NEWNHAM, a parish and market-town in Gloucestershire, 11 m. WSW of Gloucester. It has been proposed to build over the Severn, which is here 1,500 ft. wide, a suspension-bridge of two arches, each 45 ft. in span, the whole length with the side-openings being 1,125 ft. An unsuccessful attempt was made to form a tunnel under the river in 1811. At present there is only a ferry navigable half-an-hour before and after high water. The rise of the tide here is from 15 to 19 ft., and from flood-tide to high water is only 1½ hour. The tide comes in with a *bore* 4 or 5 ft. in height, which lasts for a few minutes, and then runs at the rate of 5½ or 6 m. per hour. Area 2,140 acres. Pop. in 1801, 821; in 1831, 1,074; in 1841, 1,105.—Also a parish in Herefordshire, 2½ m. N of Baldock, on the river Ivel. Area 810 acres. Pop. in 1801, 72; in 1821, 157; in 1841, 161.—Also a parish in Kent, 5 m. SW by W of Faversham. Area 1,280 acres. Pop. in 1831, 436; in 1841, 455.—Also a parish in Hants, 4½ m. E by N of Basingstoke, intersected by the London and Southampton railway. Area 1,170 acres. Pop. in 1801, 260; in 1831, 329; in 1841, 337.—Also a hamlet in Lindridge p., Worcestershire, 3¾ m. E of Tenbury, on the S bank of the Teme.

NEWNHAM-COURTENY, a parish in Oxfordshire, 5½ m. SSE of Oxford. Area 1,740 acres. Pop. in 1831, 314; in 1841, 351.

NEWNHAM-MURREN, a parish in Oxfordshire, 11 m. NW by W of Henley-upon-Thames, on the E bank of the Thames. Area 1,680 acres. Pop. in 1831, 249; in 1841, 254.

NEWNHAM-REGIS, a parish and village in Warwickshire, 4 m. NW by W of Rugby, on the N bank of the Avon. The Oxford canal passes 1 m. N of the v., and the London and Birmingham railway 1 m. S. Area 1,470 acres. Pop. in 1831, 139; in 1841, 126.

NEW NORFOLK, a parish and town of Tasmania, in the co. of Buckingham, and hundred of New Norfolk. The p. is bounded on the N by the river Derwent; on the W by the Plenty; and on the E by the p. of Wellington, from which it is separated by the Lachlan. The town is on the Derwent, 21 m. from Hobartown.—Also a police district, bounded on 3 sides by Hobartown, Clyde, and Richmond districts, comprising an area of about 50 m. in length from E to W, and 30 m. from N to S, with a total superficies of 1,500 sq. m. It consists of two parts, viz., the basin of the Derwent and a fertile tract, including the Black Brush, skirting the W side of the Jordan, and is intersected by two ranges of hills, one of which runs in a NW direction in crescent form from Mount-Wellington to the peak of Teneriffe.—Also a village in the co. of Northumberland, on Dory creek, about 25 m. from Gosfort.

NEWNTON (LONG), a parish in Wiltshire, 3¾ m. NNW of Malmesbury. Area 1,570 acres. Pop. in 1831, 307; in 1841, 305.

NEW OHIO, a village of Coleville township, Broome co., in the state of New York, U. S., 127 m. WSW of Albany.

NEW ORKNEY, or POWLES GROUP, a group of islands, in New North Shetland, to the W of Sandwich islands, in S lat. 60°, and W long. 45°.

NEW ORLEANS, a city and port of Louisiana, U. S., situated in a bend of the Mississippi, on its l. bank, 105 m. by the river, and 90 m. in a direct line from the Balize, at its mouth; in N lat. 29° 57′, W long. 90° 6′; 1,203 m. from Washington, and 1,307 m. from New York, about 1,000 m. below the mouth of the Ohio, about 1,200 m. below the mouth of the Missouri, and nearly intermediate between Boston and Mexico. It is the seat of government for the state, and the grand commercial metropolis of the Mississippi valley. No city on the globe possesses greater natural advantages for a commercial capital. The Mississippi—here 746 yds. wide at low water, and 852 yds. at high water—and its tributaries above the city, present an extent of more than 20,000 m. of water, navigated by steam-boats, and passing through the richest soils and the pleasantest climates. Its communication also with the occan is easy; and numerous *bayous* or creeks connect it with every part of the state. By a basin and canal, and Bayou St. John, it communicates with Lake Pontchartrain, and the line of lakes thence to the gulf of Mexico, the opposite Florida shore, Mobile, Pensacola, and the whole Gulf-shore, E and W. A railroad also runs between the city and Lake Pontchartrain, 4½ m. long, with only 16 inches ascent and descent,—and an artificial harbour and breakwater has been formed in the lake at the end of this railroad. The Mississippi and its principal branches are admirably adapted for steam-boat navigation, and also for the descent of those cheap and capacious vessels, the flat-bottomed boats. See article MISSISSIPPI. The use of steam-boats in towing ships now renders it unneces-

sary to wait, either at the city or below it, for favourable winds. The forts erected for the defence of the city, during the last war, have been improved, and others have been erected; and the constantly increasing strength of the city itself, and its facilities for receiving the growing strength of the whole Mississippi valley, render it comparatively secure from foreign invasion.

General description.] The old city, properly so called, is built in the form of a parallelogram, of which the longer sides are 1,320 yds., and the shorter, or the depth of the city towards the swamp, 700 yds. Above the city are the fauxbourgs or the suburbs of St. Mary and Annunciation; below, the suburbs Marigny, Daumois, Declouet. Between the city and Bayou St. John are the villages St. Claude and St. Johnsburg. The old city is divided into 66 squares, each having a front of 319 ft. in length, and each divided into twelve lots. Few of the streets, except Canal street, are more than 40 ft. wide. The wooden buildings, of which the city was formerly composed, have mostly given place to those of brick. In the old city, the French and Spanish styles of building predominate. The houses are stuccoed externally, of a white or yellow colour. The fauxbourg St. Mary, and other new parts of the city, are built principally of brick, after the American style. Several warehouses, with stone fronts, have been erected. In general, it may be said that the city is gradually becoming more purely American in all its characteristics; but a great portion of its inhabitants are of French and Spanish descent, and the French language is perhaps more used here than the English. During the season of most active business, the manners, dress, customs and languages of the world at large seem to be exhibited in New O.; those who desire to witness a display of the commodities of all climates, and all countries, with the costumes and languages of civilized and uncivilized men and women, may do well to visit the market of New O., especially on a Sunday morning in February or March. The public buildings are in general commodious and elegant. The cathedral or church of St. Louis, on the Place d'Armes, strikes the stranger forcibly by its venerable and antique contour. It was founded in 1792. On the r. and l. of the cathedral are buildings devoted to public offices. The old state-house, formerly the charity hospital, occupies a whole square fronting on Canal-street, and is surrounded by ornamental pleasure-grounds. Previous to the removal of the capital, the centre building was occupied by the legislature, and the wings by offices for the governor and chiefs of departments. The new charity hospital is 290 ft. long, and 3 stories high, and is entered under a Doric portico. The lower part of the building is occupied by the resident physicians, and as lecture-rooms, for medical students; while the second and third stories are divided into wards for the patients and rooms for the sisters of charity. The hospital is calculated to hold 540 patients. The grounds around are handsomely laid out, and kept in good order. This hospital is peculiarly well-adapted for the reception of such as are attacked with the virulent fevers, which annually invade the city, and cause such devastation especially on unacclimated foreigners. The Franklin infirmary is a private hospital, capable of accommodating 200 patients. The churches are alike conspicuous for their varied styles of architecture and the substantial manner in which they are built. Many have the sombre tint and gloomy aspect of ancient times, while others exhibit the decorative style of modern taste. The markets are large and convenient. Poydras-street market is 402 ft. long, and 42 ft. wide. The vegetable market is 172 ft. long. St. Mary's market is a noble structure, built of brick, covered over in imitation of granite, 480 ft. long and 42 ft. wide. All the markets are well supplied with both the necessaries and luxuries of life. The theatres are conspicuous buildings, and celebrated for their elegance and accommodations. The most magnificent of these is the St. Charles, which is 132 ft. long by 175 ft. deep. From the centre of the dome is suspended a chandelier, 12 ft. high and 36 ft. in circumf., weighing 4,200 lbs., and lighted by 176 gas jets. The other fittings are on an equally magnificent scale. The Orleans is a spacious edifice, of the Roman Doric and a mixture of the Corinthian and composite orders. The performances in this theatre are in the French language. The Campbell-street or American theatre, is 160 by 60 ft., and can accommodate 1,100 persons. Among the buildings of New O., the various cotton presses are not the least imposing in appearance. The Orleans cotton press extends over an area of 194,656 ft., which is nearly covered with buildings. On an average it presses 200,000 bales of cotton annually, but its capacity is much larger. The banks, hotels, &c., are also immense edifices. The St. Charles' hotel is world-renowned for its magnificence, and the sumptuous fare it provides for its visitors. The United States branch mint is a noble structure, 282 ft. long and 108 ft. deep, with two wings, each 29 by 81 ft., and the whole three stories high. The Custom-house is also a neat building.—There are, besides the new university, two colleges in New O., 10 academies, and 30 or 40 primary and common schools. A special session of the legislature was called, in 1848, to take into consideration the extension of schools throughout the state, and to regulate other matters connected with the education of the people. The harbour is one of the most capacious and deep in the world, and the local conveniences for shipping and the transaction of an extensive business, are unsurpassed. The number of vessels, of all kinds, visiting New O. during the year, is immense, and a regular communication by packets is kept up with all the large Atlantic cities, and those on the gulf. It is, in fact, the great receiving and distributing depot of the whole W, and the greatest cotton mart in the world. Nothing seems adverse to the growth of New O., except the unhealthiness of its climate. The surface of the city is from 3 to 9 ft. below the level of the river at high water, and the adjacent country is all low and marshy: this is, doubtless, the principal cause of the frequent occurrence of the yellow fever. The legislature have taken active measures for draining, raising, and otherwise improving it. The streets are now paved, and places of stagnant water are drained or filled. New O. is supplied with water from the Mississippi, the water of which is raised into a reservoir 250 ft. square. Mains are laid in all the streets to lead the water; and a large pipe, 1 m. long, is used to distribute water to clean and cool the streets in hot weather.

Commerce.] The following are the returns of the leading articles of produce received at New O. for the 4 years specified, ending each year on 31st August:

	1846.	1849.	1850.	1851.
Bagging,	917,710 d.	1,167,056 d.	816,498 d.	903,800 d.
Bale rope,	255,051	1,119,864	688,832	804,108
Cotton,	33,716,256	30,844,314	41,886,150	48,756,764
Molasses,	1,710,000	2,288,000	2,400,000	2,625,000
Sugar,	10,265,750	8,800,000	12,396,150	12,678,180
Tobacco,	4,146,562	3,938,290	6,206,820	7,860,050
All other,	26,184,135	33,832,168	32,503,403	33,296,109
Total,	77,193,464 d.	81,989,692 d.	96,897,873 d.	106,924,083 d.

showing an increase of 29,000,000 d. since the tariff of 1846 went into operation, although the receipts even then reached a higher value than is recorded

in any preceding year, and although many of the articles have declined in price under the increased supply. Cotton, sugar, and tobacco form the great articles of export.

Cotton trade.] From the *New Orleans Price Current* it appears that the value of products received from the interior during the year ending August 31st, 1852, was 108,000,000 d. The receipts of cotton during the same period at New O. reached nearly 1,500,000 bales. The southern papers agree that there had never been a year in which the results of the cotton trade had been more satisfactory. The average weight per bale was 438 lbs., making 626,000,000 lbs. The following table shows the product of low middling to good middling cotton, taking the average of each entire year for seven years, with the receipts at New O., and the total crop of the United States:

	Total crop.	Receipts at New O.	Average price.
	Bales.	Bales.	Cents per lb.
1845-46,	2,100,537	1,041,393	6⅞
1846-47,	1,778,651	707,324	10
1847-48,	2,347,634	1,188,733	6⅝
1848-49,	2,728,596	1,100,636	6¼
1849-50,	2,096,706	797,387	11
1850-51,	2,355,257	995,036	11
1851-52 (estimated),	3,000,000	1,429,183	8

The entire receipts from all sources at New O., during the year ending 31st August, 1852, was 1,429,183 bales.—an increase of nearly 450,000 bales over the year previous. The entire exports for the same time were 1,435,815 bales: 772,242 of which were shipped to Great Britain; 196,254 to France; 210,607 to other foreign ports; and 256,712 to other ports in the United States. The increase of exports consisted in 189,869 bales to Great Britain; 65,892 to France; 78,701 to other foreign ports; and 103,895 to home ports. There is in this last figure an item of importance: for it is an unanswerable argument to the assertions of the tariff and protection men, that their cotton manufactories were breaking down. The following table shows the date of receipt of first bale of each crop at New O., and the total receipts at this port as compared with the whole crops for 10 years from 1841 to 1851:

Date of receipt of First bale.	Total receipts at New Orleans.	Total crop of United States.	Tot. value. Dollars.
	1841-42,		24,425,115
1842—July 25,	1842-43, 1,075,394	2,378,875	29,420,334
1843—Aug. 17,	1843-44, 850,342	2,030,409	29,147,328
1844—July 23,	1844-45, 954,285	2,394,503	23,501,712
1845—July 30,	1845-46, 1,041,393	2,100,537	33,716,271
1846—Aug. 7,	1846-47, 707,324	1,778,651	32,589,436
1847—Aug. 9,	1847-48, 1,188,733	2,347,634	35,200,345
1848—Aug. 5,	1848-49, 1,090,797	2,728,596	30,844,314
1849—Aug. 7,	1849-50, 797,387	2,096,706	41,886,150
1850—Aug. 11,	1850-51, 950,220	2,355,257	48,756,764
1851—July 25,	1851-52, 1,429,183	*3,000,000	48,592,222
		*Estimated.	378,079,976

It will be seen by the above table that the cotton alone sold in this market within the past 10 years has yielded a gross product of 378,079,976 dollars.

Sugar trade, &c.] The sugar crop of Louisiana of 1851 amounted to 257,138,000 lbs. Of this quantity there were 203,922 hhds. brown sugar made by the old process, and 32,625 hhds. refined, clarified, &c., including cistern bottoms. This was the produce of 1,474 plantations, of which 914 are worked by steam and 560 by horse-power, and the result shows only a moderate yield, as the cane generally was not well matured, besides which the loss by *crevasses* is estimated to have been about 10,000 hhds. The crop also presented a low average in quality, as, besides the immature condition of the cane, it was somewhat injured by frost. The estimated stock on hand at the close of 1850 was 2,200 hhds., and this amount added to the crop of 236,547 hhds. would make a supply of 238,747 hhds. The distribution of this supply was nearly as follows: Shipments out of the State, 53,000 hhds.; consumption of the city and neighbourhood, 18,000 hhds.; taken for refining in the city and state, including cistern-bottoms, 15,000 hhds.; stock on hand estimated at 3,000 hhds.; leaving, as the quantity taken for the west, 149,547 hhds. The quantity shipped from New O. to Atlantic ports is 42,000 hhds., against 45,000 hhds. in 1850, and 90,000 the year previous. Besides the Louisiana crop, there were imported into New O. from Cuba 1,781 hhds., and 25,673 boxes; from Brazil, 1,591 cases and boxes, 80 barrels, and 7,689 bags; and from Manilla, 14,224 bags. The whole of the imports from Brazil and Manilla, and a great portion of those from Cuba, were for a St Louis refinery.—Coffee may now be said to take the lead among the foreign imports of New O. The first direct cargo from Rio was in 1835, and up to 1840 the imports only amounted to 44,000 bags; while in the same year 91,000 bags were received from Cuba, &c. The following table, which shows the direct imports from Rio-de-Janeiro in each year for 10 years, exhibits the rapid increase in this branch of foreign trade:

1842,	126,210 bags.
1843,	85,438
1844,	161,082
1845,	167,660
1846,	215,031
1847,	205,111
1848,	239,371
1849,	299,129
1850,	225,013
1851,	274,690
1852,	353,616

Shipping.] The tonnage which entered the port of New O. in 1832 amounted to 253,061 tons; in 1837 to 373,460 tons; in 1841 to 521,644 tons. The total number of arrivals from sea between the 1st of September, 1851, and 1852, was 2,351, viz., 807 ships, 213 steam-ships, 371 barks, 287 brigs, and 673 schooners. The entries at the custom-house for the year ended the 30th June, 1851, were as follows:—Whole number of vessels, 2,266 = 910,855 tons. Increase compared with last year is 212 vessels = 142,827 tons. Included in the arrivals were 412 foreign vessels from foreign ports, with a total measurement of 185,386 tons. This was an increase on 1851 of 80 vessels = 48,388 tons.

In consequence of the frequent interruption of navigation in the tributaries of the Mississippi, and even in the Mississippi itself, there have frequently been unnecessary fluctuations in the prices of the two great staples of the south; and southern men have come to the conclusion that they have depended too exclusively upon the river-navigation as the highway for transmitting the products of the interior to the sea-shore, and they are looking about for some efficient remedy. A considerable number of conventions and public assemblies have been held to take into consideration the organization of a system of railroads, by which a more reliable mode of transit shall be secured for the products of the interior, and two very important routes have been settled upon, and will doubtless be carried forward to completion as soon as possible. Those restrictions which formerly were laid upon the city of New O. and the state of Louisiana by their constitution have recently been removed, and another serious obstruction is being removed. The chamber of commerce of New O. not long since made such representations to Congress as induced that body to make an appropriation for removing the obstacles to the free navigation of the outlets of the Mississippi. It was demonstrated that the merchandise passing inward and outward to and from New-O. exceeded 200,000,000 dol. per annum; and it is well known that the obstructions to the free passage of vessels to and from the gulf of Mexico have hitherto been almost insurmountable.—Commercial operations at New O. are immensely facilitated by lines of electric telegraph, one of which extends from New O. to Burlington, on the frontier of Canada, a distance of 2,600 m., passing through Mobile, Augusta, Colombia, Raleigh, Richmond, Philadelphia, Baltimore, Washington, New York, and Boston. A second principal line ascends the valleys of the Mississippi and the Ohio, from New O. to Louisville, a distance of 1,150 m. These lines are not always made to follow the railways, but generally take the shortest course, and this on account of the great distances which mostly separate the principal stations. The wires are suspended on posts of wood insulated on glass rollers, and often consist but of one or two; but when they pass by a river or arm of the sea they are enclosed in gutta percha tubes, and sunk under water. The telegraph from New York to Washington passes thus under 4 miles of sea. The construction and repair of these telegraphs are submitted to the most rigid economy, and frequently the farmers through, or by whose lands they pass, undertake to keep them in order for the liberty of using the telegraph.

Population.] The pop. of New O. in 1810 was

17,242; in 1820, 27,176; in 1830, 46,310; in 1840, 102,193, of whom 23,448 were slaves; in 1850, 119,285.—The average annual mortality amounts to 5·99 per cent.! It appears that in a period of 9 years, from 1st January 1841 to 1st January 1850, there were 73,216 patients admitted into the New O. charity hospital; and that during 25 years the average mortality of yellow fever cases in this hospital was 44 per cent.

NEW PALTZ, a township of Ulster co., in the state of New York, U. S., 74 m. S by W of Albany. It is watered by Hudson and Wallkill rivers. Pop. in 1840, 5,408. The village is on the Wallkill, and contained in 1840 about 250 inhabitants.

NEW PARIS, a village of Jefferson township, Preble co., in the state of Ohio, U. S., 106 m. W by S of Columbus, on the W bank of Whitewater river. Pop. in 1840, 400.

NEW PETERSBURG, a village in Tuscarawas co., in Ohio, U. S., 79 m. SW of Columbus. Pop. 350.

NEW PHILADELPHIA, a village in Tuscarawas co., in Ohio, U. S., 115 m. ENE of Columbus, on the E bank of the Tuscarawas, opposite the junction of Sugar creek. Pop. 500.—Also a v. in Washington co., in Iowa.

NEW PITTSBURG, a village in Wayne co., in Ohio, U. S., 92 m. NE of Columbus. Pop. 150.

NEWPORT, a borough in St. Stephen's p., Cornwall, adjacent to Launceston, and included within the parl. boundary of that borough. Pop. in 1801, 738; in 1831, 1,084; in 1841, 1,068.—Also a parish in Essex, 3½ m. SSW of Saffron-Walden, in the line of the Eastern Counties railway, which has a station here. Area 2,870 acres. Pop. in 1831, 914; in 1841, 813.

NEWPORT, a borough, market-town, and seaport, in the lower division of the hundred of Wentloog, Monmouthshire, 24 m. SW by S of Monmouth, and 27 m. (by water) NNW of Bristol, with which city daily steam communication is kept up. It is situated on the west bank of the river Usk, about 4 m. above its entrance to the Bristol channel, and is approached by a stone-bridge of 5 arches, the centre one of 75 ft. span, erected in 1800. Adjoining the bridge are the remains of the ancient castle, built by Robert, Earl of Gloucester, a natural son of Henry I.; and a little higher up the Usk is a handsome bridge connected with the South Wales railway, which line passes through N., connecting it on one hand, by Gloucester, with the metropolis, and on the other with Milford Haven. N. has grown rapidly to commercial importance. Towards the close of last century it was described as a "straggling range of gloomy buildings." It is now the busiest town of Monmouthshire, comprising 3 principal, and over 20 subsidiary streets, all well-paved and lighted with gas; and by a junction with Pillgwenlly, now incorporated with the borough, it stretches for more than a mile in the direction of the river's mouth. The parish church, of Norman architecture, stands on an eminence at the N portion of the town. The district church of St. Paul's, one (at Pillgwenlly) of the Holy Trinity, and several places of worship for Roman Catholics and Dissenters, and the Town-hall, an edifice completed in 1843, comprising also the police and county courts, athenæum, mechanics' institute, and commercial rooms, are its noticeable buildings. The pop. of N. in 1801 was 1,423; in 1811, 3,025; in 1831, 7,062; in 1841, 13,766; in 1851, 19,542; and it is rapidly increasing. Water is supplied by a share company established in 1846. N. owes its rapidly increasing prosperity to its immediate contiguity to the great iron and coal works of Monmouthshire, and to the facilities afforded for shipment of those commodities from its port. The only other article of considerable export is bark. Its imports consist of provisions, timber, and iron ore. The coal of the district is chiefly suited to household purposes, but the Risca collieries in the neighbourhood furnish steam-coal of the highest quality, from which the large ocean steam-ships are supplied. Among the great iron-works connected with N. are the Ebbw Vale, Sirhowy, Victoria, British, and Cwmbrain, colossal establishments of the Coalbrook Dale Company; the works of the Messrs. Baily at Nantyglo and Beaufort; and the several establishments of the Tredegar, Cwm Celyn and Blaina, Rhymney, Blaenavon, Pentwyn and Pontypool iron companies. N. has a railway to Pontypool, (intended to be extended to Blaenavon) and thence by the Hereford line to that city; it is also the terminus of the Western Valley's line, communicating with Blaina, Sirhowy, Tredegar, and Ebbw Vale. Canal accommodation to Pontypool, Cwmbrain, Abergavenney, and Brecon also exists. The river Usk is navigable by ships of large burthen, and many fine vessels are built and launched from its banks. In 1829 there belonged to the port 50 vessels = 3,824 tons; in 1852, 89 vessels = 12,729 tons. To accommodate the growing trade of the port, magnificent docks and wharfs were completed in 1842, at a cost of £200,000. In 1844-5, there entered these docks 528 vessels = 103,300 tons; in 1852-3, 637 vessels = 166,839 tons. In 1800, the tonnage of vessels entered inwards at N. was 213 tons; the total exports 18,375 tons. In 1852 the return stood: entered inwards—foreign, 113 vessels = 18,666 tons—coastwise, 1,332 = 77,826 tons; besides 106 foreign ships, with a tonnage of 33,229 in ballast. Entered outwards—foreign, 708 vessels = 188,657 tons—coastwise, 6,637 vessels = 371,595 tons. The annual assessed value of the property in the borough in 1840, was £32,000; in 1853, £58,879. The annual value of real property in 1851, was £11,990.—The borough unites with Monmouth and Usk in returning a member to parliament, and its limits comprise Pillgwenlly and a small portion of Christ-church on the opposite bank of the Usk. The number of parliamentary voters in 1852 was 1,167, of whom 22 were freemen. N. is a polling place in the county elections. It was the scene of a serious Chartist insurrection in 1839.

NEWPORT, the capital of the Isle of Wight, is 4¾ m. S of West Cowes, and 17 m. SSE of Southampton, on the l. bank of the Medina. Two rivulets, the Kitbridge and the Carisbrooke, confluent at the town, fall into the Medina at the quay, and render navigation practicable to the sea by small vessels. The guild-hall, the library or hall of the literary institution, two assembly-rooms, and a small theatre are the noticeable civil buildings. The old church is a spacious but quaint low fabric of three aisles, separated by pointed arches, and situated in the centre of one of the open areas of the town.—The house-of-industry, the general poors' house of the island, comprising a principal building 300 ft. long, and 27 ft. broad; and another 170 ft. long, stands about 1 m. N of the town, amidst a tract of 80 acres.—Opposite to it is the Parkhurst prison, recently instituted as a reformatory for young convicted felons, on the site of an old military depot. It has accommodations for 320 prisoners, who are treated on the plan of a model prison. The buildings consist of various parallel ranges two stories high, and 40 feet apart, and so disposed as to enclose a central quadrangular area. The principal range measures 163½ ft. in length. The house and offices of the governor are in the central quadrangle; the school-rooms, a series of airy apartments, adjoin them; and the chapel occupies a detached position, and is equi-

distant from all the extremities of the establishment. The buildings are enclosed with a lofty wall; and occupy a pleasant and salubrious site, a square area of about 4 acres, on the face of an ascent, 1¼ m. N of Newport. The cost of diet per week, for each prisoner, in 1841, was 2s. 3d., or £6 4s. 9¼d. per annum.—A lace factory, on the r. bank of the Medina, employs about 200 persons on the premises, and 700 or 800 in their own houses. There is no other manufacture. N. depends principally for its prosperity on its being the chief market-town of the island. Two Episcopal chapels have recently been erected in the town; and there are chapels belonging to Independents, the Wesleyan Methodists, Primitive Methodists, Unitarians, Baptists, and Roman Catholics. The present parl. and municipal borough comprehends all the ancient borough, and a large part of the p. of Carisbrooke. The corporation income in 1840–1, was £626. Area of the chapelry of N. 80 acres. Pop. in 1801, 3,585; in 1831, 4,081; in 1841, 3,858. Pop. of the old municipal borough, in 1821, 4,269; in 1831, 4,318; of the new parl. burgh in 1841, 6,330; in 1851, 8,047. N. sends 2 members to parliament. Electors in 1848, 663.

NEWPORT, a parish and market town in Salop, 17 m. ENE of Shrewsbury, intersected by a branch of the Birmingham and Liverpool canal. Area 800 acres. Pop. in 1801, 2,307; in 1831, 2,745; in 1851, 2,906. The town of N., situated on the river Strine, is irregularly built, but contains some good houses. The trade of this place has been considerably increased by the formation of a branch-canal, connecting the Birmingham and Liverpool with the Shrewsbury canal. In the neighbourhood are mines of coal, iron, and limestone.

NEWPORT, a river of co. Mayo, issuing from Lough Beltra, and flowing WSW past the town of Newport-Pratt, to the NE corner of Clew bay. Though tidal over only a ¼ m., and navigable over even that distance only by boats, yet it falls only 61 ft. from Lough-Beltra, and less than 150 ft. from the summit-level of the country between Clew bay and Killala bay. The chief affluents of the N. river are the Skeedagh, the Buckadoon, and the Glenisland.

NEWPORT, a village of Upper Canada, in the township of Brantford, on the Grand river, 4 m. SE of Brantford.

NEWPORT, a village of New South Wales, in Northumberland co., 3 m. from Gosford, on Dory creek.

NEWPORT, a township of Lower Canada, in the co. of Sherbrooke, between Eaton and Ditton. It is in some parts hilly, but is generally fertile, and possesses good timber. It is intersected by North river, and by several tributaries of that river and of Newport river, by which it is watered in the SW. Pop. 94.

NEWPORT, a county of the state of Rhode Island, U. S., comprising the island of that name and several other islands in Narragansett bay, and containing a surface of 136 sq. m. Pop. in 1840, 16,874; in 1850, 20,609. Its capital, which is also semi-capital of the state, is on the SW side of Rhode Island, 5 m. from the ocean, and 30 m. S by E of Providence. It is finely situated on a gentle acclivity, which rises gradually from the harbour, and contains numerous churches, a synagogue, and several public buildings. Pop. in 1840, 10,924. The harbour, which is one of the finest in the United States, is semi-circular in form, and spreads westward before the town. It is safe, capacious, and easy of access, and has depth sufficient for vessels of the largest size. It is defended by Fort Adams, which stands on Brenton's Point, and Rhode Island, 1½ m. WSW of the town, and is garrisoned by 4 companies of artillery. The shipping of the harbour in 1840, amounted to 10,924 tons.—Also a township of Penobscot co., in the state of Maine, 54 m. NE of Augusta. It contains a large pond, the outlet of which forms the source of Sebasticook river. The soil is generally fertile. Pop. in 1840, 1,138.—Also a township of Sullivan co., in the state of New Hampshire, 39 m. W by N of Concord. The surface is hilly, and is watered by Sugar river. The soil is fertile, especially on the streams. Pop. 1,958.—Also a township of Orleans co., in the state of Vermont, 64 m. N of Montpellier. It is bordered by Canada on the E; by Lake Memphremagog on the NE; and is watered by the head branches of Misisque river. Pop. 591.—Also a township of Herkimer co., in the state of New York, 86 m. NW of Albany. It has a hilly surface, and is drained by West Canada creek. The soil consists chiefly of sand and calcareous loam. Pop. 2,020. It has a village containing about 450 inhabitants.—Also a village of Dover township, Cumberland co., in the state of New Jersey, 79 m. S by W of Trenton, on Nantuxet creek, 5 m. above its mouth. It contained in 1840, about 30 dwellings.—Also a village of Juniata township, Perry co., in the state of Pennsylvania, 28 m. NW of Harrisburg, on the W bank of Juniata river, above the confluence of Little Buffalo creek. Pop. 423.—Also a township of Luzerne co., in the same state, 8 m. SW of Wilkesbarre, watered by Nanticoke river. It abounds in anthracite coal, and in iron. Pop. 1,099.—Also a village of Cooke co., in the state of Tennessee, 232 m. E by S of Nashville, on the SW side of French Broad river. Pop. 150.—Also a village of Campbell co., in the state of Kentucky, 86 m. NNE of Frankfort, on Ohio river, above the confluence of Licking river, and opposite Cincinnati. It stands on an elevated plain, and contains an arsenal, and an academy endowed with 6,000 acres of land.—Also a township of Washington co., in the state of Ohio, 118 m. ESE of Columbus, on the Ohio. Pop. 1,228.—Also a village of Vermilion co., in the state of Indiana, 78 m. W of Indianapolis, on the S side of Vermilion river, 2 m. above its junction with the Wabash. Pop. 192.—Also a village of Franklin co., in the state of Missouri, 70 m. E of Jefferson city, on high bluffs about a mile from the Missouri.

NEWPORT (North and South), rivers in the state of Georgia, U. S., the former of which has a course of 25 m., and is navigable to Riceboro. The latter discharges itself into St. Catharine's sound.

NEWPORT, or Newport-Pratt, a small port in the parish of Burrishoole, co. Mayo, on the Newport river, 5¼ m. N of Westport. The quays are excellent and extensive; and the harbour is spacious and of easy entrance, and can bring up to the quays vessels of 300 or 400 tons. Considerable shipments of corn were formerly made at N. Pop. in 1831, 1,235; in 1841, 1,091.

NEWPORT-PAGNELL, a parish and market-town in Bucks, 15 m. NE by E of Buckingham, and 4 m. E of Wolverton, on the banks of the Ouse, over which there are here two stone-bridges. Area 3,220 acres. Pop. of p., in 1801, 2,048; in 1831, 3,385; in 1841, 3,569; in 1851, of town, 3,312. The town is well-built, and is divided into two unequal portions by a small stream called the Louvet. The church, a handsome edifice rebuilt in 1828, occupies an eminence from which extensive views of the surrounding country are obtained. The manufacture of lace gives employment to a considerable number of females.

NEWPORT, or Trefdraeth, a parish and seaport of Pembrokeshire, 17 m. N by E of Haverford-West. Pop. in 1801, 1,392; in 1841, 1,751. This place has considerably declined in consequence of

the contiguity of Fishguard; its bay, however, still forms an excellent harbour.

NEWPORTAGE, a village of Norton township, Medina co., in the state of Ohio, U. S., 119 m. NE by N of Columbus.

NEW PORTLAND, a township of Somerset co., in the state of Maine, U. S., 56 m. NNW of Augusta. It has a fertile soil, and is watered by Seven Mile Brook and its branches.

NEWPORT-TIP, a market town in the p. of Kilvolane, co Tipperary, on the Mulkern rivulet, 5 m. ENE of Castle-Connell. Pop. in 1841, 1,072.

NEWPORTVILLE, a village of Bristol township, Bucks co., in the state of Pennsylvania, U. S., 116 m. E of Harrisburg, on Neshaminy creek, which is here crossed by a stone bridge. In 1840 it contained about 15 dwellings.

NEWPORT-WALLINGFEN, a township in Eastrington p., Yorkshire, 4¼ m. W of South Cave, crossed by the Market Weighton canal, and 1½ m. N of the Selby and Hull railway. Area 250 acres. Pop. in 1831, 367; in 1841, 427.

NEW PRESTON, a village of Washington township, Litchfield co., in the state of Connecticut, 43 m. W by S of Hartford, on the W side of East Aspetuck river.

NEW PROSPECT, a village of Franklin township, Bergen co., in the state of New Jersey, U. S., 87 m. NE of Trenton, on Hohokus creek.—Also a village of Spartanburg district, in the state of South Carolina, 117 m. NW of Columbia.—Also a village of Greene co., in the state of Alabama, 57 m. SW of Tuscaloosa.—Also a village of Milton township, Wayne co., in the state of Ohio, 110 m. NE of Columbus.

NEW PROVIDENCE, a township of Essex co., in the state of New Jersey, U. S., 13 m. SW of Newark. It is hilly, especially in the W. The soil consists chiefly of clay loam and shale. Pop. in 1840, 832.—Also a village of Lancaster co., in the state of Pennsylvania, 46 m. E by S of Harrisburg.—Also a village of Montgomery co., in the state of Tennessee, 47 m. NW of Nashville.—Also a village of Clark co., in the state of Indiana, 107 m. S by E of Indianapolis.

NEW PROVIDENCE, one of the Bahama islands, occupying a central position in the group, and containing Nassau, the seat of government. It is 17 m. in length from E to W, and 7 m. in breadth. It is more hilly than most of the islands, but has a few tracts of fertile land, and produces good fruit, especially pine apples. Its pop. in 1832 amounted to 6,208, of whom 4,781 were coloured and Negroes; in 1842, the pop. was 7,560; in 1851, 8,385. It is the main entrepot for the productions of the other islands. See NASSAU and BAHAMA ISLANDS.

NEW QUAY, a fishing-village and harbour in the vicinity of the village of Burren, and on the N coast of co. Clare. In the vicinity are the celebrated oyster-banks of Burren.

NEWRABUNG, a lofty eminence of New South Wales, in the co. of Northumberland, about 3 m. from Gosford, Brisbane Water.

NEW RICHMOND, a village of Ohio township, Clermont co., in the state of Ohio, U. S., 116 m. SW of Columbus, on Ohio river, above the mouth of Muddy creek. Pop. in 1840, 900.

NEW RIVER, a river of the state of South Carolina, U. S., which has its source in Beaufort district, runs nearly parallel with the Savannah, and enters by several embouchures into Tybee sound.—Also a river which has its source in the state of North Carolina, enters the state of Virginia, and after passing through Peter's mount takes the name of Great Kanawha river.—Also a river of the state of North Carolina, which discharges itself by New River Inlet into the Atlantic.—Also a river of the state of Louisiana, which has its source near the Mississippi, and flowing between that river and the Amite, discharges itself into Lake Maurepas.—Also a village of Ascension parish, in the state of Louisiana, 83 m. WNW of New Orleans.

NEW ROCHELLE, a township of Westchester co., in the state and 18 m. NE of New York, U S. It has an undulating surface, and is bounded on the S by Long Island sound. The soil is chiefly clay loam. Pop. in 1840, 1,816. It has a village pleasantly situated on a bay of Long Island sound, and containing 800 inhabitants.

NEW ROCHESTER, a village of Freedom township, Wood co., in the state of Ohio, U. S., 108 m. NW of Columbus.

NEW ROSS, a village of Montgomery co., in the state of Indiana, U. S., 35 m. WNW of Indianapolis.

NEW RUMLEY, a village of Rumley township, Harrison co., in the state of Ohio, U. S., 116 m. E by N of Columbus. Pop. in 1840, 200.

NEWRY, a river, chiefly of co. Down, which rises near Rathfriland; runs along the boundary-line between the cos. of Down and Armagh to the town of Newry; and thence, under the name of Narrow-water, flows tidally between co. Down on the l. and the cos. of Armagh and Louth on the r., to the head of the bay or sea-lough of Carlingford.—Also a navigation, partly natural, but chiefly artificial, connecting the head of Lough Carlingford with the Upper Bann and Lough Neagh in Ulster. The line of artificial navigation, or of strict canal, commences at Fathom 1¾ m. below Newry; gains the summit-level immediately N of Poyntz-pass; continues on the summit-level 3 m. to the vicinity of Scarva, and passes alongside Lough Shark, whose surface-elevation is 80 ft. above sea-level; and descends to the Bann, 3 m. above Portadown. The average breadth of the whole canal is 40 ft. at the top.

NEWRY, or ST.-MARY'S-OF-NEWRY, a parish, containing a borough of the same name, partly identical with the lordship of the barony of Newry, co. Down, and partly situated in co. Armagh. Pop. in 1831, 25,117; in 1841, 25,168.—The sea-port and parl. borough of N. stands on the Newry river and canal, 5¼ m. NNW of Warrenpoint, and 30 m. SSW of Belfast. The older portions of the town were irregularly and inconveniently built on the side of a ridge; but the modern streets, on the low grounds, are comparatively regular, spacious, and well-edificed. The houses are nearly all built of granite; and the character of the town as a whole, whether as to street alignment, architecture, or interior appearance, is pleasing. St. Patrick's church, built in 1578, stands upon high ground, on the NE outskirts of the town. St. Mary's church, a handsome edifice of granite, in the pointed style of architecture, is situated on low ground in a central part of the town, on the r. bank of the river. The new Roman Catholic chapel is also a handsome structure, in the modern pointed style; and serves as the cathedral of the Roman Catholic dio. of Dromore. Two of the Presbyterian churches are elegant. There are a spacious assembly-room, a town-hall or market-house, an infantry barrack for the accommodation of 1,100 men, a new court-house, two bridewells in respectively the Down and the Armagh sections of the town, and a fever hospital. The manufactories of N. and the vicinity are cotton mills, linen factories, and yarn factories, along the river; the appliances of an extensive linen-trade; brass and iron foundries, and spade and shovel factories; two breweries and a large distillery, extensive flour mills and oat-meal mills, cordage works, coach and car manufactories, a tobacco-pipe manufactory

and a pottery, and appliances for various departments of manufacture connected with ship-building. Numerous stores situated along the canal impart to the town considerable appearances of a sea-port. The retail-trade is extensive; and the sales of dairy and agricultural produce in the town are large, and command supplies from some districts of Monaghan and Louth, and from all the S parts of Down and Armagh. The sales of butter exceed those of Belfast, and amount to upwards of 3,300 tons a-year. In 1835, the exports amounted, in estimated value, to £616,836. Their chief items were 24,867 tons of corn, meal, and flour; 1,061 tons of provisions; 267 tons of potatoes; 1,297 tons of flax and tow; 5,300 gallons of spirits; 3,686,250 yards of linen, 79 tons and 18 cwts. of eggs, 3,551 cows and oxen, 898 horses, and 15,525 pigs. In the same year the imports amounted in estimated value to £568,711. In 1836 the gross receipts at the custom-house was upwards of £58,806; in 1843, £38,577; in 1849-50, £35,106. The chief trade of the port is with Liverpool and Glasgow; but a considerable trade is also conducted with other ports of Great Britain, with the United States, with British America, with the Mediterranean, with Odessa, with the Baltic, and with Archangel. Steam-vessels are regularly employed in the trade with Great Britain, but come no nearer N. than to Warrenpoint; the large-class merchant vessels also at present come only to Warrenpoint; smaller sea-borne vessels come up Narrow-water and its canal-continuation to Newry; and barges ply up the canal to the Lower Bann and Lough Neagh. The vessels registered at the port in Dec. 1843 were 159 sailing vessels, each under 50 tons; 47 vessels, each above 50 tons; and 2 steam vessels, of jointly 326 tons. In 1850 the registered tonnage of sailing vessels was 8,965 tons; of steamers, 603 tons. During the year 1843, the number of sailing vessels inwards coastwise was 1,265 = 63,854 tons; in 1850, 824 = 48,447 tons. The number of steam vessels inwards coastwise in 1843 was 155 = 28,074 tons; and in 1850, 183 = 47,230 tons. In 1843, the number of sailing vessels inwards from the colonies was 43 = 6,945 tons; in 1850, 7 = 3,610 tons. A line of railway connects the northern terminus of the Dublin and Drogheda railway, by way of Dundalk and N., with the Ulster railway, in the vicinity of Portadown; and a branch line runs from N. to the head of Carlingford lough. The borough sent 2 members to the imperial parliament; it now sends one. Constituency in 1842, 1,136. Area of the Down section of the town, 295 acres; of the Armagh section, 334 acres. Pop. of the whole in 1831, 13,065; in 1841, 11,972.—During the rebellion of 1641, the town suffered severely; and in 1681 it was burned and dreadfully damaged by the army of James II., under the duke of Berwick, to secure their retreat to Dundalk from the forces of William III., under the duke of Schomberg. It gives the title of Viscount to the Earl of Kilmorey.

NEWRY, a township of Oxford co., in the state of Maine, U. S., 64 m. W of Augusta, watered by Bear river and another branch of Androscoggin river. Pop. in 1840, 463.—Also a village of Frankstown township, Huntingdon co., in the state of Pennsylvania, 122 m. W of Harrisburg, on Poplar run, a tributary of the Frankstown branch of Juniata river. Pop. 300.

NEW SALEM, a township of Franklin co., in the state of Massachusetts, U. S., 73 m. WNW of Boston, bordered on the N by Miller's river, and watered by a branch of that river and by an arm of Middle river. The surface is elevated, and the soil is chiefly in pasture. Pop. in 1840, 1,305.—Also a village of New Scotland township, Albany co., in the state of New York, 12 m. W of Albany. It contained in 1840 about 15 dwellings.—Also a village of Salem township, Fayette co., in the state of Pennsylvania, 187 m. W by S of Harrisburg. It contained in 1840 about 25 dwellings.

NEW SCOTLAND, a township of Albany co., in the state of New York, U. S., 9 m. W of Albany. The surface is hilly, and is drained by Coeyman's creek, and a branch of Normanskill river. The soil consists of sand, loam, and clay. Pop. in 1840, 2,912. It has a village containing about 125 inhabitants.

NEW SEWICKLY, a township of Beaver co., in the state of Pennsylvania, U. S., 5 m. E of Beaver. It has a hilly surface, and is watered by Big Beaver river. The soil is chiefly loam. Pop. in 1840, 1,740.

NEWSHAM, a township in Kirkham p., Lancashire, 9 m. NNE of Preston.—Also a township in Kirby-Wisk p., Yorkshire, 4 m. W by N of Thirsk, on the E bank of the Swale. Area 2,060 acres. Pop. in 1831, 182; in 1841, 181.—Also a township in Kirby-Ravensworth p., Yorkshire, 8½ m. NW of Richmond. Area 3,490 acres. Pop. in 1831, 546; in 1841, 451.—Also a township in Wressel p., Yorkshire, 1¾ m. NW of Howden, crossed by the Selby and Hull railway. Area 2,400 acres. Pop. 122.

NEW SHARON, a township of Franklin co., in the state of Maine, U. S., 28 m. NW of Augusta. It is drained by Sandy river, an affluent of Kennebec river, and is generally fertile. Pop. in 1840, 1,829.

NEW SHOREHAM, a township of Newport co., in the state of Rhode Island, U. S., 15 m. SSW of Point Judith, and 13 m. NE of Montank point, Long island. It comprises Block island. The inhabitants, who in 1840 were about 1,069 in number, are mostly engaged in fishery.

NEW SIBERIA. See Siberia (New).

NEWSON'S DEPOT, a village of Southampton co., in the state of Virginia, U. S., 78 m. SSE of Richmond, on the Portsmouth and Roanoke railroad.

NEW SOUTH SHETLAND, a name given by some navigators to an imperfectly explored archipelago and portion of the great Antarctic continent, situated about 600 m. S. of Cape Horn, between the parallels of 61° and 64° 30′ S, and the meridians of 53° and 62° E. The islands, of which the principal are Clarence, Cornwallis, Elephant, Livingston, Deception, and Smith, are all lofty and apparently of volcanic origin. They are separated from that portion of the mainland on which D'Urville bestowed the name of Joinville Land, and Louis Phillipe Land, by a wide channel called Bransfield strait. Cook, Weddel, Biscoe, D'Urville, Wilkes and Ross, have successively visited and described these islands.

NEW SOUTH WALES, the parent-colony of Australia, so called by Cook, on account of a certain resemblance which he saw or fancied to exist between the scenery of Botany Bay and that with which he had been familiar in the southern counties of Wales. On the 21st of August 1770, having landed on Possession island, in S lat. 10° 30′, he took formal possession of all the E coast of Australia in these words: "As I am now about to quit the E coast of New Holland, which I have coasted from lat. 38° to this place; and which I am confident no European has ever seen before, I once more hoist English colours, and though I have already taken possession of several parts, I now take possession of the whole eastern coast, by the name of New South Wales—from its great similarity to that part of the principality of Wales—in right of my sovereign, George the Third, King of Great Britain." In our general article on Australia, a section has been devoted to general details respecting each division of the island under the head Eastern Australia; and further information will be found under the heads Mel-

BOURNE, MORETON BAY, PORT JACKSON, PORT PHILLIP and SYDNEY.

NEWSTEAD, a township of Erie co., in the state of New York, U. S., 20 m. NE of Buffalo. It has an undulating surface, and is drained by Ellicott's creek and tributaries of Tonawanda creek. The soil consists chiefly of clay and gravelly and calcareous loam. Pop. in 1840, 2,653.

NEWSTEAD, a township in Bambrough parish, Northumberland, 5 m. SSE of Belford. Pop. in 1831, 110.—Also a liberty in Paplewick p., Nottinghamshire, 5 m. S of Mansfield. Pop. in 1831, 159; in 1841, 193. An abbey, founded here by Henry II. about 1170, was at the dissolution granted to Sir J. Byron, ancestor of the late Lord Byron. The great poet fitted up a part of the ancient edifice as a family mansion; but his patrimonial domain has passed into other hands.—Also a village in the p. and 1 m. E of Melrose in Roxburghshire. Pop. 250.

NEW SWEDEN, a village of Au Sable township, Clinton co., in the state of New York, U. S., 155 m. N of Albany, on the N side of Au Sable river. Pop. in 1840, 250.

NEWTEE, a fortress of Hindostan, in the presidency of Bombay and prov. of Bejapur, on a point of land which advances into the sea of Oman, and about 45 m. NW of Goa.

NEWTHORPE, a township in Sherburn p., Yorkshire, 10½ m. E by S of Leeds, crossed by the Leeds and Selby railway. Area 850 acres.

NEW-TIMBER, a parish in Sussex, 6 m. N by W of Brighton. Area 1,550 acres. Pop. 165.

NEWTON, a parish in Cambridgeshire, 6 m. S by W of Cambridge. Area 940 acres. Pop. in 1831, 161; in 1841, 183.—Also a township in West Kirby p., Cheshire, 8 m. NNW of Great Neston. Area 340 acres.—Also a township in Middlewich p., Cheshire, ¾ m. S of Middlewich, intersected by the Trent and Mersey canal. Area 610 acres. Pop. in 1831, 1,649; in 1841, 1,512.—Also a township in Malpas p., Cheshire, 1½ m. SW by W of Malpas.—Also a township in St. Oswald p., Cheshire, 1½ m. NNE of Chester.—Also a township in Runcorn p., Cheshire, 5 m. NE by E of Frodsham. Area 1,120 acres.—Also a township in Tattenhall p., Cheshire, 3½ m. WSW of Tarporley. Area 1,270 acres.—Also a township in Clodock p., Herefordshire, 9 m. SE of Hay. Pop. in 1831, 253; in 1841, 275.—Also a township in Croft p., Herefordshire, 5½ m. NW by N of Leominster. Area 970 acres. Pop. in 1831, 95; in 1841, 104.—Also a township in Kirkham p., Lancashire, 2 m. SE by E of Kirkham, in the line of the Preston and Wyre railway. Area 1,580 acres. Pop. in 1831, 381; in 1841, 324.—Also a chapelry and township in the p. and within the parl. boundaries of Manchester, Lancashire, 2½ m. NE of Manchester, in the line of the Rochester canal, and of the Manchester and Leeds railway. Area 1,280 acres. Pop. in 1831, 4,377; in 1841, 6,127. Calico-printing, and the manufacture of cotton and silk, are carried on here to a considerable extent; and chemical works for the manufacture of alkali cover a surface of 20,000 sq. yds., and employ 300 hands. A chimney of these works, erected at a cost of £7,000, is 25 ft. higher than St. Paul's cathedral; being upwards of 132 yds. in height.—Also a parish in Lincolnshire, 2 m. NW by N of Folkenham. Area 1,220 acres. Pop. in 1831, 176; in 1841, 221.—Also a hamlet in the p. of Clifton-upon-Dunsmoor, Warwickshire, 2½ m. NE of Rugby.—Also a parish in Northamptonshire, 3¾ m. N by E of Kettering. Area 1,050 acres. Pop. in 1831, 111; in 1841, 103.—Also a township in Bywell-St.-Peter p., Northumberland, 6 m. E of Hexham.—Also a parish in Suffolk, 3 m. E by S of Sudbury. Area 1,370 acres. Pop. in 1831, 432; in 1841, 462.—Also a parish in Suffolk, 2½ m. SSE of St. Edmondsbury. Area 1,320 acres. Pop. in 1831, 137; in 1841, 443.—Also a parish in the N. R. of Yorkshire, 3 m. SW by W of Guisborough. Area 1,440 acres. Pop. in 1831, 148; in 1841, 143.—Also a township in the p. of Mottram, in Cheshire, 5½ m. NE of Stockport, on the Manchester and Sheffield railway. Area 800 acres. Pop. in 1831, 5,997; in 1841, 7,501, chiefly employed in the manufactures connected with Mottram.—Also a township in Pickering p., in Yorkshire, 4 m. N by E of Pickering. Pop. in 1831, 211; in 1841, 233.—Also a parish of Mid-Lothian, 3 m. E of Edinburgh. Area 1,256 acres. Pop. in 1841, 1,743, mostly colliers.—Also the name of many villages and hamlets throughout England and Scotland, hardly one of which is of sufficient importance to require separate notice.

NEWTON, a township of Lower Canada, in the co. of Vaudreuil. The soil is generally good, especially in its W part. Pop. about 48.

NEWTON, a central county of the state of Georgia, U. S., comprising an area of 460 sq. m., drained by Yellow and Alcopahatchee rivers, branches of Ocmulgee river by which it is bordered on the S. Pop. in 1840, 11,628, of whom 3,720 were slaves; in 1850, 13,296. Its cap. is Covington.—Also a central county of the state of Mississippi, containing a superficies of 540 sq. m., drained by head branches of Chickasawha river. Pop. in 1840, 2,527, of whom 546 were slaves; in 1850, 4,456. Its cap. is Decatur.—Also a county in the SW corner of the state of Missouri, containing a surface of 1,150 sq. m., drained by branches of Neosho river. Pop. in 1840, 3,790, of whom 169 were slaves; in 1850, 4,270. Its cap. is Neosho.—Also a township of Middlesex co., in the state of Massachusetts, 7 m. W. of Boston, enclosed on 3 sides by a curve of Charles river, and intersected by the Boston and Worcester railroad. Pop. in 1840, 3,351. The village contains about 50 dwellings.—Also a township of Sussex co., in the state of New Jersey, 70 m. N of Trenton. Its central part is level, and is watered by the Paulinskill. Pop. 3,857. The village stands on the Paulinskill, and contains about 900 inhabitants.—Also a township of Gloucester co., in the same state, 6 m. NE of Woodbury. The surface is level, and is watered by Cooper's and Newton's creeks. The soil is sandy and is chiefly devoted to the culture of vegetables. Pop. 1,863.—Also a township of Cumberland co., in the state of Pennsylvania, 16 m. W of Carlisle. It has a level surface bordered on the W by Big Pond, and intersected by its outlet Yellow Breeches creek. Pop. 1,499.—Also a township of Delaware co., in the same state, 14 m. NW of Pennsylvania. The surface is hilly, and is watered by Crum and Darby creeks. The soil is chiefly loam. Pop. 752.—Also a township of Miami co., in the state of Ohio. Pop. 1,242.—Also a township of Muskingum co., in the same state, 60 m. E of Columbus. Pop. 2,568.—Also a township of Licking co., in the same state. Pop. 1,247.—Also a township of Pike co., in the same state. Pop. 326.—Also a township of Calhoun co., in the state of Michigan, 114 m. W of Detroit. Pop. 235.—Also a village of Jasper co., in the state of Illinois, 130 m. SE of Springfield, on the W side of Embarras river. Pop. 150.

NEWTON, or CLARKE, a village of Canada West, in the township of Clarke, 12 m. from Port Hope. Pop. 130.

NEWTON-ABBOT, a chapelry and market-town, in Woodborough p., Devonshire, 14 m. SSW of Exeter, on the river Teign. It is united to Newton-Bushell, and constitutes with it one town, which is

increasing in importance; its trade being facilitated by means of a railway and canal communicating with the river Teign. It is one of the polling-stations for the county.

NEWTON-BAY, an inlet on the N coast of the Middle island of New Zealand, in Queen Charlotte's sound. See article NEW ZEALAND.

NEWTON-BLOSSOMVILLE, a parish in Bucks, 2½ m. E of Olney, on the S bank of the Ouse. Area 1,050 acres. Pop. in 1831, 237; in 1841, 264.

NEWTON-IN-BOWLAND, a township in Slaidburn p., Yorkshire, 6 m. NNW of Clitheroe, on the river Hodder. Area 2,140 acres. Pop. in 1841, 461.

NEWTON-BROMSHOLD, a parish in Northamptonshire, 3 m. SE of Higham-Ferrers. Area 1,740 acres. Pop. in 1831, 122; in 1841, 161.

NEWTON-CAPP, a township in St. Andrew-Auckland p., Durham, a ½ m. NW of Bishop-Auckland. Area 1,350 acres. Pop. in 1841, 148.

NEWTON CENTRE, a village of Newton township, Middlesex co., in the state of Massachusetts, U. S., 7 m. W of Boston.

NEWTON-COLD, a township in Lowesby p., Leicestershire, 8¼ m. E by N of Leicester. Pop. in 1831, 120; in 1841, 104.

NEWTON-ST.-CYRES, a parish in Devonshire, 3⅓ m. ESE of Crediton, on the SW bank of the Creedy. Area 3,290 acres. Pop. in 1841, 1,224.

NEWTON-UPON-DERWENT, a township in Wilberfoss p., Yorkshire, 5½ m. W of Pocklington. Area 1,640 acres. Pop. in 1831, 228; in 1841, 229.

NEWTON FALLS, a village of Newton township, Trumbull co., in the state of Ohio, U. S., 162 m. NE of Columbus, on the Pennsylvania and Ohio canal, at the junction of two branches of Mahoning river. Pop. in 1840, 450.

NEWTON LOWER FALLS, a village of Newton township, Middlesex co., in the state of Massachussetts, U. S., 11 m. W of Boston, chiefly on the E side of Charles river.

NEWTON UPPER FALLS, a village of Newton township, Middlesex co., in the state of Massachusetts, U. S., 9 m. W of Boston, on the E side of Charles river.

NEWTON-FERRERS, a parish in Devonshire, 6¼ m. SE of Plymouth, on the E bank of the Yealm. Area 3,090 acres. Pop. in 1831, 767; in 1841, 778.

NEWTON-FLOTMAN, a parish in Norfolk, 7½ m. S by W of Norwich, in the line of the London and Norwich railway. Area 1,000 acres. Pop. in 1831, 382; in 1841, 371.

NEWTON-HARCOURT, a township in Wistowe p., Leicestershire, 6½ m. SE by S of Leicester, on the river Soar. Area 880 acres. Pop. in 1831, 279; in 1841, 278.

NEWTON-IN-THE-ISLE, a parish in the isle of Ely, Cambridgeshire, 4 m. NW of Wisbeach, on the Wisbeach or Nene river. Area 2,880 acres. Pop. in 1831, 431; in 1841, 400.

NEWTON-KYME, a parish in the W. R. of Yorkshire, 2 m. NW of Tadcaster, on the S bank of the Warfe. Area 1,050 acres. Pop. in 1841, 201.

NEWTON-ST.-LOE, a parish in Somersetshire, 3½ m. W of Bath, in the line of the Great Western railway. Area 1,670 acres. Pop. in 1841, 527.

NEWTON (LONG), a parish in the co.-palatine of Durham, 4 m. WSW of Stockton-upon-Tees. Area 4,380 acres. Pop. in 1831, 313; in 1841, 293.

NEWTON-LONGVILLE, a parish in Bucks, 3 m. SW of Fenny-Stratford. Area 1,640 acres. Pop. in 1831, 473; in 1841, 565.

NEWTON-IN-MAKERFIELD, a borough and chapelry, in Winwick p., co.-palatine of Lancaster, 47 m. SE of Lancaster, intersected by the Warrington and Wigan railway, and by the Manchester and Liverpool line. It formerly returned two members to parliament, but was disfranchised by the Reform bill. Area 3,070 acres. Pop. in 1831, 2,139; in 1841, 3,126.

NEWTON-ON-THE-MOOR, a township in Shilbottle p., Northumberland, 5 m. S by W of Alnwick. Pop. in 1831, 265; in 1841, 290.

NEWTON-MULGRAVE, a township in Lythe p., Yorkshire, 8 m. NW by W of Whitby. Area 1,950 acres. Pop. in 1831, 123; in 1841, 105.

NEWTON (NORTH), a parish in Wiltshire, 8½ m. SE by E of Devizes, on a branch of the Avon. Area 810 acres. Pop. in 1801, including the tything of Hillcott, 221; in 1831, 317; in 1841, 342.—Also a chapelry in North Petherton p., Somersetshire, 3½ m. SE of Bridgewater, crossed by the Taunton and Bridgewater canal, and in the line of the Bristol and Exeter railway.—Also a parish in Pembrokeshire, 3 m. WSW of Narberth.

NEWTON-NOTTAGE, a parish in Glamorganshire, 5 m. WSW of Bridgend, intersected by the Duffryn-Llynvi and Port-Cawl railway. Pop. 792.

NEWTON (OLD), a parish in Suffolk, 2⅝ m. N by E of Market-Stow. Area 2,310 acres. Pop. in 1831, 679; in 1841, 712.

NEWTON-UPON-OUZE, a parish in the N. R. of Yorkshire, 8¼ m. NW of York, comprising the townships of Benningbrough, Linton-upon-Ouze, and N. Area 4,590 acres. Pop. in 1841, 908.

NEWTON-ST.-PETROCK, a parish in Devonshire 7¼ m. SW of Great Torrington, on the banks of the Torridge. Area 1,040 acres. Pop. in 1831, 250; in 1841, 261.

NEWTON-POPPLEFORD, a chapelry in Aylesbear p., Devonshire, 3 m. NW by W of Sidmouth, on the W bank of the Otter, over which an iron-bridge of 3 arches, each 30 ft. span, has been erected here. Pop. in 1831, 588; in 1841, 549.

NEWTON-POTTER, a township in the p. of St. Peter, Yorkshire, 2 m. NNE of Leeds. Area 2,340 acres. Pop. in 1831, 863; in 1841, 1,241.

NEWTON-PURCELL, a parish in Oxfordshire, 6¼ m. NE by N of Bicester. Area 1,330 acres. Pop. in 1831, 131; in 1841, 118.

NEWTON-REGIS, a parish in Warwickshire, 5¼ m. NE by E of Tamworth. Area 1,610 acres. Pop. in 1831, 383; in 1841, 454.

NEWTON-RIGNY, a parish in Cumberland, 3 m. WNW of Penrith. Area 2,560 acres. Pop. in 1831, 176; in 1841, 310.

NEWTON-BY-SEA, a township in Embleton p., Northumberland, 8 m. NE by N of Alnwick. Pop. in 1831, 271; in 1841, 282.

NEWTON-SHAW, a thriving village in the p. and shire of Clackmannan, 1¼ m. S of the river Devon, and 1½ m. N of Alloa. Pop. 798.

NEWTON-SOLNEY, a parish in Derbyshire, 8 m. SW by S of Derby, on the E bank of the Trent. Area 1,280 acres. Pop. in 1831, 338; in 1841, 311.

NEWTON (SOUTH), a parish in Wilts, 2¼ m. N by W of Wilton, on the E bank of the Wiley river, comprising the chapelries of Chilhampton and Ugford, and the tythings of Burden's-Ball, Stowford, and Wishford. Area 3,840 acres. Pop. in 1841, 692.

NEWTON-STEWART, or NEWTON-DOUGLAS, a town chiefly in the p. of Penninghame, Wigtonshire, but partly in that of Minigaff, Kirkcudbrightshire, 8 m. N of Wigton. Tanning and currying of leather, and weaving of cotton, employ a considerable number of hands in this town; but the purchasing of wool for the markets of Lancashire is the staple trade. The business done at the cattle and horse markets held here is great and increasing. Sea-communication is maintained from a harbour at Carty, about 1½ m. down the river. The pop. in 1831 was 2,241; in 1841, 2,172; in 1851, 2,599.

NEWTON-BY-TOFT, a parish in Lincolnshire, 4 m. W by S of Market-Raisen. Area 1,730 acres. Pop. in 1831, 82; in 1841, 85.

NEWTON-TONEY, a parish in Wiltshire, 4 m. E by S of Amesbury, on a branch of the Avon. Area 2,770 acres. Pop. in 1841, 324.

NEWTON-TRACEY, a parish in Devonshire, 5 m. E by N of Bideford, on the river Taw. Area 760 acres. Pop. in 1831, 111; in 1841, 125.

NEWTON-ON-TRENT, a parish in Lincolnshire, 10 m. WNW of Lincoln. Area 1,390 acres. Pop. in 1831, 310; in 1841, 399.

NEWTON-UPON-AYR, a small parish on the coast of Kyle, Ayrshire. Pop. in 1801, 1,724; in 1831, 4,020; in 1841, 4,482.—The burgh of N., a suburb of the royal burgh of Ayr, presses on one side on the r. bank of the river Ayr, and on another on the frith of Clyde, and lies compactly on a third side with Wallace-town, a conjoint suburb. It was for a long time dependent chiefly on the collieries, but has sprung into new energy under the influence of trade and manufacture. Ship-building, rope and sail-making, iron-foundries, and salt-pans, supply employment; and about 400 weavers, and upwards of 600 hand-sewers, work for the warehouses of Glasgow. N. possesses a joint interest with Ayr in the harbour of that town; has a railway to it from the coal-mines in the p. of St. Quivox; and exports nearly all the coals, the traffic in which constitutes the chief part of the harbour's trade. Pop. of borough in 1841, 3,768.

NEWTON-VALENCE, a parish in Hants, 4 m. S of Alton. Area 1,810 acres. Pop. in 1841, 331.

NEWTON-WATER, a parish in Huntingdonshire, 5½ m. NNW of Stilton. Area 740 acres. Pop. in 1831, 108; in 1841, 97.

NEWTON-WELSH, a parish in Monmouthshire, 3½ m. NW of Monmouth. Area 2,070 acres. Pop. in 1831, 224; in 1841, 230.

NEWTON (West), a township in Broomfield p., Cumberland, 8½ m. N of Cockermouth, in the line of the Maryport and Carlisle railway. Pop. in 1831, 322; in 1841, 335.

NEWTON (West), a parish in Norfolk, 2½ m. NE by N of Castle-Rising. Area 1,030 acres. Pop. in 1831, 232; in 1841, 242.—Also a township in Kirk-Newton p., Northumberland, 6 m. WNW of Wooler.—Also a township in Aldbrough p., Yorkshire, 8½ m. NE of Kingston-upon-Hull.

NEWTON-LE-WILLOWS, a township in the p. of Patrick-Brompton, Yorkshire, 4 m. WNW of Bedale, on a branch of the Swale. Area 1,660 acres. Pop. in 1831, 269; in 1841, 334.

NEWTON-ON-THE-WOLDS, a parish in Lincolnshire, 8½ m. SSW of Great Grimsby. Area 2,060 acres. Pop. in 1831, 158; in 1841, 146.

NEWTON-WOOD, a parish in Northamptonshire, 4 m. N by W of Oundle. Area 1,590 acres. Pop. in 1831, 449; in 1841, 483.

NEWTOWN, a township in Irthington p., Cumberland, 4½ m. NNW of Carlisle. Pop. in 1831, 215; in 1841, 217.—Also a parish and market-town in Montgomeryshire, 8 m. SW of Montgomery, intersected by the Montgomeryshire canal, and situated in a fertile valley, on the banks of the Severn, over which there is here a bridge of 3 arches. Pop. in 1831, 4,550; in 1841, 3,226. The town has been considerably extended of late years, and possesses some good houses. The new flannel-hall is a spacious and handsome edifice. The staple manufacture of N. is that of flannel. There are several fulling-mills and bleaching-grounds, besides potteries, tanyards, and malt-kilns, in the town and its vicinity. By the reform act, N. was added as a contributory borough to Montgomery. The borough comprehends the p. of N., and the townships of Hendidley and Gwestydd in the p. of Llanllwchaiarn. Pop. in 1851, 6,371.—Also a township in Chillingham p., Northumberland, 3½ m. ESE of Wooler.—Also a chapelry in Wem p., Shropshire, 12 m. N by W of Shrewsbury.—Also a parish in the co. of Southampton, 10 m. N by E of Whitchurch, on the S bank of the Emborne. Area 570 acres. Pop. in 1831, 269; in 1841, 246.—Also a disfranchised borough and chapelry in Calbourne p., in the isle of Wight, 5 m. W by N of Newport. Until disfranchised by the reform act, with a pop. of 95 in 1841, N. returned 2 members to parliament!

NEWTOWN, a village in the parish of Shandrum, co. Cork, 4 m. W of Charleville. Pop. in 1831, 175; in 1841, 237.—Also a village in the p. of Abbeyknockmoy, co. Galway. Pop. in 1831, 216.—Also a village in the parish of Lusmagh, King's co., 2¾ m. S by W of Banagher. Pop. in 1831, 348; in 1841, 197.—Also a parish in co. Meath, 2¾ m. N of Kells. Area 1,103 acres. Pop. in 1831, 217; in 1841, 174.—Also a village in the p. of Rosmire, co. Waterford, 2 m. NE by E of Kilmacthomas.—Also a village in co. Dublin, on a head-stream of the Dodder, 2 m. S by W of Rathfarnham.—Also a hamlet in co. Galway, 5½ m. NNE of Gort.—Also a parish in co. Westmeath, containing part of the town of Tyrrel's-pass, and the villages of Ballinagore, Killavally, and Newton-Loe. Area 10,247 acres. Pop. in 1831, 2,752; in 1841, 3,010.

NEWTOWN, a village of New South Wales, in the co. of Cumberland, and p. of Petersham, about 3 m. from Sydney. Pop. 1,215.—Also a village of Tasmania, in the co. of Buckingham, and p. of Hobarton, on the Derwent, 3 m. from Hobarton.

NEWTOWN, a township of Rockingham co., in the state of New Hampshire, U. S., 30 m. SE of Concord, bordered on the NW by a large pond, and generally fertile. Pop. in 1840, 541.—Also a township of Fairfield co., in the state of Connecticut, 62 m. SW of Hartford. The surface is elevated, and is watered by Polatuck river, a branch of the Housatonic. The soil consists of gravelly loam, and is generally fertile. Pop. in 1840, 3,189.—Also a township of Queen's co., in the state of New York, 152 m. S of Albany. It is bounded on the N by East river and Long Island sound, and is drained by Newton creek. In some parts it is hilly and stony, but its soil, consisting chiefly of sand and clay loam, is generally well-cultivated. Pop. 5,054. The village contained, at the same period, about 500 inhabitants.—Also a township of Bucks co., in the state of Pennsylvania, 20 m. NE of Philadelphia. It has a level surface, and is drained by Newton creek, a branch of Neshaminy creek. Pop. 1,414. The town is on N. Creek, and contains about 100 inhabitants.—Also a township of Delaware co., in the state of Pennsylvania, 14 m. NW of Philadelphia. It has a hilly surface, and is drained by Crum and Darby creeks. The soil is chiefly loam. Pop. 752.—Also a village of King and Queen co., in the state of Virginia, 38 m. ENE of Richmond, 3 m. N of Mattapony river. Pop. 100.—Also a village of Anderson township, Hamilton co., in the state of Ohio, 119 m. SW by W of Columbus, on the E side of Little Miami river, and consisting in 1840 of about 30 dwellings.—Also a creek which has its source in Newtown township, Queen's co., in the state of New York, and flows into East river, opposite New York.

NEWTOWN-ANDERSON, a village in the p. of Calry, co. Sligo, 1¼ m. E of Sligo. Pop. in 1841, 135.

NEWTOWN-ARDES, a parish in co. Down, containing the town of N. Area 14,802 acres. Pop. in 1831, 9,981; in 1841, 13,886. The S boundary, to the extent of 3½ m., is identical with the extreme

N shore of Lough Strangford.—The town of N., formerly a parl. borough, stands on the road from Bangor to Downpatrick, 3½ m. NNE of Comber, and 8 m. E of Belfast. It is one of the few first-class towns of co. Down, as to size and importance; and one of the most attractive towns of the N of Ireland, as to neatness, regularity, architecture, and convenience. The weaving of muslin employs a large number of the male pop.; and the embroidering of muslin, for the manufacturers of Glasgow, employs many of the female pop. The town has a large brewery; and conducts an extensive retail trade. Pop. in 1831, 4,442; in 1841, 7,621.

NEWTOWN-BARRY, a parish of co. Wexford, containing the town of N. Area 8,248 acres. Pop. in 1831, 1,592; in 1841, 3,723. On its S boundary rises Blackrock mountain, whose alt. above sea-level is 1,071 ft., and at its SW extremity Mount Leinster, whose alt. above sea-level is 2,610 ft.—The town stands on the NW verge of the co., at the confluence of the Clady with the Slaney, 6½ m. NW of Ferns. It is built in the form of an irregular square, and possesses a character of neatness. Pop. in 1831, 1,430; in 1841, 1,437.

NEWTOWN-BELLEW, a village in the p. of Moylough, co. Galway, 3 m. WNW of Mount-Bellew. Pop. in 1841, 249.—Also one of three denominations of a series of bogs, from 1 m. to 4 m. N of the v. of N. The other denominations are New-Forest and Gartnadeeve. Area of the whole, 11,063 acres.

NEWTOWN-BREDA, a village in the p. of Knockbreda, co. Down, 3 m. S by E of Belfast. Pop. in 1841, 384.

NEWTOWN-BUTLER, a village in the p. of Galloon, co. Fermanagh, 13½ m. SE by S of Enniskillen. It gives the title of Baron to the earls of Lanesborough. Pop. in 1831, 412; in 1841, 541.—Also a village in the p. of Oranmore, co. Galway. Pop. in 1841, 405.

NEWTOWN-CLONBUN, a parish in co. Meath, 1 m. E of Trim. Area 566 acres. Pop. in 1841, 298.

NEWTOWN-CONYNGHAM, a village in the p. of All-Saints, co. Donegal, 6½ m. W of Londonderry. Pop. in 1841, 186.

NEWTOWN-CROMMOLIN, a parish, containing a v. of the same name, 3 m. NE by E of Clough, in co. Antrim. Area 3,445 acres. Pop. in 1831, 727; in 1841, 799. Pop. of the v. in 1841, 175.

NEWTOWN-FORBES, a post-town in the p. of Clongesh, co. Longford, 2½ m. NNW of Longford. Pop. in 1831, 537; in 1841, 478.

NEWTOWN-FORTESCUE, a village in the p. of Grangegeeth, co. Meath, 3½ m. N of Slane.

NEWTOWN-GIRLEY, a village in the p. of Girley, co. Meath, 3 m. N of Athboy. Pop. 105.

NEWTOWN-GORE, a village in the p. of Carrigallen, co. Leitrim, 5 m. ESE of Ballinamore. Pop. in 1831, 207; in 1841, 187.

NEWTOWN-HAMILTON, a parish, containing a town of the same name, in co. Armagh. Area 12,404 acres. Pop. in 1831, 7,253; in 1841, 7,538. The County-water runs on the W boundary; and the Newtown-Hamilton river, a head-stream of the Castletown, drains most of the interior. The highest ground, Dangry mountain, situated a little NW of the town, has an alt. of 1,093 ft. above sea-level.—The town of N. stands on the middle road from Armagh to Dublin, 4¾ m. SW of Mount-Norris. Pop. in 1831, 1,020; in 1841, 1,231.

NEWTOWN-LENNAN, a parish in co. Tipperary, 3¼ m. N by E of Carrick-on-Suir. Area 5,774 acres. Pop. in 1831, 1,931; in 1841, 1,806.

NEWTOWN-LIMAVADDY, a market-town in the p. of Drumachose, co. Londonderry, on the r. bank of the river Roe, 2 m. E by S of the SE extremity of Lough Foyle, and 7½ m. N of Dungiven. The church is a handsome structure; the private houses, though including a number of cabins, and of large but poor tenements, are aggregately much better than those of most second-rate towns in Connaught. The linen trade of N. was at one time of considerable extent, and it gives promise of reacquiring its former importance. The great impulse given for some time past to the agriculture of the surrounding country, has occasioned a steady increase to the prosperity of the town. Pop. in 1831, 2,428; in 1841, 3,101.

NEWTOWN-LINFORD, a parish in Leicestershire, 5½ m. NW of Leicester, on a branch of the Soar. Pop. in 1831, 449; in 1841, 495.

NEWTOWN-LOE, a village in the p. of Newtown, co. Westmeath, 2¼ m. W by S of Tyrrel's-Pass.

NEWTOWN-MOUNT-KENNEDY, a small town in the p. of Upper Newcastle, co. Wicklow, 17¼ m. SE of Dublin. Pop. in 1831, 825; in 1841, 823.

NEWTOWN-PLATTEN, a village in the p. of Duleek, co. Meath, 2 m. SW of Drogheda. Pop. 116.

NEWTOWN-SANDES, a village in the p. of Murhir, co. Kerry, 4½ m. S of Tarbert. Pop. 314.

NEWTOWN SQUARE, a village of Delaware co., in the state of Pennsylvania, U. S., 90 m. ESE of Harrisburg, containing in 1840 about half a dozen dwellings.

NEWTOWN-STALABAN, a village in the p. of Tullyallen, co. Louth, 1½ m. NE of Drogheda.

NEWTOWN STEPHENSBURG, a village of Frederick co., in the state of Virginia, U. S., 154 m. NNW of Richmond. Pop. in 1840, about 700.

NEWTOWN-STEWART, a town in the p. of Ardstraw, co. Londonderry, on the river Mourne, 5 m. W of Gorton. N. was originally called Lislas; it acquired its present name from Sir William Stewart, to whom it was granted by Charles I. In consequence of its commanding a great pass from the valley of the Foyle, and the N sea-board of Donegal and Londonderry to the centre and the S of the kingdom, it was long an important military post. Pop. in 1831, 1,737; in 1841, 1,405.

NEWTOWN-TRIM, a village in the p. of Newtown-Clonbun, co. Meath, on the l. bank of the Boyne, ¾ m. E of Trim.

NEW TRENTON, a village of Whitewater township, Franklin co., in the state of Indiana, U. S., 81 m. ESE of Indianapolis. Pop. in 1840, 250.

NEW TRIPOLI, a village of Linn township, Lehigh co., in the state of Pennsylvania, U. S., 86 m. ENE of Harrisburg, on a branch of Maiden creek.

NEWTYLE, a parish and village at the SW verge of Forfarshire. An opening or pass through the Sidlaw hills, on the SE side of this p., between the hills of N. and Hatton, bears the name of 'the Glack of N.,' and is traversed by the turnpike from Dundee to N. and Meigle, and by the Dundee and N. railway. The v. of N., 11 m. from Dundee, is rapidly rising to the importance of a trafficking town. Standing on the highway between Dundee and Strathmore, and at the terminus of a railway constructed for draining to the great seaport the produce of the magnificent strath, and holding communication by railway with Dundee, it is rapidly becoming a depot for grain and other agricultural produce. The inhabitants, however, are almost exclusively weavers of linen fabrics, chiefly sheetings, for the manufacturers of Dundee. Pop. in 1831, 904; in 1841, 1,264.

NEW UTRECHT, a township of King's co., in the state of New York, U. S., 7 m. N of New York. It occupies the W extremity of Long Island, and is separated by the Narrows from Staten island. It is generally level, and has a light sandy soil. Pop. in 1840, 1,283.

NEW VILLAGE, a village of Brookhaven township, Suffolk co., in the state of New York, U. S., 198 m. SSE of Albany.—Also a v. of Greenwich township, Warren co., in the state of New Jersey, 54 m. NNW of Trenton, on the Morris canal. It consisted in 1840 of about a dozen dwellings.

NEWVILLE, a village of Danube township, Herkimer co., in the state of New York, U. S., 66 m. WNW of Albany. Pop. in 1840, 200.—Also a v. of Newton township, Cumberland co., in the state of Pennsylvania, 30 m. SW of Harrisburg, on Big Spring creek. Pop. 654.—Also a v. of Worthington township, Richland co., in the state of Ohio, 74 m. NNE of Columbus, on the N side of Clear fork of Mohiccan creek. Pop. 250.

NEW VINEYARD, a township of Franklin co., in the state of Maine, U. S., 48 m. NW of Augusta. The surface is hilly, and is watered by a branch of Seven Mile river, and by a branch of Sandy river, both tributaries of Kennebec river. Pop. in 1840, 927.

NEW WILMINGTON, a village of Lakawannock township, Mercer co., in the state of Pennsylvania, U. S., 241 m. WNW of Harrisburg, consisting in 1840 of about 20 dwellings.

NEW WINDSOR, a township of Orange co., in the state of New York, U. S., 86 m. S by W of Albany. It has a hilly surface, and is drained by Murderer's creek, an affluent of Hudson's river, by which the township is bounded on the E. The soil is chiefly loam. Pop. in 1840, 2,482. The v. is on the W side of the Hudson, and contained in 1840 about 250 inhabitants.

NEW WOODSTOCK, a village of Cazeenovia township, Madison co., in the state of New York, U. S., 115 m. W by N of Albany. Pop. about 300.

NEW YEAR ISLANDS, a group off the N coast of Staten island, Tierra-del-Fuego, in S lat. 54° 41′, W long. 64° 28′. They abound with marine, and other birds, and seals. They were first visited by Cook, on the 31st Dec. 1774, and received from him the name which they bear.

NEW YEAR'S ISLANDS, a group off Arnheim Land, on the N coast of Australia, to the NW of Goulburn islands, in S lat. 11° 55′, E long. 133°

NEW YEAR'S RANGE, a mountain-range in New South Wales, in the district of Wellington, near the Rogan river, in S lat. 30° 20′, E long. 146° 53′.

NEW YORK, the most populous as well as the most important and influential of the United States, between N lat. 40° 30′ and 45°, and W long. 71° 56′ and 79° 56′; bounded on the N by Lake Ontario, the St. Lawrence, and Lower Canada; on the E by Vermont, Massachusetts, and Connecticut; on the S by the Atlantic ocean, New Jersey, and Pennsylvania; and on the NW by Pennsylvania and Lake Erie. Exclusive of Long Island, it is 320 m. long, and 312 m. broad; and contains in the whole 46,085 sq. m., or 29,494,400 acres,—an area nearly equal to that of England and Wales.

Physical features.] The SE angle of the state is mountainous, being traversed by several ridges proceeding from New Jersey, one of which crosses the Hudson river at the Highlands, presenting a bold and lofty face along both margins of the river, and abounding in the most magnificent scenery. The Catskill mountains as a range are the most elevated, and have several culminations of considerable size; but the greatest elevation in the state is Mount Marcy, in the Adirondack group, which rises 5,467 ft. above the level of the ocean. The country of Lake Champlain is hilly, and becomes mountainous on approaching the highlands which divide the waters of the lake from those which flow into the St. Lawrence and Lake Ontario. The W part of the state, lying between Lake Ontario and Pennsylvania, is principally level, except near the state line, where it becomes more broken and abrupt. From Genesee river, near its mouth, to Jamestown on the Niagara, there is a remarkable ridge running almost the whole distance, 78 m. in a direction from E to W. Its general alt. above the neighbouring land is 30 ft., and its width in some places is not more than 120 ft. The elevation of this ridge is 160 ft. above the level of Lake Ontario, to which it descends by a gradual slope, and its distance from that lake is from 6 to 10 m. There is every reason to suppose that this ridge was once the margin of the lake. About 20 m. S, and parallel to the latter, there is another ridge which runs from Genesee river to Black Rock, the country between being called the Tonawanda valley. There is equal reason to believe that this ridge formerly marked the limit of the waters of Lake Erie.—The long narrow valley which contains Lake Champlain and the Hudson, is extremely irregular, being in some places 40 m. in breadth, and in others contracted to the immediate neighbourhood of the stream. Along the shores of the river the land is generally high, with few level tracts.—The valley of the Mohawk is seldom more than 1½ m. in breadth, and generally not more than 1 m. It is bordered by two long ranges of hills, presenting little variety of aspect. In the first part of its course it flows through extensive flats.

Rivers and Lakes.] The Hudson rises in the mountainous region on the W side of Lake Champlain in several small branches, and pursues a S course to the sea at New Y. Its whole length is 324 m. From its mouth to Hudson, 130 m., it is navigable for the largest ships; and to Troy, 166 m. for sloops. For 25 m. above New York it is 1 m. wide. Where it breaks through the highlands, its navigation suffers no impediment except the narrowing of the channel, and here its waters are deeper. The precipitous and broken cliffs which project towards the river render the scenery at this point extremely grand and romantic. The combined action of the tides at the mouth of the Hudson, from its two outlets to the sea, carries the swell up the stream at the rate of 15 or 25 m. an hour. Sturgeon, shad, and herring, ascend this river in the spring, and are taken in great abundance.—The Mohawk rises near Oneida lake, and runs SE 135 m., and joins the Hudson a few miles above Albany. It is about 60 rods in breadth at Schenectady, gradually lessening to 12 or 16 at Utica. Its waters are clear, and its course diversified with beautiful islands. The intervals on both banks are rich and handsome. This stream is very unequal, and has many falls and rapids; the whole descent from its source to the Hudson is estimated at 367 ft. A canal 1½ m. in length connects the Mohawk with Wood creek, running into Oneida lake, and thence communicating with Lake Ontario.—The Genesee rises in Pennsylvania, and runs N across the W part of New York into Lake Ontario; its whole course in this state is about 125 m. About 5 m. from its mouth, at Rochester, are falls of 96 and 75 ft.; above these the stream is navigable for boats nearly 70 m., when two other falls occur of 60 and 90 ft. The harbour on the lake at the mouth of this river is called Port Genesee.—Black river, which receives its name from the colour of its waters, rises in the highlands N of the Mohawk, and its branches interlock with those of the Hudson. It pursues a NW course of 120 m., and falls into Lake Ontario near its outlet. It is a deep but sluggish stream, and the navigation is interrupted by falls, a series of which, called the Long falls, extend 14 m. The land upon this stream is generally a rich dark-coloured mould. The St. Lawrence washes a portion of the northern limit of the state. It is here wide, and has a swift

current, but its navigation is obstructed by rapids. The Oswegatchie consists of two branches, which unite 4 m. above their entrance into the St. Lawrence. The E branch is about 120 m. long, and the W nearly 100 m. The Oswego issues from Oneida lake, and runs NW into Lake Ontario. It is about 40 m. long, and is a rapid stream; its navigation is assisted by locks and canals. The Saranac rises in several large ponds, and flows NE 65 m. into Lake Champlain at Plattsburg; it is not navigable, but is a good mill stream. The Susquehanna rises in this state in a number of branches that spread over a tract of 160 m. These numerous streams are collected by two large branches, the Tioga, and the E branch or Susquehanna, which unite shortly after passing out of this state. The E branch has a course of 140 m. in New Y., and affords navigation for many rafts of timber. The Alleghany and Delaware also rise in this state.—Lakes Ontario and Champlain lie on the borders of this state. Lake George, one of the most beautiful lakes in the world, lies in the eastern part of the state, between Lake Champlain and the Hudson. It is 33 m. long, and 2 m. broad. Its greatest depth is 60 fath. It abounds with fish, such as trout, bass, and perch. The clearness of its waters, and the beautiful scenery around it, have rendered this lake the admiration of every traveller. Lake George was called by the French Lac Sacrement. An outlet 3 m. in length, and of 100 ft. descent, connects it with Lake Champlain. Many battles were fought on its borders during the early wars with the French, and in the revolution.—A cluster of small lakes lie toward the western part of this state, and discharge their waters by the Oswego river into Lake Ontario. The principal of these, beginning in the E, are: Oneida lake, 20 m. long from E to W, and about 3½ m. wide; it receives Wood creek at the E end, by which and a canal it communicates with the Mohawk. This is a very beautiful lake, and is celebrated for the abundance of its fish. Skeneateles lake, 15 m. long, and 1 to 1½ m. wide, also abounds with fish, and its trout are large. Owasco lake is 11 m. long, and 1 to 2 m. wide. Cayuga lake is 38 m. long from N to S, and 1 to 4 m. wide. In some places the shore of this lake is precipitous, but in general it is a gentle declivity from the surrounding country to the water. Its waters are shallow, but sufficient for navigation: several steam-boats ply upon them. A bridge of 1 m. in length crosses the N end of the lake. Seneca lake, nearly parallel with Cayuga, is 35 m. long, and 2 to 4 m. wide. At its S end is an extensive marsh. Crooked lake is 18 m. long, and from 1½ to 1 m. wide. Canandaigua lake, 14 m. long, and 1 m. wide, is a beautiful sheet of water, and surrounded by a fertile country. Another lake, called Chatauque, lies in the W extremity of the state near Lake Erie, and sends its waters S into the Alleghany river. It is 18 m. long, and from 1 to 3 m. wide.

Bays and harbours.] The sea-coast of New Y. is nearly all comprised within the shores of Long island, which present a few harbours and inlets, but none that are much frequented by shipping. The bay or harbour of New Y. is very safe and capacious. Its boundaries toward the sea are Long island and Staten island. It extends 8 m. below the city, and is from 1½ to 5 m. broad. It embosoms several small islands on which are fortifications. The Hudson enters this bay from the N. The East river, or channel between New Y. island and Long island, communicates with Long island sound on the E; the Kills, a strait between Staten island and the Jersey shore, communicate with Newark bay and the river Raritan on the W; and the Narrows open into the Atlantic toward the S. At low water the entrance by the Narrows is somewhat difficult for large ships, and the entrance from the sound is obstructed by the rocky strait of Hell-gate. There are several harbours on Lake Ontario, the most noted of which is Sackett's harbour, toward the E end of the lake. It is deep and safe, and was an important naval station during the war of 1812. Oswego has a good artificial harbour, and Buffalo, Dunkirk, and Portland, on Lake Erie, have similar works.

Climate.] As this state embraces a wide extent of territory, stretching from the lakes of Canada to the Atlantic, it must of necessity exhibit considerable diversities of climate. A district of level country around New Y. allows the sea-air to penetrate far inland. Along the Hudson, as far up as the Highlands, the climate is little different from that of the sea-coast; but beyond the mountains the mild and damp winds from the sea do not penetrate. Below the Highlands, the prevailing winds are southerly through the summer, the weather is variable, and the changes of temp., governed by the winds, frequent and sudden. The humidity of the air thus brought in from the sea, produces frequent showers in the middle and eastern region of the state. After two or three days of sultry weather, with the wind from the S, the clouds gather round the Catskill mountains and fall upon the country in thunder-gusts. To this process the S part of the state is indebted for all its supplies of rain during summer. In winter, spring, and autumn the rain and snow come in a great measure from the SE or between E and N. In the northern part, near the St. Lawrence and Lake Champlain, the weather is less variable, and the winters are long and severe, with a clear and settled sky. In the western parts, from the Catskill mountains to Lake Erie, SW winds prevail in a great proportion throughout the year; E winds are nearly unknown. In this region the average temperatures are about 3° higher than in the same lat. further E. With these distinctions kept in view, the following particulars, which relate to that portion of the country around Albany, may give a distinct idea of the climate in most parts of the state. The rigours of winter commence about the 20th of December, and end with February or by the 10th of March, at which time the ice in the Hudson usually breaks up. Between April 15th and May 5th, most of the migratory birds appear; and the lilac opens its blossoms from the 12th to the 30th March, with the appearance of the robin and blue-bird. The apple and pear are in bloom by the 25th or 30th April. The usual range of the therm. in the middle of the day, from April 10th to May 15th, is between 64° and 72°. In summer 90° is a high temp., and never continues but for a few days. Early wheat is cut about July 12th, and the wheat and rye harvest are completed about Aug. 15th. Buckwheat is cut in October. Maize ripens from the middle of September to the 10th or 20th October. Oats are reaped about the middle of August. Hay is cut from the 4th to the last of July. Winter-rye and wheat are sown from the 20th of Aug. to the last of September. The therm. in September often stands at 90°. From the middle of March to the last of April the weather is variable, and the changes of temp. great and sudden, though it is generally rainy, with long storms and E winds. May is a variable month, with the first half usually wet. In June the summer begins, and July is subject to drought. August is showery, with the greatest uniformity of temp. of any month in the year. The same weather continues to the 15th or 20th of September. In this month there is commonly an equinoctial storm. October is extremely pleasant, and is the best month for travelling except perhaps June. Early frosts, which destroy the tender garden vegetables, occur about September 26th; corn ripens as late as the middle of October. The leaves of the forest trees feel the early frosts, although they do not commonly drop before the 15th or 25th October. December is usually cold and showery, with frequent and long storms from the E and NE, with rain, hail, and snow. Sleighs are little used till the end of the year. The 'Indian summer' begins about the last of October, and extends, with occasional interruptions, into December.

Soil and Geology.] This extensive state exhibits every variety of soil. In the level country of the N part, to the E of Lake Ontario, and along the St. Lawrence, the soil is a warm sandy loam, and constitutes a large tract of the best land for agriculture. Around Lake Champlain there is an extensive dist. of clayey soil extending to the hills that skirt the Mohegan mountains. The alluvial flats of the Mohawk valley are highly fertile. The other parts of this valley have a stiff loam as far W as the Catskill mountains extend; beyond which the soil partakes more of the character of the western region. In this last region the hills are rocky and precipitous, and the valleys consist of black vegetable mould. The Genesee flats in the western part of the state have long been celebrated for their fertility. W of Albany are extensive sandy plains interspersed with marshes, which are rather cold. From the Highlands N to

the Mohawk, the soil is dry and warm, being in general either a gravelly or sandy loam. E of the Hudson, in this region, are rich alluvial tracts. Below the Highlands, the soil is principally dry and warm. The west end of Long island is fertile and well cultivated. In the eastern parts are sandy barren plains.—With some inconsiderable exceptions, the rock formations belong entirely to the primary and older fossiliferous or transition series. The primary rocks, which occupy the smaller portion of the surface, occur in two disconnected tracts in the SE and NE sections, but in both cases are offsets from the great primary region of New England. The southern tract includes the Highland range, which passes into Massachusetts near the SE corner of Duchess co., the SE corner of the mainland between the highlands and the sea, and the NW part of Long island with Staten island. The prevailing rocks of this district are gneiss, mica-slate, and primitive lime-stone, with some other stratified rocks; granite occurs only in beds or veins in the other rocks. The N primitive district lies between Lakes Champlain and Ontario. Felspathic granite, traversed by green-stone dykes, gneiss, hornblende, and primitive lime-stone, are the prevailing rocks of this region. The remaining rock-formations, occupying much the greater part of the surface, belong to the older fossiliferous group, and are characterised by a great simplicity of arrangement, arising from the great extent of the several members of the group, and their undisturbed horizontal position. They present a series of terraces rising by successive steps from the N toward the S, stretching nearly across the state S of Lake Ontario and the Mohawk, from E to W, and intersected at right angles by numerous valleys of denudation, some of which are occupied by fine lakes, and others form the fertile and beautiful abodes of a prosperous population. Shales, fossiliferous limestones, sandstones, and slates, here alternate with each other in an endless variety.—The most important metallic minerals are iron and lead. Galena or sulphuret of lead occurs in several localities. Iron is very generally diffused over the E part of the state, under the various forms of magnetic oxide, the red or specular oxide, and bog-ore, all of which are worked. Beds of magnetic ore extend, with little interruption, from Canada to the vicinity of New Y. The most important localities are in Orange, Rockland, Putnam, and the NE cos. Rich beds of the specular ore occur at several localities in St. Lawrence and Jefferson cos. Bog-ore is also abundant, except in the N primitive district. Sulphuret of iron, or iron pyrites, abounds in various localities, and at Canton is used in the manufacture of copperas and alum. Gypsum is pretty generally diffused through the W part of the state, and is highly valued as a manure. Hydraulic limestone, furnishing good water-cement, abounds in Madison, Onondaga, and some of the neighbouring cos. Marble, freestone, gneiss, and other building-stones are plentiful and of excellent quality.

Agricultural productions.] The stock and productions of agricultural industry, as exhibited in the census of 1845, were: 505,155 horses; 2,072,330 neat cattle, of which number 999,490 were giving milk, and produced 79,501,733½ lbs. of butter and 36,744,976 lbs. of cheese; 6,443,855 sheep, producing 4,607,002 fleeces, and 13,864,828 lbs. of wool; and 1,584,344 hogs. The cereal productions, as compared with those of 1840, were as follow:

	Wheat.	Indian corn.	Rye.	Oats.
1840	12,286,418	10,972,286	2,979,323	... bush.
1845	13,391,770	14,722,114	2,966,322	26,323,051 „

	Buckwheat.	Barley.	Potatoes.
1840	2,287,885	2,520,060	30,123,614 bush
1845	3,634,679	3,108,704	23,653,418 „

The number of pounds of flax raised were, respectively, in 1840, 2,712,000, and in 1845, 2,897,062. By the same census of 1845 it was ascertained that 192,503 acres were sown with barley; 117,379 with pease; 16,231 with beans; 255,495 with buckwheat; 15,322 with turnips; 255,162 with potatoes; 46,089 with flax; 1,013,665 with wheat, of which only 958,233 were harvested; 595,135 with Indian corn; 317,099 with rye; and 1,026,915 with oats. The average products to the acre were, barley, 16$\frac{1}{10}$ bushels; pease, 15; beans, 10; buckwheat, 14$\frac{1}{2}$; turnips, 88; potatoes, 92$\frac{2}{3}$; wheat, 13$\frac{1}{2}$; Indian corn, 54$\frac{4}{5}$; rye, 9$\frac{1}{3}$; and oats, 26. Flax yielded 62$\frac{1}{2}$ lbs. to the acre. The quantity of the following articles of production is from the census of 1840: hops, 447,250 lbs.; silk cocoons, 1,735 lbs.; maple sugar, 10,048,109 lbs.; and hay, 3,127,047 tons. Beside the above staples, fruit, lumber, wine, pot and pearl ashes, tar, pitch, and turpentine, &c., are items of some consideration to the farmer.

Manufactures.] The manufactures of this state are equally extensive with its other departments of industry. In 1845, there were 118 cotton factories, using annually raw material to the value of 1,132,702 dol., and producing 31,234,633 yds. of cloth, valued at 2,877,500 d.; 345 woollen factories, consuming raw material to the value of 2,877,804 d., and producing 4,916,998 yds. of woollen, and 1,592,890 yds. of cotton and woollen cloths, valued at 4,281,257 d.; 71 incorporated, and 1,608 unincorporated silk factories; 1,984 grist-mills; 7,406 saw-mills; 87 oil-mills; 740 fulling-mills; and 820 carding-mills. The number of iron-works was 500; trip-hammers, 156; distilleries, 221; asheries, 738; glass-factories, 15; rope-factories, 79; chain-cable factories, 7; oil-cloth factories, 24; dyeing and printing factories, 18; clover-mills, 115; paper-mills, 82; tanneries, 1,414; and breweries, 102. The total amount invested in manufactures, in 1840, was 55,252,779 d.; and in 1845, about 9 per cent. increase.

Commerce.] As a commercial state, New Y. surpasses all others in the Union. The value of the exports, for the year ending 30th June, 1846, was 36,935,413 d., of which 29,585,866 d. was the value of domestic, and 7,349,547 d. of foreign products. The imports were valued at 74,254,283 d., of which 65,903,763 d. arrived in American, and 8,350,520 d. in foreign bottoms. The aggregate tonnage of New Y. is about 2,300,000 tons. In 1840, there were in the state 469 commercial, and 1,044 commission houses in the foreign trade, with a capital of 49,533,001 d.; 12,207 retail stores, with a capital of 42,135,795 d.; 9,592 persons engaged in the lumber-business; 7,593 in internal transportation; and 1,228 in the fisheries, which employed a capital of 949,250 d.—The banks of New Y. are one of its distinguishing features, and exercise a barometric effect on the financial condition of all the other states. The laws of the state require a quarterly statement to be made to the comptroller. See article on NEW YORK CITY.

Canals.] New Y. surpasses every state in the Union for canals. The great Erie and Hudson canal, from Albany to Buffalo, was begun in 1817, and finished in 1825, at the cost of above 7,000,000 ds. It is 370 m. long, and was originally 40 ft. wide and 4 ft. deep, but has been deepened to 6 ft., and widened to 70 ft. Lake Erie is 565 ft. above the Hudson at Albany, and the whole rise and fall of lockage on the canal is 698 ft. See ERIE CANAL. A number of side-cuts branch off from the canal to different places. One of these, from Syracuse to Oswego, is 38 m. long; another, from Montezuma to Cayuga and Seneca lake, 20 m. Crooked Lake canal, 8 m. in length, and Chemung canal, 23 m., connect Lake Seneca with Crooked Lake and the Susquehanna. The canal boats for the conveyance of passengers are generally 80 ft. in length and 14 ft. in width, drawing from 1 to 2 ft. of water. The cabin occupies nearly the whole length of the deck, and is 8 ft. in height, with single berths on each side for 30 persons. They are drawn by 3 horses, and proceed day and night 4 m. an hour. Boats with merchandise go about 55 m. in 24 hours; the passage-boats make, including delays, 85 m. progress in the same time.—

The Chenango canal, begun in 1833 and completed in 1837, extends from the Erie canal at Utica up the valleys of the Saquoit and Oriskany creeks, and down that of the Chenango to the Susquehanna at Binghampton, 97 m. Rise from Erie canal to summit level, 706 ft., fall thence to the Susquehanna, 303 ft.—The Champlain canal extends from the Erie canal in Watervliet, on the S side of the Mohawk, up the valley of the Hudson, crossing that river in Saratoga, leaving it at Fort-Edward, and passing down the valley of Wood creek to Lake Champlain at Whitehall. Its length is 64 m.—The Genesee and Alleghany canal, extends from Rochester up the valley of the Genesee, and thence by that of Oil creek to the Alleghany, at Olean, 107 m., with a branch from Mount-Morris to Danville, 15 m. Its summit level at Portage is 979 ft. above the Erie canal at Rochester. The northern branch or Black River canal extends from the main trunk at Rome to the foot of the High Falls in Leyden on Black river, 35 m., with a navigable feeder of 11 m. from near Boonville to the upper streams of Black river.—The Delaware and Hudson canal, beginning at Eddyville, on the Roundout creek, 3 m. from the Hudson, ascends the valley of the creek, and passing into that of the Neversink, follows it down to the Delaware; it then runs up along the latter to the mouth of the Lackawaxen, and up this river to Honesdale in Pennsylvania. Its length is 109 m., depth 4 ft., width at surface 32 to 36 ft. The chief object of this canal is the transportation of coal, and a railroad from Honesdale to Carbondale, 16 m., affords access to the Wyoming coal-field.—The total length of the artificial navigable channels of this state, including the two unfinished works, is about 950 m., made at an expense of about 20,000,000 d. There are also about 500 m. of river and lake navigation within its borders, and a frontier line of navigable lakes and rivers of about 400 m. Ship-canals have been projected round the falls of Niagara, from the river Seneca to Great Sodus bay on Lake Ontario, and from Oswego by the Oswego and Oneida rivers, Lake Oneida, and the Mohawk to the Hudson.

Amount and Value of Goods cleared on the State canals in 1836.

	Tons.	Value.
Produce of the forest (lumber, timber, staves, ashes, &c.),	755,252	7,282,438 d.
Produce of animals (butter, cheese, provisions, wool, &c.),	24,025	5,328,028
Vegetable food (wheat, flour, &c.),	195,810	12,102,863
Other agricultural produce,	5,903	1,188,943
Manufactures,	88,810	7,380,576
Merchandise,	127,895	31,973,864
Other articles,	113,103	2,377,631
Totals,	1,310,807	67,634,343

The total tonnage of all property on the canals, ascending and descending, its value, and the amount of tolls collected for 17 years, are as follows:

Year.	Tons.	Value.	Tolls.
1836	1,310,807	67,634, 343 d.	1,614,342 d.
1837	1,171,296	55,809,288	1,292,623
1838	1,333,011	65,746,559	1,590,911
1839	1,435,713	73,399,764	1,616,382
1840	1,416,046	66,303,892	1,775,747
1841	1,521,661	92,202,929	2,034,882
1842	1,236,931	60,016,608	1,749,196
1843	1,513,439	76,276,909	2,081,590
1844	1,816,586	90,921,152	2,446,374
1845	1,985,011	100,553,245	2,646,181
1846	2,268,662	115,612,109	2,756,106
1847	2,869,810	151,563,428	3,635,381
1848	2,796,230	140,086,157	3,252,212
1849	2,894,732	144,732,285	3,268,226
1850	3,076,617	156,397,929	3,273,899
1851	3,582,733	159,981,801	3,329,727
1852	3,863,441	196,603,517	3,118,004

The decrease in the charge on *up* freight is striking. It has fallen from one dollar in 1820, including tolls and freights, to 26 cents, in 1852. And the carrier who got 49 cents in 1830, got only 11 cents in 1852, or about 3½ cents for carrying 100 pounds 100 m.

Aggregate of property arriving at tide water.

The total tons coming to tide water from Erie and Champlain canals, for each of the last nineteen years, and the aggregate value thereof in market was as follows:—

Year.	Tons.	Value.	Year.	Tons.	Value.
1834	553,596	13,405,022 d.	1844	1,019,094	34,183,167 d.
1835	753,191	20,525,446	1845	1,204,943	45,452,321
1836	696,347	26,932,470	1846	1,362,319	51,105,256
1837	611,781	21,822,354	1847	1,744,283	73,092,414
1838	640,481	23,038,510	1848	1,447,905	50,883,907
1839	602,128	20,163,199	1849	1,579,946	52,375,521
1840	669,012	23,213,573	1850	2,033,863	55,474,637
1841	774,334	27,225,322	1851	1,977,151	53,927,508
1842	666,626	22,751,013	1852	2,234,822	66,893,102
1843	836,861	28,453,408			

The aggregate value of wheat and flour.

The whole quantity of wheat and flour which came to the Hudson river, from 1834 to 1852, inclusive, with the aggregate market value of the same, and the amount of tolls received on all the wheat and flour transported on the canals in each year, from 1837 to 1852, inclusive, was as follows:—

Year.	Tons.	Value.	Tolls.
1834	130.452	5,719,795 d.	Not ascertained.
1835	128.552	7.395.939	do.
1836	124,982	9,796,540	do.
1837	116.491	9,640,156	301,739 d.
1838	133.080	9,883,586	380,161
1839	124,683	7,217.841	404.525
1840	244,862	10,362,862	700,071
1841	201,360	10,165,355	621,046
1842	198,231	9,284,778	606,727
1843	248,780	10,283,454	731,816
1844	277.865	11,211,677	816,711
1845	320,463	15,962,950	851,533
1846	419,366	18,836,412	1,099,325
1847	551,205	32,890,938	1,460,424
1848	431,641	21,148,421	1,126,133
1849	434,444	19,308,595	1,128,064
1850	461,781	20,218,188	1,114.519
1851	457,624	16.487,652	867,881
1852	576,772	22,564,256	995,160

Trade of the Western states and of New York discriminated.

The following statement gives the total tonnage arriving at tidewater, by way of the Erie canal, for a series of 17 years, distinguishing between the tonnage from this state, and the tonnage from Western states:

Year.	From Western states.	From New York.	Total.
1836	54,219 tons.	364,906 tons.	419.125 tons.
1837	56,255	331,251	387,506
1838	83,233	336,016	419.249
1839	121,671	264,596	386,267
1840	158,148	309,167	467,315
1841	224,176	308,314	532,520
1842	221,477	258,672	480,149
1843	256,376	378,969	635,345
1844	308,025	491,791	799,816
1845	304,551	655,039	959,590
1846	506,830	600,662	1,107,270
1847	812,840	618,412	1,431,252
1848	860,154	534,183	1,184,337
1849	768,659	498,068	1,260,724
1850	773,858	598,001	1,371,359
1851	966,993	541,684	1,508,677
1852	1,151,978	492,721	1,644,699

Comparative values of Flour.

The average price of flour each year at Albany is also given:

Year.	Western states.	New York.	Bbls. arriving at tide-water.	Price.
1835	268,259	868,561	1,136,778	2 d. 50 c.
1836	317,108	775,979	1,093,087	8 75
1837	284,902	747,676	1,032,578	9 50
1838	552,283	637,036	1,189,319	8 50
1839	683,509	425,544	1,109,053	6 50
1840	1,666,615	1,080,084	2,146,699	4 84
1841	1,232,987	596,657	1,829,644	6 00
1842	1,146,292	543,064	1,776,051	5 18
1843	1,568,645	670,532	2,239,177	4 56
1844	1,727,714	746,939	2,474,653	4 50
1845	1,553,740	1,288,416	2,842,156	5 57
1846	2,723,474	929,330	3,652,804	5 05
1847	3,989,232	791,107	4,780,338	6 84
1848	2,983,688	770,114	3,753,802	5 58
1849	2,842,821	886,938	3,739,759	5 00
1850	3,084,959	905,277	3,990,236	5 00
1851	3,485,734	495,467	3,991,201	4 00
1852	3.937,366	877,731	4,815,097	4 53

Of the 3,118,244 d. collected during 1852, of navigation, there was paid:

On flour and wheat,	995,160 d.
On other products,	1,323,024
Total on down freight,	2,319,084
On up freight or merchandise,	799,160
Total,	3,118,244

Railroads.] The railroads in this state are wholly the work of incorporated companies, but the state has lent its credit in aid of one great work of general interest,—the connection of the Hudson and Lake Erie by railroad. The Long island railroad extends from Brooklyn to Greenport, 98 m. A ferry of 25 m. from Greenport to Stonington connects this line with the Stonington and Boston railroad. The Reusselaer and Saratoga railroad extends from Troy to Ballston Spa, 24½ m. The Mohawk and Hudson railroad runs from Albany to Schenectady, 15 m., and is continued by the Schenectady and Saratoga railroad, running from the former place to Saratoga Spring, 21½ m. The Utica and Schenectady railroad, running along the N bank of the Mohawk, connects these two places, 78 m. The Utica and Syracuse railroad, 50 m., forms the connecting link between Albany and Auburn, a distance of 139

m., by means of the Auburn and Syracuse railroad, of 25 m., which extends from Syracuse to Auburn. The Tonawanda railroad extends from Rochester through Batavia to Attica, 47 m., and is connected with Lake Ontario by the Rochester railroad, of 8 m. The Lockport and Niagara-Falls railroad connects those two points, 20 m. The Buffalo and Niagara-Falls railroad runs from Buffalo to the Falls, 23 m. The Ithaca and Oswego railroad connects Lake Cayuga with the Susquehanna, 29 m. The Hudson and Berkshire railroad extends from the city of Hudson to the Massachusetts line towards West Stockbridge, 32 m., and the Catskill and Canajoharie road continues this route from the former place on the Hudson to the latter on the Mohawk, 70 m. The Haerlem railroad, from New Y. to Haerlem, although but a few miles long, is remarkable for its solid and costly viaducts, and its tunnel of 600 ft., cut through a hard granite rock. The New York and Albany railroad is to follow the route of this work. The New York and Erie railroad, the greatest undertaking of the kind in the States, if we except the Charleston and Cincinnati railroad, is to extend from Tappan on the Hudson, 24 m. above New Y., through the southern border cos. to Dunkirk on Lake Erie, 446 m. The cost of the work is estimated at 10,000,000 d.

Population.] The state of New Y., according to a census taken in 1845, contained 59 counties, 843 townships, 11 cities, and about 180 incorporated and from 700 to 800 non-incorporated villages. The pop., at several periods, and its progressive increase, are exhibited in the annexed table:

Years.	Population.	Decennial increase Numerical.	Per cent.
1790,	340,120	...	...
1800,	586,756	246,636	72·5
1810,	959,949	373,193	63·6
1820,	1,372,812	412,863	43·0
1830,	1,918,608	545,796	39 8
1840,	2,428,921	510,313	26·6
1850,	3,098,818	669,897	27·7

The employments of the pop., in 1840, were as follows: In agriculture, 455,954; in commerce, 28,468; in manufactures and trade, 173,193; in mining, 1,898; in ocean-navigation, 5,511; in internal navigation, 10,167; and in the learned professions, 14,111. The division of castes and sexes was thus:

	Whites.	Coloured.	Total.
Males,	1,207,357	23,809	1,231,166
Females,	1,171,533	26,222	1,197,755
	2,378,890	50,031	2,428,921

In 1845, the numbers of the people, natives of the state, were 1,894,278, or nearly three-fourths; of the Eastern states, 228,881; of other states, 83,642; of Mexico and South America, 977; of Great Britain and Ireland, 277,890; of France, 10,619; of Germany, 49.558; and of the other parts of Europe, 8.222. The numbers liable for military duty were 228,292, and the paupers amounted to 8,909, of whom one-fourth belonged to the city of New Y.

Immigration.] The following table exhibits a comparative view of the immigration from all the countries for the 4 years noted:

Nation.	1849.	1850.	1851.	1852.
Ireland	112,691	116,582	163,256	115,537
Germany	55,705	45,402	69,883	118,120
England	28,321	28,125	28,553	31,271
Scotland	8,840	6,771	7,302	7,648
Wales	1,782	1,520	2,189	2,530
France	2,683	3,398	6,064	8,776
Spain	214	257	278	455
Switzerland	1,405	2,351	4,499	6,455
Holland	2,447	1,174	1,789	1,223
Norway	3,300	3,150	2,112	1,889
Sweden	1,007	1,110	872	2,066
Denmark	159	90	229	156
Italy	602	475	618	358
Portugal	287	55	26	29
Belgium	118	230	475	82
West Indies	449	554	575	265

Turkey	6	5	4	4
Greece	6	3	1	6
Poland	133	183	142	186
Arabia	8	...	...	...
Total	220,603	211,796	289,601	299.504

Ecclesiastical statistics.] The religious denominations of this state are very heterogeneous, comprising churches of every creed, and persons of every shade of opinion. The Protestant Episcopal church was established by law previous to the revolution, and has retained its influence here in a greater degree than elsewhere. It is presided over by two bishops, the see of one being 'New Y.,' and of the other 'Western New Y.' The whole number of churches belonging to this denomination was, in 1845, 238; the clergy, in 1848, numbered 245 in the dio. of New Y., and 104 in that of Western New Y. The Catholics had in 1845, 104 churches, and a large number of other religious and charitable institutions: they are chiefly confined to the large Atlantic cities, where the Irish and other Catholic foreigners are most numerous. Of the evangelical churches the Episcopal Methodists are decidedly the most numerous; they had 892 travelling, 102 superannuated, and 860 local preachers, 141,937 church-members, and 78,237 Sunday scholars, in 1845. The regular Baptists had 43 associations, 730 ministers, 116 licensed preachers, 811 churches, and 87,776 communicants: and the Anti-Mission Baptists had two associations, 14 ministers, three licensed preachers, 25 churches, and 964 members. The Presbyterians had 3 synods, 219 ministers, 172 churches, and 21,555 members. The Congregationalists had 123 ministers, 130 churches, and 6,719 members. The Universalists had 16 associations, 252 societies, 163 meeting-houses, and 144 preachers. The Unitarians had 66 churches; the Dutch Reformed, 160; the German Reformed were also numerous, and the Quakers had 153 meeting-houses. The Lutherans and Moravians are also well represented. The Jews had 15 synagogues, and form a highly respectable class: they are chiefly confined to the large cities, being altogether occupied in trade and commerce.—By the census of 1845, it appears that in the state of New Y. there were 10 colleges, 163 academies, 55 female seminaries, and 22 other educational institutions of a higher grade. The state also supports 2 normal schools for the education of teachers. There were, at the above date, 10,707 common schools, with 291,595 scholars, and 1,569 private schools, with 44,783 pupils. The amount of capital, and the annual revenue of the several funds appropriated to the purposes of education, in 1846, were as follow, viz.:

	Capital.	Revenue.
Common School fund,	2,183,943 d. 01 c.	117,180 d. 60 c.
United States' Deposit fund,	4,014,520 71	275,667 50
Literature fund,	265,195 51	17,353 99
	6,143,662 d. 23 c.	411,202 d. 19 c.

There was also paid directly from the treasury for the deaf and dumb, 25,192 d. 99 c.; for the blind, 17,675 d. 48 c.—making the whole amount paid, in 1846, for purposes of education, 453,970 d 66 c Besides the above amounts, every city and town is separately taxed for the same purpose, and large sums are also raised by voluntary subscriptions, the whole probably to five times the amount appropriated by the state. The following table exhibits the condition of the principal colleges in 1847:

Name.	Location.	Founded.	Profes.	Alumni.	Stud.
Columbia	New York	1754	13	1,170	114
Union	Schenectady	1795	13	2,366	299
Hamilton	Clinton	1812	10	526	171
Madison Univ.	Hamilton	1819	9	140	144
Geneva	Geneva	1823	9	...	66
Univ. of N. York	New York	1831	11	320	146
St. John's	Fordham	1841	16	10	130

Theological schools are established at various places by the several denominations of Christians, the principal of which are the Theological institute and Union Theological seminary, at New Y., the former under the surveillance of the Protestant Episcopalians, and the latter of the Presbyterians; the Theological seminary, at Auburn, under the Presbyterians; the Hamilton Literary and Theological institute, under the Baptists; the Hartwick seminary, under the Lutherans; the Theological seminary, at Newburgh, under the Associate Reformed church; and St. John's college, at Fordham, under the Roman Catholics. Law schools are attached to Columbia college and the university of New York. The principal Medical schools are those of the College of Physicians and Surgeons, and the Medical department of the University in the city of New Y.; the Medical institution attached to Geneva college and the Albany Medical college; each of these has 6 teachers, and an aggregate number of students numbering 901, in 1847.—The total number of young persons constantly receiving instruction in the various educational establishments throughout the state, is about 640,000, and the expense may not be less than 4 d. each, amounting, in the aggregate, to 2,560,000 d. per ann., or a little less than 1 dollar to each inhabitant.

Constitution.] The constitution under which the state is now organized was adopted in convention on the 9th Oct. 1846, and ratified by the people on the 2d Nov. of the same year. Every male citizen of 21

years of age is eligible to vote, but he must have been such 10 days previous to the election, and have been an inhabitant of the state 1 year, of the county 4 months, and of the district where he offers his vote, 30 days next preceding. Coloured persons must have resided 3 years, and own a freehold of 250 doll. value, and have paid a tax. Convicts and persons betting or interested in a bet on the result of an election, are by law deprived of suffrage. The state is divided into 32 districts, each of which chooses a senator to serve 2 years,—the whole to constitute the senate, and 16 of whom go out annually. The members of assembly, which, together with the senate, constitute the legislature, are 128 in number, and are distributed according to pop., but each co. except Hamilton is entitled to one assemblyman. The pay of senators and assembly-men is alike, 3 doll. per day; the speaker receives 4 doll. The elections are held on the Tuesday succeeding the first Monday in November; and the legislature assembles at Albany on the first Tuesday in January. The governor and lieutenant-governor are elected for 2 years, by a plurality of all the votes. In case there are two candidates having the highest and equal number of votes, the election is decided by joint ballot of the two houses. Each must be at least 30 years of age, citizens of the United States, and have resided in the state 5 years next preceding. The lieutenant governor is *ex officio* president of the senate, but has only a casting vote. In case of death or disability of the governor, he succeeds to the office. The governor has a *veto* on all acts of the legislature, but all acts afterwards receiving a two-thirds vote are constitutionally valid without his signature. His salary is only 4,500 doll. per ann. The secretary of state, comptroller, treasurer, attorney-general, state engineer, and surveyor, are elected for 2 years, at the general election, and canal commissioners, who each receive 1,700 doll., are elected for 3 years, one being elected each year.—The judiciary is vested in a number of courts. The court for the trial of impeachments consists of the senate and justices of the court-of-appeals. The court-of-appeals consists of 8 judges, who are elected for 8 years, and so classified that two are elected every second year. The salary of each judge is 2,500 doll. The state is divided into 8 judicial districts, of which the city of New Y. is one, and in this city the number of justices is fixed by a special law. In each of the other districts, 4 justices of the supreme court are elected to serve 8 years. The justices have general jurisdiction in law and equity. Each co. except New Y. elects one co. judge for 4 years, who also acts as surrogate; but cos. having more than 40,000 inhabitants may elect a separate surrogate. Towns elect justices-of-the-peace to serve 4 years. Cities may have inferior local courts of civil and criminal jurisdiction. —The constitution provides for the payment of the public debt by a sinking fund; forbids the state to give its credit to any individual or corporation; and denies the further accumulation of indebtedness, except for casual deficits, or in case of insurrection or invasion, until the present debt is extinguished. No corporation nor banks are to be constituted by a special law, but general laws are to be enacted. If a bank becomes insolvent, bill-holders shall be preferred creditors. The school-fund is to be preserved inviolate; persons having conscientious scruples are exempt from military duty; truth may be advanced in libel cases; all feudal tenures are abolished; and leases not to be for more than 12 years. The constitution may be revised every 20 years, but not without the consent of the majority of the people.

Financial affairs.] The public debt of the state, on the 30th Sept. 1847, amounted to 24,446,590 doll., of which sum 16,773,789 d. were contracted for the construction of the canals, and the remainder for contingent and general purposes. The ordinary expenses of the government, exclusive of the interest on debt, is about 550,000 d. annually, which are met by taxes and fees of various kinds. The canals of the state for 1847 produced a net revenue of 2,888,005 d., a sum equal to $9\frac{4}{10}$ per cent. on the whole sum expended on their construction. The state has also lent its credit to several railroad companies, and issued stock to the amount of 5,228,700 d., on which interest is paid on account of such companies as have become insolvent, to the amount of 200,236 d. per ann.; this stock belongs to the general fund debt. The governor's message in 1851 reported that the direct debt consisted of 22.895,038·99 doll., composed of the canal debt, amounting to 16,505,345 doll., and the general fund debt of 6,389.693·32 doll. Two sinking funds are applicable to the discharge of these, and the surplus of these amounted to 214,392·17 doll. The general fund had a revenue of 792.451·69 doll., and the canal revenue was 3.442,906·62 doll. The value of the public works for which any debt has been created, and of other property which may be applied to the entire extinction of the public debt, is upwards of 90,000,000 doll.—The cities of the state are New Y., Brooklyn, Albany, Hudson, Troy, Buffalo, Rochester, Utica, Schenectady, Syracuse, and Oswego. There are also 160 incorporated villages, and between 700 and 800 villages not incorporated. Many of the incorporated villages are places of extensive trade and commercial importance, especially those on the Hudson river and the lakes, and on the lines of the canals and railroads. Among the larger villages may be mentioned Williamsburg, adjoining Brooklyn on the E; Jamaica, Sag harbour, Sing-Sing, Newburg, Poughkeepsie, Waterford, Herkimer, Lyons, Palmyra, Batavia, and Lockport.

History.] It has been supposed that New-Y. was first discovered by Verazzano, an Italian, but history generally attributes that honour to Hendrick Hudson, an English navigator, then in the service of the Dutch West Indian company. He sailed up the river which still bears his name, in 1609, and subsequently sold his claim to the Dutch government. A colony of that nation settled at Fort Orange, in 1613, and in the following year built some fortifications on the S point of Manhattan, now New Y. island, to which they gave the name of New Amsterdam. The territory claimed by the Dutch extended from Fort Good Hope, on the Connecticut river, to Fort Nassau on the Delaware, and undefinedly northward: to this they gave the name of New Netherlands. The English laid claim also to these lands, and in 1664, Charles II. granted the whole country to his brother, the Duke of York and Albany, and sent an army under Col. Nicholls to enforce a surrender and expel the Dutch. The name of Fort Orange was now changed to Albany, and New Amsterdam to New Y., the whole territory also taking the latter name in honour of the patentee. The colony was recaptured in 1673, and remained in the hands of the Dutch until the ensuing year, when it was restored to the English. During the seven years' war with the French, New Y. suffered much from their incursions, accompanied with the Indian savages, and the country was almost desolate, when the peace of Paris restored tranquillity, and gave Canada to the British. During the revolution which soon followed, it was the scene of many important warlike movements. New Y. city was held by the British after the battle of Long Island until the final evacuation on the 25th November, 1783, a day which has ever since been celebrated as a national anniversary by the inhabitants of the whole Union.

NEW YORK, the commercial capital of the North American Union, is located in the S part of the state, on Manhattan island, at the confluence of the Hudson and East rivers. The East river, and a small strait called the Haerlem river, divide the island from the main land. The city, which is co-extensive with the county, occupies the whole island, and is $13\frac{1}{2}$ m. long, with an average width of $1\frac{3}{4}$ m. Its greatest breadth is $2\frac{1}{2}$ m., and it contains an area of 14,200 sq. acres. The surface is very irregular, and consists chiefly of sand, in which are imbedded rocks of various species. The dense and populous part of the city has a circumf.

NEW YORK BAY.

From a Photograph taken

of about 9 or 10 m. The lower part, or that originally built, is irregularly laid out, but the upper portion has been laid out in a rectangular form. The pop., in 1845, was 371,102, of which 180,365 were males, and 190,737 females; in 1850, the pop. was returned at 515,394. There are several smaller islands belonging to the city, which are located in the Bay and East river, fronting its E and S portions, the principal of which are Governor's island, Bedlow's, Blackwell's, and Randal's. The two first of which are used by the United States as strongholds, and the others by the city-authorities for almshouse and hospital purposes.

Harbour.] The bay and harbour of New Y. is one of the most beautiful and safe in the world, and gives free ingress and egress to vessels of the largest class at all seasons of the year. On the Long Island side, on the E, lies the city of Brooklyn. At a distance of 8 m. from the Battery, S, is Staten island, with its highlands and neat villages; and on the W the Jersey shore, with Jersey city, Hoboken and Weehawken in sight, presenting a view of unsurpassed beauty and magnificence. The Battery, a public promenade, embowered in trees, and laid out in grass with gravel walks, is at the extreme S point of the city, and overlooks the bay, the Hudson and East river. Castle-Garden, built at the mouth of the Hudson, and connected with the W point of the battery by a bridge of about 100 yds. long, for several years past has been used as a place of public resort. At the entrance of the harbour are the Narrows formed by the approximation of Staten and Long islands. This pass is about $\frac{3}{4}$ m. wide, and is strongly fortified. Fort-Diamond is built on a reef, 200 yds. from the E shore, and is covered by Fort-Hamilton, which stands on an elevated site directly in its rear. Fort-Tompkins and Richmond, both strong works, defend the pass on the W side. In the bay are three islands, Governor's, Bedlow's, and Ellis's, all of which are well fortified, and together afford a safe protection from their respective directions; while at Throg's Neck, about 14 m. to the E, the eastern passage is protected by fortifications. Shipping from every maritime nation, and merchantmen of every size, line the wharves of the city on both sides, for the distance of 3 m., presenting a continuous forest of spars and cordage, mingled with the chimneys of numerous steamboats. Upwards of 1,000 sail vessels, 80 steamboats and steamships, 70 or 80 towboats, and 200 canal boats, may usually be found in the harbour of New Y. during the business-season. In the coldest winter this harbour is never obstructed by ice, so that vessels bound out or in are never delayed on that account.

Public Buildings.] The public buildings, which are generally of a costly nature, are numerous, including many magnificent churches and places of popular amusement.—The city-hall stands in the park, $\frac{3}{4}$ m. from the battery. It is built on three sides of white marble, and in the rear of red freestone. The building is entered from the front by twelve marble steps. A double circular stair-case, also of marble, leads to the second story, through the centre of the building; at the top of the stairway is a circular gallery, with marble floor, from which rise 10 marble columns of the Corinthian order supporting a splendid dome and sky-light. On this floor are the chambers of the two boards of the common council; the governor's room, hung with national portraits; and the chambers occupied by the city courts. The rooms on the first floor are occupied by the mayor and other officers of the corporation; the basement is appropriated as a mechanic's institution, the grand jury rooms, and other public offices. The building is surmounted by a cupola in which is placed a clock; there is also a room, constantly occupied, night and day, by a watchman, whose duty it is to keep a constant look-out for fires, and give notice of their occurrence and location by a given number of strokes on an immense bell which hangs in a belfry in the rear of the cupola, and which is used for no other purpose. Its sound may be heard from one end of the city to the other, and is immediately responded to by a hundred others in every direction. — The merchants' exchange is located in Wall-street, extending through to Exchange-street, and from William to Hanover streets. It is built of Quincy granite, and is 200 ft. long by 171 to 144 ft. wide, 77 ft. high to the top of the cornice, and 124 ft. to the top of the dome. The front has a recessed portico with 18 Grecian Ionic columns, 38 ft. high, and 4 ft. 4 in. thick, each one solid block of stone weighing 43 tons. The building occupies the site of the exchange destroyed in the great fire of 1835. It is entirely fire-proof, having no wood-work in its construction, except the doors and window frames.—The custom-house, situated on the corner of Nassau and Wall streets, is 200 ft. long, 90 ft. wide, and 80 ft. high, and is built in the most substantial manner of white marble. The entrance to the portico is reached by 18 marble steps, and the portico is embellished with 8 Grecian Doric columns, of the same material, 32 ft. high, and 5 ft. 8 in. thick. The rear portico is similarly ornamented, but in consequence of the rise of land from Wall to Pine-street, the ascent is only by three steps. The great business hall is a rotunda, 60 ft. in diameter, with recesses and galleries; it is surmounted by an elaborate stuccoed dome, supported by 16 elegant Corinthian columns, 30 ft. high. The cost of the building and ground was 1,175,000 d.; of the building alone, 950,000 d. This building is also perfectly fire-proof, and stands on the site of the old city hall, on the steps of which General Washington was inaugurated first president of the United States. —The halls of justice are 253 ft. long, by 200 ft. wide, and built in the massive Egyptian style of architecture, of granite quarried at Hallowell in Maine. In this building is held the court-of-sessions, and the principal police court; it contains also the city-prison or house-of-detention, with 148 cells for different classes of prisoners.—The Washington monument, now in process of erection, is built of a species of blue rock, a material which is continued up 17 ft. above ground, from a square base of 81 ft. Here the marble work for the obelisk commences. The obelisk is to be 500 ft. high, 55 ft. square at the base, and 33 ft. square at the top. The walls are 15 ft. thick at the commencement, leaving a space inside 25 ft. square, which will be of the same dimensions all the way up. The outside is constructed of what is known as Symington's large crystal marble, from the vicinity of Baltimore. The main body of the wall is of blue gneiss, and with this the interior is lined except where blocks presented by states or associations have been inserted. The above are only a few of the principal buildings appropriated to public business. There are numerous others, as the university, the lyceum of natural history, Columbia college, the city-hospital, several asylums, the Astor-house and other hotels, the new post-office, the revenue-office, and a great number of splendid private mansions.—Of the churches, many of which are superb specimens of architectural taste, the Church of the Holy Trinity is the most magnificent, and having a large open space about it, presents its symmetrical and elaborate structure to advantage on every side. It is built of brown freestone and surmounted by a gilded cross at the height of 264 ft. The building is of Gothic structure. The effect of the interior is grand and imposing. Grace church is the next in point of magnificence. It is

built of white marble, in the Gothic style, and the interior is arranged with elegance and taste. St. Thomas' is a beautiful structure of rough stone. The Reformed Dutch church is a beautiful building in the Gothic style. The new Unitarian church is also a fine building. The whole number of churches is 172, of which 23 are Baptist, 33 Protestant Episcopal, 30 Presbyterian, 6 Congregational, 30 Methodist, 13 Roman Catholic, 23 Reformed Dutch, 3 Universalist, 1 Unitarian, 6 Jewish, and 4 Quaker. —New Y. has few public grounds, but those are beautiful and well appreciated by the public. The city is supplied with an abundance of pure and wholesome water through an aqueduct of stone-masonry, laid in hydraulic cement, under ground, from Croton river, a distance of 40 m., to the receiving reservoir. See article CROTON CREEK.—New Y. has numerous literary, scientific, and benevolent institutions, each of which is of great utility in its peculiar modes of doing good. It has also several well-regulated theatres and operas, the principal of which are the Park, Bowery, Broadway, Astor, Chatham, Castle-garden, and some others of minor importance.

Commerce.] The annexed table shows the results of the commerce of New Y. in 1849 and 1850:

IMPORTS AT NEW YORK.

	1849.	1850.
Paying duty,	78,583,323 d.	95,359,625 d.
Free,	8,028,579	7,890,878
Specie and bullion,	2,813,380	10,502,115
Total,	89,425,282 d.	113,752,618 d.

EXPORTS.

	1849.	1850.
Domestic,	33,166,389 d.	33,227,676 d.
Foreign,	3,553,885	5,433,841
Specie and bullion,	4,739,903	5,885,103
Total,	41,460,177 d.	44,546,620 d.

The receipts for duties for the year ending the 30th June 1850 were 24,487,609 d., against 19,811,334 d. in 1849, and 20,839,680 d. in 1848. The aggregate commerce of the port for four years was as under:

	Imports.	Exports.
1846-7,	82,593,625 d.	46,543,793 d.
1847-8,	91,668,883	48,360,235
1848-9,	89,425,282	41,460,127
1849-50,	113,752,618	44,546,620
Total,	377,440,408 d.	180,910,775 d.

The annexed table shows what proportion of the imports consists of what is called 'dry goods.' The figures below show the amount entered for consumption, and withdrawn from warehouse for consumption:

	1848-9.	1849-50.
Manufacture of wool,	9,488,600 d.	14,877,122 d.
— cotton,	10,513,596	10,225,485
— silk,	13,354,077	15,602,424
— flax,	4,332,275	6,888,388
Miscellaneous,	4,227,998	2,372,909
Total,	41,916,546 d.	50,960,328 d.

It will be seen that nearly 45 per cent. of the imports is made up of dry goods. The following was the amount in value of goods entered for warehousing during these two years:

	1848-9.	1849-50.
Manufactured of wool,	1,257,163 d.	1,496,748 d.
— cotton,	1,773,571	1,446,706
— silk,	1,431,010	1,247,831
— flax,	442,311	702,425
Miscellaneous,	353,571	146,654
Total,	5,257,626 d.	5,040,364 d.

The imports at New Y. in 1850 were within 4,000,000 d. of the entire imports of the country in 1844-45. A comparison of the aggregate exports and imports from New Y. shows that the imports at this port amount to 60 per cent. of the goods brought into the country, and the exports to 32½ per cent. of the merchandise sent out of the country. The following summary of the value of imports and exports to and from New Y. shows, as compared with 1851, that the imports in 1852 declined 1,457,273 d., and the exports 16,606,449 d. The cause of this latter decrease appears to have been entirely owing to a change in the movements of specie, the exports of which were nearly 19,000,000 d. less than in 1851, whereas the exports of domestic produce show, it will be perceived, an increase of 1,554,006 d.

IMPORTS.

	1851.	1852.
Free goods,	9,636,967 d.	12,105,362 d.
Specie and bullion,	2,050,056	2,408,215
Dutiable goods,	105,741,847	106,670,411
Dutiable merchandise,	13,880,022	8,667,641
Total,	131,308,892	129,851,619

EXPORTS.

Domestic merchandise,	39,162,775	40,716,781
Foreign merchandise liable to duty,	4,014,052	4,828,622
Foreign merchandise free of duty,	712,813	381,851
Specie and bullion,	43,740,318	25,096,255
Total,	87,629,958	71,023,509

Shipping.] With regard to the shipping trade, the subjoined table shows the number of vessels which arrived at New Y. from foreign ports during 1852:

	Vessels.		Vessels.
American	2,300	Genoese	4
British	1,013	Mecklenburg	7
Bremen	125	Italian	9
French	18	Spanish	5
Austrian	9	Lubeck	2
Swedish	41	Oldenburg	17
Norwegian,	43	Columbian	1
Sicilian	19	Portuguese	23
Hamburg	48	Mexican	1
Danish	19	Venezuelan	4
Russian	14	Hanoverian	12
Belgian	20	Brazilian	3
Dutch	22	Bavarian	1
Neapolitan	4		
Prussian	34	Total	3,822
Sardinian	4		

COMPARATIVE STATEMENT OF ARRIVALS FOR

	1851.	1852.
Steamers,	166	206
Ships,	941	956
Barks,	883	860
Brigs,	1,303	1,253
Galliots,	4	2
Ketches,	2	...
Schooners,	588	544
Sloops	1	...
Yachts,	...	1
Total,	3,888	3,822

The number of passengers which arrived by the above vessels was as follows:

From foreign ports,	310,335
From California,	12,158
Total,	322,493

The number of passengers for the last 12 years is given as under:

1841	57,337	1847	166,110
1842	74,949	1848	191,909
1843	46,302	1849	221,799
1844	61,002	1850	226,287
1845	82,960	1851	299,081
1846	115,230	1852	310,335

The number of vessels which arrived and cleared from New Y. in 1850, with their tonnage and the number of seamen employed in them, was as follows:

ENTERED DURING 1850.

	Vessels.	Tonnage.	No. of seamen.
American vessels,	1,890	806,141½	27,540
Foreign ditto,	1,451	441,718½	18,618
Total arrived,	3,341	1,247,860	46,158

CLEARED.

American vessels,	1,463	699,617	24,263
Foreign ditto,	1,355	406,453½	17,208
Total cleared,	2,818	1,106,070½	41,471

By these returns it will be seen that considerably more than one-half the amount of tonnage employed in the commerce of New Y. is under foreign flags, of which two-thirds are British, and a similar proportion will be found in the other leading ports of the

United States. The annexed table shows the relative proportion of Foreign to American vessels employed in the trade of New Y. since 1821:

TONNAGE FROM FOREIGN PORTS.

Year.	No. of Arrivals.	Tons American.	Tons Foreign.	Total tons.
1821	912	155,723	16,240	171,963
1822	1,172	203,082½	23,707½	226,790½
1823	1,217	203,308	22,481	226,789
1824	1,364	236,080½	16,689	252,769½
1825	1,436	259,524½	20,654½	280,179½
1826	1,389	246,174½	28,822½	274,997½
1827	1,414	255,276	37,596½	292,872½
1828	1,277	236,308½	39,368½	275,677
1829	1,310	255,691½	25,820½	281,512
1830	1,489	280,918	33,797½	314,715½
1831	1,634	274,237½	62,772	337,009½
1832	1,808	295,293½	106,425	401,718½
1833	1,926	320,083½	110,835	430,918½
1834	1,932	352,225½	96,679½	444,904½
1835	2,044	373,465	90,999	464,464
1836	2,285	407,095½	149,634½	556,730
1837	2,071	368,011½	171,360½	539,372½
1838	1,790	377,563½	91,326½	468,890½
1839	2,159	422,349½	142,985½	565,335½
1840	1,953	409,458	118,136	527,594
1841	2,118	423,952½	125,073½	549,025½
1842	1,962	406,623½	148,691½	555,315½
1843	1,832	385,124½	106,370½	491,495½
1844	2,208	438,074½	155,298½	593,373½
1845	2,144	472,491½	140,858½	613,350
1846	2,292	496,761	185,404	682,165
1847	3,147	605,482½	333,537	639,019½
1848	3,060	657,794½	367,321½	1,025,116½
1849	3,227	734,008½	414,096	1,148,104½
1850	3,341	806,141½	441,718½	1,247,860

Banks.] According to the *New Y. Courier and Enquirer*, the banks of the city of New Y. showed, at their quarterly statement in December, 1852—and it must be remembered that banking is regulated and controlled by the states in America, and that mercantile pursuits are encouraged by tariffs and other legislation—a capital of 38,000,000 d., and liabilities to the extent of 131,000,000 d.; while the bank of England, with £19,000,000 in its vaults, and £14,000,000 of national securities, shows only liabilities to the extent of £43,874,000; so that, in proportion to their resources, the banks of New Y. have about three times the liabilities of the bank of England. The city of New Y. possesses more than half the banking capital of the whole state, which, by the last quarterly return was 65,450,000 d., with a total of liabilities for all the banks of the state of 220,000,000 d. To meet this vast amount of liabilities there was only 11,500,000 d. of specie in all the banks, and 21,000,000 d. of what are called cash *items*, but which are not classed with specie. In the last quarter the increase of capital was nearly 3,000,000 d., the increase of specie in the banks' vaults was 1,500,000 d., and the increase of liabilities 19,400,000 d. The *New Y. Merchant's Magazine*, a well-known authority, states that but one eminent merchant—and his death is still recent—has ever continued in active business in that city to the close of a long life without undergoing bankruptcy or a suspension of payments! In New Y. not 2 per cent. of the mercantile classes ultimately acquire wealth after passing through bankruptcy, and in Philadelphia the proportion is still smaller. According to *Palmer's Almanack* for 1849, there was in 1841—

Bankrupts,	33,739
Creditors,	1,049,603
Amount of debts,	440,934,615 dols.
Property surrendered,	43,697,307 ...

But on the property being realized, instead of a dividend of 10 cents. per dollar being paid, which this valuation would show, the proportion varied from 1 cent. in the southern district of New Y., to 13⅔ in the northern, being by far the largest dividend.

Progress of the city.] The following table shows the progress of the pop. and wealth of New Y.:

Year.	Population.	Value of real and personal estate.
1800	60,489	24,486,370 d.
1810	93,373	69,530,753
1820	123,706	69,530,573
1825	166,086	101,160,046
1830	202,589	125,283,518
1835	270,089	218,723,703
1840	312,852	252,843,163
1845	371,228	239,938,317
1850	517,849	256,217,093

City finances.] The receipts and expenditures of the corporation during the year ending 31st of December, 1852, exclusive of the fund set apart for the payment of the debt, were as follows:

Expenditure from Jan. 1, 1852, to Dec. 31, of the same year	8,294,241 d. 45 c.
Received from all sources for the same time	8,130,130 73
	164,110 72

Among the payments out of the treasury, and into it, the following are the most prominent:

	Expenditures.	Receipts.
Opening and paving streets	1,021,341 d. 82 c.	947,467 d. 90 c.
Common schools	653,935 06	40,621 53
Police	614,906 10	229 39
Alms-house	390,000 00	
Cleaning streets, and lamps, and gas	557,993 54	30,077 90
Street expenses	264,996 43	
Salaries	241,832 70	
Revenue bonds	2,368,970 00	2,933,755 00
Assessment bonds for paving streets	51,795 71	55,000 00
Docks and slips	294,986 29	5,784 25
From taxes	... ...	3,328,862 09
From money borrowed, payable by taxes and otherwise,	... ...	537,707 50

The expenditures and receipts on account of the City government, not including trust funds or the sinking fund, for the year ending Dec. 31, 1852, were as follows:

Expenditures,	3,116,793 d. 88 c.
Receipts other than from taxation	77,380 86
Balance payable from taxation	3,039,413 02

The great bulk of the city property, estimated at from 15,000,000 to 20,000,000 d., and the revenue thereon, which with the water-rent yield an annual income of nearly 1,000,000 d., are not included in the above statements. This property and these revenues are placed in the hands of certain trustees, and are pledged for the payment of the city debt, amounting on the 1st of Jan., 1853, to the sum of 13,885,856 d. There are in the hands of the commissioner of the sinking fund, applicable to the payment of this debt, city stocks, and bonds and mortgages, amounting to the sum of 3,896,266 d. 62 c.—Including the receipts and payments on account of the sinking fund for the payment of interest, and the sinking fund for the payment of the principal of the debt, the entire annual financial operations of the city government exceed 10,000,000 d., viz.:

Received into the treasury		8,170,130 d. 72 c.
Received on account of sinking fund, for payment of debt		1,162,377 04
Received on account of sinking fund, for payment of interest		926,517 59
Total sum received		10,219,025 35
Expenditure	8,294,241 d. 45 c.	
Expenditure on account of sinking fund, for payment of debt	1,116,337 60	
Expenditure on account of sinking fund, for payment of interest	790,171 77	
		10,200,750 d. 82 c.
		18,274 d. 53 c.

TOTAL AMOUNT OF THE CITY DEBT.

Besides the debt before given, of	13,885,856 d.
Reimbursable from the sinking fund, there is a debt for money borrowed to construct buildings, and for docks and slips, payable from taxation, of	1,005,000
Making a total debt of	14,890,856 d.

Schools.] The board-of-education, in the city of New Y., state that the whole number of schools within their jurisdiction, during the year ending 30th April, 1851, was 207, of which the schools of the public school society were 114; ward-schools, 72; corporate schools, 21; whole number of schools, 207. Among these were 17 schools for coloured children. The number of children taught, in 1850-51, was 107,363; in 1849-50, 102,974. The average attendance was, during the year ending Feb. 1, 1851, 40,055; during the year ending Feb. 1, 1850, 35,998. For the years ending

Feb. 1, 1848, and 1851, the number of schools, the whole number taught, the actual average attendance, and the aggregate cost of instruction for current expenses, were as follows:

1848.	Number of schools.	Number taught.	Aver. attendance.
Public schools	114	54,732	18,647
Ward schools	50	32,698	11,596
Corporate schools	18	2,169	1,878
Totals	182	89,599	32,122
Aggregate cost			201,176 d. 30 c.
Cost per scholar for 240 days' instruction			6 d. 26 c.

1851.	Number of schools.	Number taught.	Aver. attendance.
Public schools	114	53,239	19,273
Ward schools	72	50,559	18,716
Corporate schools	21	3,565	2,046
Totals	207	107,363	40,055
Aggregate cost			274,794 d. 59 c.
Cost per scholar for 240 days' instruction			6 d. 86 c.

Criminal statistics.] The following is a statement of the amount of crime brought before the courts of the city during 1848 and 1849:

	1848.		1849.	
	Convict.	Acquit.	Convict.	Acquit.
Murder and other high crimes	2	6	7	4
Manslaughter and other misdrs.	322	91	334	101
Special sessions	1,500	330	1,738	320

Sentenced to the state prison, in 1848—men, 119; women, 17; total, 186. In 1849—men, 135; women, 10; total, 145. Sentenced to the penitentiary, in 1848—men, 700; women, 170; total, 870. In 1849—men, 745; women, 131; total, 876. Sentenced to the city prison, in 1848—men, 162; women, 57; total 229. In 1849—men, 274; women, 94; total, 368. Sent to the house-of-refuge, in 1848—boys, 68; girls, 3; total, 71. In 1849—boys, 70; girls, 5; total, 75.

Climate.] The following meteorological observations were made at the New Y. hospital, in 1848 and 1850:

	Mean temp.		Highest temp.		Lowest temp.	
	1848.	1850.	1848.	1850.	1848.	18 0.
January	34°	35°	56°	57°	5°	18°
February	32	35	52	60	11	11
March	38	37	64	66	13	19
April	50	42	73	70	35	30
May	61	55	85	79	47	42
June	70	69	89	86	48	50
July	74	78	85	89	58	62
August	72	71	83	84	61	56
September	62	65	83	81	41	45
October	54	54	77	71	41	37
November	40	48	59	65	25	31
December	40	34	58	55	21	16

The average range of the barometer, and fall of rain, in these years, was as follows:

	Average barom.		Fall of Rain.	
	1848.	1850.	1848.	1850.
January	30·01	30·04	2·64 in.	5·21 in.
February,	29·86	29·96	1·45	2·48
March	29·95	29 88	1·73	5 51
April	29·98	29·92	1·15	2·19
May	29·82	29·84	6·13	7 91
June	29·86	29·98	5·78	3·36
July	29·95	29·95	4·01	4·63
August	30·03	29·96	2·22	5·91
September	29·83	29·99	2·45	5·57
October	29 93	29·92	6·16	1·75
November	30·02	30·00	2·25	1·40
December	29·99	29·97	6 37	4·48
			42·34	50·46

In 1848, the fall of snow was 24 inches; in 1850. 11. The NW wind prevailed 97 days in 1848, and 102 in 1850; a SW wind 65 days in 1848, and 76 in 1850; a NE wind 56 in 1848, and 51 in 1850.

Vital statistics.] In the year 1848 within a small fraction of 16.000 persons (15,919) were buried in the city of New Y. Large, however, as this aggregate is, it is not excessive, regard being had to the pop., nor indicative of any general insalubrity or special pestilence. Comparing the total number of deaths from disease with the estimated pop. of the city in 1848—450,000—the annual per centage is under 3 1-7th. The two most fatal maladies, according to the tables, were consumption and convulsions. Dysentery carried off 739, the chief mortality being in July and August; and typhus fever carried off 720, January, February, and March being the most fatal months. The tables of mortality bear out the statement that in the first 20 of the last 43 years, scarlet fever was nearly extinct in New Y., while measles and small-pox were of rare occurrence; whereas in the last 23 years, all these diseases have prevailed to an extent and in a mode which characterize epidemics. Since these diseases have been so prevalent the yellow fever has not appeared as an epidemic in New Y., nor in any place N of Charleston.

NEW YORK, a village of Switzerland co., in the state of Indiana, U. S., 103 m. SE of Indianapolis, on the N bank of Ohio river.

NEW YORK MILLS, a village of Whitestown township, Oneida co., in the state of New York, U. S., 96 m. WNW of Albany, on Sadaquada creek. Pop. in 1840, 900.

NEW ZEALAND,

A group of three islands in the S. Pacific, 1,200 m. E of New South Wales, 5,000 m. from the Peruvian coast of S. America, and 13,000 m from Great Britain, forming a long and comparatively narrow chain, the extreme points of which are 800 geog. m. distant from each other. They are comprised between the 34th and the 48th parallels of S lat., and the 166th and 179th meridians of E long. The northern and the middle islands are nearly of equal size, and their united territorial extent is nearly that of the United kingdom. The island to the S of Cook's strait has generally been called MIDDLE ISLAND, but by act of parliament in 1847, the name of NEW MUNSTER was conferred upon it; while the island to the N, generally known as NORTH ISLAND, was by the same act called NEW ULSTER; and the comparatively small island separated from the S extremity of New Munster by Foveaux's strait, till then known as SOUTH ISLAND or STEWART ISLAND, was called NEW LEINSTER.

Historical notice.] It is supposed by some that New Zealand was visited by Juan Fernandez. He left memoranda stating that he had sailed westward from South America 30 days, when he reached a country inhabited by a people of a light complexion, clothed in a kind of linen, who treated him hospitably; and the natives have traditions of having been visited by Europeans long before the time of Cook. Further information on this subject may be found in Burney's *History of Discovery in the South Seas.* It is clear, however, that Abel Jansen Tasman first made known the existence of New Z. to Europeans. He saw it first on the 13th Sept. 1642, when he made the N extremity of the N. island, according to his latitudes; and running down the E coast of the N. island, he passed, through Cook's strait, into a bay on the N shore of the Middle island, not far from the present town of Nelson, which he called Murderer's bay from the circumstance of his losing 4 men in a conflict with the natives, who prevented him or any of his people from landing here. Tasman, supposing the land he had skirted to be a continuation of the supposed great southern continent,—the *Terra Incognita Australis* of the geographers of that day,—called it Staatenland, or 'the States country.' In the following year, however, another Dutchman of the name of Brower ascertained the insularity of this portion of land, which induced the States-general to exchange its former appellation for that of New Z., although there was no one point of resemblance between the old and new countries,—the latter being rugged, rocky, and mountainous, rising in several places to the height of the peak of Teneriffe,—the former without a rock, and as flat as the fens of Lincolnshire. A French navigator, M. de Surville, afterwards doubled Cape Otou or the North cape, and discovered Lauriston's bay; and Cook ascertained that the strait discovered by Tasman, and thought to separate an island on the N from a great southern continent, only separated two islands from each other. Cook surveyed a great part of the coasts of New Z. between the years 1769 and 1777. In March 1772, M. Marion du Fresne, a French navigator, came in sight of Cape Egmont, on the W coast of the northern island, to which he gave the name of Le Pic Mascarin; and

from this point skirted the coast towards the SE. D'Entrecasteaux fixed the position of Cape Maria van Diemen; and Vancouver completed the examination of the southern island, which had been placed 40 m. too far E in the first chart. To the authentic geographical information collected by Cook, in his first and subsequent voyages between 1769 and 1774, relating to the coasts and harbours of the North and Middle islands, little substantial addition was made for the next half-century. The English trade with New Z. is almost as old as the first settlement of Australia. The vicinity of New Z. was even one great attraction to Australia, for a high estimate had been formed by the discoverers of the natural fertility of these islands, and the value of their timber and flax; and it was earnestly impressed upon the first governors of New South Wales, to find means of cultivating New Z. flax. The settlement at Norfolk island, a small uninhabited island two or three days' sail to the NW, was originally made, in 1793, from an idea that, being the nearest land to New Zealand, the plant might flourish there; and its first commandant was directed to procure one or more New Zealanders to teach the method of cultivating and dressing the flax. Meanwhile, sealing-expeditions had been fitted out by private enterprise to the Middle island. A shipwrecked crew spent a whole season near the S extremity of that island, and constructed a vessel to carry them to Sydney; and from this time the Middle island was frequently visited both for timber and seals. The information gained from the two New Zealanders brought to Norfolk island, encouraged the supercargo of a snow from India, at Sydney, to run into the Thames on the North island, and load with timber. His example was followed, and several experimental packages of flax were also taken off. After 1800 the intercourse thus established kept gradually extending, chiefly by means of whalers, whose frequent conflicts with the natives, however, tended to increase the general impression that New Z. was a land of savages and cannibals, irreclaimably beyond the pale of civilization. The Rev. Samuel Marsden, colonial chaplain at Sydney, had indeed conceived, towards the close of last cent., the benevolent scheme of establishing a mission in New Z.; but, owing to various hindrances, it was not till 1814 that he succeeded in landing the first missionary band on the Bay-of-Islands in the North island. Mr. Marsden's plan was taken up by the Church Missionary society; and in 1840 that body had 12 missionary stations N and S of the Thames, all on the E side of the North island. The Wesleyan missionaries commenced operations in 1823. In 1840 they had stations on the Hokianga and Kaipara, Manukau and Kawia, all on the W coast of the North island. The influence of the missionaries over the tribes in their vicinity soon became very great, and extended far beyond the range of their personal visitations. Encouraged by this, white settlers came to trust themselves with less of suspicion among the aborigines. A numerous body of shore-traders took up their abode in the vicinity of the Bay-of-Islands, the head-quarters of the Church missionaries; and a more select class acquired considerable property on the Hokianga, in the neighbourhood of the Wesleyans. In 1824, M. Duperrey touched upon the coast of New Z., during his circumnavigation of the globe; and in 1827, M. Dumont D'Urville, another French navigator, skirted the coasts of the North island. Settlements of a peculiar character also began to be formed about 1830 among the bays in and near Cook's straits. Originally they consisted of deserters from merchant or whaling vessels, or runaway convicts, who took native wives to insure the protection of some tribe, and disposed of their oil and bone to chance vessels from Sydney. In due time some Sydney houses entered largely into this business, and by making advances of stores and other commodities to those adventurers, gave permanence to the enterprise and their settlements. Some parties of sealers formed similar settlements at the S extremity of the Middle island, and also on the South island. During one of the periodical droughts in New South Wales, supplies of maize were sought in New Z. among other places. The fertility of the Bay of Plenty led some Sydney speculators to establish permanent agents there to collect the crops; the same thing appears to have been done at Kawia and elsewhere. Until 1833, the islands of New Z., having no ostensible government, were considered by vessels of all nations neutral ground and free ports; but in that year some of the settlers at the Bay-of-Islands applied to the government at Sydney for protection against the outrages perpetrated chiefly by escaped convicts; and a British resident, on the civil establishment of New South Wales, was established in New Z., but with limited functions. In 1839, a lieutenant-governor was despatched from England; and in February 1840, a treaty was negotiated between that functionary and the native chiefs assembled at Waitangi, ceding to her Majesty all rights of sovereignty the chiefs possessed; guaranteeing, on the part of her Majesty, to the chiefs free and undisturbed possession of their lands so long as they desired to retain them; and imparting to the natives all the rights of British subjects. On the 21st of May 1840, the whole of the three islands were declared to be under the sovereignty of her Majesty, the queen of Great Britain. On the 3d of May 1841, New Z. was proclaimed a colony separate and independent from New South Wales. In 1841, the New Zealand company was established; and in 1847 it was constituted the government-instrument for the disposal of territory; but in 1850, the company resigned its charter and functions into the hands of government. The treaty of Waitangi, and others in succession, ceded the sovereignty of the northern island to the British crown, and secured to the crown the right of pre-emption in those lands which the chiefs might wish to alienate. The queen became paramount of the soil, but the *proprietas* remained with the chiefs. It was optional for them to sell or dispose of their property. In the language of the treaty, they were guaranteed "the full, exclusive, and undisturbed possession of their lands and estates, forests and fisheries." "But," the clause proceeds, "the chiefs of the united tribes and the individual chiefs yield to her Majesty the exclusive right of pre-emption over such lands as the proprietors may be disposed to alienate, at such prices as may be agreed upon between the respective proprietors and persons appointed by her Majesty to treat with them on that behalf." For all practical purposes, the treaty of Waitangi is the title by which the crown of Great Britain holds the sovereignty of New Z.—From its position, and numerous harbours, and well-protected bays, in a line of coast exceeding 3,500 m. in length, the group is admirably adapted for the trade of the whole Southern Pacific, from Torres' straits to Tahiti, and as a naval station, to command the whole archipelago clustering between these points. Nor is the importance of New Z. solely owing to its position. Its climate is genial; its soil, with moderate labour, fruitful; its forests abound with a variety of fine timber; its flax has become to a large extent a cheap substitute for Russian hemp; its wool is becoming an article of export; and the produce of its agriculture, mines, and fisheries, is annually increasing. Still it must be borne in mind, that New Z. can only be rendered a wealthy and prosperous colony

by great labour and at much expense. It has neither a tropical climate, nor is it a country in which edible vegetables and fruits grow spontaneously and abundantly, neither is it inhabited by native animals adapted for the food of man. Its mountains are still covered with dense forests; and its plains and lowlands throughout much of their extent with impenetrable high fern and shrubs, or with swamps and marshes. To develop its natural resources, or create new ones, must be the work of time and energy. "Only a laborious peasantry," says Dr. Dieffenbach, writing in 1843, "can render the colony, in time, an entrepot of commerce, a depot for transit-trade, and a manufacturing country,—none of which it is at present."

I. New Ulster, or Eaheinomauwe, has its N extremity in a peninsular projection, the NW extremity of which is Cape Maria Van Diemen, discovered by Tasman in 1643, and the NE, Cape Otou or North cape. Cape Maria Van Diemen is formed of detached rocks of a hard conglomerate; and inland of this promontory the peninsula presents sandy hills of a dazzling whiteness, separated by swampy valleys mostly covered with rushes of the genus *typha*. North cape is high and bold; but is separated by a flat swampy belt of land from the hills at Kapowairua, which attain an alt. of 1,130 ft. Off North cape lies a small rocky island called Muri Motu or 'Lost island.' About 40 m. to the W of North cape are the Three Kings, a cluster of conical pinnacled rocks. To the parallel of 37° 40′, the island has a NNW and SSE direction, and nowhere exceeds 70 m. in breadth; but at the bottom of the Bay of Plenty it stretches out towards the E, and assumes a breadth of nearly 200 m., which it retains to the parallel of 39°, its general direction however being changed to NNE and SSW. From 39° S lat., the S extremity of the island Cape Kawa-Kawa, or Cape Palliser, in S lat. 41° 37′, it gradually contracts in breadth to about 50 m. Its total area has been roughly estimated at 38,000 sq. m.

Northern extremity.] Tracing the E coast of this insular division of New Z. from North cape to Cape Palliser, we meet with the shallow inlet of Sandy bay on the E side of the narrow peninsular extremity of the island. Then follows the larger and deeper inlet of Lauriston bay, or Manganui bay; to the S of which the coast-line trends eastwards to Wangara harbour, the scene of the massacre of the Boyd's crew in 1809. About 25 m. to the SE of Wangara lies the Bay of Islands, one of the finest harbours in New Z. Half-way between the Bay of Islands, and the bottom of Hauraki gulf, lies Wangari bay. The scenery of all this coast is that of a broken rugged country overspread with a dark and sombre but luxuriant vegetation. Hauraki or Waiho gulf, has an entrance of 40 m. wide between Point Rodney on the N, and Cape Colville on the S, and has a length of 70 m. to the mouth of the Thames river. The latter cape is the extreme point of a long promontory formed by a chain of wooded hills with a sharp crest and steep sides, at the base of the western slope of which runs the Waiho or Thames river. This chain, known as the Ahora mountains, is continued to the southward along the E coast.

Auckland, and the valley of the Thames.] The valley of the Thames is about 100 m. in length, extending to the neighbourhood of Lake Roturua. The frith presents several finely wooded islands, and several harbours, the most important of which is that of Waitemata, or Auckland, 40 m. distant from Point Rodney in S lat. 36° 51′, E long. 174° 45′. The river and harbour of Waitemata are shut in from the passages leading into the estuary of the Thames by the islands of Waiheki, Motu-Tapu, and Rangi-Toto. The first lieutenant-governor fixed on the shores of the Waitemata for the site of the future capital of New Z., influenced in this choice by its central position, its facility of internal water-communication by the Kaipara northwards, and by the Manukoa and Waikato southwards, and by the fertility of the soil. The distance across the island from Auckland to the head of Manukoa harbour, an inlet on the W coast of about 15 m. in length, and 8 m. broad, is only 7 m. The physical characteristics of the country around Auckland are thus sketched in a native publication of the year 1843: "The country in the district of Auckland is of that undulating character which marks the lower series of the secondary sandstone formations, with table-lands and corresponding valleys; so that the sections formed by the shores of the estuaries and rivers which indent it—the Waitemata, the Manukao, the Tamaki, and part of the gulf of Hauraki—present a succession of argillaceous sandstone cliffs of different heights, with intervening bays receding inland—the country lying between these great estuaries varying in breadth from 15 m. to 3 m., and at the portage of the Tamaki only ¾ m., affords over its surface flats of considerable extent and declivities practicable for agriculture, the bottoms being always occupied by a small stream—generally bare of wood, or covered with patches of small-sized trees suitable for fuel or fencing—and rising in gentle elevations to the mountain-ranges to the west and south, which are of a different geological formation, and are universally covered with forests of gigantic trees. In various parts of the above-described tract, hills shoot up in the form of truncated cones of various elevations, the highest about 500 ft., which are the remains of extinct volcanoes, each having a well-defined crater and a base of some extent, covered with loose fragments of vesicular lava and scoria, or immense masses of more compact lava cropping out at various points, the interstices, however, permitting the growth of a variety of shrubs and trees. The whole of the above-mentioned country, with the exception of the volcanic land, is well watered by natural streams, and water can be procured at all times in abundance by means of wells. About one-half of this district, consisting of undulating ground, is covered with fern and various shrubs, chiefly the *tupuka*, and possesses a soil of a rich yellow clay mixed with sand and charred vegetable matter, owing to the frequent burning of the fern, which, when broken up and exposed to the air, soon pulverizes into a fine rich loam, varying in depth from 1 to 2 ft., easily laboured; but, from the excellency of the subsoil, it may be cultivated to any depth required. The subsoil consists of a red and yellow clay, mixed with ferruginous sand. The substratum is formed of a soft blue and yellow argillaceous sandstone. One-fourth of the district presents a more level surface, being covered with dwarf *manuka*, fern, and a variety of small shrubs and tufts of grass. Its soil consists of a whitish clay mixed with sand, more adhesive than the former, yet, when broken up and exposed, soon pulverizes; the subsoil white clay and red ferruginous sand, substratum the same as the former. It is not so rich as the first-mentioned soil. The remaining fourth may be considered different from either of the former, being generally situated near the volcanic hills of a varied surface, the hilly portion being covered with fern and grass. The soil consisting of a dry red volcanic formation to a great depth, the greater part covered with scoria, and where it is only on the surface, the soil is a rich red loam, very fertile; another portion, covered with trees and shrubs, shows a rich mould of a volcanic nature to a depth

of several feet, mixed with red sand and small calcined stones, resting upon a substratum of concrete. Another small portion lying along the banks of fresh-water creeks, covered with evergreens and tree-ferns, affords a rich friable clay, mixed with ferruginous sand, resting on a substratum of a soft yellow and red ferruginous sandstone. It is thus seen what a variety of soils are offered to the agriculturist, each adapted to some particular production, and favourable to some peculiar mode of agriculture." The first English merchant vessel that anchored in the Waitemata was the barque Platina, on 13th Sept. 1840. At that period there was not a single European located on the shores of this harbour. See article AUCKLAND. In the lower part of the great plain of the Thames, the soil is clayey and little elevated above the mean level of the tides; but at the distance of 30 m. from the mouth of the river, the plain becomes dry, and is in many places ready for the plough. The elevated mountain-ranges on either side of this great plain consist of the unstratified classes of rocks which predominate in New Z., viz. greywacke, basalt, trap, and pumice.

South-east district.] A level tract from 4 to 8 m. wide, presenting a soil of pumiceous gravel, skirts the extensive embrasure of the Bay of Plenty, which presents several fertile islands, and one small low island, about 6 m. in circuit, called White island or Puhia-i-Wakari, which contains an active volcano, and yields considerable quantities of sulphur. At dusk the flames issuing from its crater are visible, and a white cloud resting above it usually marks its position in the horizon. The extreme eastern part of the North island is formed by a broad peninsula which divides the Bay of Plenty from the large islet on the E coast called Hawke bay or Wairau. Little is known of the SE portion of the island, with the exception of the coast line, which from Cape Mata-Mawi, the S extremity of Hawke bay, trends SSE in a high unbroken rocky line to Cape Palliser, at the entrance of Cook's strait; but the interior is known to be mountainous, and high ridges cross the island from Cape Mata-Mawi towards Cape Egmont on the W coast.

Valley of the Wairarapa.] The magnificent valley of the Wairarapa, which opens upon the SE coast of Cook's strait, contains about 500,000 acres of plains and down, and is bounded on either side by mountain-ranges affording admirable pasture. The northern or upper portion of this valley or rather series of valleys, is traversed by the head waters of the Manawatu, which flows through what is called 'the Gorge' in the great dividing range, and enters the sea on the W coast of the island; it is also watered by various streams which flow towards the E coast. Its lower portion is separated from the E coast by the Haurangi, Maungaraki, and Puketois ranges, which extend in a line parallel with the coast and at the distance of 8 or 10 m. from it. At the S end of the valley are two shallow lagunes covering an area of about 50,000 acres and surrounded by low swampy land, but having no entrance seaward. The mouth of the Wairarapa valley is open to the SW, but throughout the greater portion of its extent it is well sheltered by high ranges on the E and W, and enjoys a delightful, equable climate.

Port Nicholson and Wellington.] The high lands of Baring head, about the centre of the N coast of Cook's straits, divide Port Nicholson from Palliser bay. Two mountain-ridges which diverge at the source of the Hutt or Eritongo river from the main dividing ridge, there called the Tararua range, enclose Port Nicholson, a lake-like bay 9 m. in length by 5 m. in breadth, and the valley of its river. The land stretching on both sides of the Hutt is of great fertility. The harbour presents two deep bays, one of which, called Lambton harbour, forms the port of Wellington. The snowy peaks of the Tararua mountains form a prominent object in sailing down Cook's strait. The range extends towards the centre of the island, where it is connected by the Rua-Wahine range with the group of the Rua-Pahu and Tongariro in the district of Lake Taupo. The district of Wellington is a tongue of land averaging about 90 m. in length from N to S, by 60 m. in breadth, and containing about 3,456,000 acres, of which fully 2,000,000 are susceptible of cultivation. That portion of the district which lies to the W of the great dividing ridge and N of Cook's strait is well watered by the rivers Tarakina, Raugitikei, Manawatu, Ohau, Waikawe, Otaki, Waimea, and Waikanae. At the N extremity of this district, the foot of the Ruahine range is between 20 and 30 m. from the sandy beach of the W coast of the island. This distance remains merely the same as far S as 'the Gorge,' where the Manawatu river breaks through the dividing range on its way to the W coast; but from this point southwards the dividing ridge, here called the Tararua, bends more to the W. The country rises slightly from the coast to 4 or 5 m. inland, and with but few exceptions consists of open grass or of fern land interspersed with swamps and marshes; beyond this it becomes undulating and covered with wood; and the forest extends almost invariably to the summit of the dividing ridge.

Taranaki district, and New Plymouth.] The Taranaki country, so called from the native name of Mount Egmont, but to which English settlers have given the name New Plymouth, occupies that portion of the W coast of the North island where the coast-line, after sweeping round the broad headland of which Mount Egmont occupies the centre, trends towards the E. The settlement of New Plymouth is in S lat. 39° 1′, E long. 174° 15′. It possesses an equable climate and fertile soil, so much so as to be regarded by some as the "garden of New Z." Its soil, Mr. Hursthouse says, "a light friable loam, with a porous subsoil, is divided locally into three sorts, each marked by a different vegetation. The first is but a strip, extending along the coast, covered with light fern, interspersed with tufts of grass, and freely mixed, especially nearest the shore, with the black iron sand which is so plentiful here. The productive powers of this sand are rather surprising. Almost on the beach, within 60 yds. of high-water mark, some early emigrants formed a few rough gardens, which produced excellent crops of vegetables; and, strange as it may seem to an English farmer, upwards of 16 bush. of wheat have been obtained from a quarter of an acre of nearly the same description of soil. The second division, adjoining this, is a tract of great extent covered with fern 6 to 8 ft. high, intermixed with a small bush called *tutu*, and a species of tall grass called *toi-toi*. The surface is a vegetable decomposition of from 7 to 10 inches, matted together by the fern-root, with a light, yellow subsoil of many feet in depth, entirely free from stones, shells, gravel, or clay. The principal farms are on this land; and it may here be observed that the chief difference, as respects the cultivation of this soil and the preceding, is, that it requires more exposure before cropping. The third division is the bush, or forest-land, which joins the fern, and extends along the country in a rather irregular line, 2 to 5 m. from the coast, and a considerable distance back into the interior. This soil in appearance resembles the second description of fern-land, but turns up quite mellow, and fit for cropping at once." Away from the small block of cultivable land stretch various grassy plains, the nature and extent of which is as yet but little known.

Mount Egmont or Taranaki is the W extremity of a volcanic region which traverses the island from SW to NE, terminating on the shores of the Bay of Plenty, in which, as already noticed, is an active volcanic island. It is distinctly visible from Tongariro, bearing W by S, and offers a good landmark to vessels approaching Cook's strait from England.

From the river Waitera, northwards to the Mokau, the shores are elevated, and mostly consist of marl and a stiff blue clay. The country immediately inland is undulating in surface, and overgrown with fern; and further inland rises into low hills of gentle acclivity and rounded summits. Proceeding northwards from the Mokau, the shores as far as the mouth of the Manukau present in some places a low sandy beach, and in others are lined by sand-hills; inland, the country rises into mountains of from 1,500 to 2,000 ft., which to the S of the parallel of 38° arrange themselves into a continuous ridge, the northern extremity of the great dividing range, which, under the name of the Rangitoto mountains, begins with Mount Pirongia, alt. 2,428 ft., and extends S by E to Tongariro-peak, alt. 6,200 ft., and thence S to Ruapahu, alt. 9,000 ft.

Basin of the Waikato.] The Waikato, the largest river of the North island, rises on the N declivity of Mount Tongariro, in Lake Rotuairo, at an alt. of 1,700 ft. above sea-level; and running N, enters Lake Taupo, from the NE extremity of which it issues with a deep stream 300 yds. wide, and runs NNE to the parallel of 37° 30′ S, when it turns NW, and receives the Waipa; it then turns SW, and falls into the sea after a course of about 250 m.—Lake Taupo is about 36 m. in length by 25 m. in greatest breadth, and is situated about 12 m. N of Mount Tongariro, at an alt. of 1,337 ft. above sea-level. It is hemmed in by perpendicular cliffs of enormous altitude. A considerable portion of the country around it consists of level table-lands.

II. Middle Island, or Tavai-Poenammoo. The Middle island of New Z. is separated from the Northern island by Cook's strait, which is about 130 m. long, and has a general direction from S by E to N by W. The extreme S points of this strait are Cape Kawa-Kawa on the North island, and Cape Campbell on the Middle island, which are about 50 m. distant from each other. Its extreme N points are Cape Egmont on the N island, and Cape Farewell on the S island, which are 100 m. distant. It is of very varying breadth, and between Cape Terawiti and Wellington-head is only about 17 m. It contains several islands, the largest of which, Kapiti or Entry island, is about 8 or 10 m. in length, by 2 or 3 m. in breadth, and consists of steep forest-clad hills.

The Middle island extends from 40° 25′ to 46° 40′ S lat., and lies between the meridians of 166° and 174° 30′. Its area has been roughly estimated at 50,000 sq. m. That part of it which borders on Cook's strait was the only part of it known to be inhabited even by natives a few years ago. It is covered with high mountains, which attain an alt. of 3,000 ft. at a small distance from the shore, and are supposed to support a table-land in the interior. Three extensive masses of mountains terminate on Cook's strait, enclosing comparatively narrow valleys between them. These three masses are supposed to branch off from the N extremity of a chain of lofty sharp-peaked mountains which appears to extend from NE to SW through a considerable part of the island, the highest peaks of which attain the region of perpetual snow in this lat., or about 8,000 ft. The Kawatiri or Buller river descends from it towards the W coast; the Motueka towards Blind bay, in Cook's strait; the Pelorus to Queen Charlotte's sound; the Wairau, the Waiopai, and the Awatere, to Cloudy bay.

Nelson and Wairau district.] The E coast of Blind bay, on Cook's strait, consists of a series of high bluffs till within 10 or 12 m. of the bottom of the bay, where they cease, and the shore assumes a less abrupt appearance, but still rises to a considerable elevation at a little distance from the water's edge. At the point where the high bluffs cease, a singular bank of boulder-stones detaches itself from the main land, and at the distance of about a ½ m. runs parallel with it for 8 or 9 m. nearly to the bottom of the bay. The space between this boulder-bank and the mainland for the first 2 m. is filled by a flax swamp of about 800 acres, which, from the quantity of roots and dead timber buried in it, has evidently at one time been covered with a dense forest. Below this swamp commences a mud flat, which extends for about 5 m., and is covered with water at high tide. The last 1½ m. between the boulder and the main forms the harbour, at the head of which the town of Nelson stands, and in which there is water for vessels of 500 or 600 tons, shelter in every wind, and excellent holding-ground. The boulder-bank at its termination again approaches the main to within about 200 yds., forming by its curve a fine bight equal to a wet dock, in which vessels can be laid ashore on a smooth beach and floated off again for purposes of repair or examination. Between the end of the boulder-bank and the main stands the Arrow rock, 50 or 60 ft. high; and between this rock and the boulder-bank is the narrow though not dangerous entrance of the harbour. The formation of the boulder-bank is curious, and has afforded a good deal of speculation as to its origin. The lat. of Nelson harbour is S 41° 15′, E long. 173° 16′. It can only be entered on the flood-tide, the ebb running too strong to allow of it. The rise and fall of the tide is 12 ft. It has been necessary to have recourse to other places than Blind bay to obtain the quantity of land required for the Nelson scheme; Massacre bay on the W, and Cloudy bay on the E, have both been taken into the limits of the settlement. The connection between these districts is by no means easy, and will eventually give them the character rather of three settlements than one. Massacre bay is at present only accessible from Nelson by sea, the distance being about 50 m.; but there is a possibility of making a road over the hills which separate it from Blind bay. The greatest defect of Massacre bay is the absence of a good harbour, the rivers which exist in it only affording access for the smallest vessels; and though there is a tolerable roadstead behind the islands of Tata, it is from 4 to 6 m. from the best part of the land where shipping operations would be required. The district is a pleasing one; the greater portion is heavily timbered, and the land extremely good. Coal and lime exist in it, both accessible at the surface on the bank of the Motupipi, in which they can at once be put on board vessels of 15 or 20 tons. The gross amount of level land in this bay is estimated at 45,000 acres, of which at least 25,000 are fit for agriculture. Blind bay contains about 60,000 acres of land sufficiently level for agriculture; but not above one-half of this is of a quality adapted for that purpose. It is generally free from timber, but covered with fern; and with flax in the swampy parts, forming a margin a ½ m. deep on the S and E, near the sea.—Cloudy bay, with the Wairau plain and valley, forms however the most extensive and most valuable portion of the settlement. This district forms a broad level plain, 8 or 10 m. wide at the head of Cloudy bay, running inland for 18 m., when it suddenly converges to a width of 2 or 3 m. equally level with the plain below,

and extending from 40 to 50 m. further inland. Though it may in a general description be spoken of as level, there is a considerable but gradual fall from the head of the valley to the sea, probably not less than 2,000 ft. in 50 m. The land for 4 or 5 m. from the sea is covered with flax and other strong vegetation, and is generally swampy, but of excellent quality, and capable apparently of easy drainage; for the next 8 or 10 m. it is dry, covered with long grass, and generally of good quality; beyond this it continues grassy, the land getting lighter the further you advance up the country, till the last 16 or 18 m., which are very poor and stony, only fit for grazing purposes. At the very extremity there are a few miles of forest. The whole dist. contains abundance of excellent agricultural land; but its principal value at present is to be found in the fertile pasture with which it is clothed from end to end, including the whole of the hills which bound it on the E side, which present some of the finest sheep-runs in the world, and extend all the way to the E coast by Cape Campbell, and S to the Kaikora mountains or Central ridge.—Connected with the Wairau on the E are the Wakefield downs or Kaipara-to-hau, a district similar to the Wairau, but containing only about 20,000 acres. The whole contents of the Wairau and Wakefield downs are about 200,000 acres of level land. Of this, from one-half to two-thirds are fitted for agriculture, though the lighter portions, for reasons already alluded to, are not at present very highly estimated by the settlers. There is not at present any very easy connection between Blind bay and the Wairau. A heavy mountain-ridge, altogether impassable except in three places, divides the two. The easiest of these passes is 50 m. S of Nelson, and enters the upper part of the Wairau valley at a point 60 m. from Cloudy bay, making the whole distance from bay to bay 110 m. Another pass exists about 12 m. S of Nelson, and enters the Wairau 16 or 17 m. below the first-mentioned; but it is one of very considerable difficulty. A third, which will probably be the road to the Wairau, enters the mountains 1 m. N of Nelson, by the Maitai river, which flows through the town; crosses the upper part of the Pelorus ridge; and enters the Wairau by the Kaituna valley, 3 or 4 m. down the plain, and not above 15 m. from the sea.—The climate of the northern dist. of the Middle island is salubrious. With a great amount of sunshine, the heat is never excessive nor ever disagreeable; while, with an abundance of rain, there is no continual wet season. The wind, though for about three months in the spring and summer it blows fresh for days together, is seldom violent or tempestuous. In winter it blows little; days and even weeks almost perfectly calm, with brilliant sunshine by day, and magnificent moonlight at night, occur at that season. The sheep frequently lamb in mid-winter in the open country; and unless there happens to be an unusually heavy rain or severe frost at the time of lambing, a very small percentage of losses is sustained. Geraniums, fuschias, ænotheras, picotees, and other summer-flowers of England, continue to blossom in Nelson during the winter-months. One peculiarity of the climate is, that there are in fact only two seasons, summer and winter; there are no transition-seasons of spring and autumn; and their absence is the more observed from the fact that nearly all the indigenous trees are evergreen, so that there is no periodical fall or renewal of the leaf.

Port Underwood, situated to the S of Cook's strait, forms the natural outlet for the produce of the great Wairau plain, or the SE part of the Nelson settlement. As no harbour exists between Port Underwood and Banks' peninsula, the N half of the whole country lying between these two points may be considered as the natural appendage of the former; and its accessibility without the necessity of entering the strait would be a circumstance, if not counterbalanced by others, greatly in its favour. Another advantage of position enjoyed by Port Underwood is its vicinity to the whaling-grounds, for the shore-parties to run to. This circumstance made it in former years a favourite harbour for the whale-ships themselves; but of late years each whaling season has been getting worse than the preceding ones at Port Underwood. The entrance to Port Underwood is wide, and unobstructed by rocks, reefs, or shoals; but this advantage, as well as those we have been considering, are greatly reduced in importance by the difficulties of ingress and egress caused by the winds which generally blow on all this part of the coast. "The prevailing winds in Cook's strait," says Capt. Chaffers, "are NW nine months out of the twelve; in the winter-months, June, July, and August, blowing in heavy gales, and shifting round suddenly to the opposite point." All the reports of the residents in Port Underwood tended to show that this description is equally applicable to the winds in Cloudy bay. The NW winds blow nearly directly out of Port Underwood, and whenever violent prevent all ingress; while the opposite winds, the south-eastern, which divide the year with the north-western, whenever they are heavy, make it equally difficult for vessels to get out. Port Underwood divides itself into two arms at the upper or N part. The shores of the main harbour, and of both of these arms, may be described as consisting of a succession of coves formed by spurs from the mountains, descending into the harbour and its branches at nearly right angles to the direction of the latter. As the prevalent winds are nearly up and down the harbour, these spurs of course afford on one side or the other shelter from each wind in turn; but these coves are all of them of small extent. Next in importance to the communication of a port with the outer seas, and its general goodness as a harbour, is that of its communication with the interior of the country. Between Port Underwood and the Wairau districts there is one such communication by water, and one by land. You may send produce down the Wairau river to Cloudy bay, and so to Port Underwood, the distance being 10 m.; but the river has a bar across its mouth, which makes this an operation not to be risked with any wind but one off shore. The communication by land presents nearly equal difficulties. The hills which bound the Wairau plain on the N, turning off almost at right angles, are continued till they form the W side of Port Underwood, leaving a space of 6 m. between the plain and the port, where their bases are washed by the sea. Along the whole of this distance, with the exception of two places, where they recede and form two small coves, open to the SE, their declivities are abruptly cut off seaward into craggy cliffs and broken rocks hanging over and jutting out into the sea, and split and shattered into every variety of ruggedness. A road by the sea-coast may be, therefore, considered as out of the question. The inland path runs from the plain over the spurs between the coves just mentioned, and descends to the sea-coast in each of them; but the hill-spur requires steps cut in the footpath here and there, which will give a tolerably correct idea of its steepness.

If Queen Charlotte's sound is not so well situated as Port Underwood, as the natural outlet for the produce of the country S of the straits, it has in the same degree the advantage of Port Underwood, as an inlet for the products of foreign countries. The only part of what can properly be considered the

straits which it is necessary to sail through to reach Queen Charlotte's sound has this peculiar advantage, that its W coast is formed of a close succession of deep, safe, and easily-accessible harbours,—Port-Hardy, Admiralty bay, Port Gore, and the sound itself, the wide mouths of which, like the spaces between the opened fingers of a hand, lie almost at right angles to the direction of the prevalent winds, so as at all times to afford the readiest shelter from both. The position of Queen Charlotte's sound with reference to the opposite coast of the straits,—the S coast of the Northern island,—is a circumstance greatly in its favour. There is no harbour from Wellington all round the coast to Hokianga. The water-communication will be easier between the whole of this coast N of Porirua and Queen Charlotte's sound than between the same coast and Port Nicholson itself. For facility of ingress and egress, Queen Charlotte's sound is well known to yield to few harbours in the world. The only circumstance that makes any particular caution requisite is the set of the tides; but as the entrance is 9 m. wide, this is a difficulty easily avoidable. The harbour at Waitohi, or Newton bay, is from 20 to 25 m. from the entrance. In the words of Cook, however, "it is at the entrance 3 leagues broad, and is a collection of the finest harbours in the world." The tides in the sound, says Captain Chaffers, "are regular, the soundings from Montuara island at the mouth gradually deepen from 7 and 8 to 30 and 35 fath. mid-channel. The shores on both sides are bold, and may be approached with safety to one cable's distance." The water continues deep almost to the head of the sound, and its width diminishes very gradually. It is 2 or 3 m. wide for the most part, between the south end of Tory channel and Newton bay. "On the whole," says Colonel Wakefield, "considering the position and capabilities of Queen Charlotte's sound, whether with a view to its becoming a port for homeward-bound vessels to take in cargo and provisions, a safe channel of communication between the W part of the straits and Port Nicholson, and the E coast, or as a situation for docks and ship-building, it is of the first importance, and cannot be spoken of in too high terms." The harbour is connected with the plain of the Wairau by a pass through a valley which is densely wooded for the first 8 or 9 m. The path crosses some slopes which can scarcely be regarded as more than undulations, and indeed would hardly render incorrect a description of the whole pass as an almost level one. Beyond the wood, the valley takes a winding course into the plain, and consists of an unbroken flax and raupo swamp. Little is requisite to connect Waitohi harbour with the Wairau plain and the districts immediately to the S of it. For a town site, the land at the head of this bay presents all the requisite capabilities. A cove, which it has been proposed to call Milton-bay, lies a little to the NE, separated from it by a narrow neck or peninsula of hills, joined to the main land by a level isthmus. The level spreads round the heads of both bays, running about 3 m. in length, by a ½ m. in breadth, from the top of one bay to that of the other, and losing itself in the Waitohi and Tua Marina pass. There is, in fact, one extensive town-site abutting on two bays. Milton-bay is in itself also an excellent harbour, though more open to the sound than the other; the soundings are as regular, the water generally as deep.—The harbour selected as the site of the port to the Wairau district it is proposed to call Newton-bay; that to the E of it, Milton bay; that to the W, Shakspeare-bay. The two projecting headlands, between which lie the two bays to the W. have been named respectively Point-Raffles and Point-Metcalfe; the middle point between them it is proposed to call Point-Napier.

North-eastern coast.] From Cape Campbell to Port Victoria, a distance of about 100 m., the coast trends SSW; and presents the embouchures of several streams, amongst which are the Waipapa, the Waipou, the Hurunui, the Ashley, and the Courtenay. The surface of the country consists in general of grassy plains, stretching from the coast to the foot of the mountain-range which lies about 10 or 12 m. inland. At Kaikora, in about 42° 30′ S lat., there is a low point of land which may afford shelter to small vessels; but there is no harbour for large shipping between Port Underwood in Cloudy bay and Port Victoria on the N coast of Banks's peninsula. The SE point of the peninsula is in S lat. 43° 52′ 15″, E long. 173°. The peninsula is a mass of steep rugged hills, chiefly clothed with wood, and covered with a poor clayey soil. The mainland is low and level at the back of the peninsula, which has probably been an island at no distant geological period.

Canterbury settlement.] A society having its head-quarters in London, purchased a large block of land from the New Z. company in the neighbourhood of Banks's peninsula. The district in which the settlement is situated is nearly intersected in its centre by the 44th parallel, and contains over 2,500,000 acres, extending coastwise to the N and SW, and bounded inland by a range of hills whose distance from the coast varies from 40 to 50 m. This country is perfectly level, watered by numerous rivers and streams, and covered with grass. Portions of it are of inferior quality; a very small part is swampy; and the surface in some parts is stony; but much of it is well-adapted for agricultural purposes, and capable of yielding excellent crops of all kinds of grain, potatoes, and European fruits and vegetables; and the whole of this tract of plain country affords excellent natural pasturage, and is well-adapted for depasturing cattle and horses. The produce of a very extensive country, extending along the sea-coast for 200 or 300 m., will have Port Cooper—now Port Victoria—as its market and harbour. Banks's peninsula contains four good harbours, namely, Akaroa, Pigeon-bay, Port Levy, and Port Victoria. The country is hilly and well-wooded; and the three former harbours are separated from the plain country, so that Port Victoria alone is of value with reference to the plains adjoining. The harbour of Port Victoria, situated in the NW angle of Banks's peninsula, though open to the E, affords good and safe anchorage; large ships anchor about 4 m. up, whilst brigs and large schooners lie off the port-town of Lyttelton. The settlement consists mainly of three grassy plains or prairies, named Sumner, Whately, and Wilberforce, intersected by several rivers, with their numerous tributaries, running to the sea from an Alpine chain of snow-capped mountains. All along the spurs and foot of this range, the forest—of which the plains seem to have been stripped by fire—extends in primeval grandeur. The capital of the settlement is Lyttelton on Victoria harbour, in S lat. 43° 35′, which, as respects temperature, corresponds with about 47° in the N hemisphere, or that of the most pleasant spots in the S of France. The climate exactly resembles that of Tasmania, being chiefly remarkable for warmth without sultriness, freshness without cold, and a clear brightness without aridity. Both the grape, for which England is too cold, and the gooseberry, for which the S of Italy is too hot, here come to perfection. In consequence of the scale of the natural features of the country, the scenery is beautiful, and in some places magnificent. The prairie character of the main part of the territory, together with the dryness of the atmosphere

and the mildness of the winter, indicates that the most suitable occupation for capitalists will be pastoral husbandry. As respects flowers, kitchen-vegetables, and all the English fruits, with the addition of melons and grapes, the gardens of the French settlers at Akaroa, and of the squatters on Sumner plain, are described as teeming with produce of the finest quality and most beautiful appearance. Sea-fish is abundant, various, and of excellent quality. The only wild quadruped is swine; they are numerous, are very good to eat, and afford plenty of hard sport. The plains abound with quail, and a variety of wild-fowl. There are no snakes, wild dogs, or other indigenous vermin. The surveying officer of the ship Acheron, writing in May 1849, says of this district: "You know, of course, that the general feature of the country is a succession of abrupt and lofty hills, with corresponding deep and secluded valleys, either thickly wooded, or clothed with a thick fern and long grass, offering all kinds of obstacles both for pastoral and agricultural purposes; but here we have a plain extending from N to S 100 m., with an average width of at least 30 m., intersected by numerous rivers, not the water holes of Australia, but rather rushing torrents, which have managed to excavate beds for themselves some 200 or 300 and 400 ft. in a perpendicular drop, on the W side of the plains: these rivers will, I anticipate, on a detailed examination of their entrances being made, offer but few obstacles to boat navigation for some half-dozen miles from the sea-board. This great plain may be called almost a dead level for as far as the eye can trace from any point. From the sea-shore to the Backbone ridge, not a rise of 20 ft. meets the view; but judging from the excavated bed of the rivers and other circumstances, I think there will be found a gradual rise of the land, from the coast to the base of the mountain-range, where it may be some 500 ft. above the level of the sea." See article CANTERBURY.

Otago settlement.] About 150 m. S of Banks's peninsula, and near the S extremity of the middle island, lies another 'clan settlement,' extending from S lat. 45° 40′ to 46° 20′, between the mouth of Otago harbour and a headland called the Nuggetts about 3 m. SW of Molyneux. It has a coast line of about 53 m. and an average inland breadth of 7 m. This district is not heavily timbered like many of the northern localities of the island, and is abundantly watered. The S part is intersected by the rivers Puerua, Koau, Matou, and a multitude of smaller streams. The two last-named rivers are navigable for vessels of considerable tonnage. The Matou, Clutha, or Molyneux, which forms the S frontier of the settlement, is a fine stream which for 30 m. inland is nearly a ¼ m. broad, and 6 fath. deep. Connected with one another, and with the Matou, by navigable streams, are the lagunes of Kaitongata and Rakitoto, 1 and 6 m. long respectively. The head of the Rakitoto lagune is about 18 m. from the mouth of the Matou; and here, in this direction, water-communication ceases. There is no formidable obstacle to the formation of a road between this and the plain of the Tokomariro, which consists of about 7,000 acres, well watered and free from swamps. From this valley there is almost a level pass into that of the Taieri, where water-communication again commences; and by means of the Waihola lagune and the Taieri river, continues uninterrupted to within about 9 m. of Otago harbour. The Waihola and Rakitoto lagunes are about 12 m. apart. The plain of the Taieri is swampy to a large extent, but on the whole will prove a valuable district. The Taieri river flows into the sea about 20 or 30 m. S of Otago. For the first 5 m. from its mouth, it is confined within lofty and precipitous hills that barely afford it room to pass. Beyond this the valley suddenly opens, and the river branches, leading to the Waihola on the S, and passing through the bulk of the valley on the N. Between the Taieri and Otago, the country consists chiefly of hills of moderate elevation, covered with a good soil, and over which, or through passes between them, a practicable road might readily be formed. The harbour of Otago is 13 m. long, by an average width of 2 m., with 6 fath. water for 7 m. up, from the Heads to the islands, and with 3 fath. for the remaining 6 m., up to the very head of the harbour. It is perfectly sheltered, and runs in a direction nearly N and S. The capital town, Dunedin, stands at the head of the harbour, in a situation of great natural beauty. Lying open to the N, it is entered with a fair wind; and a fair wind out of harbour also takes a vessel soon free of land, and if seized at the commencement, may carry a ship of average sailing qualities to Cook's strait in 48 hours. The distance between Port Nicholson and Otago is 320 m. Otago, being situated at a distance of between 150 and 200 m. from the chilling influence of the vast range of snowy mountains running along the W coast, has a markedly warmer climate than even Port Cooper, which, although lying 150 m. nearer the tropics, is yet within 20 or 30 m. of these mountains. The adaptation of the soil for the growth of wheat and other grain, and particularly of potatoes, and the richness and abundance of the pastures, seem to place this district in the foremost rank, in point of agriculture, amongst the soils of New Z. Coal, iron, and copper, are reported to have been found in it. Beyond the first ridge of down, which forms the S horizon from the harbour, lies an undulating country covered with grass. The anise plant, valuable as pasture for sheep and cattle, abounds on all this land. After traversing these downs for 5 m. from Otago, we overlook the plain of the Taieri, which contains about 40,000 acres of land, and is intersected by the river of the same name, navigable for large boats 12 m. from the sea, which it reaches at about 25 m. from Otago. The land at the head of the Waihola lake consists of undulating downs, round-topped and covered with herbage, grass of various descriptions, and anise of large growth. Quails are plentiful over all these downs, and in the plains adjoining, and would be more so but for the hawks and kites. The view from Owiti is very extensive. At its base, to the SW, lies the plain of the Tokomairaro, containing about 14,000 acres. To the E, hills to the breadth of 7 m. extend to the coast; on the N lies a portage of 6 m. between it and the Waihola; and to the W, undulating prairies of boundless extent available for cattle and sheep three parts of the year. The communication with this country from Otago is easy. Water-carriage can be made use of down the Taieri to the head of the Waihola lake. See article OTAGO.

Southern extremity.] From the Molyneux river a fertile upland country extends along the coast as far as the Bluff, a harbour at the E extremity of Foveaux's strait, which separates New Leinster, or the S island of New Z., from the Middle island. This strait was first discovered by the captain of a sealing-vessel in 1816. It is about 40 m. long, and 16 m. wide on an average; and is thickly interspersed with rocks. On its N side, after passing Waipapa point, Totocs bay presents itself, into which the rivers Paponia, Makoruta, and Mataura discharge themselves. Bluff point, forming the W extremity of this bay, advances boldly into the strait, contracting it to a breadth of 12 m. To the W of Bluff harbour, we meet in succession the Waiopaki, Oreto or New river, and Aparima or Jacob river, the last of which

flows into a bight called Howell-road. Pahia point, 14 m. W of Jacob river, may be regarded as the NW extremity of Foveaux strait. From this point to Chalky bay, a deep irregular indentation in the SW angle of the Middle island, the coast is unexplored. The SW extremity of the island is bounded by elevated chalky cliffs, which are chiefly intersected by numerous narrow inlets of the sea, affording safe anchorage. The principal of these inlets are in succession, Chalky bay, to the N of Point Preservation; Dusky bay, separated from Chalky bay by West cape, and Gaol harbour.

Western coast.] The W coast, from about the parallel of 45° 30′ to 44° S, presents a high craggy mountainous range at a short distance from the shore, which sends down large precipitous ridges abruptly terminating on the coast. To the N of the parallel of 44°, the mountains retire further inland, and the coast presents woody hills and valleys of various height and extent. Little, however, is yet known of the region stretching along the W coast of the Middle island from the parallel of 45° to that of 44° 30′. From the latter point to Cape Foulwind, the coast has been recently explored by Mr. Brunner, who describes it as uninviting to the settler, and presenting "fearful rocks and mountains," and much difficult beach-travelling. The chief geological formation is a coarse granite. Black birch is the prevailing timber. Numerous streams descend to the coast, the principal of which are the Mawera or Grey, and the Kawatiri or Buller. The former has its embouchure in about 42° 35′ S lat.; the latter nearly on the parallel and a few miles to the E of Cape Foulwind. From the river Grey to Cape Farewell, a range of mountains runs parallel to the coast, sending down spurs or lateral ridges covered with forests, which terminate in abrupt cliffs and headlands on the coast. Each of the valleys between these ridges is intersected by its own stream, which is fed by the snows of the central chain.

III. New Leinster, or Stewart's Island. This comparatively small island has a triangular form, and is about 40 m. in its greatest length and width. Its surface is undulating, and rises to a high peak towards the centre. Its area has been estimated at 1,000,000 acres. At its NE angle is a fine harbour called Paterson inlet; near the centre of its E coast is Port Adventure; and near its SE point is Port Pegasus. A few Europeans are settled upon it, who are chiefly employed in the whale and seal-fishery.

General Notices.] Having thus slightly sketched the topography of the three main islands constituting New Z., we shall subjoin a few general notices relative to the whole country.

Climate.] The climate of New Z., and particularly of the northern island,—which, being the farthest from the pole, seems to possess greater natural advantages than the others,—is not unlike that of the British islands, more particularly that of Ireland, but is more equable, and neither so cold in winter, nor in reality so hot in summer. It is moist and temperate, the cold being seldom more intense than barely to produce a hoar-frost on the surface. The lowest point of the therm. is 40°; it generally ranges from 50° to 60°; nor is the heat of summer so great as to destroy the verdure, there being frequent rains and cloudy weather, in which the therm. seldom rises beyond 78°, while it generally ranges between that point and 66°. In so large an extent of territory, it will necessarily be supposed that the climate will vary considerably; that the N will be warm, approaching to tropical, and that the S will be cold, partaking more of the character of that to which we are accustomed in England: nor is such a supposition altogether erroneous. Local differences no doubt exist, dependent upon other causes than mere lat. and long., such as the proximity of a district to the coast, to a widely-extended plain, or to an inland range of mountains; it will be found, however, that in those districts which have been made available for settlement, no very remarkable variation is perceptible. Snow and frost occasionally occur during winter; the former is mostly confined to the hills and high lands; on the tops of the many ranges of mountains it is to be seen all the year round, and the latter is felt more sharply in the extensive and open plains of the S. Violent gales are frequent, and continually change their direction,—a circumstance ascribed by Cook to the great height of the mountains. Mr. Earl says: "Although we were situated in the same lat. as Sydney, we found the climate infinitely superior. Moderate heats, and beautifully clear skies, succeeded each other every day. We were free from those oppressive, feverish heats, which so invariably prevail in the middle of the day at Sydney, and from those hot, pestilential winds which are the terror of the inhabitants of New South Wales; nor were we subject to those long droughts which are often the ruin of the Australian farmer." Dr. Duffenbach says: "New Z. being situated within the temperate zone, although nearer the equator than Great Britain, possesses, from its peculiar geographical position, especially from its being insular, and also from the nature of the surface, a climate so modified as to resemble that of England more nearly than that of any other country I am acquainted with. The E coast on which Wellington, Auckland, and the Bay-of-Islands are situated, is colder than the western, where the settlements of Nelson and New-Plymouth have been founded, and where the air is far softer and milder. I ascertained this by actual comparisons, and in this respect the W coast must have great advantages over the E. In the interior of the islands the climate is colder and less changeable, in consequence of the presence of a snow-clad mountain-group, and the greater distance from the ocean. I found at Taupo, the acacias of Van Diemen's Land, the *Ricinus palma Christi*, and potatoes, affected by the frost,—a circumstance which never happens near the coast; the leaves also of several trees had become yellow and deciduous; and the landscape assumed an autumnal tint, although it can scarcely be said ever to have had a wintry appearance. At Wellington, on the contrary, and along the whole coast, the natives plant their potatoes at all seasons of the year; the forest remains ever green; and the opening of the flower-buds is merely a little retarded during winter, the presence of which is only indicated by more frequent rains and winds."—The following is a comparative table of the climate of London in N lat. 51° 30′, and of Wellington in the North island, which is centrically placed in S lat. 41°, about 5° to the N of Otago, and as many to the S of Auckland:

	Mean temp.	Mean of winter.	Mean of Hottest month.	Average No. of Days on which rain falls.	Mean Annual quantity of rain in inches.
London,	50·39	39·12	63·43	178·	24·80
Wellington,	52·50	48·85	64·25	128·	28·73

The following table exhibits the temp. within 2 m. of the coast of Blind bay, in the Nelson settlement, on the Middle island, in 1845:

	Mean lowest.	Mean highest.	Mean noon.
January,	...	74	72
February,	...	71	70
March,	...	69	68
April,	...	65	64
May,	...	60½	60
June,	39	56	54

July,	40	57	55
August,	36½	58	55
September,	34½	64½	61
October,	40½	67	63
November,	40½	72	68
December,	42½	75	70½

At Auckland, which is not more than 100 m. S of the Bay of Islands, the mean temp. is 59°; that of the three summer-months 67° 2′; of the three winter, 52°. Their difference is only 15° 2′; and their mean only 6·10ths of a degree above that of the mean annual temp.

Vegetable kingdom.] Vegetation in New Z. is uncommonly luxuriant, and the number of plants formerly unknown to Europeans is great; but the botany of these islands has as yet been very imperfectly investigated. The whole number of plants at present known does not exceed 700 species; but the greater number of its species, and even genera, are peculiar to itself. More than 140 species of fern, some of which are arborescent and 40 feet high, are natives of these islands. The most beautiful forms of New Z. vegetation are the tree-ferns and cabbage-palm. The clearing of the forests is exceedingly difficult, but generally there is no tap-root: the roots run along the surface, so that it is not very hard to get them up. The timber of New Z. is much more profitable than the ordinary timber of New South Wales. The *kauri* kind, which will grow 90 or 100 ft. high without a branch, is in use by the Admiralty for spars. At present the difficulty in its exportation is the want of facility for water carriage. There are 5 species of beech and 10 of coniferæ peculiar to New Z. Ornamental woods grow in abundance, but they are destroyed with the others in clearing, as the expense of transport would be more than they are worth in England. There is a great demand for timber and spars in all the Australian colonies; the prices obtained for New Z. timber, hitherto sent, are highly remunerative, but the supply bears no comparison to the demand. In Sydney and the other colonies they have nothing but the brittle cedar and the 'blue gum,' which is as hard as iron, and quite useless for building-purposes as no nail can be driven into it. The fine pines of New Z. are naturally adapted to supply this deficiency, being within 10 or 12 days' sail of Sydney or Hobart-Town. The black birch and *tetoki* are excellent woods for ship-building or other purposes requiring strength and durability. At Nelson alone there is sufficient wood to bring in £1,000,000, all easy of access, the greater part growing close to water navigable for boats at every tide; the ground is level, and roads are made to and through different parts of the wood. It can be put from the saw-pit on board ship for 1s. or 1s. 3d.; and the price obtained for New Z. wood in the adjacent colonies varies from 10s. to 25s. per 100 ft. The sea-coast is in many places destitute of timber; but the whole of the interior is an immense forest. A kind of myrtle is found, the leaves of which form a tolerable substitute for tea. The mulberry tree is sometimes seen, though not frequently. The oak has been successfully introduced from Great Britain. —Flax—the *Phormium tenax*—grows wild in all parts, and appears to be indigenous and inexhaustible. Its fibre is twice as strong as that of the common flax, and very nearly equal in tenacity to that of silk. At Sydney it is manufactured both into cordage and canvass. The *Phormium tenax* resembles the garden iris: its chief peculiarities consist in the fibre being obtained in the leaf, and not, as is the case with European flax, from the stem; the outside coat of the leaf being stripped, the fibres are perceived running parallel to one another, and lining the under surface of the leaf through the whole length. The leaves may be cut twice a-year, the roots remaining in the soil for reproduction. A given quantity of *Phormium tenax* will, it is said, contain more of the fibrous substance than an equal quantity of Russian hemp. Seven varieties of it have been found. One peculiarity of New Z. is the abundance and nutritious quality of many of the native shrubs upon which cattle eagerly browse. One of these, the *karaka*, which grows to be a large tree, is invariably devoured as far as cattle can reach the leaves. The grasses also are very numerous. The porcupine-grass, when young, is devoured by sheep with avidity, and the root is a favourite and agreeable food both with natives and stockmen. But when fully grown, this grass is a great annoyance to the pedestrian; its stems closely resemble the quills of the porcupine, and are nearly as formidable to the legs of the stockmen. The *tohi-tohi* is highly valuable, not more on account of its fitness for pasturage —for when young it is greedily devoured by cattle and horses—than on account of its value in house-building. It is a reed, which in swampy places grows to the height of 8 or 9 ft. The edge of its leaf is toothed like a saw; and from the silicious nature of the plant, this jagged leaf requires to be handled with caution, as it is capable of inflicting a disagreeable wound. The two properties of the *tohi-tohi* just described, together with its great length, render it invaluable for thatching roofs. The silex of the plant, by throwing off the rain, renders the roof impervious to water, and the toothed edge of the leaf, penetrating the others bound up with it, renders the cohesion of the mass perfect. This seed also forms a very elegant lining to the interior of the native hut. It is of a deep yellow colour, and, from its flinty covering, possesses a considerable polish. Placed side by side, and perpendicularly from the floor to the roof, these reeds are tastefully bound together by the flax leaf dyed of a glossy black by the bark of the *hinau*. From the top of the reed springs an elegant white plume, which might be readily taken for an ostrich feather, and forms an excellent substitute for feathers in a bed, if the plume is extracted at a proper season. The *raupo*, another swamp plant, is also used for thatching roofs. It is, in fact, a bulrush, and when carefully dried, is used for stuffing pillows. Another, and a finer kind of grass, is also used for thatching roofs, and is in great estimation amongst the natives for the manufacture of eel-nets. The value of the three last-mentioned plants to the native may be estimated from the fact that his dwelling, with the exception of its *manuka* poles and rafters, is entirely composed of them. Few, if any, nails are used, but the whole is firmly bound together with the leaf of the flax plant. Among the native fruits the *tawa* resembles a prune damson, but is more oblong, and of a blue-black colour, with a beautiful bloom. Its fruit contains a soft bitter kernel forming almost one-half the bulk of the fruit. The natives eat these berries in large quantities. The pulp is grateful to the palate, and is remarkable for the coolness which it imparts to the mouth. The *kia-kia* is a singular and very delicious fruit, springing from the base of a number of leaves from 18 inches to 2 ft. in length, which radiate from the same point. At this point, or the base of the leaves, is the fruit, in appearance a species of vegetable albumen, and resembling, when unripe, the white of an egg when boiled. As it ripens it becomes darker in colour, and is very juicy. If collected and placed in a vessel it deliquesces, fully one-half becoming liquid, and a large quantity of saccharine matter is the result. *Maiberry*, or *matahi*, is a small round fruit of the same colour as the tawaberry, the bloom being even more beautiful. The fruit when gathered is perfectly dry, but after lying together for a few hours

the juice bursts through its delicate skin in large quantities, and is very glutinous. Its flavour is delicious in warm weather, being slightly acid. The *tetoki* berry is a fruit resembling a raspberry, but somewhat lighter; its flavour is slightly acid. This fruit contains a small jet-black kernel yielding a large quantity of oil which is highly prized by the natives as an unguent for the hair. The *fuschia* berry is here an oblong fruit about three-quarters of an inch long, and a quarter of an inch in diameter. It is very sweet and juicy, and forms an admirable preserve. The *kaikatea* berry is about the size of a small pea, with a very grateful flavour. The *karaka* berry forms a chief article of food amongst the natives. This fruit resembles in form a large olive, and contains a kernel; its colour is yellowish-red, and its flavour not unlike that of a ripe medlar. The *tutu* berry is also consumed in large quantities by the natives. It is very juicy, and this juice is fermented by them into a kind of wine of which they are very fond. The seeds contained in the berry are poisonous, and the shrub on which it grows is very destructive to sheep and cattle, which are nevertheless fond of browsing on it. The effect seems to be a narcotic intoxication, from which, if they are not speedily relieved by bleeding, they soon die. Whilst enumerating the fruits of New Z., the honey of the *phormium tenax*, or flax plant, must not be forgotten. It lies in the cup of the flower in somewhat considerable quantity, and surpasses in deliciousness of flavour the finest honey collected by bees. The *nikau*, a substance which grows on the summit of the stem of an elegant palm bearing the same name, consists of a number of concentric layers, the outer of which must be removed till the inner ones are found to be tender, and these are edible. The *pura-pura* berry is about the size of the tawa berry, of an oval form, and a yellowish-red colour when perfectly ripe; before that they are, like most of the New Z. fruits, of a very disagreeable, bitter flavour. The *pura-pura* is highly esteemed for preserving. Its fruit is full of seeds, like the gooseberry. The water-melon is another native fruit, though not indigenous, the New Zealanders referring its introduction amongst them to the same period as potatoes, viz., the different visits of Captain Cook. It has not degenerated in flavour; and from the ease with which it is raised, it may be inferred that many of the finer kinds now known in Europe might be grown by every cottager as readily as a bed of cabbages. The root of the *ti* tree, a species of palm, is in use amongst the natives in the vicinity of Otago. It contains a large quantity of saccharine matter. The banana and mango are grown, but do not flower. The sugar-cane, however, flourishes at Hokianga. Various species of the *taro* or *Arum esculentum* are grown, but the *Kumera* or *Convolvulus battata*, forms the favourite harvest of the natives. The common potato improves the farther south it is cultivated.

Animal kingdom.] It is a remarkable fact that two such large islands, with such a variety of surface and of elevation, should, with the exception of a small rat, possess no indigenous animals. The first pigs were left by Captain Cook, and there are now numerous herds running wild in the woods, besides numbers reared by the natives and settlers. The fern root supplies these animals with inexhaustible abundance of a favourite food. Goats have likewise been domesticated by the natives; but there are comparatively few on the islands. Dogs abound, especially at the Bay-of-Islands, and are employed by the natives in hunting down the wild hogs. They are supposed to have been introduced by Juan Fernandez. The cat is eaten by the natives, and its skin is highly prized. The New Z. rat, which is also an article of food, was probably imported by European vessels. The birds are numerous, and many of them beautiful. "The wild melody of the birds in a New Z. forest," says Polock, "is superior to any strains of the kind I ever heard." The melody commences at the earliest dawn, and ceases at sunrise. Wild ducks, wood-pigeons, gulls, rails, parrots, and paroquets, abound. Poultry of all kinds thrive well, and find abundant food in the swarms of insects and flies. Fish of various kinds are plentiful upon every part of the coast, and form a considerable part of the food of the natives. The whale and seal are abundant in the neighbouring seas. Mackarel, red mullet, lobsters, crayfish, herrings, colefish, flounders, and a fish resembling the salmon, frequent the coasts; eels are very plentiful in the rivers of the Middle Island.—The *namu* or sand-fly appears in myriads on the borders of streams or marshy places; and the *waiwai roa* or mosquito likewise abounds; and the *keha* or flea. Beetles of many varieties, the black ant, gad-fly, flesh-fly, and locust, are numerous, and a species of scorpion and of centipede, both harmless, occur.

Soil.] "New Z.," says Mr. Heaphy, "from its possession of a rich and fertile soil, a sufficiently moist atmosphere, and a mild climate, has every requisite for the successful practice of all European agricultural and pastoral pursuits. Experience has now shown that all kinds of grain, vegetables, and fruits grown in England, flourish equally well in that country; and that many fruits, for which the English climate is too severe, may there be cultivated with success. That the soil is pre-eminently of that nature suitable for the production of grain, cannot now be doubted, as the specimens already obtained prove that, with but little attention being paid to its culture, wheat especially will thrive." The soil is in many parts extremely rich, but unlike the climate it varies considerably. Without doubt, that which is thickly timbered is the best, though that covered with fern and scrub, apparently unpromising in fertility, is found to produce excellent crops as soon as the fern roots are thoroughly rotted and the soil consolidated. To an English farmer, it will be praise sufficient to say that turnips grow with a vigour unsurpassed anywhere, and that beans, pease, and other leguminous plants, are equally successful. Fern land is often called bad land; but it is, in fact, among the most valuable land in the colony, or may be made so. If you turn up the fern land, you will not get a good crop off the first year; but this arises from two causes; first, from the nature of it, that it is a marl, and not a clay,—an argillaceous marl; and next the mode of clearing, that is by burning off the fern; whereas the argillaceous marl contains more alkaline salts than are good for cultivation, and by burning you add to them the alkaline salts of the plant, which contains perhaps more than any other plant; but if the land is ploughed up, and suffered to lie fallow for a year or two, enormous crops are produced from it. At Port Nicholson, turnips, carrots, broccoli, cabbages, pease, beans, and, in fact, all garden produce, have been cultivated with success. Great quantities of maize and of potatoes have been exported to Sydney from all parts of the island. Potatoes planted in the English method, upon cleared forest-land, have yielded 14 tons per acre. Pease thrive well, and ripen during ten months of the year. Mangel-wurzel, Cape barley, and maize, form principal objects of cultivation. "The natural resources of New Z. hitherto discovered, are now well known to be great; but they are not," says Captain Fitzroy, "of a kind to demand merely slight exertions, in order to make them available. A very healthy climate, favourable in a high degree to old as well as young people, but

particularly to children; a rapid vegetation, which continues throughout the year excepting a few weeks; and an equable moderate temperature, are permanent advantages of the first class; but the excess of wind and abundance of rain, in some particular localities, must not be overlooked. The principal natural productions are timber of many qualities, from the hardest and toughest to the lightest or most pliable, flax, gum, bark, dye-wood. copper, sulphur, manganese, iron, china clay, fuller's earth, coal, limestone, lead, silver, alum, ochre, pumice-stone, and volcanic earths. As cultivation extends and cattle increase, corn, European flax, potatoes, hides, and wool of excellent quality, will be produced in greater abundance. Even in the rough 'bush,' as it is called, cattle, horses, sheep, and goats thrive greatly; but as pastures improve, animals will likewise become proportionally better in their respective qualities. The wool of New Z. is already known as long in staple, and uniform in strength of fibre,—effects of equable moderate temp., and continuance of nourishing food throughout the year. The quantity of land necessary to support sheep is exactly the reverse of Australia. One acre would support 3 or 4 sheep in New Z., and it would take 3 or 4 acres to support one sheep in New South Wales. It is probable that wool, hides, tallow, and salt provisions will become staple articles of export, especially from the middle island, where there are so few natives that the progress of colonization would not be impeded materially."—The following table from *The Wellington Almanack* for 1851, shows the quantity of land under cultivation by Europeans, the number of the European pop., and the amount of stock held by them in the several settlements of New Z., in 1850:

Localities.	Acres in crop.	Horses.	Horned cattle.	Sheep.	Goats.	Europ. pop.
Auckland	3,082¾	725	6,803	3,281	245	3,301
Wellington	4,436¼	809	8,068	42,652	1,299	5,479
Nelson	4,242¾	441	5,052	70,960	5,337	4,047
New Plymouth	3,217	57	1,147	1,934	69	1,412
Bay of Islands	850	166	1,700	2,330	600	400
Manganui	381¾	78	1,000	420	60	259
Akaroa	145	19	614	1,630	389	295
Petre	148	95	2,839	6,248	125	432
Otago	510	298	1,725	19,751	130	1,482
Canterbury	...	34	739	10,900	50	2,300
Totals	22,013¼	2,722	28,687	160,106	11,404	24,407

Minerals.] Little is yet known of the mineral treasures of New Z., even in the northern districts, and nothing at all of the contents of the central and southern parts of the islands. Volcanic action has been remarkably intense in the northern island, and slight earthquakes have been felt; but there is no evidence of any damage to buildings hitherto erected, neither have the natives any distinct account of serious convulsions having occurred for some generations. The more valuable minerals hitherto found are coal, iron, limestone, copper, tin, manganese, nickel, lead, bismuth, arsenic, cerium, sulphur, alum, rock salt, marble of various qualities and colours, cobalt, ochre, fuller's earth, asphaltum, pumice, volcanic earths, and lavas, &c. Of the copper, the per centage of metal is usually very high, and the ore is easily smelted. Much of the manganese contains a larger per centage of copper. Both this and the copper can be quarried, rather than mined, in abundance. Fuller's earth, fire-clay, and stone fit for furnaces, which the bakers here use for their ovens, can be found anywhere in this neighbourhood. Coal is plentiful in several places, but has yet been worked near Nelson only. There is an extensive coal-field near the Waikato river; and there is said to be excellent coal remarkably convenient for shipping in Preservation harbour, at the S end of the Middle island. This coal is strongly impregnated with sulphur, so that it discolours any lackered furniture there may be in houses, but it is admirable for steamers. It is said, however, to partake of the character of some of the oriental coals, and to have the property of spontaneous combustion.

Inhabitants.] New Z. appears to be thinly inhabited. The area of the three islands of the group exceeds by about 100,000 acres the whole of Great Britain and Ireland, with all the little islands that surround them. The British islands are inhabited by 27,000,000 of civilized inhabitants; the New Z. islands by about 100,000 natives, and about 13,000 settlers of British origin. The north island is nearly a thirty-second part less than England, exclusive of Wales and Scotland, and more than 85,000 of the whole number of aborigines inhabit it. The middle island is one-ninth part less than England and Scotland, and its native inhabitants do not exceed 12,000. The scanty native pop. is not equally scattered over the islands, but concentrated principally in a few localities. In a despatch by Governor Grey, dated 9th July, 1849, the following sketch was given of the state and position of the settlements in general: "They are composed at present of what may be termed nine principal European settlements, besides smaller dependencies of these. The largest of the settlements contains about 7,000 European inhabitants, and their total European pop. may be stated at about 20,000 souls. These settlements are scattered over a district of about 800 m. of lat.; they are separated from each other by wide intervals; and communication even by persons on horseback exists only between three of them. The wide intervals between these European colonies are occupied by a native race of 120,000 souls, a very large proportion of whom are males capable of bearing arms." The southern part of the northern island is almost entirely a desert. On the W side of the northern parts, inhabitants are to be found only in a few places. The interior is mountainous, and so completely covered with trees that the people cannot be numerous. The E coast of the northern island appears to be better peopled than any other district of New Z.; but even in this district the inhabitants are far from being numerous.

Natives.] The New Zealanders form perhaps the most interesting branch of the great Polynesian family. They are of the ordinary size of Europeans, perhaps, on an average, a little taller. They are not unfrequently well-made; but their limbs, from their mode of sitting on their hams, often want that proportion which is necessary to true symmetry. The complexion of many is fair; but, in general, it is brown,—a circumstance which may arise from their constant exposure to the weather. In the form of their features they are not greatly different from Europeans. Their hair is black, coarse, and long, cut short behind, and the remainder tied in a bunch upon the top of the head. Their eyes are large, their lips thick; and their teeth—unlike those of most savage nations—large and irregular. The women differ little from the men, except that they are of a less stature, and have softer voices. The features and figures of some, however, are delicately moulded. The ordinary native dress is of the flax so plentifully produced in the country; not woven, but knotted in a peculiar manner. This garment, 5 ft. in length, and generally 4 ft. in breadth, is fastened round the shoulders by the two corners, and round the middle by a girdle. Over it many wear a large mantle extending from the shoulders to the heels. They employ two blankets, or assume European dresses, whenever they can acquire them. A more simple covering, and one not uncommon, consists of a kind of plant, woven in a particular way, tied round the neck with a string, and suffered to fall down to the middle of the thigh. Their ornaments are feathers upon the head, combs, and pearl shells. The ears are almost universally perforated, and adorned with beads, pieces of jasper, and sometimes with pieces of cloth. Their language is radically the same as the Tahitian. Their numbers are thought to exceed 120,000. They are divided into various tribes, which the extent of the country permits to remain in situations entirely separate. Mr. Ward, the secretary of the New Zealand company, says of the New Zealanders, "There is a natural politeness and grandeur in their deportment,

a yearning after poetry, music, and the fine arts, a wit and eloquence, that remind us, in reading all the accounts of them, and in conversing with those who have resided among them, of the Greeks of Homer. Their language is rich and sonorous, abounding in metaphysical distinctions, and they uphold its purity most tenaciously, although they had no knowledge of writing until the missionaries reduced their dialect to a grammatical form. It is radically the same with that of Tahiti, and of the kindred nations. They have an abundance of poetry of a lyrical kind, of which we have seen many specimens, in a metre which seems regulated by a regard to quantity, as in Greek and Latin. They are passionately fond of music." Mr. Nicholas, in his *Narrative of a Voyage to New Z. in* 1817, speaks of having heard amongst them "a plaintive and melodious air, which seemed not unlike some of our sacred music in many of its turns, as it forcibly reminded me of the chanting in our cathedrals." They excel in carving, of which their war-canoes, carrying 100 men, are specimens. Baron Hugel, who visited the country, affirms, as do the missionaries, that there is not, in the northern island at least, a single tree, vegetable, or even weed, a fish, or a bird, for which the natives have not a name; and that those names are universally known.—The most striking of their social institutions is that of chieftainship. Society is divided into three principal gradations: the *areekees* or chieftains; the *rangatiras*, being the gentry or middle class; and the *cookees* or slaves. There is a remarkable difference between the chiefs and the common people; the former are generally taller, their forms of a finer mould, their features aquiline, and their foreheads broad. Most of the chiefs have a quiet polite dignity of manner, which is very pleasing, and but for the old cannibals' tattooed visages, you might sometimes fancy some of them to be well-bred old gentlemen. This tattooing is generally done in spiral lines, one within the other; these are drawn on their cheeks and foreheads as accurately as an artist would draw them with his compass. The women generally tattoo only the upper lip; this, the abode of all the graces, they stain quite black, destroying all expression, and often making a face not quite ugly perfectly so. The natives are, in their own way, industrious, but they do not like to work for a length of time; the labour of three months in the year, on their India corn plantations and potatoes, is sufficient to provide them with the absolute requisites of life, and most of them do not see much good in spending the other nine in hard work; yet they are all extremely fond of money, and in many instances steadily pursue commerce and agriculture. In one district they own 1,000 head of cattle, and 6 corn-mills, and cultivate 10,000 acres of wheat. They are generally ambitious to obtain European comforts and practise European manners. Their old mode of salutation, viz., rubbing noses, is fast falling into disuse, and has given place to the shake of the hand and the formal bow. Sir George Grey, in a recent despatch, gives a highly favourable character of the native pop. in general. "With these characteristics of courage and warlike vagrancy," he says, "the Maories present other remarkable traits of character. Nearly the whole nation has now been converted to Christianity. They are fond of agriculture; take great pleasure in cattle and horses; like the sea, and form good sailors; have now many coasting vessels of their own, manned with Maori crews; are attached to Europeans, and admire their customs and manners; are extremely ambitious of rising in civilization and becoming skilled in European arts; they are apt at learning; in many respects extremely conscientious and observant of their word; are ambitious of honours; and are probably the most covetous race in the world. They are also agreeable in manners, and attachments of a lasting character readily and frequently spring up between them and Europeans. Many of them have also now, from the value of their property, a large stake in the welfare of the country; one chief has, besides valuable property of various kinds, upwards of £500 invested in government securities; several others have also sums of from £200 to £400 invested in the same securities." He goes on to say: "It would appear that a race such as has been described could be easily incorporated into any British settlement, with mutual advantage to both races, the natives supplying agricultural produce, poultry, pigs, and a constant supply of labour (although yet for the most part rude and unskilled); while, upon the other hand, the Europeans would supply the various manufactured goods required by the natives, and provide for the manifold wants created by their increased civilization. Such a class of settlements might easily grow into prosperous communities, into which the natives, with characters softened by Christianity, civilization, and a taste for previously unknown luxuries, would readily be absorbed. This process of the incorporation of the native pop. into the Europeans' settlements has, accordingly, for the last few years, been taking place with a rapidity unexampled in history. Unless some sudden and unforeseen cause of interruption should occur, it will still proceed, and a very few years of continued peace and prosperity would suffice for the entire fusion of the two races into one nation." Throughout New Z., four-fifths of the natives have embraced Christianity, and attached themselves either to the Wesleyan or the Church of England missionaries; but a considerable number at the Bay of Islands have lately ranged themselves under the banners of the French Roman Catholic bishop.

British population.] The following is a return of the British pop. in the different settlements in New Z., in 1842 and 1847:

	1842.	1847.
Auckland	2,895	5,217
Wellington	6,000	4,480
Nelson	2,500	2,867
New Plymouth	895	1,137
Petre	200	166
Bay-of-Islands	380	677
Hokianga	263	
Akaroa, comprising Banks' peninsula	208	247 in 1846.
	13,341	14,791

Commerce.] The exports from Auckland in 1845 amounted in value to £45,411; in 1850, to £45,765. The following table exhibits the commercial movement of Wellington, Nelson, and New Plymouth, for the years mentioned:

	Imports.	Exports.	Shipping Inwards.		Shipping coastwise. Inwards.
WELLINGTON.	£	£		Tons.	Tons.
1841	53,625	14,447	74 =	18,922	9,141
1842	112,592	12,156	80	17,337	10,996
1843	87,885	29,059	41	9,020	10,679
1844	36,175	30,273	44	6,899	8,285
1845	43,221	26,614	40	5,382	6,464
1846	59,415	31,281	47	8,362	5,948

	9,040	165	17	4,233	

In 1841 spars formed the largest single item of domestic produce exported, the value being £500. In 1842 sperm-oil figures for £1,984. In 1843 copper-ore is the chief article, and is put down at £6,800. In 1844 sperm-oil again takes the lead, although it only amounts to £2,214, and copper-ore does not appear at all in the list. In that year manganese is the article second in importance, the amount being £1,865. In 1845 kauri gum is at the head, and for no less an amount than £12,847; copper-ore, of which the amount is £9,125, being next in order. In the half-year ending 5th July, 1846, copper-ore again takes the lead, the quantity being 436 tons, and the value £8,420. Sperm-oil comes next, being £2,505, and kauri gum next, being £1,261; the minor articles comprising firewood, flax, grain, salted pork, potatoes, spars, sawn timber, whalebone, wool, &c. The imports and exports for the years 1848 and 1850 are thus stated:

	Imports.		Exports.	
	1848.	1850.	1848.	1850.
New Ulster	£124,434	£108,793	£21,339	£68,023
New Munster	100,410	131,410	22,876	47,391
Totals	£233,844	£240,203	£44,215	£115,414

During the year 1851, for which the returns have not yet been published, the pop. and stock, as also the imports and exports, are known to have been largely increased. The discovery of gold in Australia has already proved beneficial to this colony, by opening up new markets for her agricultural produce, the result of which has been that an increased amount of land has recently been brought under cultivation. As regards the mineral resources of the country, it is stated that both coal and copper-ore have been discovered of a quality that will amply repay capitalists for their working.

Fisheries.] When the settlement of Wellington

was established in 1840, this branch of industry was entirely in the hands of the Sydney merchants. A considerable number of small vessels, many of them owned in Sydney, were engaged in sending supplies of provisions and whaling stores to the whaling stations on the east coast and in Cook's strait, and in taking off the oil to Port-Jackson. Though the fish existed in the New Z. waters, the oil and bone were productions of Sydney enterprise, capital and labour. They ought no more to be claimed as New Z. productions, or as a New Z. export, than the French fisheries on the banks of Newfoundland should be deemed British, so long as the enterprise, capital, skill, and labour of another colony were alone employed in this business; it added nothing to the wealth of this colony. The settlement of Wellington was, however, scarcely established, before New Z. merchants and small-craft owners began to take a share in this enterprise. Some of the whaling-masters also found it convenient, as well as advantageous, to fit themselves out here; and for the last three or four years the whole trade has been transferred to us. The quantity of oil caught has varied from 8,000 to 1,300 tons per annum. A small quantity of sperm-oil has also been secured, averaging about 15 tons per ann., and the bone may be stated at about 40 tons per ann. The total value of the fisheries, from the 25th August, 1841, to the 5th January, 1847, at an average value, may be estimated at £86,625.

Government.] The new charter of 1846 repealed that of 1840, and created municipal, legislative, and administrative powers for New Z. The municipal administration was the basis of the whole system. Every district settled by colonists of European birth or origin was erected into a borough; every borough elected a common council, from which were to be chosen a mayor and a court of aldermen. The common council, besides electing the magistrates to whom the local administration of the district or borough was confided, were also to elect members to serve in a house-of-representatives, forming one of the three estates of a provincial assembly. The whole of New Z. was to be divided into two or more provinces, and in each of these laws to be made for the province by the house-of-representatives, a legislative council, and the governor, who together constituted the provincial legislature. As there were many topics of general concern to all the inhabitants of New Z., respecting which some uniformity of legislation and administration will be indispensable, a general assembly of the New Z. islands was to be holden by the governor-general, composed of himself, and of a legislative council, and a house-of-representatives; but no one could be a member of the legislative council of the general assembly who was not also a member of one of the legislative councils of the provincial assemblies; neither could any one be a member of the house-of-representatives of the general assembly who was not a member of a provincial house-of-representatives. The charter provided for the creation of a governor-in-chief, a governor of each of the two provinces immediately to be established, and a lieutenant-governor for each. To the governor-in-chief it was to belong exclusively to correspond directly with the secretary-of-state for the colonies, and exercise over the lieutenant-governor the same authority and control that the secretary-of-state exercises over him. In May 1852, her majesty's ministers presented a bill for granting a constitution to New Z. "He could only look on this measure," said the colonial secretary, when moving for leave to bring in his bill, "as the commencement of a system which there was no doubt it was most desirable to see established; and therefore it was the intention of government to introduce clauses in this bill, enabling the legislature of New Z., from time to time, to propose and effect such changes in their institutions as they may think fit." By this bill it was proposed that the central legislature should consist of the governor, a legislative council, and an elective assembly. The members of the legislative council were to be nominated by the Crown; the franchise for the elective assembly, was to be possessed by all who possess a freehold worth £50 a-year, all who occupy a house in town worth £10 a-year, or in the country of £5 a-year; and all who possess leasehold property for ten years to run worth £10 a-year. The electoral districts were left to be fixed by the governor. The number of councillors was not to be more than 15, or less than 10; the number of members of assembly not more than 40, or less than 25. The provisions of this bill failed to satisfy the house-of-commons, though acknowledged to be an approximation to a sound system of government. A legislative council composed of nominees of the Crown, it was justly argued, could never satisfy the colonies, and was an unhappy departure from Lord Grey's principle of a council elected by local legislation. The principle of subdivision contained in the bill was also strongly condemned. It was argued that the colonists themselves had already strongly condemned the system of provincial councils, which then existed, as being "calculated utterly to destroy that unity of action, accompanied by economy, which can alone confer an uniform national character upon the different portions of the colony, which it should be the desire of all to establish;" and it was evident that the same condemnation applied still more forcibly to the system of provincial councils contained in this bill. The colonists stated that "one centrally situated executive, with the aid of steam vessels to keep up a rapid and regular communication between the settlements, would be infinitely more direct and efficient in its action, and far less costly in its maintenance, than any of number provincial councils could hope to be; while, to meet the wants of each separate district, municipalities, with extensive powers of legislation on questions merely relating to such district, would amply suffice for all their local wants." If the principle of subdivision contained in this bill were carried out, New Z. would have ultimately to be divided not into 6 provinces, with 6 subordinate legislatures, but into 60 provinces, with as many subordinate legislatures, for the time will come when probably New Z. will contain more than 60 communities, each of them with a pop. six times as great as that of either Canterbury, Otago, or New Plymouth; and even then the population of New Z. would scarcely exceed 1,000,000. Each of these communities would be able to show that it differed in some respect from its neighbour, and ought to have the management of its local affairs. On the 30th of June 1852, an act to grant a representative constitution to New Z. received the final sanction of the Crown. The main provisions of this act are that the following provinces are established in New Z., namely, Auckland, New Plymouth, Wellington, Nelson, Canterbury, and Otago, the limits of the same to be fixed by the governor of New Z. Each province is to have a superintendent and a provincial council, of which the number, not less than 9, is to be settled by the governor; before the election of members of the provincial councils, the persons qualified to elect such members, are to elect a superintendent subject to the disallowance of the governor, in which case a fresh election is to take place, the superintendent to remain in office till a dissolution of the provincial council, and if, by death, or other cause, a vacancy shall occur, a new superintendent is to be elected; the governor is empowered to appoint electoral districts, returning officers, and to issue writs for such elections. Every person qualified for an elector is also qualified to be a member of the provincial council or to be a superintendent; every man of the age of 21 having a freehold estate of the clear yearly value of £50 of which he has been possessed for six months previous to the last registration; and every man holding a leasehold estate in the district of the yearly value of £10, which lease has not less than three years to run at the time of registration, or who is a householder within the district occupying a tenement within the limits of a town of the yearly value of £10, or without such limits of the yearly value of £5, and having resided therein for six months previous to such registration, is, if duly registered, entitled to be chosen; but aliens and persons convicted of treason, felony, or any infamous offence, are disqualified. Any member is empowered, if he see fit, to resign his seat in the provincial council; and if he neglect to attend its meetings for two successive sessions, or if he become bankrupt or insolvent, or a public defaulter, or be convicted of any criminal offence, his seat is to be declared vacant. The determination of questions as to vacancies is to be decided by the provincial council, but only when referred to them by the superintendent, who may also issue writs for the filling of any vacancies. The duration of the council is to be not more than 4 years, and the governor may, whenever he may deem it expedient, dissolve the same by proclamation. Sect. 32 establishes a legislative council for the whole colony, to be not less than 10, to be named by the governor, such members to be at least 21 years of age, and not aliens; the seats to be held for life, but may be resigned; or declared vacant for neglect of attending for two successive sessions, for taking an oath of adherence to any foreign power, on conviction of treason or other criminal offence, or becoming bankrupt or insolvent. By sect. 40 a house-of-representatives is appointed for the colony, the number to be not more than 42 nor less than 24, as the governor shall direct, such house-of-representatives, unless sooner dissolved, to continue for five years. The governor is empowered to appoint electoral districts for the election of members, and to provide all the necessary means for that purpose; the qualifications for voters or members to be the same as for the provincial councils. Her Majesty is empowered by letters patent to establish municipal corporations in any district in New Z., but the bye-laws of such corporation must have the sanction, and be subject to the alterations of the provincial council within whose province it is situated; and her Majesty may also cause by letters patent the customs and usages of the native inhabitants to be maintained in such districts as shall be set apart for that purpose. Power is given to the general assembly to regulate the sale, letting, and disposal of the waste lands of the Crown, and of all lands wherein the rights of the natives shall have been extinguished; but no persons other than her Majesty, her heirs and successors, are to acquire or accept any lands from the natives used by them in common, and no agreement for such purpose is to have any validity or effect unless entered into with her Majesty or for her by the governor. By sect. 74 the sum of £268,370 3s. with interest at the rate of 3 per cent. is declared to be due to the New Z. company, for the discharge of which one-fourth of all sums accruing on the sales of waste lands shall be paid to the said company so long as any part remains unpaid, but the company may release lands from

such payment upon such terms as the proprietors may deem fit, and make certain exceptions as to the waste lands of Canterbury, Nelson, and Otago.

Revenue.] The revenue of the colony averaged about £45,000 from 1841 to 1844, and was £52,746 in 1845, of which amount £38,745 comes under the head of 'receipts in aid.' The expenditure for 1845 was £38,841. In 1849 the revenue was £48,589; in 1850, £57,743.

NEXOE, a sea-port town of Denmark, in the stift of Sieland, on the E coast of the island of Bornholm, and 20 m. E of Roenne. Pop. 1.400. It has an hospital, and possesses manufactories of cloth, and several breweries and distilleries. The port is good, but has little trade. In the vicinity are extensive quarries of freestone and mill-stone.

NEXON, a canton, commune, and town of France, in the dep. of the Haute-Vienne, and arrond. of Saint-Yrieix. The cant. comprises 8 com. Pop. in 1831, 9,307; in 1841, 9,157. The town is 12 m. N of Saint-Yrieix. Pop. 2,157.

NEYER, a district of Hindostan, in the prov. of Gujerat, near the E bank of the Great Runn. It consists chiefly of arid sand, the only supply of water being derived from wells. The inhabitants are chiefly Coolies, and are noted for brigandage. The locality is famed for its horses. The chief town is Wow.

NEYGENSTRAET, a commune of Belgium, in the prov. of E. Flanders, and dep. of Denderhautem. Pop. 244.

NEYNWAH, a town of Hindostan, in the prov. of Ajmir, and principality of Bundu, 30 m. from Ajmir. It is of large extent, and is enclosed by a stone wall and ditch.

NEYRAC (Le), a village of France, in the dep. of the Aveyron, and cant. of Estaing, 9 m. NW of Espalion. Pop. 1,000.

NEYVA, a river of Portugal, in the prov. of Minho, and comarca of Vianna. It has its source to the S of Oleiros; runs W; and after a navigable course of about 30 m., throws itself into the Atlantic, near a castle of the same name, and 6 m. S of Vianna.

NEYVA. See Neiba.

NGAMI, a great inland lake of South Africa, a little to the S of the 20th parallel of S lat., and intersected by the 24th meridian of E long., at an estimated alt. above sea-level of 2,825 ft. It is reported to be about 60 m. in length, and 14 m. in breadth; and gives forth at its NE extremity a noble river called the Zouga, and receives another called the Teoge, at its NW extremity. The name is pronounced as if written with the Spanish *n*, the *g* being inserted to show that the ringing sound is required. It signifies 'great water;' but the lake has other names, as Inghabi, and Noka-a-Mampusi. The discovery, or rather re-discovery of this lake—for its existence appears to have been known to the early Portuguese explorers of S. Africa—is due to Mr. Livingston, a missionary stationed at Kolobeng, in S lat. 25°, and E long. 26°, a point 570 m. from Colesberg, and 900 m. from Algoa-bay, who with the view of pushing missionary enterprise further north beyond the Kalahari desert, which had hitherto presented an insurmountable barrier to Europeans, left that station on the 1st day of June, 1849, with two of his countrymen, and after travelling about 300 m., struck on a magnificent river, and winding along its banks nearly 300 m., reached the Batavana tribe, on the banks of the lake, in the beginning of August. For two or three days from the lake, the Zouga varies from 200 to 500 yds. in breadth, with flat and rather swampy shores. It then narrows and flows between high banks of limestone for six days; again opens out and spreads into a little lake about 4 m. across; and then divides into two streams, which appear to become ultimately dissipated in sands and saltpans. The N. lake itself is reported to be merely a reservoir for the surplus waters of a much larger lake or marsh about 150 or 200 m. beyond it. The Teoge river, which falls into its NW extremity, carries to it a large body of water, and has a rapid current; and its waters are uniformly greatly swollen at one period of the year. The banks of the Zouga are inhabited by the Bakhoba, or Bayeiye as they prefer to call themselves, a fine intelligent tribe, in every respect superior to the Bechuanas. Their complexion, says Mr. Livingston, "is darker than that of the Bechuanas; and, of 300 words I collected of their language, only 21 bear any resemblance to Sitchuana. They paddle along the rivers and lake in canoes hollowed out of the trunks of single trees, take fish in nets made of a weed which abounds on the banks; and kill hippopotami with harpoons attached to ropes. We greatly admired the frank, manly bearing of these inland sailors. Many of them spoke Sitchuana fluently, and, while the waggon went along the bank, I greatly enjoyed following the windings of the river in one of their primitive craft, and visiting their little villages among the reeds. The banks are beautiful beyond any we had ever seen, except perhaps some parts of the Clyde. They are covered, in general, with gigantic trees, some of them bearing fruit, and quite new: two of the boabob variety measured 70 to 76 ft. in circumf. The higher we ascended the river the broader it became, until we often saw more than 100 yds. of clear deep water between the broad belt of reed which grows in the shallower parts. The water was clear as crystal, and as we approached the point of junction with other large rivers, reported to exist in the N, it was quite soft and cold. The fact that the Zouga is connected with large rivers coming from the N awakens emotions in my mind, which make the discovery of the lake dwindle out of sight: it opens the prospect of a highway, capable of being quickly traversed by boats, to a large section of well-peopled territory. One remarkable feature in this river is its periodical rise and fall. It has risen nearly 3 ft. in height since our arrival, and this [September] is the dry season. That the rise is not caused by rains is evident from the water being so pure. Its purity and softness increased as we ascended towards its junction with the Tamunakle, from which, although connected with the lake, it derives the present increased supply. The sharpness of the air caused an amazing keenness of appetite, at an elevation of little more than 2,000 ft. above the level of the sea; and the reports of the Bayeiye, that the waters came from a mountainous region, suggested the conclusion that the increase of the water at the beginning and middle of the dry season must be derived from melting snow. All the rivers reported, to the N of this, have Bayeiye upon them, and there are other tribes on their banks. With the periodical flow of the rivers great shoals of fish descend. The people could give no reason for the rise of the water further than that a chief, who lives in a part of the country to the N, called Mazzekiva, kills a man annually, and throws his body into the stream, after which the water begins to flow. The principal disease reported to prevail at certain seasons appears, from the account of the natives, to be pneumonia. When the wind rises to an ordinary breeze, such immense clouds of dust arise from the numerous dried-out lakes, or 'salt-pans,' that the whole atmosphere becomes quite yellow, and one cannot distinguish objects more than 2 m. off. It causes irritation in the eyes, and, as wind prevails almost constantly at certain seasons, this impalpable powder may act as

it does among the grinders in Sheffield. We observed cough among them,—a complaint almost unknown at Kolobeng. Musquitoes swarm in summer, and the banyan and palmyra give in some parts an Indian cast to the scenery." Mr. Livingston, and his companion Mr. Oswell, subsequently pushed their explorations northwards to the parallel of 17° 25′ S, and between 24° 30′ and 26° 50′ E long., traversing a district watered by deep and constantly flowing streams supposed to be feeders of the Zambese. In the *Graham's Town Journal*, a Mr. D. Campbell has given an account of explorations pursued by him in this quarter since the visit of Messrs. Oswell and Livingston, of which the following is an abstract. He left Colesberg in February 1851, with the intention of going to Sebutain, the chief of a powerful nation living on the Zambese, and arrived there after a three months' journey, with three spans of oxen for his waggon. That chief was stationed on the banks of the river Chobe, on the opposite side of which is a very large town called Marami's town. The Chobe is a tributary to the great river Zambese. It rises at some distance to the W, and empties itself into that river about two days' journey below where he encamped. About 3 or 4 days' journey below the junction of the two rivers are the splendid Zambese falls. The natives pointed out a palmyra about 40 ft. high, and said that the falls were many times higher than that. Mr. Campbell did not see this river, nor its falls, owing to both rivers having begun to overflow their banks. Travelling farther N was rendered utterly impossible. When he arrived at the Chobe his waggon was placed close to its banks,—a week afterwards he had to track away from it to a distance of 3 m. The Portuguese, Mr. Campbell reports, carry on a flourishing trade here with the natives for slaves and ivory, in exchange for which they give guns capitally manufactured, the barrels being far superior to our common musket. They also supply the natives with gunpowder, red and blue cloths, beads, and various other minor articles of trade. They come from a settlement on the W coast—the natives pointing to the NW from Morami-town. They come down the Zambese, which rises in the far W, in canoes, and trade at the several towns situated on the banks of that river. They take away with them immense numbers of slaves and large quantities of ivory. The natives have splendid copper and iron arm-rings and other ornaments, which they obtain from a large Makoba tribe living in a very marshy country SW of Linquati, the chief town of the tribes about here. "The natives informed me," says Mr. Campbell, "that there was another lake many times larger than Lake N'gmi, situated a long distance from them, a few points N of W, and a lofty range of mountains extending N and S to a very great distance. They also enumerated 13 large rivers within a distance of about 400 m. N of the Zambese. There are also immense marshes to the NE of Marami's-town, round which the natives are obliged to travel, it being impossible to cross them. On the whole, I may pronounce this as the finest country I have ever seen; but, at the same time, it is the most unhealthy. I do not think it possible for a European to exist here during the summer, fever is so much more severe than at the lake. After having remained a month to rest my oxen, I started back, accompanied by Mr. Wilson, who had been at Zambese at the same time with myself, shaping our course for the Great lake, which lies rather more than 200 m. SW from the town we had visited, in lat. 20° 20′. We reached the lake after three weeks' travelling, during which we crossed the large river Zouga in canoes. This river runs out of the lake towards the E, and travelling to the lake you ascend it from the point at which it is struck, after crossing the desert 320 m. At the point where we crossed our waggons by means of canoes, the river was at least 400 yds. broad and very deep: this was about 50 m. below the lake. At the lake we met Messrs. C. and T. Green and Mr. Edwards, who were just ready to start on an expedition round the lake, partly for the purpose of elephant-shooting, but chiefly to endeavour to discover Lebele, the chief of a powerful Makoba tribe living some distance beyond the lake, a few m. N of W. These gentlemen we accompanied, and, after making the circuit of the lake, which we found to be at least 60 m. in length by 14 m. in breadth, we proceeded up the Teouge, a very large river flowing into the lake on its W side. The natives say this river comes from Lebele. At the time we ascended it, it had overflowed its banks for some miles on each side, and we could not, therefore, ascertain its actual breadth. We proceeded up this river about 150 m., in the course of which we passed through the poisonous fly in two or three places without being aware of the danger. We should have got up much further, and it is probable have discovered Lebele, the chief we were in quest of, but our oxen and horses began to die, and we were compelled reluctantly to return as quickly as possible towards the lake: when I started from the lake I had 37 oxen, but when I got back the number was reduced to 22. With these I contrived to get as far as Tsapoe's, a petty chief living on the banks of the river Zouga, about 300 m. from the lake; from which all my waggons were conveyed in canoes, the freight paid to the chief of the lake being ten bars of lead. Only fancy a river being navigable for that distance in the interior of South Africa. Here my last ox died. I omitted to say in the proper place, that while I and Mr. Welm were at the Zambese, 11 Portuguese guns were brought to us by the natives to be repaired, but this we could not undertake, the locks being of a different construction to ours. I wanted to purchase one of these weapons, but the natives refused to part with it. I should have mentioned also, that the Portuguese are carrying on a thriving trade with Lebele for slaves and ivory. They pay for these in the same description of goods as they trade with at the Zambese. The year before last, the Portuguese traders sent presents to the chief of the lake, promising him a visit the year following. This promise, however, was not kept, probably having heard that every season there were at the lake a good many English, whom they endeavour in their trading enterprises most carefully to avoid."

NGARI, a district of Tibet, at the sources of the San-pu, to the N of Nepal.

NHA-TRANG, a prov. of Annam, in the S part of Cochin-China, bounded on the N by the prov. of Phuyen, on the E by the China sea, on the S by the prov. of Bin-thuon, and on the W by Camboya. It contains a town and port of the same name, at the entrance of a river also named Nha-trang, into a bay of the China-sea, and 30 m. S of Hone Cohe. The port is safe and completely sheltered on all sides.

NHAURGHUR, a town of Hindostan, in the prov. of Malwa, district and 75 m. ESE of Kota.

NHENGAHYBAS, a numerous tribe of Indians, who inhabit the island of Marajo, prov. of Para, Brazil. They were brought to some extent to the profession of Christianity by the Jesuits. Fishing and navigation form their chief employments.

NHO, or Nouh, a town of Hindostan, in the prov. and 54 m. NW of Agra, district and 33 m. WSW of Aligur near the l. bank of the Jumna. It has extensive salt-works.

NHUNDIAQUARA, a river of Brazil, in the prov. of São Paulo, which runs S and throws itself into the bay of Paranagua, opposite Antonina.

NIAB, a town of Arabia, in Yemen, in the territory and 60 m. NW of Abu-Arish, and 9 m. from the Arabian gulf.

NIAGARA, a river or rather a strait flowing from the NE end of Lake Erie into Lake Ontario, and forming the boundary, throughout its course of about 36 m., between the United States territory and Canada. The river as it flows from Lake Erie is about ¾ m. wide, and from 20 to 40 ft. deep. It has a rapid current of about 8 m. an hour for the first 3 m., and then assumes a smooth and lake-like placidity, which it retains till within 1 m. of the great falls. At 5 m. from Lake Erie it begins to expand, till it becomes more than 8 m. in width measured across Grand island. Below Navy island it is compressed to a breadth of 2½ m. At the falls, it is ¾ m. wide; but below it is immediately compressed to a ¼ m., and is 250 ft. deep. At two m. below the falls, it becomes comparatively smooth, but flows with amazing velocity in a deep wall-sided valley or huge trench to Lewiston, having a descent of 104 ft. from the falls to that point, a distance of 7 m. From Lewiston to Lake Ontario, its fall is 2 ft., in a like distance of 7 m.; and the sides or banks of the river become gradually lower, until on approaching Lake Ontario, they reassume the level character they presented at the emergence of the stream from Lake Erie. By means of an embankment, constructed parallel with the shore along the margin of the river, the level of the surface of Lake Erie is maintained over a distance of several miles above that of the descending stream; and this embankment forms a portion of the Lake Erie canal. Lake Erie is situated upon horizontal strata, in a region elevated about 300 ft. above the country which contains Lake Ontario. The descent which separates the two countries is in some places almost perpendicular; and the immense declivity, formed by an interruption in the general level of these calcareous strata, occasions in the course of the N. the most stupendous cataract in the world, as well as the great falls of Cheneseco. This remarkable line of distinction generally runs in a SW direction, from a place near the bay of Toronto, on the N side of Ontario, round the W angle of the lake; whence it continues its course generally in an E direction, crossing the river of N. and the Cheneseco river, till it is lost in the country towards Seneca lake; but as the difference of level is spread over an easy slope of 10 m. and does not amount to more than 330 ft., or 1 ft. of rise in 160 ft., the variation in the surface is not easily detected by an ordinary observer passing through the country. Above the falls there is literally no river-valley at all, as the river flows almost flush or level with its banks. The waters of this cataract formerly fell from the N side of the slope, near the landing-place, but the action of such a tremendous column of water, falling from such an eminence through a long succession of ages, has worn away the solid stone for the distance of 7 m., and formed an immense chasm which cannot be approached without horror. Down this awful chasm, the waters are precipitated with amazing velocity; and such a vast torrent of falling water communicates a tremulous motion, which is sensibly felt for some poles round, and produces a sound frequently heard at the distance of 20 m. The height of the banks renders the descent into the chasm difficult; but a person, after having descended, may proceed to the base of the falls, and may walk in perfect safety a considerable distance between the precipice and the descending torrent. The river at the falls—which occur about 21 m. below Lake Erie, and 14 m. above Lake Ontario—is about 743 yds. wide, and the perpendicular pitch is 150 ft. in height. In the last ½ m., immediately above the falls, the descent of the water is 58 ft.; and it appears that the water falls about 273 ft. in a distance of about 7½ m. At 4 m. N of the town of Buffalo, near the E extremity of Lake Erie, we come to the village of Black Rock, where the boundaries of the lake contract, and its waters begin to pour themselves out through the sluiceway of the N. The river is at this place about a ¼ m. broad,—a dark, deep, hurrying stream. Opposite Black Rock, on the Canada side, is the village of Waterloo, to which there is a ferry. There is also a road on the American side, from Buffalo to the falls, a distance, either way, of about 15 m. From Waterloo we pass on by a level road close on the W bank of the N., and observe that the river continually becomes wider, presenting in its course Squaw island, Snake island, and Strawberry island, all near the American side, and at length it divides into two streams which sweep round Grand isle several miles in length, and containing 11,200 acres covered with wood. At the lower extremity of Grand isle lies Navy isle celebrated in the annals of Canadian rebellion. They then unite again, forming one stream as before, only increased in breadth and swiftness. And now the interest thickens, and the whole scene becomes full of spirit and meaning. Here, about 3 m. from the falls, you see the white-crested rapids tossing in the distance before you; and even in the most unfavourable state of the weather, you hear the voice of the cataract pervading the air with its low, monotonous, continuous roar. From this point too you see a column of mist rising up like a smoke in distantly burning woods, marking the locality of the sublime scene over which it is immediately hanging. A mile or two passed, we turn a little from the road to the r., in order to have a near view of the rapids, occupying the whole breadth of the river from shore to shore, and extending a ½ m. back from the falls, formed by the rush of the entire body of waters down a rough bed the descent of which in the course of this ½ m. is 58 ft. The view is something like that of the sea in a violent gale. Thousands of waves dash eagerly forward, indicating the interruptions which they meet with from hidden rocks by ridges and streaks of foam. In the extreme distance you distinguish the crescent rim of the British fall, over which the torrent pours and disappears. The wildness and the solitude of the scene are strikingly impressive. Nothing that lives is to be seen in the whole extent of the stream: nothing that values its life ever dares venture it here. Returning to the road, we ascend gradually till we come to a hotel. A footpath through the garden at the back of the house, and down a steep and thickly wooded bank, brings us upon Table rock (*a*),—a flat ledge of limestone forming the brink of the precipice, the upper stratum of which is a jagged shelf about a foot in thickness, jutting out over the gulf below. Here the whole scene breaks upon us. Looking up the river we face the grand crescent called the British or Horse-shoe fall, over which nearly seven-eighths of the whole body of water is supposed to pass. Opposite to us is Goat island (G), or Iris island, as the Americans now prefer to call it, which divides the falls, and lower down to the left is the American fall. "The height of the cataract is so much exceeded by its breadth, and so much concealed by the volumes of mist which wrap and shroud its feet; you stand so directly on the same level with the falling waters; you see so large a portion of them at a considerable distance from you; and their roar comes up so moderated from the deep abyss, that the loveliness of the scene at first sight is permitted to take precedence of its grandeur. Its colouring alone is of the most exquisite kind. The deep sea-green of the

centre of the crescent, where it is probable the greatest mass of water falls, lit up with successive flashes of foam, and contrasted with the rich creamy whiteness of the two sides or wings of the same crescent; then the sober grey of the opposite precipice of Goat island, crowned with the luxuriant foliage of its forest-trees, and connected still further on with the pouring snows of the greater and less American falls; the agitated and foamy surface of the waters at the bottom of the falls, followed by the darkness of their hue as they sweep along through the perpendicular gorge beyond; the mist floating about, and veiling objects with a softening indistinctness; and the bright rainbow which is constant to the sun; altogether form a combination of colour, changing too with every change of light, every variation of the wind, and every hour of the day, which the painter's art cannot imitate, and which Nature herself has perhaps only effected here. And the motion of these falls, how wonderfully fine it is! how graceful, how stately, how calm! There is nothing in it hurried or headlong, as you might have supposed. The eye is so long in measuring the vast and yet unacknowledged height, that they seem to move over almost slowly; the central and most voluminous portion of the Horse-shoe even goes down silently." [*Greenwood.*] About a ½ m. below the Horse-shoe fall, a commodious road has been cut down the side of the perpendicular cliff, and through the solid rock, to the river. Here we find a regular ferry (*b b*), and are conveyed in a small boat across the stream, now narrowed to a breadth of about 1,200 ft., to the American side. The passage is perfectly safe, and affords a superb view both of the falls above, and of the dark river below. The current is not very rapid, and near the American side actually sets up toward the falls. A small steam-boat plies in the rough water just below the falls, and carries passengers almost to the very sheet itself. We land almost directly at the feet of the American fall, and by walking a little way to the right, may place ourselves in its spray. Now look up, and the height will not disappoint you. It seems as if the "waters which are above the firmament" were descending from the heights of heaven, and as if "the fountains of the great deep were broken up" from below. The noise, which permits free conversation to those who are on the bank, is here imperative and deafening; resembling the perpetual rolling of near thunder, or the uninterrupted discharge of a battery of heavy ordnance, mingled with a strange crashing and breaking sound. The impression of superior height is gained, not so much from the fact that the American fall is actually 10 or 12 ft. higher than the British, as from your having a complete profile view of the one from brink to base, which you cannot well obtain of the other.—The village of Manchester is situated on the rapid just above the fall. A bridge is thrown boldly over the rushing and 'arrowy' rapid to a small island called Bath island (B), where there are one or two dwellings and a paper-mill; and from this spot another bridge runs with equal boldness to Goat island. The whole breadth of the space thus traversed is 1,072 ft. Geologists suppose, and with apparent reason, that time was when the N. fell over

the abrupt bank at Queenstown, between 6 and 7 m. below the place of the present falls, and that it has, in the lapse of unknown and incalculable years, been wearing away the gulf in the intermediate distance, and toiling and travelling through the rock back to its parent lake. "The 710,000 tons of water which each minute pour over the precipice of N., are estimated to carry away a foot of the cliff every year. Taking this average, and adopting the clear geological proof that the fall once existed at Queenstown, 4 m. below, we must suppose a period of 20,000 years occupied in this recession of the cataract to its actual site; while the delta of the Mississippi, nearly 14,000 sq. m. in extent,—an estimate founded on its present rate of increase, and on a calculation of the amount of earthy matter brought down the stream,—has satisfied Mr. Lyell in alleging that 67,000 years must have elapsed since the formation of this great deposit began." [*Quarterly Review.*] The reader will be gratified by our subjoining a more finished description of this sublime scene from the pen of Mr. Dickens: "Whenever the train halted I listened for the roar, and was constantly straining my eyes in the direction where I knew the falls must be from seeing the river rolling on towards them; every moment expecting to behold the spray. Within a few minutes of my stopping I saw two great white clouds rising up slowly and majestically from the depths of the earth: that was all. At length we alighted; and then, for the first time, I heard the mighty rush of water, and felt the ground tremble underneath my feet. The bank was very steep, and was slippery with rain, and half-melted ice. I hardly know how I got down, but I was soon at the bottom, and climbing with two

English officers who were crossing, and had joined me, over some broken rocks, deafened by the noise, half-blinded by the spray, and wet to the skin. We were at the foot of the American fall. I could see an immense torrent of water tearing headlong down from some great height, but had no idea of shape, or situation, or anything but vague immensity. When we were seated in the little ferry-boat, and were crossing the swollen river immediately before both cataracts, I began to feel what it was; but I was in a manner stunned, and unable to comprehend the vastness of the scene. It was not until I came on Table-rock and looked—great heaven, on what a fall of bright green water!—that it came upon me in its full might and majesty." With this we may compare Sir T. Bonnycastle's account of these falls, and the impressions created by them:—"You must descend to the very edge of the trembling rocky brink of the cauldron on the British side, immediately under the stairs, and 60 or 70 ft. below the narrow platform of the rock on which you have stood when you have reached the last of these stairs. This is not to be effected without some trouble, risk, and fatigue; but it repays all your exertion, for when you have reached the edge, close to the Rainbow or Split rock, you are as it were at once in a new world: chaos seems there to have never been disturbed by the regularity of nature, but reigns solemn and supreme. Place your back against the projecting, blackened, and slime-covered rocks, and look towards the mighty mass of vapour and water before you, around you, beneath you, and above you: hearing, sight, feeling, become as it were blended and confounded! You are sensible that you exist, perhaps, but in what state of existence has, for a few minutes, vanished from your imagination. The rocks vibrate under your feet. The milk-white boiling and mountain surge advances, swells up, subsides, recoils, lashes, and mingles with the thick vapour. An indescribable and terrific, dull yet deafening sound, shakes the air; your nerves feel the concussion, and the words of surprise which at length escape from your lips are inaudible even to yourself, so awfully stern is the uproar of the contending air and water in their conflict for mastery. The ideas which first struck me when I had recovered from this stupor of astonishment were those of being swept away by the foaming mountains, bubbling, seething in the huge cauldron at my feet; of being on the point of losing the sense of hearing, for my temerity in venturing to pry so nearly into the unattainable mysteries of nature; and of instant annihilation from the mass of overhanging black and beetling rock above my head, at an absolute height of nearly 200 ft. In fact I experienced the same sensations so beautifully described by Shakspeare in Lear, but from a reverse cause; so true is it that extremes meet. I became giddy and confounded by looking at and up to the dizzy scene, instead of glancing from the eye down towards an unfathomable abyss of air and water below. There are few visitors who venture to the 'imminent deadly breach' of the edge of the cauldron, and of the Split Rainbow rock. These form a huge mass, buried cables deep in the gulf, fallen headlong from above, rent by the fall in twain nearly to its base, wedged into the lip of the cauldron, and towering 20 or 30 ft. above the mountain-surge."

Volume of water.] In an article in the *American Journal of Science*, Mr. G. R. Blackwell presents some calculations, from which it will appear "that the motive-power of the cataract of N. exceeds, by nearly fortyfold, all the mechanical force of water and steam power rendered available in Great Britain for the purpose of imparting motion to the machinery that suffices to perform the manufacturing labours for a large portion of the inhabitants of the world, including also the power applied for transporting these products by steam-boats and steam-cars, and their steam-ships of war, to the remotest seas. Indeed it appears probable that the law of gravity, as established by the Creator, puts forth in this single waterfall more intense and effective energy than is necessary to move all the artificial machinery of the habitable globe. Estimating the perpendicular descent of the waters of the grand cataract to be 160 ft., and making the usual allowance of one-third part for waste of effective power, in the practical application of water to water-wheels; and also estimating the power of a horse to be equal to a force that will raise a weight of 33,000 lbs. one foot high in one minute, which is Watt and Bolton's standard, we obtain the following results:

$$\left\{\frac{1{,}402{,}500{,}000 \text{ lbs. of water} \times 160 \text{ ft. of descent}}{33{,}000}\right\} - \frac{1}{3}$$

= 4,533,334 horse-power, which is the measure of the mechanical force, or motive-power, that the waterfall of Niagara is capable of imparting. It has been estimated by Mr. Baines, in his *History of the Cotton Manufactures of the United Kingdom of Great Britain* in 1835, that the motive-power employed to operate the machinery of all the cotton-mills in Great Britain was then equal to that of about

33,000 horses, imparted by the agency of steam;
11,000 — — — waterfalls.
100,000 horse-power he estimated to be employed to operate the woollen, flax, and other mills, and mechanical operations.
50,000 horse power for propelling the machinery of steam-boats and coal-mines.

194,000 horse-power in the year 1835.

Supposing about 20 per cent. to have been added to this motive-power in the increase of locomotive engines for railways and steam-boats, as well as for various manufacturing purposes, since 1835, we add to this aggregate
39,000 horse-power more,

233,000 horse-power may be taken to be the aggregate of motive-power of all the steam engines and improved waterfalls of Great Britain; which, it will be perceived, is only 1-19th part of the effective water-power of Niagara falls. When it is considered," continues Mr Blackwell, "that the water-power of the cataract of N. is unceasing, by night as well as by day, and that the power, as calculated above, for practical purposes in Great Britain, is only applied, on an average, about 11 hours per day, during six days of the week, it may be assumed that the motive-power of N. falls is at least forty-fold of the aggregate of all the water and steam power employed in Great Britain, and probably equal to the aggregate of all the motive-power employed for mechanical purposes on this earth."

Railway-bridge at the Falls.] In 1847-48, an American engineer of the name of Elet conceived and executed the bold design of throwing a suspension-bridge across the falls. It rests on wooden towers 50 ft. high, over which pass 14 wire-cables, of 1,115 wires in all. To these the bridge is suspended, and, it is said, is capable of sustaining 1,000 tons; but another bridge is now building over that already thrown across, to serve as a connecting link between the railroads of Canada and of the state of New York. The bridge will form a single span 800 ft. in length. It is established by ample experience that good iron wire, if properly united into cables or ropes, is the best material for the support of loads and concussions, in virtue of its great absolute cohesion, which amounts to from 90,000 to 130,000 lbs. per sq. inch, according to quality. The N. bridge will form a straight hollow beam of 20 ft. wide and 17 ft. deep, composed of top, bottom, and sides. The upper floor, which supports the railroad, is 24 ft. wide between the railings, and suspended to two wire cables, assisted by stays. The lower floor is 19 ft. wide, and 15 ft. high in the clear, and is connected with the upper one by vertical trusses forming its sides, and suspended on two other cables which have 10 ft. more deflection than the upper ones. The anchorage will be formed by sinking 8 shafts into the rock, 25 ft. deep. The bottom of each shaft will be enlarged for the reception of cast-iron anchor plates, of 6 ft. sq. These chambers will have a prismatical section, which, when filled with solid masonry, cannot be drawn up without lifting the whole rock to a considerable extent. Saddles of cast-iron will support the cables on the top of the towers. They will consist of two parts—the lower one stationary, and the upper one moveable, resting upon wrought-iron rollers. The saddles will have to support a pressure of 600 tons whenever the bridge is loaded with a train of maximum weight. The towers are to be 60 ft.

high, 15 ft. square at the base, and 8 ft. at the top. The compact hard limestone used in the masonry of the towers will bear a pressure of 500 tons upon every foot sq.

WEIGHT OF BRIDGE.

Weight of timber,	910,130 lbs.
Wrought-iron and suspenders,	113,120
Castings,	44,332
Rails,	66,740
Cables between towers,	535,400
	1,678,622

WEIGHT OF RAILROAD TRAINS.

One locomotive,	25 tons.
27 double-freight cars, each 25 ft. long and of 15 tons gross weight,	405 —
Making a total gross weight of 430 tons, which will fall upon the cables when the whole bridge is covered by a train of cars from end to end; add to this 15 per cent. increase of pressure as the result of a speed of 5 m. per hour, which is a very large allowance,	61 —
Add weight of superstructure,	782 —
Total aggregate maximum weight,	1,273 tons.

The tension of the cables, which results from a weight of 1,273 tons, and an average deflection of 59 ft., is 2,240 tons. Since this assumed maximum tension can but rarely occur, it is considered ample to allow four times the strength to meet this tension—that is, 8,960 tons. But assuming 2,000 tons as a tension to which the cables may be subjected, five times the strength to meet it is allowed, and an ultimate strength of 10,000 tons provided for. For this purpose 15,000 wires of No. 10 will be required. At each end of the upper floor the upper cables will be assisted by 18 wire-rope stays, and their strength will be equivalent to 1,440 wires; these deducted leave the number of wires in the four superior cables 13,560—the number of wires in one cable, 3,390—diameter of cable, 9½ inches. The railroad-bridge will be elevated 18 ft. on the Canadian, and 28 ft. on the American side, above the present surface of the bank, and above the present structure. It will be the longest railroad-bridge between the points of support in the world.

NIAGARA, a district of Upper Canada, consisting of the cos. of Lincoln and Welland, and a portion of that of Haldimand; and bounded on the N by Lake Ontario; on the E by the Niagara; on the S by Lake Erie; and on the W by the Gore and Talbot dists. It consists chiefly of table-land, on a foundation of limestone and freestone; and the soil, which is for the most part of clay and loam, is generally well-timbered. The principal rivers in the district are the Grand river, which flows into Lake Erie; and Welland river, an affluent of the Niagara. It is intersected also by the Welland canal. Near Port Colborne is a lofty eminence, named Sugar-loaf hill. Pop. in 1840, 31,549, since which it is supposed to have increased a fifth. The chief towns are Niagara and St. Catherine's. The former, which was formerly called Newark, and was for some years the capital of the county, is in the NE corner of a township of the same name, at the entrance of the Niagara river into Lake Ontario, 48 m. from Hamilton, and 36 m. from Toronto. It is the oldest town on the river; and contains 4 churches, and numerous neat houses, with a pop. of about 3,000. It was burnt by the American forces in 1813.—The township is bounded on the N by Lake Ontario, and on the E by the Niagara. Pop. in 1840, 2,109.

NIAGARA, a county in the NW part of the state of New York, U. S., comprising an area of 484 sq. m., bounded on the N by Lake Ontario, and on the W by the Niagara. The surface is diversified, but possesses considerable fertility. It is watered by the Tonawanda. Pop. in 1840, 31,132; in 1850, 42,224. Its chief town is Lockport.—Also a township in the above-named co., on the mountain-ridge, and bounded on the W by Niagara river. It contains the American grand falls, Goat island, and some smaller islands. The surface is undulating, and the soil chiefly lime and gravelly loam. Pop. in 1840, 1,277.

NIAGARA-FALLS, a village of Niagara co. and township, in the state of New York, U. S., 297 m. W by N of Albany, on the E side of Niagara river, at the falls, and at the termini of the railroads from Buffalo to Lockport.

NIAGARA-FORT, a military post of the United States, at the mouth of the Niagara, opposite Massasanga fort, originally founded by M. de la Salle in 1679. It has recently been enlarged and strengthened.

NIAGUR, a town of Hindostan, in the prov. of Gundwana, 32 m. S of Omerkuntuc, and 210 m. ENE of Nagpur.—Also a town in the prov. of Agra, dist. and 15 m. ENE of Narvar, near the l. bank of the Sinde. It has a fort.

NIAGUSTA, Niagostos, or Naussa, a town of Turkey in Europe, in Macedonia, in the sanjak and 48 m. WNW of Salonika, and 12 m. S of Vodina, near the source of a small river of the same name, an affluent of Lake Jenidja. It is inhabited by Greeks, whose chief employment consists in the spinning and the manufacture of silk.

NIAK, an island of the North Atlantic ocean, near the S extremity of Greenland, and 30 m. NW of Cape Farewell, in N lat. 59° 45′, W long. 45° 40′.

NIALAM-DZOUNG, or Nialma, a town of Tibet, in the prov. of Ndzany, 240 m. SE of Shagatze, and near the l. bank of the Nio-tchu.

NIAMREI, a town of Senegambia, in the kingdom of Kayor, 24 m. ESE of St. Louis. Pop. about 4,000.

NIANG-TCHU, a river of Tibet, in the E part of the prov. of Wei. It has its source in Lake Tziamna-Yumtze, about 150 m. NE of Lassa; runs SSE; and joins the Yaru-dzang-bo, on the l. bank.

NIAN-TCHOU, a river of Tibet, which has its source near Mount Noldzing-gangdzang-ri, in the SE part of the prov. of Dzang; runs first SW, then NW; and joins the Yaru-dzangbo-tchu, on the r. bank, and near Shagatze. It has a course of about 150 m., and receives the Bainam-tchu on the l. Gialdzedzoung is the chief place on its banks.

NIAO-SUNG-KHY, or Ta-mu-Khy, a river of the island of Formosa, in the Chinese prov. of Fokien. It is formed by several torrents; runs W; and throws itself into the bay of Tae-wan. It is crossed by a bridge locally named Kwei-khiao or Devil's bridge.

NIAS (Pulo), an island of the Indian ocean, to the W of Sumatra, from which it is separated by a strait 66 m. in breadth. Its S extremity is in N lat. 0° 32′, E long. 97° 8′ 45″. Its length from NW to SE is 75 m., and its breadth about 30 m. It is generally mountainous; and is intersected by several considerable rivers, which near their embouchures are of depth sufficient to receive vessels of considerable size. It has also several good ports, and the anchorage along the east coast is excellent. It is still very imperfectly known. Its hills and valleys appear well cultivated; and the soil is remarkable for its fertility, producing rice in great abundance, potatoes and other farinaceous roots. Cocoa-palms abound on the hills. The number of the inhabitants is estimated at about 200,000; they are divided into upwards of 50 small communities, each under the government of an independent raja or chief. The aborigines are of middle size, well-made, and robust, and in complexion resembling the inhabitants of the continent of Asia. In features they greatly surpass the Malays, and are said to bear some affinity in contour of countenance to the Greek. The women of this island are reputed the handsomest in the Asiatic archipelago. The dress of the men consists

of a *badja* or mantle, and a piece of cloth thrown across the shoulders and encircling the waist. Their favourite colour is red. They wear a profusion of ornaments in gold, consisting of necklaces, and earrings of extraordinary size, and on the head a circlet resembling a Persian tiara. The dress of the women consists of a petticoat secured at the waist by a chain of gold or copper, and descending below the knees. They adorn themselves with a profusion of jewels, and cover the hair, which is rolled up at the top of the head and fastened with a gold bodkin, with a netting of gold. The villages are situated chiefly on the summit of hills, and always in positions capable of defence. The houses are built of wood, and generally commodious. In the N part of the island they are detached; but in the S are built close together, and form regular streets. Pigs and fowls form their staple subsistence. They use little rice, but employ in their diet large quantities of farinaceous roots. Cattle, buffaloes, and horses have been introduced into the N districts by the Malays. The natives of Nias are said to be sober and industrious; but they bear the reproach of being avaricious, obstinate, vindictive, and sanguinary. Their arms, consisting of the lance, sword, and buckler, they carry constantly, and use with much dexterity. In war they wear a tunic of strong leather, and a helmet of the same material ornamented with a bunch of black hair. Polygamy is permitted, but is seldom practised except by the chiefs. Adultery, murder, and theft are punished with death. Slavery is recognised both by law and custom. The principal exports are rice, pigs, poultry, and legumes. Iron, steel, tobacco, and coarse woollen stuffs, form the chief articles of import. In 1820, in compliance with the repeated solicitations of many of the principal chiefs of the island, Sir T. Raffles, then lieutenant-governor of Bencoolen, deputed Mr. Prince and Dr. Jack to visit this island, and to form there, if deemed advisable, one or more settlements in situations that might appear best adapted for the purpose. Their first object was to ascertain to whom the actual sovereignty of the island belonged, and whether there were any supreme authority competent to enter into terms with them for the whole; but they found that none such existed. To the king of Acheen the people of N. acknowledged no subjection, and it did not appear that his authority ever prevailed in the island. The whole country, it was found, had been immemorially divided among a number of independent chiefs, with whom it became necessary to form separate agreements. The N districts as far south as a port called Gunong-Lembo, had long considered themselves under the protection of the East India company, and had even been in the habit of hoisting the English flag, and making appeals and references to Natal,—an acknowledgment which was paid in consequence of assistance which had been afforded them against Acheenese pirates who infested their coasts, and at one time threatened a serious invasion. Proceeding to visit the principal parts, Mr. Prince and Dr. Jack invited the chiefs connected with each to a conference, the result of which was an agreement under which British settlements were made at the ports of Tello-Dalam and Lavago, and parties of sepoys landed to secure the respectability of the British flag. The interest which the island then possessed has in a great measure passed away with the cession of Bencoolen and our other settlements on the W coast of Sumatra; but the report of the mission addressed to Sir T. Raffles, an ably-written document, contains a minute account of the slave-trade carried on on this island, of which some notice may still be interesting. "All the evils," says the report, "arising from the imperfection of their civil institutions have been aggravated and increased by the odious traffic in slaves. The greatest number of slaves has hitherto been exported from Lemenbawa and Tello-Dalam; those from the N parts of the island have been much fewer. It is by no means easy to get an exact account of their numbers; some endeavouring to extenuate and diminish it, and others being equally desirous of magnifying it, according as they wished to give us a favourable impression of their conduct, or a high idea of their wealth; and the very nature of the trade, in some measure, precludes exactness. From a comparison, however, of these different accounts, checked by an estimate of the number of vessels resorting thither, and the value of their imports, we are satisfied that the annual number exported has not fallen short of 1,500! According to some accounts, more than this have been carried from Lemembawa alone; but we think the above estimate will be found nearer the truth. They are purchased chiefly by Acheenese and Chinese vessels; the latter of which carry them to Padang and Batavia. The circumstances that attend this traffic are no less revolting to humanity than those which marked it on the coast of Africa. The unhappy victims, torn by violence from their friends and country, and delivered pinioned hand and foot to the dealers in human flesh, are kept bound during the whole course of the voyage,—a precaution which is considered necessary to the safety of the crew. In their own country, the Nias people rarely make use of rice as food, and are almost unacquainted with the use of salt. The sudden change of diet to which they are subjected on board ship, added to the confinement and dejection of mind, proves fatal to many. Of a cargo of 30 slaves, 20 have been known to perish before the conclusion of the voyage; and on a moderate calculation it may be estimated, that, of the total number purchased, one-fourth never reach their destination, but fall victims to the various circumstances above mentioned." The reporters go on to state that slavery is recognised by the laws and customs of the island; that it is the punishment ordained for certain crimes, and is permitted as the ultimate resource in cases of debt. "These customs," say the reporters, "have no doubt been much increased in severity by the temptation of an external demand, and are often employed on very slight pretences; but they are quite inadequate to account for the great numbers actually exported. We have abundant proof that the greater number are made slaves by open and actual violence. The rajahs had little hesitation in admitting the fact, but said the system originated with foreigners, and that the source of the evil was without. In fact the temptation of exorbitant gain, and the persuasion of the dealers who resort to the ports, prove too much for their self-denial, and induce the more unprincipled among them to have recourse to every means of fraud, stratagem, or violence to procure victims to their avarice." The majority of the slaves are made so by violence, or on very unjust pretences; for the reporters scarcely met with an instance in which the rajahs had a single slave on hand whose redemption or sale they wished to effect. The answer was uniformly, "We have none; but if you wish to purchase slaves, wait a few days, and you may have a hundred." On inquiring further how this was to be effected, they found that the rajahs had only to send notice to their agents among the interior rajahs, and any number were forthwith brought down bound. "The fact is, the arrival of the trading boats which takes place at a certain season, is the signal for universal rapine and violence throughout the interior; hostile tribes endeavour to entrap stragglers belonging to their opponents, and the most frivolous pretences are

resorted to where violence is not deemed expedient."

NIAUMELSASKAS, a cataract of the Lulea, in Sweden, in the prov. of Northern Bothnia. The breadth of the river here is 575 yds., and the depth of its fall 119 yds. In winter the congelation of the spray forms masses of ice, which, gradually rising to the height of the cataract, forms an arch over the fall. The name, denoting 'Hare's leap,' is derived from the frequency with which these animals have been seen on its verge.

NIAUX, a village of France, in the dep. of the Ariege, cant. and 2 m. SW of Tarascon-sur-Ariege, and 12 m. S of Foix. Pop. 950.

NIAWEGE, or NIMWEGE, a commune of Belgium, in the prov. of East Flanders, and dep. of Elene. Pop. 179.

NIAYE'-MARIGOT, a town of Senegambia, in Western Bambuk, 21 m. NNW of Pisania.

NIAZEPETROVSK, a town of Russia in Europe, in the gov. of Perm, district and 87 m. E of Krasno-Ufimsk, on the l. bank of the Niaza, near its confluence with the Ufa. It has extensive iron-works.

NIBBIANO, a town of Austria, in Lombardy, in the prov. and 10 m. ESE of Como, district and 6 m. SSE of Erba.—Also a town of the duchy of Parma, in the district and 20 m. WSW of Piacenza, on the l. bank of the Tiddone. Pop. 720.

NIBE, a town of Denmark, in Jutland, in the stift and 13 m. WSW of Aalborg, on the S coast of the Lymfiord. Pop. 1,200.

NIBLEY (NORTH), a parish of Gloucestershire, 16 m. SSW of Gloucester. Area 3,410 acres. Pop. in 1831, 1,562; in 1841, 1,305.

NIBTHWAITE, a township in the p. of Coulton, Lancashire, 7 m. N of Ulverston, on the Crake.

NIBU, a town of Japan, in the island of Nifon, and prov. of Fida, about 120 m. W of Jedo.

NICANDRO (SAN), a town of Naples, in the prov. of the Terra-di-Bari, dist. and 11 m. SSW of Bari, cant. and 5 m. W of Canneto. Pop. 2,900. It has 3 churches.—Also a town in the prov. of Capitanate, dist. and 14 m. NE of San-Severo, and 27 m. N of Foggia, on the W slope of Mount Gargano. Pop. 7,800. It contains 3 churches.

NICARAGUA, a state of Central America, bounded on the N by Honduras; on the NE by the Mosquito territory; on the E by the latter territory, and by the Caribbean sea from the mouth of the Escondido or Bluefield's river to the mouth of the San-Juan-del-Norte; on the S by Costa-Rica; and on the W by the Pacific from the gulf of Nicoya on the S, to the gulf of Fonseca on the N. Its pretensions to territory considerably exceed these limits, embracing the whole Caribbean coast from Cape-Gracias-a-Dios southwards to the lower or Colorado mouth of the San-Juan-del-Norte, and all that portion of the Mosquito territory lying to the S of the Rio-de-Segovia or Wanks river; and claiming as a boundary, with Costa-Rica on the S, a right line running from the mouth of the Rio-Salto-de-Nicoya or Alvarado flowing into the head of the gulf of Nicoya, and the lower mouth of the San-Juan. Were these pretensions admitted, the state would comprise a territory of about 39,000 sq. m.; and a pop. estimated in 1846 at 250,000.

Physical features.] The great physical features of this region are its two lakes and the two chains of Cordilleras. One of the latter, the Alto-Grande, runs from the Caribbean coast, near the bay of San Juan, along the Mosquito frontier, in a NNW direction, dividing the streams which flow eastwards into the Caribbean sea from those which descend by shorter courses westwards to the lakes of Nicaragua and Managua; and the other enters the state between the head of the gulf of Nicoya and the basin of the great lake of Nicaragua; attains in Mount Orosi, nearly under the parallel of 11° N, an alt. of 5,200 ft.; and skirts the S coast, in a series of low ranges passing between the lakes of Nicaragua and Managua and the Pacific, at a distance from the sea of from 10 to 20 m., and terminating in the volcano of Conseguina at the S entrance of the gulf of Fonseca.—The two great lakes of N. form a great inland basin 300 m. in length by 150 m. wide, with broad and undulating slopes, relieved only by a few isolated volcanic cones, and the long ranges of hills along the shores of the Pacific. The lake of Managua approaches within 4 or 5 leagues of the Pacific, and has an alt. of 156 ft. above its level; but between its N extremity and the sea lie the magnificent plains of Leon and El-Conejo, in the midst of which rise the pyramidal forms of the volcanic mountains, Ajusco, Telicæ, and El-Viejo. On its SW shore stands the city of Santiago-de-Managua. See MANAGUA (LAKE OF). The lake of Nicaragua, at the lower alt. of 128 ft. above the Pacific, and 120 ft. 9 in. above the Atlantic, is a considerably larger body of water, being estimated by Mr. Squier at 120 m. in length, and 50 or 60 m. in breadth. The sole outlet to this great body of water, and the whole interior basin of N. is the river San-Juan-del-Norte, which flows from the SE extremity of the lake of Nicaragua to the Atlantic at Grey-town. See article JUAN (SAN). On the S shore of this lake stands the ancient city of Granada, the most important commercial point in the republic; and on the same shore, at a distance of 40 m., is the city of Nicaragua or Rivas.

Climate.] The general temp. of the N. coast is nearly that of the W. Indies; the heat on the Pacific coast is however not so oppressive as on the Atlantic. In the interior, the temp. is mild, and the climate salubrious. The wet season commences in May, and lasts until November. Throughout this season the therm. ranges from 78° to 88°, sometimes sinking to 70° during the night. During the dry season, which continues from November to the end of April, the temp. is somewhat less, and the winds are occasionally chilling. At this period, nearly the whole country becomes parched; the exuberance of vegetation is checked; the cattle are driven to the hills and forests for pasturage; and the dense dank jungles are dried up.—Earthquakes are, as might be expected, of frequent occurrence in this volcanic region.

Natural productions.] On the higher table-lands about Segovia and Matagalpa, wheat, barley, and the rare fruits and vegetables of Europe may be grown abundantly, as well as Indian corn, and in some parts rice. In the lower plains and valleys the soil yields annually two crops of Indian corn, and the sugar-cane, banana, mandioca, pine-apple, cocoa-nut, sapota, plantain, and sweet potato are all raised or grow naturally. Indigo, cochineal, tobacco, vanilla, cotton, cocoa, sugar, and coffee, are also, according to the district, capable of the finest cultivation. Of the various small states into which Central America is now divided, N., in point of natural gifts, appears to be the richest. Commencing the route from the gulf of Nicoya, on the Pacific, we find that at this point pearls are fished, and that a shell-fish, somewhat like a large garden-snail, is here found which yields a bright red or purple dye. Here also is the mountain Aguacate, in which the few geologists who have visited Central America have asserted immense wealth lies buried, the localities of which are evident. The most important silver-mines at present known in N. are those of Dipilta, in the N part of the republic. Their produce in three years was 17,300 lbs. Passing on towards the plain of Nicaragua, the fields are covered with high grass,

studded with noble trees and herds of cattle. Cocoa, indigo, rice, Indian corn, bananas, and cotton, are here produced, and mahogany, cedar, and pine abound in the forests. The quantity of indigo produced in the state seldom exceeds 1,000 seroons. Vegetables and garden produce are scarce about Leon, but more abundant at Granada. The mulberry grows remarkably well near the town of Diriamba. Proceeding across to the E side of the lake there are cattle-farms, on which are herds of from 10,000 to 40,000 oxen, bulls and cows. These farms are chiefly located in the district of Chontales, which stretches between the E side of the lakes as far as San-Miguelito within a few leagues of the San-Juan. Horses and mules are bred for riding and for burden, and are occasionally exported to the W. Indies. Sheep are reared on the upper plains, and swine are kept for flesh. An Englishman from one of the W. India islands informed Mr. Stephens that but for the uncertainty of labour he could manufacture sugar at his estate on Lake Leon at one-fourth its cost in the W. Indies. It is sold in Nicaragua for 1½d. per lb., and indigo can be raised for 2s. per lb. The cochineal plantations in some parts yield two crops each season. The plain of Leon is said to be characterized by a richness of soil not surpassed by any land in the world, yet it remains in primeval desolation. Mr. Stephens is apprehensive that this region might prove too beautiful even for British or American energies not to relax beneath its influence. "It may be questioned," he observes, "whether, with the same scenery and climate, wants few and easily supplied, luxuriating in the open air and by the side of this lovely lake, even the descendants of the Anglo-Saxon race would not lose their energy and industry." Leaving the lakes and descending the river San-Juan to the Atlantic, each bank is covered with valuable wood of all sizes and descriptions, and the land, according to Mr Baily, is of prodigious fertility. Amongst other products this river abounds with manatis,—an animal between a quadruped and a fish, affording excellent food and strikingly effectual as a speedy cure for scorbutic or scrofulous disorders. The length of this animal is from 8 to 12 ft., and it weighs from 500 to 800 lbs. The country appears to have but one want, and that is that it should become the seat of capital and enterprise. At present "from a fertility of soil capable of maintaining millions little more is drawn than the sustenance of 250,000 inhabitants" [*Baily*]. The anarchy which continually prevails within the state neutralizes any attempt to advance public works or develop its commerce; and yet this most impotent government betrays every desire to exercise sway over its industrious and peaceable neighbours.

Administrative divisions.] The republic is divided into departments, each of which is subdivided into judicial partidos or districts. These departments and their pop., according to the boundaries claimed by the government of N., are

	Pop.	Cap.
Department Meridional	20,000	Nicaragua.
— Oriental	95,000	Granada and Managua.
— Occidental	90,000	Leon.
— Septentrional of Matagalpa	40,000	Matagalpa.
— Septentrional of Segovia	12,000	Segovia.
— Nicoya or Guanacaste	7,000	Guanacaste.

Population.] The pop. consists of about 25,000 Whites, 15,000 Negroes, 80,000 Indians, and 130,000 Mestizoes. The latter class is sprung from the marriages of civilized Indians of Nicaragua with Spanish or Negro races. Most of them live in towns, going 2, 4, or 6 m. daily to labour in the *haciendas* and *ranchos* which are scattered pretty equally over the country. Their cottages are usually of canes thatched with palm and open at the sides. Mr. Squier says the women of pure Spanish stock "are very fair, and have the *embonpoint* which characterises the sex under the tropics. Their dress, except in a few instances, is loose and flowing, leaving the neck and arms exposed. The entire dress is often pure white, but generally the skirt is of some flowered stuff. Satin slippers, a red or purple sash wound loosely round the waist, and a rosary containing a little golden cross, with a narrow golden band or a string of pearls extending around the forehead and binding the hair, which often falls in luxuriant waves upon their shoulders, complete a costume as novel as it is graceful and picturesque. To all this add the attractions of an oval face, regular features, large and lustrous black eyes, small mouth, pearly white teeth, and tiny hands and feet, and withal a low but clear voice, and the reader has a picture of a Central American lady of pure stock. Very many of the women have, however, an infusion of other families and races, from the Saracen to the Indian and the Negro, in every degree of intermixture. Nor is the Indian girl, with her full lithe figure, long glossy hair, quick and mischievous eyes, who walks erect as a grenadier beneath her heavy water-jar, and salutes you in a musical, impudent voice as you pass,—nor is the Indian girl to be overlooked in the novel contrasts which the *bello sexo* affords in this glorious land of the sun."—The priests exercise considerable influence over the populace. Education is generally much neglected. Few towns have more than one or two public schools, each under a single teacher, and many considerable villages have not a single teacher of any grade. Granada and Leon are the seats of universities, but the salaries of the professors seldom exceed 200 dollars.

Government.] The government of the republic is composed of a house-of-deputies, and a senate. The legislative assembly holds its sittings at Managua. The senate consists of 2 members from each of the 6 districts or departments into which the state is divided, each of whom must have been resident 5 years in the state, have attained the age of 30, and possess property to the value of 1,000 dollars. They hold office for 4 years. The representatives are apportioned on the basis of 1 for every 20,000 inhabitants. They may be either seculars or ecclesiastics, but must have resided one year in the state, and are only eligible for two consecutive terms. All males of the age of 20, born in the country, are electors. The executive power is vested in a supreme director, who is elected directly by popular vote for the term of two years.—The judiciary consists of a supreme court, whose members are named by the house-of-representatives, 3 for each department, 1 of whom in each district is presiding judge. The president judges meet annually in the capital, to constitute a court of final resort.

NICARAGUA, sometimes called Rivas de Nicaragua, a city of the republic of Nicaragua, agreeably situated in a fertile district in the department Meridional, 40 m. SSE of Granada, at the distance of little more than a league from the W coast of the lake of Nicaragua, at about 100 ft. above the level of the lake. The houses are only one story in height, but those of the old Spanish inhabitants are substantially built of stone. Pop. 6,000.

NICARAGUA (Lake of), a great fresh-water lake of Central America, extending in the direction of SE and NW, from about 1 m. to the S of the 11th parallel of N lat., to 12 or 14 m. N of the 12th parallel. Its extreme length is about 90 m.; its greatest breadth about 40 m.; mean, 30 m. Mr. Lawrence estimates its area at 3,150 sq. m.; and

Mr. Baily assigns to it, as the result of a series of careful levellings, an elevation of 128 ft. 3 in. above the level of the Pacific. Near the shores, that is to say about the distance of 100 yds. from the beach, there is generally a depth of 2 fath. water; in other parts between 5 and 15 fath. are found. Mr. Lawrence, who coasted both its N and S shores, found an average depth of 6 to 7 fath. for several miles from shore. He also found it liable to frequent sharp gales. Several groups of islets and some islands diversify the surface; of the latter Zapatera (*a*), Ometepec (*b*), and Madera (*c*), are the largest. Zapatera is mountainous, rising nearly to 2,000 ft. in height, and uninhabited. Ometepec is inhabited by an industrious race of Indians, who raise maize, and possess some cattle. Madera is joined to Ometepet by a neck of land, so low that when a strong breeze sets in from the NE it is frequently overflowed; in form it is a huge mound of more than 4,000 ft. high, everywhere thickly covered with wood, affording a supply of excellent cedar timber of great dimensions. On Ometepec is a remarkable mountain that, viewed from the nearest shore, presents the figure of an almost perfect cone, rising from the surface of the water at an elevation of more than 5,100 ft. Unlike the adjacent Madera, it is bare of wood, showing only a few trees scattered here and there, but from its symmetrical proportions, is a grand and pleasing object, distinguishable by mariners on the Pacific at a great distance. Solentinami (*d*) and Sapote (*e*) are islands much smaller than the preceding, not occupied, but cultivable. The other small groups merit no particular notice. The NW extremity of the lake of N. approaches within 18 m. of the SE extremity of that of Managua, and appears to be connected with it by the Rio-Tipitapa or Panaloya (*iii*), which is, in fact, for an extent of 12 m., an estuary of Lake N., and at the head of this estuary approaches within 5 m. of Lake Managua.

Projected canal-lines.] There can be no doubt as to the fitness of both lakes for being navigated by ships. The eligibility of the route by this lake, as the line of the great oceanic intercommunication, will depend entirely upon the nature of the country across which the canals connecting it with the Atlantic and Pacific must be carried. Only one line of navigation from the Atlantic to Lake Nicaragua has as yet been examined or even thought of,—that by the river San-Juan, which has its outlet about 300 m. NW of Chagres; see articles JUAN (SAN) and GREY-TOWN; but several alternate lines from the lake to the Pacific have been proposed. One of these, called Mr. Baily's route, was surveyed by that gentleman at the expense of the Nicaraguan government. It extends from the bay or port of San-Juan-del-Sud (*h*) on the Pacific, to a point on the lake S of the city of Nicaragua (*m*), and is 15½ m. in length.—The second, called Prince Louis Napoleon's route, passes from Lake N. up the river Tipitapa, across Lake Managua, and thence across the isthmus to Realejo (*n*). The distance from Lake N. to the Pacific by this line is 104 m. Between Lake N. and the superior lake of Managua is a nominal distance of 18 m.; but, as already noticed, the connecting stream, the Rio Tipitapa, is, in fact, for an extent of 12 m. an estuary of Lake N., and for that distance may probably be so cleared out as to be made navigable. From the head of this estuary to Lake Managua, a distance of 5 m., there is a rise of about 25 ft. The greater part of this rise is abrupt, at a point about 1 m. below the lake called the falls of Tipitapa. Very little water passes here except in the rainy season, and in the dry season the stream is sometimes wholly suspended. The rock is apparently a soft calcareous breccia, easily worked. A short section of canal is therefore indispensable here, extending from the lake to the falls, a distance of 1 m. Below this to San Pasquiel, at the head of the estuary from Lake N., the bed of the stream is deep, and the banks abrupt and high, forming a natural canal, which, according to Mr. Squier's report, only needs proper dams and locks at its lower extremity to furnish a channel adequate to every purpose of navigation. Between the NW extremity of this lake and the Pacific are the great plains of Leon. Three lines across this plain have been suggested: 1st, by the l. shore of the lake to the small port of Tamarinda (*o*); 2d, by the same shore to the well known port of Realejo (*p*); and 3d, by the upper shore of the lake to the gulf of Fonseca or Conchagua. See articles FONSECA and MANAGUA. All these lines are within the territory of the state of NICARAGUA.

Another line, through the territory of the state of Costa Rica, ascends the bed of the river Sapoa, which enters the lake of N. at its S extremity with a stream of 200 yds. in width, and from 2 to 3 yds in depth, for 8 m., and then crosses the isthmus or low coast, the highest point in which has an alt. of only 270 ft. above sea-level, to the bay of Salinas, a further distance of 7 m. See SAPOA. A fourth line which has been suggested by Sir Edward Belcher, coincides with that of Prince Louis Napoleon as far as Lake Managua, but crosses from its basin, partly by a canal, partly by the bed of the river Estero, behind the coast-range, into the gulf of Fonseca. See MANAGUA.—Mr. Squier, late United States *Chargé d'Affaires* in Nicaragua, officially publishes as the length of the route by Lake N., &c., across the American continent, from the Atlantic to the Pacific:

River San Juan	90 m.
Lake Nicaragua, necessary to be traversed	110
Lake Tipitapa	18
Lake Managua	55
From Lake Managua to the port of Realejo	40
	303

The height of the various lakes to be passed and the elevations of land is thus given:

	Above Atlantic.	Above Pacific.
Height of Lake Nicaragua	147 ft. 9 in.	128 ft. 3 in.
Height of Lake Managua	176 5	156 11
Highest point of land to be passed	231 11	212 5

Mr. Squier is of opinion that the river San-Juan cannot be made navigable for large vessels. It appears, however, that the line which has found favour in the United States, and for which a company has been announced, although it has taken no practical steps towards the realization of its gigantic scheme, is as follows:

From the San-Juan on the Atlantic to Lake Nicaragua, partly by canal, partly by dams or river	119 m.
Across Lake Nicaragua to Rio Lajas (*s*)	56
From Rio Lajas to Brito (*r*), a port on the Pacific ocean, by canal	20
Total,	195 m.

The canal by this route, it is proposed, shall be on an average 17 ft. deep, 50 ft. broad at the bottom, and 79 ft. at the surface. It is calculated that 10 years would be required to complete it, and that the total expense would be, not £52.000,000, as stated by Mr. Squier, but £9,000.000. It would afford, when completed, a passage to vessels of the very first class and largest dimensions. This scheme comes into direct competition with another projected ship-canal across the isthmus of Darien, between the gulf of San Miguel on the Pacific and Caledonia bay on the Atlantic. An outline of the latter scheme is given in the article MIGUEL (GULF OF SAN). The supporters of the latter, or 'the Isthmus of Darien Ship-canal,' as it is called, argue, (1) That while San-Juan-del-Norte on the Atlantic, and Brito on the Pacific, the two termini of 'the American Atlantic and Pacific Ship-canal' have insufficient capacity and depth of water, Brito having in fact no title whatever to the name of a harbour, Caledonia bay, Port Escoces, and the channel of Sassardi, as constituting the terminus on the Atlantic side, have an extent of 11 m. of safe anchorage in all winds, with great depth of water; while the gulf of San Miguel, on the Pacific side, would hold the shipping of the world. (2) That while the American scheme requires 14 locks on the Atlantic side from San-Juan to the rapids of Castillo and Toro on the lake, and 14 on the Pacific side from the lake to Brito, no locks are necessary in the isthmus of Darien scheme. (3) That while the distance across by the Nicaraguan project is 194 m.; by the Darien it is only 39 m. (4) That while the summit-level of the Nicaraguan line is 128 ft., to be locked up to on each side; the greatest depth of cutting necessary to the Darien line is 150 ft. and that for scarcely 2 m. (5) That while the length of canal necessary to the Nicaraguan scheme is 47 m., and of river to be deepened 91 m., the Darien contemplates only 25 or 30 m. of cutting, and no dredging or deepening. (6) That artificial harbours, piers, and embankments are necessary in the one scheme; while no such works are required in the other. (7) That the Darien canal can be made navigable by ships of the greatest draught; while the Nicaraguan could not be employed by vessels exceeding 1,000 tons burthen. (8) That while the projection of the Nicaraguan scheme must encounter difficulties arising from disputed territorial boundaries, and various other grounds of delay and doubt, the concession from New Granada involves no disputed points. (9) That on the Nicaraguan line there are volcanoes in a state of activity; while no volcanoes are known to exist within some hundreds of miles of the line of the Darien canal. (10) That while the probable time necessary for transit from sea to sea would be 6 days in the course of the Nicaraguan line; transit will be effected by the Darien in from 6 to 8 hours.

NICARIA, or ICARIA, an island of the Grecian archipelago, 10 m. WSW of Samos, and to the NE of Naxia. Its loftiest point is in N lat. 37° 31′ 15″, and E long. 26° 2′ 35″. It is 27 m. in length from NE to SW, and about 3 m. in breadth. It terminates on the NE in Cape Phanari, and is covered in the centre with well-wooded mountains, but is otherwise nearly barren. Its principal exports are timber, charcoal, wine, oil, and cotton. It contains several villages, of which the principal is Cachoria. It was noted in mythology for the fall of Icarius,—whence its name, and that also of the surrounding sea. Its pop. has been estimated at 1,500.

NICASTRO, a district and town of Naples, in the prov. of Calabria-Ultra, 19 m. WNW of Catanzaro, and 27 m. S of Cosenza, on the lower range of Monte Reventino, on the W side of the Apennines, and near the S. Ippoleto river. Pop. 6,000. It is enclosed by walls, and has a castle and several churches and convents; but the houses are straggling, and generally mean in appearance; the whole town and vicinity, however, has a romantic and picturesque character. Between N. and the gulf of Santa Eufemia the country is partly covered by a thick forest, and traversed by two rivers, the Angitola and the Amato, whose waters not having sufficient vent, render the soil marshy and the air humid, which never fails to generate diseases in the hot months. That part which is not inundated produces Turkey corn in abundance. In the low grounds there are large plantations of rice, and occasionally sugar-canes are grown. Olives, rising to the height of forest-trees, spread over all the upper tracts, but the oil is of a bad flavour, and used only in manufactories. A number of farm-houses and fine country-seats are scattered over the whole plain, particularly in the neighbourhood of N. This charming region—from which the confined waters might very easily be removed by a free issue—never experiences any of the rigours of winter: so soon as the autumnal rains have ceased, the softest and most equal temp. renders it a delightful abode. The mountains, on which are seen a great number of villages and detached dwellings, present a singularly pleasing aspect. The town was much damaged by an earthquake in 1638. In its vicinity are several thermal baths. This town is supposed by some to occupy the site of the ancient *Lisania*. The district comprises 8 cant.

NICAVA, a town of Japan, in the island of Nifon, and prov. of Yetstsiou, about 120 m. NW of Jedo.

NICAVARI. See CAMORTA.

NICE, or NIZZA, a province of the Sardinian states, between the parallels of 43° 37′ and 44° 19′ N, and surrounded by Genoa, Monaco, the maritime Alps, the French dep. of Var, and the Mediterranean. Though commonly considered in Piedmont, and consequently in Italy, it can hardly be said to form a part of that country, being separated from it by the Alps, the grand boundary of Italy to the W. Its superficial extent is 1,750 sq. m., or 286,000 hectares, of which 75,000 are under cultivation; 20,000 under wood; and 16,000 are insusceptible of cultivation. Cultivation is confined for want of manure. The spade alone is used. Corn, beans, maize, and potatoes are grown. Its surface is for the most part composed of mountains and narrow valleys. In the N part there is little else than pasturage; but in the S, the greater exposure to the sun is favourable to the culture of the olive, the vine, and fruits. The amount of corn raised is small, and the number of cattle is not great; but bees are reared with success, and honey is made in large quantities. Several districts produce valuable timber. The wild boar and antelope are common, and game is abundant. Its pop., in 1821, was 95,222; in 1839, 112,428; in 1848, 118,377. A few manufactures, such as coarse woollens and netting, also soap made of olive oil, are conducted on a small scale; and there are iron and bronze foundries, and paper-mills.—The prov. is divided into the two districts of N. and Sospello, which are subdivided into 15 mandamenti, and 87 communes.

Nice, or Nizza Maritima, the capital of the above prov., stands at the mouth of the small river Paglione, on the Mediterranean, 98 m. SW of Turin, and 4 m. E of the French frontier, in N lat. 43° 41′, E long. 7° 16′. It is delightfully situated at the foot of an amphitheatre of hills covered with villas, gardens, and groves of olives, and orange and lemon trees. The lofty range of the Alps terminates the prospect on one side, and the Mediterranean on the other; while from the centre of the basin in which the town stands rises a steep and pointed rock, bearing aloft the ruins of an old castle, which adds considerably to the picturesque effect of the whole. N. is surrounded with a rampart, and divided into an old and new town. The streets of the former are crowded, narrow, and dirty; but those of the latter are tolerably straight and regular. The houses, particularly in the new town, and in the suburb of the Marble cross, are extremely neat. Their walls are frequently painted in fresco, which gives them a clean and cheerful appearance; and they are in general surrounded with gardens planted with orange and lemon trees, which are covered with fruit or with flowers during the greater part of the year. N. contains two public squares, one of which is surrounded with porticoes or open arcades, called the Piazza Vittoria, and is rather handsome. The other is bordered by a terrace, which serves at once as a public walk and as a mound or dike against the sea. The only public edifice worth notice is the cathedral. The pop. in 1838 was 33,811, exclusive of the military. The Nissareh, men, women, and children, are pronounced by a recent traveller to be "strikingly plain in their persons." They are generally small in stature, and of a muscular but not fleshy frame, with lively eyes and black hair. They speak a curious *patois* of Italian, French, Spanish, and Celtic.—N. is the see of a bishop, a suffragan of Genoa, and the seat of a royal court of appeal, a tribunal of commerce, a royal college, a theological seminary, and secondary schools of medicine and of law preparatory for the university, and a school of design. It possesses a theatre, public baths, coffee-houses, a library, 3 hospitals, 2 convents for education, and an English chapel and cemetery.

The harbour, which is protected by a mole, is spacious and secure, and is capable of admitting vessels of 300 tons. The bay is remarkable for its frequent heavy surf.—The trade consists chiefly in the export of the oil, wine, and silk of the neighbourhood; also of *liqueurs*, essences, and perfumery. Its port is free, and is the principal cause of its prosperity. As a frontier-town of France and Piedmont, considerable inducement is here held out to smugglers to introduce manufactured goods into those countries, and a premium of 20 to 30 per cent. is obtained by the contraband traders, according to the bulk and value of the article smuggled across their frontier. The free port has also prevented the establishment of manufactories of any importance. There are several lead mines in the neighbourhood of N.; that of Tende yielded the largest proportion of silver, being 2½ to every 600; unfortunately this mine is not worked at present, in consequence of some misunderstanding between the proprietor and the government.

The presumed but questionable efficiency of the climate in consumptive complaints long rendered N. a favourite place of resort on the part of emigrating foreigners, particularly English. Mr. Matthews, however, pronounces the climate of N. one of the very worst for individuals suffering under pectoral complaints. Its air is keen and piercing; and either the *bise* or the *marin*, the one bringing cold, the other damp, prevails. From meteorological observations from 1806 to 1838, the greatest height of the barometer was 28·8·2, the lowest 26·11·6, the mean 27·11·8. Out of 36,135 observations of the therm., it rose once only as high as 92·5 Fahrenheit. The lowest point was 15° of Fah. The maximum of the hygrometer was 100°, the minimum 17°, and the mean 59°. The *tramontane*, or N wind, seldom descends into the lower plains of N., but sweeps from the mountain-summits into the sea, coming into contact with the latter, about a league from the land, which is rendered apparent by the turbulence of the water. The E wind is dry and cutting; when mingled with moisture, it is a SE wind turned off to the W by the Apennines. A S wind is very relaxing, and brings rain or tempest. The SSW wind, or *lebec* as it is called, is prejudicial to animal and vegetable life. Dew is abundant, but mists are extremely rare.—The soil of the environs of N. is an aggregate of chalk, clay, and sand, with round smooth stones, thrown up into hills, mounds, and mountains of the secondary and tertiary order, covered with diluvial soil.

History.] The early inhabitants of N. were probably Celtic Gauls, and appear to have ranked very low in the scale of civilization, which, however, their intercourse with the Phœnicians and Etruscans, who traded with this coast, as well as the establishment of the Phocians, tended to improve. It is supposed that the Phocian colony of Marseilles, after driving the natives to the hills, founded N. about the time of Tarquin. The only remains of this period are some coins, bearing the bust of Diana, and on the reverse a bull; the former was the tutelary deity of Marseilles, the latter its emblem of agriculture. N. became of some consequence after the Christian era, and Strabo mentions its arsenal, and numerous ships and machines of war which were used by the Romans in conquering Provence In the 12th cent. N. was allied to Pisa and Genoa, and thus formed a municipal commonalty; but the kings of Aragon having become masters of Provence, established their supremacy over N. Provence, however, having passed from the Aragonese to the dominion of the counts of Anjou, the county of N., in 1246, became subject to the Anjou dynasty of Provence and Naples. During the war of the disputed succession of Queen Joanna I. of Naples, the people of N. applied for protection to Amadeus VII. of Savoy; and in 1402, King Ladislaus of Naples, and his competitors of the house of Anjou, renounced their claims upon N. to Amadeus VIII., duke of Savoy and Piedmont. The county of N. has remained ever since, with brief interruptions of temporary conquest, subject to the house of Savoy, under which it has attained its present state of prosperity. The county of N, although subject to the royal constitution or legislative code of the Sardinian monarchy, still retains some local registrations and privileges, which date from the time of its Angevin sovereigns. It has its own senate or supreme court of justice, and has under its jurisdiction the provs. of Oneglia and St. Remo.

NICETTA, a village of Afghanistan, on the r. bank of the Cabul river, near the confluence of the Lunye, and about 12 m. NE of Peshawur.

NICEY, a village of France, in the dep. of the Cote-d'Or, cant. and 3 m. WNW of Laignes, near the Vevre. Pop. 700.

NICHOL, a township of Upper Canada, in the Wellington district, intersected in the N by the Grand river. It possesses excellent soil, and abounds with fine timber. Pop., chiefly Scotch, 1,019.

NICHOLAS, a central county of the state of Virginia, U. S., comprising an area of 1,430 sq. m., drained by Gauley and Elk rivers, and bordered on the SW by the Great Kanawha river. Pop. in 1840, 2,515; in 1850, 3,963. It contains a village of the same name. Its cap. is Summersville.—Also a co. in the NE part of the state of Kentucky, containing a superficies of 350 sq. m., watered by Licking river and its branches. Pop. in 1840, 8,745; in 1850, 10,360. Its cap. is Carlisle.

NICHOLAS (Saint), a parish in Devonshire, 5½ m. E by S of Newton-Abbot. Area 580 acres. Pop. in 1831, 1,178; in 1841, 1,175.—Also a p. in Glamorganshire, 6 m. W by S of Cardiff. Pop. in 1831, 351; in 1841, 425.—Also a p. in Pembrokeshire, 4½ m. W by S of Fishguard. Pop. in 1831, 315; in 1841, 346.—Also a p. in the isle of Wight, adjacent to Newport. Area 410 acres. Pop. in 1831, 317;

in 1841, 275.—Also a p. in Suffolk, 5½ m. NW of Halesworth. Area 450 acres. Pop. in 1831, 101; in 1841, 90.—Also a p. in the isle of Thanet, Kent, 6½ m. WSW of Margate. Area 3,390 acres. Pop. in 1831, 726; in 1841, 679.—Also a p. in co. Wexford, 4 m. N of Wexford. Area 1,213 acres. Pop. in 1831, 311; in 1841, 316

NICHOLASTON, a parish in Glamorganshire, 1½ m. NE of Penrice. Pop. in 1831, 92; in 1841, 119.

NICHOLASVILLE, a village of Jessamine co., in the state of Kentucky, U. S., 36 m. SE of Frankfort, on a small branch of Kentucky river. Pop. in 1840, 632.

NICHOL FOREST, a chapelry in the p. of Kirk-Andrew's, Cumberland, 10½ m. NE by N of Langtown, and E of the Esk. Area 10,360 acres. Pop. in 1831, 907; in 1841, 825.

NICHOLS, a township of Tioga co., in the state of New York, U. S., 8 m. SW of Oswego, and 170 m. WSW of Albany. The surface is hilly, except on the Susquehanna, by which it is bounded on the N. The soil consists chiefly of gravelly loam. Pop. in 1840, 1,986.

NICHOLSON, a mountain of Australia Felix, in the district of Portland bay, near the Cockajemmy lakes.—Also a large river of N. Australia, which flows into the gulf of Carpentaria, to the W of the river Albert.

NICHOLSON, a township of Luzerne co., in the state of Pennsylvania, U. S., 161 m. NE of Harrisburg, intersected in the N by Tunkhannock mountain. Pop. in 1840, 658.

NICHOLSON (Port), a noble harbour in the district of Wellington, on the SW coast of the North island of New Zealand, in S lat. 41° 16′ 46″, E long. 174° 47′ 29″. It has an entrance of about ¾ m. in width, between Barrett reef and Pencarrow-head. The width of the passage varies from 1 m. to 1½ m., with a depth of water varying from 6 to 14 fath. Evans bay is an arm stretching to the S, and Lamblin harbour another arm stretching SW. Independently of these bays, the port forms a land-locked basin about 5 m. in diam. The lower valley of the Hutt river has its base on the shores of this harbour, and its apex at a gorge about 6½ m. to the N, where the hills bounding the valley of the river on the E and W approach close to each other. To the N of the gorge, through which the river rushes rapidly for about 1½ m., the hills recede from each other, leaving a valley between them about 8 m. long, and 2 m. broad. See articles New Zealand and Wellington.

NICHSVILLE, a village of Hopkinton township, St. Lawrence co., in the state of New York, U. S., 213 m. NNW of Albany, on the E branch of St. Regis river. Pop. in 1840, 125.

NICKER, an islet of the Antilles, in the group of the Virgin islands, to the NE of Virgin Gorda, in N lat. 18° 25′, W long. 64° 5′. It is 6 m. in length, and about 3 m. in breadth.

NICKOJACK, a creek in the state of Georgia, U. S., which issues from an extensive lake, and has at its exit thence a width of 60 ft.

NICKOL'S BAY, an indentation of the NW coast of Australia, in De Witt's Land, between Capes Lambert and Preston, in N lat. 20° 38′, E long. 116° 47′.

NICOBAR ISLANDS, a group situated in the SE quarter of the bay of Bengal, between the parallels of 6° 40′ and 9° 30′ N, and the meridians of 92° 50′ and 94° E, almost equally distant from the Andamans and from Sumatra. The largest of the group is named Sambelong; but the two most visited by Europeans are called Carnicobar and Nancoury. There are 9 other islands of moderate size, besides a multitude of very small ones without any distinct appellation. Most of these islands are hilly, and some of their mountains are of considerable elevation. The valleys and sides of the hills are so densely covered with cocoa and areca-palms that the sunbeams cannot penetrate through their foliage; and in some places these are so thickly interwoven with rattans and bush-rope, that they appear spun together. The islands are of course unhealthy, and absolutely pestilential to a European constitution; even the natives seldom live beyond 60 years. Buffaloes and other cattle, swine, dogs, and monkeys, are found on most of the islands; snakes and alligators are numerous. The number and variety of shell-fish is so great that here the most beautiful conchological collections might be made with very little trouble.—M. Chopard estimates the entire pop. of the archipelago at 8,000, of whom 2,000 inhabit Carnicobar. He is of opinion that they belong rather to the Hindu race, than to the Burmese or the Malayan, but that in the pop. of the S portion of the group there is an interfusion of Malay blood. Their language is polysyllabic. The inhabitants of the N. islands are of a copper colour, with small eyes, flat noses, large mouths, thick lips, and black teeth; they are well-proportioned, rather short than tall, with large ears. They have strong black hair; the men have little or no beard, and shave their eyebrows, but never cut their nails. The hinder part of the head is compressed at birth. The occupation of the men consists chiefly in building and repairing their huts, and in fishing and trading with the neighbouring islands. Their favourite weapon is a kind of javelin. The women cook and cultivate the ground, and are remarkable for their extreme ugliness. Most of the country-ships from the different coasts of India touch at the N. islands in order to procure cocoa nuts, which they purchase at the rate of 4 for a leaf of tobacco, and 100 for a yard of blue cloth. The yams grown on these islands are probably the finest in India; and the oranges are good and abundant. Tobacco is the current medium of all exchange and barter.—The Danes formed an establishment on these islands in 1756, but their little colony was soon swept away by fever, and they have since abandoned it owing to the unhealthiness of the climate.

NICOLA (San), a volcanic island of the Adriatic, in the group of the Tremiti islands, to the NE of the island of San Domino, and to the S of Caprara. It is 1½ m. in length.—Also a town of Naples, in the prov. of Principato-Citra, district and 11 m. S of Il Vallo, cant. and 4 m. ESE of Pisciotta. Pop. 380.

NICOLA-DELL'-ALTO (San), a town of Naples, in the prov. of Calabria-Ultra, district and 17 m. NNW of Cotrone, cant. and 5 m. WNW of Strongoli. Pop. 1,800. It has 4 churches.

NICOLA-LA-BARONIA (San), a town of Naples, in the prov. of Principato-Ultra, district and 9 m. SSE of Ariano, cant. and 1½ m. NNE of Castello-della-Baronia. Pop. 1,300.

NICOLA-DELLA-STRADA (San), a village of Naples, in the prov. of Terra-del-Lavoro, district and 1½ m. SSE of Caserta, and 19 m. NNE of Naples. Pop. 2,500.

NICOLA-DE-STRAFACE (San), a town of Naples, in the prov. of Calabria-Citra, district and 23 m. ENE of Castrovillari, cant. and 8 m. WNW of Amendolara. Pop. 1,463.

NICOLAEFF, a town of Russia, in the gov. of Kherson, in a fertile plain near the point of junction of the Ingul and the Bug, in N lat. 46° 58′, E long. 30° 46′, 40 m. from Kherson, 77 m. from Odessa, and 1,362 m. from Petersburg. It was founded in 1791, and the admiralty of the Black sea was removed to it from Kherson; but the tide of prosperity has ebbed from it, in its turn, since Sebastopol became the chief

station of the Black sea fleet; and its pop., once estimated at 30,000, is now reduced to 8,000. Its streets are wide and regular, and planted with trees on both sides. The dockyards are at the foot of the height above the bridge. Along the top of the bank below the bridge runs a public walk, planted with trees and flowering shrubs; behind this walk stand the more important of the public buildings, such as the college-of-cadets, the handsomest of the whole, the admiral's residence, the observatory, and the admiralty. Behind these, again, run the wide sandy streets of the town. The timber employed here in ship-building comes chiefly by the Dnieper to Kherson. All the large vessels constructed here are floated empty down the river to Glubokoyé, where they take in their cannons and tackle; and from this point they must be transported on flats called camels to the Black sea. Several Englishmen are employed in the dockyards. The environs abound in good pasture-land, and are well cultivated.

NICOLAI I. ISLAND, one of the largest islands in the sea of Aral, in N lat. 44° 59′ 4″, E long. 59° 16′ 54″. It is the ZAREN of early maps.

NICOLAI (SAINT), a village of Switzerland, in the cant. of Wallis, to the SW of Visp. Pop. 480.

NICOLAO (SAN), a canton, commune, and town of Corsica, in the arrond. of Bastia. The cant. comprises 5 coms. Pop. in 1831, 2,308; in 1841, 2,477. The town is 27 m. from Bastia. Pop. 618.

NICOLAO (SAO), an island of the Atlantic, in the group of the Cape-de-Verde islands, to the SE of the island of Santa Lucia, and NNW of that of St. Jago. Its W point is 8 m. E of Raza. It is 30 m. in length from E to W, and about 12 m. in breadth. On its S side are an extensive promontory, and the bays of St. George and Terrafal. Pop. 6,000. It has a generally mountainous surface, and contains some fertile valleys, in which coffee is successfully cultivated. Its chief town, which bears the same name, contains about 1,400 inhabitants.

NICOLAO (SAO), a village of Brazil, in the prov. of São-Pedro-do-Rio-Grande, about 5 m. N of Rio-Pardo.—Also a v. of the same prov., in the comarca of the Missoes, on the r. bank of the Piratini, near its confluence with the Uruguay. Pop. 3,940.—Also a river of the prov. of Piauhi, an affluent of the São-Victor.

NICOLAS, an island of the Bahama old channel, off the N coast of Cuba, to the NE of the river Morina.—Also a channel which separates the bank of Los Roques from the chain of islets which extends along the N coast of Cuba. It is about 75 m. in length, and 39 m. in breadth. Its central part is in N lat. 23° 20′, and W long. 80°.

NICOLAS (SAINT), a town of France, in the dep. of the Cotes-du-Nord, cant. and 1½ m. S of Bothoa, and 18 m. S of Guingamp.—Also a village in the dep. of the Manche, cant. and 2 m. ESE of Granville, and 15 m. NW of Avranches. Pop. 2,300.—Also a department, commune, and town of Belgium, in the prov. of East Flanders, and arrond. of Termonde. Pop. of dep. 18,477. The town is 10 m. NNE of Termonde, and 21 m. ENE of Ghent. Pop. 10,959. It is well-built, and has a large square surrounded by handsome houses, a fine town-house, a parish-church, a college with a chapel attached, several schools, an hospital, and several other charitable institutions, and a prison. It possesses numerous silk, woollen, and cotton factories, several spinning and printing mills, dye-works, manufactories of musical instruments, of carpets, hats, hosiery, tape, lace, leather, cards, earthenware, pipes, spangles, soap, starch, and tobacco, several salt-refineries, distilleries and breweries, vinegar-manufactories, and oil-mills, and extensive tile and brick works, and carries on an active trade in grain, cattle, horses, hemp, and thread. The town returns one deputy, and the rural district three, to the provincial states.—Also a department and com. in the prov. and arrond. of Liege. Pop. of dep. 1,447; of com. 260. It has extensive coal-mines.—Also a commune in the prov. of West Flanders, and dep. of Pervyse. Pop. 588.

NICOLAS (SAINT), a harbour on the NW coast of the island of Zea, in the archipelago. It is 1½ m. in length, and about ¾ of a mile in breadth, and is enclosed on the NW by a steep and narrow peninsula, on which is the hermitage of St. Nicolas.—Also a fort on the E coast of the island of Rhodes, 29 m. SSW of the capital. Opposite it is a group of islands of the same name.

NICOLAS (SAINT), a harbour of Lower Canada, in the district and 270 m. NE of Quebec, on the N coast of the estuary of the St. Lawrence, and 24 m. W of Cape Mont-Peles. At the entrance on the E is a cape of the same name.

NICOLAS (SAINT), a deltoid arm of the Quorra, to the W of the Santa Barbara branch.

NICOLAS (SAINT), a headland at the NW extremity of the island of Java, to the NW of the bay of Bantam, in S lat. 5° 52′, and E long. 106° 2′ 2″. It is the most northerly point in the island.

NICOLAS (SAINT), a headland of Hayti, on the NW coast of the island, 6 m. NE of Cape Foux, and at the extremity of a small peninsula, which encloses on the N the bay of the Mole-Saint-Nicolas, in N lat. 19° 50′, and W long. 73° 33′.

NICOLAS (SAN), a small island of the Pacific, near the coast of New California. Its SE point is in N lat. 33° 14′ 12″, and W long. 119° 25′ 00″.

NICOLAS DE LOS ARROYOS (SAN), a town of the republic of Monte-Video, 60 m. SE of Candelaria, and 50 m. N of Monte-Video. It stands on high ground, and consists of a few long streets crossing each other at right angles. It suffered greatly from the explosion of a powder-magazine which stood in one of the angles of the principal squares, in December 1852. Pop. about 5,000. The scenery in the neighbourhood is flat and uninviting.

NICOLAS-D'ALIERMONT (SAINT), a commune of France, in the dep. of the Seine-Inferieure, cant. and 1½ m. SW of Envermeu, and 8 m. SE of Dieppe. Pop. in 1841, 1,956. It has long been noted for its manufacture of clocks.

NICOLAS-DES-BIEFS (SAINT), a commune of France, in the dep. of the Allier, cant. and 6 m. E of Mayet-de-Montagne, and 21 m. S of La Palisse. Pop. 1,222.

NICOLAS-DE-BOURGUEIL (SAINT), a commune of France, in the dep. of the Indre-et-Loire, cant. and about ½ a mile N of Bourgueil, and 12 m. N of Chinon. Pop. 2,104.

NICOLAS-DE-LA-GRAVE (SAINT), a canton and commune of France, in the dep. of the Tarn-et-Garonne, and arrond. of Castel-Sarrasin. The canton comprises 14 com. Pop. in 1831, 10,691; in 1841, 10,794. The village is 6 m. NW of Castel-Sarrasin, and 10 m. W of Montauban, near the l. bank of the Garonne. Pop. in 1841, 3,033. The environs are noted for their melons.

NICOLAS-PRES-GRANVILLE (SAINT), a commune of France, in the dep. of the Manche, and cant. of Granville, 20 m. NW of Avranches. Pop. in 1841, 3,279.

NICOLAS-DE-PONT-SAINT-PIERRE (SAINT), a commune of France, in the dep. of the Eure, and cant. of Ecouis, 15 m. from Les Andelys. Pop. 754. It has several spinning and fulling mills, and a manufactory of cloth.

NICOLAS-DU-PORT (SAINT), a canton, commune, and town of France, in the dep. of the

Meurthe, and arrond. of Nancy. The cant. comprises 25 com. Pop. in 1831, 15,786; in 1841, 16,176. The town is 9 m. SE of Nancy, and 10 m. WNW of Luneville, on the l. bank of the Meurthe, which is here crossed by two stone-bridges. Pop. in 1841, 3,178. It has a handsome Gothic church, a town-hall, a lunatic asylum, an hospital, and a public abattoir, and possesses manufactories of varieties of cotton and linen fabrics, hosiery, brocade, several spinning and fulling-mills, dye-works, tanneries, rope-works, founderies, gypsum-works, an oil-mill, and distilleries of brandy.

NICOLAS-DEL-PUERTO (San), a town of Spain, in Andalusia, in the prov. and 39 m. NE of Sevilla, and partido of Cazalla-de-la-Sierra. Pop. 7,240. It has a parish-church, several convents and hospitals, and a public granary.

NICOLAS-DEL-REAL-CAMINO (San), a town of Spain, in the prov. of Palencia, partido and 18 m. WNW of Carrion-de-los-Condes. Pop. 94. It has an hospital.

NICOLAS-DE-REDON (Saint), a canton and commune of France, in the dep. of the Loire-Inferieure, and arrond. of Savenay. The cant. comprises 4 com. Pop. in 1831, 9,915; in 1841, 9,950. The village is 24 m. N of Savenay, on the l. bank of the Vilaine. Pop. 1,621.

NICOLAS-DE-SARARE (Saint), a town of New Granada, in the dep. of Boyaca, prov. and 30 m. SW of Pamplona, near the source of the Sarare. Pop. 1,200.

NICOLAS-DE-LA-TAILLE (Saint), a town of France, in the dep. of the Seine-Inferieure, cant. and 4 m. W of Lillebonne, and 21 m. E of Havre, near the r. bank of the Seine. Pop. 950.

NICOLET, a county of Lower Canada, in the district of Three Rivers, extending N to the St. Lawrence, on which it has a breadth of 32½ m., and comprising an area of 475 sq. m. It has a generally level surface, and is watered by several rivers, of which the Nicolet, Becancour, and Gentilly are the chief. It contains 5 parishes, and sends two members to the provincial parliament. Pop. 12,593.—Also a river which has its source in a lake of the same name, in the same district, in the SE corner of the township of Ham; runs in a generally NW direction; and after a course of about 75 m., throws itself, by two branches, into Lake Saint Pierre. It consists of two principal branches, distinguished as the eastern and western; the former of which rises in Wolfstown, and the latter in Weedon. Numerous settlements have been formed on the lower part of this river.—Also a seignory in the co. of Nicolet, bounded in front by Lake St. Peter. The soil in the interior is good, and on the banks of the river is extremely fertile. About ⅘ths of the seignory are under cultivation. The village is pleasantly situated on the Nicolet, about a mile from its mouth. It contains about 90 houses, with a Roman Catholic church in the centre, and an episcopal chapel.

NICOLO (San), an island of the Adriatic, on the coast of Dalmatia, and circle of Cattaro, at the entrance of the port of Budua, in N lat. 42° 15′ 50″, and E long. 18° 50′ 30″.—Also a town of Dalmatia, in the island of Mortero, circle and 36 m. SE of Zara. Pop. 427.—Also a town on a rock on the SE coast of the island of Tinos, Grecian archipelago, 90 m. ESE of Athens. Pop. 4,000. It possesses some fortifications, and has a suburb and a cathedral.—Also a village and port of the island of Cerigo, Ionian sea, on the E coast, 9 m. NNE of Capsali, on the N side of a bay of the same name. Pop. 400. A fort in the vicinity, bearing the same name, is in N lat. 36° 13′ 7″, and E long. 23° 4′ 34″. Numerous ruins, including those of the ancient *Cythera*, are found in the neighbourhood. — Also a rocky islet off the E coast of Anatolia, in N lat. 36° 33′, E long. 29° 8′, at the bottom of a gulf formed by Cape Angistro on the W. It is 1 m. in length, and 2 furl. broad, and attains an alt. of 700 ft. Its whole surface is covered, from sea to summit, with the remains of houses, arches, churches, monasteries, and reservoirs. The distance between the rock and the mainland on the N is only a few yards.

NICOLO-DI-LIDO (San), a fortress of Austria, in Lombardy, in the prov. and district and 3 m. E of Venice, at the extremity of a long and narrow island. In its vicinity is the port of the same name.

NICOLOSI, a town of Sicily, in the prov. and district and 9 m. N of Catania, on the S side of Mount Etna. Pop. 3,600. This town, which is the most elevated of the towns built on this volcano, was to a great extent destroyed by a torrent of lava in 1538. It has some silk-mills.

NICOMEDIA. See Ismid.

NICOPOLI, Nikopol, or Tchingani-Kalé, a town of Turkey in Europe, in Bulgaria, cap. of the sanjak and 56 m. W of Rustchuk, 90 m. SW of Bucharest, and 300 m. NW of Constantinople, on the r. bank of the Danube, a little below the confluence of the Aluta and Osma. Pop. loosely estimated at 10,000. It occupies a height, defended by ramparts and by an ancient fortress, and surrounded by several suburbs. It contains some handsome houses, several mosques, baths, &c.; but is generally ill-built. Its situation on the Danube renders it a place of considerable commercial importance. The suburbs are inhabited chiefly by Greeks and Bulgarians. N. was founded by Trajan, and some remains of the ancient walls are still to be seen. It is noted for the signal defeat of Sigismund, king of Hungary, by the Turks, in 1396.

NICOSIA, a district and town of Sicily, in the prov. and 45 m. WNW of Catania, and 75 m. ESE of Palermo. Pop. 13,000. It stands on the declivity of two hills, the bases of which are watered by the Salato and Capizzi; and contains numerous churches and convents, and a cathedral in the Norman style. Its trade consists chiefly in wine, corn, oil, and cattle. In the environs are beds of argillaceous schist and of iron pyrites, a productive salt-mine, springs of petroleum, and several sulphureous springs. This town occupies the site of the ancient *Herbita*, noted for its resistance to Dionysius, tyrant of Syracuse. The district comprises 5 cant.

NICOSIA, Leucosia, or Lefkosia, a town of Turkey in Asia, capital of the island of Cyprus, and of the sanjak of the same name, 9 m. from the N coast of the island, 210 m. WSW of Aleppo, and 540 m. SE of Constantinople, in N lat. 35° 13′ 14″, E long. 33° 26′ 30″. It stands on a slight elevation, in the centre of an extensive plain, surrounded by mountains, of which the highest summits are covered with snow. Pop. 18,000, about two-thirds of whom are Turks. It is 1½ m. in circuit; and is enclosed by lofty stone-walls, flanked with 13 bastions of great strength. The moat, which was formerly nearly ½ a m. in width, is now dry and in part filled up, and converted into corn-fields. Notwithstanding the strength of its fortifications, it is incapable of sustaining a siege, in consequence of being commanded by the adjacent heights. It is entered by three gates, distinguished by the names of Paphos, Cerina, and Famagousta or Larnica. The Greek quarter of the town contains some handsome streets; but the others are narrow, irregular, unpaved, and dirty; and the city generally is in a neglected and ruinous state. The houses generally are ill-built, and many are mere huts; but a few large and commodious dwellings are to be seen, surrounded by gardens planted

with orange, citron, and palm-trees. The ancient palace of the kings of Cyprus, an extensive structure, is now used as the governor's residence. The archiepiscopal palace is also a spacious edifice. The town contains 8 mosques, of which one is the ancient cathedral of Saint Sophia, a superb Gothic edifice; 6 Greek churches, numerous convents, 4 public baths, a large caravanserai, and a well-stocked bazaar.—It has manufactories of Turkey leather, carpets, and printed cottons. Wine and cotton form its chief articles of export. The surrounding plain possesses little fertility, and adjacent to the town is marshy and insalubrious. The wines, for which the island is noted, are grown on the slopes of the surrounding hills.—N. occupies the site of the ancient *Tremitus*. Previous to its possession by the Venetians, it was of great extent, containing 300 churches and numerous palaces and monasteries. From the Venetians it was taken by Selim II., and has since continued under the dominion of the Turks. The sanjak comprises the E part of the island, and contains extensive salt-works.

NICOTERA, a town of Naples, in the prov. of Calabria-Ultra, district and 13 m. SW of Monte-Leone, and 45 m. SW of Catanzaro, near the gulf of Gioja. Pop. 3,800. It consists of an upper and lower town. The former contains a fine square, some handsome houses, the episcopal palace, and a college. The lower part consists of an assemblage of mean and miserable dwellings, inhabited chiefly by mariners and fishermen. This town suffered severely from an earthquake in 1783.

NICOYA, a town of Central America, in the state of Costa-Rica, near the N coast of a gulf of the same name, and 76 m. WNW of Cartago.—Also a town of the same state, 96 m. W of Cartago, on the NE part of a peninsula of the same name, 15 m. from the shore of the gulf of Nicoya, and 24 m. from the SW bank of Lake Nicaragua. Pop. 3,000. Shipbuilding and the manufacture of some common fabrics form the chief branches of local employment. The trade consists chiefly in corn, maize, honey, poultry, salt, and purple-fish.—The peninsula lies partly in the NW of the state of Costa-Rica, and partly in the S of that of Nicaragua, and to the S of the lake of that name, between the gulf of Papagayo on the NW and that of Nicoya on the SE. It is about 120 m. in length from N to S, and 90 m. in medium breadth from E to W, and terminates in the S in Cape Blanco. In the N part is the volcano of Papagayo; but in its greater extent it is flat, and well adapted to the cultivation of sugar. The climate is extremely warm and unhealthy.

NICOYA (Gulf of), or Las Salinas, an indentation of the W coast of Central America, in the state of Costa-Rica, to the E of the peninsula of Nicoya, and S of Lake Nicaragua, from which it is separated by a distance of about 69 m. The depth of its embrasure from N to S is about 60 m., and its greatest breadth 54 m. Its principal port is that of Punta-Arenas, from which a road has been executed to the capital, which admits of produce being conveyed to the port in the ordinary wheel-carriages of the country in 5 days. Vessels of large size cannot however approach nearer than 2 m. It contains a number of small islands; and receives several rivers, the principal of which are the Cartago, Palmas, Chome, and Mandetre. It affords large quantities of purple fish. It has been proposed to connect this gulf with the river San-Juan, by means of a canal and the river San-Carlos.

NICUMAN, a river of Mandshuria, in the district of Sagalin-Ula, an affluent of the Amour, which it joins, on the l. bank, after a course in a SW direction of about 240 m.

NIDA, a river of Poland, in the woiwodie of Cracow. It has its source in the obwod of Kielce, near Moskarzow; runs first E, then SSE; passes Sobkow, Pinczow, and Wislica; and after a navigable course of about 75 m. joins the Vistula, on the l. bank, at Nowemiasto-korczin.

NIDAU, an amt or bailiwick and village of Switzerland, in the cant. of Berne. The bail. contains 10 parishes, and 10,096 inhabitants. The v. is 18 m. NW of Berne, at the NE extremity of Bienne, at the efflux of the Thiele. Pop. 614. It has several bleacheries, and carries on an extensive trade in salt.

NIDD, a river of Yorkshire, which rises 3 m. NE of Kettlewell, on Black-Fell, and flows E, SE, and then NE, to the Ouse at Nun-Monkton.

NIDD-WITH-KILLINGHALL, a parish in the W. R. of Yorkshire, 4 m. NW by W of Knaresborough, and N of the Nidd. Area 940 acres. Pop. in 1831, 110; in 1841, 114.

NIDDA, a river which has its source in the Vogelsberge, in the E part of the prov. of Upper Hesse, traverses the W part of the prov. of Hanau, in Electoral Hesse, and of the territory of Frankfort-on-the-Main; enters the duchy of Nassau; and throws itself into the Main, on the r. bank, a little to the E of Höchst, 7 m. W of Frankfort, and after a course in a generally SW direction of 60 m. The Horlof, Wetter, and Nidder, the latter of which it receives on the l., are its principal affluents. Scholten, Nidda, Staden, and Rödelsheim, are the principal towns on its banks. Alt. above sea-level at its source 799 yds.; at Nidda, 305 ft.—Also a bailiwick and town of the grand-duchy of Hesse-Darmstadt, in the prov. of Upper Hesse, the town is 20 m. SE of Giessen, and 27 m. NE of Frankfort, on a river of the same name. Pop. 1,871. It has manufactories of linen and hosiery, and several tanneries. In its vicinity are the mineral baths of Salzhausen.

NIDDEN, a village of Prussia, in the regency of Königsberg, on the long, narrow tract which separates the Curische-Haff from the Baltic, and to the S of Memel.

NIDDER, a river which has its source in the grand-duchy of Hesse-Darmstadt, and prov. of Upper Hesse, in the Vogelsberge, about 5 m. S of the source of the Nidda, flows thence into Electoral-Hesse, traverses the W part of the prov. of Hanau, and joins the Nidda, on the l. bank, to the NE of Vilbel, and after a course in a generally SW direction of 45 m.

NID-ELV, a river of Norway, in the prov. of Christiansand, which issues from Lake Nisservand, in the bail. of Bradsberg, traverses the E part of the bail. of Nedenaes, and after a course in a generally S direction of 75 m., throws itself into the Skagerrack at Arendal, opposite the island of Tromöe.—Also a river in the prov. of South Trondheim, which has its source in a large lake, and a little below Trondheim throws itself into the Trondheim fiord.

NIDERVILLER, a village of France, in the dep. of the Meurthe, cant. and 5 m. S of Sarrebourg. Pop. 760. It has a manufactory of porcelain and pipes, and a glass-work.

NIDGULL, a town and fortress of Hindostan, in the district of Mysore, 45 m. E of Chittledrug, on a mountain.

NIDINGEN, a small island near the W coast of Sweden, in the Cattegat, in N lat. 57° 18′ 21″, and E long. 11° 54′ 45″. It has a lighthouse.

NIDOKI, a town of Russia in Europe, in the gov. and district and 54 m. NNW of Vilna, and 5 m. ENE of Wilkomirz.

NIDWALD, or Nidwalden, a district of Switzerland, in the N part of the cant. of Unterwalden. It comprises 13 com., and contains 9,610 inhabitants (Catholic). Its chief town is Stanz.

NIEBEL, a town of Senegambia, in the state of Tuta-Dialon, in the midst of lofty mountains, 90 m. NW of Labbe.

NIEBLA, a town of Spain, in Andalusia, in the prov. and 18 m. NE of Huelva, and partido of Moguer, on the r. bank of the Tinto. Pop. 983. It is the chief town of a county of the same name, and has the remains of ramparts, 5 churches, a convent, and an hospital. In the environs are some copper mines. This town is the *Ilipŭla* of the Romans.

NIEBOROWITZ, a village of Prussia, in the prov. of Silesia, regency and 48 m. SE of Oppeln circle and 18 m. S of Tost. Pop. 410. It has a large iron-work.

NIED, a river of France, in the dep. of the Moselle, formed by the junction of the Nied-Française, which has its source at Marthil in the dep. of the Meurthe, and of the Nied-Allemande which takes its rise at Magstadt in the dep. of the Moselle, and which unite in the cant. of Boulay at Condé-Northen. The united stream flows NNE and throws itself into the Sarre, on the l. bank, 8 m. NW of Sarrelouis. The total length of its course from the source of the Nied-Francaise is 48 m. It is liable to inundations.

NIEDECK, a hamlet of Hanover, in the gov. of Hildesheim, principality and 6 m. ESE of Gottingen. Pop. 60.

NIEDEGGEN, a town of Prussia, in the prov. of the Rhine, regency and 19 m. E of Aix-le-Chapelle, circle and 6 m. S of Düren, at the foot of a rock, on the Roër. Pop. 570. It has a castle, now in a dilapidated condition, built in the 12th century by the Counts of Julius.

NIEDELBAD, a village of Switzerland, in the cant. and S of Zurich, and on the lake of that name.

NIEDENSTEIN, a town of Hesse-Cassel, in the prov. of Lower Hesse, circle and 9 m. from Fritzlar. Pop. in 1840, 689, of whom 120 were Jews.

NIEDER, a German word signifying 'lower.' For names with which it is compounded not found below, see the other term of the compound.

NIEDERBETSCHDORF, a commune of France, in the dep. of the Lower Rhine, and cant. of Soultz-sous-Forêt, 12 m. S of Wissembourg. Pop. 1,278.

NIEDERBRONN, a canton, commune, and town of France, in the dep. of the Lower Rhine, and arrond. of Wissembourg. The cant. comprises 20 com. Pop. in 1831, 19,600; in 1841, 20,187. The town is 12 m. SW of Wissembourg, and 27 m. NNW of Strasburg, on the Falkein. Pop. in 1841, 2,922. It has an extensive bathing-establishment.

NIEDERHAUSEN, a village of the duchy of Nassau, bail. and 5 m. S of Idstein. Pop. 325. It has several corn-mills and a powder-mill.

NIEDERMERSCHWILLER, a commune of France, in the dep. of the Upper Rhine, and cant. of Mulhausen, 9 m. N of Altkirch. Pop. 1,334.

NIEDERNAU, or Niderau, a village of Würtemberg, in the circle of the Schwartzburg, bail. and 1½ m. W of Rotenburg, on the r. bank of the Neckar. Pop. 412. It has several mineral baths.

NIEDERNHALL, a town of Würtemberg, in the circle of the Jaxt, bail. and 4 m. W of Künzelsan, on the Kochar. Pop. in 1840, 1,487. It has several saline springs.

NIEDERSTETTEN, a town of Würtemberg, in the circle of the Jaxt, bail. and 11 m. N of Gerabronn, and 11 m. SE of Mergentheim, on the Vorbach. Pop. 1,562. It has a castle, and carries on a considerable trade in wine.

NIEFERN, a town of the grand-duchy of Baden, in the circle of the Middle Rhine, bail. and 5 m. ENE of Pforzheim, and 21 m. ESE of Carlsruhe, on the r. bank of the Enz. Pop. 1,279.

NIEGOWICE, a town of Galicia, in the circle and 9 m. E of Bochnia, and 17 m. E of Cracow.

NIEHEIM, a town of Prussia, in the prov. of Westphalia, regency and 38 m. SSE of Minden, circle and 8 m. NNW of Brakel. Pop. 1,272.

NIEHL, a village of Prussia, in the prov. of the Rhine, in the regency and 6 m. WNW of Cleves. Pop. 1,220.

NIEL, a department and commune of Belgium, in the prov. and arrond. of Antwerp. Pop. of dep. 2.967. The village is 9 m. S of Antwerp, on the r. bank of the Rupel. Pop. 1,850.—Also a department and commune in the prov. of Limburg, and arrond. of Hasselt. Pop. of dep. 293.—Also a department and commune in the same prov. and arrond. of Tongres, watered by the Beek-de-Asch. Pop. 163.

NIELLA, a village of Sardinia, in the dio. of Coni, prov. and 7 m. NE of Mondovi, on the l. bank of the Tanaro. Pop. 1,612.

NIEMECK, a town of Prussia, in the prov. of Brandenburg, regency and 28 m. SSW of Potsdam, circle and 6 m. SSE of Zauch-Belzig. Pop. 2,340. It has several spinning-mills and distilleries.

NIEMEN, or Nieman, a river, the Memel of the Germans, and Niemona of the Lithuanians, which has its source in Russia, in the gov. of Minsk, in the E part of the district of Igoumen, near Pesotchna, on the confluence of several streams of which the Ousa is the principal, on the watershed between the Baltic and the Black sea. It takes first a W direction, runs along the confines of the govs. of Vilna and Grodno, and traverses the N part of the latter gov. At the town of Grodno it turns N and runs along the frontier of the Polish woiwodie of Augustowo, but resumes, soon after passing Kowno, where it is joined by the Wjlia, a W direction. It then enters Prussia; traverses under the name of Memel the N part of the prov. of East Prussia; passes Ragnit and Tilsit, and 8 m. below Tilsit, divides into two branches which discharge themselves into the Curische-Haff. The smaller of the two deltoid branches runs SW, and has at its mouth the town of Gilge to which it gives its name. The other runs N under the name of Russ, and subdivides near the town of that name into three branches, viz. the Almat, Skirviet and Pokolna, which form at their mouth numerous islands. The N. has a course of 450 m. Its principal affluents are on the r. the Berezina, Meretchanka, Wilia, Pevieja, Doubitza and Joura; and on the l. the Chtchara, Zelva and Szeschuppe. This river is broad, deep and navigable, even in summer; and is connected by means of the canal of Oginski with the Jaselda or Yasiolda, an affluent of the Pripec. This river engrosses nearly the whole trade of Lithuania and Volhynia.—In 1066 the sons of the grand-duke Yaroslav gained a signal victory on its banks over Prince Vseslav-Briatchislavitch of Potolsk, and it is also noted for an interview which Napoleon Buonaparte and Alexander had on its waters near Tilsit.

NIEMENTCHIN, a town of Russia in Europe, in the gov. and district and 18 m. NNE of Vilna, on the r. bank of the Vilia. Pop. 1,800.

NIEMES, or Mimonic, a municipal town of Austria, in Bohemia, in the circle of Bunzlau, 20 m. NNW of Jung-Bunzlau, and 33 m. NE of Leitmeritz, on the Jeschkenbach, at its confluence with the Jungferbach. Pop. 3,336. It has manufactories of cotton and woollen fabrics. Sapphires are found in the surrounding district.

NIEMETZKI-GRAD. See Gratz.

NIEMIROV, a town of Russia in Europe, in the prov. of Bialystock, district and 28 m. SE of Drohitchin, on the r. bank of the Bog.

NIEMIROW, a town of Galicia, in the circle and

28 m. W of Zolkiew, and 33 m. NW of Lemberg. Pop. 1,900.

NIEMODIN. See FALKENBERG.

NIEMOKSTZY, a town of Russia in Europe, in the gov. of Vilna, district and 17 m. WNW of Rossiena, and 45 m. SSW of Chavli. Pop. 1,700.

NIEMTSCHITZ (GROSS), a town of Austria, in Moravia, in the circle and 13 m. SSE of Brunn, and 11 m. SW of Austerlitz, on an island of the Schwaza. Pop. 1,050.

NIENBORG, a market-town of Prussia, in the prov. of Westphalia, reg. and 27 m. NW of Munster, circle and 5 m. NNE of Ahaus, on the Dinkel. Pop. 1,000. It has an ancient fortress.

NIENBURG, a bailiwick and town of Hanover, in the co. of Hoya. Pop. of bail., exclusive of the town, 6,500. The town is 32 m. NW of Hanover, and 36 m. SE of Bremen, on the r. bank of the Weser, at the confluence of the Murbach. Pop. 4,300. It contains 2 churches and an hospital; and has manufactories of linen fabrics, and of vinegar and oil. The trade consists chiefly in timber and coal. Tobacco and chicory are cultivated in the environs. N. was formerly a place of considerable strength. Its fortifications were demolished by the French in 1807.

NIENBURG, KLOSTER-NIENBURG, or MUNCHEN-NIENBURG, a bailiwick and town of the duchy of Anhalt-Kothen. The town is 12 m. NW of Kothen, on the l. bank of the Saale, at the confluence of the Bode, which is here crossed by a bridge. Pop. 1,900. It is enclosed by walls, and has 2 suburbs, a castle, and 2 churches. Coal is wrought in the environs.

NIEPER. See DNIEPER.

NIEPOLOMICE, a town of Austria, in Galicia, in the circle and 11 m. NW of Bochnia, near the r. bank of the Vistula.

NIEPPES, a commune and town of France, in the dep. of the Nord, cant. and 5 m. ESE of Bailleul. Pop. in 1841, 3,451. It has several breweries and vinegar manufactories, numerous lime and tileworks, manufactories of potash, and several spinning-mills and bleacheries.

NIERHOXENT, a commune of Belgium, in the prov. of Limburg, and dep. of Exel. Pop. 203.

NIERS, or NEERS, a river which has its source in Prussia, in the prov. of the Rhine, in the circle and 6 m. E of Erkelenz; flows thence into Belgium; traverses the prov. of Limburg; and throws itself into the Meuse, on the r. bank, 1½ m. NW of Gennep, and after a tortuous course, in a generally NW direction, of about 72 m. Wachtendonk, Gueldres, Goch, and Gennep, are the principal towns which it waters. In October and April it is liable to inundations. It is navigable, although not without difficulty, on account of the number of sand-banks with which its bed is obstructed. Its waters abound with fish.

NIERSTEIN, a village of the grand-duchy of Hesse-Darmstadt, in the prov. of Lower Hesse, cant. and 1½ m. NW of Oppenheim, and 10 m. SSE of Mayence, on the l. bank of the Rhine. Pop. 2,201, of whom 947 are Catholics. In the vicinity are the baths of Sirona-Bad, on the site of the ancient Roman baths of *Sirona*. The environs are noted for their excellent wine.

NIESKY, a town of Prussia, in the prov. of Silesia, reg. of Liegnitz, and circle of Rothenburg. Pop. 600. It has a Moravian gymnasium, with a fine museum of natural curiosities; and possesses manufactories of cotton and linen fabrics, and leather.

NIESTE, a village of Hesse-Cassel, in the prov. of Lower Hesse, and circle of Cassel, on a river of the same name. Pop. 571. It has a custom-house. Previous to 1831 it belonged in common to Hesse and Hanover.

NIESUCHATSCHI, a town of Russia in Europe, in the gov. of Volhynia, district and 12 m. NNE of Kowel, on the r. bank of the Turia. Pop. 150.

NIESZAWA, a town of Poland, in the woiwodie of Masow, and obwod. of Kujavie, 45 m. WNW of Plock, on the l. bank of the Vistula. Pop. 824. It has several breweries and distilleries.

NIESZWITSCH, NIESWICZ, or NESVIJ, a town of Russia in Europe, in the gov. and 63 m. SW of Minsk, district and 39 m. WNW of Sloutzk, on the Lipa, an affluent of the Niemen. Pop. 4,000. It is the cap. of a principality, and of a majorat belonging to the family of Radzwille, and has a Benedictine abbey. Its fortifications were destroyed by the Swedes in 1706.

NIEUBURG, a commune of Belgium, in the prov. of E. Flanders, and dep. of Assenede. Pop. 282.

NIEUCAPPELLE, a department and commune of Belgium, in the prov. of W. Flanders, and arrond. of Furnes. Pop. 734.

NIEUIL, or NIEUL, a commune of France, in the dep. of the Charente-Inferieure, cant. and 4 m. N of La Rochelle. Pop. 1,317.—Also a commune in the dep. of the Haute-Vienne, cap. of a cant., in the arrond. and 9 m. NW of Limoges, on the l. bank of the Glane. Pop. 730. It has a spinning and an oil-mill.

NIEUIL, or NIOEIL, a commune of France, in the dep. of the Charente, cant. and 2 m. SE of St. Claud, and 14 m. SW of Confolens, on the Son. Pop. 1,412. It has a manufactory of pottery, and in its vicinity is a mine of iron.

NIEUIL-DENANT, a commune of France, in the dep. of the Vendée, and cant. of Saint-Hilaire-des-Loges, 8 m. SE of Fontenay-le-Comte. Pop. 1,111. It has manufactories of candles and of oil.

NIEUIL-L'ESPOIR, a village of France, in the dep. of the Vienne, cant. and 5 m. ENE of Villedieu, and 9 m. SE of Poitiers. Pop. 500.

NIEUIL-LE-VIROUL, a village of France, in the dep. of the Charente-Inferieure, cant. and 3 m. NE of Mirambeau, and 6 m. WSW of Jonzac, on the Tarnac. Pop. 1,250.

NIEUKERKEN-WAES, a department and commune of Belgium, in the prov. of E. Flanders, and arrond. of Termonde. Pop. of dep. 2,389; of com. 587.

NIEUPOORT, a commune of Belgium, in the prov. of E. Flanders, and dep. of Lokeren. Pop. 1,227.

NIEUPORT, a department, commune, and town of Belgium, in the prov. of W. Flanders, arrond. of Furnes. Pop. of dep. 2,936. The town is 7 m. NW of Furnes, and 23 m. WSW of Bruges, on the Yser, 1½ m. from the sea. It communicates by means of canals with Furnes and Bruges, and with Dixmude and Ypres by the Yperlee. It is ill-built and unhealthily situated, and has manufactories of fishing-nets and cordage. Fishing forms one of the chief employments of the inhabitants. This town was formerly a mere hamlet, dependent on the town of Lombarsyde, which was destroyed by a tempest in June 1116. It was enclosed by walls by Philip of Alsace; and after being reduced to ruins by the English in 1383, was rebuilt two years after, and fortified by Philip the Bold. It sustained several sieges, the most memorable of which was that against the French in 1488. In 1600 a battle was fought in its vicinity, in which the archduke Albert was defeated by Maurice of Nassau. It was taken by the French in 1745, 1792, and 1794. The canal of Nieuport extends from the town of that name, where it unites with the Yser and the canal of Furnes, of the latter of which it is a continuation, to the canal of Ostend at Bruges, a distance of 15 m. This canal forms an

important trading communication between France and Belgium.

NIEUW, a Dutch word signifying 'new.' For names with which it is compounded, not found amongst the following, see the other name.

NIEUWE-DIEP, a village of Holland, in the prov. of Holland, arrond. and 26 m. N of Alkmaer, on the Mars-diep, a channel by which the island of Texel is separated from the continent, and at the mouth of the great Amsterdam canal. It has a fine harbour.

NIEUWEGE, a commune of Belgium, in the prov. of W. Flanders, and dep. of Varssenare. Pop. 132.

NIEUWENBRIEL, a commune of Belgium, in the prov. of E. Flanders, and dep. of Baesrode. Pop. 261.

NIEUWENDORPE, a commune of Belgium, in the prov. of E. Flanders, and dep. of Eecloo. Pop. 142.

NIEUWENHOVE, a department and commune of Belgium, in the prov. of E. Flanders, and arrond. of Audenarde. Pop. 623.—Also a com. in the prov. of W. Flanders, and dep. of Oostcamp. Pop. 115.

NIEUWENRODE, a commune of Belgium, in the prov. of Brabant, and dep. of Meysse. Pop. 936.

NIEUWERKERKEN, a department and commune of Belgium, in the prov. of E. Flanders, and arrond. of Termonde. Pop. of dep. 2,447. The v. is 9 m. SW of Termonde. Pop. 249. Agriculture and the manufacture of linen form the chief branches of local industry.—Also a dep. and com. in the prov. of Limburg, and arrond. of Hasselt. Pop. of dep. 550; of com. 326.

NIEUWKERK, or NYKERK, a town of Holland, in the prov. of Gelderland, arrond. and 28 m. NW of Arnheim, near the Zuyder-zee, on which it has a small port. Pop. 5,900. Tobacco is extensively cultivated in the environs.

NIEUWKOOP, a village of Holland, in the prov. of N. Holland, arrond. and 14 m. E of Leyden, cant. and 6 m. E of Wonbrugge. Pop. 1,900.

NIEUWMAER, a commune of Belgium, in the prov. of Antwerp, and dep. of Calmpthout. Pop. 558.

NIEUWMUNSTER, a prov. of West Flanders, in the arrond. of Bruges. Pop. 344.

NIEUWOLD, a village of Holland, in the prov. and 17 m. ENE of Groningen. Pop. 1,100.

NIEUWPOORT, a fortified town of Holland, in the prov. of Holland, arrond. and 9 m. NNW of Gorcum, and cant. of Sleydrecht, on the l. bank of the Leck, nearly opposite Schoonhoven. Pop. 390. Salmon fishing forms the chief employment of the inhabitants.

NIEUWRODE, a department and commune of Belgium, in the prov. of Brabant, and arrond. of Louvain, watered by the Molebeek. Pop. 1,043.

NIEUWSTRAET, a commune of Belgium, in the prov. of Brabant, and dep. of Rhode-Saint-Genest. Pop. 354.

NIEUWVELD (BERGEN), a range of mountains in South Africa, in the district of Beaufort, extending from the Komsberg on the SSW, to the Sneeuwberg on the NNW, a distance of about 180 m. It rises to the height of 10,800 ft., and is said to be covered half the year with snow. It gives rise on the N to the head-streams of the Zak and Riet rivers, and on the S to the Zont or Salt, and the Gamka or Great Lion rivers.

NIEVA, a town of Spain, in Old Castile, in the prov. of Segovia, and partido of Santa-Maria-de-Nieva. Pop. 579. It has a parish-church and a custom-house.

NIEVA-DE-CAMEROS, a town of Spain, in Old Castile, in the prov. and 21 m. SSW of Logrono, and partido of Torrecella-de-Cameros. Pop. 1,020.

NIEVENHEIM, a village of Prussia, in the prov. of the Rhine, regency and 8 m. S of Dusseldorf, circle and 6 m. SE of Neuss. Pop. 1,487. It has several breweries and distilleries.

NIEVERN, a village of the duchy of Nassau, bail. and 5 m. NNE of Braubach, and 6 m. SE of Coblenz, on the l. bank of the Lahn. Pop. 570. It has a forge, several founderies, and a nail-manufactory.

NIEVRE, a river of France, in the dep. to which it gives its name. It takes its rise near Bouras, in the cant. of Prémery; runs S; and throws itself, by two arms, into the Loire, on the r. bank, and after a course of 30 m.

NIEVRE, a central department of France, between 46° 40′ and 47° 35′ N lat., and 2° 50′ and 4° 10′ E long.; bounded on the N by the dep. of the Loiret and Yonne; on the E by those of the Cote-d'Or, and Saone-et-Loire; on the S by the last-named dep., and that of the Allier; and on the W by the dep. of the Cher. It comprises an area of 681,093 hect. Pop. in 1801, 232,590; in 1821, 257,990; in 1831, 282,521; in 1841, 305,346; in 1851, 327,161. It is intersected by a range of hills, forming the line of separation between the basins of the Loire and Seine, and bearing in its E part the name of the mountains of Morvan. It is watered in the N by the Yonne and its affluents, the Beuvron and Cure; in the S by Loire, Allier, Nohain, Nievre, and Aron, and contains several large lakes, of which one, named Aron, in its central part, is the largest. Its highest summit, in the mountains of Morvan, has an alt. of 880 metres = 971 yds. above sea-level. The tract along the banks of the Loire is generally fertile, but the soil in its greater extent possesses little fertility. Of the 651,457 hect. of productive soil in 1839, 148,907 were in grain; 10,132 in potatoes and legumes; 557 in beet-root; 10,325 in vineyards; 2,365 in gardens; 3,676 in orchards and nurseries; 71,948 in meadows; 258,797 in wood; and 144,697 in heaths, brushwood, and waste lands. The E portion of the dep. is extremely rugged. Its produce in grain is rather below the average; but in the valley of the Loire a considerable quantity of good corn-land exists. The elevated plains of Morvan present excellent grazing lands; and a large number of horses, cattle, and sheep are reared in the dep. The white wines of Pouilly are esteemed. The principal mineral productions are iron and coal. A large proportion of the pop. is employed in iron-works, and a considerable number in linen-weaving. The porcelain of Nevers is celebrated.—This dep. is divided into the 4 arrondissements of Nevers, Chateaux-Chinon, Clamecy, and Cosnes, which are subdivided into 25 cantons, and 316 communes. It forms the dio. of the bishop of Nevers. In 1834 it sent 4 deputies to the legislature, who were chosen by 1,084 electors.

NIF, or NINFI, a town of Turkey in Asia, in Anatolia, in the sanj. of Sarukhan, 30 m. E of Smyrna.

NIFON, NIPHON, or NIPON, the principal of the Japan islands, extending between 33° 30′ and 41° 30′ N lat., and between 130° 50′ and 142° 20′ E long., to the NE of the islands of Kiu-siu and Sikokf, from which it is separated by narrow channels, and to the SW of the island of Yeso, from which it is parted by the strait of Matsmai or Sangar; on the NW it is bathed by the sea of Japan; and on the E and S by the Pacific. The strait of Corea runs between its W extremity and the peninsula from which the strait takes its name. It presents in its general outline a curve extending from NE to SW, and presenting its convexity to the S. Its length is 900 m.; its great-

est breadth, 240 m. Its superficies, comprising several small adjacent islands, dependent upon it, is estimated at about 42,000 m. The coasts are steep, rocky, and indented with numerous bays. Of these the principal are Jedo, Totomina, Ovari, and Osaka. Towards the NE extremity are Capes Sangar and Nambu; on the NW Capes Noto and Gamaley; and on the S coast Capes Ava and Diun. Its principal summits are Tasagoura and Oraxi in the NE; the Mottoyama mountains, which terminate in the peak of Tilesius or Krusenstern, near Cape Gamaley. Near the bay of Totomina, toward the S coast, is the volcano of Fousiyava, the highest mountain in the island, and covered with perpetual snow. Near the centre are the beautiful and sacred mountain of Yessan, and the volcano of Asamaga-daki. Earthquakes are of common occurrence, and mineral springs are to be met with in all parts of the island. It is intersected by numerous streams, of which the chief are Ayedogava, Tenriou, Oyngava, Fousiyava, and Toniak. The principal lakes are Bievano-oumi or Oitz and Facone. The latter, which is near Jedo, is held in religious veneration by the natives. Several canals intersect the island in various directions, especially in the N. The climate is generally healthy. In summer the heat is excessive The rains commence about June, and continue several months. Thunder-storms are frequent, and disastrous hurricanes are not uncommon. The soil is not naturally fertile, but industry has rendered it highly productive, especially in the W provinces. Its chief agricultural productions are rice, wheat, barley, buckwheat, lentils, potatoes, melons, cucumbers, citrons, oranges, peaches, almonds, figs, the *kai* which affords a valuable species of oil, sesame, pepper, brown and green tea, tobacco, cotton, hemp, mulberries, camphor, and varnish, of which the finest is that of the Rhus vernix, which grows exclusively in the prov. of Yamato. Horses of a fine breed are raised in large numbers. The pearl-oyster is found to the SW of the island, and ambergris abounds on its S coast. Gold, silver, and copper are its principal mineral productions. It contains also coal, naphtha, agates, and porcelain clay. N. comprises 5 general divisions, viz.: Otchio, Quanto, Yetseghen, Yetsen, and Yamaisoit, and 53 provinces. Jedo or Yedo, the capital of the empire. and Meaco, the residence of the ecclesiastical emperor, are the chief towns of Nifon. See articles JAPAN, JEDO, and MEACO.

NIGATA, a town of Japan, in the island of Nifon, and principality of Yetsougo, about 180 m. N of Jedo, on a bay of the sea of Japan.

NIGDEH, or NIDEGH, a sanjak and town of Turkey in Asia, in the central part of Caramania. The sanj. is bounded on the N by the sanj. of Ak-serai and Kaisariyeh; on the E by the last-named sanj.; on the S by the Taurus chain; and on the W by the sanj. of Konieh. It is generally mountainous, and is watered by the two head-streams of the Kizil-Irmak. Its soil is fertile, and affords excellent fruit. Cotton forms also an extensive article of cultivation. The pop. consists of Turcomans, Turks, and Greeks. The town is 100 m. E of Konia, and 72 m. SSW of Kaisariyeh, near the source of the Kizil-Irmak. Pop. 5,000. It stands on a conical-shaped rock, commanding on the E a valley, and on the W a fine plain, extending to the distance, in a SW direction, of about 50 m. It is partly enclosed by ancient walls, and contains 3 castles, several fine mosques, a celebrated Ottoman college, founded by Alaeddin, and the remains of some fine excavations cut in the solid rock. It is the residence of a pasha. N. is the *Cadyna* of the ancients.

NIGER, or QUORRA, a great river of Central Africa, which has excited an extraordinary interest in modern geographers, by the remarkable nature of the region through which it flows, and still more by the various and contradictory rumours relative to its course and termination. The name *Niger*, though familiar to ancient as well as modern geographers, is not known in Africa. The great stream to which this name is given by Europeans, is known to the Negroes under the appellation of JOLI-BA, the last syllable being the general term for a river, and also of QUORRA or KAWARA. By the Moors it is called NIL-EL-ABID, or 'Nile of the Negroes;' and some travellers report that it is by the Moors of Northern Africa generally identified with the other great river of Africa, the Egyptian Nile.

Hypotheses of Ancient geographers.] Herodotus notices an expedition into the heart of Africa, undertaken by five young Nasamŏnes, whose tribe dwelt on the coast of the Great Syrtis, and who after traversing successively an inhabited region, a country of wild beasts which lay to the S of it, and then a great sandy desert, reached a city inhabited by black men, and situated on the banks of a great river flowing towards the rising sun. This river he infers to be the remote head or a branch of the Nile; but from the particulars given, there appears little doubt of its being the great central river of Africa. From Bilma, or some of the oases to the W of that country, a WSW course could carry the Nasamones to the Joliba, at a point where it has begun to flow towards the E. Strabo, Mela, and Pliny represent the Nile as rising in the W extremity of Mauritania; then passing through vast unknown regions, and, according to some accounts, sinking for a great space under ground, and re-appearing in Upper Ethiopia. Ptolemy, however, whose residence at Alexandria afforded better means of information, rejects altogether the idea of any communication between the N. and the Nile. He describes in considerable detail the course of the former river under the name Nigeir, representing it as terminated on the W by Mount Mandrus, and as giving off a divergent stream to Lake Libye, which some modern geographers identify with Lake Chad; but his statements do not include any thing positive as to the direction in which it flows.

Arabian views.] Our next great source of information respecting the geography of the interior of Africa is the Saracens or Arabians. In the course of dissensions which arose among their various dynasties in Northern Africa, large bodies of Saracens crossed the desert, and founded kingdoms on the E part of the shores of the N. The most brilliant of these was Ghana, which, enriched by the gold trade of Wangara, is said to have risen to a high degree of power and splendour. Their geographers, adopting views very different from those which had prevailed among the ancients, unanimously state that the N. flows from E to W, and discharges itself into the sea—by which they understood the Atlantic or great circumambient ocean. They represented it also as rising from the same source with the Egyptian Nile, and as identified with it, but only in the earliest part of its course. Some of them, however, asserted that it did not reach the sea. Leo Africanus, the chief authority to the modern Europeans, represents the N. as flowing from E to W, and falling into the ocean; but instead of deriving it from the Egyptian Nile, he makes it flow from the lake of Bornu, situated far in the interior of Africa. The system of Leo Africanus was followed in all the European maps of the 16th and 17th centuries, where the three great streams of the Senegal, the Gambia, and the Rio-Grande, are made the estuaries by which the great central river pours itself into the Atlantic. Even the Falemé was supposed to be a branch first separating itself from, and then uniting with the main trunk. Bartholomew Stibbs, however, having, about the end of the 17th cent., penetrated to the upper part of the Gambia, and brought down a report that "its original or head is nothing near so far in the country as by the geographers has been represented," and that twelve days' journey above Barraconda "fowls walked over it." These assertions did not meet with much acceptance from English geographers; but in the course of the following cent., the two great French geographers, Delisle and D'Anville, became satisfied that the existing delineation of the course of the N. was altogether erroneous, and constructed maps in which the N. was again represented as flowing eastwards. Instead of the single stream rolling across the whole breadth of Africa, and falling into the Atlantic, D'Anville distinguishes the Senegal, flowing W, and falling into the Atlantic; the N. flowing E, and terminating in the lake of Reghebil, in Wangara; and another river, still farther E, flowing in the opposite direction. A lake called Maberia, evidently the same with the Dibbie, is in D'Anville's maps split into two parts, one of which is the source of the Senegal flowing W, the other of the Niger flowing E. The whole course of the latter river through Bambarra, and all of it that was seen by Park, is thus made to flow westwards.

Park's discoveries.] An opposite impression as to the course of the N. was, however, entertained in some quarters, and received confirmation from reports collected at Tripoli by Mr. Lucas, who was assured by a native merchant that he had repeatedly crossed and re-crossed the river, and that it flowed with rapidity in a W direction. A more full and decisive light was at last thrown on the subject when Park, after penetrating through much of Western and Interior Africa, in 1795, reached at length Sego, the

capital of Bambarra, where he beheld "the long sought majestic N., glittering to the morning sun, as broad as the Thames at Westminster, and flowing slowly to the eastward." He traced its course downwards to Silla, and upwards to Bammaku, where it first became navigable, an extent of about 300 m. It was there reported to rise at no great distance, near Sankari, in Manding. From Silla it flows by the great commercial city of Jenné, soon after passing which, it forms the great lake of Dibbie. From the E side of that lake it was reported to issue in numerous streams, which unite into two great branches, and at last into one, before it reaches Cabra, the port of Timbuctu. Nothing, however, could be ascertained as to its farther progress and termination. We may notice, however, a few of the speculations which were formed on the subject, with the leading facts by which they were supported. The opinion which, after the discoveries of Park, became generally established, was that of Major Rennell, coinciding in some measure with the previous one of D'Anville, according to which the Niger, after issuing from Lake Dibbie, was supposed to flow E through the countries of Houssa and Cassina, till it was lost in the lakes and marshes of Wangara. The existence of these marshes is attested by the Arabian writers, who, though they combined their accounts with an assertion relative to the W course of the Niger, might probably be trusted as to the fact that there are such lakes. The evaporation produced under an African climate from their extensive surface, might, it was supposed, be sufficient to dispose of all the waters poured into them by this mighty river. A part might also flow still farther E, and exhaust itself in Lake Fittre, the Cauga of the Arabians, situated on the S frontier of the kingdom of Bornu.

Hornemann's theory.] A very different hypothesis was started by Jackson and Hornemann, both of whom affirmed that the universal conviction in Northern Africa was that the N. flows eastward, and joins the Nile, being in fact the Nile itself. The Moors, according to Jackson, expressed their astonishment when they heard Europeans doubting the identity of the two streams. Hornemann also states, that in Fezzan he never met with any one who entertained a different opinion. Browne's opinion was hostile to that of Jackson and Hornemann, and was of still greater weight, as in Darfur that careful observer and recorder approached very near to the track by which the N. must have flowed, in order to reach the Nile. Jackson indeed states that a Moorish merchant of Jenne informed him that he, with some companions, had embarked at that place, sailed down the N. and the Nile, and arrived by water at Cairo; but his details wholly invalidate the inferences drawn from this voyage. The N., he states, was found in many places reduced so low, and sometimes so entirely dried up, that it was necessary to take up their boats and carry them over land. Hornemann too was informed that the communication between the N. and the Nile was very small, except in the rainy season. It is evident that these descriptions could not apply to the stream of the greatest river in the world; that this rivulet, which would not float a boat, could not be the N. after having performed a course of 2,000 m.

Maxwell's theory.] A more recent hypothesis, which nearly absorbed every other, was that by which the N. was supposed, after a long course through Central and Southern Africa, to pour itself into the Atlantic by the estuary of the Congo. This was originally suggested to Park by a Captain Maxwell, who, in the character of a slave-trader, had been accustomed to frequent the last-mentioned river; and who founded his opinion on the vast quantity of water which the Congo poured into the ocean, and on a periodical rise taking place in its waters at a period when no rains had fallen on the S side of the line. It was argued also, that to suppose so vast a river as the N. finding its termination in lakes, which there was no reason to suppose of any extraordinary magnitude, was contrary to all analogies observed in other parts of the world; and that while lakes which form the termination of great rivers, and have no outlet, are usually salt, these are stated by the Arabian writers to be fresh. The great chain called the Mountains of the Moon, was indeed supposed to present an insurmountable bar to its progress in this direction; but this chain, it was argued, is laid down upon very arbitrary principles, a great part of it runs through a region entirely unknown to Europeans; and moreover there are repeated instances in which a great river has forced a passage through a formidable mountain-barrier. These and other arguments induced the British government to fit out an expedition to solve this grand question in modern geography. It was divided into two parts, one of which, of a military character, and commanded by Major Peddie, was destined to penetrate across Western Africa to the N., and to descend its stream; the other, of a naval description, was to ascend the Congo in boats. A meeting at some point of the great stream of the confluent river was sanguinely anticipated. The fatal disappointment of these hopes is too well known. The party of Major Tuckey, overcome by fatigue and the heat of the climate, was seized with a pestilential disorder, which proved fatal to most of them. All the leaders also of Major Peddie's party fell a sacrifice to the climate before they had even approached the N. Captain Tuckey's party did not penetrate above 300 or 400 m. up the Congo, they could observe nothing decisive therefore as to its derivation. On first entering its channel, they were struck with disappointment at its apparent paucity of stream, which did not suggest any source so remote as their mission supposed; but on ascending 200 m., it assumed a grander aspect, and spread to the breadth of several miles, and in the beginning of September, it rose 11 ft., without the occurrence of any rains adequate to produce such an effect. The extraordinary quickness too of this rise appeared to indicate that it had issued from some lake that had received almost the whole of its water from the N of the line. For these reasons Major Tuckey's opinion leaned very strongly in favour of the hypothesis on which his mission had been founded. Some corroboration of it was also obtained from the narrative alleged to have been given by Sidi Hamet, a native merchant, to Riley, who was shipwrecked on the coast of Africa. The merchant described himself to have followed the course of the N. till it took a SE, and finally a S direction, which it continued to follow at the interior city of Wassanah. It was there reported that a communication took place downwards, and terminated at the sea.

Bowditch and Laing.] Mr. Bowditch, during his residence in Ashantee, obtained, from the Moorish merchants of that country, a considerable mass of information, the general scope of which was, that the N., after passing through Lake Dibbie, separates near Timbuctu into three branches. One of these called the Gambaru flows ENE through the countries of Houssa and Cassina, till it terminates in the great lake of Caudee or Chadee,—probably the Cauga of the Arabians. Another, bearing the name of Joliba, flows N to a country called Yahudi, which carries on a great trade with Timbuctu. The third, or main stream, under the name of Quorra or Qaolla, flows ESE through Gauw, Zamfarra, Nufi, Boussa, and other countries, till after a long course it also separates. One branch rolling E, and turning to the N, forms the Egyptian Nile; the other flows S, and again separating, pours itself into the Southern Atlantic, by several channels, of which the Congo is the principal. In 1822 Major Laing determined the sources of the Mongo and the Rokelle rivers of the Sierra Leone coast, and penetrated nearly to the sources of the Joliba, the alt. of which above sea-level he conjectured to be about 1,600 ft., thereby conclusively settling one point that it could not flow to the Nile. He traced on his map the first part of its course northwards; and Mr. Caillie's observations—to be presently noticed—harmonize with Major Laing's discoveries at this point, as the point at which he encountered the head-stream of the Joliba continues the tracing of its course.

Clapperton and Lander.] The solution of the great problem, already glanced at in the information gathered by Mr. Bowditch, and in part anticipated by the German geographer Reichard, was now at hand. In 1826, Clapperton crossed the N. at Boussa; and his faithful attendant Richard Lander, completed the grand discovery in 1827, by proceeding from Badagry on the coast to Boussa, and there embarking on the river, tracing its stream downwards to the apex of its delta, and finally reaching the sea by one of its deltoid branches, the Rio-Nun.

Actual course.] The sources of the N. must lie on the N declivity of the western extremity of the great chain or series of chains, known as the Kong mountains, about the 10th parallel, and to the E of the great mountain-range which separates Senegambia, and its three great rivers flowing W to the Atlantic from the vast inland territory of Sudan. Caillie, on his route from Cambaya to Kankan, in 1828, crossed a stream at Curuassa, a village of Amana, flowing slowly in a wide valley from SW ¼ S to ENE, and navigable by large canoes, which he was informed was the head-stream of the Joliba. He was also informed that at that point he was 100 m. from its source, which nearly corresponds with the position of Mount Luma, in the great mountain-range which, diverging from the range running N on the frontiers of Senegambia, bends round the sources of the Scarcies, the Rokelle, and Camaranca, all flowing SSW to the Sierra Leone coast. The inhabitants of Curuassa informed him that the river began to overflow in July, and that they can then sail 3 m. over the plain in their canoes. The depth of the river at this point, in the middle of June, was about 9 ft. Caillie was likewise informed that five days' journey S ¼ SE of Cambaya lies the frontier of the kingdom of Couranco, in which, "according to the reports of Mandingo travellers, the Dhioliba has its source in that country. I questioned them on the subject, and they at first told me that it rises between Bouré and Yamina. I observed to them that they were asserting what was impossible; but I discovered afterwards that they meant the cataract, which they called *sourondo*, and that I had erroneously understood this word to signify 'source' in their language. I drew on the ground a line to represent the river, and, pointing to its origin, asked them how they named that part. They answered *folou* [i. e. 'beginning'] and intimated that they had no other word for 'source.' They assured me that the *folou* of the

Dhioliba is in Couranco; only the Bâ-fing and some other small rivers, they said, rise in Fouta. The Bâ-fing passes through the country of Bondou and runs to N'dar (St. Louis in the Senegal). A journey of a day and a half southward brings the traveller to Fryia, or Firya, which consists of several small villages united. They informed me that the Dhioliba passes that place and is of considerable size there. The first villages of Sangaran lie five days' journey to the SSE. Sangaran and Couranco are large countries like Fouta; the inhabitants are idolaters. These countries, I was told, are divided into a number of small districts, which have their separate and independent chiefs, who are often at war with each other. Some Mussulmans are settled among them. Couranco extends from E to W and to the S of Sangaran, which also stretches from W to E. I was informed that these countries are mountainous and very fertile. The small country of Kissi-kissi lies to the W of Couranco, at the distance of ten or twelve days' journey from Cambaya, and in the environs of Sierra-Leone." It would have been satisfactory had Caillie's route accompanied the stream from this point northwards to Bammaku, to which point Park had traced it upwards from Sego: but the French traveller pushed on towards the SW, and did not direct his steps northwards until he reached the meridian of Time. He however crossed various streams, all flowing towards the N, in his progress through the Wassalu territory, between Curuassa and Time; and these were probably feeders of the Joliba. Between Bammaku and Sego, Park found the river flowing in a NE direction, in a wide, well-cultivated valley; a little before it reaches Sego, the river bends more towards the E, but continues flowing through a level rich country, with a moderate current, as far as Silla. In his second journey, Park, embarking at Sego, descended the river as far as Boussa, where his career was unfortunately cut short. It is to Caillie's narrative we are indebted for our knowledge of the stream from the Jenné to Timbuctu. According, however, to this traveller, the Joliba, shortly after passing Sego, divides into two branches of nearly equal breadth and depth. Of these, one runs nearly direct E to Galia, and then turns NNE; while the other, which is the stream passing Silla, pursues an ENE direction, and re-unites with the southern arm a little below Runa and above Isaca. It is on the SE corner of the triangular-shaped island thus included between these two twin-branches of the Joliba that Jenné is situated. Half-way between Jenné and Timbuctu, Caillie, who had now embarked on the stream, and was proceeding downwards by a slow navigation, found the Joliba enter a large lake, called Debo, with several considerable islands in it, through which his course lay in a WNW direction. The river, on re-issuing from this lake, was about 6 m. broad. See article Debo (Lake). After emerging from Lake Debo, the river continues to flow for a brief distance NNE, and then, in N lat. 16°, bends round towards the E, and flows towards Timbuctu, when it again divides into two great branches. See article Timbuctu. After passing that great central city of Africa, it appears to continue to flow for some distance towards the E, under the name of the Issa or Joliba; and then to turn gradually towards the SE; but its actual course is yet unknown to Europeans from Kulmanna, 130 m. E by S of Timbuctu to Oiago, 64 m. N of Yaouri, in Boussa, in N lat. 11° 10′, where it bears the name of the Quorra or Kawara, and was identified with the river of Timbuctu by Park's last exploratory effort. From Yaouri to the mouth of its deltoid branch, the Rio-Nun, its course, as already mentioned, has been traced by Richard Lander. Between Yaouri and Raka, its course is nearly S. A little below Raka, in 9° 20′ N lat., it turns SE, passes Rabba, Egga, and Kakunda; and at the latter place turns S, and 30 m. below, in N lat. 7° 45′, receives its greatest known affluent, the Chadda or Shari, which is generally supposed to convey to it the waters of the great lake Chad or Tsad. See articles Chad (Lake), and Chadda. From the junction of the Chadda to the parallel of 6° N lat., its course is nearly S; but on leaving the Eggarah territory, and entering that of Ibo or Eboe, it inclines to the W. After passing Aboh, 95 m. below Iddah, and 130 m. from the mouth of the Rio-Nun branch, it gives off a number of deltoid branches, the principal of which, on the r. of the Rio-Nun, descending the stream, is the Rio-Forcados, and on the l., the Bonny and the New Calabar: see these articles. In 1832–34 an expedition under Messrs. Laird and Oldfield ascended the N. to Rabba, and the Chadda to Dagbeh, about 100 m. above its confluence with the N. This expedition was every way disastrous; but an interesting account of it is given in Messrs. Laird and Oldfield's *Narrative* [London: 2 vols. 8vo., 1837]. In 1840–41 an expedition of three well-appointed government-steamers under Captains Trotter and Allen was equally foiled, having only reached Egga, 40 m. above the confluence of the Chadda, before it was obliged to return from the sickness of almost all hands. This last expedition entered the Rio-Nun by Lewis creek. They found the delta at and near the creek split up into a number of islands, or rather clusters of mangrove bushes, for there was not an inch of land to be seen above water. The creek itself was about 100 yds. wide, with not more than 10 ft. water in many places at high tide. As they advanced, the river became broader and deeper—seldom less than 3 fath.—throwing-off branches equally deep and rapid to the r. and l. About 10 m. from the sea, the land first assumed a solid form, and became sufficiently elevated to admit of huts, which might be seen here and there with patches of cultivation in their vicinity. At first the natives were exceedingly shy, but as the expedition advanced they became less timid; while the banks attained a greater solidity, and the more elevated parts were occupied with villages and plantations, exhibiting a great degree of comfort and neatness. "The slim, waving mangroves, with their sombre unvarying tints, were now replaced by huge forest-trees of the most variegated and luxuriant foliage, throwing the shade of their gigantic limbs across the stream. In some of the villages the inhabitants were employed in digging out canoes, making paddles, &c.; at others, they appeared to be engaged in the manufacture of earthen jars, pots, &c. In passing these villages," says Mr. Cook, "the natives generally greeted us with a cheer of welcome, and as often as they had opportunity, came alongside in their canoes, without exhibiting the least sign of suspicion." The river below Aboh varied from 1,000 to 500 yds. in breadth, seldom exceeding the former, or less than the latter; several of the branches running off to the SW appeared of equal magnitude with that by which the expedition ascended, more especially one about 20 m. below, and another about the same distance above Aboh The latter had a depth of from 8 to 10 faths. across it, and "if ever examined will most probably be found to be a continuation of the Formosa, and will afford a shorter and better channel into the main stream, than that by which the expedition entered." It was afterwards found that the natives on the r. bank above Aboh were subjects of the king of Benin. After passing Aboh, the river expands into the form of a lake, thickly studded with islands, in some places 2 m. across. The Bonny branch, which is very small,

runs off to the SE, a few miles beyond Aboh. The river preserves this lake-like appearance nearly all the way to the high land, a distance of from 50 to 60 m. The deepest channel was found on the W or r. bank, where the current was never less than from 3 to 3½ knots per hour. The speed of the steamers in the river was estimated at 5½ knots, so that in reality they only went over the ground about 2 knots per hour. On entering what may properly be termed the vale of the N., the river is confined within narrower bounds: and the ground gradually rises on both banks till it has attained an elevation of about 300 ft. "A belt of trees, as if planted by man, runs along the margin of the river, and another, with equal regularity, crowns the ridge of the hills; the intermediate space is interspersed with boulders and studded with clumps of trees, round which the grass is beautifully green, and gives the whole the appearance of a gentleman's park. A few miles beyond this the N. is joined by a river from the NE; this stream appears to be deep and rapid, with high land on both banks. Proceeding onwards for a short distance, the country again becomes low and swampy, it again assumes the appearance of a lake; the banks and islands, which are numerous, are all flooded, and the high land only visible in the distance. In this state it continues to some miles beyond Iddah, where it again narrows to about a ½ m. From thence upwards to the confluence there are few islands, and the river is very beautiful, washing in its course the base of the Kong mountains. It varies in breadth from 500 to 1,500 yds., with a depth of from 3 to 15 faths., and a current of 3½ knots. On each side of the Chadda, at the confluence, there is a tract of low swampy country, and a number of sand-banks in the river, which renders the navigation a little difficult." The N. is called by the natives *Uchiminy-fu-fu*, i. e. 'White water'; the Chadda, *Uchiminy-du-du*, 'Dark water.' From the great breadth of the N., between Abòh and Iddah, with its numerous sand-banks and islands, it is difficult to keep in the right channel when the river is in full flood, and the navigation must be dangerous when the water is falling. The best time to survey the river with accuracy, and to ascertain the best channel, would be when it is at the lowest, which is from January to April. This, says Mr. Cook, would also be found the healthiest season. As the bed of the river consists of sand, the channel will most probably be found to shift from year to year. Though the river assumes the form of a lake when in flood, yet there is good reason to suppose that when low its waters will be found concentrated in one narrow channel, deep enough, it may be presumed, to be navigated by steam-vessels drawing from 5 to 6 ft. water. In passing up the river, treaties were entered into with the chiefs of Abòh and Iddah, having as their basis the total suppression of the slave trade, the abolition of human sacrifices, and the establishment of commercial relations between their people and her majesty's subjects. "On these treaties," Mr. Cook admits, "no dependence can be placed, because, in the first place, it is very doubtful whether the chiefs possessed the power of making treaties; and, secondly, because it is quite certain that they have no means to enforce them. The chief of any village on the N. would readily have entered into a similar treaty, had he been applied to, merely that he might obtain a present. To render these treaties available, resident agents should be established at the principal towns on the river, with an armed steam-vessel at their disposal." The authority of the chiefs in the lower part of the river is exceedingly limited, and little more than nominal beyond the town in which they reside. It being an object of the expedition to establish a model farm for the purpose of instructing the natives in agriculture, on the arrival of the expedition at the confluence of the N. and Chadda, a suitable piece of land was selected for this farm, and the erection of a fort near it for the protection of the settlement. The soil of this new settlement, called Mount Pettèh, was found to be very indifferent, but the situation possessed advantages that could not be overlooked. It commands a view of many miles up the Chadda, as well as up and down the N. This settlement was soon broken up; but so far the objects of the expedition had been attained, and everything promised a favourable termination to the mission. "It had been arranged that on leaving the confluence, one of the steamers should proceed up the Chadda as far as it could without endangering its return, for the purpose of making treaties with those chiefs who might be willing to do so. The other two steamers were at the same time to proceed up the N. for the same purpose, as far as it would be found navigable; after which it was intended to proceed in the gallies to Timbuctu, and as much higher as they could get. The Amelia was to have been left at the confluence to protect the settlement. These arrangements were rendered abortive, and the further progress of the expedition arrested by the fearful sickness which broke out on board all the vessels, and within 19 days spread to such an alarming extent that two-thirds of the original crew were affected by it." It differed from the yellow fever of the West Indies, and, indeed, from anything of the kind which the medical gentlemen attending the expedition had ever had experience of. The expedition now [1853] being conducted in the interior of Africa under Doctors Barth and Overweg, will, it is hoped, add much to our knowledge of this river, or at least of its great affluent the Chadda. That this immense river extends right to the heart of Inner Africa was conjectured, but the supposition has been confirmed, says Mr. Petermann, "by the actual exploration of Dr. Barth, who, in his journey to Adamana, crossed the Benue, a splendid river, a ½ m. broad, and 10 ft. deep, which he ascertained to be the upper course of the Tchadda. From all that Dr. Barth says in his last, as well as in his previous letters, I am inclined to think," adds Mr. Petermann, "that the Tchadda will eventually form the natural and most important line from the W for spreading commerce and civilization into the very heart of Inner Africa, and extinguishing the slave trade by extending European influence to the sources of the slave supply. The sheikh of Bornu has repeatedly expressed to the two travellers his desire of forming a closer bond of friendship with the English for the purpose of establishing a peaceful and regular commerce and abolishing the slave trade, and the best proof of his sincerity towards the English is the kind and generous manner in which he has at all times treated their representatives. The kingdom of Adamana, situated in the valley of the Upper Tchadda, with its pastoral and agricultural pop., is spoken of as the most beautiful country in Central Africa, and as such may probably become the key to the interior of that continent. At present the town of Kano, situated between the Kawara [Quorra] and Lake Tsad [Chad] is the great mart of the interior; there the English merchandise coming from the N by the very tedious and imperfect roads through the Great desert, meets with the American merchandise coming by steam up the Kawara from the S, where, as is well known, American influence is spreading fast. The Great desert will ever form a natural barrier, and prevent the establishing of European commerce of any considerable magnitude; it is to the Kawara

and the Tchadda, and more particularly the latter, that we must look as the means of a ready access into the virgin countries and the inexhaustible natural wealth of Inner Africa."

NIGG, a parish forming the most southern part of the E coast of Ross-shire. It extends north-eastward, and is nearly all peninsulated. The hill of Nigg extends along the Moray frith to Dunskeath at the point of the peninsula, and there beetles up in what is called the North Sutor of Cromarty. This hill is about 5 m. long, and 1 m. broad; and varies in height from 300 to 500 ft. Its coast-side breaks sheer down in rocky cliffs often 300 ft. in height.—Three fishing-villages in the p. have jointly about 430 inhabitants, and upwards of 30 fishing-boats. The largest is Shandwick, with a pop. of about 190. Pop. of p. in 1831, 1,404; in 1841, 1,426.—Also a p. in the extreme NE of Kincardineshire, bounded on the NW and N by the river Dee, which divides it from Aberdeenshire. Area 3,376 acres. The NE corner forms the *ness* or promontory called GIRDLENESS: which see. A bold breast of rock from 60 to 80 ft. high, covered with grass and herbage, overhangs the sea along all the E coast. The bay of Nigg, immediately S of Girdleness, is of semicircular form, and nearly a ½ m. in diam. The principal villages are Cove and Torry, with a pop. of 400 and 370. The other villages are Charlestown, with a pop. of 200, and Burnbank, with a pop. of 60. Pop. of p. in 1831, 1,648; in 1841, 1,642.

NIGHT, an island off the NE coast of Australia, in S lat. 13° 13′, E long. 143° 28′ 40″. It is a low woody island, about 2 m. long, and a ½ m. in breadth.

NIGHTINGALE, an island of the S. Atlantic, in the group of the Tristan-d'Acunha islands, in S lat. 35° 29′, W long. 11° 8′. It is about 8 m. in circumf., and has good anchorage to the NE. To the S are several rocky islets.

NIGRITA, or NEGLITZA, a town of Turkey in Europe, in Rumelia, in the beglik and 14 m. SW of Seres, and 36 m. NE of Salonica.

NIGRITIA, or NEGRO-LAND, a name sometimes applied by Europeans to a portion of the African continent, of which, however, the various parts have only an imaginary connection. The natives by no means consider the territory called by this name as forming a whole; and even Europeans are far from being unanimous concerning the extent of country to which this appellation is to be applied. The territory generally denominated Nigritia is bounded on the N by the Great desert; on the W by Lower Guinea; and on the S by the river Mesurada and the mountains of Kong. The eastern boundary is undetermined. It contains some of the chief rivers of Africa, the Senegal, the Gambia, the Rio-Grande, and the Niger. The proximity of N. to the equator assures us that it must be a warm region; the heat, however, is seldom excessive. The country is not generally mountainous, but it is interspersed with numerous inequalities, which tend to give a circulation to the atmosphere, and the more elevated situations enjoy a temperature which is said to be agreeable even to Europeans. The rainy season, which commences in June, is introduced by violent tornadoes, and continues till November. During this season the wind generally blows from the SW. The prevailing winds during the dry season are from the NE. The *harmattan*, a wind of a very singular nature, prevails here as in other parts of Africa. The animals found in this extensive tract of country are nearly the same as those in other quarters of the African continent. N., like all tropical countries, abounds in fruits; but it seems to want several of the species which in America are found under the same latitude. Park did not observe here either the sugar-cane, the coffee, or the cocoa-tree; and the pine-apple was equally unknown. A few orange and banana-trees are seen near the sea, but they may have been introduced by the Portuguese in their early visits to this coast. Among the vegetable productions, none are more remarkable than the lotus, which furnishes the Negroes with a sweet liquor and a species of bread; and the *shea*, a tree resembling the American oak, of which the fruit, when dried in the sun and boiled in water, yields a species of vegetable butter. This butter forms a great article of inland commerce. The common species of grain are the same as those cultivated in Guinea. Many parts of N., like several districts of Guinea, are productive of gold; but it does not appear that the Negroes have anywhere opened mines. After the annual inundations have subsided, a number of people employ themselves in washing the mud which the streams have brought down from the mountains, and separating the small particles of gold, generally called gold-dust. The auriferous sand is not always procured from the bed of a river, but is sometimes digged from such veins of earth as are thought likely to contain the precious metal. Park informs us that, in a proper soil, a party with ordinary diligence may collect in one season as much gold-dust as in value amounts to the price of two slaves. The greater part of this gold is given to the Moors in exchange for salt. Malte Brun is of opinion that the Arabs had penetrated into N. at a period long antecedent to the time of Pliny and Ptolemy. Ritter regards Central Africa, especially the Sudan districts, as that part of the world in which the primitive forms, so to speak, of the human race, its physical development and manners, may best be traced! The pop. of such parts of N. as have been visited by travellers, appears scarcely to be proportional to the fertility of the soil; yet towns are numerous, and many of them of considerable magnitude. The coast has fewer inhabitants than the interior, a circumstance doubtless in part owing to the greater unhealthiness of the former. The same cause has retarded the pop. of the banks of the Senegal and Gambia. The Negro tribes of which Europeans have most knowledge are those between the Great desert and the Bight of Benin. The tribes bordering on the desert in the N part of Nigritia are much further advanced in civilization than those bordering on the ocean. The empire of the Ashantees does not date far back, yet it is apparently the first state among the Southern Negroes which comprehended more than one town or tribe. The Negro dynasty of Timbuctu, on the other hand, appears to have ruled over an extensive territory as early as the 11th or 12th cent. The governments of Bornu and Sackatu, in the NW, also present a favourable contrast to that of the Ashantees; and it is alleged that all revolutions among the petty African states proceed from the N. The rich and enterprising traders, moreover, are from the N, and make ventures among the southern tribes as among barbarians, by trading with whom for their raw produce great gains are to be got at considerable personal hazard. "This superior civilization of the Northern Negroes is found to arise in a great measure from their intercourse with the Arabs. The most intelligent and enterprising of the Negro tribes, and the most intelligent and enterprising individuals among the rest, are generally found to have embraced the Mahommedan religion. Even where it is not avowed, many of its moral doctrines, and many of the political institutions of the Mahommedans, are found to have penetrated. The titles of dignity in the villages of many of the idolatrous Negroes are corruptions of those which prevail among the Arabs on the coast of the Red sea. Since the time that the Portuguese passed Cape Bojador, the intercourse of European Christians with the Southern Negroes has been as close and frequent as that of the Arab Mahommedans with the Northern. The nature of that intercourse has not been very dissimilar—an interchange of peaceful traffic, violent kidnapping of slaves, and occasional fits of religious proselytism. How comes it that the Negroes who have come in contact with the Arabs have been so much more benefitted than those who have come in contact with the Europeans? The Negroes, though regarded by the Arabs as an inferior race, much the same way as by the Europeans, have nevertheless been treated by them in some respects more on a footing of equality. By the law of Mahomet, no true believer can be made or kept a slave. This law has doubtless been often evaded, but not always. The peculiar character of slavery among Eastern nations was often favourable to the observation of the law; the confidential slave being easily received into the bosom of a family, or raised to high employments in the state. These circumstances have kept the line of demarcation between the Arab and the Negro less sharp and harsh than that between the European and the Negro. But, perhaps more than anything else, the pilgrimage to Mecca, incumbent upon every good Mahommedan, has proved an effective instrument for carrying civilization into the heart of Africa. Such religious journeys have from all antiquity been combined with mercantile speculation. Among rude nations this was necessarily the case; for it was only by barter that the pilgrim could obtain the means of subsistence; and this necessary traffic suggested and kept alive the desire of trading for profit. The wealthier Negroes became thus accustomed to travel as merchants; the poorer were obliged to support themselves during the pilgrimage by labour. At Jidda and at Mecca, while awaiting the great festival days, they work for their livelihood, and also to acquire the means of travelling back to their own country. Some of them extend their travels to Medina, to Jerusalem and Cairo, partly out of religious considerations, partly for the sake of gain. The Negro visits Mecca, quite as often, it may be, from a spirit of enterprise or love of gain as from religious motives, contracts practically superior notions and habits to what he could have gained at home. The Mahommedan religion has been spread in Africa not so much by Arab missionaries as by Negroes who have caught it, if we may use the expression, by living for a time among Mahommedans." See article NEGROES.

NIGUA, a town of Hayti, 12 m. SSW of Santo Domingo, on a small river of the same name, near its entrance into the Caribbean sea. Pop. about 2,500.

NIJAR, a town of Andalusia, in the prov. and 18 m. ENE of Almeria, and partido of Sorbas, at the foot of the Sierra-Alumilla. Pop. 5,820. It has a parish-church and a custom-house, and possesses manufactories of blankets.

NIJED, a town of Arabia, in Yemen, 165 m. NW of Sana, and 24 m. NE of Abu-Arish.

NIJNAIA - OZERNAIA - KREPOST, or 'the Lower fort of the lakes,' a fort of Russia in Europe, in the gov. and 57 m. WSW of Orenburg, on the r. bank of the Ural. It is so named from the number of lakes with which it is surrounded. It is enclosed by walls constructed of wood, and contains about 150 houses.

NIJNY, NIJNE, NIJNII, and NIJNAIA, Russian words signifying 'lower.' For names with which they are compounded, not found in the following list, see the other name.

NIJNY-DEVITZK, a town of Russia in Europe, capital of a district, in the gov. and 33 m. WSW of Voronej, on the r. bank of the Devitza. Pop. 1,900. It contains 2 churches. The district is generally fertile, and raises large numbers of cattle and of bees.

NIJNY-NOVGOROD, or NISHNYI-NOWGOROD, or more briefly, NIJEGOROD, a government of Central Russia, lying between the parallels of 54° 26′ and 57° 6′ N, and the meridians of 41° 40′ and 46° 38′ E; and bounded by the gov. of Kostroma on the N; by Viatka, Kazan, and Smolensk, on the E; by Penza and Tambov on the S; and by Vladimir on the W. It has an area of 42,432 sq. versts, or 18,500 sq. m. nearly. Pop. in 1841, 1,103,200; in 1846, 1,178,200, chiefly Slavonians, and of the Greco-Russian church; but about three-tenths are Tartars. Forming a part of the great plain of Russia, the surface of this gov. is diversified only by slight undulations; it has a productive soil, with a temperate climate. There is, however, a wide difference between the character of that part of the gov. which lies to the N of the Volga, and that to the S. That river, which has here a breadth of two-thirds of a mile, forms in fact a line of demarcation between two totally distinct regions. On its r. bank, steep cliffs show the termination of the plain towards the S, which has an average elevation above the river of 150 ft., and is everywhere well-adapted for tillage, and productive. But N of the Volga, plains of little elevation extend far and wide, and the sandy soil affords only scanty crops. On the S plateau, garden-vegetables, apples, and plums grow freely; on the N, there is no garden-cultivation, though the elevation of the surface does not exceed 200 Parisian feet above mean sea-level. The chief sources of employment are the raising of corn and hemp, the rearing of cattle, and fishing in the rivers and lakes; but manufactures also are more flourishing in this quarter than in most other parts of the empire. They are mainly directed to preparing for sale the raw produce of the country, such as tanning different kinds of leather, making soap and potash, refining tallow, and weaving canvas and coarse linens. Great numbers of cattle and horses are reared. Besides the advantages of a central situation, this prov. is traversed by the Volga, and by its affluents the Vetluga, the Sura, and the Oka, and has direct communication by water both with Moscow and St. Petersburg. Steamers communicate by the Volga with Astrakhan, and by the Kuma with Perm. The exports are corn, hemp, leather, soap, tallow, canvas, salt, iron, and copper. This gov. is divided into 11 circles, and in 1833 contained 13 towns with a united pop. of 54,798. The principal towns are the cap. of the same name, Balakna, Jadim, Perevcz, Arzamas, and Potshinki.

NIJNY-NOVGOROD [*i. e.*, 'Lower Novgorod'], a large and thriving commercial town, the capital of the above gov., situated on a triangular height at the confluence of the Oka and Wolga, on the r. bank of both rivers, in N lat. 56° 19′ 43″, E long. 44° 0′ 58″, 265 m. ENE of Moscow. It consists of two divisions, one stretching along the face and at the foot of the high ground which forms the S bank of the Oka; the other, and principal part of the city, occupying the top of this elevation, and commanding a view over a wide plain of corn and forest-land. The dwelling-houses are built here, as in the interior of Russia, generally of wood, but the shops and warehouses are more substantial. Small as the stationary pop. is, it contains 38 churches of great size and beauty, a couple of monasteries, and a nunnery. The public buildings are very elegant. The stationary pop. of the town is about 30,000; but during its fair upwards of 200,000 persons are collected within and around it. By means of the two rivers it maintains an easy communication with the richest agricultural and manufacturing provinces of Russia. The productions of China are carried during the month of September over the Baikal lake, and in spring reach the Volga along with the Siberian caravans. The productions of Astrakhan, Persia, and Bokhara ascend that river, while those of Petersburg, Germany, England, and France descend it, so that the productions of the East and West meet as in a common centre at Nijny-N. Since 1816, the largest annual fair in Russia has been held here, Makarief, 54 m. lower down on the Volga, having been destroyed by fire in August of that year. Some idea may be formed of the quantity of business transacted at the great fair of Nijny-N., from the results of the fair in 1849. The transactions in that year, we may premise, are stated to have been less satisfactory than those of 1848. The price of tea in particular was 20 per cent. higher, and injuriously affected the trade in other articles. Money was scarce, owing to the recent stagnation of the corn trade, and the payment for two-thirds of the aggregate purchases is said to have been deferred for periods of 12, 18, and even 24 months. With these drawbacks, the total value of the domestic articles at the fair was £7,916,016. The following found a sale: — Raw materials, £1,917,940; provisions, £858,684, and domestic manufactures, £3,981,716; the total sales of domestic articles amounting to £6,758,340, leaving £1,157,675 unsold. The total foreign articles at the fair amounted to £2,430,191, of which 493,955 worth of European raw materials found a sale, and £204,888 of manufactures. Asiatic articles sold to the extent of £1,329,131; the total sales of foreign articles being £2,027,944, leaving £402,217 unsold. So that in fact the total value of both domestic and foreign articles at the fair was no less than £10,346,207, of which £8,786,314 found buyers, and £1,559,893 remained unsold. Schnitzler and the other authorities state the annual value of goods sold here at 125,000,000 roubles, or £5,000,000 sterling; but Mr. Bremner was assured by a gentleman filling a high situation, that this is only the official value given in to government by the merchants, which always falls short of the real value sold. "It is notorious," he says, "that in order to escape the payment of part of the duties, the merchants never give the true value of their stock." There has also been a great increase since the time to which this statement relates; so that the real amount of money turned over in the place may now be fairly estimated at 300,000,000 roubles, or £12,000,000.

Fair.] The fair is held without the city. Mr. Bremner thus graphically describes it: "After passing the gates not a single symptom of the fair had we seen Turn this way, however; from the Volga and Asia look in another direction—across the Oka—and there, on a low almost inundated flat, exposed to the waters of both these rivers, lies a scene of bustle and activity unparalleled in Europe. A vast town of shops laid out in regular streets, with churches, hospitals, barracks, and theatres, now tenanted by more than a hundred thousand souls, but in a few weeks to be as dead and silent as the forest we have been surveying; for when the fair is over, not a creature will be seen out of the town, on the spot which is now swarming with human beings." The spacious plain between the two rivers was pitched on as a convenient site for the fair, and in preparing it for the

object in view the difficulties presented by the swampy nature of the ground were overcome by the enormous outlay of 40,000,000 roubles = £1,670,000. Deep sewers, vaulted over, were constructed through the morass, and connected by canals with the rivers. The buildings for the bazaars were raised on piles, and the whole boggy surface of the plain was covered to the depth of some feet with gravel and clean sand; so that, notwithstanding the inundations to which it is still liable, it almost perfectly dissembles its untoward nature. In the midst of the plain is the great bazaar, divided by lanes or passages, intersecting at right angles, into 64 square groups of warehouses, or rectangular blocks of solid stone buildings of one story in height, and containing, besides some public offices in the centre, 2,522 large vaults for merchandise, to each of which is attached a small chamber for the merchant. Round the public offices in the centre are ranged, during the fair, the European wares, the French millinery, and English broadcloth. Next follow the Armenians, a numerous and distinguished class in every commercial assemblage throughout the East. Near these the Bokharians usually range themselves, who are easily distinguished from other Asiatics, says our author, by their squat corpulent figures and dark complexions. Nearly a whole side of the bazaar is occupied by the Chinese market, in which the shops are all laid out in the Chinese fashion, though we believe that but few of the subjects of the Celestial empire actually frequent the fair. Tea is the chief article of the Chinese trade. Beyond the stone buildings of the bazaar commence rows of wooden booths, in which the motley Siberian and Tartar tribes establish themselves with their furs and peltry. The most remarkable to a European eye, though not the least common of their wares, being the dark mouse-coloured hide of the wild-horse, with black mane and streak along the back, much prized by the Bashkirs and other tribes for its warmth as well as beauty. "Most of the streets have elegant light arcades on each side, supported in front by cast-iron columns, where purchasers can walk about, well-sheltered in all kinds of weather, to view the tempting displays in the windows. The shops are generally very handsome, and in some instances extend from street to street, so as to have two fronts. They present nothing of the confusion of a fair; the goods of every kind are as neatly ranged as in a city. To facilitate business, there is a separate quarter set apart for each different kind of the most important description of goods. One quarter contains groceries, of which the value sold is very great. In another fish and caviar are exposed in most fragrant variety; of these about sixty thousand pounds' worth are sold at each fair. A third quarter contains leather articles of every kind, which may be bought surprisingly cheap, but in particular boots and shoes are disposed of ready-made in large quantities. Morocco leather is also sold wholesale to a very large amount; a great deal of it comes from Astracan, where—as in other parts of European Russia—goats are kept for the sake of their hides to make this leather, more than for milk or flesh. The agreeable soap of Kasan is sold to a large value. Iron articles from Tula and glittering arms of every description occupy a conspicuous share of the streets. The cloth-range is also large and well-stocked; the value of woollen-goods, Russian and foreign, sold annually, is seldom less than 3,000,000 of roubles = £120,000. But one of the most curious of all is the tea-quarter, which occupies the greater portion of an immense division standing by itself. This is one of the most singular corners, not only from the number of Chinese seen in it, but also from the great amount of cash turned over by them. The chests are all sewed into tough skins. One quarter contains ready-made clothes of all descriptions; the cloaks both for men and women are made from stuffs with the most singular patterns. Some of the figured works from Asia are really beautiful. The quarter for fancy articles—gloves, handkerchiefs, ribbons, &c.—is always crowded with purchasers, attracted by the graces of the fair occupants from the Rue St. Honore. The division for wines is not very large. That for cotton goods appeared to be very valuably stocked. Most of the articles had an English look; but among the thousands of dealers assembled here from all other towns we met with only one countryman. Of cotton goods, Russian and foreign, the value sold generally averages 22,000,000 roubles = £880,000. The gaudiest display of all is among the numerous shops for silks and shawls. Most of these articles being of oriental manufacture, the patterns far outshine even the waistcoats of our modern beaux. The manufactured silks here disposed of every year are estimated at 10,500,000 roubles = £420,000 —while of raw silk 308,000 lbs. are sold. Nothing surprised us more, however, than the furniture-shops; costly tables, chairs, sofas, all the heaviest articles of furniture, brought in safety to such a distance, and over such roads, were what we did not expect to meet even in this universal emporium. Large mirrors, too, from France as well as St. Petersburg, and crystal articles from Bohemia, were displayed in great profusion; and many a longing eye might be seen near the windows of the jewellers and silversmiths, who are said to do a great deal of business, not only in selling their home-made articles, but also in buying jewels brought from Asia."

NIJNY-TAGELSK, or TAGILSK (NIJNII), a town of Russia in Asia, in the gov. of Perm, and district of Werkhoturie, on the Tagil. It is well-built, and has several hospitals, an observatory, extensive iron-works, and manufactories of machinery.

NIJROW, a valley of Afghanistan, in the Kohistan of Cabul, to the E of the valley of Punjschir. It is very fertile, and well cultivated. It is inhabited by Tajiks and Pashai. The former are supposed to be of Persian descent; the latter bear considerable resemblance to the natives of Kafiristan.

NIKDEH. See NIGDEH.

NIKHOUS, a town of Algeria, in the prov. and 120 m. SW of Constantina, to the NE of the lake Al Shott. It is now in ruins.

NIKITA, a village of Russia in Europe, in the gov. of Taurida, in the Crimea, district and 39 m. S of Simferopol. It has a fine terraced garden, constructed by imperial order, for the promotion of the culture of tropical productions.

NIKITINSKAIA, a fortress of Russia in Europe, in the gov. of Yekaterinoslav, district and 20 m. ESE of Alexandrovsk, and 18 m. NW of Orckhov, on the r. bank of the Konskaia.—Also a town in the gov. and district and 47 m. ENE of Orenburg, on the l. bank of the Sakmara.

NIKITOVKA, a town of Russia in Europe, in the gov. and 41 m. WNW of Kharkov, district and 10 m. W of Bogodoukhov.—Also a town in the gov. of Voronej, district and 36 m. ENE of Jalyki.

NIKITSK, a town of Russia in Europe, in the gov. and 22 m. SSE of Moscow, district and 12 m. ENE of Podol, on the Pakra. Pop. 750. In its vicinity are extensive stone quarries.

NIKLASBERG, a town of Austria, in Bohemia, in the circle and 30 m. W of Elnbogen, and 14 m. NNW of Eger. Pop. 571.

NIKLASMARKT. See GYERGYO - ST. - MIKLOS.

NIKLOWITZ, or MIKOLOWICE, a town of Austria, in Moravia, in the circle and 8 m. N of Znaym. Pop. 796.

NIKOLA (SAINT), a town of the archd. of Austria, in the prov. of Lower Austria, and circle of the Muhl, 27 m. SE of Freystadt, on the l. bank of the Danube.

NIKOLAEVKA, a town of Russia in Europe, in the gov. and district and 24 m. S of Yekaterinoslav, on the l. bank of the Dnieper.

NIKOLAEVSKA, a town of Russia in Europe, in the gov. and 90 m. SSW of Saratov, district and 60 m. NW of Kamychin, on the l. bank of the Medveditza.

NIKOLAEVSKAIA, a town of Russia in Europe, in the gov. of Saratov, district and 5 m. ESE of Kamychin, on the l. bank of the Volga.

NIKOLAEVSKAIA - KREPOST, a town and fortress of Russia in Asia, in the prov. and 75 m. W of Omsk. It is situated in the midst of a marsh surrounded with wood, and is extremely unhealthy. It contains about 150 houses. The fort forms one of the Ishim line.

NIKOLAI, or MIKOLOW, a town of Prussia, in the prov. of Silesia, in the reg. and 56 m. SE of Oppeln, circle and 15 m. N of Pless. Pop. 3,320.

NIKOLAIEV. See NICOLAEFF.

NIKOLAIEV, a town of Russia in Europe, in the gov. of Podolia, district and 14 m. NW of Proskourov, and 66 m. N of Kamenetz. Pop. 1,870.—Also a town in the gov. of Vilna, district and 48 m. SSW of Oschmiana, and 18 m. NNE of Novogrodek, on the r. bank of the Niemen.

NIKOLAIEVCHINA, a town of Russia in Europe, in the gov. and district and 54 m. SW of Minsk, and 45 m. ESE of Novogrodek, on the l. bank of the Niemen.

NIKOLAIEVKA, a town of Russia in Europe, in the gov. of Poltava, district and 14 m. N of Zolotonocha, on the l. bank of a river of that name.—Also a town in the gov. of Voronej, district and 27 m. SSW of Astrogojsk, on the r. bank of the Tikhaia-Sosna.—Also a town in the same gov., in

the district and 21 m. NE of Valyki, on the l. bank of the Polatovka.

NIKOLAIKEN, a town of Prussia, in the prov. of East Prussia, regency and 68 m. SW of Gumbinnen, circle and 14 m. SE of Sensburg, on the W side of lake Spirding. Pop. 2,040.

NIKOLAJOWSK, or Saint Nicolaus, a fort belonging to Russia, on the coast of Imeritia, at the mouth of the Natanebi, 15 m. SSE of Poti. It was taken by the Turks in October 1853.

NIKOLAPAVDINSK, a town of Russia in Europe, in the gov. and 180 m. NNE of Perm, 60 m. W of Verkhotourie, on the l. bank of the Lialia.

NIKOLSBURG, or Mikulow, a town of Austria, in Moravia, in the circle and 27 m. S of Brunn. Pop. 8,000, of whom a large proportion are Jews. It has a fine castle, and a valuable library belonging to the princes of Dietrichstein, a college, a theological seminary, a lyceum, a gymnasium, and a public library and museum. The environs afford excellent wine, and contain several marble quarries.

NIKOLSK, a district and town of Russia in Europe, in the gov. of Vologda. The district comprises numerous lakes and marshes. It is well-wooded and moderately fertile. The manufacture of articles in wood and of mats, the rearing of bees and the chase form the chief occupations of the inhabitants. The town is 210 m. E of Vologda on the r. bank of the Joug. Pop. 650.

NIKOLSKAIA, a town of Russia in Europe, in the gov. of Olonetz, district and 26 m. S of Kargapol, on the E bank of lake Latsha.—Also a town in the gov. and 36 m. S of Riazan, district and 1 m. W of Pronsk, on the l. bank of the Pronia.—Also a town in the gov. of Voronej, district and 54 m. NNE of Bogoutchav, and 18 m. ENE of Pavlovsk, on the l. bank of the Podgornaïa.

NIKOLSKAIA (Stanitza), or Novaia-Kargata, a town of Russia in Europe, in the gov. and district and 99 m. ESE of Orenburg, and 66 m. W of Orskaïa, on the Ural. Pop. 2,000. It is advantageously situated for commerce, and carries on a considerable trade with Persia and Bokhara. Its inhabitants are chiefly of Tartar origin.

NIKOLSKAIA-SASTAVA, a village of Russia in Asia, in the gov. and district and 39 m. S of Irkoutsk, at the point of the efflux of the Angara from Baïkal.

NIKOLSKII-CHAR, a strait of the Arctic ocean running between the small island of Kousova-Zemlia and the S coast of Nova-Zembla. It forms an arm of the strait of Kara, by which the island of Vaïgatch is separated from Nova-Zembla.

NIKOLSKOE, a town of Russia in Europe, in the gov. of Voronej, district and 54 m. NE of Starobielsk, and 42 m. SW of Bogoutchav.—Also a village and port in the gov. and district of Archangel, on the White sea, at the embouchure of the S arm of the Dwina. It formerly possessed considerable trade; the harbour is now to a great extent choked with sand.—Also a fort in the gov. and district and 93 m. ENE of Orenburg, and 6 m. W of Stanitza-Nikolskaïa, on the r. bank of the Ural.

NIKOLTOJ-MANTOROVKA, a town of Russia in Europe, in the gov. of Voronej, district and 11 m. NE of Valyki, and 30 m. SSW of Birioutch.

NIKOPOL, a town of Russia in Europe, in the gov. and district and 72 m. SSW of Yekaterinoslav, and 41 m. SW of Alexandrovsk, on the r. bank of the Dnieper. Pop. 1,200.

NIKOPOL, or Tchingani-Kali. See Nicopoli.

NIKOPOLI, a village of Turkey in Europe, in Rumelia, in the sanj. and 144 m. WNW of Gallipoli, and 5 m. NW of Tzaglaik, on the l. bank of the Karasu.

NIKORITZI, a town of Russia in Europe, in the gov. and 138 m. WNW of Kherson, district and 18 m. NE of Tiraspol.

NIKOUL, a river of Russia in Asia, in Kamtchatka, which runs W, and after a course of 24 m. throws itself into the Kamtchatka, on the r. bank. The first Russian settlement in Kamtchatka was formed on the banks of this river.

NIKOULITZIN, a town of Russia in Europe, in the gov. and 15 m. E of Viatka, district and 12 m. S of Slobodsk, at the confluence of the Tcheptza with the Viatka. It occupies the site of the ancient town of Tchoub-Bolvanskoë-Gorodok, destroyed in 1181 by the Novgorodians.

NIKOUP, a town of Turkey in Europe, in Bulgaria, in the sanj. of Rustchuk, 48 m. SE of Nikopoli and 12 m. N of Ternova, on the l. bank of the Rousita, near its confluence with the Jantra.

NIKSAR, a town of Turkey in Asia, in Asia Minor, in the gov. and 60 m. N of Sivas, and 36 m. NE of Tokat, on the r. bank of the Kueïlu-Hissar. It is built on the slope of a hill, but is commanded by a fort constructed by the Genevese. The houses, which are chiefly of wood, are 3 or 4 stories in height and roofed with tile. Some of them are surrounded with gardens. The total pop. of N. is estimated to consist of 600 Turkish families, 120 Armenian, and 60 Greek. The town contains a citadel and several bazaars.

NIKSIKI, a village of Turkey in Europe, in Bosnia, in the sanj. of Herzegovina, 78 m. SW of Mostar, and 60 m. ENE of Ragusa, on the frontier of Montenegro. A little to the W of the village is a small lake of the same name.

NILAB, a town of the Punjab, on the l. bank of the Indus, at the confluence of the Hurru, a little below Attock. The river is here 120 ft. in depth, but narrow, and is crossed by a ferry.

NIL-ABAISSE, a commune of Belgium, in the prov. of Brabant, and dep. of Nil-Saint-Vincent-Saint-Martin. Pop. 362.

NILE, the great river of Egypt and of Eastern Africa, composed of the union of three great head-streams, the western of which is the Bahr-el-Abiad or White river; the central, the Bahr-el-Azrek or Blue river; and the eastern, the Takazze or Atbara. It takes the name of the Nile only after the junction of the Bahr-el-Abiad and Bahr-el-Azrek. The former stream—which it is no longer matter of controversy constitutes the larger and principal head-stream of this wonderful river—has its rise somewhere in the mysterious heart of the African continent, probably near the equator; flows towards Egypt from the W or SW; and then runs N, till it is joined by the Bahr-el-Azrek which rises in Abyssinia, and after fetching a large circuit to the SE and then to the SW, in the course of which it passes through the great Abyssinian lake of Dembea, joins the Bahr-el-Abiad in about 16° N lat. From this point the Nile, with the exception of one large bend towards the W, has a N course to its junction with the Takazze, a large river also coming from Abyssinia.

Sources.] The ancients were ignorant of the sources of this river, although it attracted so much of their attention; and the moderns remained long unacquainted with them, though it now appears that the source of one of its principal branches was known to Europeans long before they credited the fact. Bruce, it is true—who undertook a search which was believed to have eluded every former adventurer—assures us that he was the first of Europeans who saw the fountains from which the N. originates; so anxious was he to secure this honour to himself, that he minutely examines the accounts of such travellers as pretend to have visited them before him; and his decision, as was to be expected, is in his own favour. But Bruce's examination of Kircher's account of the sources of the N., plainly evinces that the latter had either actually visited these sources himself, or had received his information from such as had. What were considered the sources of the Bahr-el-Azrek or 'the Blue river,' were found

and described by two Jesuits, Paez and Tellez, two centuries before the pretended discovery of Bruce: a few differences and inaccuracies detected by Bruce in their account, serve rather to confirm than invalidate the truth of this early visit. Still Bruce met not that applause which he expected, and which his labours deserved; the reception of his narrative, even by his own countrymen, can scarcely be accounted generous. It was first doubted whether he had really ever seen the head of the river which he described as the chief branch of the N.; and when this could no longer be insinuated, it unhappily for him, began to be suspected that he had only visited the head of an inferior branch, and that the true N. originated far to the W, among what was called 'the Mountains of the Moon.' The Messrs. D'Abbadie have recently advanced the opinion that the Gibe of Inarya or Enarea, rising in N lat. 7° 49′ 48″, and E long. 36° 2′ 39″, must be regarded as the true head-stream of the White N. In opposition to this hypothesis, Dr. Beke contends that the principal sources of the N. must be somewhere S of the 2d parallel of S lat., and between the 29th and 34th meridians of E long. He argues that the principal sources of the N., according to Ptolemy, are in the country of *Mono-Moezi*, near the E coast of Africa; and that the name 'Mountains of the Moon' arose from a translation of the word *Moezi*, which signifies 'moon' in the language of the Sawahilis or 'dwellers on the coast,' from whom the Greek merchants and seamen of Alexandria, trading with India and Eastern Africa, subsequently to the time when they had acquired a knowledge of the Hippalus or SW monsoon, obtained the particulars respecting the Upper N. which are recorded by Ptolemy. He corrects what he conceives to be the fundamental error of Ptolemy's map, viz., its general extension much too far southwards, and shows that the head of the N., which that geographer places on the W side of the country of the *Anthropophagi*, bordering on the *Barbaricus sinus*, in the vicinity of the island of *Menuthias*, must be situated in about 2° S lat., and 34° E long., at the extreme eastern edge of the table-land of Eastern Africa, and at a distance of about 300 or 400 m. from the island of Zanzibar, which island is identified with *Menuthias* by D'Anville, Vincent, and De Froberville. Among other evidence in support of this conclusion, Dr. Beke refers to the statement of the Arabian geographer, Ibn-el-Wardi, that the N. divides above the country of the Zinj (Zanzibar), one branch going towards Egypt, and the other to the country of the Zinj; suggesting the probability that the latter branch is the river Lufidji, which falls into the Indian ocean in about 8° S lat., and which appears to have some of its sources near those of the N.; and he explains how the contiguity of the sources of these rivers is, according to the native mode of thinking, equivalent to an actual water-communication between the rivers themselves, so that the two would be regarded as branches of one stream. Dr. Beke regards the great central table-land of Eastern Africa as an elevated region of irregular surface, having its line of greatest elevation towards the Red sea and the Indian ocean: the water-shed between the streams flowing into the sea, and those tributary to the N., being along the extreme E limits of this table-land. In his opinion, Ptolemy fell into a very natural error of making the 'Mountains of the Moon' extend from E to W, across the continent of Africa, at right angles with the general direction of the course of the river flowing from them; whereas the actual direction of the E edge of the table-land—which to the Sawáhilis, or natives of the coast, has the appearance of an extensive range of lofty mountains, and which Dr. Beke identifies with the Mountains of the Moon—is from SW to NE; and by measuring 600 m. in the latter direction—such being about the distance that Ptolemy makes to exist between the two heads of the Nile in those mountains—Dr. Beke hypothetically places in about 7° N lat., and 39° E long., the source of that geographer's second arm of the river. This second arm Dr. Beke identifies with the Sobát, Telfi, or river of Habesh, which joins the Bahr-el-Abiad, or White river, in about 9° 20′ N lat., and which was considered by the officers of the Egyptian exploring expedition, who ascended it 80 m., to contribute to the Nile nearly a moiety of its waters. It is some confirmation of this hypothesis that the Mountains of the Moon of Ptolemy consist of this mountain-range of Eastern Africa which flanks the country of the Uniamezi to the E, instead of being a range stretching across the continent from E to W, that the great snowy mountains KILIMANDJARO and KENIA [see these articles] are known to be portions of a littoral chain to the S of the equator. Of the various head-streams of the river of Habesh, the Wabbi, which is said to rise in the mountains to the S of Shoa, and to join the Godjeb, the upper course of the river of Habesh, coincides in Dr. Beke's opinion, most closely with the head of Ptolemy's second river: and he remarks that, in like manner as the White river is made by Ibn-el-Wardi to branch off to the coast of Zanzibar, the river of Habesh—of which the Wabbi of the table-land is taken by him to be the head—is, at the present day, made by the natives to branch off to the Somáli coast by the Wabbi-Giwéyna, Gowin, or Juba river, which is called 'Nilo,' and also by the Wabbi or 'Nile' of Mákdashu [Magadoxo]; and that these three rivers, some of whose sources are contiguous at the edge of the table-land, in about 7° N lat. and 39° E long., all bear, in common, the generic name of *Wabbi*, which in the Somali language, signifies 'the river,' and likewise the not less generic designation of *Nile*. Dr. Beke also notices the fact, that the confluence at Khartúm, in 15° 37′ N lat., of the White and Blue rivers, commonly, but erroneously in his opinion called the White and Blue Niles, is merely the junction of the *Astapus* with the Nilus; and that, in reality, the confluence of Ptolemy's two arms of the Nile—namely, the White river and the river of Habesh—is in 9° 20′ N lat., upwards of 6° beyond Khartum. While establishing that these two principal arms of that river have their sources at the extreme edge of the table-land of Eastern Africa, Dr. Beke argues further for the existence of a third great arm of the N.—namely, the Bahr-el-Ghazal or Keïlah, which likewise joins the central stream in about 9° 20′ N lat., and which, he thinks, there is reason to regard as the Nile of Herodotus and other writers prior to Ptolemy; and he suggests that the latter geographer was drawn away from the separate consideration of this more westerly arm by the error which he had fallen into of placing the one of his two arms of the river to the W instead of the NE of the other, whereby he was led to confound the former with the Nile of Herodotus.

In these views of Dr. Beke, Mr. Ferdinand Werne, who was attached to Mahomed Ali Pasha's exploring expedition, substantially coincides. M. Antoine d'Abbadie, he says, "originally informed us in a letter written on the 17th Oct. 1844, from Adoa in Habesh, to Cairo, that he had discovered the source of the White N. According to the assertion of the fortunate discoverer, the source was then situated in the country of Gamru or Gmura, near Mounts Boshi and Doshi; but he stated neither the degree of lat. nor of long. of the pretended site of this source. Upon this, I at once contradicted M. d'Abbadie's claim to having solved this geographical problem, and drew the attention of geographers to the discoverer's erroneous etymology of the name of the Mountains of the Moon, upon which he principally based his assertion. [*Monatsberichte* Jahrg. vii. s. 20.] It now seems, however, that this source of M. d'Abbadie's Nile has dried up, or at all events that he has abandoned it, since he no longer mentions this site, but transports the source of the river into quite a different country, namely, into the forest of Babia, between Inarya (Enarea) and Jimma-Kaka, in lat. 7° 49′ N, and long. 34° 38′ E of Paris. It so happens that during the expedition which Mahommed Ali, viceroy of Egypt, sent in 1841-42 to explore the White Nile, I navigated the river from its bifurcation in Sennaar upwards, as far as the 4th degree of N lat., the furthest point till then reached by any traveller, and there we were told that the sources lay still further to the S. [See *Expedition for the Discovery of the Sources of the White Nile*, by F. Werne.] M. Antoine d'Abbadie establishes three rules, which, according to him, ought to determine the true source of a river—namely, 1st. Universal consent. 2d. The greater volume of water. 3d. In deciding between equal volumes of water, a preference is generally given to that tributary whose direction coincides most nearly with the general course of the lower river. It is, however, remarkable that in his present claim to the discovery of the source of the White N., he altogether discards the first of these laws; for he tells us that the natives near the sources of his White N. assert that all the waters of that district flow into the Abbai [the Blue river]. A tribe which has commercial intercourse with another by means of a direct water-communication, as M. d'Abbadie pretends is the case by means of his hypothetical river, between the inhabitants of Kafa and Enarea on the one hand, and those of Bari on the other, ought, if the same circumstances of climate exist, to possess similar domestic animals, and similar productions and useful articles. According to M. d'Abbadie, Enarea and Kafa possess coffee, and both horses and mules; but all these are utterly unknown in the kingdom of Bari, in 4° N lat., which was visited by us during our expedition. Again, according to M. d'Abbadie, there are neither sheep, nor fowls, nor leather, in Kafa and Enarea; while all these are met with in Bari. The value of dollars is well known in Kafa; but money is not known at all in Bari. Lakono, the king of Bari, and his companions, pointed to the S when describing to us the situation of the sources of the White N., which river is called Tubirih in that country. Indeed, from the formation and situation of the mountains whose valleys are watered by the true N., any person looking in that direction would infer the further southerly course of the river for a distance of several degrees of latitude. The natives always pointed to the S when we inquired after the upper course of the river; and they knew nothing of a running stream towards the E, in which direction they hold commercial intercourse with the country of Berri, distant 10 days from Bari, and on the road to which country they meet only with wells. As regards us Europeans," Werne adds, "we arrived in Bari with the preconceived opinion that the White N. came from the east, and we were consequently the more precise and careful in our inquiries; but all our delineations of a curved line towards the E as the probable course of the river could not induce the natives to deviate from their previous statements that it comes from the S. The entire configuration of the mountain-ranges points to a water-parting which Nature has established both on the E and on the W. The mountain-chains of Loyoga and Kugelu both stretch towards the S, being most probably offsets or spurs from an extensive range of mountains near the equator, where the hydrographical system of the Bahr-el-Abiad has its origin. If M. d'Arnaud, my travelling companion on the White N.," continues Werne, "lays down the chief branch of the small streams that form that river as coming from the E, it can only be regarded as a remnant of that opinion which we had preconceived before we reached Bari, and according to which we considered the sources of the river to be in that direction. There never was a question as to a main branch; and Lakono, who asserted that he had been in the country, called by him Anjan (Anyan), in which the head-streams of the N. have their origin, said that the depth of the water in the beds of the four rivulets whose confluence forms that river was such as to reach only to his ancles as he waded through them. It appears, therefore

improbable that any one of such shallow rivulets in the country of Anyan should come from the forest of Babia, a distance of 5° to the N. I might perhaps reject the opinion of the people of Bari as being opposed to my own original persuasion, and might still consider the river to come from the E, if the direction we saw it come from when at the island of Tschanker had warranted such a conclusion; but instead of continuing its course to the S and E, and winding round below the cliffs of Lugi and Kalleri (no doubt the skirts of a lofty mountain-chain), and thence flowing slowly and quietly along by the mountain-range of Loyoga from the 4th to the 8th degree of N lat., the river comes direct from the mountain-fastnesses in the S, in the form of a turbulent stream escaped from confinement. The general rise of the land, and the numerous rocks in the river's bed, prove that its fall increases considerably as one advances further among the mountains; and the rocky wall of Kalleri is said to form a great cataract during the rainy season, whence one might almost infer the existence of a mountain-lake. The fall of the river among the mountains is no doubt greater than it is where we saw it at Tschanker. Consequently, if we were to regard M. d'Abbadie's forest of Babia as the site of the sources of the White Nile, that forest must be placed at an enormous height; and an uninterrupted connexion of mountain-ridges would be necessary in order to force the river to adopt an unnatural course from N to S, in an elevated longitudinal valley resembling an aqueduct, instead of flowing direct towards the W into the basin which likewise receives the Sobat. It seems to me much more probable that the pretended sources of M. d'Abbadie's White N. are merely those of a tributary of the Blue N. or of the Sobat. It is my opinion, Werne adds, that time will prove Ptolemy, and the natives of Bari, to be correct in their assertions, and that we have to look for the sources of the White N. in the regions near the equator, where we shall likewise find the 'Mountains of the Moon,' though probably under a different name, of which I consider the mountains reached by our expedition to be merely the outskirts."

Mr. Ayrton, in an *Essay on the Nile*, read before the Royal Geographical society, supports the Messrs. d'Abbadie's conclusions. He is of opinion that the material question at issue between M. d'Abbadie and Dr. Beke was not whether this or that river *per se* was to be regarded as the source of the White N., but whether the system of waters of the N. was actually confined to the Abyssinian plateau and the immediately adjacent drainage on its W and S limits; or whether we must assign to the N. a far more extensive drainage, and extend its waters, as contended for by Dr. Beke, into a country to the S of the 2d degree of S lat. —that is, whether the same incidents of climate which produced on the inner and lesser side of the culminating ridge of the Abyssinian plateau, and where the country was to the leeward of the winds which bring rain, the lesser river of the Blue N., did not also produce, on the outer and larger side of the same ridge, and where it was first exposed to the effect of the rainy winds, the larger river of the White N. He contends that if Dr. Beke's opinions were correct, it would follow that instead of the mountains in Inarya and Kaffa, in from 10° to 5° N lat., and 35° to 40° E long., constituting the point of culmination of the eastern part of Africa, we should have to look for the culminating point of that part of the continent to the N of the 2d degree of S lat., and in from 29° to 34° E long.; and that consequently upon the right solution of that question would necessarily depend, to a considerable extent, the correctness of our ideas of the physical geography of Africa. He controverted the objections involved in Dr. Beke's assumption that the derivation to Ptolemy of the name of the 'Mountains of the Moon' was to be sought for in the word *Moezi*, because that word signified 'moon' in some languages of Africa, and there happened to be a place of that name more nearly corresponding than Gamaro with the position assigned to these mountains by Ptolemy, by endeavouring to establish that, if due allowance were made for Ptolemy's errors in lat., his position of these mountains would as well accord with M. d'Abbadie's position of Gamaro as with Dr. Beke's position of the country of Mono-Moezi. He next controverted the inference that the Arabs translated their phrase Gebel-el-Qamar from the Greeks: showing, 1stly, that the Arabs were the earliest navigators of the Red sea; 2dly, that there was historical evidence that the Sabæan tribes of Arabia, shortly after the time of Solomon, conquered Abyssinia; and, 3dly, that the influence of the language of the Arabs, consequent upon those circumstances, had been such as to justify the presumption that they had applied the name of 'Gebel-el-Qamar' to these mountains long before the era of the Greeks in Egypt. He then examined the evidences in favour of M. d'Abbadie's conclusions, that the White N. rises in Inarya, afforded by the circumstances of the climate, hydrography, and physical configuration of Africa. He contended that, as the mountains of the S part of the Abyssinian plateau intercept the rain of the SW monsoon in what would otherwise be its passage to the mountains of Yemen in Arabia, which are in position within its influence; and as the rain of this monsoon passes over the land of this side of Africa to the SW of Abyssinia, so as to extend quite to Nubia, it necessarily follows that the S part of the Abyssinian plateau is the highest land within the influence of the SW monsoon, and constitutes the culminating point in the NE part of Africa. He then showed that if the N. were assumed to rise to the S of the 2d degree of S lat., the inclination of its bed, calculated upon ascertained data for rather more than the first half of its course, would warrant an alt. for the mountains about its source of at least 6,500 ft. above the sea, which, reasoning from the analogous instance of the Syhadri range on the W coast of India, would produce heavy falls of rain as the sun became vertical to such mountains, and therefore occasion a periodical rise of the river at a much earlier period than that at which it is now observed to occur. Finally, Mr. Ayrton argued that the hypothesis of Dr. Beke, of the N. rising to the S of the equinoctial line was wholly untenable. The great drainage of the continent of Africa the author considered to be on the one side towards the Atlantic, and on the other by the N., towards the Mediterranean, with a comparatively lesser drainage along the E side of the continent into the Indian ocean. Confining his observations to the N., he assumed the tract drained by that river to be bounded on the inland side by the high land stretching from the E flank of the Atlas, southward by the W of Borgu and Darfur, until it joined the mountains spoken of by Browne as extending from 13° N lat. along the direction of the 25th meridian, to 8° N lat., and thence turning round to the E as far as long. 28°, whence the same mountains were supposed, upon some authorities referred to by the author, to extend to the W bank of the White N., in 4° 42′ N lat., and follow the bend of its outer tributaries, until they united with the most southern and eastern part of the Inarya mountains. The author, however, admitted that the whole argument was professedly one of probability, and that the question would not perhaps be finally solved until the gap subsisting between the observations of M. D'Abbadie and the termination of the journey of M. D'Arnaud was filled up.

The White Nile.] The course of the White Nile has been explored to a little S of the 4th parallel of N lat.; between that parallel and the parallel of Kilimandjaro, or 4° 30′ S, the map of Eastern Africa is nearly a blank. Here we find a ridge of gneiss rocks stretching across the bed of the river and forming rapids. The Bari Negroes informed Werne that the river proceeds from the country Ajan, 30 days' journey to the S; and Baron von Muller was informed by a man who "had never seen either snow or ice," that the Bahr-el-Abiad comes from a high mountain, the top of which is quite white. We have seen that 'the mountains of the Moon,' in the position in which most maps of Africa have hitherto placed them, have really no existence; and Dr. Beke thinks it probable that the S limits of the basin of the N. will be found to be formed on the E by the basin of the river Lufidji flowing into the Indian ocean, and on the W by that of the Upper Congo flowing towards the Atlantic. Or it may be that the hydrographical system of the great lake of Eastern Africa, called N'yassi, forms the boundary in the former direction. The extent to the westwards of the basin of the N. is unknown; but it is manifest that it cannot possibly reach much, if anything, beyond 20° E long., where it must be limited by the hydrographical system of Lake Chad. Descending the main stream of the N. in a NNE direction, we come, in 9° 20′ N lat., to its great western arm, called Bahr-el-Ghazal or Bahr-el-Keilah, which is described by M. Lafargue, who entered its mouth, as "a magnificent stream, with a tolerably rapid current," and which, Baron von Muller says, contains crocodiles, hippopotami, water-snakes, and fish. M. Werne learned from the natives that this river comes from Barbary! This, Dr. Beke remarks, is physically impossible; for Denham and Clapperton crossed the continent of Africa, from the Mediterranean to Lake Chad, in about the 15th meridian of E long., and must have come to this river had it existed there. Most probably the interpreters of the Egyptian expedition made use of the Arabic expression *Bilad-el-Gharb*, which means literally 'the West country,' though it is used by Orientals to denote Barbary; so that all that the natives must be understood as having said is, that this river comes from some country in the W. At the point of confluence with the Bahr-el-Ghazal, the N. forms a small lake, which is surrounded with an immense forest of reeds, and then turns abruptly towards the E, to a point where, in N lat. 9° 15′, on the S frontier of the territory of the Kek Negroes, it receives the Sobat or Bahr-el-Mokada, a slowly-flowing river coming from the E. and probably carrying with it the drainage of the Wallaga and the Galla territories to the SW of Amhara. From the junction of the Sobat to the

11th parallel of N lat., the river has a NNE course, between swampy banks covered with reeds, in the Dinka territory. In about the last-named parallel it turns N, and separates the territory of Dar Fazokl, or the S extremity of Sennaar, on the E, from the Shilluk territory on the W. Near Eleis or El-Ais, it leaves the Shilluk country, and enters Sennaar. In this distance the bed of the river is very wide, and it frequently divides itself into branches, enclosing fertile islands. Baron von Muller is of opinion that this district of country would be found highly fit for colonization, its climate being healthy, and its soil fertile. At Turah or Terah, in N lat. 13° 50′, 110 m. ENE of Lobeid, the N. when it is high inundates the country for a great distance, forming an immense lake, and the mud which it deposits contains a considerable quantity of salt. "The tropical rainy season," says Baron von Muller, "forms an interesting epoch in the physical aspects of Central Africa. Progressing from S to N in May and June, the rains increase in intensity; fearful hurricanes from the S and SE occur, accompanied by dark-red and yellow clouds, and suffocating clouds of dust fill the air. At the end of the rainy season there arises a regular N wind, extending as far as to 10° N lat., from October to January and February; and curiously enough this wind is felt earlier in Sennaar and Kordofan than in Egypt. Before the rains, the immense plains show only a few bushes of the *Asclepias gigantea*, interspersed with decaying stems of the *Rhamnus zizyphus, Spina Christi, Balanite Egyptiaca*, and *Salvadora Persica;* after the rains, the soil becomes covered with the most luxuriant vegetation." Under the parallel of 14° 20′, or that of the Jebel-Musselet, the river bends towards NNE, and then flows nearly direct N to Khartum, in N lat. 15° 41′, E long. 32° 30′, a town situated at the confluence of the Bahr-el-Abiad or Abai, and Bahr-el-Azrek, and one of the emporiums therefore of Central Africa. Here the elevation of the stream above the level of the Mediterranean is 1,525 ft. See articles KHARTUM, ABAI, and ABIAD (BAHR-EL).

Upper Nile.] The confluent stream makes a remarkable bend in its course between Khartum and Abdum or Ambukol, flowing first about 70 m. in a NNE direction to Derira, where it crosses the frontier of Sennaar, and enters the Shendy territory of Nubia. At this point it assumes a NE direction, which it preserves for about 70 m. to Assur, in N lat. 16° nearly, when it turns N, and in 17° 45′ receives on its r. bank its third great head-stream, the Takazze or Bahr-el-Aswad, identified by some geographers with the *Atbara* of Ptolemy. The Takazze is the second river of Abyssinia in point of size, the Abai or Bahr-el-Azrek being the first. It receives the drainage of a large volcanic region in that country, and brings down by its rapid current a considerable portion of volcanic matter into the N., to which circumstance Ruppel conceives the great fertility of the soil deposited by the river of Egypt is chiefly owing. See TAKAZZE. On this point Le Gardiner Wilkinson says: "The component parts of the water of the N., according to the analysis given by Regnault in the *Memoires sur l'Egypte*, are: 11 water, 9 carbon, 6 oxide of iron, 4 silica, 4 carbonate of magnesia, 18 carbonate of lime, 48 alumen; total 100: the quantity of silica and alumen varying according to the places whence the mud is taken, which frequently contains a great admixture of sand near the banks, and a larger proportion of argillaceous matter at a distance from the river. The same quality of soil and alluvial deposit seems to accompany the N. in its course from Abyssinia to the Mediterranean; and though the White river is the principal stream, being much broader, bringing a larger supply of water, and probably coming from a greater distance than the Blue river, or Abyssinian branch, which rises a little beyond the lake Dembea, still this last claims the merit of possessing the real peculiarities of the N., and of supplying those fertilizing properties which mark its course to the sea. The White river, or western branch, likewise overflows its banks, but no rich mud accompanies its inundation; and though, from the force of its stream, which brings down numbers of large fish and shells at the commencement of its rise, probably from passing through some large lakes, there is evidence of its being supplied by an abundance of heavy rain, we may conclude that the nature of the mountains at its source differs considerably from that of the Abyssinian ranges." From the junction of the great affluent to the isle of Mokrat, under the parallel of 19° 25′ N, the course of the N. continues NNW; but at the latter point it bends suddenly round to SW, and maintains this direction till it reaches Ambukol, where the river is in fact only 155 m. distant from Dereira, although measured along its course it is at least 460 m. It is usual for travellers to leave the course of the river at Ambukol, and continue their journey to Khartum across the intervening country known as the Bahiuda desert. The course of the river is now NNW; but at Maragha, it assumes a N direction; and a little below this last point, inclines to the E of N, and enters the Dar-el-Mahass in Lower Nubia, where it turns NE. Under the parallel of 22° N, it forms the cataract known as that of Wadi-Halfa. Passing the splendid remains of Ipsambul, and the towns of Derr, and Dandour, it changes its course to nearly direct N, and under the parallel of 34° N forms the last or lowest cataract near Essuan or Assuan, on the S frontier of Egypt. See article ASSUAN.

Lower Nile.] The principal features of that portion of the course of the N. which lies within the Egyptian frontier are touched upon in the article EGYPT. From Assuan to Cairo, by the course of the river, the distance is 545 m., and has been performed with great ease by a steamer drawing 2 ft. 6 in. water. Clot Bey estimates the level of the river above the Mediterranean, at Assuan, 563 French ft.; and at Cairo 40 French ft. According to the same authority, the river flows, in this part of its course, at the rate of 2 m. an hour during the dry season, and 3 m. during the floods. The mass of water carried down during the flood is enormous; and if the calculations made by Linant Bey, previous to his great undertaking of raising the waters at the head of the Delta, be correct, the N. would require but 14 hours to fill up the basin of the lake of Geneva, having a surface of 545,000,000 of sq. metres, and an average depth of 80 metres. There is, however, reason to doubt the accuracy of the calculations. The inferior level to which the low water sank in 1798–99 and 1800 was regularly 3 cubits and 10 digits of the scale of the nilometre at Rhoda. During the three years of French occupation, the floods reached 17 cubits and 10 digits, which implied an actual rise of 7·58, 6·85, and 7·96 metres for the 3 years. A rise of 8 metres is considered as boding fine crops; 7 metres makes them indifferent; while a rise of 9 metres is considered injurious to some places. French engineers find that the level of the soil does not rise more than 126 millimetres in a century from the muddy deposits. Sir G. Wilkinson thinks that the soil has increased in 1,700 years but 9 ft. near Elephantine; 7 ft. at Thebes; 3 ft. 10 in. at Heliopolis and Cairo; and very little indeed at Rosetta. This corroborates the idea of Volney that during historic time no great alteration had occurred in either the outline of the coast, the mouths of the

river, or the extent of the delta. The banks of the N. increase in height as you travel S. In January, Professor Chaix found them 10 to 12 ft. above the water, and beyond Thebes even 25 to 30 ft. They are likewise higher than the flat country, which at Siut is even 4 metres below the level of the banks. In Herodotus's time a rise of 15 to 16 cubits was necessary to water the land, which is equal to 7·8, or 9·2 metres, according as we reckon by the royal or the vulgar cubit. As these quantities are still found correct, they furnish us with another proof of the accuracy of the historian, and that but little change has taken place during the 23 centuries which have elapsed since Herodotus conversed with the priests of Egypt upon the rise of the Nile. The height of the banks and the depression of the land in the interior are indicated, Sir J. G. Wilkinson observes, by the form of the dykes, which beginning on a level with the bank, and extending in a horizontal line, stand frequently 12 or 15 ft. above the land near the edge of the Desert; and he is of opinion that the common notion respecting the invasion of the sand is exceedingly exaggerated. The sand encroaches on the land on the Libyan side of Egypt, in those places where valleys open from the desert, but this bears a very small proportion to the whole surface of the country; and it is evident, he adds, from a comparison of the extent of the alluvial deposit, and the partial inroads of the sand, than the beneficial effects of the former far exceed the injury done by the latter, and that there is a greater proportion of land capable of cultivation now than at any previous period. The sections across the Desert to the Red sea present a gradual ascent from the valley of the Nile to the eastward, till you reach the summit of a mountain-plain of some extent, from which all the valleys or torrents running in a W direction empty themselves into the N., and those to the eastward into the Red sea. In those parts where the primitive range joins the secondary mountains, the descent to the sea is generally shorter and more rapid, but the general character is the same; on the Libyan side is a similar ascent, to the summit of the limestone-range which forms the extensive table-land of that part of Africa. The oases are merely depressions in this mountain-plain; and they vary in their depth, the Oasis Parva being of a much higher level than the Great Oasis. From these facts we may infer that the springs in the former are not supplied from that part of the N. lying in the same lat. with it, but from some distant point where the level of the river is more elevated. The water of the N. percolates to the Great Oasis by means of the bed of clay which forms its base, entering at some point a little to the S; and the only difference in the origin of the sources of the southern and northern Oases is, that one is supplied from the river at no very great distance from it, and that the other traverses a more extensive bed of clay before it reaches the more elevated surface of the Oasis Parva.

It appears, however, that a remarkable fall has actually taken place in the level of the N. at some remote period. Dr. Lepsius was the first traveller whose attention was called to this circumstance by the discovery of hieroglyphic inscriptions on the rocks and basement stories of the fortress at Samneh, recording the rise of the river, and the year, month, and day of the kings' reigns when the different inundations occurred. These inscriptions are numerous; and the highest noting is nearly 28 ft. above the inundation of 1848, the greatest hitherto known. It is evident, moreover, from the traces of the effect of the stream upon the rocks at the same level, that the N. did actually rise to the height marked by these contemporary records. They are all written in the reigns of the kings who were contemporary with or immediately followed the Osirtasens; and are probably the work of some of the priests, with a view to the security of the temple. Sir Gardner Wilkinson is of opinion that the cause of the great fall in the level of the river was undoubtedly the sudden giving way of some rocks which impeded the stream at a point somewhere below Nubia; and that this fact is attested by the remains of high alluvial soil, by deserted channels of the river, and other evidences that the whole valley was once irrigated by its waters to a considerable height above the present inundations. The extensive plains of Ethiopia—now presenting the appearance of a wilderness—owed, he argues with much apparent force, their former fertility and their existence to the great rise anciently of the N. It appears to have been at Silsilis, or Jebel-el-Silsileh, that the rocky barrier which kept up the river to its early level gave way, not all at once, however, there being reason to believe that at least three subsidences took place at intervals. The catastrophe occurred probably at a period anterior to history; yet it is strange, that among the wonders which the priests delighted to relate, no tradition of an event so extraordinary and so important in its consequences should have been preserved. On the subject of the precise period when the ancient barrier of the N. was broken down, it is difficult to arrive at any certainty. Sir Gardner, however, concludes, from calculations set down in this communication, that it occurred between the years 1700 and 1500 B.C., or between 3,550 and 3,353 years ago.

To the separate article on the DELTA of the Nile the reader is referred for full information respecting the features of the river, in this interesting portion of Egypt. To what is there stated we may here add that a railway is now executing, under the direction of English engineers, between Cairo and Alexandria, which is to be carried across the N., by a tubular bridge, at a point where the river is 1,500 ft. wide when at its full height. The rails, however, are to rest on the top of the tube, as its dimensions are too small for the entrance of a locomotive engine. We may also here add the interesting information, that by means of some valuable geological observations made by Mr. Robert Stephenson during his stay in Egypt, while planning this railway line, and also by the rectification of the levels in some leading points on the same authority, Miss Fanny Corbaux has been enabled to restore the relative configurations of land and sea, in Lower Egypt, with something approaching to geological certainty, up to the time of Darius Hystaspes, or B.C. 521, and from thence to deduce those of the Mosaic period. Some raised beaches of the age of Darius show that the separation of the Temseh marine basin from the sea was then a very recent event, the Serapeum bank being only just above water; before that change it was a ford at high tide, and dry at low tide. This bank, during the Mosaic period, was, Miss Corbaux argues, the only route out of Egypt to the Sinaitic desert; for the long Suez bank, which now divides the great bitter lake from the present head of the gulf, was rather too low under water to be fordable. Its summit, which Mr. Stephenson ascertained to be very near the edge of the lake-basin, where the pass is narrowest, affords, both in its physical features and its geographical position, a site for the passage of the Exodus that fulfils every condition required by the Mosaic narrative. The relative heights of the Serapeum bank, and a very ancient marine raised beach further show that, when this was on a level with the sea, the Arabian gulf really reached to the outer ports of Hierapolis, or 45 m. beyond its present

boundary, and received the waters of the river N. by one of its smallest branches, an offset of the Pelusiac, while all the others emptied themselves into the Mediterranean sea. These extraordinary geographical features Miss Corbaux endeavours to show, must have been not yet altogether obliterated in the time of Moses.

NILE, a river of Tasmania, in the co. of Cornwall, which has its source in Ben-Lomond; runs WSW; and falls into the S. Esk between the parishes of Lymington and Deddington.

NILES, a town of Cayuga co., in the state of New York, U. S., 10 m. SE of Auburn. It has a hilly surface, bordered on the E by Skeneateles, and on the W by Owasco lake. Pop. in 1840, 2,234.—Also a township of Berrian co., in the state of Michigan, 182 m. WSW of Detroit. Pop. 1,420. The v. is on St. Joseph's river. It contains about 1,000 inhabitants.

NILGHERRY. See NEILGHERRY MOUNTAINS.

NILKANTHA, a town of Hindostan, in Nepaul, about 45 m. in a direct line N of Katmandu, and at the base of the lofty peak of Gosain-Sthan. It contains several springs, and a temple dedicated to Mahadeva, and is resorted to by great numbers of pilgrims, who repair hither about the end of July. Throughout the rest of the year it is totally deserted.

NILLANDU-ATOLLS, a double group of islands in the Maldive archipelago, to the N of Collomandu-atoll. It is 40 m. in length from N to S, and is divided into a N and a S group, comprising a total number of 48 islands, and about 1,000 inhabitants. The extreme NE island is in N lat. 3° 01′ E long. 73° 05′.

NILLUMBIK, a parish of Australia Felix, in the co. of Bourk, bounded on the N by the p. of Morang; on the W by the Yarra-Yarra rivulet; and on the S by the Yarra-Yarra river.

NILOVA-POUSTYN, a cloister of Russia in Europe, in the gov. of Tver, in the N part of the district of Ostachkov, on an island of Lake Seligher. It is of great extent and affluence.

NIL-PIERREUX, a commune of Belgium, in the prov. of Brabant, and dep. of Nil-Saint-Saint-Martin. Pop. 296.

NIL-SAINT-MARTIN, a commune of Belgium, in the prov. of Brabant, and dep. of Nil-Saint-Saint-Martin. Pop 420.

NIL-SAINT-VINCENT, a commune of Belgium, in the prov. of Brabant, and dep. of Nil-Saint-Saint-Martin. Pop. 169.

NIL-SAINT-VINCENT-SAINT-MARTIN, a commune of Belgium, in the prov. of Brabant, and arrond. of Nivelles. Pop. 1,322.

NILSIA, a town of Russia in Europe, in the gov. and 30 m. NNE of Kuopio, and district of Nedre-Savolax, at the S extremity of Lake Syvari.

NILUFER, NIFER, or ULFER-SHAI, a river of Turkey in Asia, in Anatolia, in the sanj. of Khodavendkir. It has its source in the E side of Mount Olympus, near the village of Aksu; and flows in a NW and W direction, passing to the N of Brusa, and through the plain between Lake Abullionte and the gulf of Mudawia; and joins the Muhalitsh or *Rhyndacus*, on the r. bank, a little above its influx into the sea of Marmara.

NILUN, or NEILUNG, a village of Tibet, 40 m. SW of Chaprung, on the N side of the Himalaya mountains, at an alt. of 11,127 ft. above sea-level, and on a river of the same name, a little to the NE of its confluence with the Bhagaretti. This river forms one of the highest, if not the highest, of the sources of the Ganges.

NIMA, a district of Japan, in the island of Nifon, and prov. of Ivami.

NIMBURG, or WICZEMILOW, a royal town of Austria, in Bohemia, in the circle of Bunzlau, 18 m. SSE of Jung-Bunzlau, and 21 m. SSW of Neu-Bidschow, on the r. bank of the Elbe. Pop. 2,312. It has extensive breweries.

NIMEGUEN, or NIMWEGEN, an old but clean and handsome town of Holland, in the prov. of Gelderland, situated on the l. bank of the great branch of the Rhine called the Waal, 9½ m. S of Arnheim. Pop. in 1840, 21,182. It is fortified with walls, ditches, and extensive outworks. Its streets are narrow, and on account of the abrupt elevation from the river, the windows of one range of houses overlook the chimneys of another. The town-house is a fine old building; and several of the churches are likewise entitled to attention, as well as the flying bridge across the Waal, and the opposite village of Lint. A shady promenade, called the Belvidere, commands an extensive view of the course of the river and the surrounding country. The only article of manufacture for which the town is celebrated is its pale beer, which is sent to almost every part of the Netherlands; it has, however, manufactories of Prussian blue, glue, leather, and cloth; it has also copper-works and salt-works. N. was a Roman post under Julius Cæsar, and an imperial city under Charlemagne; but is known in history from the treaty concluded here in 1678. It was taken by the French in 1794, after a severe action.

NIMES, or NISMES, a town of France, the cap. of the dep. of Gard, on the railway from Beaucaire to Cette, 30 m. NE of Montpellier, in N lat. 43° 0′ 36″, E long. 4° 20′ 46″. Pop. in 1789, 48,360; in 1821, 39,068; in 1846, 47,215, of whom 25,000 were Protestants. It stands in a beautiful plain, surrounded with undulating eminences, and fertile in corn, wine, and olives. The interior of the town is confused and irregular, and the houses in general ill-built, but a few are respectable, if not handsome. The suburbs, which are nearly as large as the town, have more straight and regular streets, and the whole town is cleaner than most of the southern towns of France. The close built part of the town is surrounded by boulevards, on the site of the mound or earthen wall which formerly enclosed the city. On the Boulevard de l'Esplanade is a hall of justice, built in the Grecian style, and adorned with Tuscan columns. On another is a handsome hospital. N. has no longer an academy of sciences, but it has a royal college or university academy, with a library of 38,000 vols., a society of medicine and agriculture, an academy of the fine arts, and several other literary and scientific institutions. It has also extensive manufactories, particularly in silk stuffs, stockings, ribbons, linen, and leather. It has likewise dyeing and printing works; also an extensive trade in raw and wrought silk, corn, dried fruits, olive oil, and the wines and brandy of the surrounding country. It is the seat of the departmental authorities and courts of justice, as well as the central court of appeal for the departments of Gard, Vaucluse, Lozère, and Ardeche. A central house-of-detention for 12 departments is established here, and generally contains from 1,000 to 1,500 prisoners. It is now the see of a bishop suffragan of Avignon.—N. is a very ancient city. It originally bore the name of *Nemausus*, and it is supposed was built by a colony of Greeks, about the same time as Marseilles. Augustus sent hither a Roman colony, who embellished it greatly, and made it one of the finest cities of its day. It afterwards successively fell under the dominion of the Vandals, the Goths, and the Saracens; and was united to the crown of France in the 8th cent. It is interesting from its ancient monuments, of which, with the exception of Rome, it is said to contain more than any

other city in Europe. The far-famed *Maison Carrée* is a fine ancient edifice, 76 ft. in length, 39 ft. in breadth, and 39 ft. in height. It has 6 columns in front, and 10 on each side, of 27 ft. in height. This edifice stands in the middle of the town, and is almost in as good preservation as when reared in honour of Caius and Lucius Cæsar, the grandsons of Augustus. There are also, among other Roman remains here, a beautiful fountain, with the remains of baths, statues, and other antiques; a building commonly called the temple of Diana, but supposed rather to have been a pantheon; a large ancient tower, above 200 ft. in height, situated on an eminence at the N side of the city, and formerly surrounded by a circle of open columns; and above all, the walls of the amphitheatre, an edifice almost as large as the colosseum of Rome, and in a better state of preservation. The grand outline, 412 ft. in length, and 306 ft. in breadth, of the amphitheatre is still entire; its columns, porticos, 35 rows of steps, and most of its ornaments, are in good preservation.—The arrond. of N. comprises an area of 167,998 hect. Pop. in 1841, 134,737. It is subdivided into 9 cants.

NIMISHILLEN, a township of Stark co., in the state of Ohio, U. S. It has a level surface, watered by a creek of the same name, and is generally fertile. Pop. in 1840, 1,927.

NIMISILLA, a village of Franklin township, Summit co., in the state of Ohio, U. S., 121 m. NE of Columbus. Pop. in 1840, 100.

NIMMEN, a town of Mandshuria, in the prov. of Kirin-Ula, on the l. bank of the Nonni, 42 m. NNE of Tsitsikar.

NIMPTSCH, a circle and town of Prussia, in the prov. of Silesia, and reg. of Breslau. The circle comprises an area of 51 sq. m., and 23,036 inhabitants. The town is 32 m. S of Breslau, and 9 m. E of Reichenbach, on the Lohe. Pop. in 1837, 1,654. It is enclosed by walls, and contains 2 Lutheran churches, a Catholic chapel, and an hospital. It has several distilleries, and manufactories of woollen fabrics and of hosiery.

NIMRA, a town of Arabia, in Yemen, 54 m. WNW of Kaukeban, and at an equal distance from Leheia.

NIMRAB, a tribe of Arabs, who inhabit the territory of Shendy in Nubia.

NIMRUD, or NIPHATES, a range of mountains in Turkey in Asia, between the pashaliks of Erzerum and Diarbekir. They commence a little to the N of Bedlis, near the source of the Khabur; run W; and unite with the Taurus chain near the source of the Tigris. They extend a total distance of 180 m., and form a line of separation between the upper streams of the Euphrates and Tigris. Their W division bears the name also of the Gudji-dagh.

NIMRUD, an immense quadrangular mound of bricks and rubbish, about 4 m. in circumf., 8 m. SSE of Mosul, and 2¾ m. SE of Zikru-l'-Ahwaz, as a dyke of solid masonry which crosses the bed of the Tigris is called. In the middle of the W side of this mound is the celebrated NW palace, which Mr. Layard has recently explored with such rich and interesting results. It is one of four similar mounds in this vicinity, one of which, that of Khorsabad, is situated about 14 m. NE of Mosul, on the l. bank of the Khauser, an affluent of the Tigris. Another, or rather twin mounds, called Kouyunjik and Nebbi-Yunis, stands immediately opposite Mosul. The third, called Karamles, is as far N of Nimrud as Khorsabad is from Mosul. Mr. Layard is of opinion that the position of the long-lost city of Nineveh may be assumed by taking these four great mounds as the corners of its ground plan: the four sides corresponding pretty accurately in circuit with the 480 stadia = 60 m., or perhaps 74 m. assigned by Diodorus Siculus as the circuit of the walls, and the three days' journey of the prophet Jonah. It appears, from some incidental expressions of Herodotus, that he intended to give a description of this famous metropolis in the work he proposed on Assyrian history; but either that work never was composed, or it has perished. He says that Nineveh, or, as he calls it, *Ninos*, was ruined by Cyaxares and the Medes, using language which implies that in his time it was either not at all or but partially inhabited. Diodorus describes it as covering an area of 480 stadia, and surrounded with walls 100 ft. high. He speaks, in another place, of its capture by Arbaces, a Mede. Its final conquest by Cyaxares and Nebopolassar, in 612 B.C, is described by Alexander Polyhistor; after which time, it not only was superseded as the seat of government by Babylon, but the materials of its buildings, and probably its pop. also, were transferred to the rival city. Nearchus, in the time of Alexander, mentions Nineveh in terms which seem to imply that a city of the name was still in existence, though it had lost its power and greatness. Strabo says that it was destroyed before his time; and Lucian, that when he wrote [A. D. 180.] not a vestige of it remained. In this state—"a desolation," in the language applied to it by the prophet Zephaniah—this great city seems to have continued until Botta's and Layard's researches and discoveries drew attention to it again. The notice of travellers in Assyria had indeed been often attracted to the huge mounds of earth and rubbish, which it was conjectured might be the remains of the once stupendous cities of Nineveh and Babylon. A mass of brickwork, vitrified, and rising out of the aggregated debris of centuries, was long identified with the remains of the tower of Babel. Some mounds, it was also conjectured, might mark the site of the hanging-gardens of BABYLON [see that article]. And among the numerous mounds on the l. bank of the Tigris, opposite the modern city of Mosul, one which tradition fixed on as the tomb of Jonah, led conjecture to the probable site of the ancient Nineveh. As early as 1841, Mr Layard had inspected the ruins and mounds on the E bank of the Tigris, and the scene and sensation which it then excited in him, are thus described in his own words: "He [the spectator] has left the land where Nature is still lovely,—where, in his mind's eye, he can rebuild the temple, or the theatre, half doubting whether they would have made a more grateful impression upon his senses than the ruin before him. He is now at a loss to give any form to the rude heaps upon which he is gazing. Those of whose works they are the remains, unlike the Roman and the Greek, have left no visible traces of their civilization or of their arts: their influence has long since passed away. The more he conjectures the more vague the results appear. The scene around is worthy of the ruin he is contemplating: desolation meets desolation; a feeling of awe succeeds to wonder; for there is nothing to relieve the mind, to lead to hope, or to tell of what has gone by. These huge mounds of Assyria made a deeper impression upon me, gave rise to more serious thoughts and earnest reflections, than the temple of Balbec and the theatres of Ionia." Shortly afterwards, Mr. Layard had a second opportunity of viewing the ruins of Nimrud, and of examining them; and it was upon this occasion that the thought suggested itself to him of making excavations. In a happy moment, he obtained a letter of introduction to Sir Stratford Canning, her Majesty's ambassador at the Sublime Porte. That distinguished statesman at once perceived that no ordinary person had been presented to his notice, and invited him to prolong his stay in the East, and discharge some extra duties of the embassy and ultimately enabled the sanguine and successful explorer, in the autumn of 1845, to resume his excavations in Assyria, in the hope that, should success attend the attempt, means would be found to carry it out on an adequate scale. All our readers know the triumphant result of Mr. Layard's enterprise and perseverance, which have brought into the possession of this country treasures beyond all price, in the monuments now deposited in the Assyrian gallery of the British museum.

Mr. Layard's general conclusions from his Assyrian researches, aided by the extraordinary skill of Major Rawlinson in deciphering various inscriptions, are thus summed up by himself. "1st. That there are buildings in Assyria which so far differ in their sculptures, in their mythological and sacred symbols, and in the character and language of their inscriptions, as to lead to the inference that there were at least two distinct periods of Assyrian history. We may, moreover, conclude, that either the people inhabiting the country at those distinct periods were of different races, or of different branches of the same race; or that by intermixture with foreigners, perhaps Egyptians, great changes had taken place in their language, religion, and customs, between the building of the first palace of Nimrud, and that of the edifices at Khorsabad and Kouyunjik. 2d. That the names of the kings on the monuments show a lapse even of some centuries between the foundation of the most ancient and most recent of these edifices. 3d. That from the symbols introduced into the sculptures of the second Assyrian period, and from the Egyptian character of the small objects found in the earth, above the ruins of the buildings of the oldest period, there was a close connection with Egypt, either by conquest or friendly intercourse, between the time of the erection of the earliest and latest palaces; and that the monuments of Egypt, the names of kings in certain Egyptian dynasties, the ivories from Nimrud, the introduction of several Assyrian divinities into the Egyptian pantheon, and other evidence, point to the 14th cent. as the probable time of the commencement, and the 9th as the period of the termination of that intercourse. 4th. That the earlier palaces of Nimrud were already in ruins, and buried before the foundation of the later; and that it is probable they may have been thus destroyed about the time of the 14th Egyptian dynasty. 5th. That the existence of two distinct dynasties in Assyria, and the foundation, about 2,000 B. C., of an Assyrian monarchy, may be inferred from the testimony of the most ancient authors; and is in accordance with the evidence of Scripture, and of Egyptian monuments. The ruins hitherto examined," Mr. Layard pro-

ceeds to say, "have shown that there are remains of buildings of various epochs on the banks of the Tigris, near its junction with the Zab; and that many years, or even centuries, must have elapsed between the construction of the earliest and the latest. That the ruins at Nimrud were within the precincts of Nineveh, if they do not alone mark its site, appears to be proved by Strabo, and by Ptolemy's statement that the city was on the Lycus, corroborated by the tradition preserved by the earliest Arab geographers. Yakut and others mention the ruins of Athur, near Selamiyah, which gave the name of Assyria to the prov.; and Ibn Said expressly states that they were those of the city of the Assyrian kings who destroyed Jerusalem. They are still called, as it has been shown, both Athur and Nimrud. The evidence afforded by the examination of all the known ruins of Assyria further identifies Nimrud with Nineveh. It would appear from existing monuments that the city was originally founded on the site now occupied by these mounds. From its immediate vicinity to the place of junction of two large rivers, the Tigris and the Zab, no better position could have been chosen. It is probable that the great edifice in the NW corner of the principal mound was the temple or palace, or the two combined; the smaller houses were scattered around it, over the face of the country. To the palace was attached a park, or paradise as it was called, in which was preserved game of various kinds for the diversion of the king. This enclosure, formed by walls and towers, may perhaps still be traced in the line of low mounds branching out from the principal ruin. Future monarchs added to the first building, and the centre palace arose by its side. As the pop. increased with the duration and prosperity of the empire, and by the forced immigration of conquered nations, the dimensions of the city increased also. A king founding a new dynasty, or anxious to perpetuate his fame by the erection of a new building, may have chosen a distant site. The city, gradually spreading, may at length have embraced such additional palaces. This appears to have been the case with Nineveh. Nimrud represents the original site of the city. To the first palace the son of its founder added a second, of which we have the ruins in the centre of the mound. He also built the edifice now covered by the great mound of Baasheikha, as the inscriptions on the bricks from that place prove. He founded at the same time a new city at Kalah-Sherghat. A subsequent monarch again added to the palaces at Nimrud, and recorded the event on the pavement-slabs in the upper chambers of the western face of the mound. At a much later period, when the older palaces were already in ruins, edifices were erected on the sites now marked by the mounds of Khorsabad and Karamles. The son of their founder built the great palace at Kouyunjik, which must have exceeded those of his predecessors in extent and magnificence. His son was engaged in raising one more edifice at Nimrud,—the previous palaces, as it has been shown, having been long before deserted or destroyed,—when some great event, perhaps the fall of the empire and destruction of the capital, prevented its completion. The city had now attained the dimensions assigned to it by the book of Jonah, and by Diodorus Siculus. If we take the four great mounds of Nimrud, Kouyunjik, Khorsabad, and Karamles, as the corners of a square, it will be found that its four sides correspond pretty accurately with the 480 stadia or 60 m. of the geographer, which make the three days' journey of the prophet. Within this space there are many large mounds, including the principal ruins in Assyria, such as Karakush, Baasheikha, Baazani, Husseini, Tel-Yara, &c. &c.; and the face of the country is strewed with the remains of pottery, bricks, and other fragments. The space between the great public offices was probably occupied by private houses, standing in the midst of gardens, and built at distances from one another; or forming streets which enclosed gardens of considerable extent, and even arable land. The absence of the remains of such buildings may easily be accounted for. They were constructed almost entirely of sun-dried bricks, and, like the houses now built in the country, soon disappeared altogether when once abandoned and allowed to fall into decay. The largest palaces would probably have remained undiscovered had there not been the slabs of alabaster to show the walls. There is, however, sufficient to indicate that buildings were once spread over the space above described; for, besides the vast number of small mounds everywhere visible, scarcely a husbandman drives his plough over the soil without exposing the vestiges of former habitations. Each quarter of the city may have had its distinct name; hence the palace of Evorita, where Seracus destroyed himself, and the Mespila and Larissa of Xenophon, applied respectively to the ruins at Kouyunjik and Nimrud. Existing ruins thus show that Nineveh acquired its greatest extent in the time of the kings of the second dynasty—that is to say, of the kings mentioned in Scripture. It was then that Jonah visited it, and that reports of its size and magnificence were carried to the west, and gave rise to the traditions from which the Greek authors mainly derived the information handed down to us."

Mr. Ainsworth, the able and efficient secretary of the Syro-Egyptian society, and whose personal researches led the way to a better knowledge of the geography of Assyria, has called in question some of the conclusions at which Mr. Layard has arrived in the above passage. In a paper recently read by him before the Syro-Egyptian society, after pointing out the received distinctions of Assyria Proper, and of the Assyrian empire, Mr. Ainsworth proceeded to argue that, whichever of the disputed versions of Gen. x. 11 is adopted, it still remains certain that there was an Assur or Athur existing before the foundation of Nineveh; that the Arabian geographers, Yakut, Abulfeda, and Ibn Said, describe the ruins at the modern N. as those of the said Asshur, or Athur; that Mr. Rich, in his *Kurdistan* [vol. ii. p. 129], the Rev. N. Morren, in his article 'Assyria' in *Kitto's Cyclopedia*, and Dr. Layard, in his *Nineveh*, &c. [vol ii. p 245], admit that all well-informed natives designate Nimrúd as Al Asshur, or Athur. He also argued that the name which occurs in the inscriptions found in the NW edifice at Nimrúd has been read by Major Rawlinson as that of the Asshur of Genesis, and that Dr. Hincks has also published his conviction that the first word of the inscription is either the name, or an abbreviation of the name, of Athur: although the doctor adds, which is a *non sequitur*, that the same name stands for the city of which the historical name is Nineveh; that Dr. Layard's archæological investigations have already shown that the builder of the central palace—the second in succession of time—at Nimrúd also erected edifices, if he did not found the sites of what are now called Báasheikha and Kalá Shirgat; that Dr. Layard also admits that the more modern Assyrian ruins at Koyunjuk, Khorsabad, and Karamles represent the Nineveh of the Books of Jonah and Nahum, of profane history and of travellers. But Dr. Layard also comprises within the same denomination a palace of the same age that was erected upon the ruins of Asshur. That taking Dr. Layard's own map, and laying down upon it, as proposed by that gentleman, the extent given to Nineveh by Diodorus Siculus, taking the value of the stadium as proposed by Dr. Layard, or, as Mr. Ainsworth would prefer, as proposed by Major Jervis, 607·62977 ft., the great mound of Nimrúd, Koyunjuk, Karamles, Báasheikha, Khorsabad, &c., cannot be brought into that area. That the distance of Nimrúd from Mosul is, according to Yakut, 8 farsakhs—of Larissa (Nimrúd) to Mespila (Mosul), according to Xenophon, 6 parasangs—of Nimrúd from Yarumjah 18 m., according to Mr. Ainsworth's own researches—and from Nimrúd to Koyunjuk, in Dr. Layard's map, 23 geog. m.; whereas the long side of the square, as described by Diodorus Siculus, gives only 16½ m. So also from Nimrúd to Karamles is a distance of 16 geog. m.; whereas, according to the measurements of Diodorus Siculus, the shorter side should not exceed 9 or 10 m. No arbitrary grouping of the Assyrian ruins would be satisfactory, Mr. Ainsworth contended, at the present moment. In any case, as many sites, as Jerraiyah, Tel Escoff, Tel Kaif, Báazani, Husseini, Tel Yakub, Keshaf, Tel Shir, Hamman Ali, &c., must be left out as could be got into a Nineveh so laid down; but that if such a grouping were made, Báasheikha, Báazani, Karamles, and Nuniyah would come together with far greater topographical aptitude than the group proposed by Dr. Layard, and which would exclude Báasheikha, monumentally established as the site of the palace of the successor of the builder of the NW palace of Nimrúd; that such a grouping would also best meet the descriptions of the site of the historical Nineveh left to us by Herodotus, Pliny, and others. That if, when Strabo said "between the rivers," he had had Nimrúd in his mind, he would, with his customary accuracy, have said "at the junction of the rivers;"—and that, finally, in the present state of the inquiry there are no other data than that Nimrod or Ninus, or his or their successors, erected and continued to erect edifices at Athur, one of the oldest cities of Assyria Proper; and that the second dynasty also erected edifices at the same spot after its fall, and the rise of the historical Nineveh, to identify the one with the other; but that the greater number of probabilities, at least topographically speaking, are that the two sites were always distinct, and that Athur or Nimrúd was a separate site from the abode of Ninus, as well as from the historical Nineveh.

The points above debated are certainly involved in considerable doubt and difficulty, and it will require much more extensive research in the way of excavation, and the labour perhaps of a generation or two of historians and philologists to elicit well-established and satisfactory conclusions from the new found evidence. Mr. Fletcher's opinion as to the identity of the ruins of Nimrud with certain ancient localities may be here given: "It is evident," he says, "from the sculptures which have been discovered at Nimrud, that these mounds were in ancient days occupied by some large Assyrian city. Major Rawlinson, in his interesting paper on Assyrian Antiquities, assumes that the ruins of Nimrud represent the old city of Calah, or Halah, while he places Nineveh at Nebbi-Yunas. Yet it appears likely that the ancient Calah, or Halah, which was probably the capital of the district of Calachene, must have been nearer to the Kurdish mountains. Ptolemy mentions the prov. of Calachene as bounded on the N by the mountains of Armenia, and on the S by the district of Adiabene. Most writers place Ninus, or Nineveh, within the latter prov. But if so, Adiabene would include also Nimrud, and, therefore, it is not probable that Halah, or Calah, could have occupied the site indicated by Major Rawlinson. St. Ephraim, himself a learned Syrian, and well-acquainted with the history and geography of the East, considers Calah to be the modern Hatareh, a large town inhabited chiefly by Yezidees, and situated NNW of Nineveh. Between Hatareh and the site of Nineveh we find a village bearing the name of Ras-el-Ain, which is evidently a corrupted form of the Resen of Genesis. It is worthy of remark that this theory confirms the statement made in Gen. x. 12, where Resen is represented as occupying a midway position between Calah and Nineveh. But assuming Major Rawlinson's hypothesis to be correct, it is clear that there would be no room for a large city between Nebbi-Yunas and Nimrud, a distance of, at most, 25 m. Nor is it certain that the latter may be considered as the site of the *Larissa* of Xenophon. A considerable interval must have taken place between the passage of the

river Zab by the Ten thousand and their arrival at the Tigris. It is expressly mentioned that they forded a mountain-stream, which seems to have been of some width, soon after they had passed over the Zab. But no vestige of any stream of this kind appears between Nimrud and the Tigris. It is probable, therefore, that the Charadra of Xenophon was the Hazir, or Bumadas, after passing which, the Ten thousand marched in a NW direction past the modern village of Kermalis to the Tigris. At a short distance from the latter they encountered a ruined city, which Xenophon terms Larissa, and which occupied probably the site of the modern Ras-el-Ain. The village known by this name is about 12 m. from the Tigris, but the ancient city may have been much nearer. Both Ptolemy and Ammianus Marcellinus mention a city situated at the mouth of the Zab, on precisely the same site as that occupied by the mounds of Nimrud, which they term Birtha, or Virtha. But Birtha, or Britha, in Chaldee, signifies the same as Rehoboth in Hebrew, namely, wide squares or streets, an identity in name which seems to imply also an identity in locality. It appears likely, therefore, that Nimrud is the same as Rehoboth [Gen. x. 11.], which it is said Asshur founded after his departure from the land of Shinar."

NIMWEGEN. See Nimeguen.

NIMY-MAISE'RES, a department and commune of Belgium, in the prov. of Brabant, and arrond. of Mons, watered by the Haine. Pop. of dep. 2,048. The village is 2 m. N of Mons, on the l. bank of the Haine. Pop. 1,496. It has manufactories of porcelain and pipes, and of sugar from beet-root.

NINANE, a commune of Belgium, in the prov. of Limburg and dep. of Chaudfontaine. Pop. 387.

NINEANAI, or Nimeanai, a large state in the interior of Africa, to the W of the Zanguebar coast, intersected by the equator. Nothing is known of it save from the reports of Somali traders; who represent it as a fertile region, under a sovereign chief.

NINEHEAD, a parish of Somersetshire, 1½ m. N of Wellington. Area 1,510 acres. Pop. in 1831, 311; in 1841, 349.

NINE ISLANDS, a group of small islands in the Pacific, lying to the N of the Salomon archipelago, in S lat. 4° 36′, E long. 154° 58′.

NINE MILE PRAIRIE, a township of co. Callaway, in the state of Missouri, U. S. Pop. 2,059.

NINEROLA, a village of Spain, in the prov. and 6 m. from Valentia, celebrated for quarries of fine marble.

NINE STANDARDS, a mountain of Westmoreland, 3 m. ESE of Kirkby-Stephen, in N lat. 54° 27′ 2″, having an alt. of 2,136 ft. above sea-level.

NINEVEH. See Nimrud.

NINFA (Santa), a village of Sicily, in the prov. and 30 m. SE of Trapani.

NINFIELD, a parish of Sussex, 3½ m. SW of Battle. Area 2,700 acres. Pop. in 1841, 563.

NING, a town and district of China, in the prov. of Shen-si, 90 m. NNW of Si'an.—Also a town and district in the prov. of Kiang-si, 90 m. WNW of Nanshang.—Also a town and district in the prov. of Yun-nan, 60 m. S of Yun-nan.

NING-GOUTA, a town of Mandshuria, on the Hurka river, 90 m. ENE of Kirin, in N lat. 44° 24′, E long. 129° 43′. It is surrounded by a double line of strong palisades, with 4 gates. It conducts an active trade with the Chinese frontier.

NING-HAI, a town of Corea, in the prov. of Kin-shan, on the Yellow sea, 120 m. SE of Han-yang.

NING-HIA, or Ning-Hai, a town of China, in the prov. of Kan-su, near the great wall and on the l. bank of the Hoang-ho, in N lat. 38° 32′. It is reputed to be 6 m. in circuit, and to have two walled suburbs; but its houses are mostly built of wood and earth. Its brick walls are ancient, and almost entirely covered with moss and lichens, but are well-preserved. The streets are dirty, narrow and winding; and many quarters are in ruins. This town was the capital of a flourishing Tartar state for two centuries. It is surrounded on all sides by marshes, in which canes, reeds, and water-lilies, grow in abundance.

NING-HIANG, a town of China, in the prov. of Shan-si, 90 m. SW of Thai-Yuan.

NING-KOUE, a town of China, in the prov. of Ngan-hwei, in N lat. 31° 2′, E long. 118° 43′. It is environed by a mountainous and thickly wooded territory. It is celebrated for its manufacture of paper from a species of rose.

NINGO, a town of Upper Guinea, on the Gold coast, 30 m. W of the embouchure of the Volta. The environs are flat, fertile, and wooded.

NING-PO, a city of China, in the prov. of Chekiang, on a tongue of land at the point of junction of two rivers, which, uniting below the town, form the Takia or Ning-Po river, in N lat. 29° 54′, E long. 121° 32′, about 100 m. S of Shang-hai, and nearly opposite the island of Chusan. It is situated on a fertile plain surrounded by hills, and well-irrigated from the river. Its walls, 25 ft. in height, have a circuit of 6 m., and it is well-supplied with shops, but presents no important edifice, except its temples, one of which is of large size. Its streets are narrow, and are crossed here and there by heavy stone arches. Its pop. has been estimated at between 200,000 and 300,000. Of the pop. within the walls, it has been estimated that four-fifths are engaged in trade, merchandise, or labour; while no less a proportion than the remaining fifth is calculated to belong to the literary class. This, however, includes not only the graduates and candidates for literary promotion, but also the writers and clerks in the public offices. Of the pop. in the suburbs, and on the level plain extending to the hills, six parts out of ten are estimated as deriving their livelihood from agriculture; three parts as artisans of various kinds; and the remaining tenth as consisting of fishermen and boatmen. The manufacture of carpets and mats furnishes employment to a large proportion of the people. The female part of the pop. are employed, to a considerable extent, in weaving cloth. If the statement which was once made by the present *taoutai* be correct, that in N. there are 100,000 houses and shops assessed in taxes to the government, even a moderate calculation must raise the number of the pop. to nearly 400,000 persons. This, however, will be considered a very large estimate, when the extent of ground actually covered with buildings is considered. In some parts of the city a considerable space of ground is occupied by gardens and tombs. The latter are often covered with shrubs, and various species of the melon tribe. There is an usually large proportion of temples and of spacious private buildings within the walls. The breadth, also, and cleanliness of the principal streets, give a favourable impression of the wealth and rank of the inhabitants. The comparative facility, however, with which houses can be rented within the city by foreigners, the decay of many of the buildings, and the non-occupation of others, furnish a proof that the city is rapidly losing its former splendour and consequence. But N. is still a place of importance, and has a considerable trade with the interior. It has a large maritime trade also with the prov. of Fo-kien, and the island of Formosa, from both of which sugar and rice are imported. There is also an extensive trade with the prov. of Shan-tung. It is one of the 5 ports opened by recent treaty to foreign trade, but its commerce has as yet proved limited, although it is near to the green tea districts. It exports silks to Japan, and wood and charcoal to Shang-hai; and a considerable number of the pop. find employment in junk building. A missionary hospital and station was founded here in 1843, and promises to be of peculiar value in the evangelization of China. The peculiar advantages which N. presents as a missionary station are thus enumerated: 1. The pop.,

from the limited extent of its foreign commerce, is less exposed to the disquieting, contaminating influences on their simplicity. 2. The literary character and social refinement of the people have acquired a celebrity throughout the empire. 3. N. is the usual point of access to the populous city of Hang-chow, which is the cap. of the prov. of Che-keang, and is inferior in importance only to Su-chow. 4. It has also an extensive native trade with the interior. 5. Its situation on the mainland, opposite to Chusan, invests it with an important character, under a variety of future contingencies. In the event of a recurrence of hostilities, Chusan would probably, as in the last war, be immediately occupied by British troops; and, once re-occupied, it would be permanently retained, and probably substituted for Hong Kong, as the base of British power. This would open Chusan to missionary efforts; and missionaries from N., speaking the same dialect, would be ready at once to enter on this fertile, salubrious, and populous island. The climate, like that of Shang-hai, is favourable for Europeans of ordinary physical strength; the boundary regulations permit a considerable extent of missionary exertion; the people are friendly and respectful to foreigners; the rulers evince no disposition to oppose the efforts of missionaries; and the dialects of Shang-hai and N., though dissimilar, resemble each other more than at any other two of the consular cities of China." One of the branches of the river of N. leads in a NE direction to Yu-yow and Hang-chu-fu; the other, or SW branch, leads to Fung-wai. A bridge of boats connects the town with its suburbs. In the year 1841, a body of British troops held winter-quarters here. The weather set in intensely cold in the middle of December, and on the 14th of that month the surrounding hills were all covered with snow, which also fell heavily in the town itself.

NING-THI. See KYAN-DUAYN.

NING-TU, a town of China, in the prov. of Kiang-si, in N lat. 26° 27′, E long. 115° 49′.

NING-YUEN, a town of Eastern Tartary, near the frontier of China, situated on a small river of the same name which falls into the gulf of Leao-tung, 250 m. E of Pekin.—Also a town of China, in the prov. of Ho-nan, in N lat. 25° 32′, E long. 111° 46′.

NINIAN BAY, a bight on the NE coast of Australia, to the W of Point Barrow, running into the land about 3 m.

NINIANS (SAINT), a parish and town of Stirlingshire. The greater part of the p. is arable land, and well-cultivated. Pop. in 1841, 10,080.—The town, 2 m. S of Stirling, is a considerable manufacturing place. Tartans, woollen stuffs, and nails are extensively made here, and at the village of Bannockburn. In 1746, the church, converted into a magazine by the Highland army, was blown up. The main street is narrow and confined, and the houses are in general old-fashioned.

NINK, a town of Russia, in the gov. of Archangel, in about 64° 30′ N lat., and 31° E long.

NINOVE, a town of Belgium, in the prov. of E. Flanders, on the Dender, 16 m. SW of Brussels, and 22 m. SSE of Ghent. Pop. in 1842, 4,500. Linen yarn is made here.

NINTH ISLAND, a small island off the S coast of Van Diemen's Land, in S lat. 40° 51′, E long. 147° 15′.

NINTRE, a village of France, in the dep. of Vienne, cant. and 5 m. S of Chatellerault. Pop. 1,500.

NIO, anciently *Ios*, a small island of European Turkey, in the archipelago, 17 m. SW of Naxos, and 4 m. E of Sikyno, 8 m. in length from SE to NW, and 3½ m. in breadth. It is hilly, and not particularly fertile, but has a pop. of 3,700 Greeks, who raise both wine and cotton; they export also oil, wax, cheese, and honey; their principal property, however, consists in their cattle, which are numerous. Nio, the chief town, is built on a height on the W side of the island, and is said to contain three-fourths of the inhabitants. Tradition asserts that Homer died in this island, and had erected to him a monument here. Gaultier fixes the position of the highest and central point of the island in N lat. 36° 42′ 44″, E long. 25° 20′ 59″.

NIŒUIL-SUR-L'AUTISE, a village of France, in the dep. of La-Vendee, cant. of Saint-Hilaire-sur-l'Autise. Pop. 800.

NIONS. See NYONS.

NIORT, an arrondissement, canton, and town of France, in the dep. of Deux-Sevres.—The arrond. comprises 8 cants., and has an area of 143,501 hect. Pop. in 1841, 102,482.—The cant. comprises 13 com. Pop. in 1841, 30,758.—The town, situated on the Sevre, which from it takes the name of Sevre-Niortaise, in N lat. 46° 19′, had a pop. of 18,739 in 1841. It stands on two small hills, and has a castle flanked with four round towers. It has a public library of 20,000 vols., a communal college, a school-of-design, and a botanic garden. Its manufactures consist of woollen-stuffs, gloves, leather, shoes, and paper.—Also a town of France, dep. of the Mayenne, 2 m. W of Lassay. Pop. 2,000.

NIO-TCHU, a river of Tibet, which joins the Pung-suk-Zangvo, on the r. bank, on the frontier of Bhotan.

NIPASK, a lake of North America, in N lat. 52° 10′, W long. 103° 20′.

NIPHON. See NIFON.

NIPIGON, a river and lake of Upper Canada. The lake is about 60 m. N of Lake Superior, and discharges itself into the latter lake by the river, which has a course from NNW to SSE.

NIPISIGHIT, a river and village of New Brunswick. The river has a NE course, and enters the S side of Chaleur bay, above 12 leagues W of Caraquit island, after a course of 45 m. The v. is at its mouth.

NIPISSING, a lake of Upper Canada, to the NW of Lake Huron, into which it discharges itself by the river Francais. It is also connected with the Ottawa by the SW branch. It is noted for its immense flocks of wild geese. It is about 50 m. in length, by 35 m. in breadth.

NIRGUA, a town of Venezuela, 36 m. W of Valencia, originally erected in the vicinity of the mines of Villa-Rica, but afterwards removed in consequence of the repeated attacks of the Indians. Its environs are fertile, but infected by malaria. The Sambos of N., for services rendered to the royal authority, attained from the Spanish monarch the title of "his faithful and loyal subjects, the Sambos of the city of Nirgua." The houses are almost all in ruins from age.

NIRIS, a village of Farsistan, in Persia, 75 m. E of Shiraz. It has manufactories of arms and cutlery.

NIRMUL, a town of Hindostan, in the prov. of Berar, and district of Nandere, belonging to the Nizam, 4 m. N of the Godavery.

NIRVA, a village of Nifon, in Japan, 80 m. ENE of Meaco.

NISAO, a river of Hayti, which rises in a small lake, and flows SSE, having its embouchure in about N lat. 18° 14′, W long. 70° 12′.

NISCH. See NISSA.

NISEMASSE, a cluster of small islands in the Eastern seas, in N lat. 8° 15′, E long. 128° 42′.

NISHAPUR, an ancient city of Persia, 35 m. WSW of Meshid, once the greatest and richest in

the prov. of Khorassan. About the middle of the 12th cent. it was taken by the Tartars, and so completely ruined that when the inhabitants returned they could not distinguish the situation of their own houses. Its ruins are said to cover a circuit of 25 m. The present pop. is about 8,000. Delicious fruits are produced in its neighbourhood; and it has a trade in turquoises, iron, and salt.

NISHNABATTONA, a river of Louisiana, which falls into the Missouri, on the l. bank, in N lat. 40° 20′. It is about 50 yds. wide at its mouth, and runs parallel to the Missouri throughout the greater part of its course.

NISI, a town of Greece, in the SW of the Morea, on the r. bank of the Pidheima, near its mouth. It is supposed to occupy the place of the ancient *Stenicla*ros, a port of the Messenians. The vicinity is rich and well-cultivated.—Also a river of Sicily, in the district of Messina, which flows into the Ionian sea after a SE course of 12 m. Its sands are said to yield gold.

NISIBIN, a village of Asiatic Turkey, in the pash. of Bagdad, 36 m. SE of Mardin, now of petty dimensions, but distinguished as occupying the site of the ancient fortress of *Nisibis*, long regarded by the Romans as the firmest bulwark of the Eastern empire. The foundation of the walls, about 3 m. in circuit, and several detached towers, may still be seen overlooking the small but rapid river *Mygdonius*, and approached by a small Roman bridge of 12 arches. The greater part of the site of the ancient city is now covered with the black tents of the Kurds. Rice is cultivated in the environs.

NISIDA, or NISITA, a small island of the Mediterranean, in the gulf of Naples, 3 m. SE of Pozzuoli. Its lower part is covered with gardens and other cultivated ground, while the upper is crowned as anciently with wood. It is described by Lucan as emitting pestilential steams; but at present it is perfectly salubrious. It has a small sea-port called Porto-Pavone, where ships going to Naples perform quarantine. See article NAPLES (GULF OF).

NISKAYUNA, a township of Schenectady co., in the state of New York, U. S., on the S side of the Mohawk, 12 m. NW of Albany. Pop. 700.—Also a settlement of Shakers, 8 m. NW of Albany.

NISMES. See NIMES.

NISSA, a fine city of Bulgaria, the *Naissus* of antiquity, and one of the oldest towns in European Turkey, seated on the l. bank of the rapid Nischava, a tributary of the Morava, which divides the town from the dilapidated *grad* or fortress. It is encircled by an earthen embankment with palisades and gates; and its fortress is surrounded by a strong rampart of masonry, with elevated bastions. The pop. is about 4,000. Mr. Spencer is of opinion that a good carriage-road might be constructed from the valley of N. by following the course of the Morava to Pristina, and from thence taking the valley of the Vardar, through Macedonia, to Salonica on the Ægean sea. Dr. Platé is of opinion that, in the event of the prolongation of the German and Hungarian railways across Turkey, as a means of speedy communication with the East, the line should run along the r. bank of the Morava; and then, leaving the valley, go over low upland either toward N. or Sophia, whence it would be pushed forward to Adrianople and Constantinople, or into the valley of the Egerb-su, and thence into that of the Vardar near Uskub.

NISSAH, a river of Algeria, which descends from the Gurgurah, and after receiving the Bugdurah, assumes the name of the Buberak, and flows into the Mediterranean, 42 m. E of Algiers.

NISSAN, a village of France, in the dep. of Herault, 4 m. SW of Beziers. Pop. 1,200.

NISSAVA, a river of European Turkey, which descends from Mount Jesekowitz to the S of Sinshink; flows WNW, passing Nissa; and, 12 m. below the latter town, joins the Morava, on the r. bank, after a course of 90 m.

NISSER-VAND, a lake of Norway, in the bail. of Bradsberg. It is about 30 m. in length, and from 2 to 3 m. in breadth; and is enclosed by cliffs of vast elevation. or mountains clothed with sombre pine-forests. It discharges its waters by the Nid-elv into the Skager-rack.

NISSUM-FIORD, an inlet on the W coast of Jutland, communicating with the sea by a narrow passage called the Sœnder-minde, in N lat. 56° 22′. It is 13 m. in length, by 4 m. in breadth.

NISTELRODE, a village of Holland, in the prov. of N. Brabant, 12 m. E of Bois-le-Duc. Pop. 1,600.

NISTER, a village of the duchy of Nassau, in the bail. of Hachenburg, on an affluent of the Sieg. Pop. 2,136.

NI-TAO, an island of the Yellow-sea, near the SW extremity of Corea. It is 12 m. in length from N to S.

NITH, the largest of the three chief rivers of Dumfries-shire, giving name to the W division of the co. Its principal head-streams rise on the N side respectively of Prickeny and Benbain-hills, 2½ m. asunder, both on the boundary of Ayrshire. After passing the village of New-Cumnock, and receiving in its vicinity from the S, Connal-burn and the beautiful and rapid Afton-water, it enters Dumfries-shire, and flows E to the confluence with it of the Skaar, passing the large village of Thornhill. Its banks till below Sanquhar, though redeemed from the dreariness which characterizes them in Ayrshire, consist chiefly of a verdant vale overlooked by variform but not grand or bold mountain-land; but they are afterwards exquisitely rich in all the varieties of the choicest landscape. From the confluence with it of the Skaar, it flows over a distance of 11½ m. SE by S to a point near the confluence with it of the Cairn; it then makes a bold and beautiful sweep westward; and thence, over a distance of 8 or 8½ m., runs nearly due S to the Solway frith. About 2½ m. below Dumfries, it begins slowly to expand into an estuary; and between Craiglebock-rocks and Caerlaverock-castle, where it fairly becomes lost in the Solway frith, 4¾ or 5 m. below the point of begun expansion, it attains a breadth of 2¼ m. Owing principally to the tide's impetuosity, the navigation of the river is difficult to seamen unacquainted with its peculiarities; but it has been greatly improved, and is identified with considerable traffic. The Nith, exclusive of all minor bends and windings, has altogether a course of about 49 m.

NITHSDALE, the western of the three great divisions of Dumfries-shire, so named from its being drained and traversed by the river Nith. The soil in most parts is light and dry. The district even yet is of not very well-defined limits, or has along its E side much ground which is debateable between it and Annandale. The original name was Strathnith or Stranith. In 1620, Robert, 8th Lord Maxwell, was created earl of N. William, the 5th earl, took part with the Pretender in 1745, and was attainted, and condemned to be beheaded; but, through the address and courage of his countess, made an extraordinary escape from the Tower.

NITI PASS, a pass leading from Kumaon into Tibet, by the banks of the Dauli, and the ravine of the Niti river. The crest of the pass is 16,814 ft. above sea-level. The village of N. is situated in N lat. 30° 47′, E long. 79° 56′.

NITON, a parish and village in the isle of Wight, 8 m. S of Newport. Area 1,170 acres. Pop. 613.

NITRA. See NEUTRA.

NITTANY, a mountain of Pennsylvania, U. S., which commences in Centre co., and extends between Lycoming and Northumberland cos., almost to the W branch of the Susquehanna.

NITTEDAL, a village and parish of Norway, 12 m. NE of Christiania. Pop. 1,458.

NITTENAU, a town of Bavaria, 12 m. WNW of Roding, on the l. bank of the Regen. Pop. 800.

NITTORE, a town of Hindostan, in the Nizam's territories, 52 m. NW of Bidur.

NIUCUNDA, a river of Sweden, which issues from a lake on the E side of the Kiolen mountains; flows through the Stor-siœn lake; and enters the gulf of Bothnia, 9 m. SE of Sundsvall.

NIUERA-ELIA, or NEWERA-ELIA, an elevated plain or table-land in the island of Ceylon, 47 m. SW of Kandy. The summits of the high grounds in the interior of Ceylon frequently stretch into a considerable extent of table-land, which, when encircled by hills, presents the appearance of an extensive basin: in a situation of this description, at an elevation of 6,200 ft. above sea-level, stands the plain of N., about 4 m. in length, and 1½ m. in breadth, on which a military station was established in 1829, as a convalescent post. The intervening space between it and Kandy has till recently been almost without inhabitants, and devoid of every kind of cultivation, but is less densely wooded than the low grounds. Though generally designated a plain, this district presents considerable inequalities of surface, being divided into two valleys by a range of hills covered with jungle, which towards the S are broken into a succession of abrupt rising grounds and ravines; to the N, however, the ground is almost uniformly level. Springs and rills of water are met with in every direction, and give a marshy character to the surface, wherever the slope is insufficient to afford free drainage. This particularly applies to the upper portion of the plain, the greater part of which is a complete morass during most of the year. On every side, the plain is encircled by lofty mountains, one of which rises 2,000 ft. above the station, and consequently must be more than 8,200 ft. above the level of the sea. These mountains, though exceedingly steep, rocky, and nearly devoid of soil, are covered to the summit with forest-trees and underwood. Most of the surface of the plain is composed of black peat, but in some parts there is a rich mould, resting on yellow clay or gravel, and covered with a coarse tufted grass. The climate, though very invigorating after the heat of the sea-coast, is too bleak and variable to be pleasant. The position, moreover, is exposed to violent gusts of wind, particularly at the change of the monsoons; and even when the rays of the sun are unclouded, a cold dry piercing wind generally prevails. To those who have been long resident in the low grounds, the mornings and evenings here are very cold, for the therm. sometimes falls to 29°, and ice is formed of considerable thickness; it seldom rises above 70°, and Europeans can take exercise, even during the hottest period of the day, without experiencing the slightest inconvenience. As may be expected from the situation, the daily variations in temp. are considerable, and often extremely sudden. N. has its wet and dry seasons, the former taking place during the SW, the latter during the NE monsoon; but no month ever passes without rain; heavy dews are also frequent in the mornings and evenings, and the station is often enveloped in dense fogs.—The district has been highly recommended to emigrants by parties well-acquainted with the locality. Mr. Sirr, in his *Ceylon and the Cingalese*, says: "We can bear witness to the advantages offered in this mountain-district for a European settlement, and the only matter of astonishment is that so many years of British rule should have elapsed before the attempt was made. The natives, says Mr. Baker, now produce five successive crops of potatoes from the same land. Stock of all kinds is remarkably cheap, and the draught-buffalo is an animal which entirely supersedes the horse for all heavy work, not only on account of his great strength, but from the fact of his requiring no other food than pasture. Wheat has been experimented upon, and the quality produced proved infinitely superior to the seed imported, and yet Ceylon is entirely dependent upon America for the supply of flour. Oats and beans thrive well, but have been neglected, consequently the horses in the island are fed expensively upon paddy and gram, the principal portion of which is imported from India."

NIVE, a river of France, in the dep. of Basses-Pyrenees, which has its source near St.-Jean-Pied-de-Port; and joins the Adour, on the l. bank, at Bayonne, after a NW course of 54 m.

NIVELLE, or NIVONNE, a river having its source in the Spanish prov. of Pampeluna, near Urdache, and flowing NW through the French dep. of Basses-Pyrenees into the bay of Biscay, after a course of 24 m. The British army under Wellington crossed it at St.-Jean-de-Luz in Nov. 1813.—Also a village of France, in the dep. of Nord, cant. of St. Amand, 9 m. NNW of Valenciennes. Pop. 1,570.

NIVELLES, NIVELLE, or NYVIL, a town of Belgium, in the prov. of S. Brabant, 17 m. S of Brussels, on the Thienne. Pop. 7,926. It has manufactories of woollen and cotton stuffs, lace, and hats; and numerous distilleries, breweries, and tanneries.

NIVERNAIS, an ancient province in the interior of France, to the W of Burgundy, and NW of Orleanais. It is about 60 m. long, and 50 m. broad, and has an area of 639,806 hect. The greater part of it is now comprehended in the dep. of the Nievre. Its cap. was Nevers.—The canal of N. runs from the Loire, at the embouchure of the Aron, to the Yonne at La Choise.

NIVERNAIS BAY, a large bay at the E end of Lake Ontario.

NIVIANO, a small town of the duchy of Parma, situated on a hill not far from the Trebia, 8 m. S of Piacenza.

NIVILLAC, a commune and village of France, in the dep. of Morbihan, cant. and 2 m. NE of La Roche-Bernard. Pop. 2,350.

NIVONNE. See NIVELLE.

NIWNITZ, a town of Moravia, 3 m. SE of Ungarisch-Brod. Pop. 1,300.

NIXDORF, or GREAT NIKOLSDORF, a town of Bohemia, 27 m. ENE of Dresden. Pop. 5,000. It has considerable manufactures of linen and cotton.

NIXONTON, a township of Pasquotank co., N. Carolina, U. S., on Little River.

NIZA, a small town of Portugal, in the prov. of Alemtejo, near the Tagus, 15 m. NNW of Portalegre, between the rivulets of N. and Figueiro. Pop. 2,300.

NIZAM'S TERRITORIES. See HYDERABAD.

NIZAMPATAM, a town of India, in the prov. of the Northern Circars, 45 m. SW of Masulipatam, in N lat. 15° 56′. It carries on a considerable coasting-trade, by means of the small craft of the natives.

NIZANKOWICE, a town of Galicia, in the circle and 6 m. S of Przemysl.

NIZAO. See NISAO.

NIZIBIN. See NISIBIN.

NIZIERS (SAINT), a town of France, dep. of the Rhone, 30 m. NNW of Lyon. Pop. 1,360.—Also a village in the dep. of Ain, cant. and 4 m. E of St. Tirvier-de-Courtoux. Pop. 1,600.—Also a village in the dep. of the Loire, 9 m. N of Roannes; and another v. in the same dep., 9 m. S of Montbrison.

NIZNIORO, a town of Austrian Poland, in the circle and 15 m. ENE of Stanislawow. Flints are found in the neighbourhood, and a magazine of them is or was kept at this place for the army.

NIZON, a commune and village of France, in the dep. of Finistere, 18 m. SE of Quimper. Pop. 1,380.

NIZONNE, a river of France, which rises 3 m. S of Noutron, in the dep. of Dordogne, and flows in a SW course of 36 m. to the Dronne.

NIZOVA, or Nisabad, a port of Southern Daghistan, in the khanate and 30 m. ENE of Kuba, at the embouchure of the Kudialt shai.

NIZZA. See Nice.

NIZZA-DELLA-PAGLIA, or Nizza-Monferrato, a town of the Sardinian states, in the duchy of Montferrat, and prov. of Acqui, at the junction of the Nizza and the Belbo, 17 m. SW of Alessandria, on the provincial road conducting from Acqui to Asti. Its form is peculiar, being as nearly as possible a triangle enclosed with very solid walls; the fortifications, particularly at the angles, are of a very imposing character. It is seated in a beautiful and luxuriant plain, with vine-clad hills rising around it, and sparkling with villas, churches, and rural dwellings. It contains 637 houses, 999 families, and 4,377 inhabitants. Many improvements have been made upon it since 1815, and others are in progress and in contemplation. The territory of this district teems with almost every species of vegetation, but is most renowned for its splendid vineyards, and its wines have long attained the highest celebrity in every part of Italy. It produces a great quantity of fruit of various kinds, and is especially famous for the growth of melons. Its great strength as a fortified town, and its importance as a military position, involved it in all the miseries incident to war, through a long succession of ages. The town, or city as it is called, has many fine buildings, public and private. There are 3 parochial, and 9 other churches and convents; the civic palace, with its noble portico and lofty tower; several handsome and spacious *case*, or family palaces; a theatre, schools for the instruction of both sexes, and several benevolent institutions.

NOACOTE, a fruitful valley of Nepal, situated under the 28th parallel of N lat., and so near the mountains as to be perfectly sheltered from the N winds, on which account it is much warmer than the other parts of Nepal, and produces all the fruits of the more southern provinces, and a quantity of sugar.—Its capital of the same name, 17 m. NW of Katmandu, is not of great extent, but contains some of the largest and best-looking houses in Nepal, and a celebrated Hindu temple, dedicated to Bhavany. Its situation is of importance, as commanding the only entrance in this quarter from Tibet, and standing close to Mount Dhybun, by which the Chinese army was obliged to descend in 1792, when they invaded Nepal.

NOAGOR, a town of Hindostan, in Gundwana, at the confluence of the Mehe and Hetsu, 45 m. SSE Bottunpur.

NOAILLAN, a commune and village of France, in the dep. of Gironde, cant. and 2 m. N of Villandraut. Pop. 2,200.

NOAILLES, a village of France, in the dep. of Correze, cant. and 4 m. S. of Breves. Pop. 650.—Also a v. in the dep. of Oire, 9 m. SE of Beauvais.—Also a v. in the dep. of Tarn, cant. and 4 m. S of Cordes.

NOALE. See Novale.

NOALEJO, a town of Spain, in the prov. and 21 m. SSW of Jaen. Pop. 1,900.

NOANAGUR, a district of Hindostan, in the prov. of Gujerat, near the S side of the gulf of Cutch, on the l. bank of the Nagne. The soil is stony, but produces sugar-cane, and good crops of grain and cotton. The inhabitants are principally Hindus, whose chief retains the ancient title of *jam*.—The capital is a large town defended by a stone wall, with round towers and a ditch. A considerable proportion of its pop. are weavers, and manufacture very beautiful cloths, which are exported to Surat and other places. The river Nagne, which flows past the town, is supposed by the natives to possess some qualities peculiarly favourable for the dyeing of cotton cloths, for the excellence of which this place is celebrated. In 1808, the jam of N. entered into a treaty with the British, by which he engaged that his subjects should refrain from piracy.

NOANAMA (San Joseph de), a settlement of New Granada, in the prov. of Choco, on the shore of the river San Juan, 170 m. N of Popayan.

NOAN-JEDDU, a town of Hindostan, in the prov. of Gujerat, 48 m. E of Surat.

NOARA, a town of Sicily, in the prov. and 33 m. WSW of Messina. Copper and lead are wrought in the vicinity.

NOBA, a small island in the Eastern seas, near the W coast of Aru, in S lat. 5° 5′.

NOBBER, a parish of co. Meath, 12 m. WNW of Navan. Area 10,488 acres. Pop. 3,757.—The village of N., 5 m. ENE of Moynalty, was the birthplace, in 1670, of Carolan, the last of the Irish minstrels.

NOBEL, a town of Russia, in the gov. of Minsk, 24 m. SW of Pinsk, on the r. bank of the Stokhod.

NOBLE, a county in the NE part of Iowa, U. S., intersected by the Elkhart and Tippecanoe rivers. Area 432 sq. m. Pop. in 1841, 2,702.—Also a township in Morgan co., in Ohio. Pop. in 1841, 1,308.—Also a township in Shelby co., in Ohio. Pop. 1,394.

NOBLEBOROUGH, a township of Lincoln co., Maine, U. S., 174 m. NE of Boston. Pop. 2,210.—Also a township of Herkimer co., New York, on the NW side of Canada creek.

NOBLEJAS, a town of Spain, in the prov. and 30 m. NE of Toledo. Pop. 1,800. The surrounding country is fertile in olives and vines.

NOBLESTOWN, a village of Alleghany co., in Pennsylvania, U. S., 10 m. SW of Pittsburg.

NOBLESVILLE, the capital of Hamilton co., in Iowa, U. S., 20 m. NE of Indianapolis, on White river.

NOBRA, a town and district of Tibet, in N lat. 34° 38′, at an alt. of 11,000 ft. above sea-level. The Shay-yok, an affluent of the Indus, has its origin in a lake or a glacier in this district.

NOBRE (La), a commune and village of France, in the dep. of Cantal, cant. and 3 m. N of Champs. Pop. 1,650.

NOCARA, a town of Naples, in the prov. of Calabria-Citra, 27 m. NNE of Castrovillari.

NOCARIO, a village of Corsica, 12 m. ENE of Corte. Pop. 500.

NOCCEANO, a town of Naples, in Abruzzo-Ultra 1 ma, 9 m. S of Civita-di-Penne. Pop. 770.

NOCE, a town of France, in the dep. of the Orne, 30 m. E of Alençon. Pop. 1,375; of cant. 10,600.

NOCEDA, a village of Spain, in the prov. and 27 m. SE of Villafranca, near the r. bank of the Cabrera. Pop. 579.

NOCERA, or Nuceria-Camellaria, a town of the States of the Church, in the duchy of Spoleto, 5 m. SW of Ancona, and 15 m. W of Camerino, in N lat. 43° 6′. It suffered severely by an earthquake in 1751, and does not now contain above 900 inhabitants. It is still, however, the see of a bishop, and is celebrated for its baths.

NOCERA, a town of Naples, in Calabria-Ultra 2da, 20 m. SSW of Cosenza. Pop. 2,800.

NOCERA-DE-PAGANI, or NUCERIA-ALFATERNA, a town of Naples, in Principato-Citra, on the Sarno, 9 m. NE of Salerno. It is a place of some antiquity. After its destruction by Roger of Normandy, in the 11th cent., the inhabitants, instead of rebuilding the town on its former site, continued to occupy the surrounding villages, which they gradually extended, and embellished with a number of handsome edifices; hence the present town, instead of being surrounded with ramparts, presents to the eye scattered groups of houses, pleasantly intermingled with rural scenery. Its pop. amounts to about 6,800. It is the see of a bishop, and contains a number of churches and convents.

NOCHIZTLAN, the capital of a district in the Mexican state of Zacatecas, 60 m. NW of Oaxaca, containing 164 families of Spaniards, Mulattoes, and Indians, engaged in the cultivation and commerce of grain; and in the manufacture of woven stuffs.

NOCI, a canton and town of Naples, in the prov. of Terra-de-Bari, 27 m. N of Tarento. Pop. 8,000.

NOCIGLIA, a village of Naples, in the prov. of Terra-d'Otranto, 21 m. E of Gallipoli.

NOCKAMIXON, a township of Bucks co., in Pennsylvania, U. S., 14 m. N of Doylestown. Pop. 2,000.

NOCKHOLT, a parish of Kent, 5 m. W of Seven-Oaks. Area 1,750 acres. Pop. 539.

NOCOR, a small river of Marocco, which falls into the Mediterranean, in N lat. 35° 15′.

NOCTE (LA), a village of France, in the dep. of Nievre, cant. and 4 m. SSE of Tours, on an arm of the Cressone. Pop. 704.

NOCTON, a parish of Lincolnshire, 7 m. SE of Lincoln. Area 5,340 acres. Pop. 553.

NODAWA, a river of Louisiana, which falls into the Missouri, on the E side, in the NW part of the state. It has a S course; and is about 70 yds. wide above its mouth.

NODDLE'S ISLAND, a small, pleasant, and fertile island in Boston harbour, Massachusetts, U. S., about 2 m. ENE of the town, on the Chelsea shore. A strong fortress has been built on it.

NODEAH. See NUDDEA.

NODHA, a village of Mekran, in Persia, 63 m. SW of Kej.

NODHEA, a village of Kerman, in Persia, 75 m. NNE of Kirman.

NODJIBABAD, a town of Hindostan, in the district and 90 m. NE of Delhi.

NODZ, a village of France, in the dep. of Doubs, 18 m. SE of Besancon. Pop. 500.

NOE′, a village of France, in the dep. of Haute-Garonne, cant. of Carbonne, 21 m. SSW of Toulouse. Pop. 600.

NOEL ISLANDS, a group of small islands, in the Mergui archipelago, in N lat. 10° 45′, E long. 96° 38′.

NOESA-BARON, an island in the Eastern seas, near the S coast of Java, in S lat. 8° 39′, about 25 m. in circumf.

NOESA-CAMBAZ, or PULO-CANNIBAZ, an island in the Eastern seas, near the S coast of Java, in S lat. 7° 42′. It is about 45 m. in circumf.

NOESA-COMBA, a small island in the Eastern seas, to the SE of Borneo, in S lat. 5° 17′.

NOESA-LAOUT, a small island in the Eastern seas, near the S coast of Ceram, in S lat. 3° 40′.

NOESA-NESSING, a small island in the Eastern seas, near the E extremity of Timor, in S lat. 8° 20′.

NOESA-SERAS, four small islands in the Eastern seas, in about S lat. 5° 15′.

NOGAIS, a people of Tartar origin, located in the S of Russia, chiefly in the W part of the gov of Caucasus, the N part of Taurida, and the S part of Yekaterinoslav. They are divided into several hordes or tribes. Those on the Kuban, in the W part of Caucasus, are called Little N., or Black N., and amount to about 10,000 families. See article TARTARS.

NOGALES, a town of Spain, in the prov. and 27 m. SE of Badajoz. Pop. 800.—Also a town of Spain, in the prov. and 45 m. N of Palencia.

NOGARA, a small town of Austrian Italy, in the prov. of Verona, on the Tartaro.

NOGARO, a town of France, in the dep. of Gers, on the Nidon, 21 m. WSW of Condom. Pop. 1,390; of cant. 14.074.

NOGAT, a river of Prussia, which branches off from the Vistula; passes by Marienburg, and joins the Frische-haf about 6 m. N of Elbing. The island thus formed by the two branches of the Vistula and the Baltic with its bays, is also called Nogat. It is fertile, and of considerable extent. The N. is connected with the Elbing by a canal.

NOGENT L'ARTAULD, a town of France, in the dep. of Aisne, on the Marne, 6 m. S of Chateau-Thierry. Pop. 1,200.

NOGENT-LE-BERNARD, a town of France, in the dep. of the Sarthe, 18 m. NNE of Le-Mans. Pop. 3,000.

NOGENT-LE-ROI, a canton and town of France, in the dep. of the Marne, 12 m. N of Chartres. Pop. of town 2,079; of cant. 11,976. The town is celebrated for its cutlery.—Also a town and cant. in the dep. of Eure-et-Loir, 10 m. SE of Dreux. Pop. of town 1,300; of cant. 11,439.

NOGENT-LE-ROTROU, a canton and town of France, in the dep. of the Eure-et-Loir, 27 m. SW of Chartres. It has considerable manufacturing establishments. Pop. of town 7,000; of cant. 12,715.

NOGENT-SUR-MARNE, a town of France, in the dep. of Seine, 6 m. E of Paris, on the r. bank of the Marne. Pop. 1,828.

NOGENT-SUR-SEINE, a canton and town of France, in the dep. of Aube, situated on the l. bank of the Seine, which here becomes navigable, 29 m. NW of Troyes. Pop. 3,383. It is not well-built, but has manufactories of stockings, and a considerable trade with Paris by the river, chiefly in wine and corn. It was the scene of actions between the French and the Allies, on the 9th and 10th February, 1814.—The arrond. has an area of 85,000 hect., with a pop. in 1841 of 34,785. It comprises 4 cant.

NOGENT-SUR-VERNISSON, a village of France, in the dep. of Loiret, cant. and 6 m. NW of Chatillon-sur-Loing. Pop. 830.

NOGHE, a village of Sennaar, on the r. bank of the Nile, 50 m. NE of Sennaar.

NOGUEIRA, a town of Brazil, in the prov. of Para, on the l. bank of the Tefe, near its confluence with the Amazon.—Also a town of Portugal, in the prov. of Estremadura, comarca and 7 m. W of Setuval. Pop. 1,600.

NOGUEIRA-DO-CABO, a town of Portugal, in the prov. of Beira, comarca and 24 m. W of Lamego. Pop. 600.

NOGUERAS, a village of Spain, in the prov. and 36 m. S of Saragossa. Pop. 550.

NOHANENT, a village of France, in the dep. of Puy-de-Dome, cant. and 3 m. NNW of Clermont-Ferrand. Pop. 1,125.

NOHOVAL, or NOGHEVAL, a parish in cos. Westmeath and Longford, 4¼ m. NW by W of Ballymore. Area of Westmeath section 11,588 acres, of which 2,391 acres are in Lough Ree. Area of the Longford section 3,563 acres. Pop. in 1831, 4,154; in 1841, 4,480.—Also a parish, containing a village of the same name, on the coast of co. Cork, 4 m. E of Kinsale. Area 2,568 acres. Pop. in 1831, 1,260; in 1841, 1,175.—Also a parish in co. Clare, 2¼ m.

NE of Kilfenora. Area 4,661 acres. Pop. in 1831, 408; in 1841, 450.

NOHOVAL-DALY, a parish in cos. Cork and Kerry, 6½ m. NW by W of Mill-street. Area of the Cork section, 11,544 acres; of the Kerry section, 5,829 acres. Pop. of the whole, in 1831, 3,229; in 1841, 3,954. The surface consists of a portion of the glen or vale of the river Blackwater, almost immediately below that river's source, and portions of the mountainous screens of the vale within both Cork and Kerry.

NOHOVAL-KERRY, a parish in co. Kerry, 2½ m. W of Castle-Island. Area 3,204 acres. Pop. in 1831, 853; in 1841, 944.

NOIA, a town of Naples, in the prov. and 9 m. S by E of Bari.

NOIDAN-LE-FERIOUX, a village of France, in the dep. of Haute-Saone, cant. and 6 m. S of Scey-sur-Saone. Pop. 820.

NOIL, or NAYAIL, a river of Hindostan, in the prov. of Coimbatore, which descends from the W Ghauts, and flows E to the Cavery, which it joins on the r. bank, near Vaylur.

NOIR (CAPE), a cape on the W coast of Tierra-del-Fuego, in Cockburn channel.—Also a cape on the N side of Chaleur-bay, in the gulf of St. Lawrence, about 7 leagues WNW of Bonaventura.

NOIRETABLE, a town of France, in the dep. of Loire, 23 m. W of Montbrison. Pop. 1,880; of cant. 8,321.

NOIRMOUTIERS (ILE DE), an island of France, on the coast of Brittany, in the bay of Bourgneuf, belonging to the dep. of La Vendee. Its superficial extent is about 70 sq. m. Pop. in 1841, 7,590. Its surface is low, the N part being little elevated above the level of the sea at high water, and the S somewhat below it, but protected on the E side by dikes, on the W by downs or natural sand-hills. The soil is very productive, and corn and cattle are exported annually. Bay salt is made on the coast. The chief town, on the NE coast of the island, contains 1,600 inhabitants, and has a shallow harbour fit for coasters of 50 or 60 tons.

NOISY-LE-GRAND, a village of France, in the dep. of Seine-et-Oise, cant. of Gonnesse, 9 m. E of Paris. Pop. 1,100.

NOISSY-LE-SEC, a village of France, 4 m. NE of Paris. Pop. 1,500.

NOIX (ISLE AU), or NUT ISLE, a small isle, of 50 acres, near the N end of Lake Champlain, and within the prov. of Lower Canada.

NOIX (LAC), a lake of the United States, in Louisiana, about 50 m. in circumf., which discharges its waters into the Bayou-Rigula-de-Bondieu, which joins Red river, 3 m. above Natchitoches. The outlet of the lake is navigable for boats most of the year.

NOIZAY, a town of France, in the dep. of Indre-et-Loire, 6 m. NW of Amboise. Pop. 1,100.

NOJA, a town of Naples, in the prov. of Basilicata, 15 m. SW of Tursi. Pop. 1,446.—Also a town of Naples, in the prov. of Terra-di-Bari, cant. and 3 m. NNW of Rutigliano. Pop. 4,700.

NOLA, a town of Naples, in the Terra-di-Lavoro, 15 m. ENE of Naples. Pop. 8,850. It is a gloomy and deserted place; the houses are badly built, and the streets wretchedly paved. It is the see of a bishop, and has an episcopal seminary and a military hospital. Under the Romans it was a flourishing colony, and numbers of fine Etruscan vases are still found in it. Silk is raised in the neighbourhood.

NOLAY, a town of France, in the dep. of Cote-d'Or, 10 m. SW of Beaume, and 14 m. SE of Arnay-le-Duc. Pop. 2,000. It has considerable trade in wines, grain, and wool.—Also a village of France, in the dep. of Nievre, cant. and 12 m. ENE of Pougues. Pop. 1,300.

NOLI, a town of the Sardinian states, situated on the coast, 30 m. SW of Genoa. Pop. 800. It is the see of a bishop, whose diocese is united with that of Savona.

NOLI (CAPE), a cape in the NW of Italy, on the Genoese coast, in N lat. 44° 13′.

NOLINSK, a town of Russia, in the gov. of Viatka, 120 m. NNE of Kazan, on the r. bank of the Kurtshum. Pop. 1,200.

NOLLENDORF, a village of Bohemia, 22 m. S by E of Dresden, and 2 m. NE of the village of Culm.

NOMAES, or NOMAO, a town of Portugal, in the prov. of Beira, 6 m. SE of St.-Joao-de-Pesqueira.

NOMAIN, a village of France, in the dep. of Nord, 12 m. NE of Douai. Pop. 2,126.

NO-MAN'S-LAND, a small island near the coast of Massachusetts, U. S., in N lat. 41° 15′, a little to the SW of Martha's Vineyard. It belongs to Duke's co.

NOMBELLA, a town of Spain, in the prov. and 24 m. SE of Madrid. Pop. 1,400. It has extensive manufactories of coarse earthenware.

NOMBRE-DE-DIOS, a town of Mexico, in the intendancy of Durango, 170 m. N of Guadalaxara. There is another settlement of the same name in Mexico, 36 m. WNW of Chihuahua.—Also a port of New Granada, 45 m. NE of Panama, in N lat. 9° 36′, at the bottom of a bay to which it gives name. This town was destroyed in its infancy by the Indians of Darien; but was rebuilt, and the inhabitants maintained their ground till 1584, when orders arrived from Philip II. for their removing to Porto-Bello, as being better situated for the commerce of that country.—Also a river of Peru, in the prov. of Arequipa, which runs into the Pacific ocean, in S lat. 17° 10′.

NOM-DE-JESUS, a town of the island of Zebu, one of the Philippine islands, see of a bishop, suffragan of Manilla.

NOMENOGNO, a small town of the Sardinian states, in the Milanese prov. of Novara.

NOMENY, a town of France, in the dep. of Meurthe, situated on a height near the Seille, 14 m. N of Nancy. Pop. 1,332; of cant. 12,735.

NOMEXY, a commune and village of France, in the dep. of Vosges, cant. of Chatel-sur-Moselle. Pop. 577.

NOMI, a town of Nifon, in Japan, 16 m. NE of Kanasava.

NOMISNY-BAY, a bay in the river Potomac, on the coast of Virginia, U. S., in N lat. 38° 11′.

NONA, a small town of Dalmatia, situated on an island near the coast, in N lat. 44° 14′, 7 m. NE of Zara. Pop. 600. It was formerly called *Onona* or *Ononum*, but is now completely decayed. Unfortunately the harbour also, though once good, is now filled up and has become a marsh.

NONAC, a village of France, in the dep. of Charente, cant. and 4 m. WNW of Montmoreaux. Pop. 1,150.

NONANCOURT, a town of France, in the dep. of the Eure, on the small river Arve, 12 m. S of Verneuil. Pop. 1,345; of cant. 9,278.

NONANT, a village of France, in the dep. of Orne, 12 m. E of Argentan. Pop. 860. It has bottle-works.

NONANTOLA, a town of the duchy of Modena, on the r. bank of the Panaro, 8 m. NW of Modena.

NONARPE, a town of Spain, in the prov. and 64 m. SE of Saragossa. Pop. 1,023.

NONCELLO-ET-MEDUNA, a river of Austrian Lombardy, rising 3 m. NE of Pordenone, and join-

ing the Livenza on the l. bank, after a SSE course of 15 m.

NONE, a town of Piedmont, 12 m. SSW of Turin, on the E bank of the Torto. Pop. 1,620.

NONESUCH, a harbour at the E end of the island of Antigua, in N lat. 17° 5′. The road is foul and full of rocks, and generally shallow.

NONETTE, a village of France, in the dep. of Puy-de-Dome, cant. and 3 m. ENE of Saint-Germain-Lembron. Pop. 700.

NONINGTON, a parish of Kent, 4 m. S of Wingham. Area 3,680 acres. Pop. 806.

NONO (CAPE), a promontory on the W coast of the island of Iviça, in the Mediterranean, in N lat. 39° 3′.

NONTRON, a town of France, in the dep. of Dordogne, 24 m. N of Perigueux. Pop. in 1841, 3,609; of cant. 14,985. It has manufactories of leather and cutlery; and there are iron mines and forges in the neighbourhood.—The arrond., comprising 8 cants., with an area of 170,768 hectares, had a pop. of 83,889 in 1841.

NONURA, a small uninhabited island in the Pacific, off the coast of the prov. of Piura, in Peru, to the N of that of Lobos.

NOORDBROCK, a town of Holland, in the prov. and 12 m. E of Groningen. Pop. 1,270.

NOORDWOLDE, a town of Holland, in the prov. and 4 m. N of Groningen. Pop. 1,000.

NOORDWYK-BINNEN, a village of Holland, in the prov. of S. Holland, 6 m. NNW of Leyden. Pop. 1,800.

NOOTKA SOUND, a bay of the North Pacific, on the W coast of North America, discovered by Cook, in 1778. The entrance is situated in the E corner of Hope bay, in N lat. 49° 33′, E long. 233° 12′. The E coast of Hope bay, from Breakers point to the entrance of the sound, is covered by a chain of sunken rocks, which seem to extend some distance from the shore. The entrance into the sound is between two rocky points, that lie ESE and WNW from each other, distant between 3 and 4 m. Within these points, the sound widens considerably, and extends to the N, four leagues at least, exclusive of the several branches toward its bottom. In the middle of the sound are a number of islands of various sizes. The depth of water in the middle of the sound, and even close to some parts of its shore, is from 47 to 90 fath. The harbour and anchoring-places within its circuit are numerous. The land bordering upon its coast is of a middling height, and level; but within the sound it rises almost everywhere into steep hills, ending in round or blunted tops, with some sharp ridges on their sides. Cook visited this sound in April; and he mentions that even in the night the therm. never fell lower than 42°, while in the day it very often rose to 60°.—The trees which chiefly compose the forests, are the Canadian pine, the white cypress, the wild pine, and two or three other sorts of pine less common. The wood is all of a large size. Of animals, the most common were bears, deer, foxes, and wolves. The foxes are of several varieties; some of their skins being quite yellow, with a black tip to the tail; others of a deep or reddish yellow, intermixed with black; and a third sort of a whitish or greyish colour, also intermixed with black. The pine martin and the ermine occur. The racoons and squirrels are of the common sort; but the latter is rather smaller than ours, and has a deeper rusty colour running along the back. To these may be added the lynx or wild cat, the mouse deer, and the buffaloe. The sea-animals seen off the coast were whales, porpoises, seals, and sea otters. Birds in general are not only rare as to species, but few in numbers. Those which chiefly frequent the woods are crows and ravens; a bluish jay or magpie, common wrens, the Canadian or migrating thrush. The birds which frequent the waters and shores are gulls, shags, wild ducks of two sorts, plovers, and swans. The only animals of the reptile kind observed here, and found in the woods, were brown snakes about 2 ft. long, with whitish strips on the back and sides, which seemed to be harmless; and brownish water-lizards. The insect tribe are butterflies, bees, moths, and mosquitoes. The persons of the natives are in general under the common stature; but commonly pretty full or plump, though not muscular. Their visage is round and full, and sometimes also broad, with high prominent cheeks; the nose is flattened at its base with wide nostrils. The forehead is rather low, the eyes are small and black; the mouth round, with large round thick lips; the teeth tolerably equal and well set. Their colour it is difficult to determine, as their bodies are always so incrusted with paint and dirt; though, in particular cases, when these were well rubbed off, the whiteness of the skin appeared almost equal to that of Europeans! Their common dress is a flaxen mantle, ornamented on the upper edge by a narrow strip of fur, and at the lower edge by fringes or tassels. Besides the above dress, which is common to both sexes, the men frequently throw over their other garments, the skin of a bear, wolf, or sea-otter, with the hair outward, and tie it as a cloak, near the upper part, wearing it sometimes before and sometimes behind. Two towns or villages seem to be the only inhabited parts of the sound. The chief employment of the men seems to be that of fishing, and killing land and sea animals for the sustenance of their families. The women manufacture their flaxen or woollen garments, and prepare the sardines for drying.

In the year 1786, an association of British merchants residing in the East Indies was entered into, and a small settlement was formed on this sound for the purpose of obtaining furs; but the settlement was seized by the Spaniards in 1789, and two vessels sent to Mexico, where they were set at liberty by the viceroy, on the supposition, as he declared, that nothing but ignorance of the rights of Spain could have induced other nations to attempt an establishment on that coast. A war between Great Britain and Spain in consequence of the outrage was only avoided by mutual concession and explanation, in what is called the Nootka-sound convention,—a document the importance of which was recently revived by the discussions with the United States government relative to Oregon, in which England claimed the valley of the Columbia river and the coast to the S of Vancouver's island, on the authority of discoveries by Cook, Vancouver, and Mackenzie; of the Nootka-sound convention in 1790 with Spain, and of settlements effected and maintained at different times by British subjects; while the United States claimed the territory on the ground of discoveries made by her citizens Gray, Kendrick, &c.; of the cession made by Spain in 1819, and of occupation and settlements previously, as well as afterwards, effected by American traders. In the present instance, the honours of discovery appear to be due to a Spanish navigator of the 17th cent., Juan-de-Fuca, who has given his name to the strait that separates Vancouver's island from the mainland. The American ministers asserted that not only the valley of the Columbia, but the whole of the Oregon territory, and territory as far as the 52d parallel of N lat., belonged to Spain, and was by Spain transferred to the United States at the treaty of Florida in 1819; and took credit to themselves for moderation in proposing the 49th parallel as a boundary-line. The question therefore arose, which is the better claim, —that which is founded on the treaty by Spain with England in 1790, or that which rests on the Florida treaty with the United States in 1819? "By the former Spain agreed to give indemnity to British subjects dispossessed of their settlements about Nootka-sound, and to guarantee the same liberty of access to the citizens of both nations, 'as well in those parts which were to be restored to British subjects,' as in the other parts of N. America which then belonged to Spain. By the latter she ceded all her authority and jurisdiction over her provinces in N. America to the United States. Now, when it is recollected that in 1789 Spain abandoned her settlements in Nootka-sound, and that from this time she appears to have neglected this portion of her colonial empire altogether, it seems a very questionable doctrine to hold that any treaty made thirty years afterwards could transfer to another nation possessions left and recognised as left in the hands of Englishmen. The only parties to the treaty of 1790 were England and Spain. The country which was the subject of the treaty was afterwards abandoned by Spain. The parties expressly mentioned in the treaty as to be 'indemnified' and 'restored' were English. It seems difficult to avoid one of two conclusions on premises like these, viz, that the property and possession of this district were virtually ceded to England, or that Spain and England were to hold it on terms of joint occupancy. In the former case Spain could have no right whatsoever to transfer it by a treaty made thirty years afterwards; in the other she could only surrender the moiety of her possessions and rights which she shared with England. In neither case could the United States claim the exclusive sovereignty of the Oregon territory."

NOQUET'S BAY, a bay on the NW coast of Lake Michigan, to the N of Green bay, 45 m. long, and 18 m. wide.

NORA, a town of Sweden, in the prov. of Westermanland, 28 m. NNW of Upsal, on the W bank of a small lake of the same name. Pop. 700.

NORA (LA), a town of Spain, in the prov. and 3 m. W of Murcia, on the l. bank of the Segura. Pop. 1,800.

NORAN, a clear and rapid stream of Forfarshire, which rises among the Grampians and falls into the South Esk.

NORBURG, or NORDBURG, a seaport of Denmark, in the island of Alsen, in N lat. 55° 3′. Pop. 900.

NORBURY, a chapelry and township in Stockport p., Cheshire, 3¾ m. SE by S of Stockport, on a branch of the Mersey, and intersected by the Manchester and Birmingham railway. The inhabitants are chiefly occupied in the weaving of silk and cotton. Considerable numbers also find employment in the extensive coal-mines in the neighbourhood. Area 1,410 acres. Pop. in 1831, 671; in 1841, 808.—Also

a township in Marbury p., Cheshire, 7 m. SW by W of Nantwich, in the line of the Ellesmere canal. Area 1,550 acres. Pop. in 1831, 408.—Also a parish in Derbyshire, 4 m. SW by W of Ashborne, on the river Dove. Area 2,470 acres. Pop. in 1831, 465; in 1841, 510.—Also a parish in Salop, 4 m. NNE of Bishop's-Castle. Area 4,880 acres. Pop. in 1831, 382; in 1841, 420.—Also a parish in Staffordshire, 4½ m. SW by S of Eccleshall, intersected by the Birmingham and Liverpool Junction canal. Area 5,270 acres. Pop. in 1831, 370; in 1841, 353.

NORCIA, a town of the States-of-the-Church, in the deleg. and 18 m. E of Spoleto, on the Freddara. Pop. 3,530. It has a trade in wine, oil, and truffles. It occupies the site of the ancient *Nursia*. In 1730 it suffered severely by an earthquake.

NORD, a department in the NE of France, including the chief part of the ancient divisions of French Flanders, Hainault, and Cambresis, and forming more than half the line of French frontier towards Belgium. It is bounded on the N by the North sea; on the NE and E by Belgium; on the S by the deps. of L'Aisne and La Somme; on the W by that of Pas-de-Calais. It lies between the parallels of 49° 57′ and 51° 5′. Its length from E to W, extending inland from the sea, is 120 m. It has an area of 569,904 hectares, or 2,278 sq. m. Pop. in 1841, 1,085,298; in 1851, 1,158,285. In 1801 the pop. was 765,000. It holds a leading rank in wealth and revenue, containing the large towns of Lisle, Dunkirk, Valenciennes, Cambray, and Douay, and exhibiting, both in the state of its agriculture, and the comfort of the lower orders, the superiority so long ascribed to the Flemish above the French provs. Its surface is chiefly comprised in the basin of the Scheldt; on the E it belongs to that of the Meuse; on the W, to the Aa and the Yzer. Its chief streams are the Scheldt, and its affluents the Haine, Scarpe, Sensee, Lys, Law, and Deule; and the Sambre, the Aa, the Colme, and the Yzer. All these streams, from the level character of the surface, are of slow course. The highest point of surface does not exceed 200 metres = 218 yds. The coasts are bordered with sandy downs like those of Holland; and present the two ports of Gravelines and Dunkirk. The soil is highly productive in all kinds of corn, as well as in flax, tobacco, beet-root, colza, chicory, and hops. About 250,000 hectares are rich soil; 150,000 calcareous; 25,000 hilly; 15,000 sandy; and 15,000 marshy. The pasturages are rich, especially along the Sambre. The largest farms are in the vicinity of Douay. In 1839 the live stock consisted of 79,177 horses; 226,338 oxen; 210,834 sheep; 73,810 pigs; and 6,638 goats. The annual produce of wool is 750,000 kilog. The butter and cheese of Bergues and Maroilles are celebrated. Of mineral productions the chief are coals, of which about 7,500,000 quintals are annually raised. The manufacturing establishments are very extensive. The chief are of linen, woollen, and cotton stuffs, lace, paper, soap, and leather. There are likewise considerable iron and glass-works in the dep., and numerous distilleries, breweries, beet-root sugar manufactories, and salt-refineries. — The dep. is administratively divided into the 7 arrondissements of Lisle, Avesnes, Cambray, Douay, Dunkirk, Hazebrouck, and Valenciennes; which are subdivided into 44 cantons, and 661 communes. It forms the dio. of the archb. of Cambray.—In 1834 it sent 12 deputies to the legislature, who were nominated by 6,005 electors. In 1842 it possessed 43 secondary educational establishments, with 1,913 pupils, a royal college at Douay, and 17 communal colleges. In 1840 there were 71 superior primary schools, with 2,317 pupils, and 1,450 elementary schools, attended by 98,286 children.

NORD (Riviere du), a river of Lower Canada, in the co. of York, which joins the Ottawa, on the r. bank, after a SSW course of 30 m.

NORDALEN, a parish and village of Norway, in the bail. of Romsdal, 30 m. S of Molde.

NORDEN, a town of Hanover, in E. Friesland, about 2 m. from the North sea, on which it has a small but good harbour, 15 m. N of Embden. Pop. 5,600. It has manufactories of linen yarn, tobacco, and soap. It is united with its port by a small canal.

NORDENBURG, a town of East Prussia, on a small lake, 55 m. SSE of Königsberg, in N lat. 54° 19′. Pop. 2,350.

NORDERHAUG, a parish and village of Norway, 20 m. NW of Christiania. Pop. of p. 6,400.

NORDERNEY, an island of Hanover, on the coast of E. Friesland, 20 m. NW of Aurich, in N lat. 53° 43′. It is only 7 m. in circumf. The inhabitants, in number 600, are employed chiefly in fishing and navigation. It is much frequented for sea-bathing.

NORDEROOG, an island of Denmark, to the W of Pelivorum, in N lat. 54° 32′, E long. 8° 30′. It is inhabited by myriads of the sea-fowl *Sterna Catiana*.

NORDGAU, an ancient division of Germany, which in the Middle ages was extensive, but at present is confined to the external part of the principality of Neuburg, or the district between Bavaria proper and the Upper palatinate. See Neuburg.

NORDHALBEN, a town of Bavaria, 39 m. NNE of Bamberg. Pop. 1,300.

NORDHAUSEN, a considerable town of Prussian Saxony, in the gov. of Erfurt, on the river Zorge, 30 m. SSW of Halberstadt. It is fortified with a wall flanked by towers; and contains a Catholic and several Lutheran churches, an orphan-house, 3 hospitals, and 13,000 inhabitants. The chief trade consists in the distillation and sale of spirits. A few years ago, it was calculated that 200 stills in this town and its vicinity consumed annually 300,000 bushels of corn; and that the value of the spirits sent out of the town for sale was about £60,000, exclusive of duty; while nearly 1,000 head of cattle and 10,000 swine were fed on the refuse of the stills. Here are also oil-mills, which prepare oil to an annual value of £30,000 or £40,000; likewise tanneries, and manufactories of linen, woollen, hardware, and soap. A fine marble from the adjacent district of Hohenstein is made here into a number of different articles.

NORDHAUSEN, a commune and village of France, in the dep. of Bas-Rhin, 16 m. NE of Schelestat. Pop. 1,033.

NORDHEIM, a village of Bavarian Franconia, at the foot of the mountain called the Rhoen, 7 m. N of Bischoffsheim. Pop. 800.—Also an old town of Hanover, at the confluence of the Ruhme and the Leine, 12 m. N by E of Gottingen. It is surrounded with a wall, and is tolerably well-built. Pop. 4,033. —Also a village of Saxe-Weimar, on the Fulda, NE of Eisenach. Pop. 1,400.

NORDHOLZ, a village of Hanover, in the gov. and 39 m. WNW of Stade, near the E bank of the estuary of the Weser.

NORDHORN, a village of Hanover, in the gov. and 45 m. WNW of Osnabruck, on the Vechte. Pop. 900.

NORDKOPING, Norköping, or Nordkioping, a town of Sweden, in the laen of Linköping, on the river Motala, between Nyköping and Linköping, 76 m. SW of Stockholm. Pop. 11,040. It is well-situated for trade, vessels coming up to it by means of the river, where a commodious quay is erected. In 1849, 137 vessels from foreign ports arrived with full cargoes, and 98 cleared. It has broad and straight streets, and some public buildings worth notice. It

has manufacturing establishments for iron and brass-ware, fire-arms, and leather, also woollens, tobacco, and paper. The town was greatly damaged by a Russian squadron in 1719.

NORDLAND, or Norrland, a maritime province of Norway, lying between Finmark or Norwegian Lapland on the N, and Trondheim on the S. It extends from the 66th to the 70th parallel of N lat. Its extent, including the adjacent Loffoden islands, is computed at 46,000 sq. m. Corn is cultivated to a small extent in some favoured districts. The breed of cattle, though small, is good; and butter and cheese are exported; but the land is in general very poor, and the pop. thin. The majority of the inhabitants are fishermen, and trade with Bergen and other towns to the S. The pop. in 1845, comprising that of the amt of Finmarken, was only 102,844. See article Norway.

NORDLAND, or Norrland, the most northern of the three old divisions of Sweden, comprising the 7 provs. of Gestricia, Helsingland, Herjedalen, Medelpad, Jamtland, Angermannland, and W. Bothnia. It extends from the 60th to the 65th parallel of N lat., and is bounded by Lapland on the N; the gulf of Bothnia on the E; Middle Sweden on the S; and Norway on the W. In the most extensive acceptation of the name, N. includes Swedish Lapland, making the country comprised in it extend to the 68th parallel. By a late repartition, it was divided into the 3 govs. of Umea, Hernosand, and Gefleborg. The surface is rugged throughout; and the mountains form, with those of Norway, the most extensive part of the grand Scandinavian chain. The most considerable rivers are the Indal, the Anger, the Luleä, and the Piteä, which have courses of from 200 to 300 m., but are not all navigable, and often occasion great damage to the surrounding country from inundations. Flax, hemp, and linen, form articles of export. Here are likewise a number of productive iron-mines; and large quantities of excellent timber are annually floated down the rivers. There are scarcely any towns in the interior of the country, but several along the coast; the principal and most thriving is Gefle.

NORDLAND (West). See Hernosand.

NORDLAND, or Nordlendingafiording, a division of the island of Iceland, forming its N part.

NORDLEDA, a parish and village of Hanover, in the gov. and 32 m. WNW of Stade. Pop. 1,300.

NORDLINGEN, an ancient town of Bavaria, in N lat. 51° 30′, 36 m. NNW of Augsburg, on the Goldbach. Pop. in 1845, 6,464. It is surrounded with an earthen mound, and bastioned ramparts. It has a handsome cathedral belonging to the Lutherans, who form the greater part of the inhabitants. Its manufactures of woollens, linen, carpets, gloves, stockings, and leather are considerable; but the chief articles of trade are supplied by the vicinity, and consist of hogs, corn, and feathers,—the latter an object of importance from the very general use of down beds in Germany. The vicinity of N. has been the scene of repeated conflicts. The Imperialists received here a signal defeat from the Swedes in 1634; and not far from this was fought the indecisive battle between the French and Austrians, of 11th August 1796. This town was annexed to the Bavarian dominions in 1802.

NORDMALING, a small town and parish of Sweden, in the prov. of Angermannland, on the gulf of Bothnia, in N lat. 63° 34′. The inhabitants are chiefly employed in copper mines.

NORDSO, a lake of Norway, in the bail. of Bradsberg, into which the Tondsö, the Flodals, and the Huidsö, discharge themselves; and which discharges its own waters, by a stream of short course, into the head of the Langesund at Porsgrund. Steamers are about to be placed on this lake and the Langesund-fiord.

NORDSTRAND, an island of Denmark, on the W side of the duchy of Sleswick, 15 m. NE of the mouth of the Eyder. Area 20 sq. m. Pop. 3,000. It was formerly of considerable size, but has suffered much by inundations, particularly by the sudden and dreadful one of 1634, when above 1,300 houses, and 6,000 persons, with 50,000 head of cattle, were swept away. The inhabitants are partly Lutherans, partly Catholics. They are employed in navigation, fishing, and agriculture.

NORE, a river partly of co. Tipperary, but chiefly of Queen's co. and co. Kilkenny. It rises among the Devil-Bit mountains in co. Tipperary, at a point 1½ m. NE of Moneygall; and flows NE, SE, and S, to a confluence with the Barrow at a point 1½ m. above New Ross. Its principal tributaries are the Tannet, the Erkin, the Dinane, the King's river, the Ballyduff, the Dobbin's Mill rivulet, Jerpoint rivulet, and Thomastown rivulet. The towns on or quite near its banks, are Borris-in-Ossory, Mountrath, Abbeyleix, Durrow, Ballyragget, Kilkenny, Stoneyford, Thomastown, and Innistiogue. It is navigable for boats from Innistiogue to Thomastown.

NORE (Black), a cape on the coast of Somersetshire, at the mouth of the Severn, 5 m. SW of the mouth of the Avon.

NORE (The), a noted part of the river Thames, situated E of Sheerness, at the point of a sand-bank which runs eastward from the isle of Grain. On this bank a floating-light is now fixed, at a point 4 m. NE of Sheerness, in N lat. 51° 29′, W long. 0° 48′.

NORENBERG, a town of Prussia, in Pomerania, on the lake Enzig, 20 m. NE of Stargard. Pop. in 1847, 1,619.

NORFOLK, a maritime county of England, on the east coast; bounded on the NW by the Wash, which divides it from Lincolnshire; on the N and NE by the German ocean; on the SE and S by the Waveney, a brief artificial line, and the Little Ouse, which divide it from Suffolk; and on the SW and W by the Great Ouse and the Nene, which divide it from Cambridgeshire and Lincolnshire. It is so nearly surrounded by its marine and river boundary as to be almost an island; and is directly connected with the mainland only by a narrow causeway raised through the marshes near Lopham. Its form is nearly ellipsoidal, but suffers indentation from nearly the whole area of the Wash. Its greatest length from Yarmouth to the vicinity of Wisbeach in Cambridgeshire, in a direction from E by S to W by N, is 60 m.; its greatest breadth, from the vicinity of Thetford to the village of Blakeney, in a direction at right angles with the former diameter, is 40 m. Its circumf. is about 170 m.; its area, 2,024 sq. m. or 1.295.360 statute acres. In area it is the fourth co. in England, being exceeded only by Yorkshire, Lincolnshire, and Devonshire; in amount of pop. it is the ninth; and in density of pop. the twenty-sixth.

Surface.] The coast extends in a regular convex line from the mouth of the Yare on the E to the head of the Wash on the W; and is everywhere tame and monotonous, and for the most part so low as to be visible at but a small distance at sea. Hunstanton cliff, nearly 80 ft. high, a little inward from the entrance of the Wash, usually called St. Edmund's point, is the only noticeable rocky prominence. Diluvial cliffs, usually called the Mud cliffs, composed chiefly of clay and large embedded masses of chalk, extend from Happisburgh near North Walsham to the village of Weybourne W of Cromer. Much of the coast consists of continuous belts of sand slenderly tumulated with pebbles and gravel.

thrown up by the violence of the waves, and locally called 'shingles.' These ranges of mimic sand-hills are strung into adhesiveness by the matted roots of the *Arundo arenaria*, the *Arenaria peploides*, the *Carex arenaria*, and other kindred weeds, and resemble in appearance and character the sand-hill ranges on the opposite coasts of Holland. An extensive tract, in the neighbourhood of Thornham, now constantly submerged, or dry only at the efflux of the tide, appears to have been a large forest, invaded and overwhelmed by the sea. The principal harbours are those of Yarmouth, Cley, Wells, Brancaster, Heacham, Snettisham, and Lynn-Regis.—Interiorly this co. is less varied in its features than perhaps any tract of country of equal extent in the kingdom. The surface, except about Norwich, and in the vicinity of Sherringham and Cromer, is chiefly a dead flat of uniform aspect. Towards the N and NE it is somewhat undulated, and displays series of green hillocks and fertile valleys, diversified with hedgerows, coppices, and woods, and worked by culture into forms of softly-pleasing landscape. The general appearance of the country is flat and unpicturesque, the undulations of the surface not being sufficient to relieve the eye, while the luxuriant effect of rich woodland is not always to be met with. Indeed the co. would be regarded as rather uninteresting in its external aspect were it not for the evidences of careful cultivation and the pleasing tokens of human industry so frequently and prominently brought before the eye of the traveller. Open fields divided by neatly-trimmed hedges, and tilled with garden-like precision and cleanliness, must always be agreeable; though, on the other hand, N. has much indifferent husbandry still remaining, many negligent farmers growing each year crops of weeds as well as corn.—The climate, as may be imagined on the eastern coast, is dry throughout the year, and cold and biting winds prevail during the winter and early in spring.

Mineralogy and soils.] This co. is poorer, in subterranean treasures than most other parts of England. It appears to contain no coal, and no accessible strata or masses of useful stone. Chalk is manufactured into excellent lime, both for exportation and for domestic use. Marl occurs in the valley of the Bure, and brick-clay abounds in various places. —The greater part of the arable land of the co. is sandy. The richest district lies N and NE of Norwich. "Any classification of the soils for the purpose of conveying an idea of the character of the land throughout can only give an approximation to the truth, as in the same farm, and often in adjoining fields, the greatest difference prevails. In this co. the marked features which elsewhere are stamped upon the surface of the earth by the geological formations beneath it, are not to be distinguished, and the traveller has some difficulty in collecting from the variable conditions of the land a sufficiently clear and definite conception of its character. The light sandy lands, however, may be described as prevailing in the N and W districts. They differ considerably in quality, being sometimes, as at no great distance from Thetford, blowing sand, and in other places possessed of more natural fertility. They rest upon a substratum of chalk, which crops out at different points. Into this portion of the co. there extends northward from Cambridgeshire, to King's Lynn, a strip of fen land, which is found very useful by the large light land farmers. The central and eastern parts of the county generally consist of loamy soils varying in quality, being here and there stiff and difficult to manage, but generally light, and incumbent on a marly clay. In this district principally, and especially towards the SE, are found those extensive marshes to which we have already alluded." Mr. Arthur Young, computing the area of the co. at only 1,830 sq. m., distributes it as to soil into 220 sq. m. of light sand, 420 of good sand, 60 of marsh-land clay, 900 of various loams, 148 of rich loam, and 82 of peat.

Rivers.] The streams of N. chiefly belong either to the basin of the Ouse, and flow towards the head of the Wash; or issue from the skirts or slopes of the chalk-heights in the NW, and flow toward the E coast. The latter are the more important. The Yare rises at Shipdam; runs 25 m. E to a junction with the Wensum 2 m. below Norwich; describes the segment of a circle, with the convexity toward the south, over 20 m. to a junction with the Waveney; expands into a lake, called Breydon broad or Breydon water, 4 m. long, and occasionally ½ m. broad; receives the Bure at the lower end of the lake; and flows 3 m. S to the German ocean, forming over these 3 m. a narrow peninsula, the site of the town of Yarmouth. The Wensum rises in the vicinity of Fakenham, and flows sinuously 45 m. SE past Norwich to the Yare. The Waveney rises at Lopham, in a swampy tract within a few yards of the source of the Little Ouse; runs E and NE past Diss, Harleston, Bungay, and Beccles; and then runs NNW and NNE to the head of Breydon broad. The Bure rises in the N side of the county, at Melton-Constable, pursues chiefly a SSE and partly an E course, past Blickling, Aylesham, Wroxham, and Acle; and performs till its junction with the Yare an entire run of about 50 m. The Taes, the only other considerable stream in the E, rises in Depwade hundred, and flows N to the Yare, in the vicinity of Norwich. The Ouse comes in upon the co. from Cambridgeshire, near Littleport, a few miles below Ely, and runs 22 m. to the E side of the head of the Wash, passing in its progress Downham, Denver, and Lynn-Regis. The Little Ouse, or Brandon, issuing from almost the same source as the Waveney, flows 35 m. W along the boundary of the co., and at Thetford is joined by the Thet from the vicinity of Hingham. The Wissey, or Stoke, runs in two head-waters from the vicinity of West Bradenham and Scoulton to the Ouse near Denver sluice, and achieves a total run of about 30 m. The Nar, or Setchy, rises at Litcham, and runs 22 m. chiefly W and partly N, past Castle Acre, to the Ouse above Lynn-Regis. The Welney leaves the Ouse at the point where the latter comes in from Cambridgeshire, and joins the Nene, which thence traces the boundary northward to the W side of the head of the Wash. Several streams, but all inconsiderable, fall into the sea on the N. Most of the rivers have a very meagre aggregate fall. Swelled by land-floods above, and often choked by silt thrown up by the violence of the tide below, they commonly overflow their banks, and form numerous small shallow lakes or pools, provincially called *broads* or *meers*.

Agriculture.] N. possesses the honourable fame of having led the way in the modern agricultural improvements of Britain, and it popularly retains the character of being the foremost co. for agriculture in Britain. Naturally poor and barren land has been here not only brought into cultivation but worked into full competition with land naturally fertile, to an extent far greater than in most of the other cos. of England. Wheat is a general crop throughout the co., but thrives best on the stiff loamy lands. Barley is well adapted to the lighter soils. It is raised in vast quantities to be malted for exportation, and may be regarded as the staple agricultural produce. Oats are raised only as a shifting crop, and seldom in greater quantity than for consumpt within the co. Among what are termed irregular

crops, mustard is cultivated between March and Wisbeach, and saffron in the SW district, adjacent to Cambridgeshire.—The horses of N., whether the originally imported breed, or a cross with that of Suffolk, are a bony, active, hardy race, from 14 to 15 hands high, admirably adapted for the purposes of both the field and the road. The oxen fattened on the green crops and other produce of farms are the Aberdeenshire, W. Highlands, Galloway, and other small Scottish breeds. The native N. sheep, so late as about 150 years ago, shared with rabbits almost the entire dominion of fully one-half of the co., then a wild, bleak, unenclosed expanse of waste territory. They are horned, and have a black nose and black feet. The sheep usually preferred, since the dividing and enclosing of the commons, are the Leicester and South-Down breeds. The Norfolk pigs are a comparatively small and slender race.—Norfolk turkeys are in great repute for their size and delicacy; and are reared in vast numbers for markets in the most distant parts of the kingdom. Large flocks of geese are bred in the fenny districts. Woodcocks, snipes, widgeon, teal, ducks, and various other aquatic species of birds, are plentiful. The *Otis Tarda*, or great bustard, the largest of the British land fowls, is still occasionally seen on the heathlands of W. Norfolk. The *Strix otis curtatus*, or short-eared, long-winged owl, the *Corvus cornix*, the *Tringa pugnax*, are found in the co. Pike, tench, trout, perch, and other species of fresh-water fish, are plentiful. The rabbit is an object of considerably extensive trade, and breeds in large numbers on Methwold heath.—The rents of farms vary considerably in different parts of the co. In some parts the arable land is let at rents as high as 50s. per acre, and some of the pasture at upwards of £3. Taking the average of the whole co., the rent of the arable may be 21s. per acre, that of the marshes 30s. per acre. An immense increase has of late years taken place in the rental of some of the marsh land. According to the returns under the property-tax for 1815, the estimated rental of N. was £1,102,352; the rent per acre 17s., and the estimated profits of occupiers £698,882. The amount assessed under the property-tax was £1,439,977; under the income and property-tax established in 1842 it amounts to £1,945,558, being an increase of £505,581.

Manufactures and commerce.] The staple manufacture of the co. is woven woollen goods. Worsted, now a small village, is remarkable for having given name to the kinds of woollen fabric which are formed from the yarn of carded instead of combed wool. Dormics, cambrics, and calecuts, formerly constituted the principal fabrics; druggets, serges, shalloons, and duffields followed; and these, in their turn, have been superseded by crapes, camblets, frish, stuffs, tabinets, bombazines, poplins, damasks, shawls, and a variety of fancy articles, formed from different and curious intermixtures of wool, mohair, and silk. These articles were formerly produced by the joint labour of several towns and villages throughout the co.; but, since the introduction of machinery, the manufacture of them has been chiefly confined to Norwich and its vicinity. See NORWICH. A considerable manufacture of stockings is carried on at Aylesham; of bombazines, spindles, tops, and wooden ware at Wymondham; of silk and crape at Yarmouth; of coarse woollens and of paper at Thetford; of fabrics from hemp, flax, and cotton, at Diss and North Lopham; and of mustard at Downham.—The foreign trade of Norfolk, especially to the Baltic, and to Holland, Portugal, and Spain, was at one time very great; it is now almost wholly engrossed by the ports of Yarmouth and Lynn. See the articles on these towns. Wells, Blackney, Burnham, and Cley, though they partially share in the corn trade, are rather fishing-towns than ports. In general, Norfolk, through the medium of the Great Ouse and its associated rivers and canals, supplies a large part of central England with coals, wine, timber, groceries, &c., and, in return, receives large quantities of corn, malt, and cheese.

Inland navigation] An act was obtained in 1827, for rendering the Yare and Wensum navigable to Norwich for vessels drawing 10 ft. water. and for cutting canals from the Yare to the Waveney, and from the latter, through Lake Lothing, to the sea. The works have been completed; and comprise, as a prominent part, a tide or sea-lock, which admits vessels 84 ft. in length, and 21 ft. across the beam. The Yare and Wensum are now navigable to Norwich for sea-borne vessels; and the Waveney, to Beccles, for small sea-borne vessels, and to Bungay, for river-craft. The Bure is navigable to Aylesham, 40 m. from the mouth of the Yare; the Thurn to Hickling-broad; and the Ant to Wayford-bridge, whence a canal continues the navigation to North Walsham. The Ouse and the Nene are navigable over all their extent within the co.; and are connected by a canal of 6 m. in length, from Wisbeach in Cambridgeshire to Outwell-creek and Salter's Load in Norfolk. The Little Ouse is navigable to Thetford; the Wissey to Stoke-Ferry; and the Nar to Castle-Acre. Several small cuts connect the navigable rivers with private estates, and serve for carrying corn to market, and freighting back coals and manure.

Roads and railways.] The turnpike roads of the co., about 30 years ago, are said to have been 17, with an aggregate extent of about 250 m. In 1836, the number of turnpike trusts was 15; and the aggregate extent of road under their charge was 271 m. A large proportion of the principal lines radiate from Norwich, respectively toward Wells, Holt, Cromer, North Walsham, Yarmouth, Ipswich, Thetford, Watton, and Swaffham.—The East Anglian railway commences at the terminus of the Northern and Eastern railways at Bishop's-Stortford; communicates with Cambridge by a branch; proceeds NNE to the vicinity of Norwich, nearly parallel and pretty close to the Ipswich and Norwich mail-road; makes a sudden curvature on the SE side of Norwich; and runs nearly due E to Yarmouth.

Towns and divisions.] This co. possesses one city, Norwich; 3 parliamentary boroughs, Yarmouth, Lynn, and Thetford; and, in addition to these, 26 market-towns. In 1831, the towns which had each a pop. of upwards of 3,000, were the city, the three boroughs, and Wymondham, East Dereham, Wells, and Swaffham; those which had upwards of 2,000 but less than 3,000, were Diss, North Walsham, Upwell, Aylesham, Downham, and Fakenham.—N. is divided into 33 hundreds, besides the liberties of Norwich, which is a city and co. of itself. It is in the Norfolk circuit, and has its assizes at Norwich. The parliamentary representation of N., previous to the Reform act, consisted of 2 members for the county, 2 for the city of Norwich, and 2 for each of the boroughs of Yarmouth, Lynn, Thetford, and Castle-Rising. The Reform act left the total number of members the same as before; but disfranchised the borough of Castle-Rising, and gave 4 members to the co.,—2 to an eastern, and 2 to a western division. The constituency of the two county divisions in 1837, was 15,601; of whom 9,496 were freeholders, 1,824 were copyholders, 1,558 were jointly freeholders and copyholders, 39 were leaseholders, and 3,474 were occupying tenants. In 1848, the electors were 8,507 for the E, and 7,510 for the W division.—Norfolk is in the dio. of Norwich, and prov. of Canterbury; and is divided into the two archdeaconries of Norwich and Norfolk. In 1829, the total number of livings in the co. was 683; the total number of dissenting congregations 181. The sum expended for the poor, in 1801, was £169,733; in 1811, £291,501; in 1821, £256,044; in 1831, £299,357. The amount of county levies for poor rate, county rate, and other local purposes, in 1834, was £355,684. The estimated rental of the co. is £1,957,822, the assessed rental £1,928,422, and the amount assessed to property and income tax £1,972,553. The number of persons returned as 'independent' in 1841 was 10,358, being a proportion of 10·4 per cent. below the average of England and Wales upon the same amount of pop. The actual annual value of the real property assessed to the income and property

tax in 1843 was £2,327,371, being a proportion of 4·55 per cent. of real property above the average for the like pop. throughout England and Wales.—In 1831 there were only 6,168 depositors in the savings-banks of N., the amount of whose deposits was £198,554; in 1846 the number of depositors had increased to 19,250, and the amount of their deposits to £562,373. The mean amount of each depositor, in 1841, was £31; and in 1846, £29.

Population.] The pop. of Norfolk, in 1801, was 273,371; in 1811, 291,999; in 1821, 344,368; in 1831, 390,044; in 1841, 412,621. Houses, in 1831, 74,793; in 1841, 85,922. In 1831, the number of males of 20 years and upwards, was 93,498; and of these 45,413 were employed in agriculture, and 4,740 in manufactures. The pop. in 1841 was 412,664, of whom there were, above 20 years of age, 94,982 males, and 95,967 females; while of those under 20, there were 104,119 males, and 117,596 females. Of the pop. of 1841, 384,594 of the persons so enumerated were born within the co., and 28,070 elsewhere. Between the years 1831 and 1841, the rate of increase in the pop. appears to have been checked in a most remarkable manner. In 1811, the pop. was 291,999, being an increase of 18 per cent. as compared with the previous ten years; in 1821 the number was 344,368, an increase of 13 per cent. over the previous decennial period; in 1831, 390,054, or an increase of 13¼ per cent.; while in 1841, the rate of increase was found to be only 5¾ per cent., the pop. having only increased during the ten years to 412,664. The number of inhabitants to 100 statute acres in Norfolk, according to the census of 1841, was 31·9, being a proportion of not less than 25·8 per cent. below the average of England and Wales; there being 15 other English counties with a less number to 100 acres; one county, viz. Sussex, having the same number; the remainder having in each case more than N. The pop. in 1851 was 433,803; being an increase in 50 years of 59·78 per cent., that for all England and Wales being 101·04 per cent.—The average annual number of persons charged with criminal offences, during the 7 years preceding 1820, 1827, 1834, and 1849, was respectively 267, 404, 521, and 633. The general state of education amongst the adult pop. may, in some measure, be gathered from the fact, that the proportion per cent. of persons married, who signed the registers with marks, during the year ending June 30th, 1839, was 46.

History.] Norfolk, at the epoch of earliest record, was inhabited by the *Icení*. The district was included in the Roman prætidial territory of *Fluvia-Cæsarensis*. About the year 575, it passed under the dominion of the Saxon leader Uffa; and, in common with Suffolk and Cambridgeshire, was erected into the kingdom of East Anglia. After the Norman Conquest, Ralph de Guader received Norfolk as an earldom; but he soon took up arms against his sovereign. The earldom was then given to Hugh Bigod, and it continued in the possession of his family till the time of Edward II. The title, at subsequent dates, was raised to that of duke, and associated with that of earl-marshal, &c.; and it passed first to the Mowbrays, and next to their descendants the Howards, who rank in the British peerage next to the Blood royal. In 1348-9, 58,000 persons died of the plague, called 'the black death' in Norfolk. In Wat Tyler's rebellion, John Litester, a Norwich dyer, headed a body of insurgents called the Norfolk levellers. In 1549, the rebels Robert and William Kett, brothers and tanners of Wymondham, headed a large body of insurgents in this co. During the civil wars of Charles I., Norfolk joined the parliamentarians, Norwich was fortified against the king, and that town, Yarmouth, and other places, were garrisoned with parliamentarian troops.

NORFOLK, a county in the E part of Massachusetts, U. S., intersected by the Neponset and Charles rivers. Area 400 sq. m. Pop. in 1840, 53,140; in 1850, 79,000. Its cap. is Dedham. The Boston and Providence railroad intersects the co.—Also a county in the SE of Virginia, U. S., intersected by Elizabeth and Pasquetank rivers, and comprising a portion of Dismal swamp. Area 544 sq. m. Pop. in 1840, 21,092; in 1850, 18,770, exclusive of that of the cap., which gives name to the co., and is a port of entry on the NE bank of Elizabeth river, 8 m. above its entrance into Hampton roads, and 106 m. ESE of Richmond, in N lat. 36° 50′, W long. 76° 18′. It occupies a low site, and its streets are crooked and irregular. It contains a court-house, a jail, a market-house, 2 banks, a theatre, an academy, an orphan-asylum, a Lancasterian school, an athenæum, and 8 churches for Episcopalians, Presbyterians, Baptists, Roman Catholics, and Methodists. N. has more foreign commerce than any other town in the state. The harbour is a beautiful basin, nearly 1 m. wide, and is effectually defended by three forts. On Washington point, between the E and W branches of the river, about 1 m. from Norfolk, there is a marine hospital, and a government navy yard with a fine dry dock. Pop. in 1830, 9,816; in 1840, 10,920; in 1850, 14,320.—Also a township of Litchfield co., Connecticut, U. S., 36 m. WNW of Hartford. Pop. 1,393.—Also a township of St. Lawrence co., in New York, U. S., 234 m. NNW of Albany. Pop. 1,728.—Also a township of Upper Canada, on the N coast of Lake Erie, in Talbot district.

NORFOLK BAY, a deep bay on the E coast of Van Diemen's Land, 20 m. E of Hobart-town. It is about 8 m. long from N to S, and from 3 to 5 m. broad from E to W. The largest fleet may anchor here on a good bottom of from 4 to 9 faths. deep.

NORFOLK ISLAND, an island, or rather a group of islands, in the S. Pacific, in S lat. 29° 2′, E long. 168° 2′, 900 m. ENE of Sydney, and 1,350 NE of Cape Pillar in Van Diemen's Land. The group is composed of two principal islets, Norfolk and Philip, distant about 6 m. from each other, with about a dozen rocks. Norfolk island is not quite 5 m. long, with a medium breadth of 2½ m., and a superficies of 8,960 acres. It rises, in the biforked summit of Mount Pitt, to an alt. of 1,050 ft. above sea-level. Philip island is about 1¼ m. long, and ¾ m. broad. Norfolk island was discovered in 1774 by Cook, who found it uninhabited, and who, with his crew, were probably the first persons who ever set foot on it. It is about 15 m. in circumf.; and has a fruitful soil clothed with verdure, and presents a scene of exuberant fertility. It appears of volcanic origin, and consists of a series of hills and valleys, alternating like the waves of the ocean. The pine [*Araucaria excelsis*] is the most abundant species of forest-tree occurring upon it. Some trees of this species measure from 150 to 180 ft. in height, and from 18 to 20 ft. in circumf. Their timber, however, is of a brittle quality, and only fit for house-building and common purposes. Vines, oranges, and lemon trees thrive well; as also the potato, and every kind of garden-vegetable which the grub spares. Wheat and maize are produced in great abundance. In 1843, 615 acres were under maize, 34 under wheat, 56 under rye, 56 under barley, and 25 under oats. The first is sown in April, and is usually reaped in October. The ground is then turned up afresh, and planted with maize, which is ready for pulling when the season approaches for sowing wheat. Stock of all kinds thrives well. The same species of pigeons, parrots, and parroquets occur here as in New Zealand, together with rails and some small birds. The sea-fowl are white boobies, gulls, fern, &c. The shores abound in fish, amongst which are king's fish, salmon, ship-jacks, and mackarel. The climate is delightful and salubrious, being neither intolerably hot nor excessively cold. The mean temp. in 1841 was 69° 39′; in 1843, 72° 07′; blighting SE winds however prevail. This island was colonized by Governor Phillips, shortly after his establishment of a settlement in Port-Jackson. The number of con-

victs committed to his charge being greater than he could easily support, he divided the refractory body into two parts, and sent the smaller and more profligate division to N. island; and the ordinary practice has since been to transport the more abandoned convicts, and such as have fallen under the sentence of the law a second time, to this island. One great objection to the colonization of this island is the difficulty of approaching it, owing to the heavy mountainous sea which constantly beats on its shores, which are everywhere high and precipitous. It has not unfrequently happened that ships from Port Jackson have been upwards of a month beating off and on, unable to advance, and unwilling to return, and still as distant as ever from all possibility of communication with the shore. The want of any harbour or roadstead for shipping is also much against it. After being abandoned for 15 years, it was re-occupied in 1825 on the footing of an exclusively penal settlement.

NORFOLK (New), a name formerly applied to the coast-line of Russian America, between the parallels of 57° and 61°, from Admiralty bay to Baranov island.

NORFOLK SOUND, a bay on the W coast of Russian America, in N lat. 57°, entering between Cape Edgecumbe on the N, and Woodhouse-point on the S. In 1792, the Russians founded the establishment of New Archangel on Sitka island in this sound. See articles Archangel (New) and Sitka.

NORGE. See Norway.

NORHAM, a township of the co. of Durham, 6 m. NE of Cornhill, and 6 m. SW of Berwick-upon-Tweed, in the detached district of the co. called Norhamshire, lying between Northumberland and the river Tweed.

NORIC ALPS, that portion of the great chain of the Alps which stretches from about the meridian of 12° 15′ in an E direction towards Vienna. See Alps.

NORINSK, a town of Russia, in the gov. of Volhynia, 12 m. WSW of Ovrutsk.

NORKITTEN, a village of E. Prussia, in the reg. and 30 m. W of Gumbinnen, on the Auxinne.

NORLAND, a township of the W. R. of Yorkshire, 2½ m. SW of Halifax. Pop. in 1841, 1,670.

NORLEY, a township of Cheshire, in the p. and 5 m. SSE of Frodsham. Pop. 615.

NORMA, a town of the Papal states, in the deleg. and 21 m. WSW of Frosinone.

NORMAN (Cape), a headland on the W coast of Newfoundland, at the W entrance of the narrow bay of Manco, 20 leagues from Cape Ferrol, in N lat. 51° 40′.

NORMAN'S ISLAND, a small island in the West Indies, 18 m. E of St. John, in N lat. 18° 20′.

NORMAN'S KILL, or Creek, a river of Albany co., New York, U. S., which falls into the Hudson, 2½ m. S of Albany.

NORMANBY, a parish in the co. of Lincoln, 7 m. W by S of Market-Raisen. Area 1,420 acres. Pop. in 1831, 430; in 1841, 471.—Also a parish in the N. R. of Yorkshire, 5 m. WSW of Pickering, on the river Severn. Area 2,330 acres. Pop. in 1831, 258; in 1841, 245.—Also a tything in Ash p., Surrey, 4½ m. WNW of Guildford.—Also a township in Stow p., Lincolnshire, 5½ m. SE of Gainsborough.—Also a township in Ormsby p., N. R. of Yorkshire, 4 m. WNW of Guisborough. Area 1,640 acres. Pop. in 1831, 138.

NORMANBY, a county of Southern Australia, bordering on the S on Discovery bay and Portland bay. It is 50 m. in length from N to S, and 80 m. from E to W. Its chief town is Portland. In Mount Napier, its surface attains an alt. of 1,444 ft. The Glenelg river bounds it on the W. Pop. in 1842, 2,267.

NORMANBY-ON-THE-WOLDS, a parish in Lincoln, 3½ m. N by E of Market-Raisen. Area 1,980 acres. Pop. in 1831, 122; in 1841, 129.

NORMANDY, an ancient province and duchy of France, one of the most extensive and fertile in the kingdom; bounded by the English channel on the W and N; by Picardy on the E; and on the S by the provs. to the N of the Loire. It contains about 11,000 sq. m.; being about 150 m. in length, and in breadth between 80 and 90 m. It has the form of an oblong, extending from E to W, of which, however, the N line is much indented by the sea. It was subdivided into Haute-Normandie, forming its E part, and comprising the Pays de-Caux, the Pays-de-Bray, the Vexin Normand, the Roumois, Campagne-de-Neubourg, and Campagne-de-St.-Andre, the Pays-de-Ouche, the Lieuvin, and the Pays-d'Auge, and of which the cap. was Rouen; and Basse-Normandie, comprising the Campagne-d'Alençon, the Pays-d'Houlme, the Campagne-de-Caen, the Bessin, the Boccage, the Cotentin, and the Avranchin, and of which the cap. was Caen. At the French revolution it was divided into the five departments of Seine-Inferieure, Eure, Calvados, La Manche, and the greater part of Orne. It is a rich and fertile district, highly productive in grain, lint, colza, and apples. Almost every farmer rears more or less flax on his little occupancy, and makes his family put it through the different processes of manufacture. The climate has not enough of warmth for the culture of the vine, but the want of it is supplied by extensive apple orchards. The fisheries on the coasts are extensive. The Norman horses are strong, and capable of considerable work, but are of small size. The best breed is raised in the district called the Cotentin: at the plough, oxen are generally used. The most generally diffused branch of manufacture is that of linen. The quality of Norman linen is in general coarse and strong. After linen comes lace, which employs thousands of women and girls in various parts of the prov. Cottons are of late introduction, and are made only in large factories, which now exist at Rouen and along the line of the Havre and Paris railway; Caen, Bayeux, Alencon, Honfleur, have lace; Louviers and Elbœuf, fine woollens; Vire, in the SW, produces woollens, but of coarse quality; while Aigle manufactures pins and needles in large quantities. The exports of N. consist chiefly of cotton, linen, and lace; also cattle, corn, butter, and cyder. The Normans uniformly speak French, with a provincial accent in rural districts, but with accuracy and propriety in the towns. In Roman times, N. was inhabited by the *Veliocasses*, the *Caleti*, the *Bajocesses* and the *Lexovii*. After the loss of Gaul by the Romans, it formed part of the kingdom of Neustria. Its present name was received from the Normans, a race of great celebrity in the Middle ages, who, issuing from Scandinavia under the command of Rollo, settled here in the latter part of the 9th cent., and compelled the king of France to make them the formal cession of the country as a fief in 912. They were henceforth governed by their own dukes, the most renowned of whom was William, who achieved the conquest of England in 1066. The two countries remained under one king until 1203, when N. was wrested from the feeble hands of King John. It subsequently became to England a favourite object of conquest, the theatre at times of successful invasion, and finally of disaster and expulsion. Edward III. began the campaign of 1346 by overrunning N., and closed a succession of anxieties and perils by the victory of Crecy. A less transient occupancy of N. was obtained by Henry V., who three years after the battle of Agincourt conquered the whole of this province, and obtained its formal cession by the peace of 1420. It remained in the possession of England for 30 years,—a period still cited by the Normans as the era of the foundation of several of their seminaries, and of a number of their public edifices; but was finally wrested from the English in 1449. N. had until the Revolution its separate parliaments, which sat at Rouen; its provincial laws and usages were also preserved, and under the name of *Coutumier de Normandie* form an important monument of the legal system of the Middle ages.

NORMANTON, a parish in Derbyshire, 2 m. S by W of Derby, intersected by the Birmingham and Derby railway. Area 1,660 acres. Pop. in 1831, 295; in 1841, 309.—Also a parish in Lincolnshire, 7 m. N by E of Grantham, at the source of the Witham. Area 1,540 acres. Pop. in 1831, 204; in 1841, 200. Also a parish in Rutlandshire, 6 m. E by S of Oakham, on the river Gwash. Area 2,450 acres. Pop. in 1831, 33; in 1841, 28.—Also a parish in the W. R. of Yorkshire, 3½ m. ENE of Wakefield, intersected by the York and Manchester railway, comprising the townships of Altofts, Snydale, and N. Area of p. 4,110 acres. Pop. in 1831, 899; in 1841, 1,323.

NORMANTON (North), or Temple-Normanton, a chapelry and township in Chesterfield p., Derbyshire, 3½ m. SE of Chesterfield, and 1½ m. E of the Midland Counties railway. Pop. in 1831, 146.

NORMANTON (South), a parish in Derbyshire, 2½ m. ENE of Alfreton. Area 1,730 acres. Pop. in 1831, 1,154; in 1841, 1,288.

NORMANTON-LE-HEATH, a chapelry in Nail-

stone p., Leicestershire, 3 m. SSE of Ashby-de-la-Zouch. Area 1,320 acres. Pop. in 1831, 216.

NORMANTON-UPON-SOAR, a parish in Nottinghamshire, 12 m. SSW of Nottingham, intersected by the Midland Counties railway. Area 1,500 acres. Pop. in 1831, 365; in 1841, 428.

NORMANTON-UPON-TRENT, a parish in Nottinghamshire, 3¾ m. ESE of Tuxford. Area 1,110 acres. Pop. in 1831, 349; in 1841, 362.

NORNDORF, a town of Bavaria, between the rivers Lech and Schmutter, 15 m. N of Augsburg. Pop. 800.

NORO, a town of Mandshuria, 300 m. NE of Ninggouta, at the confluence of a small river of the same name with the Ossuri.

NORONA. See FERNANDO-DE-NORONHA.

NOROSI, a settlement of New Granada, in the prov. of Santa-Marta, situated near the point where the river Magdalena communicates with the Colorado.

NOROY-LE-BOURG, a town of France, in the dep. of Haute-Saone, 9 m. E of Vesoul. Pop. 1,200.

NOROY-LE-SEC, a village of France, in the dep. of Moselle, cant. of Conflans, 6 m. WNW of Briey. Pop. 600.

NORRENT-FONTE'S, a town of France, in the dep. of Pas-de-Calais, 12 m. NW of Bethune. Pop. 1,000.

NORRIDGEWOCK, the capital of Somerset co., in the state of Maine, U. S., on the Kennebec, 32 m. N of Augusta. It is finely situated on both sides of the river, and has considerable trade with the back-country. Pop. 1,865.

NORRIESTON, a village of Perthshire, now joined to the village of Thornhill, 9 m. WNW of Stirling. Pop. 750.

NORRISTOWN, the capital of Montgomery co., Pennsylvania, U. S., on the N side of the Schuylkill, over which it has a bridge 800 ft. in length, 91 m. E by S of Harrisburg, and 17 m. NW of Philadelphia. Pop. 2,937.

NORRITON, a township of Montgomery co., in Pennsylvania, U. S., with a village on the Schuylkill river. Pop. 1,411.

NORRKOPING. See NORDKOPING.

NORRLAND. See NORDLAND.

NORRTELGE, a port of Sweden, on the Baltic, in the laen and 30 m. NE of Stockholm, in N lat. 59° 45′. Its pop., about 1,000, is employed chiefly in fishing and the coasting-trade. In the neighbourhood is a manufacture of fire-arms. The place suffered considerably from a Russian squadron in 1719.

NORSINGEN, a village of Baden, 4 m. N of Staufen. Pop. 400.

NORSKOE, a town of Russia, in the gov. and 9 m. NW of Jaroslav. Pop. 1,500.

NORT, a town of France, in the dep. of Loire-Inferieure, on the r. bank of the Erdre, 15 m. NNE of Nantes. Pop. 3,200. It is an entrepot for the iron, wood, and coals, sent from the interior to Nantes.

NORTE (RIO-BRAVO-DEL, or RIO-GRANDE-DEL), a large river of North America, which, according to the map of Lewis and Clarke's tract from the Missouri to the Pacific, has its remotest sources in two streams which rise in the great cordillera that separates the eastern from the western waters of North America, in 40° 12′ N lat., and 111° 30′ W long., immediately to the W of the sources of the Big Horn, Platte, and Arkansas rivers. The valley containing its sources is separated by another stupendous ridge on the N from the head-waters of the great southern branch of Lewis river; and on the W by another range, which separates it from the sources of the Multnomah or great SE branch of the Columbia. These two streams run W, in separate courses of 50 m. each, till they unite and form the Rio-del-N. Turning SE from this point, the Rio-del-N. is augmented by several streams from the W; and after a course of 120 m. is joined from the NE by Colter's river. It then runs 250 m. farther in the same direction, in a valley bounded on both sides by ranges of snowy mountains, as far as 38° N lat., and 107° W long., where it enters the prov. of New Mexico. Thence its course is due S for 350 m. to 33° N lat., passing by the city of Santa-Fé, whence it directs its course generally SE, through the prov. of Cohahuila, and after dividing Texas from New Santander, falls into the gulf of Mexico, in 25° 55′ N lat., and 97° 26′ W long., according to Humboldt. The comparative course of this river is nearly 1,600 m., 540 of which are to the NW of Santa-Fé. It cannot, however, be said to be a navigable river in any part of its course, owing to the rocky ledges and cataracts in the upper part of its course, and to sand-bars in the flat country; but small boats might ascend as far as Presidia-de-Rio-Grande, in Cohahuila, a distance of 200 m. from the coast. Nearly 180 m. above the Presidio-de-Rio-Grande, it receives the Puerco, after a course of 320 m. SE from its source in the apex of the angle formed by the junction of the Sierra-del-San-Sacramento with the mountains of Namhi, in 34° N lat. Above 166 m. higher up it receives the Rio-Conchos, after a course of 300 m. NE from the Sierra-Madre. Where Pike crossed the Conchos it seemed to be as large as the Rio-del-N. at the Passo. Like the Missouri, the Red river, and the Arkansas, the Rio-del-N. has its periodical floods, which commence in April, are at their height in the beginning of May, and fall towards the end of June. At Albuquerque, where Pike crossed it, 40 m. below Santa-Fé, it was 400 yds. wide and 3 ft. deep; and in the drought of summer it might be forded as far as its junction with the Conchos. Opposite Taos, for an uninterrupted distance of nearly 15 m., it runs pent up in a deep cannon, through which it rushes in rapid torrents. "This frightful chasm is absolutely impassable; and viewed from the top the scene is imposing in the extreme. None but the boldest hearts and firmest nerves can venture to its brink and look down its almost perpendicular precipice over projecting crags and deep crevices, upon the foaming current of the river, which in some places appears like a small rippling brook, while in others it winds its serpentine course silently but majestically along, through a narrow little valley, with immense plains bordering and expanding in every direction, yet so smooth and level that the course of the river is not perceived till within a few yards of its verge." [*Gregg.*] The inefficiency of this river for commercial purposes is further apparent from an extraordinary event which occurred in 1752, of which the inhabitants in Humboldt's day still preserved the recollection. The whole bed of the river became dry all of a sudden for more than 30 leagues above and 20 leagues below the Paso, and the water of the river precipitated itself into a newly formed chasm, and only made its reappearance near the presidio of San Eleaziario. After, however, the lapse of several weeks, the water resumed its course, it is supposed by the filling up of the chasm and its subterraneous conductors. Though this is very likely an exaggerated statement, the constant disappearance of the river in seasons of severe drought in part explains the tradition. It is singular that, despite the vast number of tributary streams which would be expected to flow into the Rio-Grande, very few in reality reach their destination. The Rio-Puerco, or the muddy stream, is an exception; and yet this river, though running a course of 300 m., is for a portion of the year dry at its mouth. The Santa-Fé even, a bold and dashing rivulet in the

vicinity of the mountains, becomes as it flows on an insignificant stream, and is often lost ere it reaches the Rio-Grande. Indeed, this river runs a course of 500 m. before it receives any addition of the slightest consequence. We consequently find that above the influence of the tide it is almost everywhere fordable during the chief part of the year: during freshets it is certainly deeper, but in general the water does not rise above the knee. Throughout almost the whole of its course its banks are low and seldom adorned with much vegetation, if we except bushes, and yet from its disproportionate width—generally 300 or 400 yds.—it is not like the other rivers of that region subject to inundations, so great an evil to the inhabitants on the borders of the Colorado and Brazos in Texas. To the inhabitants of Northern Mexico this river is known as the Rio-del-Norte or 'North river,' because it takes its rise among the northern hills and flows in a southerly direction. Below it is called the Rio-Grande, but nowhere now Rio-Bravo, as it once was, and is still in many maps. Its lower portion is sometimes very picturesque, and also dangerous to navigation, from the constant recurrence of small wooded islands—the *islatas* of the Rio-Grande—which with shoals, narrow and rapid channels, remove almost all hope of its ever becoming a useful river. Along almost the whole course of the river the land is sterile, bleak, and barren; there are exceptions about Taos and Santa-Fé, but the want of irrigation makes the former the distinctive characteristic, until we approach the sea. During the late war the Americans were able to make a bridge of waggons across the river, which speaks volumes for its shallowness.

NORTEN, a town of Hanover, in the principality and 6 m. N of Gottingen, near the r. bank of the Leine. Pop. 1,300.

NORTHALL, or NORTHOLT, a parish in Middlesex, 2½ m. SW by S of Harrow-on-the-Hill, intersected by the Paddington canal. Area 2,230 acres. Pop. in 1831, 447; in 1841, 653.—Also a hamlet in Eddlesborough p., Bucks, 3 m. NNE of Ivinghoe. Area 990 acres. Pop. in 1831, 553; in 1841, 540.

NORTHALLERTON, a parish and borough in the wapentake of Allertonshire, N. R. of Yorkshire, 32 m. NNW of York, and 225 m. NNW of London, intersected by the Great North of England railway. The p. includes the chapelries of Brompton, Deighton, and High-Worsall, and the township of Romanby. Area 13,100 acres. Pop. in 1831, 5,118; in 1841, 5,273. The church is a spacious edifice, supposed to have been erected about the 14th cent. The town is situated in a delightful valley watered by the Wiske. It is well-built, and consists chiefly of one broad street about a ½ m. long. The sessions-house, on the E side of the town, is a handsome modern building. The principal manufactures carried on here are those of linens and leather; but not to any considerable extent. The chief importance of the place arose from its being the half-way town between York and Newcastle. But the King's Head posting-house at N., which had been an inn for nearly two centuries, situated in the centre of the market-place, with a spacious assembly-room, and stabling for 100 horses, is now converted into a farm-house, with 250 acres of land to it: so much for railways. The old coach from York to Newcastle in 1706 put up at this inn; and the Edinburgh, Berwick, Newcastle, York, and London post coach, established in 1712, also put up at this inn and at the Golden Lion alternately. The latter coach occupied 13 days in travelling to and from London and Edinburgh. The quarter-sessions for the north riding are held here. In the neighbourhood is Standard-hill, so called from a battle fought here in 1138 between the English and Scots. N. formerly returned 2 members to parliament: under the reform act it returns only one. The boundaries of the borough, which have been extended, include the townships of N. and Romanby, and the chapelry of Brompton. The number of electors registered in 1837 was 271; in 1848, 303. The pop. of the parl. borough in 1841 was 4,861; in 1851, 4,995. N. is a polling-place in the election of members for the northern division of the co.

NORTHAM, a parish and village in Devonshire, 1¾ m. N by W of Bideford, having the Bristol channel on the W, and the navigable river Torridge on the E. A succession of villas connects the village of N. with Bideford. Area 2,740 acres. Pop. 3,578.

NORTHAMPTON, the capital of Northamptonshire, locally situated in the hund. of Spelhoe, 65½ m. NW by N of London, on the N bank of the river Nene, which communicates here by a branch with the Grand Junction canal. The town, which occupies the summit of an eminence gently sloping to the river, over which there are several bridges, was formerly defended by embattled walls and a castle. It consists of four principal streets, with several smaller ones diverging from them. The houses in general are built of a reddish coloured freestone. The principal public buildings, exclusive of churches and chapels, are the town-hall, an ancient and commodious structure; the county-hall, a modern edifice in the Grecian style of architecture; the county-gaol, the infirmary, the lunatic asylum, and the new theatre. The market-place is a spacious open area surrounded by shops and houses. At the N extremity of the town, near the Royal terrace, are handsome barracks; and at a short distance, on the S side, stands one of the fine sepulchral crosses erected by Edward I. in commemoration of his queen, Eleanor of Castile. The assizes for the co. are held here, and also the quarter-sessions for the southern division. The income of the borough for 1840 was £4,622; for 1850, £7,694. It returns 2 members to parliament. Electors registered in 1837, 2,103; in 1848, 2,390. Pop. of parl. borough in 1841, 21,242; in 1851, 26,657. The town contains 6 churches, and 15 dissenting chapels. — The principal branch of manufacture carried on in the town is that of boot and shoe making, in which upwards of 1,300 persons are employed. Considerable business is also done in leather currying, wool-combing, and the manufacture of lace. There are also three iron-foundries; and the town forms the mart in which large quantities of the agricultural produce of the surrounding co. is disposed of. Trade is facilitated by the navigation of the Nene, which communicates with the Grand Junction canal. Races take place at N. in August. The course, which is pretty extensive, lies at a short distance, on the N side of the town. The town of N. gives its name to certain tables which have been constructed with respect to mortality, and which form the data upon which the business of most of the life insurance societies of this country is conducted. The N. table of mortality professes to show what number of persons out of 11,650 assumed to be born at the same time, attain to the ages of 1, 2, and 3 years, and to every year of age up to 96. The calculations were made by Dr. Price from the accounts kept at N. from 1735 to 1780, both years inclusive, of the ages at death of 4,689 persons who were buried within that period in the p. of All-Saints. Calculations were also made upon the data thus furnished, of the value of life annuities, of insurances on single and joint lives, and of annuities payable on the survivorship of lives. These tables form the basis of the business of many English and Scotch insurance offices. It has also been the basis of calculation for

friendly and benefit societies; and government formerly sold annuities to a large amount on terms founded upon the data furnished by it.

NORTHAMPTON, a county on the E side of the state of Pennsylvania, U. S., watered by the Delaware and Lehigh. Area 1,100 sq. m. Pop. in 1840, 40,996; in 1850, 40,941. Its chief town is Easton.—Also a co. on the E side of Virginia, bounded on the S by the entrance into Chesapeake bay, and on the W by Chesapeake bay. Area 320 sq. m. Pop. in 1840, 7,715; in 1850, 7,396. Its chief town is Jackson.—Also a co. in the N part of N. Carolina. Area 546 sq. m. Pop. in 1840, 13,369; in 1850, 13,335.—Also a township of Rockingham co., New Hampshire. Pop. 885.—Also the capital of Hampshire co., Massachusetts, on the W bank of Connecticut river, in N lat. 42° 19′, W long. 72° 38′, opposite Hadley, with which it is connected by a bridge 1,080 ft. long. Pop. in 1840, 3,750.—Also a township of Fulton co., New York, 50 m. NW of Albany. Pop. 1,526.—Also a township of Burlington co., New Jersey, intersected by Rancocus creek. Pop. 6,813.—Also a township and cap. of Lehigh co. Pennsylvania. Pop. 293.—Also a township of Bucks co., Pennsylvania, 10 m. SE of Doylestown. Pop. 1,694.

NORTHAMPTONSHIRE, a midland county of England; bounded on the N by the cos. of Rutland and Lincoln; on the E by Huntingdon, Bedford, and Bucks; on the S by Bucks and Oxford; and on the W by Oxford, Warwick, and Leicester. Its form is oblong and irregular, extending from NE to SW about 70 m., by from 7 m. to 25 m. in breadth. Its area is 1,010 sq. m., or 680,400 acres, being the 22d in point of size of the English cos. The surface is pleasantly diversified with moderate elevations. The highest ground is in the vicinity of Daventry, where the Nene and the Cherwell, flowing into the eastern sea, and the Leam, flowing into the western, rise near each other. A little farther N, the Avon and the Welland, running into opposite seas, also spring near each other. About Towcester the co. also is hilly; indeed, this co. is on the whole more elevated than the adjoining districts, as appears from the fact of its containing the sources of several rivers passing into other cos. and flowing into opposite seas. Besides being enlivened by the numerous streams with which it is watered, the verdure is in general rich and vivid, and the district well-wooded, and interspersed with seats and mansions of the nobility and gentry, forming on the whole a fine general landscape.

Rivers.] The Nene and the Welland are the principal rivers. Besides others above named, the Ouse also rises in this co. The Nene proceeds from two sources, one in the W, near Daventry, and the other about 12 m. NNW of Northampton. Meeting at the latter town, the river becomes navigable for small craft, and runs in a sinuous course to Peterborough, whence it forms the boundary towards Croyland, where it finally quits the co. for Cambridgeshire. See article NENE. The Welland rises about 3 m. NW of the second head-source of the Nene, and flows NE, forming the NW boundary of the co., by Stamford and Market-Deeping in Lincolnshire, to the vicinity of Croyland, where it approaches within a few miles of the Nene, and finally quits the co. for Lincolnshire. By means of locks this river has been rendered navigable to Stamford. The Ouse, at the SE corner of the co., forms a tract of rich meadows about Stony-Stratford. The extreme N point of the co., surrounded and intersected as it is by rivers, is liable to inundation, and forms the commencement of the fenny tract extending to the Lincolnshire washes.

Canals, roads, and railways.] The Grand Junction canal begins at Braunston in this co., near the Warwickshire border, where it unites with the Oxford canal, and passes E through a tunnel, and then SE to Blisworth, near which it sends off a branch to Northampton. It then penetrates through another tunnel of difficult construction to Cosgrove; and thence flows into Bucks, despatching a branch from Cosgrove to Stony-Stratford. This canal, besides its prolongation to the metropolitan district, affords the means of communication, through the Oxford canal, with all the canals in the district round Birmingham, and through the Grand Union canal, with the Trent and Mersey navigations. The Grand Union canal begins in the Grand Junction in Norton p. N of Daventry, and runs N to the Leicester canal near Foxton, passing through two tunnels, and sending branches to Welford and Market-Harborough.—The road from London by St. Alban's and Dunstable, to Coventry, Liverpool, and Chester, enters this co. at Stony-Stratford, and crosses it on the Watling-street, by Towcester, Daventry, and Braunston, to Warwickshire. The road from London by Dunstable to Leicester, Derby, and the midland and northern cos. in general, enters near Horton, and crosses by Northampton, Kingsthorpe, and Market-Harborough, into Leicestershire. The road from London by Bedford to Nottingham and the NE, enters by Higham-Ferrers, and crosses by Kettering and Rockingham into Rutlandshire. The road from London by Huntingdon to Lincolnshire enters by Peterborough, and crosses by two branches, one through Market-Deeping, the other through Croyland.—The London and Birmingham section of the Great North-western railway enters this co. between Stony-Stratford and Northampton, and crosses it nearly in the line of the Grand Junction canal, from the Wolverton station, on the SE border, by Bliston and Weedon, to Rugby. It passes through a tunnel 400 yds. in length under Watling-street at Weedon, and at Killesby through another about 1¼ m. in length, being the longest on the line, and penetrating partly through a quicksand. The Wolverton station is the principal engineering establishment and depot of the company: see WOLVERTON. A branch from the main line at Blisworth runs along the E side of the co. to Peterborough; whence the Syston and Peterborough, the Eastern counties, and the East Lincolnshire lines, afford communication with all quarters of the co.

Minerals, soils, and produce.] The oolite formation extends throughout the co., but there is no chalk. Limestone everywhere abounds, and is extensively quarried. The NE part of the co. is chiefly fen-land continuous with that of the adjoining cos. of Lincoln and Cambridge. Peterborough fen, part of the Bedford level, contains nearly 7,000 acres of excellent soil. The soil of this co. is in general a stiff loam, in some localities cold and wet, or, as about Towcester in the S, intermixed with clay and coarse gritstone. On the whole the land here is not unproductive.—N. is noted as a grazing and dairy co., especially throughout that tract which lies northwards from Northampton to the Leicestershire border. About half the co., exclusive of woodlands and commons, is in pasture; but the cultivation of wheat and other crops usual in farming cos. is carried on to a considerable extent. Much of the arable land, however, was till recently open field-land; and numerous sheep are grazed on the high grounds. The size of the farms is generally from 100 to 500 acres; and comparatively few leases are granted. Nearly the whole of this district was anciently occupied by Rockingham, Whittlebury, and Salcey forests: there are still considerable remains of these. Most of the forest underwood is thorn, ash, and maple. The timber is chiefly oak, ash, beech, and elm.—This co. is proverbially held to be a healthy district. From its inland and moderately elevated situation, it is not so subject to heavy and continued rains as the more western cos. are. The average annual fall of rain for 14 years, in the months of March, April, and May, was 14·13 inches.

Population.] The total pop. of this co. in 1801 was 131,757; in 1831, 179,300; in 1841, 199,061, of whom 98,886 were males, and 100,175 females; in 1851, 213,784. The total increase per cent. in 50 years thus appears to have been 66·70; the annual increase 1·03 per cent.

Divisions.] This co. is divided into 20 hundreds, of which Nassaburgh or Peterborough liberty, Willybrook, Corby, Polebrooke, Navisford, Huxloe, Rothwell, Higham-Ferrers, Hamfordshoe, and Orlingbury, are in the northern division; and King's-Sutton, Chipping-Warden, Green's-Norton, Cleley, Towcester, Fawsley, Wymersley, Spelhoe, Nobottle-Grove, and Guilsborough, are in the southern. It

comprises 336 parishes; 1 city, Peterborough; 1 co. town and borough, Northampton; 2 other borough and market-towns, Higham-Ferrers and Brackley; and 6 market-towns, Daventry, Kettering, Oundle, Thrapston, Towcester, and Wellingborough. There are 551 villages in the co. This co. is included in the dio. of Peterborough, and prov. of Canterbury. With Rutlandshire it forms an archdeaconry. The poor rate returns for 3 years, to Easter 1750, show an average expenditure of £12,367 on the poor of this co. In 1803 the expenditure was £97,894; in 1840, £88,449.—The co. returns 4 members to parliament, 2 for the northern division, and 2 for the southern division. Peterborough and Northampton also return 2 members each. The number of electors registered for the co. in 1837, was 3,857 for the northern, and 4,600 for the southern division. In 1848, it was 4,031 for the northern, and 4,715 for the southern.—The co. is comprehended in the Midland circuit. The assizes are held at Northampton; and the quarter-sessions also there and at Peterborough. The co.-jail and house-of-correction are at Northampton.

Trade and manufactures.] This co. is not remarkable for trade or manufactures, except for boots and shoes, which are made in immense quantities at Northampton, and at Daventry, Kettering, Long-Buckley, and Wellingborough, for exportation or for army contract. Other manufactures, such as those of lace, hats, whips, pottery, paper, and malt, are carried on to some extent in various places. At Kettering, and the neighbouring villages of Rothwell and Desborough, several hundred weavers are engaged in making silk-plush for hats. Wool-combing and spinning are also carried on. The chief exports of the co., besides shoes, are wheat, flour, beans, timber, bark, fat cattle, sheep, wool, butter, and cheese.

History.] When Britain was invaded by the Romans, this part of the island was inhabited by the *Coritani;* it was subsequently included in the Roman prov., *Flavia Cæsariensis,* and the Saxon kingdom of Mercia. In 1469, the partisans of the houses of York and Lancaster met at Edgecote in this co., and fought a fierce battle, in which the Lancasterians were victorious. In 1586, Mary, queen of Scots, was executed at Fotheringay castle. In 1645, the army of Charles I., who had fixed his head-quarters at Daventry, was defeated at Naseby by Fairfax and Cromwell.

NORTHAU, a parish of Herts, 4½ m. NNE of Chipping-Bassett. Area 3,180 acres. Pop. 609.

NORTH BAY, a bay on the S coast of Chiampa, in N lat. 10° 36′, E long. 106° 35′.—Also the most northerly bay of Forrestier's peninsula, in Van Diemen's Land, between Cape Paul Lamanon and Cape Frederick Hendrick.

NORTH BEAVER, a township of Beaver co., Pennsylvania, U. S. Pop. 2,293.

NORTH BEND, a village of Hamilton co., Ohio, U. S., on the river Ohio, 16 m. below Cincinnati.—Also a township in Maçon co., Illinois.

NORTH BERWICK. See Berwick (North).

NORTHBOROUGH, a parish of Northamptonshire, 7 m. NW of Peterborough. Area 710 acres. Pop. in 1831, 227; in 1841, 272.—Also a township of Worcester co., Massachusetts, U. S., 33 m. W of Boston. Pop. 1,348.

NORTHBOURNE, a parish of Kent, 3 m. W of Deal. Area 3,490 acres. Pop. in 1841, 885.

NORTHBRIDGE, a township of Worcester co., U. S., 45 m. SW of Boston. Pop. 1,447.

NORTH BRIDGEWATER, a township of Plymouth co., in the state of Massachusetts, U. S., 22 m. S by E of Boston. Pop. 2,616.

NORTH BROOKFIELD, a township of Worcester co., in Massachusetts, U. S., 60 m. W of Boston. Pop. 1,485.—Also a township in Madison co., in New York.

NORTH (Cape), a cape on the N coast of Ireland, in N lat. 55° 15′, W long. 8° 55′.—Also the NE point of the island of Georgia, in the S. Atlantic.—Also a cape on the E coast of S. America, in N lat. 1° 48′.—Also the N point of the island of St. John, in the gulf of St. Lawrence, in N lat. 47°.—Also the NE point of the island of Cape Breton, in N lat. 47° 2′.—Also the NE extremity of the North island of New Zealand.

NORTH CAPE, a promontory on the N coast of the Norwegian island of Magerŏe, forming the most northern point of Norway, in N lat. 71° 10′ 15″. It is a long-extended headland or tongue of rock, narrowest where joined to the main body of the island, and enlarging towards its other or seaward extremity, where it becomes of an insular shape, and is indented by several chasms forming small creeks. Its surface is flat, and rises gradually from the landward end till about a ¼ m. from its seaward extremity, when it declines with a gentle slope towards the sea. The whole is destitute of vegetation, and strewn with small fragments of rock. Speaking accurately, however, this cape does not form the most northern point of Magerŏe; for a narrow rugged ridge to the W of it, and divided from it by a broad fiord, called Knivskiærodden, bears NW of it. Capell Brooke calls this point Knivskiœr-næs.

NORTH CASTLE, a township of West Chester co., New York, U. S., 33 m. NE of New York. Pop. 2,058.

NORTH CHAPEL, a parish of Sussex, 5 m. NNW of Petworth. Area 3,600 acres. Pop. 843.—Also a parish of Hertfordshire, 1½ m. NW of Berkhampstead. Area 3,890 acres. Pop. 1,265.

NORTH CHATHAM, a village in Columbia co., New York, U. S., 15 m. S by E of Albany. Pop. 250.

NORTH CODORUS, a township of York co., in Pennsylvania, U. S. Pop. 1,540.

NORTH COLAH, a parish in Cumberland co., in New South Wales, skirted on the NW by Berowa creek.

NORTH-EAST, a township of Dutchess co., New York, U. S., watered by Ten-mile creek. Pop. 1,385.—Also a township of Cecil co., Maryland.—Also a township of Erie co., Pennsylvania, 10 m. NE of Erie. Pop. 1,793.—Also a river of Cecil co., Maryland, which flows into the Chesapeake, 5 m. SE of Charleston.

NORTH-EAST PASSAGE. See Arctic Ocean.

NORTHENDEN, a parish of Cheshire, 4 m. W of Stockport. Area 3,910 acres. Pop. 1,386.

NORTHERN CIRCARS. See Circars.

NORTHFIELD, a parish of Worcestershire, 5 m. SE of Hales-Owen. Area 5,880 acres. Pop. 2,201.

NORTHFIELD, a township of Washington co., in the state of Maine, U. S. Pop. 232.—Also a township of Washington co., Vermont, 10 m. SSW of Montpellier. Pop. 2,013. — Also a township and village of Franklin co., Massachusetts, 92 m. NW of Boston. Pop. 1,673. The v. is situated on the E bank of the river Connecticut.—Also a township of Richmond co., New York, 3 m. N of Richmond, on the NW part of Staten island. Pop. 2,745.—Also a township of Summit co., in Ohio, 143 m. NE of Columbus. Pop. 1,031.

NORTHFLEET, a parish of Kent, on the banks of the Thames, 2 m. W of Gravesend. Area 3,980 acres. Pop. in 1831, 2,124; in 1841, 3,621.

NORTHFORD, a township of New Haven co., Connecticut, U. S., 28 m. S by W of Hartford.

NORTH FORELAND. See Foreland.

NORTH FORK, a township of Ashe co., in N. Carolina, U. S.—Also a township of Mason co., in Kentucky.—Also a township of Izard co., in Arkansas.

NORTH GEORGETOWN, a village of Colum-

biana co., in Ohio, U. S., 146 m. N by E of Columbus. Pop. 300.

NORTH GOSHEN, a village of Litchfield co., in Connecticut, U. S., 34 m. W by N of Hartford.

NORTH HAMPTON, a township of Rockingham co., in New Hampshire, U. S., 50 m. SE of Concord. Pop. 885.

NORTH HAVEN, a township of New Haven co., Connecticut, U. S., 30 m. SSW of Hartford. Pop. 1,349.

NORTH HEAD, a cape on the NE coast of Australia, the NW point of Bustard bay, in S lat. 24°.

NORTH HEMPSTEAD, a township of Queen's co., New York, U. S., on Long Island sound, 20 m. E of New York. Pop. 389.

NORTH HEW, a township of Grand Isle co., in Vermont, U. S., 71 m. NW of Montpellier. It forms an island in Lake Champlain, with an area of 6,272 acres. Pop. 716.

NORTHIAM, a parish in Sussex, 6½ m. WNW of Rye. Area 4,100 acres. Pop. 1,329.

NORTHILL, a parish of Bedfordshire, 3 m. WNW of Biggleswade. Area 4,210 acres. Pop. 1,280.—Also a parish of Cornwall, 6½ m. SW of Launceston. Area 7,540 acres. Pop. in 1831, 1,155; in 1841, 1,217.

NORTHINGTON, a parish in Southamptonshire, 7 m. NW of Winchester. Area 1,580 acres. Pop. in 1841, 286.

NORTH ISLAND, a small island in the N. Pacific, in Dixon's entrance, in N lat. 54° 20′.—Also an island in the Atlantic, near the coast of S. Carolina, at the mouth of the Great Pedee river, in N lat. 33°.—Also an island on the N coast of Australia, near the head of the gulf of Carpentaria, one of those included by Flinders under the appellation of Sir Edward Pellew's group. Its N extremity is in S lat. 16° 30′, E long. 137° 2′.

NORTHLEACH, a parish and market-town in Gloucestershire, 82 m. WNW of London, and 20 m. E by S of Gloucester, on the post-road from Cheltenham to Witney. Pop. of p. in 1831, 795; in 1841, 1,290.—The town lies in a bottom, in the centre of the Cotswold hills, near the source of the small river Leche, from which it derives its name; and consists chiefly of one long irregularly-built street. It was formerly an important clothing-town, but there not being sufficient water for the mills, the manufacture declined. The county-bridewell and house-of-correction is in the vicinity of the town.

NORTHMAVEN, a parish in Shetland, comprising the N part of the Mainland, and a number of adjacent islets. It has a superficial extent of about 80,000 acres. Its highest ground, Rona-hill, exceeds 2,000 ft. above sea-level. The principal village is Hillswick. Pop. in 1831, 2,386; in 1841, 2,504.

NORTHMOOR, a parish in Oxfordshire, 6½ m. W of Oxford. Area 1,910 acres. Pop. in 1841, 367.

NORTH MOUNTAIN CREEK, a river of the United States, which runs into the Missouri, 239 m. below the Falls. It is 30 yds. wide at its mouth.

NORTHOP, a parish in Flintshire, 3½ m. SSE of Flint, and 10 m. W by N of Chester, comprising the townships of Caer-fallwch, Golftyn, Kelsterton, Wepre, Leadbrook Major and Minor, Northop, and Saughton. Pop. in 1831, 3,026; in 1841, 3,566.

NORTHORPE, a parish in Lincolnshire, 7 m. NE of Gainsborough. Area 2,390 acres. Pop. in 1841, 141.

NORTHOVER, a parish of Somersetshire, N of Ilchester. Area 220 acres. Pop. 174.

NORTH POINT, the NW point of the island of Langara, 5 m. N of Queen Charlotte's island, in N lat. 54° 20′.

NORTH POINT ISLET, a small island in the gulf of Carpentaria, near the island of Groote-Eylandt, in S lat. 13° 31′, E long. 136° 45′.

NORTHPORT, a township of Waldo co., in the state of Maine, U. S., 50 m. E of Augusta. Pop. 1,207.—Also a township of Suffolk co., in the state of New York.

NORTH PROVIDENCE, a township of Rhode Island, U. S. Pop. 4,207.

NORTH REPS, a parish of Norfolk, 7 m. NE of Aylesham. Area 2,680 acres. Pop. 603.

NORTH RIVER, a river of New Hampshire, U. S., which joins the Lamprey river, in the N part of Epping.—Also a river of N. Carolina, which runs into Albemarle sound, in N lat. 36° 6′.—Also a river of Massachusetts, which runs E into Massachusetts bay.—Also a river of the island of St. Vincent, which runs into the sea, 1 m. N of Young point.

NORTH SALEM, a township and village of Westchester co., in New York, U. S., 24 m. N of White Plains. Pop. 1,161.

NORTH SEA. See GERMAN OCEAN.

NORTH SOUND POINT, a cape of the island of Antigua, on the E side of the entrance into Parham harbour, in N lat. 17° 16′.

NORTH STAR BAY, a small bay in Wolstenholme sound, in N lat. 76° 33′, W long. 68° 56′, so called from her Majesty's ship North Star, under Commander Saunders, which was sent out in May 1849 with provisions for Sir John Franklin's expedition, having taken up quarters here from the 30th of September 1849 until the 1st of August 1850. A settlement of Esquimaux was found here, and another about 12 m. down the sound. Each settlement consisted but of one hut, in which a number of families dwelt. The huts are generally formed about half under ground on the slope of a hill near the sea, the upper part being built over in a very rude manner with rough stones. These Esquimaux did not know the use of boats, and their only weapon appeared to be a small spear which they carry in their hand. They live entirely on raw food, mostly seal's flesh. Not having boats, they are compelled to follow the land-ice to the N during the summer, depositing the seals which they kill at their various stations along the coast, on which they retreat during the winter as their stock to the northward becomes exhausted. The ship became frozen in on the 12th of October, when the housing was spread over, and every other preparation made for the winter. The therm. did not fall below zero till the beginning of November. On the 24th of October the sun just showed itself above the hills at noon, and did not reappear until 17th February, when his upper limb again made its appearance,—a period of 116 days. During the winter, the party (who occupied the farthest point to the N at which a ship was ever known to have wintered) had heavy gales of wind occasionally from the E, during which time the therm. invariably rose, sometimes nearly to zero, as also in cloudy weather. "I may add," says Commodore Saunders, "that throughout the whole voyage neither the marine nor the aneroid barometer have been of any use to indicate the weather, although both appear quite sensitive and move together. We found February our coldest month, on the 24th of which the therm. was registered at 9 and 10 P.M. at 62¾° below zero, and at 61 for the following 8 hours. It also fell to 63½° on the 27th. I believe this to be the coldest natural temperature ever registered. On Monday, January 28, 1850, an Esquimaux was brought alongside in a sledge in a most deplorable condition from frost bites. His companions threw him off from it at the foot of our ladder, making us to understand they wished us to cure him, and I felt compelled, from humanity's sake, to receive him on board, though reluctantly, as he was much in the way of our men on the lower deck. For the first two months he appeared to do well, and I was in hopes we would be enabled to cure him. In the mean time, as a sort of recompense, I expected to make him understand our language sufficiently to inquire if he could give us any information respecting Sir John Franklin and his party, or any of the other Arctic ships. However, in this I was disappointed, for although he was on board upwards of three months, he did not appear to understand us better than when he first came. His new mode of living being totally different to what he had been accustomed, he became unwell, and died on the 9th of May." The North Star, while locked up in the bay, lost four of her crew from scurvy. As the spring and summer advanced, shooting-parties were sent out, but all they succeeded in getting was only about 50 hares and a few wild ducks. Several foxes were also shot during the winter. When the weather became sufficiently warm to allow the carpenters to handle their tools in the open air, the ice was dug away from round the bows of the ship for 3 ft. in depth to examine and repair what injury she had received in coming through the ice, which was found to be very trifling. During the month of June the rigging was refitted and blacked-down; the sails repaired; the ship and boats painted, and everything got ready for sea. From this time the few cases of scurvy which had made their appearance in April rapidly disappeared. In the beginning

of July the ice rapidly disappeared in the bay, the floe becoming covered with pools of water. All along the shore the ice was broken up by the tide, and it daily became more difficult to land. On the 13th of July, the water caused by the melting of the snow on the hills in the interior—which poured down like a river—had completely cracked the floe across, and opened it out from 20 to 60 ft. in width. "I therefore determined," says Commodore Saunders, "to saw a canal down to it from the ship, a distance of 2,030 yds. On the morning of the 16th we commenced our labours, beginning from the ship and sawing towards the crack. On the evening of the 22d the two strait cuts were completed; the ice varying in thickness from 2 to 4½ ft. On the 23d we commenced cross cutting. On the evening of the 25th, the ice having become so rotten, the saws and other implements were brought on board; for it now decayed so very rapidly that I considered it would soon all break up of itself. During the latter part of July, the ice decayed in an astonishingly rapid manner; the floe which some short time ago was 4 ft. in thickness, was now broken into small pieces, and was fast disappearing—so much so, that the water alongside the ship on the surface was perfectly fresh. On the morning of the 1st August the ship was got under weigh and hauled out of her winter quarters, where she had remained upwards of ten months. During the whole of that day and the next all hands were employed warping, heaving, and towing her through the ice in the sound, and, after very great exertions, succeeded in getting her into open water on the morning of the 3d. We then made sail and beat out between Wolstenholme island and the main, and stood to the W. About 25 m. W of Wolstenholme island we fell in with the pack or middle ice, which we entered; and after several vexatious stoppages and hard labour we succeeded in reaching open water at midnight of the 6th, and stood over for Possession bay, on our passage to which, a distance of 150 m., we did not meet with any ice—not even bergs"

NORTH STONINGTON, a village of New London co., in Connecticut, U. S., 53 m. NE of Hartford. Pop. 2,269.

NORTHUMBERLAND, the most northern county of England on the E; between 54° 51′ and 55° 51′ N lat., and 1° 00′ and 2° 23′ W long.; bounded on the N by Scotland, from which it is divided by the bounds of Berwick-on-Tweed, and by Norhamshire and Islandshire forming an isolated part of the co. of Durham; on the E by the German ocean; on the S by the co. of Durham, from which it is partly divided by the river Tyne, and partly by the river Derwent; on the W by Cumberland, and by Roxburghshire in Scotland, from the latter of which, on the NW, it is divided by the Cheviot hills. The form of the co. is triangular, with its apex to the N. It is one of the largest cos. in England, being nearly 70 m. in length from N to S, and upwards of 46 m. in breadth near its S extremity. Area 1,809 sq. m., or 1,158,310 acres. Another part or hundred of Durham, however, called Bedlingtonshire, is included within the outer limits of the co., between the wards of Castle and Morpeth.

Soil and aspect.] The soil and surface of this co. are various: some parts are fertile and well-cultivated, while others are almost barren. On the sea-coast, and in the vales of Beamish, Till, and Beaumont, a sandy loam is found. Around the Cheviot hills, in the NW, is a dry gravelly loam, with fine green hills thrown into a variety of forms, and enclosing deep, narrow, and sequestered glens. The Cheviots are celebrated for their sheep-pasture. Towards the centre and SE of the co., moist loams on a wet clayey bottom prevail, while a black peat earth occupies most of the mountainous districts, and some of the lower parts of the country. The surface is generally level about the sea-coast, but more diversified towards the middle, rising into gently swelling ridges, which are separated by the principal rivers. The W side in general is open and mountainous, growing little else but heath, and affording only scanty subsistence to the flocks that are depastured there.—The climate of N. is considered more healthful than that of most other maritime cos.; nevertheless the temperature is subject to great variations. The mountains are covered with snow for months together, when none is to be seen in the lower districts. A cold E wind is prevalent in the spring. The winter has short frosts, but very heavy rains.

Coast-line.] Tracing the coast from the N, Berwick, a place of consequence in former ages, first presents itself. Southward is Holy Island or Lindisfarne, once the see of a bishop, till its removal to Durham: see HOLY ISLAND. Still further S is Bamborough-castle, formerly a place of great strength. Nearly opposite are the Farne islands and the Staples, the resort of innumerable sea-fowl in the breeding season. Farther S, and nearly opposite Warkworth, is Cocket Island, which is partly cultivated. At the mouth of the river Wansbeck, running past Morpeth into the North sea, is the small port of Cambois, from which corn and grindstones are exported. More to the S is Blythe, a tolerably good harbour, whence coals and salt are shipped; and near it the artificial harbour of Hartley-haven. Near the mouth of the Tyne are Tynemouth and N. Shields, from both of which places, particularly the latter, vast quantities of coals are shipped.

Rivers.] Few cos. can boast of more noble rivers than N. The Tyne, Tweed, Blythe, Wansbeck, Coquet, and Alne, are all capable of receiving large vessels. The Tyne and the Tweed, however, do not exclusively belong to this co., both serving, in part of their course, only to bound the district, and the Tweed being more particularly a Scottish stream: they are both described under separate articles. The Tweed rises in Tweeddale in Scotland, winds through a course of 30 m., and skirts the N border of this co.; the Tyne has its source in two branches termed the North and South Tyne, the North Tyne being reinforced by the waters of the Reed, which rises among the Cheviots, and falls into the North Tyne at Bellingham; the North and South Tyne meet near Hexham, and flowing W fall into the sea at Tynemouth.—The Blythe rises eastward of the course of the North Tyne, and discharges itself into the sea at Blythe.—The Wansbeck is formed by a number of small streams uniting before they reach Morpeth, and continuing an easterly course to the sea at Cambois.—The Cocket or Coquet rises among the Cheviot hills, and flowing E, empties itself into the sea below Warkworth.—The Alne takes its rise near the source of the last-named river, and flowing in a circuitous direction, falls into the sea near Alnmouth.

Roads and railways.] There are no canals in N., though unsuccessful attempts have been made to introduce one from the navigable part of the Tyne to Hexham, or to extend the Tyne navigation from Newburne to Hexham.—The high road to Edinburgh enters this co. from Gateshead, by Tyne-bridge, to Newcastle, and runs N through Morpeth, Alnwick, and Belford, to Berwick-on-Tweed. A branch-road forks off beyond Morpeth, and proceeds to Edinburgh by Wooler and Coldstream. Another road to the N runs from Newcastle nearly in the line of an old Roman road, by the valley of the Reed, to Jedburgh, and thence also to Edinburgh. The Newcastle and Carlisle road, now much deserted, runs by Hexham and Haltwhistle.—There are numerous railroads in this co., particularly in the S district, for the conveyance of coals from the pits to the *staithis* or wooden jetties which project into the rivers Tyne, Blythe, Alne, and Tweed, for the purpose of loading vessels for general export. Locomotives are now in general use on these railroads; indeed, a species of locomotive, provided with toothed wheels which run on rails supplied with cogs, was long in use in this vicinity. The principal railways in this co are the Newcastle and Carlisle, the Newcastle and North Shields, and the Newcastle and Berwick railways.

Agriculture.] About 150,000 acres of the surface of this co. are in tillage; 650,000 in pasture; the remainder, besides barren moors, consists of uncultivated hills and mountains. The county thus consists in great measure of mountain and other pasture and bleak unprofitable moors; while the vales, beautiful as they are, by which the mountains are intersected, and the level country on the coast, form but the exception to the general rule. In the S parts of the co., the valleys of North and South Tyne, with others reaching from them, and also that of the

Wansbeck, contain land of excellent quality. The size of farms in the ward of Glendale is various, but they generally range from 300 or 400 to 1,000 or 1,200 acres; and in cases where the tillage-land at the foot of the Cheviot range is held in connexion with mountain-pasture, farms may be found to contain 2,000 or 3,000 acres. The vale of the Coquet is fertile and well-cultivated. The line along the base of the Cheviots, extending from Whittingham, by Wooler, to the banks of the Tweed, is a district universally adapted to the turnip course of husbandry. That along the coast from Warkworth to Berwick is of a stronger and heavier quality of soil, and more generally fitted for the growth of wheat and beans. Wheat is grown in large quantities. The barley-crops are generally very abundant; and beans have always been a flourishing crop, especially along the sea-coast. Though the corn-harvest in the vale of Till and upon Tyneside frequently commences in the first week of August, in the bleak sterile districts oats will often be uncut in the beginning of November: the most general harvest, however, is in September. The hay-harvest takes place in the middle of June. The farmers of N. have long been celebrated for their superior skill in breeding young cattle. Oxen are mostly grazed in the eastern part of the co. and the vicinity of Whittingham. The short-horned kinds are most prevalent; for the dairy the Durham, and for fattening the Scotch, cattle are preferred. The native wild cattle of Chillingham park are a zoological curiosity. The long-woolled sheep have been much improved by the introduction of the Leicester and Southdown sheep; but the native Cheviot breed, a hardy useful species with a small fleece of ordinary wool, is still the most prevalent. Goats are kept on the Cheviot hills. There has been a great advance of income on much of the land in this co. Yet, Mr. Caird says, "it must surprise many who have hitherto been led to consider the agriculture of N. as a model for the rest of the kingdom, to learn that a great portion of the co., extending from near Newcastle on both sides of the railway as far N as Warkworth, is as little drained and as badly farmed as any district we have yet seen in England; and that the occupiers of the small farms can only eke out a scanty subsistence by careful parsimony, and by employing no labour except that of themselves and their families." Mr. Colbeck says, "Although the advantages of long leases are yearly becoming more understood, a great proportion of the farms in this co. are still let from year to year. It will, indeed, seem strange that so absurd a custom should be persisted in, when the ruinous consequences are so apparent. In N. the greatest improvement has been made on the light land; and much of the centre and south-east parts of the co. consists of 'poor, wet, heavy soil, producing comparatively inferior crops of corn, unless within the reach of manure.'"

Minerals.] This district is eminently rich in subterraneous treasures. Coal, lead, and iron are its most valuable and abundant minerals. The system of stratification to which the coal-fields of N. and Durham belong, commences on the primary rocks in Westmoreland, Cumberland, and the Cheviot-hills. The coal seams and the rocky strata which, together, constitute the Newcastle coal formation, are partly covered by the magnesian limestone, and rest upon the lead-mine measure. They occupy a hollow or trough, of which the extreme length, from Acklington near the Coquet, to Cockfield near West Ackland, in the adjoining county of Durham, is 58 m., and the breadth from Bywell on the Tyne, on the sea-shore, is 24 m. A variety of perpendicular and diagonal fractures intersect the coal-stratification in all directions, and divide the great coal-field into thousands of lesser enclosures. The beds of what is called the 'Independent Coal formation' are also very extensive, though the seams are much inferior to those in the district just described. The coal alternates with a slate clay, limestone, and sandstone; and at many of the places where coal is worked, limestone is also quarried. In the maritime district, from the Coquet to the Tweed, the measures dip to the SE, and, unlike the beds of the Newcastle coal-field, undulate with the surface.—The lead district is a bleak and rugged region of mountains, extending from N. and Durham, into Cumberland and Westmoreland, and thence to the extremity of Derbyshire, about 160 m. The veins, however, often lie so low that they are unprofitable. The richest mining-fields in N. are at Allenhead and Coalcleugh: these, with other five lead mines in the parish of Allendale, produce on an average about 2,500 tons of lead per annum. Iron ore is found both in the coal and the lead districts. Immense quantities of iron pyrites lie imbedded in the strata of indurated clay through all the coal-field, and are profitably supplied from the collieries to the iron-works in the coal district. Zinc ores abound in most of the plumbiferous veins; copper is also found in these and in the coal-measures, but it is not worth working. Trap rocks occur in both coal formations, and a small district along the Tweed is occupied by the new red sandstone.—This co. abounds with mineral springs. Many occur within the limits of the Newcastle coal-field: some of them are impregnated with common salt. Chalybeate springs, some of which deposit large quantities of yellow ochre, are common in the vicinity of Newcastle; and there are sulphuretted springs at Dukesfield and elsewhere.

Commerce, Manufactures, &c.] The great centre of the commerce of N. is NEWCASTLE, under which article will be found a full account of the exports and imports of the co. so far as they centre in that important and extensive port. The coal trade is the principal source of wealth in this co. Lead, white-lead, glass, cast and wrought iron, colours, shot, pottery, coal tar, and other articles, the materials of which are chiefly derived from the mines and collieries, are manufactured and exported, together with flour, corn, oatmeal, potatoes, butter, eggs, pickled salmon, fat cattle, sheep, pigs, &c. Ship-building and rope-making employ a numerous population. A writer in the *Morning Chronicle*, to whose papers we have often been indebted for much valuable information, says, "no county in England has made more real or solid progress in all the elements of social prosperity than N.: commercial and mining enterprise goes hand in hand with skilled cultivation, and supplies a various and extensive field to industry; a sound and healthy, if limited, education, is generally diffused amongst its inhabitants; and the hard-headed shrewdness and intelligence of the peasantry form a remarkable contrast with the apathy and stolidity observable amongst them in some other quarters."

Divisions, Towns, &c.] N. is divided into 6 wards, similar to hundreds, viz.:

		Acres.
Glendale ward,	NW	107,200
Bambrough ward,	NE	69,650
Coquet-dale ward,	E to W	269,590
Morpeth ward,	ESE	93,530
Castle ward,	SE	103,680
Tynedale ward,	SW	514,660
		1,158,310
To which may be added,—		
Berwick-on-Tweed bounds,	N	5,120
Newcastle-on-Tyne, town and county,	S	2,000
		1,165,430

The wards are divided into N, S, and other divisions, comprehending 646 constabularies; and are subdivided into 97 parishes, containing, exclusive of Newcastle-on-Tyne and Berwick-on-Tweed, 1 municipal borough, Morpeth, 1 new parliamentry borough, Tynemouth with North Shields, and 8 other market-towns, Allendale, Alnwick, Belford, Bellingham, Haltwhistle, Hexham, Rothbury, and Wooler, besides the towns of Alnmouth, Bambrough, Blyth, Hartley, Seaton, and Warkworth, and numerous villages and hamlets. The pop. of this co. in 1801, amounted to 157,101; in 1831, to 223,912; in 1841, to 250,268; in 1851, to 303,505, being an increase of 79·21 per cent. in 50 years, and of 1·17 per cent. annually.

Franchise and Government.] Under the reform act this county returns 4 members to parliament, 2 for the northern division, comprehending the wards of Bambrough, Coquetdale, Glendale, and Morpeth,

together with Berwick bounds, Norhamshire, Islandshire, and Bedlingtonshire;—and 2 for the southern division, comprehending the wards of Tynedale and Castle. The number of electors registered for the county, in 1837, was for the N division 2,786; for the S, 5,070. In 1848, the electors for the N division were 3,030; for the S, 5,260. The town and county of Newcastle-upon-Tyne also returns 2 members, and Tynemouth and Morpeth 1 each. The town and bounds of Berwick-upon-Tweed may be also noticed here, as returning 2 members. N. is included in the northern circuit. The assizes and the Epiphany quarter-sessions are held at Newcastle; the Easter sessions at Morpeth; the Midsummer at Hexham; and the Michaelmas at Alnwick and Berwick. The county-jail and house-of-correction is at Morpeth; and there are also houses-of-correction at Alnwick, Hexham, and Tynemouth. This county is in the prov. of York and dio. of Durham, of which it forms an archdeaconry. The poor rate returns for 3 years, to Easter, 1750, show an average expenditure of £3,796 on the poor of this co.; in 1833, the expenditure was £78,049; in 1840, £65,416; in 1847, £75,415, being at the rate of 1s. 2½d. in the pound on the annual value of rateable property in the co., viz. £1,246,474; that for all England being 1s. 6¾d. per pound.

History] The aborigines inhabiting the E side of the co., and the adjacent parts of Scotland, from the Tyne to the frith of Forth, according to Ptolemy, were called the *Otadeni*; and those westward of them, the *Gadeni*. Both these tribes are supposed to have been dependent upon the *Brigantes*,—a British tribe of powerful influence before the invasion of the Romans. The Northumbrians were not brought under the Roman yoke until Agricola led his legions into the N, and entirely subjugated the country; to secure which he erected a chain of forts or stations extending from the Solway frith to Tynemouth. This barrier being found insufficient, a rampart of earth was constructed by the Emperor Adrian, which also extended from sea to sea. Severus subsequently strengthened this great line of defence, by erecting the Picts' wall. The Saxons established their dominion here in 547, under Ida, who assumed the title of king of Bernicia, and erected the fortress of Bambrough. Having successfully maintained the integrity of his kingdom for 12 years, he was slain in battle in 560. In the same year Ælla, one of the chiefs who came over with Ida, acquired the sovereignty of Deria, which comprised the whole of the country between the Humber and the Tyne. The two kingdoms of Bernicia and Deira were subsequently united in the person of Ethelfrid, under the name of Northumbria, which now formed one of the seven kingdoms constituting the Saxon Heptarchy. In 867, N. was conquered by the Danes under Ivar, who assumed the government of the country between the Humber and the Tyne. The co. was subsequently governed as a dependent kingdom, or as an earldom, till the Norman conquest. It gives the title of Duke to the family of (Smithson) Percy. Henry Percy, 13th Baron Percy, created Earl of N. in 1337, was the first nobleman who bore the title of Earl of N. This ancient title was elevated to a dukedom, in favour of Dudley, Earl of Warwick; and in 1749 was revived in the person of Algernon Seymour, 7th duke of Somerset, the 11th and last earl of the male Percy line. The only daughter of Algernon, Duke of Somerset, married, in her father's lifetime, Sir Hugh Smithson, the descendant of an ancient family long seated at Stanwick, in the North Riding of Yorkshire, to whom had been secured a special remainder of the dignities of Baron Warkworth and Earl of N. Sir Hugh succeeded according to the special remainder in 1750, and was created Earl Percy and Duke of N. in 1766.

NORTHUMBERLAND, a maritime county of New South Wales; bounded on the N by the Hunter river; on the E and S by the ocean; and on the W by the Hawkesbury. It is 68 m. in length, and 55 m. in breadth. Area 1,498,880 acres. Its principal port is Newcastle, on the coast, at the mouth of the Hunter river. Maitland, on the Hunter, 25 m. above Newcastle, is the county town, but West Maitland, a little higher up the stream, is the most populous town. About 12 m. S of Newcastle is Lake Awabu or Macquarie, the most considerable lake in this region of Australia. The pop. in 1846 was 13,335.

NORTHUMBERLAND, a county in the central part of Pennsylvania, U. S., watered by both branches of the Susquehanna. Area 440 sq. m. Pop. in 1840, 20,027; in 1850, 23,223. Its chief town is Sunbury.—Also a county of Virginia, W of Chesapeake bay, bounded on the NE by the Potomac. Area 240 sq. m. Pop. in 1840, 7,924; in 1850, 7,268.—Also a township of Coos co., New Hampshire, on the Connecticut. Pop. 399.—Also a township of Saratoga co., New York, on the Hudson. Pop. 1,672.—Also a village of Northumberland co., Pennsylvania, at the confluence of the E and W branches of the Susquehanna. Pop. 928.

NORTHUMBERLAND (Cape), a projection on the S coast of Australia, in S lat. 38° 4′, E long. 140° 37′.

NORTHUMBERLAND INLET, a bay of the Arctic sea, in N lat. 65°.

NORTHUMBERLAND ISLES, a chain of islands in the S. Pacific, near the NE coast of Australia, in S lat. 21° 30′, which run parallel to the mainland, at the distance of from 5 to 8 m. They are of various height and magnitude; the largest is about 13 m. in circumf.

NORTHUMBERLAND STRAITS, a narrow channel of the Eastern seas, between the Calamianes islands and the shoals of Apo.

NORTHVILLE, a township in Wayne co., Michigan, U. S., 28 m. WNW of Detroit. Pop. 260.

NORTHWAY, a township in Ashchurch p., Gloucestershire, 2¼ m. ENE of Tewkesbury. Pop. in 1831, 188.

NORTH-WEST CAPE, a headland on the NW coast of Australia, in S lat. 21° 47′, E long. 114°.

NORTH-WEST RIVER, a branch of Cape Fear river, in N. Carolina, U. S.

NORTH-WEST TERRITORY, a name long-applied to that portion of territory of the United States, while not assumed as a member of the union under the designation and with the privileges of a state, bounded on the E and SE by Lake Michigan and the Illinois river; on the S, SW, and W, by the Missouri; and on the N by the 49th parallel of N lat., demarcating it from the British possessions. These limits, extending over 10° of lat. and 14° of long., comprise an area of about 300,000 sq. m., which is now distributed among the Missouri and Minnesotah territories; and the states of Wisconsin, Iowa, and Illinois. A few notices of its very peculiar natural features will be here given. The most remarkable of these is the innumerable multitude of lakes which spangle its northern surface, the remains probably of a vast sea that once covered the whole country extending N from the gulf of Mexico, and perhaps reaching to Hudson's bay. Besides this, there are two great natural features belonging to the valley of the Upper Mississippi, which perhaps are never fully realized but by actual inspection. The first consists in the uniformity of elevation, and the shape of the surface. The country from the outlets of the Illinois and Missouri to St. Peter's, and from Lake Michigan to Council-Bluffs, and beyond that point westerly, is a vast plain slightly ascending to the N and to the W. By observations taken between the Mississippi and Lake Michigan, the elevation above the Atlantic has been found a little exceeding 500 ft.; and W of the river, in the same parallel, towards the Missouri, something over 700 ft. At St. Peter's it is about 700 ft. Nicollet states that Camp Kearney, near Council-Bluffs, is 1,037 ft. above the level of the gulf; the elevation of Rock island, in the same lat., on the Mississippi, is 528 ft.; the height of Fort Pierre-Choteau, on the Missouri, 1,456 ft.; and the lower end of Lake Pepin, in the same lat., (44° 24′), 710 ft. There are a few elevations above the general range called mounds; but with the exception of these, the surface is marked only by ravines running from the general level down to the beds of the streams, which are usually from 100 to 200 ft. lower. The other remarkable feature is the character of the vegetable covering of the surface. There are in this region large tracts of country wholly destitute of tree or shrub, and covered only with a luxuriant growth of wild grass, beautifully interspersed with flowers of every hue and variety, each successively making the prairie to look gay with their presence from April to October. This beautiful natural meadow, not more pleasant to the eye than genial to the culture and grateful to the toil of man, consists of a very dark brown vegetable mould, in appearance like a mixture of the light feathery part of ashes, with a rich ooze. This mould is from 1½ to 2 ft. deep usually, and sometimes more than that; and in whole sections, in several townships of 6 sq. m. in extent, one "could not find more gravel in the same quantity of mould than in his flour barrel." The country is a limestone formation. The timber, which is only on the streams, consists of elm, ash, black walnut, butternut, maple, mulberry and iron wood on the bottoms, and on the upland white, red, black, and burr oak, shell-bark, and common hickory, with occasionally linden, birch, wild plum and cherry, locust, and some others. On the Wisconsin and St. Croix are heavy growths o

pine. The best portions of this Upper Mississippi valley are upon the W shore of Lake Michigan, including the E portion of Wisconsin, the Illinois and Rock rivers and their tributaries, the Mississippi on both sides, and generally the whole of Iowa. Although no part of this region can with propriety be denominated hilly, yet upon the Wisconsin, the Fox, and the head-waters of Rock and Milwaukie rivers, the country is considerably diversified with hills, or rather swells, and valleys. The only hills worthy of particular notice are the Ocooch and Smoky mountains, which are broad and elevated ridges rather than mountains. The former is situated about 12 m. N of the Wisconsin, and 100 m. above its mouth; and the latter about 40 m. S of the portage between the river just mentioned and Fox river of Green bay. The Blue mounds near the Wisconsin, the Platte mounds near Platteville, the Pilot-knob near Galena, the Table-mound 3 m. S of Dubuque, Sherald's mound, and Pike's mountain, may also be named among the lesser elevations of this region. There are some elevations also near the r. bank of the Mississippi, above Lake Pepin; and, in fact, on both sides in that part of the country. The Coteau-des-Prairies is an extensive and elevated table-land dividing the waters which flow into the Missouri from those falling into the St. Peter's and Mississippi. A range of highlands extends from the Ocooch on the Wisconsin to Lake Superior, supposed to be a continuation of the Ozark mountains. The N section of this highland usually goes under the name of Porcupine hills. "It is neither a mountainous, nor a hilly, nor an absolutely flat country," says Nicollet, "exhibiting undulations of the surface that are not entitled to these usual appellations. There are hillocks, swells, and uplands, but they have a longitudinal and horizontal rather than a vertical projection. The first Frenchmen who explored it, and the British and Americans who followed them, were so forcibly impressed with this novelty in the appearance of the topography, that they employed new names to designate it: hence we have the expressions *coteau des prairies*, *coteau des bois*, *i. e.* 'highland prairie,' 'highland woods,' *hauteur des terres*, 'summit of land,' and rolling, flat, or marshy prairies. The basin of the Upper Mississippi is separated, in a great part of its extent, from that of the Missouri, by an elevated plain, the appearance of which, seen from the valley of the St. Peter's, or that of the Rivière Jacques, looming as it were a distant shore, has suggested for it the name of *coteau des prairies* Its more appropriate designation would be that of *plateau*, which means something more than is conveyed to the mind by the expression, a plain. Its N extremity is in lat. 46°, extending to 43°; after which it loses its distinctive elevation above the surrounding plains, and passes into rolling prairies. Its length is about 200 m., and its general direction NNW and SSE. Its northern termination—called *tête du coteau*, in consequence of its peculiar configuration—is not more than 15 to 20 m. across; its elevation above the level of Big Stone lake is 890 ft., and above the ocean 1,916 ft. Starting from this extremity (that is, the head of the coteau), the surface of the plateau is undulating, forming many dividing ridges, which separate the waters flowing into the St. Peter's and the Mississippi from those of the Missouri. Under the 44th degree of lat. the breadth of the coteau is about 40 m., and its mean elevation is here reduced to 1,450 ft. above the sea. The coteau itself is isolated in the midst of boundless and fertile prairies, extending to the W, to the N, and into the valley of the St. Peter's. The plain at its N extremity is a most beautiful tract of land, diversified by hills, dales, woodlands, and lakes. This region of country is probably the most elevated between the gulf of Mexico and Hudson's bay. From its summit grand views are afforded. At its E border, particularly, the prospect is magnificent beyond description, extending over the immense green turf which forms the basin of the Red River of the North, the forest-capped summits of the *hauteurs-des-terres* that surround the sources of the Mississippi, the granite valley of the Upper St. Peter's, and the depressions in which are Lake Travers and the Big Stone lake. The other portions of the coteau, ascending from the lower latitudes, present pretty much the same characters. The difference, however, is remarkable: that the woodlands become scarcer, whilst the open prairies increase in extent.

NORTH WHITE CREEK, a village in Washington co., New York, U. S., 36 m. NE of Albany. Pop. 500.

NORTH WHITEHALL, a township of Lehigh co., in Pennsylvania, U. S., 95 m. ENE of Harrisburg. Pop. 2,324.

NORTHWICH, a market-town in the chapelry of Witton, co-palatine of Chester, 17½ m. ENE of Chester, and 4 m. from the Hartford station of the Grand Junction railway. Area 200 acres. Pop. in 1831, 1,481; in 1841, 1,368. The town derives its name from its relation to the *wiches*, or 'salt towns,' included at the time of the Conquest in the earldom of Chester. It is pleasantly situated on the banks of the Weaver, near its confluence with the Dane. Its streets are irregular, and many of the houses are of considerable antiquity. There are here large dock-yards for the building of *flats*—boats of a peculiar construction, used in conveying salt, in the manufacture of which article the inhabitants are chiefly employed. It is conjectured that the salt-springs at N. were known to the Romans long before the Christian era. There are about 30 salt-works, including brine springs and rock salt. The springs are inexhaustible, and the mines are reported to be sufficiently extensive to last for centuries. All round the town are erected spacious low buildings with lofty chimneys, in which the brine undergoes evaporation in shallow pans of iron, from 10 to 30 ft. wide, and from 20 to 60 ft. long. The strongest brine contains 25 per cent. of salt, which is worth from 1s. to 3s. per ton to the manufacturer. The rock salt is valued at not more than 6d. a ton until raised from the mine, and may cost from 1s. to 2s. a ton in raising. It has been estimated that upwards of 400,000 tons of rock and white salt are annually exported from Liverpool, the whole being furnished by the mines of Cheshire, of which those at Northwich are the chief—while the home consumption cannot be less than 16,000 tons in addition.

NORTHWICK, a chapelry in Henbury p., Gloucestershire, 5½ m. SW by W of Thornbury, on the E bank of the Severn. Area 1,390 acres. Pop. 285.

NORTHWOLD, a parish in Norfolk, 4 m. SE of Stoke-Ferry, on the Wissey or Stoke river. Area 5,200 acres. Pop. in 1831, 1,094; in 1841, 1,140.

NORTHWOOD, a township in Wem parish, Salop, 13 m. NW of Shrewsbury, on the river Roden. Pop. in 1831, 233.—Also a parish in the isle of Wight, 1¾ m. S by W of West Cowes. Area, including the town of West Cowes, 4,270 acres. Pop. in 1831, 4,491; in 1841, 5,147.

NORTH YARMOUTH, a township of Cumberland co., Maine, U. S., on Casco bay, 10 m. N of Portland. Pop. 2,824.

NORTON, a township in Runcorn p., co.-palatine of Chester, 3¾ m. NE of Frodsham. Area 2,180 acres. Pop. in 1831, 306.—Also a parish in Gloucestershire, 4½ m. NE of Gloucester. Area 1,980 acres. Pop. in 1831, 423; in 1841, 427.—Also a parish in Derbyshire, 7½ m. N by W of Chesterfield. Area 4,630 acres. Pop. in 1831, 1,747; in 1841, 1,908.—Also a parish in the co.-palatine of Durham, 2 m. N of Stockton-upon-Tees, intersected by the Clarence railway. Area 4,890 acres. Pop. in 1831, 1,486; in 1841, 1,628.—Also a township in Bromyard p., Herefordshire, 3 m. NE by E of Bromyard. Area 2,190 acres. Pop. in 1831, 554.—Also a parish in Hertfordshire, 1 m. WNW of Baldock. Area 1,780 acres. Pop. in 1831, 364; in 1841, 403.—Also a parish in Kent, 3½ m. W of Faversham. Area 840 acres. Pop. in 1831, 111; in 1841, 107.—Also a parish in Leicestershire, 6¼ m. ESE of Leicester. Area 1,990 acres. Pop. in 1831, 161; in 1841, 172.—Also a parish in Northamptonshire, 2¼ m. ENE of Daventry, in the line of the London and Birmingham railway. Area 3,260 acres. Pop. in 1831, 541; in 1841, 582.—Also a township in Cuckney p., Notts, 4 m. S by W of Worksop. Pop. in 1831, 324.—Also a parish in Suffolk, 6¾ m. E by N of St. Edmund's-Bury. Area 2,340 acres. Pop. in 1831, 802; in 1841, 879.—Also a parish in Radnorshire, 2½ m. N by W of Presteigne. Area 3,000 acres. Pop. in 1831, 297; in 1841, 291.—Also a parish in Worcestershire, 3 m. N by E of Evesham. Area 2,420 acres. Pop. in 1831, 397; in 1841, 385.—Also a p. and town in the E. R. of Yorkshire, on the S bank of the Derwent, which separates it from that of New Malton. The town of Norton is connected with New Malton by a bridge, to the foot of which on either side the buildings advance, and form a continued line of street through N. and New Malton, interrupted only by the river. This parish unites with New Malton in re-

turning 2 members to parliament. Area 2,510 acres. Pop. in 1831, 1,425; in 1841, 1,644.—Also a township in Campsall p., W. R. of Yorkshire, 8¼ m. N by W of Doncaster. Area 2,030 acres. Pop. 643.

NORTON, a township of Bristol co., in Massachusetts, U. S., 33 m. S of Boston. Pop. 1,545.—Also a village in Delaware co., in Ohio, 34 m. N of Columbus.—Also a township in Summit co., in Ohio. Pop. 1,479.

NORTON-BY-KEMSEY, a parish in Worcestershire, 3 m. SSE of Worcester. Area 2,095 acres. Pop. in 1831, 560; in 1841, 601.

NORTON-BY-BREDON, a chapelry in Bredon p., Worcestershire, 5 m. NE by N of Tewksbury, crossed by the Birmingham and Gloucester railway. Area 1,000 acres. Pop. in 1831, 199.

NORTON-BAVANT, a parish in Wilts, 2¾ m. SE of Warminster, on the river Wiley. Area 2,370 acres. Pop. in 1831, 279; in 1841, 285.

NORTON-BISHOP'S, a parish in Lincolnshire, 8 m. WNW of Market-Raisen, on the river Ancholme. Area 4,240 acres. Pop. in 1831, 426; in 1841, 475.

NORTON-BRIZE, a parish in Oxfordshire, 4½ m. SE of Burford. Area 3,140 acres. Pop. 687.

NORTON-CANES, a parish in Staffordshire, 5¼ m. W by S of Lichfield. Area, including the township of Little-Wyrley, 4,470 acres. Pop. 755.

NORTON-CANON, a parish in Herefordshire, 3 m. SW of Weobley. Area 2,300 acres. Pop. in 1831, 388; in 1841, 282.

NORTON-CHIPPING, or CHIPPING-NORTON, a parish and borough in the co. of Oxford, 20 m. NW by N of Oxford. Area, including the hamlet of Over-Norton, 4,780 acres. Pop. of p. in 1841, 3,031. The town consists chiefly of one long and handsome street, on the side of a considerable eminence. In former times it was a place of some commercial importance; but having few facilities for manufactures, it now possesses little trade. Its pop. in 1851 was 2,932. The manufacture of woollen girth and horse-cloths is still carried on. The income of the borough, in 1848, was £384; in 1850, £86.

NORTON-IN-THE-CLAY, a township in Cundall and Leckby p., Yorkshire, 3 m. N of Boroughbridge. Area 1,030 acres. Pop. in 1831, 146.

NORTON-DISNEY, a parish in Lincolnshire, 10 m. SW of Lincoln, on the W bank of the Witham. Area 1,960 acres. Pop. in 1841, 206.

NORTON (EAST), a parish in Leicestershire, 13 m. E by S of Leicester, on the W bank of the river Eye. Area 1,390 acres. Pop. in 1841, 137.

NORTON-FITZWARREN, a parish in Somersetshire, 2½ m. NW of Taunton, crossed by the Bristol and Exeter railway. Area 1,270 acres. Pop. in 1831, 545; in 1841, 606.

NORTON-IN-HALES, a parish in Salop, 3½ m. NE by N of Drayton-in-Hales. Area 1,910 acres. Pop. in 1831, 311; in 1841, 312.

NORTON-UNDER-HAMBDON, a parish in Somersetshire, 4½ m. NE of Crewkerne. Area 820 acres. Pop. in 1831, 513; in 1841, 527.

NORTON-HOOK, a parish in Oxfordshire, 5¼ m. NE by N of Chipping-Norton. Area 3,730 acres. Pop. in 1831, 1,506; in 1841, 1,525.

NORTON-KING'S. See KING'S-NORTON.

NORTON-LINDSEY, a parish in Warwickshire, 3¼ m. WSW of Warwick. Area 590 acres. Pop. in 1831, 141; in 1841, 176.

NORTON-MALREWARD, a parish in Somersetshire. 5 m. S of Bristol. Area 2,180 acres. Pop. in 1831, 110; in 1841, 98.

NORTON-MANDEVILLE, a parish in Essex, 8½ m. W by S of Chelmsford. Area 2,180 acres. Pop. in 1831, 114; in 1841, 134.

NORTON-MIDSUMMER, or NORTON-FRIARS, a parish in Somersetshire, 9 m. SW by S of Bath. Area 3,370 acres. Pop. in 1841, 3,509.

NORTON-ON-THE-MOORS, a parish in Staffordshire, 4¾ m. NE by N of Newcastle-under-Lyne, intersected by the Caldon canal. Area 3,940 acres. Pop. in 1831, 2,407; in 1841, 2,291.

NORTON-ST.-PHILIP, a parish and market-town in Somersetshire, 6 m. S by E of Bath. Area 1,850 acres. Pop. in 1831, 767; in 1841, 775.

NORTON-PUDDING, a parish in Norfolk, 1½ m. S by E of Fakenham. Area 600 acres. Pop. 25.

NORTON SOUND, a large bay on the NW coast of America, and between the parallels of 62° and 65°, discovered by Cook in 1778. From the heights adjoining the coast are seen inland extensive valleys, rivers running through them, well wooded, and bounded by hills of a gentle ascent, and moderate height.

NORTON-SUBCOURSE, a parish in Norfolk, 13 m. SE by E of Norwich. Area 1,990 acres. Pop. in 1831, 367; in 1841, 356.

NORUNGA, a town of Hindostan, in the prov. of Bahar, on the great military road from Calcutta to Benares, 80 m. SSW of Patna.—Also a town on the banks of the Godavery river, near Rajamundri, in the Northern Circars.

NORWALK, a township of Fairfield co., Connecticut, U.S., near the mouth of a small river, on Long Island sound, 45 m. NE of New York. Pop. in 1840, 3,863. Carpets and felting are manufactured here.—Also the cap. of Huron co., in Ohio, 99 m. N by E of Columbus. Pop. 2,613.

NORWALK ISLANDS, a cluster of small islands in Long Island sound, near the coast of Connecticut, in N lat. 41° 4′.

NORWAY,

Or, as it is called by the people of the country, NORGE, or NORRYKE, that is, 'the Northern kingdom,' or 'kingdom of the Normans,' a small kingdom of Northern Europe, united to the Swedish Crown; comprehending the western and smaller part of the Scandinavian peninsula; and bounded on the N by the Northern ocean; on the NE by Russian Lapland; on the E by Sweden; on the S by the Cattegat; and on the W and NW by the German ocean. It stretches from the 58th to the 71st parallel of N lat.; and from the 18th to the 31st meridian of E long. Its breadth is greatest in the parallel of Bergen, where it is 240 m.; N of the parallel of Drontheim it is very narrow, in some places not exceeding 20 m. The great mass of the country is comprised between the parallels of 59° and 63° N. Including windings, and the coast stretching E from Cape Naze to Stromstadt, it has a coast-line of more than 2,000 m. in extent. In the N this country is separated by mountains and rivers from its only foreign neighbour; on the E also Nature has erected a mighty barrier between it and the sister-country of Sweden. The boundaries between Sweden and N. are perhaps the most exactly determined of any in the world; having been drawn with the utmost attainable mathematical accuracy, even through the most desert and inaccessible wildernesses, for a length of 1,196 m. The march-stones rest on firm plates in which the point of commencement is accurately pointed out. Above this, the whole has the form of uncemented stones, 3 ells high and 9 round. On the top of all these are 5 stones. One of these, in the middle, has the king of Denmark's name on the Norwegian, and the king of Sweden's name on the Swedish side. Two lines cut out on the under part of this stone point out the direction in which the next march-stone is to be found. Two other

stones, called 'directors,' are situated on the continuation of these lines, some feet from the middle stone, to point out the direction of the boundary line; and the two other stones, called 'witnesses,' surround the middle stone on other sides, that its place may be still more accurately ascertained if any accident should remove the stone from its proper place. Between the march-stones, the wood is everywhere cut through for a breadth of 16 ells, so that the one march-stone may be seen from the other: these are seldom more than 4 m. apart. In every parish touched by the boundary-line is deposited an accurate description and plan of the proceedings of the commissioners of the two governments, together with a minute description of the boundary so far as it is connected with that *praestigelt* or 'parish.' These documents, signed by all the Danish and Swedish commissioners who were present at fixing the boundaries, were carefully deposited in the churches. This clear and definite boundary-line was fixed in October 1751; and it was agreed that the limits should be re-investigated every 10 years, the march-stones kept in order, and the woods again cut. These limits were actually gone over anew and improved in 1786 and 1806, in their whole extent, from Swinesund at Stromstadt, to the E extremity of Lake Enara, on the frontier of Russian Lapland. It must be observed, however, that since the peace at Fredericksham in September 1809 Eastern and Western Finmark are now entirely bounded on the S by Russian Lapmark, from the source of the Muoniojock, the eastern branch of the Torneä, to the old frontier at Lake Enara: all this tract of Swedish Lapmark having been ceded to Russia by that treaty.

Administrative divisions.] N. is divided into 4 *stifts*, viz. Aggershuus, Christiansund, Bergen, and Trondhjem. These are subdivided into 17 *amts*, which, arranged according to the three geographical regions within which they are situated, are as follows:

Districts.	Area in sq. m.	Pop. in 1840.	Pop. in 1845.
I. NORDLANDENS:			
Nordland,	15,052	57,791	65,512
Finmark (and Lapland),	27,470	33,394	43,938
Total,	42,522	94,185	109,450
II. NORDENFJELDS:			
Söndre-Bergenhuus,	6,285	104,471	116,989
Nordre-Bergenhuus,	7,515	69,778	77,978
Romsdal,	5,933	70,174	81,314
Söndre-Trondhjem,	7,094	77,724	89,329
Nordre-Trondhjem,	8,668	57,422	66,570
Total,	35,495	399,569	433,180
III. SONDERNFJELDS:			
Aggerhuus,	1,893	90,326	109,432
Smaalehnene,	1,566	62,921	73,622
Hedemarken,	9,516	77,929	87,118
Christian,	9,418	90,903	102,730
Buskerud,	4,787	76,669	83,918
Bradsberg,	5,560	63,139	72,891
Nedenaes and Raabygdelaget,	4,256	45,842	52,932
Lister and Mandal,	2,042	54,252	61,918
Stavanger,	3,805	62,859	78,210
Jarlsberg and Laurvig,	856	54,516	63,070
Total,	43,708	701,073	785,841
Grand total,	121,725	1,194,827	1,328,471

The *amts* are subdivided into *fogderie* or bailiwicks; and the bailiwicks into parishes.

Physical features.] The coast of N. is high, bold, rugged, and deeply indented, especially in the northern parts, with *fiords* or arms of the sea running deeply into the mainland, and sprinkled over with a multitude of rocky islets, or *sheers*, which within the polar circle expand into large islands. It is, however, remarkably deficient in good harbours, though possessing in many instances a great depth of water. In some quarters, banks of sea-shells occur 200 ft. above the present level of the sea. It appears from the geological observations made by M. Robert, during the expeditions of the *Recherche* to the North sea, Lapland, and Spitzbergen, that in the gulf of Drontheim the formations were of the gneiss, talcose, and protogenic system. At many points, and up to 300 ft. above the sea, these coasts presented rocks rounded and worn by the action of the ocean, with ancient beaches, at various elevations, full of marine shells. Above this alt. the rocks retained their usual rough and serrated character. At the North cape the presence of ancient beaches was very remarkable; and at Hamn, between the North cape and Hammerfest, there was observed a thick alluvial deposit, gently inclined, and divided into seven terraces of ancient beaches retiring one behind the other, and separated from each other by a peaty soil. All this system reposed on a thick stratum of marine shells, most of the species of which are identical with those now living in the same seas. The interior is generally mountainous, interspersed here and there with romantic glens and fertile valleys; and is intersected by numerous rivers full of cataracts, and by creeks and inlets of the sea, together with numerous large and small lakes, which, bordered with woods of deciduous trees of variegated foliage, and forests of tall and stately pines and firs, afford romantic scenery. The preponderance of naked rocks and barren mountains, however, gives rather the appearance of grandeur than of beauty to the scenery of N. Marshes and fens occupy large districts; and nowhere in Europe are found such a number of precipices, cataracts, and glaciers, as exist here.

Mountains.] The Norwegian mountains form a grand and extensive chain running nearly 1,200 m. in a NNE and E direction, and occasionally detaching lateral ridges from the main chain. These *fields* —pronounced *fyells*—or mountain-chains commence near the S extremity of the kingdom, and terminate at Tanafiord; and are distinguished by different appellations as they advance in their course. The most southern part is generally known by the appellation Seveberget. The Dovrefield, or that portion of the chain which lies between the parallels of 62° and 63° N, rises in the Sneehättan to an alt. of 7,940 ft. according to Esmark, or 7,513 ft. according to Forsell's map; from which a branch strikes off in a SE direction, forming the frontier between Sweden and Norway. The highest mountain-summit is the Skagtolstind in the Hörungurne or Jotum-fields, at the head of the Aardals-fiord. To the N of the Sneehättan, the great Norwegian range is composed of mica slate and granite, and denominated the Kiölen mountains. It gradually declines in elevation as it runs to the NE and E, separating Swedish Lapland from Nordland and Finmark, and terminating at Tanafiord, beyond which there are no traces of this chain.—The geological formations are chiefly primary. The most common rock is gneiss; next to which is mica slate resting upon or alternating with gneiss. In beds subordinate to both occur limestone, quartz, and hornblende. Granite is not of frequent occurrence. The Sneehättan is composed of mica slate. The highest passes of the Norwegian mountains are those of the Fille-field, a range of mountains containing the line of the Hardanger-field northwards, between Bergen and Aggershuusstift, 3,973 ft. [*Von Buch*], and Harebacken and Jerkin, over the Dovrefieldt, not far from the Sneehättan, 4,575 and 4,563 ft. respectively. These are inconsiderable heights when compared with those of the passes over the Alps and Pyrenees.—In several places where the rays of the sun fall obliquely, the snow-line is at an elevation of 3,000 ft.; but in exposures

where the rays have full force, the snow melts even as high as 7,000 ft. during the heat of summer. There are glaciers in the Norwegian mountains, but none comparable in magnitude to those of the Alps. Amongst the Kiölen mountains, the ordinary site of the glaciers, between the latitudes of 67° and 68°, may be placed at 2,325 ft. of elevation. They seem to owe their formation to the alternate influence of thaw and frost, changing gradually the lower zone of snow into an icy wall. The depth of snow and ice on the Folgefond, a huge mountain filling the space between the S arm of the Hardanger-fiord and the W branch near its junction with the sea, is supposed to be many hundred feet. This mountain, rising abruptly from the fiord, in irregular cliffs, at once attains a height of 3,500 ft.; and on the west of these cliffs commences a bank of snow extending 40 m. in length, with a breadth of 14 m., and attaining an alt. of 5,440 ft. in its highest point. The beautiful and fantastic groups often presented by these glaciers are by the simple northern tribes ascribed to the invisible powers of magic: hence they are called *jegna* in Lapland, and *jokul* in Iceland and N., from the Gothic verb *gyckia*, which signifies 'to trick' or 'bewitch the eye.'

Rivers.] Of the numerous streams which descend from the Norwegian mountains, none are navigable, and all of them are inconsiderable, except the Glommen. This river, called also the Stor-elf, or 'Great river,' after a meridional course of nearly 300 m., enters the sea at Friederickstadt. Notwithstanding its magnitude, which, in the lower part of its course, is equal to that of the Thames at Putney, it is unnavigable by reason of cataracts in some places and shoals in others. The only purpose to which it is applied is that of floating trees from the interior forests to the coast.—The Dram or Drammen-elf, after having received the Beinna, flows into the west side of Christiana bay.—The Alten-elf and Tana-elf are the largest streams in Finmark. The Alten-elf is unnavigable, as in its course through the mountains, below Masi, it dashes over falls the whole way, and the mountains rise like perpendicular walls above the river, reducing it at last to a mere fissure. Its valley, however, forms an oasis in a desert region, being the most extensive and fertile in the north of N.; and it is well known to anglers for its salmon. The Tana is also celebrated for its vast shoals of salmon.

Lakes.] The lakes of N. are numerous, and several of them are of considerable size, as the Miösen, which is 60 m. in length, and 18 m. broad in the centre. The Nisser-vand is 30 m. long, but only 2 m. broad; the Tyer is 15 m. in length and breadth. The lake of Faemund, near the source of the Glommen, is 35 m. long, by 8 m. broad. The Randsfiord or Rands-soe winds upwards of 50 m. among the defiles of the Fille-field. What was formerly called Danish Lapland abounds in lakes, as the Zolmihjauri, Zgarajauri, Jissjauri, Abyjauri, Jedickjauri, Gurjajauri, and many others. In several of these lakes are found *mardynes* or floating islands, composed of pieces of turf or sea-grass, originally torn from their situation by the water, and afterwards matted together by the action of the currents.

Climate.] Two-thirds of N. are situated within the temperate zone; the other third is within the polar circle: yet, from its maritime situation, the country is not so cold as might be expected from its high latitudes; but the temperature of the summer months is below that of Swedish Lapland. This is especially the case in Finmark, where, though the mean temp. at the North cape is 6° higher than at Enoutekis, yet the mean temp. of the summer months at the latter place is much higher than at the former. On the southern frontier of N. the longest day is 18 hours 30 minutes; the shortest, 5 hours 30 minutes. In the middle districts the longest day is 21 hours; the shortest, 3 hours. In the extreme N the sun continues above the horizon for 2½ months; and remains invisible for an equal period. During the period that the sun remains above the horizon, the sky has both day and night a light blue colour, peculiar to these northern regions at this period of the year, occasioned by the rays of the sun striking the atmosphere at so small an angle. Scarcely a star is visible in the heavens at night; and the moon, even when full, hardly forms a shadow. At this season there is something unnatural and death-like in the appearance of things as night sets in. Business comes to an end before the sun goes down, and all nature falls into stillness and repose whilst it is yet light. If you have been unaccustomed to such a state of things, you seem as you pass the streets, whether it be of Stockholm or St. Petersburg, Hernosand or Tornea, to be in the midst of a city which is uninhabited. [*Baird's Travels.*]—N. can hardly be said to possess a spring or autumn: for here the summer's heat instantly succeeds the cold of winter. Within the space of 7 days Nature throws off her snowy covering, and assumes the garb and hues of spring. "The contrast between the rudeness of winter and the bloom of spring," says Geijer, "is here much more powerful, and consequently the latter is here welcomed with a far higher feeling than in those countries whose inhabitants know nothing of such quick transition. Spring, which quickens all beings, seems in the North more than elsewhere, to stir the very heart of Nature,—and presents,—particularly in the mountainous parts where the transition is more rapid,—a spectacle which should pervade the darkest and most depressed bosom with a ray of the delightful bliss of existence. The snow melting in the sunbeams, and rushing from the mountains in numberless rivulets over the fragrant verdure of the vales,—the mighty waters, loosened from their icy chains, and hastening onward with augmented tide,—the trees, as it were, instantaneously arrayed in leafy verdure, from which the song-birds chirp their tuneful strains, filling the clear elastic air of spring with salutations to the North,—the heaven floating in a brilliant sea, which soon no longer knows of night,—the gladness, in fine, pervading the whole of animated nature,—all combine in the northern spring, to cause an overflowing sense of life as at once awakened from a lengthened torpor. If this first transition make a more powerful impression on the observer, the mildly blooming progress immediately succeeding it has a more genuine and moving charm. From its contrast with the frequently barren grandeur of northern scenery, and from its tinge of evanescent beauty, all the loveliness of nature in the North has a sort of tender expression. This observation applies equally to the gentle tints of the opening rose, and to the blooming cheek of the northern maiden; to the clear colouring of the heaven, when compared with a dark blue southern sky, to the light but vivid verdure of the grass, so strongly contrasting with the unaltered witnesses of winter.—our woods of gloomy pine, all which evince a weakness of vegetation not to be found in the maturity of southern nature, and its—we may so say—more full-blooded productions" It is thought that of late years a sensible change has taken place in the climate of N., the summer being less warm, and the winter less severe.—Beyond the 66th parallel, vegetation nearly disappears, although the Norwegians contrive to raise corn at Altengaard under the 70th parallel. This is the highest known lat. in which corn has ever been raised. Barley and oats vegetate at an elevation of from 1,500 to 1,800 ft. when sheltered in valleys; but at 1,200 or 1,300 ft. of alt., the night-frosts are highly prejudicial to the seed. Fruit-trees of various kinds flourish at an elevation of 1,000 ft. The spruce fir can stand the cold at an elevation of 2,000 ft.; the silver fir, at a height of 3,000 ft., as also the birch; beyond this the dwarf-birch, some willows, and the juniper, alone vegetate to the elevation of 3,290 ft. above the sea. Von Buch gives us the following curious description of the decreasing line of vegetation in ascending the Kiolen mountains: "As in the ascent of Mont Blanc we gradually rise beyond all the points which seemed immeasurable from the valley, so in like manner the Lapland vegetation, with which we are familiar in the valleys, gradually disappears under our feet. The Scotch fir soon leaves us; then the birches become shrivelled; now they wholly disappear, and between the bushes of mountain willows and dwarf birches, the innumerable clusters of berry-bearing shrubs have room to spread, blaeberries on the dry heights, and mountain brambles on the marshy grounds. We at last rise above them; the blaeberries no longer bear; they appear singly, with few leaves, and no longer in a bushy form. At last they disappear, and are soon followed by the mountain willows. The dwarf birch alone braves the height and the cold, but at last it also yields, before reaching the limit of perpetual snow; and there is a broad border before reaching this limit, on which, besides mosses, a few plants only subsist with great difficulty. Even the reindeer moss, which vies in the woods with the blaeberry in luxuriance of growth, is very unfrequent on such heights. On the top of the mountains, which is almost a table-land, there is no ice, it is true, nor glaciers, but the snow never leaves these heights; and a few single points and spots above this level are alone clear of snow for a few weeks. Here the Laplanders seldom or never come with their reindeer except in descending to the valleys. It is a melancholy prospect; nothing in life is to be seen any longer, except perhaps occasionally an eagle, in his flight over the mountains from one fiord to another. The view is more grateful as we descend, as it is a return from wilderness and solitude to cultivation and society. On Akkha-Solkhi, one of these mountains on the W coast, and 3,392 ft. in alt. above the sea, the following limits of the different productions were accurately marked by the barometer.

Limit of snow above Talvig, in 70° N lat.,	3,514 ft.
Betula nana, or dwarf birch,	2,742

Salix myrsinites, or whortle-leafed willow,	2,150
Salix lanata, or downy willow, goes above the *Betula nana*, and approaches the limit of perpetual snow.	
Vaccinium myrtillus, or blaeberry,	2,031
Betula alba, or birch tree,	1,579
Scotch fir, or *Pinus sylvestris*,	450

The snow-skate of the Norwegian is an indispensable machine under such a climate. It consists of two thin narrow pieces of fir, of unequal lengths, and turned up in front. The longer skate, which measures about 7 ft., is used on the left foot; the other, which is about 2 ft. shorter, on the right. Their width is about 3 in.; and the thickness at the part the foot is placed, about 1 in. Strong loops of willow or of fir-root are fixed to the sides, through which are passed leather thongs for attaching the skate to the foot. The skates are smeared with pitch, and on the under side is a hollow groove to prevent slipping; the under side is also covered with seal-skin or rough bear-hide for the same purpose. The widely-dispersed inhabitants of N., without distinction of age or sex, make use of these skates in winter, traversing mountains, lakes, and arms of the sea, as well as level ground, and often saving by their help several leagues of the distance they are obliged to travel at other seasons. On a common road a good skater will travel faster than a horse in a sledge. His progress up hill is slow and fatiguing; and on hard snow he would slip backwards but for the rough skin on the under surface of the skates; but he descends the steepest mountains with astonishing rapidity, avoiding precipices, and guiding his flight with his pole.

Agriculture.] In N. the soil is often so shallow as not to admit of being ploughed; and the number of inhabitants is too small to admit of its being cultivated in any other way. Vegetation, however, as we have had occasion to remark, is amazingly quick. The summer is short; and autumn, such as it is, generally brings with it such a quantity of rain as would generally destroy whatever crops might be long on the ground. To dry the grain—which generally consists of rye—"the peasants," says Coxe, "fix forked poles about 10 ft. high, and place rows of other poles transversely, on which they file the sheaves, the lowermost sheaf hanging about 2 ft. from the ground. They are also obliged to bake the corn in wooden shades heated by means of stoves." Agriculture in N., though practised from a very remote period, has made little progress in proportion to the wants of the nation; yet in some districts, the industry and exertions of the peasantry to overcome the natural obstacles with which they have to contend, are extraordinary and deservedly successful. The rocky mountains which cover so large a portion of the country, preclude tillage; the rapid torrents which rush down from the heights often sweep away both produce and soil together; and besides, the short duration and variable nature of the season favourable to vegetation, even the parching heat of the summer sun reflected from the rocks which encircle the valleys, is hurtful to the labours of the husbandman. In most places, which are at all favourable for agriculture, are to be seen clean and neatly built farm-houses, many of which are two stories high; with gardens around them full of turnips, hops, potatoes and other roots; and fields enclosed with hedges, and carefully cleaned. Among other contrivances to counteract the evils of their climate, they make small hedges behind each other along the declivities, to retard the snow from melting too suddenly, and rushing down in torrents; and in the dry month of June, when the sunshine is bright and uninterrupted, water is brought from great distances, and distributed over the parched fields of grain; while in harvest, hurdles are placed among the standing corn to prevent it from being laid by the heavy winds and rains. Yet often in the end of summer or during autumn, a premature frost will destroy the grain in the ear. In the south of N., in good years, enough of grain is produced to supply the wants of each district, with the addition of a small overplus for the use of the northern districts. The best cultivated and most productive districts, are Hedemarken, Hadeland, Toten, Romerige, and Ringerige, in the gov. of Christiania; Vos and Sognedal in that of Bergen; Jederen, Ryfylke, and Nedeness, in that of Christiansand; and Nommedal and Inderkerred in that of Drontheim. Oats are most generally cultivated in N.; barley and rye hold the next rank; wheat, buck-wheat, and pease, are far from being common. In the mountainous tracts, oats and barley are usually sown in the months of April and May, that the harvest may be finished before the arrival of the cold nights of the autumn; but on the coast they are seldom sown till June. The grain is generally cut about the end of August or beginning of September; sometimes rye, which has been sown in the preceding autumn, is ripe in the month of July. Potatoes have been generally introduced into cultivation, but do not attain a sufficient size during the short summer of the country. There is great want of manure in the arable tracts; and the nature of the soil will not admit of a proper rotation of crops. Hemp is grown in some districts, and a little tobacco. Every farm has a certain number of married labourers employed on it in proportion to its extent, who are called 'house-men;' as they receive from the farmer a house and a quantity of land nearly sufficient to maintain a family; in return for which they are bound to work for him at a low and fixed price, whenever they are called. Except in the neighbourhood of towns or of the coast, a young Norwegian cannot marry till he has a place of this kind open for him, as he could not find employment for more than three or four months in summer. The country abounds in excellent pasture, and is better adapted for the rearing of cattle than the culture of grain; but still considerable difficulties are experienced by the husbandman in this department, and particularly in regard to winter-provender. The general breed of horses is small, but well-proportioned, lively, hardy, and often extremely beautiful. Except in the stables of rich proprietors, they seldom receive any oats as food; after the pasture of summer is at an end, they are fed chiefly with hay, cut straw, or sometimes even with dried leaves. The horned cattle are generally of a small size; and many of them are sent to pasture on the islands along the coast, where they thrive well, but become so wild as to require the skill of the hunter to retake them. The cows especially become more valuable towards the north. In the middle of May, the cows are put out to the meadows, and, in June are driven to the mountains, or into the heart of the forests, where they remain till the month of August or September. On their return, they are pastured in the meadows, till the snow sets in about the middle of October, when they are removed to the stables, and fed with straw and a little hay; but frequently they are obliged to be contented with buck branches, dried leaves, lichens, sea-weed, reeds, bark of trees, and even fish-heads and fish-bones ground. The sheep of N. are of the same breed with those of Denmark; but in some of the S districts the English breed has been introduced. Goats also are kept; and their milk is mixed with that of the sheep in making butter and cheese. Hogs are not very numerous; nor are geese, ducks, and other poultry, an object of much attention among the peasantry. In most districts of N., a principal part of the husbandman's profits are derived from the cutting of timber for fuel and enclosures, for the making of roads, or for purposes of building, and from preparing tar, ashes, and charcoal.

Forests] The forests of N are immense, and constitute the most important source of wealth, employing above 500 saw-mills. The produce of these forests, consisting of ash, birch, oak, and lime-tree, is applied to various purposes. The large trees are formed into beams, planks, and spars, for exportation. The more diminutive trees and branches, and even larger pieces of timber, in the interior, where carriage is expensive, are made

into charcoal for the use of glass-houses, furnaces, and different kinds of manufactures. The roads in N., as in many parts of Russia, are formed of wood. Turpentine is extracted from the fir-trees in great quantities, and affords a valuable article for exportation. Fences in this country, as in America, where timber likewise abounds, are formed of split-wood; hedges being scarcely known. The forests afford abundance of fuel, so that though the country may contain coal, it is seldom, or rather never sought after. The inner bark of the elm, a tree said not to be common in N., and of the fir, which abounds, is dried, ground, and used not only for feeding swine—a use to which it seems to be well adapted—but, in times of scarcity, when mingled with meal, is used even as human food. "I had previously been rather disposed to doubt the fact," says Mr Laing, "and to laugh at the idea of a traveller dining on saw-dust pudding and timber bread. In years of scarcity, however, this use of fir-bark is more extensive than is generally supposed. The present dilapidated state of the forests, in districts which formerly supplied wood for exportation, is ascribed to the great destruction of young trees for this purpose in the year 1812." The outward bark of the birch is used to cover the roofs of houses, because, from its sap and firmness, it resists putrefaction longer than almost any other substance. The inner bark of the birch is used in the tanning of hides, and for strengthening fishing nets and sails. This tree, from an incision made in the trunk near the bottom, also yields a liquor resembling wine. The twigs serve, in times of scarcity, as fodder for horses; the twigs of alder and aspen are used for the same purpose.

Animals.] Rein-deer are still found in a wild state, in the northern parts of N.; but the greater number are claimed by individuals, and tamed so far as to feed in the herd and return home at particular seasons. Besides the rein-deer, N. has the bear, the wolf, the lynx, the glutton, and the lemming or Norwegian mouse; the two last being, in some degree, peculiar to the country. The elk is found in the S districts. The beaver occurs in N. Hares, foxes, and the squirrels which furnish the well-known fur called *petit gris*, are not uncommon; and in winter, they assume a white, or a grey colour. Some birds are mentioned as being peculiar to N., such as the *Picus tridactylus*, and the *Tetrao lagopus*.

Minerals.] Gold, silver, lead, copper, iron, salt, and sulphur, are the minerals of N. Beautiful granite, rock crystals, garnets, and amethysts, are also found in some districts. The Norwegian cordierite, when cut and polished, exhibits an opalescence resembling that of the stellular sapphire. The most celebrated silver-mines of N. are those of Kongsberg, which were discovered during the reign of Christian IV. The silver is generally found in ore, and extracted by the usual process, though sometimes it is found pure in small grains, and instances are not wanting of its having been found in considerable masses. One piece, which is still preserved in the cabinet of curiosities in Copenhagen, weighs 409 marks, and is said to be worth 3,000 rix-dollars, or £600. These mines formerly produced about £70,000 annually. In 1805, the working of them was given up on account of their unproductiveness; but they were again opened in 1815. However, as the produce seldom does more than cover the expense, and, it seems, is not sufficient even for that purpose, the mines are of little advantage to government. Their chief utility consists in affording employment to a great number of indigent persons, and in supplying the kingdom with currency. Even at Kongsberg, where the silver is taken from the mine, the workmen are constantly paid in paper currency. At some distance from Kongsberg, at a place called Fossum, is a mine of cobalt. Productive copper mines are open at Roraas. They were discovered in 1644, and yield a considerable revenue to the Crown. At Quickore and Selboe, other copper mines are wrought; and at Alten-Tavig, in the province of Finmacken, there are copper-works owned by British shareholders. The amount of refined copper produced in 1792 was 2,986 skippunds. But of all the mines which occur in N., none are more truly valuable than those which produce iron. Of these, the chief are said to be situated in the southern parts of Christiania. Lead mines are wrought near Kongsberg, and alum in the vicinity of Christiania.

Population.] The pop. of course bears a very small proportion to the geographical extent of N. In 1801, it was estimated at 910,074; in 1833, it was 1,150,000; in 1845, 1,328,471, of whom about 150,000 live in 38 towns, only 9 of which exceed 3,000 inhabitants; the remainder are scattered over the country in small villages and farms. An official report on the sanitary condition of the kingdom lately presented to King Oscar by the Norwegian home-department, offers a number of facts interesting to the British reader. The year 1850 was in general favourable to health in N. No epidemic broke out, and the cholera, which appeared in Christiania, attacked few persons. The bloody flux was in some districts epidemic and very fatal. Scurvy was almost unknown, except among the prisoners in Christiansand. Consumption was prevalent and as fatal as ever; and leprosy was on the increase.

The average mortality during the last 12 years had been 18·5 out of every 1,000. The number of births (exclusive of still-born) was 43,110 in 1850. The whole pop., not counting immigrants and emigrants, was estimated at 1,410,855 at the close of the year. Of the total births, 39,394 were legitimate, and 3,716 illegitimate, or 1 illegitimate in 11·6. Tronhjem diocese showed 1 base child in every 7; in Tromsö and Christiania dioceses it was about 1 in 10; in Bergen, about 1 in 19; and in Christiansand, about 1 in 27·5. The number of illegitimate children in N. is thus accounted for by a recent traveller. "Separated as each valley is from the rest of the world, it is absolutely necessary that each should possess no more inhabitants than it is able to maintain. The *huusbond*, or cottier, pays his rent in labour, and maintains himself by a portion of the farm which is assigned to him as his own provision ground. It is evident, therefore, that a couple marrying before they can succeed to one of these tenements must starve as soon as the first winter sets in. It may easily be imagined what must be the consequence of a number of young persons living together during so many idle months in a state of forced celibacy. But, as if to take away whatever check might arise from public opinion, there is a law, that if a man marries a woman—she having any assignable number of children by any assignable number of fathers—not only the woman becomes the lawful wife, but the children become the lawful children of the man who marries her. The natural effect of this is to render a woman careless of her virtue, because she need never despair of absolutely regaining her situation in society. Mr. Laing speaks of this as a charitable and praiseworthy law. It is charitable and praiseworthy only on the supposition that it is desirable that children should be born out of wedlock. From these two causes combined, the average of bastardy is 1 in 4; in one parish in the north of N., 2 in 5—the highest average in the known world."—The bulk of the nation are Normans, or Norwegians, who, like the Swedes and Danes, are of Germano-Celtic origin. They are generally of middle stature, well-formed, and of a resolute and energetic character. In early life, their hair is generally fair, and their complexion clear and ruddy. The women are often very handsome, with expressive blue eyes, and regularly formed features. Their dress is plain and simple, that of

the men being generally of a stone colour, with white metal buttons. In N. there are three distinct classes of society: the upper class, the *bonder* or agricultural peasant, and the seafaring peasant. Mr. Laing says: "the bonder, or agricultural peasantry, each the proprietor of his own farm, occupy the country from the shore-side to the hill-foot, and up every valley or glen, as far as corn will grow. This class is the kernel of the nation. They are in general fine athletic men, as their properties are not so large as to exempt them from work, but large enough to afford them and their households abundance, and even superfluity, of the best food. They farm, not to raise produce for sale so much as to grow every thing they eat, drink, and wear in their families. They build their own houses, make their own chairs, tables, ploughs, carts, harness, iron-work, basket-work, and wood-work; in short, except the window-glass, cast-iron ware, and pottery, every thing about their houses and furniture is of their own fabrication. There is not probably, in Europe, so great a population in so happy a condition as this Norwegian yeomanry." The fact however is, it has been well-remarked by a public journalist commenting on this and similar passages in Mr. Laing's interesting volume, "the fact is, that the Norwegian *bonder* are centuries behind that state of things, in which alone the effective *exploitation* of their resources could take place. Living principally on the produce of their own land, or of the forests and the waters to which they have unrestricted access; paying no rents, and very moderate taxes; having few artificial wants, and providing even for these by means of barter, the agricultural pop.—i. e., in other words, the vast majority of the people, have no absolute need of money. Most of the operations of life can be carried on just as well without it. It is hopeless to expect that a people in this condition will have any inclination to emulate the thrift of the Dutch or the Danes. The milk of N. is, by the unanimous testimony of travellers, the finest and richest in the world, and peculiarly suited for the manufacture of butter: and yet the farmers do not make enough over and above their own consumption, to supply the very limited wants of the town pop. Butter is actually imported from Denmark to supply the deficiency. Even of the staple resources of N., such as its timber, fish, and minerals, much less is made than would be the case in a country where surplus labour, and surplus capital, concurrently seeking employment, supplied the two main elements of industrial progress. Not a little of the finest and largest timber goes to waste from obstacles to its transmission to the coast, which in a richer country would soon be overcome. The inland or fresh water fisheries can scarce be said to be made a source of profit at all. Strangest of all is the scanty produce in minerals. The total weight of iron smelted in N. in a year, does not, according to Mr. Forester, exceed 30,000 tons. How great a contrast this to Wales or Belgium! The abundance of coal in the latter countries, and the restrictions on the use of charcoal in N., will never account for so extraordinary a disproportion. And then why not import charcoal? The price that the iron of N. obtains would well warrant the outlay. But the country has not capital for ventures of that description. When the storthing wanted lately a loan of 250,000 dollars, equal to about £50,000, they could not raise the money at home; they had to advertise in the English papers."

In N. the aged and infirm, the sick of all descriptions, all who have not the means of providing for their own subsistence, are domiciled with the proprietors and such other inhabitants of the parish as are able to support this charge. These more fortunate classes furnish maintenance and shelter to their distressed neighbours, who in return render such services as they are capable of performing. The distribution of this burden takes place according to the number of poor on the one hand, and to the extent and value of the different farms on the other. In each of these respects different parishes present great diversities. In some the number of the poor is so small, that the same invalid is allotted in the course of a year to five or six farmers, who receive him by trust. There are other parishes where the same family keeps the year through one or more of these guests, which the law and their own charity have imposed upon them. The wages of workmen in towns vary from 6s. to 8s. 6d. a-week. The agricultural labourers receive from 3d. to 5d. per day, with lodging and board. The usual food of these classes consists of salted herrings, oatmeal porridge, potatoes, and coarse barley bread. Once or twice a-week only this fare is eked out with a morsel of lard or salted meat.

The remaining portions of the pop. of N. are mainly Laplanders and Finns. The Laplander inhabits a region where wholesome food is far from being plentiful; his size is therefore generally diminutive, and his limbs are deficient in those proportions which are reckoned in other places essential to beauty. Notwithstanding the meanness of his appearance, the Laplander, from his manner of life, is hardy, robust, and strong beyond what his size would indicate. He is not only more hardy than the muscular Norwegian, but so much more strong that the stoutest of his southern neighbours cannot bend his bow. The Norwegian Laplanders are in general more wealthy than their Swedish brethren. Those inhabiting the coast-districts support themselves entirely by fishing.—A considerable number of Finnish colonists, called by the country people Quäner, appear in Norwegian Lapland. Far within the polar circle, the patient Quäner continues to raise a scanty crop of potatoes and rye, and to struggle successfully with the severities of the rude climate.

Religion.] These three nations all profess Lutheranism. The Laplanders, however, retain so many of their ancient superstitious practices, that their religion can hardly be called Christianity. There are no privileged ranks in N., the citizens being distinguished only by their different occupations. "It is a peculiar characteristic," says Mr. Laing, "of the Norwegian church, that there is no dissent from it,—no sectarians. A few years ago, a person of the name of Houghan had a few followers; but his doctrine on religious points did not differ from that of the established church. It was his object to inspire a more religious spirit, and more strict observance of the church doctrine: so that his followers were similar to what is called the evangelical part of the Church of England. But even this slight attempt at a division, within the pale of the church itself, appears to have had no success. There are several reasons for this peculiarity of the Norwegian church. The principal, perhaps, is, that it has no temporal power; no political existence as a part of the state; no courts, or laws, or interests of its own, jarring with those of the other classes of the community, and raising animosity between them and the clergy. The clergy are, in political rights or privileges, on the same footing as any other class of the community. The Lutheran religion is part of the state, but not the ministers who are employed to teach it. They are represented in the storthing like other citizens; and, having no separate interests as a body of clergy, enjoy individually the confidence of the people, and an unity of interests with them. They are often sent to the storthing as their representatives. This unity

of worldly interests prevents dissent in spiritual matters. Another cause of the great influence of the clergy, and of the total absence of religious dissent, is the great consideration in which the rite of confirmation is held. To pass such a confirmation implies that the young person is well-grounded in the principles of his moral and religious duties, and is of good character and understanding. It is in common life equivalent to taking of a degree in the learned professions, being in fact a certificate of capacity for discharging ordinary duties and trusts."

Constitution.] The constitution of N. is that of the 31st May 1814, confirmed in the storthing on the 4th November following. By the first article of her constitution, N. forms a free and independent state united to Sweden under the same king. By the 25th and 110th articles, her finances, administration, legislation, and land and marine forces, are declared to be distinct and separate from those of the Swedish kingdom. It is further declared, that only native Norwegians, professing the Lutheran faith, shall be eligible to state-employments, with the exception of professorships; that N. shall be liable only for its own national debt; that the Norwegians shall be governed by their own national code of laws; and that no citizen shall be liable to imprisonment except in cases fixed by law; that the liberty of the press shall remain inviolate; and that landed property cannot be forfeited to the state. The *ockls* and *aasardes* are also declared inviolable. According to this singular law, every man whose ancestors have at any time possessed a freehold, and who every ten years has declared in the proper court that he claims the estate, but that he is unable to redeem it, may, when he has acquired sufficient wealth, recover the possession of his forefathers. In this case, the immediate proprietor is compelled to quit his property for the estimated value. This renders every one careful to preserve an exact knowledge of his descent, and fixes the affections of a family to that spot which has long remained the property of the race. At the same time, as has been justly remarked, it greatly diminishes the value of land, few being willing to purchase, and still fewer being willing to improve, what they know may soon be taken from them; and which at a certain conjuncture the laws of their country will compel them to abandon. It is further declared by the constitutional laws of the kingdom, that no earldom, baronies, or entails, shall be established within the Norwegian boundaries.—Every Norwegian, without regard to fortune, is obliged to carry arms for a certain period.

Government.] N. is governed by an hereditary limited monarchy, in which the king has the executive, and the storthing the legislative power. The council-of-state is responsible for the acts of the sovereign, who must be of the Lutheran church. The succession is lineal, and to agnates of the dynasty of Bernadotte. On the failure of the royal line, the storthing of N. and the Swedish diet shall be convocated on the same day, to deliberate on the proposal which may be submitted to them by the king or interim government regarding the destination of the crown; and within 12 days thereafter the election must take place. On the day preceding the election, a committee of 44 is to be appointed, who, in the event of the choice of the Swedish and Norwegian states falling upon different persons, shall assemble and fix the succession by a majority of votes. In the case of a minority, the government shall be conducted by a council of state, of 10 Norwegians and 10 Swedes at Stockholm, in which the minister of either country, as shall be determined by lot, shall preside. The choice of the minor's guardian shall be determined in the same manner as the election to the throne. The king is of age at 18; and it is expected that, unless under some extraordinary emergency, he shall spend some time of every year in N. He appoints a council of 8 Norwegians—none of whom must be under 30 years of age—as his representatives in his absence. He can also name a viceroy in his absence, who must be either the crown-prince or the eldest son of the crown-prince. The Norwegian minister-of-state, and 2 members of the council, must be present at every deliberation on Norwegian affairs. The civil list was fixed by the storthing in 1818 at 1,112,000 dollars.

The Storthing.] The storthing assembles on the 1st of February, every third year, in Drontheim, and remains assembled for 3 months. Its members are elected at a meeting of electors which assembles every 3 years. Every 50 inhabitants of a town, and every 100 persons living in the country, send 1 elector to this assembly, and the whole number of representatives must not be less than 75 or above 100. A member of the storthing must be at least 30 years of age, and have resided 10 years in the country. No member of the council-of-state, or any one enjoying an office or pension under government, is eligible to the storthing; but every one who is elected is obliged to attend and discharge his duties as a member, if the election has not fallen upon him for the third time; his expenses are also defrayed by the state. The king has the power of convening extraordinary meetings of the storthing; but there must always be present at least two-thirds of the representatives; one-fourth of the members from the lagthing, and the other three-fourths the odelsthing, each of which has its own president and secretary. The storthing can decree laws, impose taxes, grant loans, pass naturalizations, inquire into alliances and treaties, and summon every citizen before it, except the king or members of the royal family. Every law must be proposed in the odelsthing, and afterwards submitted to the amendment of the lagthing. Should the two chambers disagree in their views of any law, they are convened together, and by a majority of two-thirds ultimately reject or adopt the law. Having passed the storthing, the law is carried by a deputation to the king, whose approval makes it law. Should he reject any law, the same storthing cannot propose it anew; but the second may; and on the proposal of the third, the law must pass into effect, whether sanctioned by the king or not. All laws are written in Norwegian; and the storthing deliberates with open doors. Any attempt to endanger its privileges is construed high treason.

Administration.] The ministry consists of the viceroy, a minister-of-state, 10 counsellors, and a secretary, who decide by a majority, and afterwards report to the king. The council-of-state and the lagthing compose the highest tribunal of the state, and take particular cognizance of state-offences.—A high court of justice, consisting of 3 members, is established in each of the provinces or bailiwicks; and these provinces are again subdivided into inferior districts, with their respective courts. A general civil and criminal code has been projected for the kingdom. The highest tribunal of justice is composed of a president or justiciary, 6 ordinary and 3 extraordinary assessors. No member of this tribunal must be under 50 years of age. The police is very effective.

Ecclesiastical establishment.] The clerical body consists of 5 bishops, viz., one for each of the govs., and one for Nordland, with 49 deans, and 379 pastors. The king nominates the bishops; the deans are chosen by the clergy of their dio. The livings are in the hands of patrons. The bishop of Aggerhuus is considered as metropolitan. The yearly revenues of the bishoprics are calculated to be, the highest £600, and the lowest £400 sterling. From the tribunal of the deans, an appeal lies in ecclesiastical affairs to the bishops. A missionary college at Drontheim is especially devoted to the conversion of the Laplanders.

Literature.] N. has its own language, but it cannot be said hitherto to have possessed any national literature. Its scholars and eminent men, even its first poet, Holberg, have all written in Danish, and we do not possess a single original work in the Norwegian language. But the Norwegians are by no means destitute of a taste either for the sciences or fine arts. Mathematics, natural history, and history, are much cultivated: even among the common people, we find good calculators and ingenious ma-

thematicians. A favourite amusement with the country people is to recount the tales and traditions of ancient times. Newspapers were established in this country in 1803. There are upwards of 20 newspapers published, but some only give the advertisements and official notices of the prov. or town in which they appear. Of those which give also the foreign and domestic news, the most extensive circulation appears enjoyed by a daily paper called the *Morgen Blad*, published in Christiania. The cost of a daily paper sent by post is 7 dollars, or about 28s. yearly. There is no duty on newspapers; and, as there are 6 or 7 published in Christiania alone, this price is probably as low as competition can make it. Danish, German, and Swedish books, are pretty extensively read. The periodicals of Germany have likewise penetrated to the highest north.

Education.] The education of youth is chiefly intrusted to itinerant schoolmasters, who usually reside a fortnight at every hamlet: nevertheless, it is rare to meet with a peasant who cannot both read and write. The town-schools are ill-organised; but the high-schools of the five principal cities are nowise inferior to the very best establishments of the kind in Europe. There are two seminaries for instructing schoolmasters.--The university of Christiania was founded in 1812. It has 16 professors, and about 150 students. There is a royal school of cadets in Christiania; an establishment for the instruction of young Laplanders at Drontheim; and a commercial academy at Christiania.

Finances.] The revenue of the kingdom has been estimated at 1,597,217 specie dollars, or £379,339; but it has of late years much exceeded that sum. In 1850 the expenses of the state amounted to 3,421,900 spd., and the income was 3,466,300 spd., showing a surplus of 44,000 spd. On the 31st of Dec. 1850, the treasury surplus was 1,384,000 spd., the treasury activa amounted to 5,637,800 spd., and its passiva to 3,978,700 spd., exhibiting a surplus of 1,659,100 spd. A loan of 4,500,000 marcs banco, or £330,000 sterling, proposals for which were issued a few months ago by the Norwegian government, was concluded in 1848, in Hamburg. The rate of interest is 4 per cent.; the principal will be liable to be paid off in 30 years; and the price at which it was taken was 93. On the separation of N. from the Danish crown the latter justly claimed that a fair proportion of the common public debt of the two countries should be taken over by N. This claim was sanctioned by the allied powers; and as it was virtually a recognition by them of N. as a self-existing independent state, and not a mere prov. or part of Sweden, and was in itself just, it was acceded to by the storthing. Both nations started with equal debt in proportion to their property and pop.; but N. has paid off the greater part of her debt except 3,127,771 dollars—due principally within the country, and not redeemable; has formed military, naval, and civil establishments suitable to her condition; has regularly diminished the taxes in proportion to the reduction of her debt; and, in 21 years, has been able to take off the direct taxes on property altogether—finding the indirect taxes sufficient to cover the expenditure, with a sufficiently large surplus. Denmark, during the same period, has augmented her public debt to about 127,000,000 rix-dollars; and has every year had an under-balance, or excess of expenditure above income.

Army.] The military force of N. is from 10 to 12,000 regulars, 2,000 of whom are employed in garrison-duty, 1,285 artillery, and 1,070 cavalry, and a somewhat larger body of militia. The country is divided into a number of districts, of which each furnishes a soldier. Every male at his birth is registered for the militia; and from the first on the list all deficiencies are supplied. After a service of 10 or 14 years, they take their place among the invalids, and after some time are dismissed. Conscription is the mode usually resorted to for supplying the regular forces. A late decree of the storthing directed the whole fortresses throughout the kingdom to be demolished.

Navy.] The navy of N. is upon a very small scale, amounting to only 6 brigs, 8 schooners, and 77 gun-boats. These vessels are generally situated at Christiania, Christiansand, and Frederickstadt. At the two latter ports there are docks. In 1844 there were at the port of Christiania 10 steam-vessels, of a power varying from 20 to 120 horses. Of these boats. 5 belonged to the government, and were employed in the conveyance of the mails. Only one of them had been built for an armed steamer. The other 5, belonging to private persons, were employed on different stations as passenger-boats. The Jernbarden, an iron-vessel of 62 tons, was brought over in pieces from Scotland, and plies in the Miösen lake 50 m.

Commerce.] From the earliest period, the Normans have sustained the character of bold and skilful navigators: the sea is still their element, and the vicissitudes and dangers of a maritime life are highly congenial to the national spirit. The internal commerce of the country is very insignificant, on account of the bad roads and difficulties of carriage. In the higher latitudes, almost the only commerce is that of barter. Since the union with Sweden, the passes or defiles between the two countries have been kept in good order. The only mail known in the country is the government post. The principal commercial towns are—Bergen, Drammen, Christiania, Langesund, Christiansand, Drontheim, Frederickstadt, Arendal, Oster-Rusoer, Laurvig, Tonsberg, and Hammerfest. The national bank is located at Drontheim; and its notes form the principal money currency of the country, and even on the exchange at Hamburg are valued as high as 111 dollars paper for 100 specie. The country contains no railroads or canals.—The principal exports are wood, fish, iron, copper, glass, alum, marble, kelp, dyeing lichens, pickled meat, hides, fur, feathers, oil, tar, and pitch. Both the imports and exports of N. are very considerable, as the following list of the leading items in 1850 will show:

EXPORTS.		
Salt fish,	1,500,000	vog.
Herrings,	568,000	barrels.
Train oil,	6,500,000	pots.
Timber,	227,000	læsts.
Iron,	14,600	skeppund.
Copper,	365	—
IMPORTS.		
Barley,	572,000	barrels.
Rye,	517,000	—
Ditto (meal).	1,000,000	lbs.
Salt,	518,000	barrels.
Coffee,	6,300,000	lbs.
Pork,	830,000	—
Horned cattle,	2,438	
Cheese,	630,000	lbs.
Rice,	8,970	barrels.
Ditto (shelled),	470,000	lbs.

In 1815, N. exported 90,000 lasts of wood to Great Britain; in 1842, 50,100. The total exportation of wood in 1842 was 256,000 lasts. The total of deals and battens imported from N. into Great Britain in 1851, 978,200 pieces; in 1852, 1,177,000 pieces. The most extensive forests are in the interior, and are chiefly property belonging to the peasantry. For some years the timber-trade has been gradually changing its course: formerly England was looked upon as the principal market, and in return England retained almost the exclusive import of manufac-

tures. From 1809, the period when the English protection system extended in favour of Canada, the decline of the trade with England commenced, and in the same proportion did the use of British manufactures decrease. Hamburg and the German states also became new markets for this description of Norwegian produce, and German manufactures superseded in a great measure those of England.—The Norwegian mercantile navy, in 1838, consisted of 2,427 vessels, of a total burthen of 212,242 tons, and navigated by 12,935 men. At the close of 1850, N. had 3,696 vessels, measuring 284,110 tons, and manned by 19,037 seamen. Of this number the country-districts owned 570 ships of 16,131 tons and 2,597 men; and the towns, 3,126 ships of 267,978 tons and 16,440 men. Besides these, the ungauged country fish-boats carry 103,394 barrels of herrings and 1,919 men.—The imports consist of corn, wine, spirits, salt, and soft goods. In average years, the importations and exportations nearly balance each other.

Fisheries.] The fisheries of N. are very extensive and productive, employing 80,000 hands, and producing an annual revenue of 1,500,000 dols. Vaage is the central point and chief place of the northern fisheries. The herring fisheries have of late years been very unproductive, but formerly the exports of herrings to the Baltic, from Bergen, amounted to 100,000 barrels. A small species of herring is exported under the name of anchovies. Nothing, Mr. Latham says, "is wasted by the Norse fisherman. The very heads and offals of the cod have a use. Beaten up with some sea-weed, and mixed with a little hay, they serve as a mash for the Finmark cows, that not only manage to exist, but even to thrive, upon fodder so anomalous. Between 1815 and 1835 the number of barrels of herrings exported was in round numbers as follows:

1815 to	1819	155,000
1820	1824	307,000
1825	1829	340,000
1830	1835	517,000

Of lobsters, the export from

1815 to	1819 was	605,000
1820	1824	927,000
1825	1829	1,320,000
1830	1835	784,000

A single lobster costs in N. about 1½d.; a trifling duty is laid upon them when they leave the country. The London market has the chief monopoly of them. There is good cod-fishing off Shetland; but the Norwegian can undersell the Shetlander, because his tackle is cheaper, and he fishes with nets. The lobster season is the winter. They pass the time between their capture and their embarkation in flat tanks pierced with a multitude of small holes, lying off the neighbourhood of Laurvig, half-sunk and half-afloat. Besides Laurvig, Christiania and Bergen have a large share in the lobster-trade.' The chief market for salmon is Denmark. For several years the salmon-trade was very prosperous, but of late it has been limited. This was found to be owing to immense shoals of sharks. Eight ships were fitted out for shark-fishing in 1841, and 20,000 of these voracious animals were captured.

History.] Harold Harfager, 'the fair-haired king' of N., appears in history so early as 870, spreading terror and desolation throughout the Hebrides. This prince laid the foundation of that authority which the kings of N., and afterwards of Denmark, when the monarchies were united, exerted over the Orkneys. Olaf I., called Olaus Friguessan by some historians, having been converted to Christianity in England, compelled his Norwegian subjects to embrace it. Olaf II. continued the work begun by his predecessors, and made use of religion as a pretext for wresting the government from a few petty kings who then ruled along with him in this country. Canute the Great, king of Denmark, conquered N. in 1028, but did not retain it long. In 1263, Haco, king of Norway, was defeated by Alexander III., king of Scotland, in the famous battle of Largs, in Ayrshire. From 1034, N. was governed by its own king; and when, in 1319, the male line of the royal house was extinguished in Haco VII., the States elected the young Swedish king, Magnus VIII., the son of Haco's daughter. Olaf IV., the grandson of Magnus, was elected king of Denmark in 1376, and after the death of his father governed both countries. That prince, having died without issue, was succeeded by his mother Margaret, daughter of Valdemar III., king of Denmark; and from this period N. remained united with Denmark, but preserving with a few exceptions its own constitution. The union of these two kingdoms lasted till 1814, when the king of Denmark, in his quality of absolute sovereign of N., ceded this state to the king of Sweden. See article SWEDEN.

NORWAY, a township of Oxford co., in the state of Maine, U. S., 44 m. W by S of Augusta. Pop. 1,786.—Also a township of Herkimer co., in New York, 86 m. WNW of Albany. Pop. 1,046.

NORWEGIAN, a township of Schuylkill co., in Pennsylvania, U. S., on the Schuylkill river. Pop. 3,812.

NORWELL, a parish in Nottinghamshire, 5 m. N by W of Newark, on a branch of the Trent. Area 3,720 acres. Pop. in 1831, 939; in 1841, 954.

NORWICH, the capital of Norfolk, the seat of an extensive diocese, and a city and county of itself. Its county boundary is a circuit of 14 m., and comprehends an area of 6,630 acres. The city stands a little NE of the centre of this territory, in 52° 31′ N lat., and 1° 18′ E long.; 109 m. NE by N of London, 43 m. N of Ipswich, and 18 m. W by N of Yarmouth. The river Wensum approaches the town on the NW and leaves it on the SE. It measures about 1½ m. in extreme length, 1 m. in extreme breadth, and 4 m. in circum.; but in recent years has, on several sides, especially on the W and SW, received suburban extensions to the amount probably of one-fourth of its former area. Ten hamlets, which divide among them the rural parts of the county of the city, were formerly separated from the town by green fields and frowning fortifications; but, in most instances, they are now populous, handsome, and contiguous suburbs.

Principal Edifices.] The ancient town in most of its street arrangements is very irregular; its thoroughfares are narrow and winding, and, in some instances, follow the line of the ancient walls.—The market-place, a large square in its centre, is one of the most spacious in England.—The Wensum, during its sinuous course through N., is spanned by ten bridges, two of which are modern structures of cast-iron, others are fine specimens of ancient masonry.—The castle stands on the shoulder of a hill SE of the centre of the ancient town. The area of the inner ballium commands a map-like view of the city and the circumjacent country. The great keep, situated within this area, is a massive quadrangular pile 110¼ ft. long, 92 ft. 10 in. broad, and 69⅓ ft. high. Part of the ancient area of the castle has been intruded on by the town; part has, since 1738, been used as the cattle-market, part bears aloft two buildings, to be afterwards noticed; the rest of it is open to the public, and forms a highly attractive promenade.—The new county jail, situated on the E side of the old castle, or keep, was built in 1824-8, at an expense of £50,000. It consists chiefly of a governor's house, and three radiating wings.—The new county-hall, situated on the NE side of the inner vallum of the castle, built in 1822-3, is a hand-

some edifice, in the Tudor style.—The new city jail, and house-of-correction, built in 1824-7, at a cost of about £30,000, is a hollow quadrangle, with towers at the angles, and enclosing an area of upwards of 1½ acre.—The Horse barracks, situated in Pockthorpe, and built by government in 1791-3, form three sides of a quadrangle, and contain ample accommodation for 5 or 6 troops of cavalry.—The Guild-hall, at the N end of the market-place, is a large antique edifice, built nearly in its present form, between 1407 and 1453.—St. Andrew's-hall, used as the festal-hall of the municipal corporation, and for public meetings, occupies the nave of the conventual church of the Black Friars. Its length is 124 ft., and its roof is supported by 12 slender pillars. The triennial musical festival is held in this hall.—The Cathedral founded in 1096, attained completion so late as 1430. In 1806-7, the whole fabric was repaired and beautified, on an extensive scale; in 1818, and subsequent years, the decayed ornaments of the west front were restored, and many other improvements effected; and in 1831, the south front was renewed. Its style of architecture is chiefly Norman; being distinctively marked by the semi-circular arch, and the massive short column. The length of the whole building, from E to W, is 407 ft.; the breadth, at the transept, 178 ft.; the length of the nave, from the W door to the screen, is 204 ft.; its breadth, with the aisles, 72 ft. Cloisters, attached to the S side of the nave, form a quadrangle, within the walls, of 174 ft. A tower and spire, rising from the intersection of the transept with the nave and the choir, jointly attain a height of 315 ft., exceeded in Britain only by the steeple of Salisbury. The tower is an interesting specimen of the Norman style. The spire is in a later style of elegant proportions, octangular in form, boldly crocketted in the ribs which run up its angles, and surmounted by a weather-cock. The interior of the cathedral is grand and solemn in general effect; and both its great features and its ornamental mouldings boldly exemplify the extraordinary massiveness, and uncouth proportions of the Norman style. The site of the noble pile is about a ¼ m. NE of the castle, and about half that distance from the nearest part of the r. bank of the Wensum. Immediately N of it stands the Bishop's palace, an extensive and irregular pile. The church of St. Peter Mancroft, at the SW corner of the market-place, ranks next to the cathedral in both architecture and dimensions. It is a large, regular, and handsome edifice, finished in 1455. Several of the parish churches are interesting structures, and there are several handsome chapels belonging to different religious denominations.

The Diocese.] Felix, a Burgundian, introduced Christianity among the East Anglians, under King Sigbert. About the close of the 7th cent., Bosa, the 4th bishop, divided the dio. into two sees, and fixed the new one at North Elmham. Wildred united them toward the close of the 9th cent.; and he fixed his episcopal seat at Elmham. Herfast, 13th bishop after Wildred, translated the see of Elmham to Thetford; and the second bishop after Herfast, translated it, in 1094, from Thetford to N. The dio., as to its seat, has since continued unchanged; and, as to extent and features of government, has been but slightly modified. Its total number of parishes was formerly upwards of 1,350; but, immediately after the Reformation, and at subsequent dates, they were so far consolidated that, in 1829, the number was only 1,185; and again they are so clustered into the possession of pluralists, that the number of beneficed clergymen amounted recently to less than 700, that of licensed curates to about 250. The archd. of N. originally extended over the whole dio.; but three other archdeaconries were afterwards established,—Norfolk in 1200, Sudbury in 1126, and Suffolk in 1127. The church commissioners have transferred to the dio. of Ely the Cambridgeshire parishes, the deaneries of Fordham, Clare, and Thingo, in the archd. of Sudbury, and the deaneries of Fincham and Lynn in the archdeaconries respectively of Norfolk and Norwich. The revenues of the bishopric amounted, in 1831, to £5,395 net. The dean and 4 canons who constitute the chapter, possess, as successors of the wealthy prior and monks of Norwich, a much larger revenue than the bishop.

Schools, Charities, &c.] In 1833, there were in this city 124 day, 12 boarding, 38 infant, and 43 Sunday schools. The endowed and other charity schools, in 1836, were attended by upwards of 2,600 scholars. The number of Sunday scholars was upwards of 3,000. A Lancasterian school is supported principally by dissenters, for the education of about 300 children. The Gurney school, supported by the family of that name, educates and partly clothes 60 girls. The Catholic charity school educates 110 children. An hospital and school for the blind was founded in 1805. St. Giles' hospital, usually called the Great hospital, has an income of from £6,000 to £7,000 per annum. Other charitable benefactions are numerous, and very various in object. The patronage and distribution of the endowed charities, previously under the management of the corporation, and amounting to not less than £9,213 per annum, on an average of 3 years, ending 6th April, 1835, is now exercised by a general list of charity trustees, consisting together of 29 persons, appointed by the Lord-chancellor. The charities under the management of trustees appointed by direction of the donors, amount to not less than £6,000 per annum. Besides the foregoing, the incomes of charitable institutions, associations, and schools in N. under the management of committees appointed by the subscribers, and supported generally by voluntary contributions, amount to upwards of £10,000 per annum.—The Norfolk and N. hospital was opened in 1772. The Norfolk lunatic asylum, at Thorpe near N., was established in 1814, for the reception of pauper and criminal lunatics. A dispensary was instituted in 1804; an ophthalmic infirmary in 1822; a Magdalene asylum in 1827. The N. Savings' bank, established in 1816, shows, between the years 1830 and 1840, a gradual and regular increase both of depositors and of amount deposited, respectively from 2,781 to 8,180 persons, and from £86,043 to £223,664. The Norfolk and N. Literary institution was established in 1822. The public library was instituted in 1784, and possesses upwards of 20,000 volumes. A city library, and a penny library have each about 2,200 volumes. A Mechanics' institution, established in 1825, maintains a fortnightly lecture during winter, and has a valuable library and collection of models, instruments, and apparatus. Three newspapers are published in N.; and there are two newspaper subscription rooms. There are also choral, madrigal, and horticultural, societies, a theatre, and an assembly-house.

Manufactures.] N. is the most ancient manufacturing town in the kingdom, and has been noted for its woollen fabrics since the reign of Henry I., when a colony of Flemings settled in the city, and got long wool spun at the village of Worsted, 9 m. to the N, whence the article took its name. An abstract of a census of the weavers of N., furnished by the report of the commissioners on hand-loom weavers, published in 1840, will best show the nature and the absolute and relative amount of the fabrics then woven by hand. Bombazine employed 1,205 workers, of whom 803 were men; challis, Yorkshire stuffs, mous-

seline-de-laine, fringes, &c., 1,247, of whom 510 were men; gauzes, 500, chiefly women; princettas, 242, nearly all men; filloons, 221, nearly all men; silk shawls, 166, of whom 74 were men; bandanna, 158, of whom 86 were men; camlets, 92, nearly all men; sacking, 45, all men; silk, 38, of whom 16 were men; jacquard, 30; worsted shawls, 26; woollen and coach-lace, each 22; camletees, 20; horse-hair-cloth, 17; lustres, 3;—total of weavers, 4,054, of whom 2,211 were men, 1,648 women, 108 boys, 77 girls, and 10 apprentices. At the same date there were 1,021 unemployed looms, making the total number of looms 5,075. Of the 4,054 employed looms, 3,398 were in the houses of the weavers, and 656 in shops and factories. In 1838, 2 woollen, 3 worsted, and 2 silk-mills, jointly employed 1,285 hands. In 1849, the number of hand-loom weavers in N. was estimated at 2,500; of weavers employed on power-looms, at 750: making a total number of about 3,250. The numbers employed in the yarn, mohair, and worsted manufactures, did not exceed 1,000 of both sexes and all ages; about 1,200 persons, chiefly children, were employed as winders; and the number of warpers, pickers, sewers, dyers, packers, hot-pressers, havel-makers and drawers, slaie and shuttle-makers, &c., might be 500: making a total of 5,950 persons employed in the different branches of manufacture connected with the city. Deducting from this number 1,200 winders, who are for the most part children, we shall have 4,750 persons, of whom we may suppose two-thirds, or 3,100, are married people with 3 children each. There would thus be a portion of the pop. of Norwich, amounting to 14,050 persons, either engaged in or dependent upon manufactures for their subsistence in 1849. The most flourishing period of the N. manufactures is stated by Mr. Blakely to have been "during the middle of the last cent., when fabrics of every kind were made, and the whole manufacturing pop. of N. and the neighbouring villages was well and profitably employed. Camlets, camletees, callimancos, satins, bombazines, and lastings, were the articles most in demand. The ledger of one firm, during the year 1791, shows exports of the above to Italy, Spain, Spanish America, Russia, Norway, Holland, Madeira, and China, to the amount of £100,000 sterling, whilst 30 other manufacturing firms were competitors in the same fabrics. This was at a period when the total exports of the manufactures of England were £14,000,000, out of which N. furnished its quota of £1,000,000." The cotton manufactures also at that time employed 2,000 hands in N. Change of fashion, the invention of the spinning jenny, and the competition of Lancashire and the West Riding, have, however, consigned these things to history; and N. crapes, the fillover shawl, gauze crape, poplins, satins, and satinettes, combing and spinning of mohair, printing of light silk and barege shawls, now form the chief employment of the artisans of N. Lace and shoemaking have been recently introduced, and in the latter 2,000 hands are employed in the city. It is satisfactory to learn, from Mr. Blakely's pamphlet, that the "general state of the manufactures in N., although not equal to the halcyon days of the camlet and bombazine trade, is now rapidly reviving, and that at this moment but few good weavers are unemployed. The great increase in our exports under the free-trade regime, and the abundance of capital, have been felt in N., as in other mercantile districts, causing hundreds of looms to resume their activity." Speaking of the weavers of N., Mr. Blakely says: "Like their predecessors, they have ever been ready to resist by physical force any real or imaginary invasion of their rights; and during the present century the city has been several times a scene of disorder. It is, however, but just to say, that the same intrepidity of character and buoyancy of disposition have supported them during successive years of low wages and distress, and the same tact and shrewdness of character have availed them in producing from their looms the most difficult creations of fancy. As a body they are intensely political,—alive to all matters of public interest, temperate in their habits, patient amidst unparalleled suffering, and in their craft perhaps still unsurpassed by any artisans in Europe. Much anxiety is evinced for the education of their children, and even at the most depressed period of trade there is but a slight diminution in the attendance at the Sabbath and day schools. The rate of wages is arranged amongst the weavers, and agreed to by the manufacturer; and although they are not equal to those of the north, N. being placed in the centre of a productive agricultural district, with an abundant supply of provisions, the weekly earnings of the artisans may be expended to greater advantage than in many other cities." There are also in N. extensive establishments for dyeing and dressing the manufactured goods, a cotton-mill, and several iron-foundries, breweries, vinegar, orchal soap, candle, oil, and mustard-works.—N. was anciently a seaport, and though long bereft of this character by geognostic changes in the bed of the Yare, has once more become so by means of the ship-canal and other improvements called the Lowestoft navigation. Nearly one-half of the whole exports and imports of Yarmouth belong to N.; and the trade between the two places has been greatly facilitated by the establishment of steam-packets on the Yare. The river-carriage of agricultural produce, coal, and other heavy articles, is conducted chiefly in lighters, of from 15 to 20 tons burden.

Municipal affairs.] A charter of 5° Henry IV. made the extensive territory within the corporation-limits a co. of itself, excepting only the castle; and this is now, by the boundary act, included for the purposes of representation. The municipal reform act divided the borough into 8 wards, and reduced the number of aldermen to 16, and that of councillors to 48. The jurisdiction of the corporation in the co. of the city is exclusive. Assizes are held twice a-year; and general or quarter-sessions are held by the recorder. The annual receipts of the corporation during 5 years terminating in 1833, varied between £2,320 and £3,624; in 1850 they amounted to £9,592. N. has returned 2 members to parliament ever since the reign of Edward I. Constituency in 1835, 800 freeholders, 2,540 freemen, and 2,280 added by the reform bill,—in all 5,620; in 1841, 4,349; in 1848, 4,220. Pop. in 1693, 28,881; in 1801, 35,734; in 1831,61,110; in 1841, 62,294; in 1851, 68,195. Poor rates in 1832, £25,541; in 1838, £16,595.

History.] N. appears to have gradually arisen out of the decay of the Roman town of *Venta Icenorum* or Caistor. The nascent city offered attractive advantages as a fishing-station, and grew to be a fishing-town. Under the Anglo-Saxon princes it was a place of some importance, and in the reign of Edward the Confessor it had 1,320 burgesses and 25 churches. Domesday-book of 1086, though noting many of its dwellings to be untenanted, states its burgesses to have been 1,565, and its churches 54. In 1122, Henry I. held his Christmas in the town, and raised the place to an equality of franchise and privilege with London. A vast body of Jews about this time settled in N.; they afterwards got embroiled in contests with the monks, at whose instigation probably the inhabitants, enraged by their alleged crucifixion of a Christian boy, nearly exterminated them in 1189. In 1216 the castle was taken and the town plundered by the troops of Louis, the dauphin. Between 1294 and 1342, the city, hitherto fortified only with a large ditch, was fortified by the citizens with embattled walls, towers, portcullised gates, and military engines. About 1336, a number of worsted and woollen manufacturers from the Low countries settled in the town, and occasioned a rapid augmentation of its trade, wealth, and pop. In 1348-9 it was bereft of about one-third of its inhabitants by the plague. In 1381, 'the Norfolk levellers' pillaged the houses of the wealthier citizens, and committed great ravages. Five great fires,

between 1463 and 1507, greatly desolated the town; the last of them destroyed no fewer than 718 houses. In the reign of Edward VI., the rebels under the two Ketts marched against N., took possession of the city, pillaged it, and burnt a large part of it. In 1557-8, several martyrs to the reformed religion were burnt in N. In years between 1486 and 1665, eight or nine visitations of plague and 'the sweating sickness' made fearful havoc, carrying away in four instances respectively 1,431, 2,251, 3,076, and 4,817 persons. In 1565-6, upwards of 300 Flemings, who were driven from their native land by the persecutions under the duke of Alva, settled in N., and revived its declining prosperity. In 1570, 1646, 1697, and 1706, the city was visited, and very seriously damaged, by great floods. During the civil wars under Charles I., N. was fortified in the cause of the parliamentarians.

NORWICH, a town of New London co., Connecticut, U. S., on the Thames, in N lat. 41° 33′, W long. 72° 7′, 13 m. N of New London. It contains a court-house, a jail, and 7 churches for different denominations. It is a considerable town both for trade and manufactures; is favourably situated at the head of navigation; and has an extensive back country. Steam-boats ply between N. and New York, and it is connected by railroad with Worcester in Massachusetts. The falls of the river afford seats for various mills and manufacturing establishments. Pop. in 1830, 3,144; in 1840, 4,200.—Also a township of Windsor co., Vermont, on the Connecticut, 46 m. SSE of Montpellier. Pop. 2,218.—Also a township of Hampshire co., Massachusetts, 104 m. W of Boston. Pop. 750.—Also a township of Franklin co., Ohio, on the Scioto. Pop. 731.—Also a township and village of Chenango co., New York, on the Chenango, 112 m. W of Albany. Pop. 6,145.—Also a township of Muskingum co., in Ohio, 65 m. E of Columbus.—Also a township of Huron co., in Ohio. Pop. 676.

NORWICH, a township in Brock district, Upper Canada, intersected by several affluents of Big creek. Pop. in 1842, 2,747. It contains in its NE part the village of Norwichville.

NORWICHTOWN, a village of New London co., in Connecticut, U. S., 37 m. SE of Hartford, and 2 m. N of Norwich. Pop. 1,000.

NORWOOD, a chapelry in Middlesex, 2 m. N of Hounslow, intersected by the Grand Junction canal. Pop. in 1831, 1,320; in 1841, 2,385.—Also a hamlet, including two villages, in the parishes of Lambeth and Croydon, Surrey, 6 m. S of London, on the line of the Croydon railway. The N. school-of-industry, for the reception and training of destitute children from the London parishes, is pleasantly situated on the top of an eminence in this hamlet, and is a well-regulated and interesting establishment. The South Metropolitan cemetery, a beautiful and well-arranged burying-ground, has been formed here on the gentle slope of one of the little eminences which surround the hamlet; its extent is 41 acres. Besides a public office and residence for the superintendent, it contains two chapels, one for Episcopalians, the other for dissenters. N. has long been celebrated as the rendezvous of the gipsy tribes, who used to encamp within its shades.

NORWOOD, a village of Upper Canada, in the township of Asphodel, 10 m. SE of Warsaw. Pop. 150.

NOSENSTADT. See Bistritz.

NOSE PEAK, a cape on the E coast of Patagonia, in S lat. 53° 32′, W long. 70° 01′.

NOSIMA, a small island of Japan, in the strait between Nifon and Xicoco.—Also a town of Japan, in the island of Nifon, 20 m. NNW of Taisero.

NOSOOKA, a town of Russia, in the gov. and 42 m. S of Chernigov.

NOSS, a small island of Scotland, lying to the SE of Bressay, in N lat. 60° 12′, esteemed one of the most fertile of the Shetland isles.

NOSSA-SENHORA-D'ASSUMPÇAO. See Assumpçao.

NOSSEBE, or Nassi-Be, a small island, situated in a bay off the NNW coast of Madagascar, in S lat. 13° 30′, within 1 m. of the mainland which is here low and marshy. It is about 15 m. in length, and contains an excellent harbour. The French had a settlement on this island, but finding it a hot-bed of disease and death, where two-thirds or three-fourths of their troops sometimes fell a sacrifice to the climate in one summer season, they have abandoned it; and the island of Mayotta, distant about 180 m. to the W, is henceforth to be the sole garrison and military depôt of the French in these seas.

NOSSEN, a town of Saxony, on the Mulda, 19 m. W of Dresden. Pop. 2,040.

NOSS-HEAD, a cape on the E coast of Caithness, 4 m. NE of Wick, with a lighthouse in N lat. 58° 28′ 38″, W long. 3° 3′ 5″.

NOSTAL, a township in Wragby p., Yorkshire, 4½ m. SW of Pontefract. Pop. in 1831, 142.

NOSTANG, a village of France, in the dep. of Morbihan, cant. and 9 m. ENE of Port-Louis. Pop. 1,200.

NOTAHACKY, or Notahucky, a river of Tennessee, U. S., which rises in N. Carolina, and joins the French-Broad, a little above Danbridge.

NOTARESCO, a village of Naples, in Abruzzo-Ultra 1ma, 9 m. E of Teramo. Pop. 1,250.

NOTCH (The), a pass in the W part of the White mountains, in New Hampshire, U. S. The narrowest part, between two perpendicular rocks, is only 22 ft. wide. The road from Lancaster to Portland passes through this notch, following the course of the head branch of the Saco river. The scenery at this point is grand and picturesque

NOTCH (Cape), a cape on the coast of Patagonia, in the strait of Magalhaens, in S lat. 53° 25′, W long. 72° 45′.

NOTGROVE, a parish in Gloucestershire, 3¼ m. N by W of North-Leach. Area 1,520 acres. Pop. in 1831, 166; in 1841, 181.

NOTLEY (Black), a parish in Essex, 1¾ m. S by E of Braintree. Area 2,370 acres. Pop. in 1831, 486; in 1841, 520.

NOTLEY (White), a parish in Essex, 9 m. NE by N of Chelmsford. Area 2,020 acres. Pop. in 1831, 453; in 1841, 470.

NOTO, a considerable town in the SW of Sicily, in the Val-di-Noto, delightfully situated on an eminence overlooking a richly cultivated valley, 15 m. SW of Syracuse. It is of considerable antiquity; but having been destroyed by an earthquake in 1693, the site of the present town is some miles from that of the ancient town. Its population is computed at 12,000. Of the numerous churches and convents which it contains, several are elegantly built in the Grecian style. Its other public buildings are an hospital, a college, a Monte di Pieta, and a valuable museum of Greco-Siculo medallions. It trades chiefly in wine, oil, and corn, the produce of the adjacent country.

NOTO, a town of Nifon, in Japan, 48 m. NW of Jedo.

NOTO (Cape), a headland on the NW coast of the island of Nifon, in N lat. 37° 39′.

NOTO (Val di), one of the three provinces into which Sicily was formerly divided, forming the SE portion of the island. Its length from E to W is 70 m.; its breadth about 50 m. It forms in extent a third of the island, and comprises the portion first peopled by Grecian colonists, and most celebrated both in Grecian and Roman history. It is now administratively divided into the prov. of Syracuse, and a portion of the provs. of Caltanisetta and Catania. It contains the towns of Catania, Syracuse, Augusta, Modica, Calatigirone, Lentini, Carlentini, and Noto.

NOTRE-DAME, a small river of Lower Canada, which falls into the St. Lawrence about 16 m. below Montreal.

NOTRE-DAME BAY, a bay on the E coast of Newfoundland, in N lat. 49° 55′.

NOTRE-DAME-D'ABONDANCE, a large village of the Sardinian states, in Savoy, prov. of Chablais, 30 m. E of Geneva.

NOTRE-DAME-DE-FRESNAY, a village of France, dep. of Calvados, 15 m. SSW of Lisieux. Pop. 300.

NOTRE-DAME-DE-L'EPINE, a village of France, in the dep. of La Marne, 4 m. ENE of Chalons-sur-Marne, cant. of Marson. Pop. 500.

NOTRE-DAME-DE-MONT, a village of France, in the dep. of Vendee, cant. and 4 m. NW of St.-Jean-de-Mont. Pop. 1,800.

NOTRE-DAME-DE-TOUCHET, a village of France, in the dep. of La Manche, cant. and 4 m. SSW of Mortain.

NOTRE-DAME-DU-THIL, a town of France, dep. of Oise, 1 m. NW of Beauvais. Pop. 1,000.

*** NOTRE DAME. Besides the above, a number of towns and villages in France compounded with this term, will be found under the second word.

NOT'S ISLAND, a small island near the coast of Virginia, in N lat. 38° 38′.

NOTTAWASAGA, a township of Upper Canada, in Simcoe district, skirting a bay of the same name in the S part of the Georgian bay of Lake Huron; and intersected by a river of the same name which falls into the bay. Pop. in 1842, 420.

NOTTE, a small river of Prussia, in Brandenburg, which runs from S to N, and falls into the Spree near Köpenich, after a course of 45 m. It is navigable in the lower part of its course.

NOTTELN, a town of Prussian Westphalia, in the gov. of Munster, 10 m. W of Munster.

NOTTEVOE, an island off the SE coast of Norway, in the gulf of Christiania, in N lat. 59° 12′, E long. 10° 29′.

NOTTINGHAM, a borough and county of itself, in the hund. of Broxtow, co. of Nottingham; on the N bank of the Trent, by railway 27½ m. N of Leicester, 47½ m. NNE of Rugby, and 130¾ m. NNW of London. Area of the borough, previous to the new arrangement of the municipal boundaries, 2,610 acres. Houses in 1831, 10.407: in 1841, 10,942; in 1851, 11,549. Pop. in 1831, 50,680; in 1841, 52,922; in 1851, 58.432.—The town is beautifully situated on a rocky eminence, overlooking the rich vale of the Trent. On the N rises a chain of wood-crowned hills, and towards the S stretches the vale of Belvoir. In the more ancient part of the town the streets are generally narrow and irregular, but considerable improvements have been effected of late years. Several of the streets rise in terraces one above the other; the hill being so steep that the ground floors of the houses towards the top are higher than the roofs of those at the bottom. N. presents characteristic features, commercially and socially. To a superficial observer, it appears a handsome, old-fashioned town, full of quaint and quaintly-named streets, narrow and winding, but frequently affording glimpses full of architectural picturesqueness, while so long as the visitor confines himself to the principal thoroughfares, his impression will also be decidedly in favour of the town, as respects the important essentials of good substantial paving and of cleanliness: both soil and situation facilitate the latter quality. A great portion of the town is built upon the face of such steep declivities as afford natural surface-drainage, and the soil, generally of sandstone, is almost as absorbent as a sponge. Notwithstanding these advantages, however, N. is, in one respect, one of the worst built towns in England. Its area is the most crowded in the kingdom. According to Mr. Hawksley's report, there is in N. one individual to 'every square of 4½ yds. on the side,' the calculation including the very large open space of the market-place, while, in one particular part of the town, it has been ascertained by the poor-law authorities that upwards of 4,200 people dwell in a space not measuring 220 yds. sq.

Principal Edifices.] The spacious market-place—one of the finest in the kingdom—is ornamented with lofty houses and shops of elegant appearance.—The new exchange, which occupies its eastern angle, is a handsome edifice, containing a suite of noble rooms.—The mechanics' institution, a recently erected edifice, is a handsome structure of classic design. The external dimensions of the edifice are 124 ft. by 61 ft. Entering beneath the portico, upon the r. is the residence of the librarian, and on the l. the stair-case leading to the great hall. Advancing through a corridor, upon each side are two commodious class-rooms, beyond which are the library, 42 by 26 ft., and the natural history gallery, 50 by 19 ft. 6 in., with the apartment of the curator, and at each angle a staircase. The flat above is almost entirely occupied by a noble hall, 80 by 45 ft., and 30 ft. high, with an orchestra and platform. Under the orchestra is an upper gallery for natural history, 50 ft. long, 8 ft. wide, and 12 ft. high: also, a committee-room, apparatus-room and music library.—The new corn-exchange is a handsome edifice, with a hall of 77 ft. by 55 ft., a spacious corridor, and a reading room. The roof is nearly one entire surface of glass.—The county-hall, erected in 1770, comprises two law courts, a grand jury-room, &c.—The co.-jail is built upon the edge of the rock on which a considerable portion of the town stands. A considerable number of its cells are hewn out of the solid rock.—The house-of-correction is conveniently situated, and tolerably well-arranged; and the town-jail adjoins but is unconnected with it.—The general hospital and infirmary, established in 1782, and the co. lunatic asylum, erected in 1812, are large and commodious structures.—N. castle stands on the SW side of the town, on the summit of a steep rock. It was burned in Oct. 1831, during the riots consequent upon the rejection of the reform bill. In 1832, the duke of Newcastle obtained at the Leicester assizes a verdict for £26,000 against the hund. of Broxtow for the destruction of the castle; but its blackened walls still overhang the town.—In Castle-park are extensive cavalry barracks, erected in 1792.—It may be matter of surprise, that notwithstanding the growing importance of its manufactures, and the great extension of its trade during the last ten years, when compared with the pop. returns of Leicester and Derby, N. should not have increased the number of its inhabitants in the same proportion as those rival towns have done. In 1841 the pop. of Leicester numbered 50,932, now it is 60,650. Derby in 1841 had a pop. of 32,875; in 1851, 40,615. In 1841 the borough of N. numbered 52,922; in 1851, 58,432. But the truth is, that hitherto N. has been incapable of extension, in consequence of there lying within the boundaries of the borough a wide belt of land, which being subject to common-right, has hitherto been protected from encroachment by the freemen with great vigilance. The consequence has been, that colonies of manufacturers have settled themselves by thousands just beyond these boundaries; and in places which 20 years ago were green fields, there is now a constant succession of streets, all within a mile or so of the borough. These, with the residents in the manufacturing villages closely adjacent, and of the town

show an aggregate pop., within a circle of about 5 m., of nearly 115,000; in 1841 the numbers in this area amounted to about 102,000. Now, however, the commonable lands round the town have been enclosed for building purposes by act of parliament, and the populous suburbs of Lenton, Radford, Isongreen, Carrington, and Sneinton, are being incorporated within the borough itself by new streets in all directions. Among other improvements, public 'Recreation walks,' and an arboretum of 20 acres have been formed.

Parishes, &c.] The borough of N., comprehending the parishes of St. Mary, St. Nicholas, and St. Peter, has been enlarged by the addition of the neighbouring p. of Sneinton, and parts of those of Lenton and Radford, with the extra-parochial district of the park and castle liberties.—The church of St. Mary is a massive pile, erected about the time of Henry VII. The interior has recently been altered and enlarged. Its length from E to W is 216 ft.; that of the transepts, 97 ft.; the breadth of the nave, 67 ft.; of the chancel, 29 ft.—The church of St. Peter is an ancient structure, but greatly modernized.—St. James' chapel is a neat modern building.—The Independents have 4 churches; the Baptists 4; and the Wesleyan Methodists 3. Here are also places of worship for the New Connexion Methodists, Society of Friends, Roman Catholics, Unitarians, Sandemanians, Huntingtonians, and Jews. The Roman Catholic church of St. Barnabas, erected on an elevated site on the W side of the town, in 1842-4, at a cost of £20,000, is a very handsome building, of a cruciform plan, 190 ft. in length. The transepts are 83 ft. by 20 ft.; and the nave is 76 ft. by 22 ft. The tower is surmounted by a spire about 150 ft. in height. The edifice is lighted by 76 stained glass windows.—According to the abstract of education returns, there were in 1833, in the 3 parishes of N., and those of Sneinton, Lenton, and Radford, 5 infant, 97 daily, 44 Sunday, and 8 boarding schools. The free grammar-school, founded in 1513, is endowed with £772 per ann. The Blue-coat school, containing 80 children, is partly supported by endowment and partly by subscription; 2 National and 3 Lancasterian schools are supported by voluntary contributions and small payments from the children.—A school-of-design has existed for some years, and its direct influence on the trade of N. is beginning to be very sensibly felt. The designs sold by the travelling foreigner are no longer in demand at N., while the fabrics of the town are competing with those of France and Belgium in what has hitherto been their stronghold upon the foreign market,—beauty of design. In lace window-curtains, the productions of N. are extensively superseding the Swiss figured muslins in the foreign markets, which take off as many of a certain quality as N. can produce, while others of a superior kind are manufactured for home-consumption.—There are several well-endowed hospitals and benefactions to the poor.—The N. poor-law union comprehends 3 parishes, embracing an area of 4 sq. m., with a pop. returned in 1831 at 50,680. The average annual expenditure on the poor of this district, during the 3 years preceding the formation of the union, was £11,150. Expenditure in 1838, £18,556; in 1840, £14,159.—Under the new municipal act the parliamentary boundaries of N. have been considerably enlarged, and comprehend the parishes already named. The borough is divided into 7 wards, and placed under the government of 14 aldermen, and 42 councillors. The income of the borough in 1839 was £15,157; in 1850, £13,491.—N. returns 2 members to parliament. The number of electors registered in 1837 was 5,475; in 1848, 5,172.

Manufactures, trade, &c.] The principal manufactures carried on at N. are those of lace and of cotton and silk hosiery. The recent introduction of the manufacture of plat-nets in imitation of foreign grounds, ornamented by the application of the new jacquard apparatus, imparted fresh stimulus to the lace trade. See NOTTINGHAMSHIRE. A considerable change has of late years taken place in the mode of conducting the staple manufactures of the town and county of N. By Chevalier Claussen's adaptation, stockings, shirts, drawers, &c., for the first time in the history of the manufacture, are produced by steam-power, one person only being required to attend to each set of frames for the purpose of supplying yarn and remedying any casual accident; yet the number of hands employed is greatly increased by the new system. One firm, which employs about 400 hands in-doors, occupies three times that number at their own homes in finishing. The hands employed by them on the old system, combined with these, form a total of 3,000 exclusively in their service,—at least 1,000 more than were working for the same firm before the trade received its great impetus 12 months ago. These numbers do not include spinners, bleachers, box-makers, and others indirectly set to work by the augmentation of this branch of industry,—probably 1,000 additional. Here is seen the result of the new system upon one establishment merely; and when it is recollected that many others in the three cos. have been subjected to similar influences, though probably not all to the same proportionate extent, the advantages it promises will be readily appreciated. The females in the lace-warehouses earn from 9s. to 18s. a-week, and as many of them live with their parents, to whom they pay 6s. or 7s. weekly for their board, they have about £15 a-year to themselves for dress and pocket-money. Their employment is one of taste and ingenuity, and hence, perhaps, their superior appearance when compared with females of their own class in other places. Of females—skilled hands—there are frequently in warehouses from 200 to 300. Their occupation as well as their comfort demands a scrupulous cleanliness of person. Over them is a superintendent, to preserve order, regularity, and morality of conduct; and any known dereliction in or out of the factories, would subject the girl to dismissal. In 1838 there were 3 cotton, 2 worsted, and 3 silk-mills, employing collectively 891 hands. Among the other branches of industry prosecuted here are dyeing, wire-drawing, pin-making, iron and brass-founding, malting, and tanning.

History.] William the Conqueror built a castle here. In the reign of Stephen, N. was the scene of hostilities between that prince and Henry of Anjou. During the wars of the barons, the castle was attacked and taken by surprise by Robert de Ferrarus, earl of Derby. After the deposition of Edward II., N. castle became the residence of his queen, Isabella of France, and her paramour, Roger de Mortimer, earl of March. Several parliaments were held here. In 1485, Richard III. marched from N., where he had assembled his forces, to the battle of Bosworth field. In the civil war, Charles I. set up his standard at N. in 1642, but the place fell next year into the hands of parliament. During the protectorate the castle was dismantled; after the restoration, a new one was erected on the site of the old building, by the duke of Newcastle. This edifice, which resembled a magnificent villa rather than a castle, was burned down, as already observed, during the riots of 1831. Villiers, duke of Buckingham, who possessed the old fortress as heir of the earl of Rutland, to whom it was granted by James I., sold it to Cavendish, duke of Newcastle, who erected the modern edifice in the years 1674—1683. March, the architect, constructed it in the Palladian style, of which it was an admirable specimen. The cost is stated by Deering to have been £14,000. The rooms were of great size and magnificence, forming unbroken suites of apartments. From the castle-hill is obtained the best view of N., which seems to lie between this eminence on the W, and a corresponding one of very similar aspect and dimensions on the E, called Colwick-hill. A noble prospect is obtained over the course of the Trent, embracing a field of several miles.—Among the curiosities of this town are the wine vaults of Messrs. Homer & Crossland. These cellars are of vast dimensions, extending back from the market-place for a length of 170 yds., of an average breadth of 15 ft.

They have been hewn out of the solid rock; the roof is about 8 ft. high, and still bears the marks of the pickaxe. As the ground rises towards the back, the upper portion of the cellar is 63 ft. from the surface; and at this point a large funnel-shaped shaft exists, which is used for letting down the casks. The temp. of the air in the cellar remains at 53° all the year round. N. contains many such *subterranea*, though none of equal dimensions. It is difficult to pronounce for what purpose such long narrow passages could have been originally excavated in the rock, and the fancy of antiquaries has assigned them variously to Druidical, Roman, and mediæval periods.

NOTTINGHAMSHIRE, one of the north midland counties of England; bounded on the NW by Yorkshire; on the NE and E by Lincolnshire; on the S by Leicestershire; and on the W by Derbyshire. It lies between the parallels of 52° 50′ and 53° 34′ N lat., and is of an oval form, about 50 m. in length from N to S, by 25 m. in breadth. It has an area of 837 sq. m., or about 480,000 acres, according to Lowe.

Aspect, soil, &c.] The surface of this co., except the Trent level, is uneven, though none of the hills rise to any considerable degree of elevation; the general aspect, therefore, is open though not tame. The principal tract of hilly country runs from Nottingham, in the SW, northwardly to Market-Warsop, giving rise to most of the smaller streams of the co. S of the Trent, the Wolds constitute other elevations running W and E from Thrumpton to near Hickling. The hills generally are of moderate elevation, and the whole country has an undulating aspect, affording a cheerful and domestic agricultural prospect. Where the hills attain greater height, their tops are usually planted, — a mode of management which affords harbour for the game, one of the main agricultural pests of this district. The surface of great part of this co. was anciently covered with wood; the celebrated royal forest of Sherwood, the traditional scene of Robin Hood's exploits, extending in the N district for about 21 m. in length, by a breadth varying between 7, 8, and 9 m. A portion of this ancient forest is still in existence, forming part of Earl Manvers' park at Thoresby, and is known by the name of Birkland forest. "This tract proves by the plain indications of fertility it offers, its large trees, and strong growth of gorse and fern, that the long period during which Sherwood forest existed as a waste was due not to any defect of the soil, but to the fact that it was 'protected' from improvement and cultivation by being a royal domain. And the character of desolation thus imposed upon the district continued after it had fallen into the hands of great landowners who were little more disposed to improve than the Crown itself." Long before Sherwood forest ceased to be a waste, it had been for the most part denuded of its timber. All this tract, with a few trifling exceptions, has now been enclosed, and divided with quickset hedges, the fields being generally of good size and well-proportioned to the extent of the different farms. The farms commonly run from 300 to 500 acres, a few of them reaching the extent of 1,000 acres. The county contains many fine parks and seats. An unusual number of our nobility have made it their residence. There is one district here called 'the Dukery,' from the number of ducal families having seats within it; and though by the sale of Worksop manor to his grace of Newcastle, the duke of Norfolk has withdrawn from the spot, it is still sufficiently remarkable to merit the name it bears. Here are Clumber-park, Welbeck-abbey, Thoresby-park, Rufford-hall, all within the compass of a few miles; the duke of Newcastle, the duke of Portland, Earl Manvers, and the earl of Scarborough occupying one neighbourhood. The geological formation on which the co. rests is the new red sandstone; and red marl, and its varieties of sand, gravelly sand, and red and white sand stones, constitute by far the greater part of the soil of this co. The sand or gravel may be divided into—1. The forest-country or the borders of it; 2. The Trent-bank country; 3. The tongue of land E of Trent running into Lincolnshire. The clay country may be divided into—1. The clay N of Trent, consisting of the N and S clay divisions and the hundred of Thurgarton; 2. The clay S of Trent, comprehending the vale of Belvoir and the Wolds. The lime and coal land lies to the W of a line drawn from the river at Shire-Oak, nearly S by W to the river Lene, near Woolaton. The coal seams vary in thickness from 1 or 2 to 5 or 6 ft. Coal-pits of considerable depth have been sunk in various places; the coal, though similar, is inferior to that of Newcastle. Gypsum, which occurs in different parts of the co., is extensively worked near Newark, and a very good yellowish freestone for building and paving is raised in various places; marl is also found throughout the co. The NE extremity of the co., including the Carr, contains a marshy tract like the marsh lands of Lincolnshire.—The climate of N. is considered healthy. Its comparative dryness is probably the consequence of the clouds from the Western ocean breaking upon the hills of Derbyshire and Yorkshire, and exhausting themselves before they reach this co. The greatest rains are observed to come with E winds. The harvests are on the whole rather later than those of the more southern cos.

Agriculture.] This co. is principally arable. Pasturage is more attended to in the Trent-bank district than elsewhere. The usual crops are wheat, barley, oats, turnips, and clover. "The farming of the N division is in many respects superior to that in the S part of the co. The land is of a lighter character, less expensive to till, and better adapted for green crops and stock: while it happens to be pitched at a considerably lower scale of rent. Much of the land being of a light sandy nature, two corn crops in succession can seldom be taken with advantage; and against this the chief restriction is imposed on the farmer by his landlord, who does not generally insist on the exact observance of a four or five course." [*Caird.*] Weld, or dyer's yellow weed, is cultivated to some extent in the N district; hops have been largely grown in the vicinities of Ollerton and Rufford, and in most parts of the N clay district. The limestone and coal district is chiefly under tillage: it also contains some woods. Remnants of the old forest may be seen here and there in the parks of the nobility and gentry, and there are some valuable new woods and plantations, especially on the estates of the dukes of Newcastle and Portland. There are excellent market-gardens, and some good orchards near the principal towns. In the neighbourhood of Nottingham much of the land is in pasture for supplying the town with dairy produce, and the advantage of water-carriage for manure is enjoyed by the farmers on both banks of the Trent. The best land here lets high, from £2 up to £4 an acre. Beyond the immediate influence of the town, the rents vary from 35s. to 45s. an acre, inclusive of tythe. The land being naturally rich, yields large crops.—The horned cattle fed in this co. are chiefly of Irish breed. There are still many flocks in which the blood of the old 'Forest sheep' of the district prevails, a brown-faced and hardy but ill-shaped animal, which, if it can be fattened at all, will scarcely be fit for the butcher till four or five years old. A cross-breed between the Forest-sheep and the South-down is kept in some of the parks. The ordinary cross-bred sheep kept are Leicester and Forest crosses. Some South-downs are kept by a few of the proprietors on their own farms, but they have obtained no place amongst the general stock of the county.

Rivers.] The Trent and its tributaries, the Soar, the Erwash, and the Idle, are the principal rivers in this co.; but the Trent, into which all its rivers fall, is pre-eminently the first in importance. Throughout its whole course of about 60 m. in this co. it is a broad navigable stream, bordered by the level lands already alluded to. It enters about 2 m. below Sawley, near the junction of the cos. of Nottingham, Derby, and Leicester; and flows in a sinuous NE course by Nottingham to Newark, whence it proceeds to North Clifton, and enters Lincolnshire near Misterton. See article TRENT. The Soar and the Erwash form parts of the S and SW boundary of the co. The Soar first touches it near Stanford, and flowing W and N by Kingston, joins the Trent at Sawley. The Erwash rises by some of its headfeeders between Annesley and Kirkby, and runs SSE along the border of the co., dividing it from Derbyshire, to the Trent which it joins opposite Barton. The Idle rises in Sherwood forest, and runs N by Retford, deviates to the W and NW by Mattersey and Bawtry, and then runs E by Misterton to the Trent; it is joined by various tributary streams, the chief of which are the Maun, the Meden, and the Ryton. The Witham touches the E border of the co. The Fleet, a small tributary to the Trent, rises near Winthorpe, and runs N to its junction at Gerton. The Devon, reinforced by the waters of the Smite, falls into the Trent near Newark.

Canals, railways, and roads.] The Chesterfield canal begins in the tideway of the Trent at Stockwith, near its junction with the Idle; and runs WSW to Gringley, whence it turns S to East Retford, and again proceeds W by Worksop to Shire-Oak, where it enters Yorkshire. Vessels of 20 tons burthen can navigate this canal from Retford; but between that place and the Trent vessels of even 60 tons are admitted.—The Grantham canal enters this co. from Lincolnshire near Hickling, and runs NW in a very circuitous course of 30 m. to Nottingham, where it is joined by the Nottingham canal, which runs up the Erwash to Eastwood. At the latter place it communicates with the Erwash canal, running down the valley of the Erwash, on the opposite bank. The line after this junction is continued northwards on the Nottingham side, till it ultimately crosses it, and proceeds to the Cromford canal at Pinxton, Derbyshire. The Beeston cut and other branches are connected with this line of canal.—The Nottingham branch of the Midland Counties railway runs from the main line near the junction of the Trent and the Soar to Nottingham; and about 6 m. of the main line itself crosses the SW corner of the co. along the E bank of the Soar.—There is a railroad from Mansfield to the basin of the Cromford canal at Pinxton, with a branch to the Codnor-park iron-works.—The Halifax road enters this co. at Rempston, and runs N by Nottingham and Mansfield into Derbyshire. The Carlisle road, by Grantham, runs by Newark, Ollerton, and Worksop, into Yorkshire. The Edinburgh road, by York, branches off from the last at Newark, and runs through Tuxford, East Retford, and Bawtry, into Yorkshire. The road to Leeds runs by Upper Broughton, and joins the Halifax road at Nottingham. A road runs from Grantham to Nottingham, whence and from the other towns in the co. other roads radiate in various directions.

Trade, manufactures, &c.] The trade of this co. has been greatly facilitated by its canal navigation, and more recently by the facilities of modern railway transit. The chief manufactures, besides malt in great quantities at Newark and Worksop, paper at East Retford, iron and malt at Mansfield, iron and brass, ropes, and celebrated candles at Newark, candlewicks at Gamston, ale and earthenware at Nottingham, &c., are those of lace, and silk and cotton stocking goods. Lace is manufactured at Beeston, Lenton, Mansfield, Newark, Nottingham, Radford, and Sutton-in-Ashfield; and silk and cotton hosiery, &c., at Mansfield, Nottingham, and Radford. The cotton manufacture is also carried on at Papplewick. Nottingham is the great centre of the machine lace, and the cotton and silk hosiery, trades. The machine lace trade is a branch of industry more modern than that of the hosiery among which it took its rise, being originally worked indeed on the stocking-frame. The stocking-frame-work knitting is said to have originated towards the close of the 16th cent., previous to which period stockings, then generally if not entirely made by females, were knitted by hand. In 1589, William Lea invented the stocking-frame, and taught his brother and some of his nearest relatives the use of it. His invention was discountenanced, upon the grounds that it would tend to deprive hundreds of the industrious poor of their usual means of maintenance, whereupon Lee, at the invitation of Henry IV. of France, went, with 9 workmen, to Rouen in Normandy, and the French competition is to this day felt by the British frame-work knitters. From the period when Lee invented stocking frames, down to the commencement of 1851, the operatives employed in working them have been scattered over a wide tract of country, including a very considerable proportion of the cos. of Nottingham, Derby, and Leicester. "The hosiers owning these frames," says a local authority, "fixed their residences in the chief towns of each co., and employed a class of middlemen to sublet them in different districts where hands could be found to work them at the lowest rate of wages. The duty of these men was, and still is, to give out the yarn, pay wages, deducting rent of frame, and then at the close of each week to bring the wrought goods to the warehouses of the hosiers in bags: hence the middlemen are frequently also called 'bagmen.' It has ever been a difficult thing to keep a proper check upon these bagmen, whose exactions, combined with the longvexed question of frame rent, have ever been a fruitful source of discontent among the operatives. Still, from the scattered nature of the manufacture, their services have hitherto been indispensable. Up to the time of the adoption of the round machinery, very many of the hosiers' warehouses were little larger than ordinary dwellinghouses; but at the close of 1850 it was found that in consequence of the larger bulk of goods requiring storeroom, and from the pending change in the method of manufacture necessitating the adoption of the factory system to a great extent, an entirely new class of buildings would be required, combining factory, warehouse, and salerooms. Thus, after the lapse of more than two centuries, without any material variation in the method of conducting the stockingmaking business, it suddenly assumes a position similar to that which forms the greatness of Yorkshire and Lancashire, and has firmly established the machine lace manufacture of Nottinghamshire—namely, the adoption of the factory system. The change from old habits to new ones is going on so rapidly that much attention is required to mark its progress, and to observe the antiquated grievances it is driving into oblivion, including the system of middlemen and frame rents, though these will continue to exist to a less and less extent until all the old frames have been gathered into factories, which, of course, will be a work of considerable time." Great as has been the progress made in one twelvemonth, a considerable period must elapse before the whole 30,000 frames, or more, of the midland counties have been gathered into establishments similar to the one described under the head NOTTINGHAM.

Hosiery manufacture.] The manufacture of hosiery is a trade almost exclusively confined to the three Midland cos. of N., Leicester, and Derby. The articles of hosiery manufactured—that is to say, knitted upon the frames, and afterwards either seamed or stitched by women—are gloves, stockings, drawers, underwaistcoats, and a variety of small miscellaneous pieces of dress, amongst which may be reckoned the outside woollen jackets sometimes worn by women and children, and for which Leicester has of late acquired some celebrity. The materials used by the framework-knitter are—cotton, silk, wool, and various combinations of them. The trade, which may be called a semi-domestic one, has been for at least half a century an occupation in which much chronic distress has prevailed, and framework-knitting has long been treated as one of the very lowest of textile manufactures. In 1669, there were 660 knitting frames of Lee's model

in England—400 of them in London. At that time there were only two frames in the town of Nottingham, and not 100 in the co. In 1714 there were 2,500 frames in London, 600 in Leicester, and 400 in Nottingham. After this era the trade began to flow steadily from the capital to the central counties. In 1753, there were only 1,000 frames in London, while the number was as great in Leicester, and half as great again in Nottingham. Up to the end of the first quarter of the last cent., silk was the principal material wrought upon the stocking-frames. In 1730, cotton hose were first produced. A succession of mechanical improvements and adaptations of the knitting machine followed, rendering the mechanism capable of producing imitations of the pillow-lace then manufactured. Knitting machinery, in fact, was the parent of lace machinery, the one trade grew out of the other, and the elder and the younger branches of industry have long continued close neighbours. In 1782, the number of frames in England was about 20,000, and of these more than 17,000 worked in the Midland counties; in 1812, the number in Notts, Leicester, and Derby was more than 29,000. The subjoined details are collected from a series of interesting papers, on the state of the manufacturing and working classes of Great Britain which recently appeared in the *Morning Chronicle*. The district which is understood to be the area of the hosiery manufacture contains 230 parishes: the boundary towns being, in a general way, Chesterfield on the N, Newark on the E, Ashby-de-la-Zouch on the W, and Market-Harborough on the S. These topographical limits would indicate a space about 70 m. in length and 45 m. in breadth. Within this area the twist machine and the knitting frame reign pre-eminent. There were in 1844, in the co. of N., 60 parishes, in each of which there were more than 6 frames at work. The number of separate shops or working-places in the co. was ascertained to be 4,621; and the total number of frames 16,382, of which 14,879 were at the time of the inquiry in operation. In the co. of Leicester there were 100 parishes in each of which more than 6 frames were at work; and the total number of frames was 20,861, of which 18,558 were in operation. In the co. of Derby there were 60 parishes in which more than 6 frames were at work; and the total number of frames was 6,797, of which 6,005 were in operation. The total number of frames therefore in the three cos. may be stated as about 44,000 in 1844; and as the number of new frames constructed in the three cos. between the years 1833 and 1844 was not above 1,000, it may be assumed that the estimate of 1844 is a tolerably close approximation to the statistics of the trade at the present day. In the last census, the number of individuals employed in framework-knitting was reckoned at about 53,000. "This estimate, however, gives a false idea. When we reckon not only the men and women—the number of the latter, I may state, is fast diminishing—who actually ply the machines, but the number of women and children directly connected with the trade, and who are occupied in winding the thread, and seaming and stitching the goods after they are removed from the frame, it may be fairly estimated that the number of people closely connected with and dependent upon the hosiery manufacture considerably exceeds 100,000. This mass of pop. is to a great extent scattered over the three cos. in great numbers of small villages and hamlets, the names of which are only locally known. In the three principal towns of Leicester, Nottingham, and Derby, there were in 1844 only 8,000 frames, forming less than one-fifth of the whole number."

Lace-making.] The branch of industry generally known as the lace-trade includes two principal departments,—the warp process, in which the mechanism is still generally moved by hand-labour, and the twist or bobbin-net process, in which the mechanism is now commonly although not uniformly driven by steam. The following statistics of the manufacture are compiled principally from the results of investigations in 1831 and 1836 by Mr. Felkin. The bobbin-net manufacture dates its origin from the year 1811. At that time the pop. of N., and of the surrounding districts and villages of Lenton, Beeston, Radford, Basford, Arnold, and Sneinton, was 47,300. In 1831 it was calculated that the hosiery trade employed fewer people than it did in 1811; and as the pop. in question had then increased to 79,000, the augmentation is principally to be ascribed to the rapid growth of the bobbin-net manufacture. In 1831 there were at work in the town of N. upwards of 1,240 lace-making machines, and in the surrounding villages about as many more. The number of machines, then, in operation in the kingdom was estimated at 4,500, of which Nottinghamshire of course possessed more than half. In 1836, from another careful inquiry, it appeared that the total number of machines had decreased to 3,800. The number of machine-hands employed had of course decreased with the decrease of the engines upon which they wrought, the number being about 6,000, or less than two to every machine. The number of owners of these machines was stated at about 860; in 1831 there were 1,382 owners. In 1836, the number of machines in the town of Nottingham was 576; in the subsidiary towns and surrounding district it was about 1,470; showing that the tendency of the manufacture had been to flow from the central point of Nottingham, and to spread itself over the surrounding area. The total number of machines in England actually at work in 1836 was 3,547, of which the co. of N. possessed 2,162, or more than one-half. At the period in question, 1836, the number of machines making fancy net in the Midland dist. was increasing, and great improvements were also in the course of being introduced into the mechanism. Since 1836 no census of the number of machines employed in the lace-trade has been taken; the numerical amount of the machines in use remains, it is thought, pretty stationary, but their productive power has, by the introduction of mechanical improvements, greatly increased. Indeed, the improvement in the machinery employed in lace-making may be conceived from the following extraordinary fact: in 1810 and 1811 a square yard of a particular kind of lace fetched £5; in 1824 its price was 15s.; in 1847 it might have been purchased for 5d.! Part of this astounding reduction is owing to the cheapening of the raw material, but of course the great cheapening agent has been improved machinery. The lace of N. is manufactured from cotton and silk yarns spun in Manchester and Coventry. For the manufacture of lace it is requisite that they should be loosely doubled: and this doubling process is partly performed in Lancashire and Warwickshire, partly in and around the town of N. The doubling-mills are worked principally by women and children, superintended by male overlookers. The hosiery and lace trades together have usually employed in this co. from 13,000 to 14,000 adult males, besides females and children.

Divisions, &c.] This co. is divided into 6 wapentakes or hundreds, besides the liberty of Southwell and Scrooby, and the co. of the town of Nottingham. Of these, 2 of the hundreds, Bassetlaw and Broxtow, besides the co. of the town of Nottingham, and part of the liberty of Southwell and Scrooby, are in the NW parliamentary division; and 4 of the hundreds, Thurgarton, Newark, Bingham, and Rushcliffe, besides the remainder of the liberty of Southwell and Scrooby, are in the SE division. The hundreds consist each of a N and a S division, except Bassetlaw, which comprises Hatfield, N. Clay, and S. Clay divisions. The co. contains 246 parishes; and, besides the borough and co. town of Nottingham, 2 other boroughs, Newark and E. Retford, and 6 market-towns, Bingham, Mansfield, Allerton, Southwell, Tuxford, and Worksop.—The pop. of the co. in 1801 was 140,350; in 1831, 225,400, consisting of 47,117 families, of whom 13,351 were chiefly employed in agriculture, 25,578 in trade, manufactures, and handicraft, and 8,188 otherwise occupied; in 1841 the pop. had increased to 249,773, of whom 121,660 were males, and 128,113 females; in 1851 the pop. was returned at 294,438, being an increase of 92·98 per cent. in 50 years, or at the rate of 1·32 per cent. per ann.—Under the reform act this co. returns 4 members to parliament, two for the N division, and two for the S. The polling-places for the former are at Mansfield, Nottingham, and E. Retford, Mansfield being the principal place of election. The polling-places for the latter are at Newark-upon-Trent, Bingham, and Southwell, the principal place of election being Newark. The number of electors registered in 1837 was 3,389 for the N, and 3,621 for the S divisions; in 1848, 3,910 for the N, and 3,692 for the S. Nottingham, Newark, and E. Retford, including the hund. of Bassetlaw, also return each 2 members. Previous to the passing of the reform act, the co. returned only 2 members, but the boroughs returned the same number as at present.—N. is included in the midland circuit. The assizes are held at Nottingham; the quarter-sessions at Nottingham, Newark, and E. Retford. The soke of Southwell and Scrooby, comprising 20 townships, is under peculiar jurisdiction. Tho co.-jail is at Nottingham, and the co. house-of-correction at Southwell. The number of parties committed for trial in 1840 within the co. was 356; in 1842, 374; in 1844, 348; in 1849, 341.

N. was formerly in the dio. and prov. of York, but it has been transferred by the ecclesiastical commissioners to the dio. of Lincoln, and prov. of Canterbury. It forms an archd., comprising the deaneries of Bingham, Newark, Nottingham, and Retford, and the peculiar of Southwell. The total number of Sunday schools in the co. in 1833 was 366, containing 32,170 children; of daily schools 647, containing 19,867 children; and of infant schools 34, containing 1,572 children. The savings' banks in this co. in 1839 were 6; number of depositors 12,295; amount of money invested £334,057, of which £51,564 consisted of sums not exceeding £20, belonging to 7,456

depositors, and £6,853 of sums exceeding £200, belonging to 31 depositors. In 1850, the number of savings' banks was also 6; amount of deposits, £442,086; number of depositors, 17,622.—The poor rate returns for 3 years to Easter 1750, showed an average expenditure of £4,375 on the poor of this co. In 1803 the expenditure was £47,453; in 1840, £53,407; in 1847, £69,831, being at the rate of 1s. 5d. in the pound on the annual value of rateable property in that year, viz., £978.991. The value of property assessed to income tax in 1815 was £737,229; in 1843, £1,142,367.

History.] This portion of Britain was first inhabited by the *Coritani*, and included in the *Flavia Cæsarensis* of the Romans. On the establishment of the Saxon heptarchy it formed a part of the Mercian territory. William the Conqueror bestowed the greater part of the co. on his natural son, William Peverel, who afterwards supported Stephen in his usurpation. The central position of this co., and the great barrier formed by the river Trent, made it the scene of many important military movements during the English civil wars of the Middle ages; and during the parliamentary war it was the seat of some remarkable transactions.

NOTTINGHAM, a port-of-entry in Prince George co., Maryland, U. S., on the Patuxent, 28 m. SE of Washington.—Also a township of Rockingham co., New Hampshire, 25 m. ESE of Concord. Pop. 1,193.—Also a township of Mercer co., New Jersey, on the Delaware, 17 m. NE of Mount Holly. Pop. 5,109.—Also a township of Washington co., Pennsylvania, 13 m. E of Washington. Pop. 983.—Also a township of Tuscarawas co., Ohio.

NOTTINGHAM (East), a township of Chester co., Pennsylvania, U. S.—Also a village of Cecil co., Maryland.

NOTTINGHAM (West), a township of Hillsborough co., New Hampshire, U. S., on the E side of the Merrimack.—Also a township of Chester co., Pennsylvania.

NOTTINGTON, a hamlet of Dorsetshire, 2 m. N by W of Weymouth, celebrated for its mineral spring and baths.

NOTTON, a township in Royston p., Yorkshire, 4 m. N of Barnesley. Area 2,540 acres. Pop. 310.

NOTTOWAY, a river of Virginia, U. S., which joins the Meherrin in Gates co., in N. Carolina, after a SE course of 110 m.—Also a co. of Virginia, in the SE part of the state. Pop. in 1840, 9,719; in 1850, 8,415.—Also a township of St. Joseph co., in Michigan. Pop. 1,226.—Also a village in Noroway co., Virginia, 67 m. SW of Richmond.

NOUAILLE (La), a village of France, in the dep. of La Creuse, cant. and 6 m. NE of Gentioux. Pop. 1,440. — Also a village in the dep. of Dordogne, 27 m. ENE of Perigueux. Pop. 1,150.

NOUAIN, a river of France, which rises in the Etang-d'Entrain, in Nievre, and flows to the Loire, at Cone, in a W course of 27 m.

NOUAN, a village of France, in the dep. of Indre-et-Loire, cant. and 4 m. ESE of Montrevor.

NOUAN-SUR-LOIRE, a village of France, in the dep. of Loir-et-Cher, cant. and 9 m. N of Bracieux, on the l. bank of the Salle. Pop. 560.

NOUDAR, a small town of Portugal, in the prov. of Alemtejo, with a fortified castle, 21 m. SE of Mourao.

NOUS, a village of Karamania, in Asiatic Turkey, 18 m. S of Oscat, where are considerable ruins of the ancient *Nyssa*.

NOUTOOKOOAGAN, a river of Canada, which runs into St. John's lake, in N lat. 48° 26′.

NOUVION, a village of France, in the dep. of La Somme, 7 m. NNW of Abbeville.

NOUVION-EN-THIERACHE, a commune and town of France, in the dep. of Aisne, 7 m. NNW of Vervins, on the r. bank of the Noirieu. Pop. 2,071, chiefly employed in manufacturing cotton and linen thread.

NOUZILLY, a village of France, in the dep. of Indre-et-Loire, cant. and 9 m. WSW of Chateau-Regnalt. Pop. 1,050.

NOVA, a small island in the Atlantic, near the coast of Brazil, in S lat. 0° 4′.—Also a town of Hungary, in the com. of Salad, 12 m. SW of Szala-Egerszeg. Pop. 540.—Also a village of Austrian Lombardy, 7 m. N of Milan.

NOVAIA, a small town of Tobolsk, in Asiatic Russia, on the Irtish, 100 m. ESE of Tobolsk, on the r. bank of the Aidar.

NOVAIA-ZEMLIA. See Nova-Zembla.

NOVALAISE, a town of the Sardinian states, in the prov. of Chambery, 10 m. NE of Pont-Beauvoisin. Pop. 1,700.—Also a village in the Sardinian prov. of Turin, 4 m. N of Susa, on the l. bank of the Cenise. Pop. 720.

NOVALE, a town of Austrian Italy, in the Venetian prov. of Treviso, on the Musone, 11 m. S by W of Treviso.

NOVARA, an important province of Piedmont, between the river Sesia on the W, and the Ticino on the E, and stretching northwards to the prov. of Pallanza, between Lakes Orta and Maggiore. The prov. of Valsesia was incorporated with that of N. in 1837; and the entire superficies of the prov., thus enlarged, is 2,051 sq. kilom., with a pop. in 1839 of 186,159, which would give 90·76 inhabitants to the sq. kil. But, separate from Valsesia, the prov. of N. has an area of 360 sq. geog. m., and the absolute number of its inhabitants in 1826 was 144,319, or from 400 to 401 for every geog. sq. m. About one-third of this territory, N of a line drawn from Romagnana on the Sesia, to the Ticino, a little below Borgo-Ticino, is very beautiful, comprehending the district called the Riviera-d'Orta, and stretching along the lake of Verbano to its S limit at Sesto. Vineyards spread far and near upon the mountains' sides, while the forests, and the various minerals abounding in this lofty region, with its vast extent of verdant pasturages, are further sources of wealth; here, too, the mulberry-tree finds a genial soil and clime. The other and larger portion of the N. territory, lying S of the line above drawn, is a far-extended plain, covered with corn-fields and meadows, marshes and rice-grounds, and everywhere intersected by rivers, streams, or canals for diffusing irrigation. The extent of cultivated land in the prov., independent of Valsesia, is at the present time about 88,891 hect.; that of wood, 24,581 hect. Wheat, maize, rye, barley, oats, rice, and pulse, flax, hemp, buckwheat, potatoes, cabbages, rape, melons, gourds, cucumbers, &c., are the chief produce of the soil; but of the whole of the tillage land throughout the plains at least three-fifths are cropped with wheat, Indian corn, and rice. The wines of this prov. have a high repute for quality, and form a leading article of commerce with Milan, Switzerland, and Turin; but the most important produce is silk, whether considered as a source of revenue or as a branch of industry. The average quantity yielded by the prov. of N. is from 32,000 to 35,000 kilog. yearly; and there are between 50 and 60 establishments within the prov. for the purpose of preparing it for foreign markets. Flax also forms an item of consequence in the agricultural wealth of this territory. Independently of Valsesia, the prov. of N. maintains 17,030 working oxen; cows and bulls, 16,900; goats, 670; sheep, about 7,000; pigs, 9,085; horses, 2,530; asses, 1,900; and mules, 800. Most of the sheep are descended from the Tibet and Merino races, and their wool is very fine. —The manufactories in the prov. of N. are unimportant. There is a fabbrica of cotton, and a little linen is woven at Cavaglietto, and also at Cavaglio. At Galliate there are several fabbrice connected with the

preparation and throwing of silk, and about 600 people are employed in cotton factories, established for the encouragement of industry; and there are similar establishments at Cerano. But agriculture and commerce are its great resources.—The N. territory, distinct from Valsesia, comprises 13 mandamenti or districts, and these are subdivided into 96 communes.

NOVARA, the capital of the prov., is, after Turin and Genoa, the most important city in the Sardinian states. At the period of the census of 1839-40, it contained 1,133 houses, 3,777 families, and a total pop. of 18,524. Its increase, however, since that time has been great. It stands on a slight mound or elevation, in the midst of the great plain of Piedmont, and is encircled by a solid wall, with a *vallum* or broad dyke, through which runs a stream, affording the means of overflowing the surrounding marshes, and thus greatly increasing the strength of the place. The line of walls forms an agreeable drive and promenade, commanding splendid views of the Alps, and particularly Monte Rosa. The citadel, standing just within the walls, is a vast quadrangular brick building, surrounded by a broad and deep moat. Those parts which remain of the old city are quite in the Lombard character; but the antiquated portions are gradually disappearing before modern improvements, large handsome buildings are rising in their place, and most of the new streets are well and substantially built. Besides the cathedral and the ancient basilica of San-Gaudenzio, this flourishing city contains 16 other churches, many of which are fine buildings, and adorned with noble works of art. The duomo or cathedral, dedicated to San-Lorenzo, is an edifice of high antiquity, and embellished with marbles, gilding, and paintings. Among the public buildings are the civic palace and archives, the palace of justice and of the tribunals, the episcopal palace, the public library, theatre, 7 hospitals, several asylums and benevolent institutions, and a school-of-arts and trades, founded and endowed by the Countess Torniella-Bellini, at an expense of 700,000 lire, one portion of which is appropriated to males, and the other to females, with a suitable library annexed. Besides these there are 4 colleges and institutions for public instruction, including a gratuitous normal school.—The corn market of N. is the largest and most important in Italy. The building in which it is held is a vast quadrangular block, with a spacious cortile in the centre, and two portals. N. is the grand mart for corn, grain, and seeds of all kinds, in this division of Piedmont. Three large fairs held yearly at N. are numerously attended from all parts, not only of the adjacent provs., but also from Switzerland and Lombardy.—The position of N. is 159 metres = 521 ft. above the level of the sea; but this is nearly 50½ metres below the level of Lago-Maggiore; and the whole surrounding country is low and marshy. On the 23d of March 1850, the Austrians defeated the Piedmontese army in a well-fought battle in the vicinity of this town, which was followed by the abdication of Charles Albert, and the armistice of 26th March.

NOVA SCOTIA, a peninsular portion of the continent of North America, separated on the N by the strait of Northumberland from Prince Edward's island; on the NE by the gut of Canseau, from Cape Breton; and bounded by the Atlantic ocean on the S and SE, and by the bay of Fundy and New Brunswick on the W. A neck of land only 14 m. wide connects it with the latter prov. It lies between the 43d and 46th parallels of N lat.; and between the 61st and 67th meridians of W long. Including Cape Breton, it is about 350 m. in length from E to W, and from 50 to 80 m. in breadth. Its superficies is estimated at 15,617 sq. m., or 9,994,880 acres.—The civil departments of the prov. consist of divisions and counties. Of the former there are 5: viz., the Eastern, Middle, Western, Halifax, and Cape Breton divisions. There are 18 counties, which are again subdivided into districts and townships.

Physical features.] The face of this country is agreeably diversified by hills and dales; but though undulated in surface, it cannot be described as a mountainous region, for the loftiest hill does not rise more than 600 ft. above the level of the sea. The range of highlands, seldom exceeding 500 ft. in elevation, runs generally from E to W, branching off into irregular and hilly land, which terminates sometimes in abrupt cliffs on the coast, and sometimes sinks into gentle declivities in the interior. By far the greater part of the country is still covered with primeval forest. The shores are generally bold and rocky, especially along the S coast. The most remarkable cliff on the whole coast is the summit of Aspotageon, which is about 500 ft. in perpendicular height, and is generally the first object seen in approaching Halifax from Europe or the West Indies.

Inland waters.] Though N. can boast of no very large lakes or rivers, few countries of its size present a greater variety, or are more conveniently or abundantly watered. Lake Rosignol, the largest in the prov., situate in the co. of Queen's, is about 30 m. in length. The Shubenacadie river is upwards of half-a-mile wide at its mouth, draining into the Basin-of-Mines, an extensive chain of lakes, and having a powerful ebb and flow of tide for 25 m. The Lahave, the Annapolis, the East river of Pictou, the Avon, the St. Croix, and several others, navigable by small vessels for some distance from the sea, furnish great facilities for the shipment and exportation of the productions of the surrounding agricultural or mineral districts. The smaller streams tributary to these, or draining the country by independent channels, are numerous. The number of small lakes in Nova Scotia, particularly on its S side, may be estimated by the fact that nearly 100 are to be found between Halifax and Saint Margaret's bay,—a tract of country that neither in length nor breadth exceeds 20 m.

More important than its inland waters may be ranked its noble harbours, estuaries, and deep-sea basins, most of them open and navigable at all seasons of the year. The centre of Cape Breton, giving to its three counties in nearly their whole extent a double sea-coast, is occupied by a broad arm of the sea, navigable by vessels of any size, and affording facilities for the import and export of commodities rarely in any country surpassed. The basin of Annapolis, into which flows the river of that name, though of less extent, is a noble estuary, sheltered by mountain ranges, opening to the bay of Fundy through a narrow gorge, navigable by large vessels and accessible at all seasons of the year. Young as the country is, the shores of this basin, for an extent of 30 m., are highly cultivated; they are overlooked by smiling cottages, that are surrounded by waving corn-fields or embosomed in extensive orchards, and present in the summer-season many features of which the people are justly proud.—The Basin-of-Mines is still more remarkable. It is a continuation of the bay of Fundy, the rushing tides of which (rising and falling 60 ft.) expand after passing through the strait formed by Blowmedon and Parrsborough, into a broad basin, which washes the shores of four of the most fertile of the midland cos., receiving into its bosom 19 rivers, and by its powerful ebb and flow for miles up and down many of them, affording for navigation singular facilities which even adverse winds cannot control. Along the S coast of N., from Cape Sable to Cape North, spacious harbours open at all seasons of the year are numerous. Some of these are of such depth and extent that their dimensions often contrast strangely with the limited commerce which as yet floats upon their bosoms. Shelburne, Halifax, Sheet harbour, are unsurpassed; and there are roadsteads, sheltered anchorages, and arms of the sea innumerable.

Climate.] The climate of N. seems, with the progress of cultivation, to be undergoing amelioration: winter has been diminished by the prolongation of autumn, and showers of snow are neither so frequent nor heavy as heretofore. Winter, however, is here not unfrequently found "lingering in the lap of May," and the spring is consequently late and irregular in its approach. But when vegetation com-

mences, it is very rapid, and a few days alter the whole face of nature. About the end of May, the fields afford sufficient food for cattle. The heat of summer is generally moderate and regular; it is greatest in August. The autumn is decidedly the finest portion of the year; the mornings and evenings in this season are cool, and the sky generally clear and cloudless. This season often continues, though with occasional rains, and a progressive increase of cold, until January, there seldom being any severe weather before the 20th of December. January seldom passes over without a remarkable thaw; February is distinguished for the heaviest falls of snow. The greatest quantity of rain falls in spring and autumn. See article HALIFAX.

Soil and agriculture.] In such an extent of territory as is contained in Nova Scotia, there must necessarily be a great variety of soil. Haliburton, estimating by a scale of 12 parts, is of opinion that there may be 3 parts of prime land, 4 of good land, 3 of inferior, and 2 incapable of cultivation. Of these the two latter classes of soil are chiefly to be found on the S shore, from Cape Canseau to Cape Forchee. The soil may be divided into 3 classes: upland, interval, and marsh. The quality of every variety of upland is known by the species and size of the timber it produces. *Interval* is a term peculiar to America, and denotes that portion of land which is composed of the alluvial deposit of large brooks and rivers. Marsh in its natural state produces a strong coarse aquatic grass; but when enclosed and drained is exceedingly fertile. Wheat is raised with some difficulty in N., being subject to many more casualties than either oats, barley, buckwheat, rye, or Indian corn. On good upland, the average crop of wheat is from 16 to 25 bushels; on interval and dyke it is much more. Oats yield on an average 25, rye 16, and barley 20 bushels per acre. Maize, or Indian corn, is extensively cultivated in the W districts. Potatoes thrive well; their average produce being 200 bush. per acre. In 1851 there was raised within the prov. 297,157 bush. of wheat, 196,097 of barley, 61,433 of rye, 1,384,437 of oats, 170,301 of buckwheat, 37,745 of Indian corn, 21,638 bushels of pease and beans, 287,837 tons of hay, 3,686 bushels of grass-seeds, 1,986,789 of potatoes, 467,127 of turnips, 33,325 of other roots, 3,618,890 lbs. of butter, and 652,069 lbs. of cheese. Reaping begins in August, and is finished in September. One of the greatest difficulties experienced in rural affairs in this country arises out of the rapid progress of vegetation, which limits the time for planting and sowing to a very short space, and if any irregularity occurs, not only requires great exertion, but occasions these labours to be very imperfectly performed.—The cattle are very good; but the most profitable and hardiest stock is sheep. The official returns of 1851 estimated the live stock at 28,789 horses, 156,557 oxen, 85,856 cows, 282,180 sheep, and 51,533 swine.—The mineral products of N. are extensive and valuable, forming a large proportion of its exports, and promising to rise in importance. Coal abounds, and has its value greatly enhanced by the great demand for it over the whole of the American continent. The chief bed, on the N coast near Pictou, is estimated to comprehend an area of about 100 sq. m.; but this space is intersected by large dykes, and interrupted by faults, so that the actual extent is not yet ascertained. There is some reason to think that it may stretch considerably farther, though sunk too deep to have yet been traced. It has a glossy, jet-black appearance, is highly charged with bitumen, melts and cakes like that of Newcastle, and when the tar is dissipated, burns like coke.

Manufactures and Commerce.] The manufactures of N. are few in number; among them may be named cordage, coarse woollens and chocolate; tobacco is also manufactured in different ways. Coarse cloths or 'homespuns' are woven by the peasantry in all the settlements. Coarse flannels, bed linen, woollen blankets, and carpets are also made. The making of flour is an extensive and universally prevailing trade; and also preparing deals for exportation. Grindstones are exported from the co. of Cumberland, in which there are extensive quarries supplying the material. Mills for grinding plaster of Paris or gypsum have been established in the co. of Hants, but their operation is very limited. Forges are found in all the villages and hamlets. Manufactured articles in common use are generally obtained from Great Britain, and in a lesser degree from the United States, the high price of labour in the colony preventing the embarkation of capital in manufacturing speculations. The returns of 1851 reported, that there existed within the prov., at that date, 1,153 saw mills, valued at £89,869, and employing 1,786 hands; grist mills, 398, valued at £72,649, and employing 437 hands; steam mills or factories, 10; tanneries, 237, valued at £26,762, and employing 374 hands; value of leather manufactured, £52,625; value of boots and shoes manufactured, £73,654; foundries, 9, valued at £12,900, and employing 138 hands; quantity of iron smelted, 400 tons, valued at £4,635; value of castings, £3,486; weaving and carding establishments, 81, valued at £11,690, and employing 119 hands; hand-looms, 11,096, valued at £24,486; yds. of fulled cloth manufactured, 119,698; yds. of cloth not fulled, 790,104; yds. of flannel, 219,352; breweries and distilleries, 17, valued at £6,032, and employing 42 hands; gallons of malt liquor manufactured, 78,076; gallons of distilled liquor, 11,900; other factories, 131, valued at £14,382, and employing 185 hands; value of agricultural implements manufactured, £16,640; value of chairs and cabinet ware, £11,155; value of carriages, £9,491; value of other wooden wares manufactured, £19,233; quantity of coal raised, 114,992 chaldrons; casks of lime burnt, 28,603, valued at £4,433; quantity of bricks made, 2,845,400, valued at £3,211; tons of gypsum quarried, 79,795, valued at £10,498; grinding stones quarried to the value of £5.857; value of soap manufactured, £28,277; value of candles manufactured, £21,210; quantity of maple sugar manufactured, 110,441 lbs.; vessels built, 486 = 57,776 tons; boats built, 2,654.

The imports and exports of the province, in 1842, and 1847, were as follows:—

IMPORTS FROM	1842.	1847.
Great Britain, . . .	£337,364	£330.915
British West Indies, .	44,023	28,850
British North American colonies,	204,979	185,590
British colonies elsewhere,	98,178	4,110
United States of America,	373,739	309,383
Foreign States, . .	113,275	171,106
Total, . . .	£1,171,558	£1,031,954
EXPORTS TO		
Great Britain, . .	£79,784	£71,804
British West Indies, .	433.425	202,415
British North American colonies,	237,891	233,004
British colonies elsewhere, . .	6.042	6,587
United States of America,	72,699	474,950
Foreign States, . .	29,413	38,309
Total, ...	£869,254	£1,031,069

The balance of trade against the prov. is not so great as may appear from the foregoing tables; the value of exports being placed very low in proportion to the returns, and the W. India trade being exclusively carried on by vessels owned in the province, as is generally that with Great Britain. N. exported to the British West Indies, in 1840, goods to the

value of £411,556; whereof £173,590 were in dry cod. From a report of the committee on trade and manufactures to the house-of-assembly, it appears that the amount of goods, wares, and manufactures, imported into the port of Halifax alone, from the United States, during the year 1852, was 317,260 doll. chiefly at a duty of 6¼ per cent. and under, which, if imported into the United States, would have been charged with a duty of from 20 to 40 per cent., and which, it is contended, could be manufactured in the prov. as cheaply as in that country. The report further states, that the total amount of importations into Halifax from the United States, during the same year, including 370,148 d. of flour and breadstuffs, was 889,174 d.; and that the total exports, during the same periods, amounted to 343,672 d.; leaving a balance of 545,402 d. in favour of the United States in that port alone, being an increase on the preceding year of no less than 151,614 d. while the exports had diminished during both years. The committee had been unable to ascertain the value of the imports of manufactured goods into the prov., but express their conviction that it amounts to a considerable sum, and so greatly exceeds the exports to the United States, as to constitute a disadvantageous and adverse trade. The committee also report, that they have examined manufacturers established at Halifax, and engaged in the manufacture of iron castings, stoves, &c., clothing and tailoring, domestic wines, syrup, cordials, hats and caps, soap, boots and shoes, furniture, pails and buckets, and marble, who severally complain of the ruinous effects of the low rates of duties, and are sanguine that were they protected from foreign competition, and secured in the enjoyment of the home-market, they would be able to supply the domestic market with those articles at as cheap a rate as they can be imported from abroad, in which opinion the committee concur; and, further, that were it not for the protective policy of the United States, the colonists, to a considerable extent, could supply the American market. A considerable portion of the report is devoted to the consideration of the presumed injurious results to the prov. from this state of things,—the want of employment which is thus created, and the extensive emigration of the more youthful and active portion of the community. The committee claim for its artificers, that as the American republic has shut its markets against them and their productions, American manufacturers should not be allowed to interfere with them in their own market.

Fisheries.] In 1851, the number of vessels employed in the fisheries of N. were 812 = 43,333 tons, and manned by 3,681 hands; and the number of boats, 5,161, with 6,713 hands. The nets and seines were 30,154. The quantity of dry fish cured, was 196,434; barrels of salmon, 1,669; of shad, 3,536; of mackarel, 100,047: of herring, 15,409. Total value £217,270. The quantity of fish oil made was 189,250 gall., value £17,754. The committee whose report is quoted above, recommend the fishermen to the especial care of the legislature. "Let the legislature," say they, "firmly and resolutely require of her majesty's ministers that protection against the encroachments of the United States which ought long since to have been awarded. Let her majesty's government be respectfully informed, that in return for that allegiance so cheerfully yielded to the sovereignty of the queen, her colonial subjects are entitled to be protected by the parent-state against the invasion of their property by a foreign power, and when the fisheries are rescued from foreign intrusion, thousands of British seamen will find profitable employment on our coasts and become extensive consumers of the productions of agriculture and the arts." It seems that a practice had grown up on the part of the fishing-boats of New England of extending their operations considerably within the bays of Nova Scotia, and within the line of one marine league from the British headlands which is the legal boundary. From the nature of these rights it is impossible to protect them without the presence of a considerable number of small armed vessels; and if the authority of the government is not adequately represented on the spot, disputes are apt to arise among the fishermen themselves, or the rightful owners of the ground may be driven away by an invasion of unlawful competitors. The bay of Fundy is as obviously a British possession, by the law of nations and by the terms of the treaty of 1818, as Delaware bay or Chesapeake bay belong to the United States, because they are "arms or recesses of the sea entering from the ocean between capes and headlands." The application of the term in a looser sense to such waters as Hudson's bay or the bay of Biscay, has nothing whatever to do with the interpretation of this treaty. Nothing can be more precise or conclusive than the terms of the treaty by which the United States "renounce for ever any liberty of fishing heretofore enjoyed or claimed by the inhabitants thereof on or within three miles of any of the coasts, bays, creeks, or harbours of Her Britannic Majesty's dominions in America, not included in the specified limits." These specified limits do not include the bay of Fundy, for they commence at Cape Ray, on the coast of Newfoundland, and extend through the straits of Belle Isle, N to the coast of Labrador; and to that region only on our coasts the fishermen of the United States have a right to resort.—See article NEW BRUNSWICK.

Population.] In 1749 the pop. of this colony amounted to 18,000. After the removal of the Acadians or French settlers, the British settlers were estimated in 1755 at 5,000. In 1781 their numbers amounted to 12,000; but two years afterwards they were joined by 20,000 loyalists from N. America; so that in 1784 the pop. amounted to 32,000. In 1827, the pop., exclusive of Cape Breton, amounted to 123,848 souls; of whom 28,659 were returned as belonging to the Church of England; 37,225 as Presbyterians; 20,401 as Catholics; 9,408 as Methodists; 19,790 as Independents; and 2,968 Lutherans. In 1851 the pop. was 276,117; or of each of the 18 cos. composing this prov. was as follows:

Halifax, .	39,112	Cumberland, .	14,339
Lunenburg, .	16,395	Colchester, .	15,469
Queen's, .	7,256	Pictou, .	25,593
Shelburne, .	10,622	Sydney, .	13,467
Yarmouth, .	13,142	Guysboro', .	10,838
Digby, .	12,252	Inverness, .	16,917
Annapolis, .	14,286	Richmond, .	10,381
King's, .	14,138	Cape Breton, }	27,580
Hants, .	14,330	Victoria, }	

Of married persons of both sexes there were in 1851 78,701; widowers, 2,238; widows, 5,916; rate-payers, 38,388; paupers, 1,072; deaf and dumb, 230; blind, 136; lunatics, 166; idiots, 299; Indians, 1,056; coloured persons, 4,908. There had been 8,120 births, 2,802 deaths, and 1,710 marriages, during the year 1851. The schools numbered 1,096, and the scholars 31,354. The religious denominations are thus stated: Church of England, 36,482; Catholics, 69,634; Kirk of Scotland, 18,867; Presbyterian church of N., 28,767; Free church, 25,280; Baptists, 42,243; Methodists, 23,596; Congregationalists, 2,639; Universalists, 580; Lutherans, 4,087; Sandemanians, 101; Quakers, 188; other denominations, 3,891. These bodies had 567 churches in 1851. Engaged in learned professions, commerce, &c., there were: clergymen, 288; lawyers, 143; doctors, 145; merchants and traders, 2,415; persons employed in manufactures, 3,200; mechanics, 8,895; farmers, 31,604; persons engaged in the fisheries, 9,927; registered seamen, 1,413; persons employed at sea, 3,961; persons engaged in lumbering, 1,254. The inhabited houses were returned at 41,455; families, 45,541; uninhabited houses, 2,028; houses building, 2,347; stores, barns, and outhouses, 52,758. The probable value of real estate, £8,050,923; highest rate for poor and county, £16 8s. 4d.; lowest rate, 10d. The majority of the present inhabitants are natives, the descendants of emigrants from Great Britain and the United States. In the eastern parts of the prov. the majority are Scotch. The descendants of the Acadians are chiefly located at Clare, Pubnico, and Menudie. They speak a very corrupt French patois. A remnant of the Micmac tribe, sometimes called Indians, exists in Cape Breton; and there are above 3,000 Negroes in the prov.

Government.] N. is governed by a lieutenant-governor, who also takes the title of commander-in-chief of the prov. He is assisted by a council of 12 members, who form a constituent part of the legisla-

ture, their consent being necessary to the enacting of laws. In their capacity of legislators they sit as an upper house. At present, however, the governor has not only the power of nominating but of suspending the members of this council. The members of the house-of-assembly are elected by the freeholders. Halifax chooses 4 co. and 2 town members; all the other cos. send 2 each; and each town 1 representative. The qualifications for a vote or representation are either a yearly income of 40s. cleared from real estate, or a title in fee-simple to a dwelling-house, or the possession of 100 acres of land.—The governor is chancellor in office, and he and his executive council constitute a court-of-error. The supreme court is composed of a chief-justice, 3 assistant-justices, and a circuit associate. There are courts of common pleas in each co., and courts of general sessions. Besides these there are sheriff and justice-of-peace courts.—The revenue of N. in 1829 was £38,360, of which £20,000 was expended in making roads and bridges. In 1842 the revenue amounted to £84,869; in 1847 to £111,025.—Besides the presence of two or three regiments of British troops in the garrisons, there is an organized militia of 26 regiments, embracing a force of nearly 45,000 men.

Ecclesiastical establishment.] This consists of a bishop, with a salary of £2,000 per ann., besides £400 as a missionary allowance; of one archdeacon, who is also ecclesiastical commissary, his salary being £300, with an allowance of £175 as a missionary, and of about 30 other missionaries, each receiving from the Society for Propagating the Gospel from £100 to £200 per ann.; the whole ordinary expense being £7,640, nothing of which, however, falls on the provincial revenue.

Education.] King's college, at Windsor, was founded under a royal charter in 1802. The bishop of the diocese is the visitor; and the lieutenant-governor, bishop, and other provincial officers, form a board of directors or governors. It has an annual allowance from the provincial treasury of £400, and is otherwise supported by benefactions from societies in England and other sources, to the amount of £1,000 per ann. It is under the immediate management of a president, who has a salary of £368 per ann., including his allowance as chaplain. In connection with this college there is an academy or grammar-school, with at present about 58 scholars. The principal of this academy has an annual salary of £160, and an assistant at £80, those salaries being exclusive of tuition fees.—Dalhousie college, in the city of Halifax, is an institution originally founded under the patronage of the late earl of Dalhousie, when lieutenant-governor of the prov., in 1819, and was intended to be upon the model of the Edinburgh university. In this institution no religious tests are required from the governors, professors, graduates, or others. The funds are at present about £620 per ann.—Acadia college, incorporated by acts of the general assembly passed in 1840 and 1841, is situated at Horton in King's co., having been established by the Baptist education society. There are in this institution 3 professors of the Baptist denomination, and 33 students. There is connected with the college an academy with 2 teachers and 45 pupils. A sum of £400 is granted by the legislature in aid of private contributions towards the support of this college, which is under the more immediate superintendence of the above-mentioned Baptist society. Both institutions are open to all denominations, and no religious tests are required from either professors or students.—St. Mary's seminary or college, founded by the Roman Catholics, was incorporated by an act of the provincial legislature in 1841. The act provides that no religious tests shall be required from any of the trustees or students. The principal professor is a Roman Catholic priest, assisted by other professors and teachers of the same persuasion. The students in the college and seminary are about 72. This institution receives an annual grant from the provincial treasury of £326, and is otherwise supported by subscriptions and tuition fees.—The minor academies and grammar-schools throughout the prov. are numerous. Ample provision is made for the education of every young person. For this purpose one-fifteenth part of the public revenue is every year set apart in aid of still larger private contributions, and the result has long been most satisfactory. Mr. M'Gregor, in his excellent work on British America, written in 1833, thus speaks of the people of N. "It is a matter of doubt whether more general and useful knowledge among all grades of the pop. can be discovered in any country than will be found to prevail in this prov. Many of those born and educated in it have distinguished themselves, not only at home but in different parts of the world, and the natives generally possess a ready power of apprehension, a remarkably distinct knowledge of the general affairs of life, and the talent of adapting themselves to the circumstances of such situations as chance, direction, or necessity may place them in."

Halifax division.] The Halifax division comprises only a part of the country of that name, and contains 4 townships, viz., Halifax, Dartmouth, Preston, and Laurence-Town.—The harbour of Halifax is one of the finest in America. See HALIFAX. Dartmouth was founded in 1750. It occupies the opposite side of Halifax harbour.

Eastern division.] The Eastern division contains the districts of Colchester and Pictou, and the cos. of Sydney and Cumberland. The town of Pictou was founded in 1790. Guysborough in Sydney, and Sherbrook on the St. Mary river, are the principal places in the division.

Middle division.] This division contains the three cos. of Hants, Lunenburg, and Queen's.—Windsor in Hants, on the Avon river, is the cap. of this div. Lunenburg, next to Halifax, is the oldest settlement formed by the British government in Nova Scotia. The town of Liverpool is built on a harbour of the same name, formerly known by the French appellation of Rosignol.

Western division.] This division contains the two cos. of Annapolis and Shelburne. The town of Annapolis Royal, from the earliest settlement of the colony until the establishment of Halifax, was the cap. of the prov., and much of the history of N. is connected with it. The inhabitants of Digby prosecute the fishing of mackarel with much success. Yarmouth is a thriving town. Pubnico, a French settlement in the township of Argyle, has an excellent harbour. Cape Sable, in this division, forms the extreme S point of N., being in 43° 27′ N lat., and 65° 33′ W long. Shelburne harbour is one of the best in America.

Historical notice.] In May 1497, John Cabot and his son Sebastian, supposing that a shorter route to India might be found in the NW., sailed from Bristol in a W direction. On the morning of the 24th of June these intrepid and skilful mariners were surprised by the sight of land. Being the first they had seen on their voyage, they called it Prima-Vista; and it is generally supposed to have been some part of N.; but the Marquis de la Roche was the first European who visited N. with an intention to colonize. He sailed from France in 1598, and landed a few convicts on the isle of Sable, which is situated about 50 leagues to the SE of Cape Breton. In 1603 we find M. de Monts appointed by Henry IV. governor-general of all the country from the 40th to the 46th parallels of N lat., that is from Virginia almost to the head of Hudson's bay. In the commission of De Monts the whole of the country now called N., New Brunswick, and part of the state of Maine, was called Cadie. The same territory seems to have successively borne the appellations of Acadia, L'Acadie, and Arcadia. De Monts found the country thinly inhabited by fierce and savage Indians. The colony planted by him was poorly supported by the mother country; and in 1621 James I. of England gratified his secretary, Sir William Alexander, afterwards Earl of Stirling, with a grant of the extensive tract of country lying on the E side of a line drawn in a N direction from the river St. Croix to the gulf of St. Lawrence. This country was named in the patent Nova Scotia, which circumstance gave rise to a tedious discussion whether Nova Scotia and Acadia were the names of one and the same country, or indicated two distinct provinces. Charles I. confirmed his father's grant by patent, dated 12th July 1624; and in May 1625 created the premier baronet of Nova Scotia. In July of the same year he empowered the privy council of Scotland to confer the title with all its privileges upon any individual they saw fit, till the number amounted to 150. In July 1630 the Scottish parliament confirmed the charters of Charles and James, and the proceedings of the privy council. The territory was to be divided into parcels not exceeding 150; and Sir William Alexander was authorised, in his capacity of royal lieutenant and founder of the colony, to dispose of them, with the title of baronet, to such adventurers as offered. He is said to have received £200 from each purchaser. An expedition was fitted out by him in 1730; but soon after the prov. was conquered by the French government, in whose possession it remained till re-conquered by the provincial troops of Massachusetts, in the course of the war which was terminated by the capture of Quebec. Some time after the conquest of the colony by France, Sir William Alexander was induced to cede his claims to that government. Charges of having obtained money for this cession, and imparted none of it to the adventurers who had bought lands and titles of him, were vehemently urged, with

what justice it is not easy to say; enough that the projected Scotch colony was entirely abandoned. The utter silence regarding it in the act of Union shows the impression of the Scotch nation that all right and title to N. either by the Scotch as a people or by subjects of the Scotch Crown had ceased and determined. The Scotch colony of N. and the Scotch colony of Darien, with all pertaining to them, were tacitly classed in the same category. By the 12th article of the treaty concluded between England and France on the 11th of April 1713, all N. with its ancient boundaries, as also the city of Port Royal, were ceded to Great Britain. In 1749 an expedition sailed from England, under the command of Colonel Cornwallis, who founded Halifax, and instituted three courts of justice; and in 1753 a body of German emigrants founded Lunenburg. The early history of these and successive settlements presents little else than a constant succession of struggles with the surrounding savages; but the authority of the government was gradually established, especially under the able administration of Governor Lawrence, and emigration began to flow towards the country in a constant and steady stream from the colonies on the American continent and from the north of Ireland. By the 2d article of a definitive treaty executed at Paris in 1762, France renounced all claim to N., Canada, Cape Breton, and the islands in the St. Lawrence; and since that period N. has enjoyed uniform tranquillity and repose. In the last war between the United States and Great Britain, not one act of hostility was committed on the border of the two rival countries by either party.

NOVATE, a town of Austrian Italy, in the prov. and 6 m. NW of Milan. Pop. 1,050.—Also a village in the Valteline, 9 m. SSW of Chiavenna.

NOVAWESZ, a village of Prussia, in the reg. and 2 m. E of Potsdam. Pop. 3,150. It has woollen and cotton factories.

NOVA-ZEMBLA, or Novaia Zemlia [*i. e.* 'New Land'], a large island in the Arctic ocean, administratively comprised in the Russian gov. of Archangel. It extends in a NNE and SSW direction from 70° 30′ to 76° 30′ N lat., and between 52° and 66° E long. It consists of two islands, having a joint length of 470 m., and average breadth of 50 m.; but separated by a channel extending, under the parallel of 73° 20′, in an E and W direction about 45 m., and 9 m. wide. On the S it is separated from Waigatz island by a strait 30 m. wide. Black clay slate and limestone are the principal rocks. Its E coast has not yet been fully explored, and is seldom accessible, on account of the ice by which it is surrounded; indeed no part of this dreary and inhospitable region has any permanent inhabitants; but particular tracts of the S and W coasts are visited by fishermen and hunters sent out by the merchants of Archangel and Mezen. The N extremity is rugged, mountainous, and covered with perpetual snow and ice; the S is lower and more level, and produces moss, a short grass, some dwarf-willows, and a few of the hardiest species of berries, but nothing that can be called a tree. On the W side, the mountains attain an elevation of 2,000 ft. above sea-level; and those overhanging the Matotshkin-Shar, or dividing channel, have alts. of 3,156 ft., 3,204 ft., and 3,475 ft. The E shores are comparatively low and barren. The hunters find wild rein-deer, Arctic bears, foxes, and the common fox, on this island. The coasts are frequented by whales of different kinds, walrusses, and other large fish. The walrus forms a chief object of pursuit to the fishermen; and the number of these animals killed in places to which they resort is often such that the teeth and bones of the head are sufficient to load a vessel.

NOVE (Le), a large village of Austrian Italy, on an affluent of the Brenta, 13 m. NNE of Vicenza.

NOVELDA, a town of Spain, in the prov. and 13 m. W of Alicant, on the Vinalapo. Pop. 8,095.

NOVELLARA, a town of the duchy of Modena, situated on a small river which falls into the Po, 8 m. SSE of Guastalla. It was formerly the cap. of a separate duchy, and contains about 4,000 inhabitants, who manufacture silk and leather.

NOVEMIASTO, a town of Prussian Poland, in the reg. and 32 m. WNW of Posen. Pop. 2,400.—Also a town 47 m. SSW of Warsaw. Pop. 2,100.—Also a village in the prov. of Plock, on the Sonna, 40 m. NNE of Plock. Pop. 500.

NOVENTA, a town of Austrian Italy, in the deleg. and 18 m. SSW of Vicenza. Pop. 3,900.

NOVENTA-DI-PIAVE, a town of Austrian Italy, in the deleg. and 17 m. NE of Verona, on the l. bank of the Piave. Pop. 2,000.

NOVES, a town of Spain, in the prov. and 18 m. NW of Toledo. Pop. 2,450.—Also a town of France, in the dep. of Bouches-du-Rhone, 6 m. SE of Avignon, near the l. bank of the Durance. Pop. 1,050.

NOVGOROD, or Novogorod, a government or prov. of European Russia, stretching between the parallels of 57° and 61° N lat., and the meridians of 30° and 40° E long.; and bounded on the N by the govs. of St. Petersburg and Olonetz; on the E by those of Vologda and Yaroslav; on the S by Yaroslav and Tver; and on the W by Pskov and St. Petersburg. It has an area of 107,090 sq. versts, or 47,006 sq. m., with a pop. in 1841, of 850,200; in 1846, of 907,900. Its surface is generally flat and marshy; but is intersected on the SW by the Valdai chain, which stretches from about the parallel of 57° and the sources of the Volga, NE to the meridian of 85°, dividing the waters flowing SE towards the Volga, from those which pursue a N course to Lake Ilmen and Lake Ladoga. All the E part of the gov. belongs to the basin of the Caspian, and is watered by tributaries of the Volga. The W part belongs to the basin of the Baltic. The principal rivers are the Cheksna, Andoga, Souda, Kolp, Tchagadocha, Kobodja, and Mologa, which are all ultimately absorbed by the Volga; the Poust, Pola, and Msta, flowing into Lake Ilmen; the Volkhov, by which that lake discharges itself into Lake Ladoga; and the Sias, which flows into Lake Ladoga. The canal of N. unites the Msta and the Volga; that of Tikhvin, the Tikhvinka, an affluent of the Sias, with the Sominka; and that of Sias, with the river Sias and the Volkhov.—The climate is cold, especially in the N part. This large prov. is not, however, deficient in fertility, except in the north, where large tracks are covered either with marshes or with moss. The other districts produce corn, hemp, flax, large quantities of wood, iron, and salt. Some homely manufactures are carried on in the towns; and soap, linen, candles, and potash are made throughout all the country. The exports are confined to corn, flax, hemp, and wood. The fisheries in the lakes and rivers are productive.—The prov. is administratively divided into 10 circles, viz. N., Krestzy, Valdai, Demiansk, Borovitshi, Ustiujna, Tshirepovetz, Kirilov, Bielosersk, and Tikhven.

Novgorod, or Novgorod-Veliki, (*i. e.* 'the Great Novgorod,') an extensive, though no longer populous town, the capital of the above gov., situated 100 m. SSE of St. Petersburg, at an alt. of 452 ft. above sea-level, in a beautiful plain at the N extremity of Lake Ilmen. It is divided into two parts by the Volkhov, a deep and rather rapid stream, somewhat broader than the Thames at Windsor, which here issues from the lake, and is crossed by a fine wooden bridge supported on granite pillars. The part on the r. bank of the river is called the Torgavaia, or the market-town; that on the l., the Sophiskaia or quarter of St. Sophia. The latter, surrounded with a rampart of earth, and a ditch flanked with a range of old towers, is about 1½ m. in circumf., but this circuit includes a number of uninhabited houses, and much open space. It contains the kremlin or citadel, in which is the ancient palace of the czars, and the cathedral of St. Sophia, a large building, with brazen gates. The other part of the town contains the building occupied by the governor; but the rest of the habitations are mainly

an irregular collection of wooden structures. The pop. of the whole place, once estimated at 100,000, has dwindled to 8,600. It has some trade in corn, and inconsiderable manufactures of canvass and other articles.—N. is one of the most ancient cities of the empire, having been founded, according to Nestor (the Russian historian), in the 5th cent., about the same time as Kiev. In the 9th cent. Ruric made it the seat of his government; but the court was soon after removed to Kiev. In 1036, his successor, Jaroslav, granted the inhabitants considerable immunities; and the citizens gradually formed themselves into a republic, under a chief magistrate, who though hereditary was limited in his power. The territory of this state extended as far as Livonia on the W, and to the frontiers of Siberia on the E. Its trade too was extensive, and it possessed one of the earliest factories of the Hanse towns. In 1471, Ivan Vassilivitz I. compelled the citizens to receive a governor of his own nomination; and ultimately reduced them to complete subjection. The court governed N. with great severity; and a conspiracy having been organized here in 1570, public executions cut off many of its richest inhabitants, and the subsequent severity of the government continued to depress the city, till a finishing blow was given to its prosperity when Peter the Great founded Petersburg, in the beginning of the 18th cent., and thus gave a new direction to the commerce of the Baltic.

NOVGOROD. See Nijny-Novgorod.

NOVGOROD-SIEVERSKOI, a town of European Russia, in the gov. of Chernigov, of which it was for some time the capital. It stands at the confluence of the Dnieper and the Desna, 86 m. ENE of Chernigov. Pop. 8,000. It has a considerable trade in wheat and other agricultural produce.

NOVGRAD. See Novigrad.

NOVI, a province of the Sardinian states, in the division of Genoa; bounded on the W and N by the division of Alessandria; on the E by the prov. of Bobbio; and on the S by the prov. of Genoa. It is about 30 m. in length from E to W, but has an average breadth of only 9 m. The Apennines cover its S part. It is watered by the Lemme, the Scrivia, and the Borbera. It is administratively divided into 6 mandamenti, and 36 comuni.—Its cap., of the same name, is situated 23 m. N by E of Genoa, in a fertile plain, at the foot of the Apennines. It is tolerably well built, and contains 5,600 inhabitants. Several of the more affluent inhabitants of Genoa have country-residences here, in which they pass the autumn months. In front of the principal church there is a public square. It has a castle occupying an elevated position. The chief manufactures of the place are of silk. It is likewise an entrepot for goods coming from the Levant into Lombardy, and thence into the south of Germany. On 16th of August 1799, a sanguinary battle took place here between the French under Joubert, assisted by Moreau, and the Austro-Russian forces under Suwarrow, in which the former were worsted.

NOVI, a small town of Bosnia, situated at the junction of the rivers Sanna and Unna, 45 m. SE of Carlstadt, on the frontiers of Croatia. It has a strong castle.—Also a small town of the duchy of Modena, 20 m. N by E of Modena.—Also a town of Austrian Illyria, on the Adriatic, 25 m. SE of Fiume. It is the residence of the bishop of Zeng. Pop. 1,400.—Also a town of Naples, in Principato-Citra, 18 m. SSW of Capaccio. Pop. 1,500.

NOVI, a township of Oakland co., in Michigan, U. S., 25 m. NW of Detroit. Pop. 1,351.

NOVI-BAZAR, Jeni-Bazar, or Rascia, a sanjak of Bosnia; bounded on the NE by Servia; on the S by Albania; on the W by the Herzegovina; and on the NW by the sanj. of Trawnik, from which it is separated by the Drin. The Dinaric Alps skirt it on the SW. The Drin, and the Western Morava, have their sources in this district. Its cap., of the same name, formerly the cap. of the prov. of Rascia, is situated on the Rashka, an affluent of the Ikbar, 85 m. S of Belgrade. It contains about 8,000 inhabitants, partly Christians and partly Turks, and has a castle.

NOVIDWOR, a town of Russia, in the prov. of Bialystock, 15 m. N of Sholka. Pop. 600.

NOVIERCAS, a town of Spain, in the prov. and 27 m. ESE of Soria. Pop. 1,400.

NOVIGRAD, a town of Austrian Dalmatia, in the co. of Zara, on a bay of the same name, 16 m. N of Scardona. It was taken by the Turks in 1646, but recovered by the Venetians the following year, and the castle demolished.

NOVIGRAD-VOLYNSK, a town of Russia, in the gov. of Volhynia, on the l. bank of the Slutsh, 60 m. E of Rowno.

NOVILARA, a town of the Papal states, in the deleg. of Urbin-et-Pesaro, 3 m. SSE of Pesaro.

NOVION-EN-PORCIEN, a town of France, dep. of Ardennes, 6 m. N of Rethel.

NOVI-SHEHR, or Nova-Palanka, a town of Bosnia, in the sanj. and 30 m. WSW of Srebornik, on the r. bank of the Liesnitza, an affluent of the Bosna.

NOVITA (San-Geronimo-de), a city of New Granada, capital of the prov. of Choco, situated 160 m. N of Popayan, in N lat. 5° 4′. The houses are mostly built of wood. The pop. are chiefly Negroes, Mulattoes, and Sambos.

NOVITO, a small river in the kingdom of Naples, in Calabria Ultra, which falls into the gulf of Gerace.

NOVI-VAROSH, a town of Bosnia, in the sanj. and 52 m. NW of Novi-Bazar.

NOVO-BERDA, a town of Albania, in the sanj. of Skuten, 45 m. NNE of Uskup.

NOVO-BIELAIA, a town of Russia, in the gov. of Voronetz, 60 m. WSW of Bogutshar.

NOVO-BIELINSKAIA, a town of Russia, in the gov. of Voronetz, on the r. bank of the Bielona, 42 m. NNE of Starobielsk.

NOVOE-USOLE′, a town of Russia, in the gov. of Perm, on the r. bank of the Kama, 15 m. S of Solikamsk.

NOVOGLADKA, a Cossack town or settlement in the Russian gov. of Caucasus, on the l. bank of the Terek, 24 m. WSW of Kizliar. It is well fortified, and contains a Crown establishment for rearing silk-worms and the manufacture of silk. On the opposite side of the river are warm baths, much frequented.

NOVOGOROD. See Novgorod.

NOVOGRIGOREVSKAIA, a Cossack settlement, on the r. bank of the Don, 12 m. ENE of Perekhopskaia.—Also a village in the gov. of Caucasus, on the r. bank of the Kuma, 27 m. NNE of Georgievsk.

NOVOGRODEK, a town of Russian Lithuania, in the gov. and 87 m. E of Grodno, on a tributary of the Niemen. It was formerly the capital of Black Russia.

NOVOI, a village of Russia, in the gov. and 75 m. NW of Moscow, on the r. bank of the Volga.

NOVOI-OSKOL, a town of Russia, in the gov. and 90 m. SE of Kursk. Pop. 5,000.

NOVOI-OZERO, a salt lake of Russia, in the SE part of the territory of the Don Cossacks, to the NE of Lake Bolshei.

NOVOKHOPERSK, a town of Russia, in the gov. and 108 m. ESE of Voronetz, on the r. bank of the Khoper. It is surrounded by a rampart and bastions. Pop. 1,800.

NOVOLI, a town of Naples, in the Terra-d'Otranto, 6 m. WNW of Lecce. Pop. 2,700.

NOVO-MESTO, a town of Russia, in the gov. and 72 m. NNE of Chernigov, on the l. bank of the Iput. Pop. 1,100.

NOVO-MIRGOROD, a town of Russia, in the gov. of Cherson, on the l. bank of the Vis, 160 m. NNW of Cherson. Pop. 3,000, of whom a large proportion are Servians.

NOVO-MOSKOVSK, a town of Russia, in the gov. of Yekaterinoslav, near the r. bank of the Samara, 16 m. N of Yekaterinoslav. Pop. 2,500. It was formerly a frontier-fortress towards Tartary.

NOVO-PETROVSKOE, a town of Russia, in the gov. and 60 m. NW of Cherson.

NOVO-REDONDO, a Portuguese settlement on the SW coast of Africa, in S lat. 11° 12′, at the mouth of the Redondo.

NOVO-RSCHEV, or Novorjev, a town of Russia, in the gov. of Pskov, on the lake of Podso, 70 m. SSE of Pskov. Pop. 500.

NOVO-SHANSAROV, a fortified town of Russia, in the gov. of Pultava, between the Vorskla and the Polusero, 21 m. SSW of Pultava. Pop. 3,500.

NOVO-SHESHMINSK, a town of Russia, in the gov. and 92 m. SE of Kazan, on the r. bank of the Shesma.

NOVO-SIL, a town of Russia, in the gov. and 80 m. SSE of Tula, on the r. bank of the Chefka.

NOVO-SLOVO, a village of Asiatic Russia, 72 m. SSW of Krasnoiarsk.

NOVYDWOR, a town of Russia, in the gov. and 30 m. ENE of Grodno.—Also a town in the same gov., 66 m. SSE of Grodno.

NOWAGUR. See Noagor.

NOWARAHAUT, a village of Bengal, 10 m. NE of Dacca. In the vicinity of this place, during the rainy season, the nabobs of Bengal kept their fleet of war and state-boats.

NOWAWES. See Neudorf.

NOWELL (Point), a cape on the W coast of North America, near Prince William sound, in N lat. 60° 27′.

NOWE-MIASTO, a town of Poland, on the l. bank of the Pilica, 17 m. SE of Rawa. Pop. 1,000.—Also a small town in the interior of Poland, at the conflux of the Nidda and the Vistula, 40 m. E by N of Cracow.

NOWIDWOV, a town of Poland, at the confluence of the Bog and the Vistula, 17 m. NNE of Warsaw. Pop. 800. Near it is the fortress of Modlin.

NOWITARY. See Neumarkt.

NOXUBEE, a county in the E part of Mississippi, U. S. Area 680 sq. m. Pop. in 1850, 10,257.

NOYA, a small but ancient town of Spain, in Galicia, on a bay of the Atlantic, at the mouth of the river Noya, 19 m. WSW of Compostella. Pop. 1,600. Ship and boat building are carried on here.—Also a river of Spain, in the NE of Catalonia, which falls into the Llobregat, near Martorello, and has a number of paper-mills on its banks.

NOYAL-MUZILLAC, a village of France, in the dep. of Morbihan, cant. and 3 m. NE of Muzillac.

NOYAL-PONTIVY, town of France, in the dep. of Morbihan, cant. and 3 m. E of Pontivy. Pop. 3,320.

NOYAL-SUR-VILAINE, a town of France, in the dep. of Ille-et-Vilaine, cant. and 6 m. N of Chateau-Giron. Pop. 3,060.

NOYAN, a village of France, in the dep. of Allier, cant. and 4 m. SW of Souvigny, near the l. bank of the Quenne. Pop. 740. Coal is wrought in the vicinity.

NOYEL. See Noil.

NOYEN, a town of France, in the dep. of Sarthe, cant. of Malicorne, on the river Sarthe, 5 m. SW of Le Mans. Pop. 1,800.

NOYERS, a town of France, in the dep. of the Yonne, on the Serin, 11 m. S of Tonnerre. Pop. 2,000. It is surrounded with a wall, and has a castle. Coarse flannels and serges are made here.—Also a town of France, in the dep. of Basses-Alpes, 5 m. W of Sisteron. Pop. 1,000.—Also a village in the dep. of Indre-et-Loire, cant. of Sainte-Marie, 18 m. ESE of Chinon. Pop. 300.—Also a village in the dep. of Loire-et-Cher, cant. and 2 m. NE of Saint-Aignan, on the Cher.

NOYON, a town of France, in the dep. of Oise, situated on the small river Vorse, an affluent of the Oise, 24 m. NW of Soissons, and 42 m. ENE of Beauvais. It has an interesting old cathedral. It contains about 5,000 inhabitants; and has manufactories of linen, leather, hats, and stockings, and a brisk trade in corn with Paris. It was for a time the capital of Charlemagne. During the civil wars of the 16th cent. it suffered severely, and has been several times destroyed by fire. It was the birthplace of John Calvin.

NOZAY, a town of France, in the dep. of Loire-Inferieure, 20 m. SW of Chateaubriant. Pop. 2,700.

NOZEROY, a town of France, in the dep. of Jura, on the Ain, 27 m. S of Besançon. It has extensive leather manufactories, and an active trade in cattle.

NOZIERES, a town of France, in the dep. of Ardeche, cant. of Le Mastre. Pop. 1,100.

NOZZANO, a town in the duchy of Lucca, 10 m. N by E of Lucca, on the Serchio. Pop. 2,400.

NUBE, a large river of Chili, which flows down the W declivity of the Andes, and passing the ancient city of Chillan, afterwards unites with the Itata, and falls into the Pacific ocean, in S lat. 36°.

NUBIA, a region in the NE of Africa, between the parallels of 11° and 24° N lat., and the meridians of 28° and 39° E long. The name is very indefinitely used: being sometimes applied to a large, and frequently to a much less extensive country, but the boundaries of both of which are very vague and uncertain. Some geographers represent this country as extending southwards to Kordofan and Abyssinia, so as to embrace Sennaar and the districts on both sides of the Nile; others give the name of Nubia only to the country on the E of the Nile, and assume the Mareb as its boundaries towards the S, so that Dongola and Sennaar are considered as separate countries.

Physical features.] From the S limits of Egypt, the land rises gradually towards the S, as far as the sources of the Nile, and the mountains of Abyssinia. The face of the country is intersected by large and small valleys, which run from S to N, and from E to W; on the table-land, several ridges of mountains of considerable height stretch themselves across the country, particularly in the E parts near the Arabian gulf. Farther to the S, the Nile runs between high rocks, which confine it to its bed during the periods of highest inundation; here the river forms several rapids and cataracts. The country on the E of the Nile has been visited only by a few bold travellers, who have accompanied caravans from one valley to another. The soil is covered, in what is called the Desert of N., with a deep loose sand, and sharp flinty stones. In several places it is sprinkled with rock salt; here and there a grove of dwindled acacias, or tufts of colocynth and senna, relieve its dreary aspect. The water, even during the rainy season, is black and putrid; and the Arabs themselves, who occupy this district, are obliged to remove with their flocks during the dry season into regions better supplied

with water. The highest mountains here run eastwards from Assuan to Haimar, and are called the mountains of Otaby or Ataby,—a name which is often given to the whole chain, as far as Cosseir. To the southwards, in the neighbourhood of Suakim, the mountains assume the appellation of Dyaab; and still farther to the S they are called Orbay-Cangay. They consist of primitive calcareous rock. Granite, quartz, greenstone, and felspar appear in the western ridges. The western desert is called Bahiudah. The southern parts of N., being watered by the Atbara or Tacazze, the Bahr-el-Azrek and the Bahr-el-Abiad, present a verdant surface in many parts. A recent traveller thus briefly but impressively sketches the characteristic features of N: "N. only exists by the grace of the Desert or the persistence of the Nile in well-doing. It is a narrow strip of green between the mountains on both sides and the river. Often it is only the mere slope of the bank which is green. You ascend through that, pushing aside the flowing lupin and beans, and stand at the top of the bank in the Desert. Often the Desert stretches to the stream, and defies it, shoring it with sheer sand. A few taxed palms, a few taxed *sakias* [water-wheels], the ever neat little houses, the comely black race, and, walling all, the inexorable mountains, rocky, jagged, of volcanic outline and appearance,—these are the few figures of the Nubian panorama. Dates, baskets, mats, the gum and charcoal of the mimosa, a little senna, and farther S, ebony, sandalwood, rice, sugar, and slaves, are all the articles of commerce; lupins, beans, and dhourra, a kind of grain, the crops of consumption. It is a lonely, solitary land. There are no flights of birds, as in Egypt; no wide valley-reaches, greened with golden plenty. Scarce a sail whitens the yellow blue of the river. A few solitary camels and donkeys pass, spectral, upon the shore. It seems stiller than Egypt, where the extent of the crops, the frequent villages, and constant population, relieve the sense of death. In N. it is the silence of intense suspense. The unyielding mountains range along so near the river, that the Howadji fears the final triumph of the Desert. Like a line of fortresses stretched against the foe, stand the sakias, the allies of the river. But their ceaseless sigh, as in Egypt, only saddens the silence. Through the great gate of the cataract you enter a new world, south of the poet's 'farthest south.' A sad, solitary, sunny world—but bravery and the manly virtues are always the dower of poor races, who must roughly rough it to exist." [*Nile Notes.*] To this rapid but clever sketching of an American artist, the description given by another recent traveller, Captain Peel, may be added: "The features of N. between the first and second cataracts are totally distinct from those of Egypt. The Nile is confined in a narrow valley of steep rocky hills, whose sides are blackened by the sun, and have been broken into fragments by some great convulsion. The granite range extends to Kalabsheh; its strata are thrown up vertically, and rise in the most fantastic forms. The sandstone formation is then resumed. The alluvium from the Nile on either side is very little,—a narrow band of soil frequently interrupted,—and from the bed of the river being rock, and therefore remaining at the same constant depth, most of it has become raised above the inundation by the deposit from the constant irrigation. In Egypt the bed of the river rises equally with the soil. The irrigation is done by the wheel, driven by oxen, and turning a chain of water-jars, which admits of being lengthened as the river falls. It is enclosed in a rude building, often picturesque, resembling at a distance some old tower covered with creepers. A boy sits driving the oxen; his shrill cry and the creaking of the wheel are the music of N.; day or night it never ceases."

Climate.] The climate of Nubia is intensely hot, but, upon the whole, healthy. Smallpox is the only epidemic of the country; the plague is hardly known. In the southern districts, the rainy season generally commences about the middle of June. Burckhardt observed it begin at Shendy in the latter days of April. The *chamsin* generally blows from the 29th or 30th of April to the 18th or 19th of June. It is often accompanied with thunder and lightning. Nothing can exceed the beauty of the mornings and evenings in N. "All of us," says Dr. Richardson, "had seen the skies of Italy and Greece; but for brightness, the nocturnal sky of Egypt and N. surpasses them as much as they do that of England." This remark applies more particularly to the valley of the Nile, where rain almost never falls. In the environs of Shendy, Calliaud found the centigrade therm. during a whole month range from 45° to 48°. The therm. of Fahrenheit in the month of February, when plunged into the sand, indicated a heat of 125°, and in the open air stood at 96°. Leigh cooked a dish by placing the stone-pan in which it was contained in the hot sand!

Productions.] Cows, sheep, goats, buffaloes, oxen, and a few camels, constitute the domestic animals of the Nubians. In the eastern mountains, troops of gazelles occur. Dongola possesses a fine breed of horses. Hyenas are sometimes seen on the banks of the Nile, and monkeys have been observed on the eastern mountain-ranges. Elephants, and perhaps even the giraffe, traverse the deserts. Crocodiles and hippopotami are found in the Nile near Dongola, Sukhot, and Mahass. Eagles, storks, crows, sparrows, a small red-legged species of partridge, lapwings, and plovers, have been enumerated among the birds of N. The sandy islets of the Nile are sometimes covered with an aquatic bird of the size of a goose, called *kork.*—The Nubians have no implements for fishing except at the first and second cataracts, where fish are sometimes caught in nets; the most common species of fish are called *dabesk* and *meslog.* The sandy banks of the Nile abound with black beetles which the Nubians denominate *kafirs* or 'infidels,' and consider poisonous. In marshy spots, a kind of mosquito is very troublesome; locusts, larger than the golden wren, occasionally lay waste the fields of the Nubian husbandman.—Of the vegetable kingdom, N. possesses the *dhoum* or *Palma Thebaica*, and a species of mimosa, called *saut;* but no dates are found from Dongola to Sennaar. The ebony-tree predominates in the forests. On the plains which are inundated by the Nile, particularly between Esneh and Mahass, the *senne-mekke* or senna plant abounds. On the sandy western banks of the Nile occur tamarisks, and a bush called *symka*, perhaps the *Palma Christi*, which affords an excellent food for camels, and from the bean-like fruit of which the Nubians extract a kind of oil with which they anoint their body and hair. The *dhourra* and the *bammia* are the principal sorts of grain; though wheat, millet, beans, barley, and lentiles, are also cultivated. A few vines are trained in the neighbourhood of Derr, and cotton and tobacco are cultivated in some parts.—It has been affirmed that there are mines of gold in N.; their situation, however, is not known. The famous emerald mountain belongs rather to Southern Egypt than N.

Agriculture.] The inhabitants of N., from the first cataract to the frontiers of Dongola, do not plough their fields after the inundation of the Nile has subsided as they do in Egypt. The waters not rising sufficiently high to overflow the steep banks, irrigation is carried on by means of *sakiehs* or water-wheels, which are put in action as soon as the river has subsided. The number of these wheels between Assuan and Wadi-Halfa, Burckhardt states to have exceeded 600 when he visited the country. One *sakieh* requires the alternate labour of 8 or 10 cows, and waters from 3 to 5 *fedhans*. The taxes these poor people pay are levied chiefly upon their means of irrigation. A tax of 300 piastres or £3, is laid upon

each water-wheel, and the half of that on the bucket and pole called the *shaduf*. This latter is employed in N. only where the land is low, or where it is not sufficiently large to support the charge of the other, or most likely where they are too poor to afford its outlay. A tax of 1 piastre, or 1½d., is also imposed on every date-tree, for the fruit of which N. is celebrated. The total taxes amount to upwards of 20s. an English acre. This, for a rocky country like N., is far too much, especially when it is considered that every Nubian was formerly his own freeholder. The result is that the country is fast depopulating. Whole villages are deserted, and the Desert on both sides the river, meeting with no resistance from man, is including large tracts of rich soil within its grasp. While the Nubians never taste wheaten bread, but live almost entirely on eggs, milk, vegetables, and dates, with occasional dhourra cakes, the fellahs of Egypt have their wheat and barley, and are able to live in comparative luxury. Though their land is far more fertile than that of N., and though the Desert steals not upon them its deadly marches, yet they are not taxed so heavily as the Nubians are. The first seed sown is the dhourra. After this crop is reaped, the ground is again irrigated, and barley is sown: sometimes a third crop is reaped after this. Wheat is grown only in a few districts. Wine is made from the palm-tree, and beer from barley. Date spirits are made and publicly sold from Siut southward through the whole country, and in Upper Egypt. Small looms are frequently seen in the houses of the Nubians: with these the women weave very coarse woollen mantles, and cotton cloth. From the leaves of the date-tree they form mats and bowls in a very neat manner. These are the only manufactures in N.; everything else is imported from Egypt.

Commerce.] A main article of Nubian export is dates; the quantity of this article imported into Egypt from N., by way of Assuan, varies from 1,500 to 2,000 *erdebs* per year, each *erdeb* weighing about 200 lbs. The principal articles from Egypt, through Berber to Shendy, and thence to Sennaar, Kordofan, and Darfur, are the *sembib* and *mehleb*,—the former a perfume and medicine, the other a condiment. In addition to these are imported soap, sugar, beads, coral, paper, and hardware. The returns from the S and SE parts of Sudan to Egypt, through Berber and Shendy, are grain, gold, ivory, musk, ebony, leeches, coffee, fruit, honey, and above all, slaves. Burckhardt calculates the number of slaves sold annually in the market of Shendy at about 5,000, of whom 1,500 are for the Egyptian, and 2,000 for the Arabian market; the rest are purchased by the Bedouins. A caravan travels twice a-year from Mahass to Cairo with slaves. Dollars form the common currency of the country.

Population.] Burckhardt estimates the pop. of N., from Assuan to Mahass, at 100,000 souls: this estimate, of course, does not include the tribes of the Deserts. Perhaps the total pop. does not fall below 250,000 souls. M. Lenormant estimates the Berber pop. from the first to the second cataract at 20,000 souls, and as many from thence to the frontier of Sennaar. The author of the *Nile Notes* thus sketches the natives of N.: "In appearance and character the Nubians are the superiors of the Egyptians; but they are subject to them by the inscrutable law that submits the darker races to the whiter, the world over. The sweetness, and placidity, and fidelity,—the love of country and family, the simplicity of character and conduct which distinguish them,—are not the imperial powers of a people. Like the Savoyards into Europe, the Nubians go down into Egypt and fill inferior offices of trust. They are the most valued of servants, but never lose their home-longing, and return into the strange sultry silence of Nubia when they have been successful in Egypt. Yet the antique Ethiopian valour survives. Divers districts are still warlike, and the most savage struggles are not unknown. The Ethiopians once resisted the Romans, and the fame of one-eyed Queen Candace, whose wisdom and valour gave the name to her successors, yet flourishes in the land, and the remains of grand temples attest that the great Rameses and the proud Ptolemies thought it worth while to own it. The Nubians bear arms, but all of the rudest kind,—crooked knives, iron-shod clubs, and slings, and a shield of hippopotamus hide; and in the battles the women mingle and assist. Yet in the 500 m. from Syene to Dongola, not more than 100,000 inhabitants are estimated. They reckon 700 *sakias* for that distance, and that each is equal to 1,500 bushels of grain. These shores are the very confines of civilization. The hum of the world has died away into stillness. The sun shines brightly in N. The sky is blue, but the sadness of the land rests like a shadow upon the Howadji. It is like civilization dying decently. The few huts and the few people smile and look contented. They come down to the shore as the ibis skims along, wonderingly and trustfully, as the soft-souled southern savages beheld with curiosity Columbus's fleet. They are naked, and carry clubs, and beg powder and arms, but sit quietly by your side as you sketch or sit upon the shore, or run like hunting-dogs for the pigeons you have shot. If there be any impossible shot, the Hawadji is called upon with perfect confidence to execute it,—for a clothed Howadji with a gun is a denizen of a loftier sphere to the nude Nubians. Why does the sun so spoil its children and fondle their souls away? How neat are their homes, like houses set in order! For the mighty Desert frowns behind, and the crushing government frowns below. Yet the placid Nubian looks from his taxed sakia to his taxed palms, sees the sand and the tax-gatherer stealing upon his substance, and quietly smiles as if his land were a lush-vine-yarded Rhine-bank!" The habitations of the Nubians are low huts of mud or of loose stones, roofed with dhourra straw, "which last till they are eaten up by the cattle, when palm-leaves are laid across. These mud dwellings are generally so low that a person can hardly stand erect in them. The houses at Dehr, and a few in the larger villages, are, however, better built. The utensils of a Nubian's hut consist of about half-a-dozen coarse earthen jars, about 5 ft. in height, and from 1 to 2 ft. in diam., in which all the provisions are kept,—a few earthenware plates, a hand-mill, a hatchet, and a few round sticks over which the loom is laid. To the N of Dehr the dress consists usually of a linen shirt, or the woollen cloak of the peasants of Upper Egypt; the head-dress is a small white linen cap, with sometimes a few rags twisted round it in the shape of a turban. Young boys and girls go naked. The women wrap themselves up in linen rags or black woollen gowns; they wear ear-rings and glass bracelets; those who cannot afford to buy the latter, form them of straw. Their hair falls upon the neck in ringlets, and on the back part of the head they wear short tassels of glass or stones, both as an ornament and an amulet. The richer class wear copper or silver rings round their ankles. S of Dehr, and principally at Sukhot and in Mahass, the grown-up people go quite naked, with the exception of the loins. The Nubians seldom go unarmed. As soon as a boy grows up, his first endeavour is to purchase a short crooked knife, which the men wear tied over the left elbow, under the shirt, and which they draw upon each other on the slightest quarrel. The descendants of the Bosnians, who settled in this country in the 15th cent., are still distinguished among the Nubians by the name of Osmanli or Turks They have, indeed, lost their original language; but their features still betray a more northernly origin than the rest of the inhabitants of the country: their complexion is light brown, while that of the Nubians is almost black. The inhabitants of N., as far S as Dongola, are known in Egypt under the name of Berabera or Berbers. "The Berber of Lower Nubia," says M. Lenormant, "is of a slender form, dark complexion, and prematurely reaches old age, retaining his beauty only during infancy and youth, but reminding an observer more forcibly than any neighbouring people of the ancient Egyptian race, such as they are depicted upon their monuments. The females wear the matted hair of the court of Sesostris." From Dongola and Sennaar, the inhabitants of the countries on the Nile, and all the other Arab tribes as far as Bornu, speak Arabic dialects. The eastern nations on the Atbara, towards Takka and the Red sea, speak the Biskarye language; to the W, the nearest foreign language is that of Kordofan, a dialect differing in pronunciation only from that of Darfur. The name *Nuba*, Burckhardt informs us, is likewise given to all the blacks coming from the slave-countries to the S of Sennaar. —The Sheygya tribes inhabit the country to the E of Dongola. They are a handsome, gallant race of people. Their hue is a clear, glossy jet black, which appeared to M. Waddington "to be the finest colour that could be selected for a human being." It is not the Negro-black, being quite distinguished by its brightness or polish. The features of the Sheygya are regular, and their eyes mild and soft.—The rocky tract extending along the E side of the Nile from Syene to Guz is occupied by the Ababdeh and Bisharye Arabs. These tribes plunder and destroy one another, and have few good traits of character. Their territory formerly belonged to the Bojah tribe, —a Berber race supposed to bear a close affinity to the ancient Blemmyes. The western desert is occupied by a people called Barberins and sometimes Barabras; the latter term being to be considered as nearly synonymous with the appellation Nubians. They are a lean sinewy race of men, of a brown or black complexion, but bear no resemblance to the Negroes of the W of Africa. Among all these people the general Nubian character is discernible; its modifications seem to be the result only of diet, habits, and locality. We shall conclude our sketch of the Nubian tribes, therefore, with Burckhardt's general description of the Nubians. "The men," he tells us, "are generally well-made, strong, and muscular, with fine features. In stature they are

somewhat below the Egyptians. They have no mustachios, and but little beard, wearing it under the chin only, like the figures of the fugitives in the battle-pieces sculptured upon the walls of the Egyptian temples. In passing along the wadys of N., it often occurred to me to remark that the size and figure of the inhabitants were generally proportioned to the breadth of their cultivable soil. Wherever the plain is broad, and the peasants, from being able to carry on agriculture, are in comparatively easy circumstances, they are taller and more muscular and healthy; but in the rocky districts, where the plain is not more than 20 or 30 yds. in breadth, they are poor meagre figures, in some places appearing almost like walking skeletons. The women are also well made, and, though not handsome, have generally sweet countenances and very pleasing manners; I have even seen beauties among them. Denon has certainly not done justice to them. But they are worn down, from their earliest years, by continual labour; the whole business of the house being left to them, while the men are occupied exclusively in the culture of the soil. Of all the women of the East, those of N. are the most virtuous; and this is the more praiseworthy, as the vicinity of Upper Egypt, where licentiousness knows no bounds, might be expected to have some influence upon them."

Government.] Until conquered by Ibrahim Pasha the Nubians were an independent people, having no prime ruler, and acknowledging allegiance to no man. The pasha of Egypt has placed a *sheik-el-beled* and a *kaim-mekama* in every considerable Nubian village. These two officers govern in name of the pasha, but are inferior to the *kashif* or chief judge of the district.—The total revenue of N., while under the *Kaladshy*, was estimated at about £10,000.

Topography.] The country extending along the Nile, from Assuan to the northern limits of Dongola, is divided by the inhabitants into two parts: the Wady-el-Kenous, extending from Assuan to Sebua,—and the Wady-Nuba, embracing the whole country from Sebua to Dongola. The latter district is also sometimes called Said. All the villages, as far as Dongola, are grouped under the general term *wady*. Thus Wady-Dehmut extends about 4 m. along the bank of the river, and includes upwards of half-a-dozen hamlets, each of which has its particular name.—At Debudy the country on the E bank of the Nile widens a little. Five hours above Debudy is Wady-Kardasoy, around which are visible the foundations of so many buildings as must have rendered it at one time a city of temples.—About 6 hours from Kardasoy is the district of Tafa or Teffa, extending along both banks of the river.—Kalabsheh is the largest village between Dehr and Assuan. It consists of a number of huts built round the ruins of a magnificent temple. Belzoni says the pottery found in the ruins is all of Grecian manufacture. About 9 m. below Dakke, at a place called Djorn-Hossein, is an excavated temple, executed apparently in the infancy of the art.—Dakke is supposed to occupy the site of the ancient *Pselcis*. Its temple, a beautiful edifice, is built of a remarkably fine sandstone of a peculiar bluish tinge.—Dehr, the modern capital of Nubia, is a long straggling village of mud cottages, in the midst of a thick palm-grove. Dr. Richardson estimated the population in 1817, at 3,000 souls.—Ebsambal, or Ibsambul, is celebrated for its magnificent temple, first laid open by Belzoni, which M. Champollion considers to have been built 15 centuries before the Christian era.—Wady-Halfa, is the last habitable place to which the Nubian boats ascend: the river is navigable, however, above an hour farther. Towards the S extremity of this wady four cultivated islands occur in succession: beyond these, innumerable rocky islets form the second cataract of the Nile. The river is here at most 200 yds. in breadth; and broken into a number of streams by the rocks and islets, appears as if issuing from a marshy source. Some of the rocks are covered with shrubs and verdure, while others present beds of yellow sand or black naked summits. These rocks extend about 10 m.; while, on each side of the river, the whole prospect is one vast desert of sandstone, rock, and yellow sand. Mr. St. John estimates the breadth of the Nile at the second cataract, where it enters N., at a mile. This cataract is rather of the class of rapids than of falls, and this remark is still more true of that of Syene, which, so long as the shallowness of the stream does not oppose, is accessible to boats, both ascending and descending.—The island of Say above the cataract is about 8 m. in length, and from 1 to 3 m. in breadth. It had formerly its own independent aga. —Above Tinareh, the Nile pursues a very winding course, and is divided by a succession of large and beautiful islands.—The inhabitants of Mahass claim to be descendants of the Arab tribe of Koreish, to which the family of Mahomet belonged. It is certain, however, says Mr. Waddington, that at present the features and language of this people are Nubian. Dongola, on the western branch of the Nile, begins to the south of the island of Mosho, near Argouan. Arambo, a large solitary hill, about 4 m. from the Nile, has, from time immemorial, marked the frontiers of Mahass and Dongola.

History.] Any notices which we find of this country in Greek or Roman authors are brief and insignificant; although the state of Meroe figures largely in Herodotus, and the expedition of Cambyses against Ethiopia must necessarily have crossed Nubia. In the time of Herodotus the island of Elephantine formed the S extremity of Egypt; all beyond it—consequently N. also—was unknown to the Greeks; although Egypt, by the expedition of Cambyses, had become a Persian prov., the Persians had never been able to carry their arms farther into N. and Ethiopia. The lapse of two centuries, during which Egypt remained subject to Persia, until the conquest by Alexander in 332, seems to have effected a complete estrangement in manners, language, and national feelings, betwixt the inhabitants of Egypt and N.; the former had, within that period, adopted many Persian customs,—the latter remained true to the manners of their ancestors. During the dominion of the Ptolemies, Elephantina, and the country of the cataracts, continued to form the southern frontier of Egypt. Under the Roman empire, the campaign of Petronius, the general of Augustus Cæsar, against the Ethiopians, enlarged the Egyptian boundaries, as that general is represented to have conquered several Nubian cities on the r. banks of the Nile, among which were *Pselcis Primis* and *Nabata*, the capital of the country. In Pliny's time, however, the country of the cataracts came again to be considered as the *Claustra Romani imperii;* and even Ptolemy himself, although by far the most learned of the Egyptian geographers, seems to have been unacquainted with the regions on the course of the Nile beyond these boundaries. Procopius informs us that Dioclesian endeavoured to establish a Nubian colony around the cataracts, to serve as a bulwark for his Egyptian prov. against the invasion of the southern hordes. The Nubians do not appear in history later than Justinian's reign; but the doctrines of Christianity began about this time to penetrate into the higher valleys of the Nile. In 639, Nubia afforded an asylum to the fugitive Christians. It seems to have been at this period that the numerous ancient heathen temples, along the Nubian side of the Nile, were converted into Christian churches. The Nubians resisted the inroads of the Mahommedans until the end of the 13th cent., when the Egyptian sultan, Dhaher Bibar, conquered Dongola, the capital of N. Between the years 1275 and 1290, the Nubian kingdom was nearly annihilated, or lost the power of restraining the incursions of the Bedouin Arabs within its limits. According to the traditions of the Nubians themselves, the present inhabitants of the country derive their origin from Bedouin invaders. When these hostile Arabs entered the country, the Christian inhabitants were either put to the sword or driven beyond the limits of the kingdom; a few, however, apostatised, and preserved their property by embracing the creed of the prophet; and their descendants, Burckhardt observes, can still be distinguished at Tafa and Serra, to the N of Wady-Halfa. The two Arabian tribes of Djowabere and El-Gharbye took possession of the country from Assuan to Wady-Halfa, and afterwards extended their authority over a number of small tribes settled on the banks of the river. The tribe Djaafere planted themselves on the banks of the Nile from Esneh to Assuan; while some families of Sherifs settled in the Batn-el-Hadjar, and the Koreish tribe took possession of Mahass. Between these new possessors of N. and the kings of Dongola, a fierce and interminable war was carried on, until the latter fairly broke the power of their opponents, and reduced them to the condition of tributaries. The Djowabere tribe next turned its arms against the Gharbyes and nearly annihilated them, but the latter having sent a mission to Constantinople in 1420, obtained the assistance of a body of Bosnian soldiers against the Djowaberes, who were in their turn driven back to Dongola. The Bosnians either built or garrisoned the three castles at Assuan, Ibrim, and Say; and obtained certain prerogatives for themselves and their descendants. They are still distinguished among the Nubians by the name of Osmanli or Turks. In 1822, Mahomet Ali, pasha of Egypt, despatched an army of 10,000 men under his son Ismail to subdue the

whole country on both sides of the river to its source. The first enemy this expedition encountered were the remains of the Mamelukes, who had built a handsome little town for themselves called New Dongola. When summoned by Ismail, they proudly replied, "We will make no terms with our servant!" But being unable to muster above 300 men, they retreated to Shendy, whither Ismail pursued them, and compelled them to disperse themselves over the country. The next enemy Ismail encountered was the Sheygya,—"the only people," says Waddington, "to whom arms are playthings, and war a sport." Their daring prowess, however, was of little avail against the pasha's army, and they were compelled to render homage and a moderate tribute. Eventually, the pasha's troops overrun and extorted an acknowledgment of supremacy from all the states which border on the Nile, and even from the remote kingdom of Darfur. But there is little probability of the pashas of Egypt ever being able to keep up their authority throughout this extensive line: in fact, the Egyptian conquerors, from Sesostris downwards, have never been able to do so.

NUBISUR, a village of Sind, 25 m. S of Dephlah, in N lat. 25°.

NUBLADA, an island in the N. Pacific, in N lat. 16° 40′, W long. 122° 30′, SW of Cape Corientes, on the coast of Mexico.

NUCHAR, a town of Asiatic Turkey, in the pash. and 60 m. W of Diyarbekir, on the l. bank of the Euphrates.

NUCIA (La), a town of Spain, in the prov. and 30 m. NE of Alicante. Pop. 1,900.

NUCKERGAUT, a town of Northern Hindostan, in the district of Serinagur, in N lat. 30° 3′. It is the station of the ferry-boats on the adjacent part of the Ganges, which is here from 200 to 300 yds. broad, according to the season of the year.

NUDDEAH, a district of Bengal, situated in the delta of the Ganges, between the 22d and 24th parallels of N lat., in the zemindary of Kishnagur. It has an area of 3,105 sq. m., and a pop. in 1822 of 1,187,000. It is watered by the Bhaghiretti, Jelinghi, and Issamutti; but the soil being sandy, it is not so productive as the adjoining district of Burdwan. The principal towns are Kishnagur, Nuddeah, and Santipore.—The town of N., the ancient cap. of the district, and for a considerable period the cap. of Bengal, is situated on an island at the confluence of the Bhaghiretti and Jelinghi rivers, 60 m. above Calcutta, in N lat. 23° 35′.

NUDLINGEN, a village of Bavaria, near Munerstadt. Pop. 900.

NUECES (Rio-de-las), a river of Texas, which rises in the Guadalupe mountains, under the parallel of 31°; runs SSE in a course parallel to the Rio-del-Norte; and discharges itself into Corpus Christi bay, after a course of about 300 m. It is navigable for about 40 m. Its principal tributary is the Rio-Frio.

NUEIL, a village of France, in the dep. of Deux-Sevres, cant. and 9 m. E of Chatillon-sur-Sevre. Pop. 1,800.

NUEIL-SOUS-PASSAVANT, a town of France, in the dep. of Maine-et-Loire, on the l. bank of the Layon, 18 m. SW of Saumur. Pop. 200.

NUEJOLS (La), a village of France, in the dep. of La Lozere, cant. and 3 m. ESE of Mende, near the Nize. Pop. 500.

NUESTRA-SENORA-DE-L'ASSUMPTION. See Assumpcion.

NUEVA-CACERES. See Caceres.

NUEVALOS, a village of Spain, in the prov. and 9 m. SSW of Calatayud. Pop. 600.

NUEVAS-GRANDES, a port on the N coast of Cuba, in N lat. 21° 26′, W long. 77° 3′.

NUEVITAS-DEL-PRINCIPE (Puerto-de-las), a port on the N coast of Cuba, in N lat. 21° 38′, W long. 77° 10′.

NUEZ, a village of Spain, in the prov. and 15 m. WSW of Toledo. Pop. 550.

NUFFIELD, a parish of Oxfordshire, 7½ m. WNW of Henley-upon-Thames. Area 2,076 acres. Pop. in 1841, 216; in 1851, 251.

NUFI, a large and once flourishing kingdom on the l. bank of the Niger, to the NW of Kattam-Karrafi. Captain Allen characterises its people as the most enterprising race of the interior,—frank, good-humoured, and faithful. The long-continuance of civil wars which have distracted their country, and frequent invasions of the Fellatahs, have scattered them among the surrounding nations, where they are the most active manufacturers and merchants. "The N. people," says Captain Allen, "extend over a great territory, and may comprise 100,000 people. The nation may be said to extend from the confluence on the l. bank beyond Rabbah. On the r. bank there are also N. people, but they are more assimilated with the Filatahs. The N. people are generally marked in the face with three elliptical gashes extending from the temple to the mouth, and one from the nose, crossing the cheek. Their hair is shaved so as to leave three circular patches,—one behind, one in the middle, and the other in the front. Most of the N. men I saw at Egga wore the tobe; many of them were dressed with a cloth, which hung somewhat gracefully from one shoulder, after the fashion of the Roman toga. They were in general tall and well made: the form of the head, the countenance, the contour of the figure, and the lighter shade of the colour of the skin, indicated an intermixture of the Caucasian with the Negro race."

NU-GARIEP. See Gariep.

NUGGINA, a town of Hindostan, in the prov. of Delhi, in N lat. 29° 27′, E long. 78° 26′, 47 m. NNW of Moradabad.

NUGGUR, a fort of Hindostan, in the prov. of Ajmir, 69 m. S of Jypur.—Also a town of Bundelcund, 81 m. SSW of Chatterpur.

NUGHEDA, a village of Sardinia, 3 m. S of Ozieri. Pop. 1,600.

NUGMAT, a Russian settlement on the W coast of N. America, in N lat. 64° 30′.

NUGU, one of the Friendly islands, 3 m. NE of Tongatabu.

NUHIVA, or Federal Island, one of the Ingraham islands, in S lat. 8° 58′.

NUILLE-SUR-VICOIN, a village of France, in the dep. of La Mayenne, cant. and 6 m. S of Laval. Pop. 1,500.

NUITS, a town of France, in the dep. of Cote-d'Or, 14 m. SSW of Dijon, on the Musin. Pop. 3,404. It has manufactories of paper and coarse woollens; and the environs produce good wine.

NUJIBABAD, a town of Hindostan, in the prov. of Delhi, 95 m. NE of Delhi, in N lat. 29° 37′.

NUJIFGHUR, a town of Hindostan, in the prov. of Allahabad, on the r. bank of the Ganges, 20 m. SE of Caunpur.

NUKAHIVA, one of the Marquesas group, having its SE point in S lat. 8° 57′, W long. 139° 32′. It is about 21 m. in length. Its inhabitants are a ferocious set of savages.

NUKALAN, a low sandy island in the Fiji group.

NULACOONDA. See Nalgondah.

NULCHITTY, a village of Bengal, 8 m. NW of Backergunge, on an arm of the Ganges.

NULDINGAH, a town of Bengal, in the district of Jessore, 74 m. NE by N of Calicut.

NULDRUGH, a district of Hindostan, in the prov. of Bejapore, situated between the 17th and 18th parallels of N lat., and bounded on the S by the Bimah.—Its cap., of the same name, is situated in N lat. 17° 42′.

NULEZ, a town of Spain, in the prov. and 15 m. SW of Castellon-de-la-Plana. Pop. 2,873. It is surrounded by a wall flanked with towers.

NULIZE, a village of France, in the dep. of Loire, 12 m. SE of Roanne.

NULPE, or NULPI, a river of Ecuador, in the prov. of Esmeraldas, which enters the Mira, in N lat. 1° 21′.

NULVI, a village of Sardinia, in the prov. and 15 m. ESE of Sassari. Pop. 3,000.

NUMANSDORP, a village of Holland, in the prov. of S. Holland, 14 m. S of Rotterdam. Pop. 1,600.

NUMBALLE, a river of Ecuador, in the prov. of Jaen-de-Bracamoros, which falls into the Chinchipe, on the W side, in S lat. 5° 16′.

NUMIN, a river of Mandshuria, which descends from the E flank of the Hinghan, and runs SE to the Nun, which it joins on the r. bank, after a course of 120 m.

NUN, or WADY-NUN, a province of Marocco, forming the most southern part of the empire, and taking its name from a river which enters the Atlantic 35 m. SW of Cape Nun. Gum, wax, and ostrich-feathers, are the only commodities which it produces for export; its inhabitants carry on a considerable trade, however, with the interior of Africa, and several districts are fertile in corn. The whole extent of coast, from Aghadir to Cape Bojador, does not afford a single harbour. The inhabitants being chiefly wandering tribes, bear a small proportion in point of number to the extent of their territory. See MAROCCO.

NUN, or NON, a river of Mandshuria, which passes the towns of Merghen, Nimmen, and Sitsikar, and joins the Sungari, on the l. bank, after a S course of 520 m. It receives the Hogar, the Numin, the Yol, the Shol, and the Toro.

NUN, a central deltoid-branch of the Niger, falling into the gulf of Guinea at Cape Nun, 65 m. W of the mouth of the Bonny or New Calabar, and 130 m. SSE of that of the Benin. The N. from the anchorage inside the bar has the same general appearance with the neighbouring rivers, the banks presenting a luxuriant foliage consisting chiefly of mangroves, interspersed with oil and cocoa-nut palm trees, reaching down to the water's edge. The pop. along its banks, few in number, reside chiefly in two villages on the l. bank, near the sea, one of which is called Acassa. They carry on some little trade with the natives higher up the river, and get provisions in return, but their trade with Europeans is inconsiderable. Though the bar of the N. has as much water on it as the bar of the Bonny, ships experience great difficulty in getting out, owing to the tide setting strongly across the channel, and to this may be attributed the smallness of the palm-oil trade of this river. "For the first few miles," says Capt. Trotter, in his report of the ascent of the Niger, "there was a want of animation, few birds or living things of any kind being seen, and only a single canoe, the solitary occupant of which paddled as fast as he could into the mangroves to avoid the steam-vessels. A lonely hut appeared occasionally, with its floor scarcely out of the water: the few inhabitants, who were generally quite naked, appeared much alarmed at our approach. The stream on each side was lined with mangroves, with oil-palms and other trees appearing occasionally amongst them. As we proceeded upwards from Sunday island, where the influence of the tides gives place to the constant downward current of the river, a marked change took place in the scenery. The banks began to be slightly elevated above the water, and instead of the mangrove a variety of beautiful palms and other trees formed a forest so dense, that for upwards of 100 m., except where spots were cleared for cultivation, the eye could not penetrate more than a few yards beyond the water's edge. These cleared spots, containing yams, cocoas, cassadas, Indian corn, plantains, and occasionally sugar-cane, began to appear immediately after leaving Sunday island, and gradually became more frequent. Solitary huts were now succeeded by clusters, and clusters of huts by villages, the villages became larger and more populous, while the natives showed themselves less timid, and often came off in their canoes to hold intercourse with us. For the first 50 m. there was little appearance of trade; but afterwards large canoes were seen carrying palm-oil, destined for Brass-Town and Bonny." Owing to the large quantity of stores and provisions with which they were laden, the steamers composing Captain Trotter's expedition seldom made good more than from 25 to 30 m. a-day. They began their ascent of the river on the 20th August, and on the afternoon of the 26th reached the town of Abòh or Ibo, 130 m. from the sea. The banks of the river the whole way up to nearly the N limit of the Abòh country, were perfectly flat, and presented with few exceptions a continuance of impenetrable forest, which, though beautiful, and at first pleasing to the eye, wearied it at length by its sameness: it was a great relief, therefore, to find the ground afterwards slightly elevated and undulating, and the country more open. Having left Abòh on the 28th of August, the expedition on the 2d of September came in sight of the high cliffs on which the town of Iddah stands, and of detached hills appearing still higher up the river. On the 10th of September it reached the confluence of the Niger and Chadda. See NIGER.

NUN (CAPE), a headland on the coast of Marocco, in N lat. 28° 46′, W long. 11° 3′.

NUN-BURNHOLME, a parish in the E. R. of Yorkshire, 3 m. ESE of Pocklington. Area 2,137 acres. Pop. in 1841, 263; in 1851, 253.

NUNCRATA (LA), a village of Naples, in Abruzzo-Ultra 1ma, 9 m. SSW of Ascoli.

NUNDA, a township in Alleghany co., state of New York, U. S., 20 m. N of Angelica. Pop. 2,637.

NUNDAPORAM, a town of Hindostan, in the Northern Circars, district of Cicacole, in N lat. 18° 23′.

NUNDEAL, a town of Hindostan, in the Balaghaut, 67 m. NNW of Cuddapah.

NUNDUNGUR, a town of Hindostan, in the prov. of Bahar, district of Durbungah, in N lat. 26° 12′.

NUNDURBUR, a town of Hindostan, in the prov. of Burhampur, 32 m. from Turkeira. It is now nearly in ruins, but still contains about 500 houses. On an isolated hill to the W of the town is the tomb of a saint, which is much visited by devotees from all quarters.

NUNDYDRUG, a celebrated fortress of Hindostan, in the prov. of Mysore, in N lat. 13° 22′, E long. 77° 53′, 31 m. E of Bangalore. It is built on the summit of a rock, about 1,700 ft. high. It was taken by storm, by the British troops, in 1791, after an obstinate defence of three weeks.

NUNEATON, a parish and market-town in the co. of Warwick, 19 m. NNE of Warwick, and 8½ N by E of Coventry. The parish includes the hamlets of Attleford, and Stockingford. Area 6,112 acres. Pop. in 1801, 4,769; in 1831, 7,799; in 1851, 8,133.—The town, pleasantly situated on the river Anker, had a pop. of 4,859 in 1851. The inhabitants are chiefly employed in the manufacture of ribbons.

NUNEN, a village of Holland, in the prov. of N. Brabant, 6 m. ENE of Eindhoven. Pop. 1,700.

NUNEZ (RIO), a river of Senegambia, which rises on the frontier of the Fulah kingdom of Futah-Jallon, and falls into the Atlantic, in N lat. 10° 40′, after a WSW course of 150 m. The country on its banks is very unhealthy. At present about 15 or 20 vessels of from 200 to 300 tons, chiefly French, visit this river yearly for purposes of trade. Two-thirds of the imports are British manufactures and

salt. The exports are gold, ivory, hides, wax, and ground-nuts.

NUNIA. See NIMRUD.

NUNIVAK, an island of Russian America, in N lat. 60°, off Cape Arinoff.

NUNJENGODE, a town of Hindostan, in the prov. of Mysore, on the S bank of the Cubany, inhabited chiefly by Brahmins, who are supported by a celebrated pagoda, to which immense numbers of Hindus annually resort.

NUN-KEELING WITH BEWHOLME, a parish in the E. R. of Yorkshire, 10 m. NE by N of Beverley. Area 2,220 acres. Pop. in 1841, 291; in 1851, 269.

NUNKIRCH, a village of Prussia, in the reg. and 15 m. SE of Treves. Pop. 550.

NUNNEY, a parish in Somersetshire, 3 m. SW by W of Frome. It includes the hamlet of Trudoxhill. Area 2,421 acres. Pop. in 1831, 1,204; in 1851, 1,115.

NUNNINGTON, a parish in the N. R. of Yorkshire, 4½ m. SE by S of Helmsley, on the S bank of the Rye. Area 1,600 acres. Pop. in 1831, 441; in 1851, 443.

NUNO-PEREIRA, a small island near the E coast of Madagascar, in S lat. 13° 50′.

NUNO-TRISTAO, a small river of Western Africa, which falls into the Atlantic, in N lat. 9° 40′.

NUNTHORPE, a chapelry and township in Ayton p., Yorkshire, 3½ m. NNE of Stokesley. Area 1,410 acres. Pop. in 1831, 125; in 1851, 126.

NUNTON, a parish in Wilts, 2½ m. SSE of Salisbury. Area 1,040 acres. Pop., with that of Bodenham, in 1831, 309; in 1851, 276.

NUORO, a town of Sardinia, 60 m. ESE of Sassari, on the summit of a mountain, 1,907 ft. in alt. Pop. 3,600. It is the see of a bishop, and has a cathedral, 3 churches, 3 *oratorii*, a monastery, and a large circular prison.

NUR, a town of Poland, on the r. bank of the Bog, 70 m. ENE of Warsaw. Pop. 500.

NURA, a river of the duchy of Parma, which rises on the confines of the Genoese territory, and falls into the Po, 6 m. NE of Piacenza.—Also a small town of the duchy of Parma, prov. of Piacenza, between the rivers Nura and Zena.

NURALLAPUR, a town of Bengal, in the district of Dacca, on the N bank of the Ganges, 24 m. SW of Dacca.

NURAMINIS, a town of Sardinia, 15 m. NNW of Cagliari. Pop. 1,200.

NURBUDDAH. See NERBUDDAH.

NUREMBERG, or NURNBERG, an ancient town of Bavaria, formerly a celebrated free city of the empire. It stands in a wide, sandy, but well cultivated plain, 97 m. NNW of Munich, on the Pegnitz, a considerable but not navigable stream which, flowing from E to W, divides it into two parts. Though no longer fortified, it is surrounded by an old wall, and a ditch, with round towers at intervals, embracing a circuit of about 3 m. Several of the streets are wide, but they are mostly crooked and irregular. Of its public edifices, one of the oldest is the castle or fort called Reichsfeste, the occasional residence of emperors in the Middle ages, but now used as a granary. The Rath-haus or council-house, built in 1619, is a fine old structure. Several extraordinary subterranean passages extend from this edifice to beyond the walls. The public library is remarkable for its manuscripts and early editions of printed books. The establishment of the Burg-grave of N. took place so far back as 1060; the purchase of the city-rights by the inhabitants from the emperors, dates from 1427. Its early trade consisted partly in the sale of the merchandise of the Mediterranean and East Indies, received from Venice, previous to the discovery of the maritime passage by the Cape of Good Hope; but its chief source of prosperity lay in its manufactures. Upwards of four centuries ago, N. was noted for its manufactures in iron, brass, and other metals. Paper also was made here at an early date. Musical and mathematical instruments, wooden clocks, copper-plates, pins, needles, spectacles, and toys of all kinds, whether of hardware, wood, or *papier maché*, are largely manufactured in N.; and the printing and bookselling business is carried on to a considerable extent. N. possesses a school for drawing and another for painting; a picture-gallery; several collections of books, instruments, and natural curiosities; an academy for teaching several of the arts practically; and a celebrated gymnasium. This city appears to have been most prosperous in the 15th and 16th cent.; its decline is to be attributed to certain defects in its political constitution, which admitted of the management of public affairs being engrossed by a small number of families. Even now the number of persons practising each trade is limited by law, so that, until a vacancy occur by death, no artist can establish himself in business: such a law puts an end to every thing like competition or enterprise. In 1802, long pending discussions with Prussia were adjusted, and N., declared neutral in all future wars of the empire, was enabled to disband its military establishments. In a few years, however, the formation of the Confederation of the Rhine put an end to its existence as a separate state, and placed both the town and its territory in the hands of Bavaria. Its pop. in 1846 was 45,381. The first railway in Germany was opened between N. and Fürth in 1836. It is 3¼ m. in length, and was constructed at an expense of 200,000 florins, or about £50,000. It has proved a highly successful speculation, yielding in 1850, a net profit of 26,861 florins, or above 13 per cent. on the capital.

NURIA, a mountain of the Pyrenees, on the frontier of Spain, a few miles to the N of Campredon in Catalonia. Over it is a pass called the Colde-Nuria.

NURNEY, a parish in co. Kildare, 3¾ m. S by W of Kildare. Area 1,798 acres. Pop. in 1841, 735.

NURPUR, a district and town of Hindostan, in the prov. of Lahore, 60 m. NE of Amritsir. The town is situated on the top of a hill, in N lat. 33° 12′. It has a pop. of from 6,000 to 8,000, a considerable number of whom are employed in shawl-weaving.

NURRAH, a town of Hindostan, in the prov. of Gundwanah, in N. lat. 21° 2′.

NURRI, a commune and village of Sardinia, 8 m. E of Isili. Pop. of com. 2,154.

NURSINGHUR, a town of Bengal, 38 m. NE of Sangur.

NURSLING, a parish of Hampshire, 3 m. S of Romsey. Area 2,124 acres. Pop. in 1851, 1,024.

NURSTED, a parish of Kent, 4 m. SW of Gravesend. Area 510 acres. Pop. in 1841, 36; in 1851, 34.

NURTINGEN, a town of Würtemberg, on the r. bank of the Neckar, 14 m. SE of Stutgard. Pop. 3,982, employed in agriculture and in the manufacture of woollen and cotton stuffs and musical instruments.

NURWUR, a town of Hindostan, in the prov. of Agra, on the road from Bhopal to Agra. It is surrounded by a stone wall; and almost all its buildings are of stone, two stories high, and flat-roofed. It is said to contain 1,100 shops. Its fort is 526 ft. above the level of the town.

NUSCO, a town of Naples, in Principato-Ultra, 46 m. W by N of Naples. Pop. 4,000. It is the see of a bishop

NUSHAR, a village of Asiatic Turkey, 55 m. SW of Diyarbekir.

NUSLAU, or NUSISLAU, a town of Moravia, 14 m. S of Brunn, near the l. bank of the Schwarza. Pop. 1,000.

NUSSAOUH, a town of the Birman empire, situated on the W bank of the Irawaddy, a little above the head of the Bassein branch of that river.

NUSSBUCH, a village of Baden, in the bail. and 1 m. E of Tryberg. Pop. 640.

NUSSDORF, two market-towns of Hungary, in the palatinate and 23 m. NNE of Presburg.—Also a village of Lower Austria, on the Danube, 4 m. N of Vienna.

NUSSERITABAD, or SACKUR, a town of Hindostan, in the prov. of Bejapore, in N lat. 17° 20′.

NUSSIRABAD, a town of Hindostan, in the prov. of Ajmir, 15 m. from Ajmir, situated in a plain scantily covered with soil, in N lat. 20° 56′. There are neat and regular cantonments here. The surrounding country has a wild and bleak appearance.

NUSSIRPUR, a district of Sind, situated between the 25th and 27th parallels of N lat., and intersected by the river Indus.—Its capital, of the same name, is situated near the Indus, in N lat. 25° 28′.

NUSSLOCH, a town of Baden, 6 m. S of Heidelberg. Pop. 1,400.

NUTFIELD, a parish of Surrey, 1 m. W of Blechingley. Area 3,373 acres. Pop. in 1851, 895.

NUTH, a village of Belgium, in the prov. of Limburg, cant. and 2 m. SSW of Oirsbeek. Pop. 1,200.

NUTHALL, a parish of Notts, 5 m. NW of Nottingham. Area 1,644 acres. Pop. in 1851, 685.

NUTHAMPSTEAD, a hamlet in Barkway p., Hertfordshire, 5½ m. SE of Royston. Pop. 302.

NUTHE, a small river of Prussian Saxony, which rises near Juterbock, and falls into the Havel, on the r. bank, opposite Potsdam, after a N course of 36 m.

NUTHUIRS, a village of Persia, in the prov. of Irak, situated on a small plain surrounded by mountains, on the road from Ispahan to Sultanieh, 63 m. N of Ispahan.

NUTHURST, a parish of Sussex, 4 m. SSE of Hursham. Area 3,260 acres. Pop. in 1841, 768; in 1851, 727.—Also a hamlet in Solihull p., in Warwickshire. Area 750 acres. Pop. in 1851, 113.

NUTLEY, a parish of Hants, 6 m. SW of Basingstoke. Area 1,501 acres. Pop. in 1851, 169.

NUTSCHOW, a village of Mecklenburg-Schwerin, in the bail. and 6 m. N of Gnoien.

NUYTS ARCHIPELAGO, a designation given to the islands and rocks off the SW coast of Australia, between the meridians of 132° and 134° E, or Cape Nuyts and Point Westall. The largest are St. Francis and St. Peter.

NUYTS (CAPE), a rocky headland on the S coast of Australia, in S lat. 32° 2′, E long. 132° 25′.—Several large reefs lie off this headland. The southernmost are 2 or 3 m. in length. The northern extend about 8 m. along the coast, and at the distance of about 8 m. from it.

NUYTS LAND, a designation sometimes given to that part of the coast of S. Australia which lies between the meridians of 116° 40′ and 132° 30′, which was discovered by the Dutch navigator, Nuyts, in 1627.

NUYTS (POINT), a headland on the S coast of W. Australia, in S lat. 35°, E long. 116° 30′.

NUZIDERS, a large village of the Tyrol, in the Vorarlberg, near Pludentz.

NYACK, a village of New York, U. S., on the Hudson river, 108 m. SW of Albany. Pop. 800.

NYAMI, a town of Bambarra, in Central Africa, 48 m. NE of Sego.

NYAMU, a village of Bambarra, 140 m. W of Sego.

NYANITZ, a town of Moldavia, 60 m. W of Jassy, near the l. bank of the Nemz, an affluent of the Moldava.

NYARA, a large town of Bambarra, on the l. bank of the Joliba, 40 m. NE of Sego.

NYARPET, a town of Hindostan, 65 m. NW of Madras.

NYAS. See NIAS.

N'YASSI, a great lake of S. Africa, the existence of which has been placed beyond a doubt by recent investigations, and especially by the researches of Mr. Cooley. It lies to the NE of the territories of the Cazembe, and NW of Mozambique; stretching in a NW and SE direction between the meridians of 30° and 35° E, and intersected centrally by the parallel of 10° S. The Luapula or Ruapura, a large river, flows into its W side: and various smaller streams from the Kitshinga, Tanga, and Moviza territories, lying to the SW of the lake.

NYBUNDAN, a village of Mekran, in Persia, 50 m. W of Burjun.

NY CARLEBY. See KARLEBY.

NYEBORG, or NYBORG, a town of Denmark, on the E side of the island of Funen, opposite to the island of Zealand, and 16 m. W of Corsoer, in N lat. 55° 19′, E long. 10° 48′. Pop. 3,200. It has a large but not very secure harbour. It is here that ships passing through the Belt pay toll. The Swedes were defeated here in 1659.

NYEHASKE, a village of Holland, in the prov. of Friesland, 18 m. S by E of Leeuwarden. Pop. 900.

NYEKIOBING, a town and port of Denmark, in the island of Falster, on the Guldborg-sund, 62 m. SW of Copenhagen. Pop. 1,600. It is tolerably well-built, and has an hospital and 4 schools. Its inhabitants are employed partly in agriculture partly in navigation. In 1849, 252 vessels entered this port; and 57,900 tons of grain were exported from it to England.—Also a town of Denmark, on the N coast of the island of Sieland, in the gulf of Isefiord, 38 m. WNW of Copenhagen. Pop. 900. It has a good harbour, and some trade.

NYER, a village of France, in the dep. of Pyrenees-Orientales, 1 m. S of Olette, and 9 m. SW of Prades. Pop. 500. There are hot springs here.

NYESTED, a trading town of Denmark, in the island of Laaland, 26 m. ESE of Naskow, in N lat. 54° 48′.—Also a port of Denmark, on the E side of the island of Mors, 12 m. SSE of Thisted, on the Salling-sund, a branch of the Lymfiord. Pop. 700. In 1849, 265 vessels = 6,610 lasts, entered this port.

NYFFE. See NUFI.

NYHAMM, a harbour of Sweden, at the mouth of the river Ljusna. The entrance is difficult, but the interior is secure.

NYIR-BATHOR, a town of Hungary, in the com. of Szabolcs, 30 m. NE of Debreczin.

NYIREGYHAZA, a town of Hungary, in the com. of Szabolcs, 9 m. NW of Nagy-Kallö, and 29 m. N of Debreczin. Pop. in 1845, 15,740, whose employments partake more of country than of town labour, consisting in the tillage of the vicinity, the rearing of cattle, and making of wine, soda, and salt.

NYKERK, a town of Holland, in the prov. of Gelderland, 27 m. NW of Arnheim. Pop. 3,800.

NYKOPING, a laen or government of Sweden, lying between the parallels of 58° 35′ and 59° 30′, comprising the western and most considerable part of the province of Sudermania. It is bounded on the N by the Moelar lake; on the E by the laen of Stockholm; on the S by that of Linköping; and on the W by Œrebro. It has an area of 2,507 sq. m.

Pop. in 1825, 106,793; in 1840, 114,920. Its surface is hilly, but nowhere attains a greater elevation above sea-level than 1,500 ft. Its principal rivers are the Torshaella-aa, the Nyköping, and the Trosa. Its mineral products are important. Its chief towns are Nyköping, Strongnaes, and Eskilstuna.

NYKÖPING, the capital of the above laen and of Sudermania, is situated on a bay of the Baltic, 49 m. SW of Stockholm, in N lat. 58° 46′. It is one of the neatest towns of the kingdom, being well built, with broad and straight streets; but its pop. is only 2,900. Its manufactures are pretty considerable, consisting of brass wares, woollen and cotton stuffs, paper, and starch; and its trade and navigation extensive for so small a place. The Swedish language is supposed to be spoken in great purity in this town.

NYKYRKA, a town of Sweden, on the E shore of Lake Witter, 45 m. W of Norrköping.

NYLACKY, one of the Banda islands, in the Eastern seas, in S lat. 4° 11′.

NYLAND, a province of Russia, in the gov. of Finland, bounded by the gulf of Finland, Karelia, Tavastehus, and Finland proper. Its area is 4,880 sq. m. See TAVASTEHUS.

NYLAND, a parish in Somersetshire, 6 m. NW of Wells. Area 590 acres. Pop. in 1851, 38.

NYLEN, a canton and town of Belgium, in the prov. of Antwerp, 60 m. NE of Lierre, on an affluent of the Neethe. Pop. 1,729.

NYMBRECHT, a village of Prussia, in the reg. and 30 m. ESE of Cologne. Pop. 400.

NYMETT-ROWLAND, a parish in Devonshire, 4 m. SSE of Chulmleigh. Area 595 acres. Pop. in 1831, 99; in 1851, 99.

NYMETT-TRACEY. See Bow.

NYMPHONBURG, a village of Bavaria, 4 m. NW of Munich. There is a royal chateau here, and a porcelain manufactory. Pop. 1,120.

NYMPHSFIELD, a parish in Gloucestershire, 3¼ m. E by N of Dursley. Area 1,472 acres. Pop. in 1841, 466; in 1851, 417.

NYMPTON-BISHOPS, a parish in Devonshire, 3 m. SE by E of South Molton. Area 9,579 acres. Pop. in 1841, 1,325; in 1851, 1,246.

NYMPTON (ST. GEORGE), a parish in Devonshire, in the hund. of Chulmleigh. Area 2,240 acres. Pop. in 1851, 292.

NYMPTON (KING'S), a parish in Devonshire, 3½ m. N by W of Chulmleigh. Area 5,539 acres. Pop. in 1841, 777; in 1851, 719.

NYNT, three adjoining villages of Hungary, 7 m. SSE of Raab. The wine made here is exported in large quantities to Silesia.

NYON, a town of Switzerland, in the cant. of Vaud, on the NW side of the lake and 11 m. N of Geneva. Pop. in 1850, 2,471. It has a well frequented yearly fair, and some carrying trade, with manufactories of leather and porcelain. It is supposed to occupy the seat of the Roman *Novodunum*.

NYONS, a commune and town of France, in the dep. of Drome, 32 m. NE of Avignon. Pop. 3,251. It has manufactories of silk, earthenware, and leather.

NYPATUR, a town of Hindostan, in the district of Baramahl, on the l. bank of the Panar, 30 m. SE of Caverypatam.

NYRA, a river of Hindostan, which descends from the E flank of the Western Ghauts; runs E; and joins the Bimah on the r. bank, near Norsingpur, after a course of 120 m.

NYRMUL. See NIRMUL.

NYSLOTT, a town of Russia, in Finland, in the district of Savolax, 60 m. N of Viborg, on Lake Outroufs. It has a strong castle on a rock, in the middle of a deep stream. It was ceded to Russia at the peace of Abo, in 1743.

NYSTAD, a sea-port of Russia, in Finland, 38 m. NW of Abo, in N lat. 60° 49′. Pop. 2,000. It has manufactures of linens and woollens, and of knit stockings; and carries on a traffic in provisions, oars, rudders, and other wooden articles. In 1721, a treaty was concluded here between Russia and Sweden.

NYSTED. See NYESTED.

NYTHANA, a village of Hindostan, in the prov. of Gurwhal, 18 m. SW of Sirinagur.

NYULAS, or HAIS, a town of Hungary, in the com. of Wieselburg, 27 m. SW of Presburg, on the banks of a small lake of the same name. Pop. 850.

O

O, or ST. MARTIN D'O, a town in the N of France, dep. of Orne, 9 m. S of Argentan.

OA, a parliamentary parish in the island of Islay. It belongs *quoad civilia* to the p. of Kildalton; and comprises the SE peninsula of the island.

OACCO, a district of Southern Africa, in the interior, NE of Benguela, and on the upper part of the course of the Coanza.

OACHATE, a harbour on the S point of the island of Ulietea, in S lat. 16° 55′, W long. 151° 24′.

OADBY, a parish of Leicestershire, 3 m. SE of Leicester. Area 1,560 acres. Pop. in 1841, 1,085; in 1851, 1,196.

OAGHILL, a village near the centre of the island of Arran, in co. Galway.

OAHU, WOAHOO, or WAHU, a beautiful island in the Sandwich group, 25 m. WNW of Morokai. It is about 46 m. in length, and 23 m. wide. Mr. Ellis characterises it as "the most romantic and fertile of the Sandwich islands;" but Captain Wilkes says it has a greater resemblance to the desert coast of Peru than any other of the Polynesian islands he visited. A chain of lofty mountains rises near the centre of the E part of the island, and extends about 20 m. to the plain of Eva, which divides it from another mountain-ridge running parallel to the NW shore. The whole island is volcanic. Its pop. in 1849 was 23,145. The town and harbour of Honolulu is situated on the S side of the island, in N lat. 21° 20′, W long. 157° 45′. See HONOLULU.

OAKA. See OKAMUNDEL.

OAK CREEK, a river of Ohio, which runs into

the Ohio, a few miles above Augusta, in Kentucky. —Also a village in Milwaukie co., in Wisconsin, 93 m. E of Madison.

OAKE, a parish of Somersetshire, 5 m. W of Taunton. Area 865 acres. Pop. in 1841, 174; in 1851, 168.

OAKFORD, a parish of Devonshire, 3 m. W by S of Bampton. Area 5,464 acres. Pop. in 1841, 641; in 1851, 625.

OAK GROVE, a village of Westmoreland co., Virginia, U. S., 52 m. NE of Richmond.—Also a village in Livingston co., in Michigan.

OAKHAM, a parish, and the capital of the co. of Rutland, 6¼ m. N by W of Uppingham, and 95 m. NNW of London. Area of p. 3,130 acres. Pop in 1831, 2,390; in 1851, 3,031.—The town is pleasantly situated in the rich and fertile vale of Catmose. The assizes and quarter-sessions for the co. are held in the shire-hall, an ancient building, supposed to have formed part of a castle erected here in the reign of William I. The co.-jail and house-of-correction stands in an airy situation, close to the town. The Leicester and Peterborough railway has a station here, 26¾ m. from Leicester, and 110½ m. from Norwich.

OAKHAM, a township of Massachusetts, U. S., 64 m. W of Boston. Pop. 1,038.

OAKHAMPTON, a parish and borough in the co. of Devon, 22 m. W by N of Exeter, in a valley watered by the Ocke. Area of p., including the hamlet of Kigbear, 9,552 acres. Pop. in 1831, 2,055; in 1851, 2,165. The town is surrounded on every side by hills, and derives its chief importance from being situated on the great road from Exeter to Launceston. It returned 2 members to parliament until disfranchised by the reform bill. It is one of the polling-places for the S division of the co.

OAKHAMPTON (Monk), a parish in Devonshire, 2¾ m. ENE of Hatherleigh, on the E bank of the river Okement. Area 1,488 acres. Pop. 270.

OAKHILL, a village of Jackson co., Ohio, U. S., 80 m. SSE of Columbus.—Also a village of Granville co., in N. Carolina.

OAKINGTON, a parish in Cambridgeshire, 4¼ m. NW by W of Cambridge. It includes the hamlet of Westwick. Area 1,757 acres. Pop. in 1851, 694.

OAKLAND, a county in the E part of the peninsular portion of Michigan, U. S., watered by the Clinton. Area 900 sq. m. Pop. in 1840, 23,646; in 1850, 31,266. Its cap. is Pontiac.—Also a village in Alleghany co., in New York, situated on Cashaqua creek.—Also a village in Claiborne co., in Mississippi, 87 m. SW of Jackson. It is the seat of a Presbyterian college, founded in 1831.—There are numerous other villages and hamlets of this name in the U. S.

OAKLAND, a township of Upper Canada, in Brock district, to the SW of Brantford. Pop. in 1842, 464. It contains a v. of the same name.

OAKLEY, or Ockley-Reynes, a parish in Bedfordshire, 3¼ m. NW of Bedford, on the river Ouse. Area 1,740 acres. Pop. in 1841, 492; in 1851, 457. —Also a parish in Bucks, 12½ m. W by S of Aylesbury. Area 2,250 acres. Pop. in 1841, 391; in 1851, 425.—Also a township in Croxhall p., Staffordshire, 2½ m. N by W of Tamworth, in the line of the Birmingham and Derby railway.—Also a township in Muckleston p., Staffordshire, 2 m. NE of Drayton-in-Hales, in the line of the Liverpool and Birmingham Junction canal.—Also a parish in Suffolk, 2½ m. NNE of Eye. Area 1,288 acres. Pop. 336.

OAKLEY (Great), a parish in Essex, 6 m. SE by E of Manningtree. Area 3,049 acres. Pop. in 1831, 1,118; in 1851, 2,177.—Also a parish in Northamptonshire, 5 m. N of Kettering. Area 2,810 acres. Pop. in 1831, 204; in 1851, 197.

OAKLEY (Little), a parish in Essex, 4 m. SW by W of Harwich. Area 1,119 acres. Pop. in 1831, 244; in 1851, 293.—Also a parish in Northamptonshire, 5½ m. NNE of Kettering. Area 724 acres. Pop. in 1831, 128; in 1851, 123.

OAKLEY, a parish of New South Wales, in Bathurst co., skirted on the E by the Campbell river.

OAKMERE, a township in Delamere p., co.-palatine of Chester, 10 m. E by N of Chester. Area 2,800 acres. Pop. in 1831, 140; in 1851, 252.

OAKMULGEE. See Ocmulgee.

OAKOVER, a parish in Staffordshire, 10 m. E by N of Cheadle, on the W bank of the Dove. Area 810 acres. Pop. in 1831, 62; in 1851, 61.

OAKSEY, a parish in Wilts, 5½ m. NE by N of Malmesbury, in the line of the Great Western railway. Area 1,802 acres. Pop. in 1851, 487.

OAKSVILLE, a village in Otsego co., in New York, U. S., 73 m. W of Albany.

OAKTHORPE and DONISTHORPE, hamlets, partly in the p. of Nether Seal, co. of Leicester, and partly in the p. of Church Gresley, co. of Derby, 3½ m. SW of Ashby-de-la-Zouch. The pop. of Oakthorpe in 1851, was 591; of Donisthorpe, 392.

OAMBA, a town of Lower Guinea, on the l. bank of the Loge, 180 m. SE of San Salvador.

OARE, a chapelry in Chieveley p., Berks, 5 m. NNE of Newbury.—Also a parish in Somerset, 12 m. W of Minehead. Area 4,000 acres. Pop. in 1841, 59; in 1851, 57.—Also a parish in Kent, 1½ m. N by W of Faversham, on the river Swale. Area 686 acres. Pop. in 1841, 186; in 1851, 195.

OASIS, a name used by geographers to designate any small fertile tract surrounded by deserts. Strabo says, the word *oasis* is a name given, in the language of Egypt, to inhabited cantons, entirely surrounded by vast deserts, in which they resemble so many islands in the midst of the ocean. The Arabs call them *waheh*, *i. e.* 'inhabited places.' The best known are those which occur on the Libyan desert, which are generally reckoned three in number: viz. the Oasis Magna; the Oasis Parva, or that of El-Kassar; and the Libyan Oasis, or Oasis of Siwah. To these some add the Western Oasis, first visited by Sir Archibald Edmonstone in 1819. Edmonstone and Rennell agree that the foundation of these spots of fertility in the Desert must have been first laid by the vegetation occasioned by springs, the decay of which gradually produced more soil. They are always surrounded with high lands. Under the Empire, the whole region of the oases was attached to the *Heptanomis*. The Roman emperors made them places of exile for state-delinquents. The Arians also exiled their ecclesiastical opponents thither. See articles Ammon, Dakhel, Gara, Khargeh, and Siwah.

OATHLAW, a parish in Forfarshire, 4 m. NNE of Forfar. Area 3,870 acres. Pop. in 1831, 533; in 1851, 424, a decrease attributed to the stoppage of a spinning mill, and the demolition of cottages.

OATLANDS, a village of Van Diemens Land, in Monmouth co., on the Dulverton river, 51 m. from Hobarton.—It gives name to a police-district of 900 sq. m., and also to a hundred.

OAXACA, or Guaxaca, a department of the Mexican federacy, stretching along the coast of the Pacific, and between the parallels of 15° 45′ and 18° 20′ N; is bounded on the N by Vera-Cruz and Tabasco; on the E by Guatimala; on the S by the Pacific; and on the W by Puebla. Its superficial extent is 4,447 sq. leagues, or nearly 33,000 sq. m. Its pop. in 1808 was estimated at 600,000; but in 1842 at only 500,278. It is traversed from NW to SE by the cordillera of Anahuac. The Rio-Verde waters the extensive valley of O.; the Chicomtepec, the Chapalaya, the Tehuantepec, and the Chimalapas, flow into the gulf of Tehuantepec, and the Rio-del-Passo into the gulf of Mexico. Except the valley of Guaxaca—which gave the title of Marquis del-Valle to Ferdinand Cortez, the conqueror of Mexico—the greater part of the country is mountainous, yet it abounds with wheat, cattle, sugar, cotton, honey, cocoa, plantains, and other fruits. It has mines of gold, silver, and lead; and all its rivers

have gold in their sands. Cassava, cochineal, crystal, and copperas abound; also vanilla, a drug chiefly used as a perfume to give chocolate a flavour. "The intendancy of Oaxaca," says Humboldt, "is one of the most delightful countries in this part of the globe. The beauty and salubrity of the climate, the fertility of the soil, and the richness and variety of its productions, all minister to the prosperity of the inhabitants; and this prov. has accordingly been, from the remotest period, the centre of an advanced civilization. The vegetation is beautiful and vigorous throughout, and especially half-way down the declivity of the table-land, in the temperate region, where the rains are very copious from May to October. This intendancy alone has preserved the cultivation of the cochineal, a branch of industry which it formerly shared with Puebla and New Galicia." In no other part of Mexico does the *nopal*—on which tree the cochineal insect subsists—flourish so well. Not only do the climate and soil appear peculiarly adapted to this plant in O., but the Indians of this dep. have, by a long course of practice, acquired so much experience in the manner of cultivating the nopal, and collecting the insects, as to preclude all rivalship in any of the other provinces. In some years there have been produced, in O., 400,000 lbs. of cochineal; worth in Europe, even during peace, about 1,600,000 dollars. The poor Indian who collects this precious commodity, barters it for manufactured goods to the Spanish shopkeepers in the villages, who together with the exactions of the government and the priesthood, leave to the Indian a miserable return for his industry. The mountains, particularly those of the Mistica, are peculiarly adapted to the growth of the mulberry-tree. The indigo of the district of Tehuantepec is superior in quality to that of Guatimala; but as there are no ports open to foreign commerce along the coast of the Pacific, in the vicinity of Tehuantepec, nor, indeed, on any part of the coast of O., the inhabitants have not been stimulated either to the culture of that, or of the cotton-plant, or of the sugar-cane, except so far as is absolutely necessary to supply their own immediate consumption. In all the mountainous districts of O., and more especially in the spacious valleys which are situated from 2,500 to 6,000 ft. above the level of the sea, we find a soil and climate at least equal, if not superior, to any on the globe: there is not a single article raised in the temperate zone that would not here find a congenial region. Wheat and all kinds of grain yield a return to the cultivator equal to that of the most fertile parts of Europe. The fruits and vegetables of O. are unrivalled for luxuriance and delicacy.

Oaxaca, the cap. of the above state, is built on the l. bank of the Rio Verde, 200 m. SSE of Mexico, on the site of the ancient Huaxyacac. Its pop. in 1808 was 38,000, but is now estimated at only 25,000. A magnificent situation, an excellent soil, a temperate climate, and a constant succession both of the fruits of Europe and America, would render O. a delightful city, were those physical advantages adequately improved by the industry of the inhabitants. The town is built in the form of an oblong square, nearly 2 m. by 1¼ m., including the suburbs, which are full of gardens and plantations of cochineal. The streets are wide and well paved; and the houses, of two floors, are built of freestone. The town-house, in the great square, is built with stone of a sea-green colour. The bishop's house and the cathedral form two sides of the same square, which is surrounded with arcades as a defence against the rain and the sun. The other churches and monasteries, which are numerous, are solidly built and richly decorated. The distance from the Atlantic to the Pacific ocean is very small between the bay of Tehuantepec and the port of Huasacualco; and the sources of the latter river and the Chimalapa approach each other under the parallel of 16° N: these circumstances have long suggested the project of a canal to connect the two seas. See Tehuantepec.

OBA, a town of Persia, at the head of a small gulf on the W coast of the Caspian, on one of the mouths of the Kur, 150 m. NE of Tabriz.

OBAN, a thriving little town and port of Argyleshire, situated in the p. of Kilmore, 25 m. SE of Tobermory, 33 m. WNW of Inverary, and 92 m. NW by N of Glasgow, at the head of a small bay which recedes from the sound of Kerrera, and has a boldly-indented coast backed by moderate-sized hills. It is of comparatively recent origin, and has risen rapidly from a trivial commencement. The opening of the Crinan and Caledonian canals, the construction of parliamentary and statute-labour roads in the interior, the introduction and improvement of steam-navigation, the general and rapid amelioration of the Highlands, the sudden and vast expansion of traffic between the western coasts and islands and the Clyde, and the origination of trade between the Highland west and very distant parts of the empire, have all kept the prosperity of the town in steady movement. The harbour and anchoring-ground of the port are particularly good. The bay is semicircular, has a depth of from 12 to 24 fath. of water, is quite sheltered from every wind, and affords at all times a safe retreat to ships of any burden. The imports are principally miscellaneous goods, from Glasgow and Liverpool; the exports chiefly pig-iron, whisky, wool, fish, kelp, and Easdale slates. The port is a central point for all the shipping which visits the NW parts of Scotland, or passes through the Caledonian canal; and it has constant and animating communication by steam-vessels with Glasgow, Greenock, Tobermory, and Inverness; and in summer sends off steamers to Staffa, Iona, Skye, Stornoway, and Liverpool. The chief manufactures are the distilling of whisky and the making of silk and straw hats. The burgh is represented in parliament jointly with Ayr, Irvine, Campbellton, and Inverary.—The pop. of the *quoad sacra* p. was 1,554 in 1841; and 1,871 in 1851.—The pop. of the parl. burgh in 1851 was 1,752.

OBDORSK, a station at the mouth of the Obi, in the Russian gov. of Tobolsk, in N lat. 66° 30′, E long. 67° 20′. The banks of the Obi here consist chiefly of mountains destitute of wood, and only here and there covered with a few shrubs; every attempt to introduce plants and vegetables has failed. Even domestic animals are unable to resist the climate, a horse seldom living more than one year; reindeer form the only resource of this country. The summer, however, though short is agreeable. A small palisadoed fort, the most northerly of any maintained by Russia, is here garrisoned by 25 Cossacks, whose officer forms a species of sovereign to the scattered tribes of Ostiaks and Samoiedes. The village consists of a wooden church, a few dark log-houses of the Cossacks, a number of Ostiak yurts scattered in various directions, and a few huts which serve as a magazine for the furs collected as tribute from the natives. A great annual fair is held here, which brings the Russian merchants into commercial intercourse with all the nomade tribes who wander over a region extending 1,250 geog. m. in lat. from Archangel to Turukhansk on the Lower Yenisei. Tobacco, iron and copper pots, axes, knives, needles, and steels for striking fire, are here bartered for peltry, clothing made of reindeer skin, venison, fossil ivory, down and feathers.

OBE. See Obi.

O-BECSE. See Becse.

OBEDACH, a town of Styria, in the circle and 12 m. SE of Judenburg. Pop. 640. It has a fortress, and possesses several forges, and a manufactory of earthenware.

OBEH, a range of mountains to the S of Nubia, in the Quamamyl, to the W of Tumat.

OBEID. See Lobeid.

OBER, a German word signifying 'upper.' Names commencing with this word, not found amongst the following, are to be sought for under the second name.

OBER. See Obra.

OBERALP, a territory of Switzerland, in the cant. of Uri, and district of Urserne, at the foot of the Crispalt, near the sources of the Rhone and the Aar. It is very elevated, and contains a small lake abounding with trout.

OBERAU, a village of Bavaria, in the presidial of Welheim, on the Loisach. It has an extensive gypsum quarry.—Also a v. of Saxony, in the circle of Misnia, and bail. of Grossenhayn. Pop. 260. Wine is cultivated in the environs.

OBERBACH, a village of Bavaria, 7 m. SW of Bischofsheim, on the l. bank of the Sinn, near Kreutzberg. Pop. 500. It has a manufactory of pottery, and a paper-mill.

OBERBETSCHDORF, a commune of France, in the dep. of Bas-Rhin, cant. and 3 m. S of Soultz-sous-Forets, and 12 m. S of Wissemburg. Pop. 1,238. It has manufactories of pottery.

OBERBRONN, or Oberbrunn, a commune of France, in the dep. of Bas-Rhin, cant. and 2 m. W of Niederbronn, and 12 m. W of Wissemburg. Pop. in 1841, 1,664. There are pottery-works here.

OBERBRUCK, a village of France, in the dep. of Haut-Rhin, and cant. of Massevaux, 15 m. NNE of Befort. Pop. 500. It has several blast-furnaces, and a manufactory of white iron.

OBERBURG, a town of Austria, in Styria, in the circle and 26 m. WNW of Cilly, and 17 m. SW of Windischgratz. Pop. 560. It has a castle, and a fine church.—Also a hamlet of Switzerland, in the cant. of Aargau, bail. of Brugg, and p. of Windisch. The ruins of the amphitheatre of the ancient *Vindonissa* are still to be seen here.—Also a v. in the cant. and 12 m. NE of Berne, bail. and 2 m. SSE of Berthoud, on the l. bank of the Emme. Pop. 1,470. In its vicinity are the mineral wells of Fonsbad.

OBERDORF, a town of Würtemberg, in the circle of the Jaxt, and bail. of Neresheim. Pop. in 1840, 1,324, of whom 567 were Jews.—Also a town of Bavaria, in the presidial and 48 m. SSW of Augsburg, and 15 m. ENE of Kempfen, on the r. bank of the Wertach. Pop. 965. It has a fine castle, in which is the tomb of the last elector of Treves.—Also a commune of Styria, in the circle of Gratz, near Voitsberg. It has a glass manufactory.—Also a village of Switzerland, in the cant. of Bâle, and district of Waldenburg. Pop. 500. It is well-built. In its vicinity is a mineral bath.

OBERDRAUBURG, a town of Illyria, in the gov. of Laibach, circle and 48 m. WNW of Villach, and 12 m. ESE of Lienz, on the l. bank of the Drave, and near the frontiers of Tyrol.

OBERENSINGEN, a village of Würtemberg, in the circle of the Schwarzwalde, bail. and 1½ m. NW of Nürtingen, and 15 m. SE of Stuttgart. Pop. 600. Millstone is quarried in the vicinity.

OBERGESTELLEN, a village of Switzerland, in the cant. of Valais, near the head of the valley of the Rhone, at an alt. of 4,360 ft. above sea-level.

OBERHALBSTEIN, a district of Switzerland, in the cant. of the Grisons. It comprises a valley 24 m. in length from NNW to SSE, extending from the mountains of Julier and Septimer to the l. bank of the Albula, and containing the villages of Tiefenkasten and Conters. The inhabitants are Catholics.

OBERHASLI. See Hasli.

OBERHAUSBERGEN, or Oberhusberyen, a commune of France, in the dep. of Bas-Rhin, 6 m. WNW of Strasburg. Pop. 414.

OBERHAUSEN, a village of Bavaria, in the presidial and 3 m. WSW of Neuburg, near the r. bank of the Danube.—Also a v. in the presidial and 5 m. S of Roggenburg, on the r. bank of the Roth. Pop. 400.

OBERHAYD, a town of Bohemia, in the circle and 29 m. S of Budweis, and 4 m. SE of Rosenberg, on a small affluent of the Moldau.

OBERHERGHEIM, a commune of France, in the dep. of Haut-Rhin, and cant. of Eusisheim, 9 m. S of Colmar, on the l. bank of the Ill. Pop. 1,660.

OBERHESSEN. See Hesse-Cassel.

OBERHOFEN, a village and fortress of Switzerland, in the cant. of Berne, bail. and 3 m. SE of Thun, on the E bank of the lake of that name. Pop. 731.—Also a v. in the cant. of Aargau, district of Laufenbourg. Pop. 626, Catholics.—Also a v. in the cant. of Thurgau, district of Gottlieben. Pop. 586, Protestants.

OBERHOLZHEIM, or Holzheim, a village of Würtemberg, in the circle of the Danube, and bail. of Wiblingen, 11 m. SSW of Ulm.

OBERINNTHAL. See Imbst.

OBERKAIL, a village of Prussia, in the reg. and 21 m. N of Treves. Pop. 500.

OBERKATZ, a town of the duchy of Saxe-Meiningen, in the Unterland, and in the bail. of Wasungen, 11 m. WNW of Meiningen, on the Katz. Pop. 300. In its vicinity are the ruins of the fortress of Wolfsburg.

OBERKIRCH, a town of the grand-duchy of Baden, in the circle of the Middle Rhine, on the r. bank of the Rench, 8 m. NE of Offenburg. Pop. 1,570. It is enclosed by walls, and has two suburbs. It possesses a paper and several oil-mills, and a forge.—Also a v. of Switzerland, in the cant. and 12 m. NW of Lucerne, bail. and circle and 1½ m. S of Sursee, on the NW bank of Lake Sempach. Pop. 1,141, Catholics. It has a house-of-correction.

OBERKOTZAU, a town of Bavaria, in the presidial and 5 m. WNW of Rehau, on the r. bank of the Saale. Pop. 800.

OBERLAND, a district in the E part of the duchy of Saxe-Meiningen, containing the towns of Schalkau and Sonnenberg.—Also a district of Switzerland, in the cant. of Berne, extending from Thun to the Bernese Alps, and forming the SE and most elevated portion.—Also a district in the NW part of the cant. of the Grisons.

OBERLAND, or Hocherland, an ancient territory of Prussia, in the prov. of E. Prussia, reg. of Danzig, and circle of Elbing.

OBER-LESCHIN, a village of Prussia, in the prov. of Silesia, reg. and 32 m. NW of Liegnitz, circle and 8 m. SE of Sprottau, near the r. bank of the Bober. Pop. 400.

OBERMOSCHEL, a town of Bavaria, in the Pfalz, 23 m. N of Kaiserslautern, and 9 m. SW of Kreutznach, on the Moschel, at the foot of a mountain. Pop. 630. In the environs are quarries of marble and limestone, and several mines of mercury and of coal.

OBERMOTTERN, a commune of France, in the dep. of Bas-Rhin, and cant. of Bouxwiller. Pop. 1,034. It has several flour-mills.

OBERNAI. See Ehnheim.

OBERNBERG, a town of Austria, in the prov. of Upper Austria, and circle of the Inn, near the r. bank of the river of that name, and 11 m. NW of Ried. Pop. 1,565. It has manufactories of linen.

OBERN-BUND. See Grisons.

OBERNBURG, a town of Bavaria, in the presidial and 38 m. W of Wurtzburg, on the l. bank of the Maine. Pop. 1,830. It has a considerable trade in wood.

OBERNDORF, a town of Würtemberg, in the circle of the Schwarzwalde, 11 m. NNW of Rotweil, and 48 m. SW of Stuttgart, on the l. bank of the Neckar. Pop. in 1840, 1,880, of whom 1,468 were Catholics. It has manufactories of arms, and several tanneries.—Also a town of Austria, in the prov. of Lower Austria, 23 m. SW of St. Polten, on the r. bank of the Melk.—Also a town of Hanover, in the gov. and 15 m. NW of Stade, and duchy of Bremen, in the bail. and 6 m. SE of Neuhaus, on the l. bank of the Oste. Pop. 1,580. Navigation and the manufacture of tiles form the chief branches of local employment.—Also a village of Prussia, in the prov. of the Lower Rhine, reg. and 42 m. ENE of Coblenz, and circle of Wetzlar-Braunfels, on an affluent of the Lahn. Pop. 300.

OBERNHOF, a village of the duchy of Nassau, 2 m. NE of the town of that name, on the r. bank of the Lahn. Pop. 260. It has a powder-mill and a forge. In the vicinity are mines of argentiferous lead and copper.

OBERNKIRCHEN, a town of Hesse-Cassel, in the prov. of Lower Hesse, and circle of Schaumberg, 11 m. E of Minden, and 29 m. W of Hanover, on the Bückeberg. Pop. in 1840, 1,787. It has an ancient abbey. In the environs are extensive quarries of freestone, the most noted in the N of Germany, and which for 400 years have supplied materials for a large proportion of the principal edifices in the Netherlands. It has also extensive coal-mines.

OBERPAHLEN, a village of Russia in Europe, in the gov. of Livonia, district and 53 m. ENE of Pernau, on the r. bank of a small river of the same name. It has a castle, formerly the residence of the grand duke of Holstein. Starch, powder, potash, and earthenware are its chief articles of manufacture.

OBERRIED, a village of Baden, in the circle of the Upper Rhine, bail. and 9 m. SE of Friburg, on the Brugge. Pop. 494.

OBERRIEDT, or Overriet, a village of Switzerland, in the cant. and 12 m. SE of St. Gall, and district of the Rhein-thal, in a marshy territory, near the l. bank of the Rhine.

OBERSEEBACH, a commune of France, in the dep. of Bas-Rhin, and cant. of Seltz, 9 m. SSE of Wissemburg. Pop. in 1840, 1,773.

OBERSHAUSEN, a village of the duchy of Nassau, in the bail. and 6 m. N of Weilburg. Pop. 300. It has several saw, tan, and oil mills.

OBERSITZKO, Oberzyko, or Obrzycko, a town of Prussia, in the prov. and regency and 30 m. NW of Posen, circle and 9 m. N of Samter, on the l. bank of the Warthe, which is here crossed by a bridge. Pop. in 1837, 1,700.

OBERSTDORF, a town of Bavaria, in the presidial and 7 m. S of Sonfothen, and 33 m. ESE of Lindau, near the r. bank of the Iller and the junction of its three head-streams. Pop. 1,800.

OBERSTEIN, a village of the duchy of Oldenburg, in the principality and 9 m. ENE of Birkenfeld, on the l. bank of the Nahe, on the road from Bingen to Saarbruck. Pop. 1,900. It has a castle, and a Catholic and Lutheran church. Agates are found in large quantities in the environs, and form an important branch of local trade. A coarse red conglomerate forms the basis of the sedimentary formations of the district, but near the village overlies and laps round protruding masses of amygdaloidal trap and porphyry. Near O., this conglomerate contains veins of imperfect agate or chalcedony of a honey-yellow or reddish colour, which by means of certain processes is made to assume the deep red of the carnelian. These however are not the real quarries of the celebrated agates, which come from the hills near Idal about 2 m. distant. Beyond Idal is a greenish-brown trap rock; some portions of which are softer than the others, and contain nodules from an inch to a foot in length, which are filled with chalcedony or agate. In an escarpment of this rock are the real agate quarries. The smaller agates are solid, being completely filled with a compact pale ash grey chalcedonic mass. The larger ones are invariably hollow; the outer circumference consisting of layers of the same pale grey chalcedony, lined with botryoidal mamellations, or imperfect quartz crystals. The large nodules are found compressed, flattened out, and elongated, marking a peculiar action during the time of their formation. It is the outer portion of the agate which is used for ornamental purposes; and the workmen have learnt to change their colour, some becoming dark brown or chocolate, others zoned with alternate layers of black and white or brown and white, like the onyx or sardonyx of antiquity,—not a few of which seem to have been produced in the same way.

OBERSTENFELD, a town of Würtemberg, in the circle of the Neckar, obmt and 7 m. NNE of Marbach, on the Bottwar. Pop. in 1840, 1,457. It has an ancient monastery.

OBERSTINKENBRÜNN, a town of Lower Austria, and lower circle of the Manhartsberg, 23 m. NNW of Korneuburg, on a mountain.

OBERSULZ, a town of Lower Austria, and lower circle of the Manhartsberg, 21 m. NE of Korneuburg, and 5 m. SW of Zistersdorf.

OBERTYN, a town of Galicia, in the circle and 12 m. NNE of Kolomea, and 30 m. SE of Stanislawow, on the Czerniawa. Pop. 1,463, of whom 613 are Jews.

OBERVILLACH, a town of Illyria, in the gov. of Laybach, circle and 42 m. NW of Villach, and 20 m. W of Gmund, on the l. bank of the Mole, at the foot of lofty mountains. It has manufactories of steel-wire and of needles.

OBERWALD, an elevated tract of country in Hesse-Darmstadt, in the chain of the Vogelsberg. It has an alt. of 870 yds. above sea-level, and comprises the highest summits of the chain.

OBERWESEL, a town of Prussia, in the prov. of the Rhine, regency and 19 m. SSE of Coblenz, circle and 3 m. S of St. Goar, on the l. bank of the Rhine. Pop. 2,361. In its vicinity are the ruins of the castle of Schönberg.

OBERWINZ. See Felvinz.

OBERWYL, a village of Switzerland, in the cant. and 21 m. S of Berne, and bail. of Nieder-Simmenthal, on the l. bank of the Simme. A little to the NE are the mineral baths of Buntschibad.

OBERZENN, a town of Bavaria, in the presidial and 11 m. NNE of Leutershausen, and 8 m. WSW of Markt-Erlbach, on the Zenn.

OBESENIO, or Alt-Beschenowa, a town of Hungary, in the com. of Torontal, 45 m. NW of Temesvar, on the r. bank of the Aronka. The inhabitants are chiefly Bulgarians.

OBHOR, a river of Arabia, in the Hedjaz, which flows into the Arabian gulf, 18 m. NNW of Jedda. It is joined on the l. by the Wady Fâtineh.

OBI, Obe, or more properly Ob, a river of Russia in Asia, formed by the junction of the Biïa and the Katunya or Chuya, the former of which has its source in Lake Teletskoi or Altan-Kol, to the N of the Altai chain, on the confines of the govs. of Tomsk and Yeniseisk; and the latter in the Little Altai chain, on the Chinese frontier. Lake Teletskoi is

fed by numerous streams, the chief of which are the Bashkush, and the Chulishman, both of which descend from the higher part of the snowy chain of the Altai. The Katunya is formed by the union of the Koksun or Kuki-Usun, which flows from W to E, and the Chui or Chuya, which runs from E to W. Both these latter streams also have their sources in the Altai. These two streams unite 3 m. W of Biisk. After traversing the gov. of Tomsk, throughout almost its entire length, the confluent stream, entering the N part of the gov. of Tobolsk, throws itself into the gulf of the same name, in N lat. 67° and E long. 72°. It flows in two general directions, first NW to the confluence of the Irtish, and afterwards N. In the lower part of its course it divides into numerous arms, which reunite before reaching the embouchure. Its principal affluents are on the r. the Tchoumych, Inia, Tom, Tchulym, Ket, Tym, Vakh, Agan, and Polouï; and on the l. the Tcharych, Vasiougan, two rivers of the name of Yougan, the Bulyk, Salym, Irtish, Sosva, and Synia. After the junction of the Irtish, a river nearly equal in size, the Obi becomes very large, and at some points has a breadth of several versts. It is very rapid, and towards the lower part of its course is obstructed by cataracts; but notwithstanding these disadvantages it forms the most important river in Siberia, being the great medium of communication between European Russia and China. The extent of navigation afforded by this river and its affluents is estimated at not less than 2,000 m. Barnaoul, Kolyvan, Narym, Surgut, and Berezov, are the chief places on its banks.—The basin of the O. is enclosed on the S by the Little Altaï, the Ouluk-tag, and the mountains of Aïtaou and Naourzim; on the W by the Ural chain; and on the E by the mountains of Téletzk and Kouznetzk, and a ridge extending from the coast to the basin of the Yenisei. The total area of this basin exceeds 1,300,000 sq. m.—Its length of course, from the sources of the Irtish to the gulf of Obi is about 1,650 m.; and its breadth, from the sources of the Vakh to those of the Tobol, nearly 1,600 yds.—The O. is named by the Tartars Oumar; and by the Ostiaks, of whom a great number inhabit its banks, the Eme' or Osse'.—Dr. Bunge, of the St. Petersburg academy, visited the remotest sources of the O. in 1832, and has given the following account of the surrounding region: "I quitted my camp, on the banks of the little river Kara-Dyrghoon, and having turned a group of hills, situated on the l. bank of the Chooya, I pursued my way over the plain, which rises gradually, and which is bounded on the r. by the Chooya, and on the l. by an abrupt chain of snowy mountains. After a journey of 13 or 14 m. across this steppe, which is dry and scantily covered with vegetation, we passed the Chooya on horseback. This river is here not deep but very rapid: we ascended one of its principal affluents, the Boilooghem. Late in the evening, we reached the felt tents of Demeshi-Chokhon, the independent chief of a camp of Kalmucks established near a spring in a hollow of the Alps. I had hoped to find amongst these good-natured inhabitants of the frontier the assistance requisite for the execution of my plan of penetrating as far as possible into the lofty mountains. They, indeed, furnished me with the necessary instructions respecting the localities, and for a trifling remuneration they provided me with horses and guides for some days. I disembarrassed myself of everything not absolutely indispensable for the journey, and we quitted the banks of the Boilooghem next day. We directed our course across the steep mountains towards the Chooya, and reached its sources early in the afternoon. A little more than a mile to the l. of these sources, there is on the crest of a high chain of snowy mountains an *obo*, or column marking the frontier between the Russian territories and the Chinese empire. This column bears an inscription in the Mongol language, importing that at this spot, where, on either side, the springs flow in opposite directions, the habitations of the Kalmucks, who pay contributions to the two empires, end, and those of the Mongol tribe of Soyon begin. After halting for some time on this elevated spot, we descended into a deep valley of the Alps, which extended very far. It forms an immense marshy plain, covered with innumerable lakes of different dimensions. Several clusters of snowy peaks rise in the midst of this plain, and the water which descends from them feeds the lakes, which are the origin of some considerable rivers. The extent of this valley is upwards of 35 m. from E to W; it is inhabited by a vast number of deer, reindeer, argalis, ibexes, wolves, foxes, &c. These animals prefer this spot, because it is rarely visited, except by some Kalmuck hunters, who, however, remain there but a short time, because they are strictly prohibited from taking up their residence there, although they are always anxious to do so, notwithstanding the severe cold, on account of the fine pasturage in the valley. We made a further march, the same day, of about 20 m. We passed the sources of the Bashkan, an affluent of the Abakan, and we halted for the night near a small lake. Although it was the middle of July, and we were warmly clad, we endured much from the cold, for we could nowhere find firewood of any kind. Next day, a dense fog enveloped the lofty mountains in our front, which are those of the Altan-tau, or the true grand Altaï, the Kin-shan of the Chinese, which was the ultimate object of my journey. Happily, the fog dispersed when the sun rose, and we commenced our march for the pass of Mount Shapshal, the only practicable route to the Altan-tau. After about 10 m., we arrived at the borders of a beautiful lake, named Yeiln-kol, which stretches at the foot of the Altan-tau for 9 or 10 m., its breadth being from 3 to 3½. From its NW extremity issues the river Choolyshman, beyond which, the gigantic mass of the Altan-tau rears itself, and like a sharp wall extends from NNW to SSE, enclosing the valley in which the river flows. With great difficulty we succeeded in scaling the advanced mountains of the chain. We passed immense fields of snow, and at length found ourselves in a narrow path, which is the real defile of the Shapshal, which gives its name to the whole mountain. This terrific path is, as it were, suspended on the southern slope, looking over a precipice of massive rocks. It runs over detached and not very firm fragments of glimmerschiefer [a species of talc], of which the whole mountain consists. The golden lustre which proceeds from this rock, when the sun shines upon it, has caused the name of Altan-tau, or 'Golden mountain,' to be given to this vast chain. In ascending this path, we perceived in the ravine below piles of bones of men and horses, who had been precipitated down, which admonished us of the temerity of our undertaking. We at length gained the summit, whence I enjoyed a most extensive view. To the W we perceived the wide valley which we had lately traversed, full of lakes, amongst which we distinguished the Yeiln-kol, close to our feet, and to the l., a larger one, named Kyndiktoo-kol, still partly covered with ice. To the NE, appeared a deep ravine, bounded by abrupt peaks covered with snow, whence originates the Tsooi, which falls into the Kemchoog, one of the constituents of the Yenisei. We were told that, about 46 m. from the place where we then were, there was a Mongol-Soyon town, situated on its banks, also called Kemchoog.

In respect to botany, these mountains present little novelty. Its vegetation is the same as that on the banks of the Kooraï. The crests are entirely destitute of vegetation and covered with perpetual snow."

OBI (Gulf of), or Obskaïa-Gouba, an extensive embrasure formed by the Arctic ocean, on the N coast of Russia in Asia, between the parallels of 67½ and 72½ N, partly in the gov. of Tobolsk, and partly on the confines of that of Yeniseisk, named from the river which it receives on the S. Its length from N to S is about 450 m. At its entrance, between Capes Olenii and Sievero-Vostotchnyi, it has a breadth of 75 m. A considerable arm which it presents on the SE, bears the name of Tazovskaia-bay. It receives the Obi at its SE extremity.

OBIDOS, a town of Portugal, in the prov. of Estremadura, 45 m. N of Lisbon, on a small river which falls into a bay of the Atlantic. Pop. 2,770. It has a citadel, and contains the ruins of a fine aqueduct.

OBIDOS, a town of Brazil, in the prov. of Para, in S lat. 1° 50′, on the E arm of the Rio-de-Trombetas, near its confluence with the Amazon, which is here contracted into a channel of 1½ m. in width, and 600 ft. in depth. Pop. 1,000. It is situated on a hill, and is built with great regularity, with a fine square in the centre and a handsome parish church. The cultivation of cotton and cacao forms the chief sources of local industry. This town was founded by the Indians, and originally bore the name of Pauxis.

OBIDOS, a town of Portugal, in the prov. of Estremadura, comarca and 24 m. NNW of Alenquer, and 48 m. N of Lisbon, on an elevated tract near the l. bank of the Arnoya. Pop. 2,770. It is enclosed by walls flanked with towers, and has an old castle, 4 parish-churches, 2 hospitals, a classical school, and some Roman remains. This town was taken from the Moors in 1148 by D. Alonzo Henriquez. In 1808, a battle was fought under its walls between the French and English.

OBIGRES, a commune and village of Belgium, in the prov. of Hainault, 4 m. SE of Pecq, near the l. bank of the Scheldt. Pop. 750.

OBION, a county in the NW of the state of Tennessee, U. S., skirted on the W by the Mississippi. Its cap. is Troy. Pop. in 1840, 4,814; in 1850, 7,686. —Also a river in the same state, formed by the junction of several streams, and which flows into the Mississippi, on the l. bank, after a course, in a generally SW direction, of about 90 m.

OBISFELDE, a town of Prussia, in the prov. of Saxony, reg. and 35 m. NW of Magdeburg, circle and 21 m. SW of Gardelegen, on the l. bank of the Aller. Pop. in 1837, 1,651. It possesses a custom-house, 2 schools, an hospital, and an alms-house; and has a brewery, and a distillery of brandy. Tobacco, chicory, and flax, are cultivated in the environs.

OBISPO (San Louis), a settlement on the coast of Upper California, 40 m. N of Point Conception.

OBITOCHNEI, or Nogaisk, a town of Russia in Europe, in the gov. of Taurida, district and 72 m. SSE of Oriekhov, in the midst of steppes, on a river of the same name, 6 m. above its entrance into the sea of Azof. Although of only recent foundation, it is already a place of considerable importance. Its inhabitants are chiefly Nogai Tartars. The embouchure of the O. forms a good harbour.

OBJAT, a commune of France, in the dep. of the Corrèze, cant. and 5 m. ENE of Ayen-Bas, and 10 m. NW of Brives. Pop. 1,333.

OBLIGADO, a village of Buenos Ayres, on the r. bank of the Parana, in S lat. 33° 37′. The river is here 800 yds. wide.

OBNORA, a river of Russia in Europe, which has its source in the gov. of Vologda, and district of Griazovetz, near Volosatova; thence it flows into the gov. of Yaroslav; passes Lioubim; and throws itself into the Kostroma, on the r. bank, at Karganova, and after a total course of 60 m.

OBOE, or Missah, an island off the Adel coast, in the sea of Bab-el-Mandeb, in N lat. 12°, E long. 43° 12′.

OBOIAN, a district and town of Russia in Europe, in the gov. of Kursk. Pop. of district 40,000. The town is 36 m. S of Kursk, and 45 m. NNW of Belgorod, at the confluence of the Oboianka and Psiol. Pop. 5,000. It has 2 churches, and carries on a considerable trade in grain, cattle, wax, and silk. This town was built in 1650, by the czar Alexis Mikhailovitch, to defend the coast from the irruptions of the Tartars of the Crimea.

OBOL, a river of Russia in Europe, in the gov. of Vitebsk, which issues from a small lake in the district of Gorodok, near Ozerichtchi; runs SW; and throws itself into the Southern Dwina, 12 m. above Polotzk, and after a course of 75 m.

OBOL-LANDET, an island of the gulf of Bothnia, near the E coast of Sweden, in N lat. 63° 42′, E long. 20° 12′.

OBOLSOEN, an island of the gulf of Bothnia, near the E coast of Sweden, in N lat. 62° 47′, E long. 17° 50′.

OBON, a town of Spain, in Aragon, in the prov. and 54 m. SSE of Zaragoza, partido and 33 m. WSW of Alcaniz, on the Rio-Martin. It has manufactories of woollen and linen fabrics.

OBORKI, a town of Russia in Europe, in the gov. of Vilna, district and 39 m. SE of Oschmiana.

OBORNE, a parish of Dorsetshire, 2 m. ENE of Sherborne. Area 593 acres. Pop. in 1851, 140.

OBORNIK, or Obernik, a circle and town of Prussia, in the prov. and reg. of Posen. The circle comprises 165 sq. m. The town is 18 m. NNW of Posen, on the r. bank of the Warthe, and at its confluence with the Wellna. Pop. in 1837, 1,499.

OBOUKHOV, a town of Russia in Europe, in the gov. and district and 27 m. SSE of Kiev.

OBRA, a river of Prussia, in the prov. and reg. of Posen, which has its source near a small village of the same name, in the circle of Krotoszyn, and 5 m. N of Kozmin; waters Yaroczewo, Kriewen, and Kosten; traverses in their entire length the extensive marshes of the same name; passes Kopnitz, Bentschen, Tirschtiegel, Meseritz, and Blesen; traverses several lakes; and, after a sinuous course, in a generally NW direction, of about 150 m., joins the Warthe, on the l. bank, 1½ m. W of Schwerin. The marshes of the Obra, which extend in a NE direction, are intersected by several canals, which run NE towards Moszyn and the Warthe, and which communicate also by several small streams with the Oder.

OBRAGILLO, a town of Peru, in the dep. and 50 m. NE of Lima. Pop. 500.

O'BRENNAN, a parish in co. Kerry, 3¼ m. NW by N of Tralee. Area 6,547 acres. Pop. in 1831, 847; in 1841, 992. Most of the surface consists of part of the Stacks mountains.

O'BRIEN, a small group of islands in the New South Shetland archipelago, in S lat. 61° 28′, W long. 61° 15′.

O'BRIEN'S-BRIDGE, a parish in co. Clare, containing the villages of Bridgetown and O'Brien's-Bridge. Area 11,425 acres, of which 2,772 acres form a detached district lying ¾ m. WSW of the main body. Pop. in 1841 of the whole 4,995; of the rural districts 4,349. The N district of the main body, down to a point a little S of the centre, is almost wholly mountainous and waste; and contains three heights of respectively 1,729, 1,458, and 1,181

ft. of alt. above sea-level. The W part of the detached district is also considerably upland, and has at its extremity a height of 875 ft. of alt. above sea-level. The hamlets in the p. are Ballyvoursher, Monaglee, Ballydaw, and Ballinamona, in the main body, and Trough in the detached district.—The v. of O'Brien's-Bridge stands on the E verge of co. Clare, on the r. bank of the Shannon, 6½ m. NE by N of Limerick. The bridge which gives name to the v. here crosses the Shannon, and has at its E end, in co. Limerick, the v. of Montpelier. The arches of the old bridge were 14 in number, and of various forms and sizes, from 19 to 28 ft. in span, the whole built of rubble stone, in rude workmanship; yet it has for several centuries withstood the action of both the current and the atmosphere. In the course of 1844, 7 arches of the co. Limerick end of the bridge were removed, and 6 of 27 ft. span each substituted for them. A quay 700 ft. in length was also completed, and a lay-by formed here. Pop. 435.

OBRIGHEIM, a village of the grand-duchy of Baden, in the bail. and 3 m. W of Mosbach, on the l. bank of the Neckar. Pop. 1,035.

OBRISTENFELD, a town of Würtemberg, in the circle of the Neckar, and bail. of Marbach, 20 m. NNE of Stuttgart, on the Botwar. It has a monastery.

OBRITZBERG, a village of Austria, in the prov. of Lower Austria, and upper circle of the Weiner-Walde, 7 m. NNW of St. Polten, and 2 m. S of Wolbling. It has mines of coal and alum.

OBROAZZO, or Obrovatz, a town of Dalmatia, in the circle and 20 m. NE of Zara, and 5 m. ENE of Novigrad, on the l. bank of the Zermagna.

OBSERVATION ISLE, an island in the W part of the gulf of Carpentaria, near the N coast of Australia, in S lat. 15° 38′, E long. 137° 3′.—Also an island in the strait of Magalhaens, in S lat. 52° 44′, W long. 74° 35′, 3 m. E of Cape Pillar.

OBSERVATORY INLET, an arm of the sea on the W coast of British North America, in N lat. 55° 15′, W long. 134° 25′. It was so named by Vancouver, in consequence of several important astronomical observations made in it.

OBSERVATORY ISLE, or Pudyona, an island of the S. Pacific, near the NE coast of New Caledonia, in S lat. 20° 16′ 40″, E long. 164° 25′ 17″.

OBSKAIA-GOUBA. See Obi (Gulf of).

O-BUDA. See Ofen (Alt).

OBVA, a river of Russia in Europe, in the gov. of Perm, which has its source in the NW part of the district of Okhansk; runs NE; and throws itself into the Kama, on the r. bank, 54 m. N of Perm, and after a course of about 105 m.

OBVA, or Obvinsk, a town of Russia in Europe, in the gov. and 60 m. NW of Perm, and district of Solikamsk, on the Jazva, a small affluent of the Obva. Its inhabitants, about 300 in number, employ themselves chiefly in agriculture and the chase.

OBWALDEN. See Unter-Walden.

OBY (Great), an island of the Molucca Archipelago, to the S of Gilolo, and NNW of Ceram. Its NE point is in S lat. 1° 26′ 5″, and E long. 127° 58′ 18″. It is about 48 m. in length from E to W, and 24 m. in breadth. The sultan of Bachian has a pearl fishery on the coast. The Dutch have or had a fort on its W coast.

OBY (Little), an island of the Molucca Archipelago, a little to the W of Great Oby island, in S lat. 1° 24′, and E long. 127° 10′. It is about 7 m. in length.

OBY (Pulo), an island of the Eastern sea, near the coast of Cambodia, in N lat. 8° 25′. It is a high mass of granite, 10 or 12 m. in circumf., and clothed with luxuriant vegetation from its summit to the water's edge.

OBYDZA, a village of Galicia in the circle of Sandec, 14 m. SW of Nowi-Sandec, on a small affluent of the Dunajec, in a mountainous locality. It has a glass-work.

OCA (Sierra de), a range of mountains in Spain, in the Iberian chain, of which it forms the N part. It joins the Cantabrian chain on the S side in the N part of the prov. of Palencia, between the sources of the Ebro and Palencia; runs SE into the prov. of Burgos; and to the SE of the town of that name, unites with the Sierra de S. Millan. It has a total length of about 75 m.

OCAIDO, a town of New Grenada, in the dep. of the Cauca and prov. of Choco, 120 m. N of Novita, and 300 m. N of Hopayan.

OCAMBARO, a town of Mexico, in the state of Mechoacan, 66 m. SE of Valladolid, on the road from that town to Toluca, and to the W of the ancient mines of Angangeo.

OCANA, a judicial partido and town of Spain, in New Castile, and in the prov. of Toledo.—The town is 27 m. ENE of Toledo, and 30 m. SSE of Madrid, on the summit of a hill, at the entrance to a fine plain. Pop. 4,500. It is still enclosed by some portions of its ancient walls, but has lost to a great extent its former magnificence. The streets are broad and well paved. It has a handsome square. The houses are substantially built of stone. The principal edifices are the palace of the Duke De Frias, the government house, the fountains, of which one is remarkably beautiful, and the parish churches, of which there are four. It has also numerous convents, an hospital and barracks; and possesses manufactories of soap, coarse woollen fabrics, hosiery, leather, and pottery. A victory was here gained over the Spaniards by the French, on the 19th Nov. 1809. The environs are very fertile.—Also a town in Andalusia, in the prov. and 27 m. N of Almeria, in a plain remarkable for its fertility.—Also a town of New Grenada, in the dep. of the Magdalena, 114 m. SE of Mompox, and 270 m. NNE of Santa-Fe-de-Bogota, on the r. bank of the Rio-del-Oro, a small affluent of the Lebrija, and in a section of the Andes to which it gives its name. Pop. 5,000. Copper is found in the vicinity.

OCATAHULA, a lake of the state of Louisiana, U. S., between the parishes of Ocatahula and Rapides. It is about 24 m. in length from NE to SW, and 6 m. in breadth; and is traversed by a river of the same name, which has its source in the NE of the co. of Natchitoches; runs SE; and joins itself with the Wachitta on the r. bank, opposite the confluence of the Tensas and after a course of about 120 m.

OCCHIOBELLO, a village of Austria, in Lombardy, in the prov. of Polesina, 15 m. SW of Rovigo, and 8 m. N of Ferrara, on the l. bank of the Po. Pop. 1,168.

OCCIMIANO, or Ocmiano, a town of Sardinia, in the div., and 14 m. NNW of Alexandria, prov. and 8 m. SE of Casale, on a hill near the Po. Pop. 1,700.

OCCLESTONE, a township in Middlewich p., in Cheshire. Area 721 acres. Pop. in 1851, 117.

OCCOLD, a parish of Suffolk, 2 m. SSE of Eye, and comprised in the parl. boundaries of that burgh. Area 1.479 acres. Pop. in 1841, 578; in 1851, 620.

OCEAN, an island of the South Pacific, to the SW of the Scarborough islands, in S lat. 0° 48′, and E long. 170° 49′.—Also a small island in the Auckland group, lying in the centre of Port Ross bay.

OCEANIA, in French Oceanie, a designation given by French geographers to that region of the globe which extends from about the 95th meridian of E long., to the 110th of W long.; and from the 25th parallel of N lat., to the 50th of S lat.; and subdivided by M. Balbi into the three great divisions of Mal

aisia, Australia, and Polynesia. Within the limits thus defined, stretching 10,000 m. in every direction, we have a vast expanse of ocean with a profusion of islands scattered over it, whose combined area probably exceeds 2,500,000 sq. m. See article AUSTRALIA.

OCENTEJO, a village of Spain, in the prov. and 45 m. E of Guadalaxara. Pop. 224.

OCEOLA, a township of Livingston co., Michigan, U. S. Pop. 504.—Also a village of Mississippi co., Arkansas.

OCHA, a river of Asiatic Russia, in the gov. of Tobolsk, which issues from Lake Tenis, and after an E and N course of 150 m., joins the Irtish on the l. bank.

OCHAGAVIA, a town of Spain, in the prov., and 27 m. ENE of Pampeluna, in the valley of the Salazar. Pop. 1,204.

OCHANDIANO, a town of Spain, in the prov. and 27 m. SW of Bilbao, on the Urquiola. Pop. 1,165.

OCHANSK, a town of Russia, in the gov. and 40 m. WSW of Perm, on the river Kama.

OCHELHERSNIDORF, a village of Prussia, in the reg. and 60 m. NW of Liegnitz. Pop. 1,200.

OCHIL HILLS, a range of mountains commencing about 2 m. from the river Forth, in the vicinity of Stirling, and extending in an ENE direction to the frith of Tay. The range runs parallel to the Grampians; forms the screen on the Lowland side of Strathallan and Lower Strathearn; and lies across the head of the whole peninsula of Fife, defending it, and the low ground of Kinross, Culross, and Clackmannan, from the storms which come down the glens and gorges of the Grampians. Its length is about 24 m.; its average breadth about 12. Its SE side, especially toward the Forth, is steep; and even its NW side rises, on the whole, with a greater abruptness than belongs to most of the Scottish ranges. Its summits are highest at its SW end, and might, especially there, as well as in other parts of the range, be termed mountainous, but for the vicinity of the Highland alps. Two of the summits overlooking the Forth are Bencleugh, or the hill of Alva, 2,300 ft. above sea-level, and the loftiest of the range; and Demyat-hill, 1,345 ft. above sea-level. The King's Seat, about 4 m. from Dollar, attains an elevation of 2,000 ft. above the valley of the Devon at Dollar, or 2,160 ft. above the level of the sea. Most of the range is of a beautiful green, and affords excellent sheep-pasturage. Offshoots so low that they rarely lift a summit more than 500 ft. high, run down the whole peninsula of Fife, and, along with the beautiful Lomond-hills, and some less considerable isolated hills, impart to it that undulated contour which so pleasingly characterizes its appearance. The main range is unusually rich in its minerals; and, besides yielding round its base large supplies of coal and of stratification superincumbent on the coal-measures, has furnished from its interior large quantities of various valuable metals.

OCHILTREE, a parish nearly in the centre of Kyle and of Ayrshire, 8 m. long, 5 m. broad. Pop. in 1831, 1,562; in 1851, 1,787.—The village of O. is pleasantly situated on the l. bank of the Lugar, immediately below the confluence with it of the Burnock, 4 m. from Cumnock.

OCHOLNICA, a village of Galicia, 18 m. SW of Nowi-Sandec.

OCHOTSK. See OKHOTSK.

OCHRIDA, a sanjak of Albania, between the parallels of 40° 40′ and 41° 45′ N; bounded on the N by the sanjak of Skutari; on the E by Monastir; on the S and SW by Avlona; and on the W by Elbassan. It is traversed on the E by the Hellenic mountains, ramifications of which extend towards its centre. The Beratino waters it on the S, and the Skanli intersects it centrally. Towards its E frontier lies the lake of O., giving rise to the Black Drin.—Its chief town, of the same name, is situated on the declivity of Mount Maniana-Petrin, on the NE side of the lake of Ochrida, 100 m. N of Janina. Its pop., amounting to about 6,000, descended from a colony of Bulgarians, is employed chiefly in the neighbouring mines, which yield sulphur and silver.—The lake of O., the ancient *Lychnidus lacus*, is about 18 m. in length from N to S, and 8 m. broad.

OCHSENFURT, a town of Bavarian Franconia, on the Maine, 10 m. SE of Wurtzburg. Pop. 2,000.

OCHSENHAUSEN, a town of Würtemberg, on the Rottum, 14 m. S of Ulne. Pop. 1,350. It is the chief place of a petty principality, with 6,000 inhabitants, which formed the territory of the rich abbey of Ochsenhausen, and was given to Prince Metternich in 1803.

OCHSENSTOCK, a mountain of the Alps, in the Swiss cant. of Unterwalden. Alt. 7,742 ft. above sea-level.

OCHSENKOPF, one of the principal summits of the Fichtelgebirge, in Bavaria. Alt. 532 toises = 1,133 yds.

OCHSHAUSEN, a village of Hesse-Cassel, 2 m. SSE of Cassel. Pop. 450.

OCHTA. See OKHTA.

OCHTE, a river of Hanover, which rises to the E of Ehranburg, and joins the Weser, on the l. bank, after a NNW course of 36 m.

OCHTINA, a town of Hungary, 30 m. S by W of Kesmark. Pop. 800.

OCHTRUP, a village of Prussia, in the reg. and 27 m. NW of Munster. Pop. 927.

OCIV, a village of Spain, in the prov. of Vittoria, on the Rio-Yugalez. Pop. 260.

OCKBROOK, a parish of Derbyshire, 5½ m. E by S of Derby. Area 1,730 acres. Pop. in 1851, 1,763.

OCKE, a river of Berkshire, which runs into the Thames at Abingdon, after an E course of 20 m.—Also a river in Devonshire, which runs into the Torridge, below Hatherleigh.

OCKENDON (NORTH and SOUTH), two adjoining parishes in Essex, 7 m. from Romford. Area of North O., 1,698 acres; of South O., 2,907. Pop. of North O. in 1841, 306; in 1851, 338. Pop. of South O. in 1841, 968; in 1851, 1,021.

OCKER, a considerable river of Germany, which has its source in the Harz; flows through a beautiful valley among those mountains; waters Wolfenbüttel and Brunswick; enters the kingdom of Hanover, and falls into the Aller, on the l. bank, 5 m. W of Giffhorn, after a prevailingly N course of 76 m. Great quantities of timber are floated down from the Harz by this river.—Also a town in the duchy of Brunswick, on the river Ocker, 3 m. NW of Harzburg. Pop. 480.

OCKHAM, a parish of Surrey, 1 m. E of Ripley. Area 2,340 acres. Pop. in 1841, 640; in 1851, 649.

OCKLEY, a parish of Surrey, 6 m. S by W of Dorking. Area 4,286 acres. Pop. in 1851, 641.

OCLASIR, a town of Hindostan, in the prov. of Gujerat, district of Baroach, on the Nerbudda.

OCLE-PITCHARD, a parish of Herefordshire, 7 m. ENE of Hereford. Area 1,507 acres. Pop. in 1851, 221.

OCLONIA (CAPE), a cape on the NE coast of the island of Negropont, in N lat. 38° 28′.

OCMULGEE, a river of Georgia, U. S., which, after flowing in a SSE direction 200 m., joins the Oconee, and with it forms the Altamaha.

OCONA, a port of Peru, in the prov. of Arequipa, situated on a river of the same name, 96 m. WNW of Arequipa.

OCONEE, a river of Georgia, U. S., which unites with the Ocmulgee to form the Altamaha.

OCOPA, a mission-college of Peru, in the prov. of Xauxa, 116 m. E of Lima.

OCOZINGO, a deserted town of Guatimala, in the prov. of Chiapa, 40 m. E of Chiapa-dos-Espagnols.

OCRECOCK INLET, a navigable channel on the coast of N. Carolina, between Albemarle and Pamlico sound, in N lat. 34° 55′. On each side of the channel are dangerous shoals.

OCSABAMBA, a river of Peru, in the prov. of Chumbivilcas, which rises in the Andes, and enters the Apurimac.

OCTARARO CREEK, a river of Pennsylvania, U. S., which divides Lancaster and Chester cos., and runs into the Susquehannah, in Maryland, about 5 m. below the Pennsylvania frontier.—Also a township of Lancaster co., Pennsylvania.

OCTEVILLE, a village of France, in the dep. of La Manche, 1 m. SW of Cherbourg. Pop. 1,508.—Also a village in the dep. of Seine-Inferieure, 5 m. N of Havre. Pop. 1,923.

OCTOYAS, a river of the La Plata confederation, in the prov. of Salta, which runs E, and enters the Vermeio, on the l. bank, in S lat. 23° 30′.

OCUMARA, a bay on the coast of Venezuela, 5 leagues E of Porto-Cabello, and about 28 m. SSE of Caraccas. Its port is good and well-sheltered. The village is at the distance of one league from the port, and is watered by a river of the same name, which discharges itself into the bay.

OCZAKOV. See Otchakof.

ODCOMBE, a parish of Somersetshire, 3 m. W by S of Yeovil. Area 1,296 acres. Pop. in 1851, 713.

ODDALENGO (Grande and Piccolo), two contiguous villages of the Sardinian states, in the prov. and 15 m. W of Casale.

ODDINGLEY, a parish of Worcestershire, 3 m. S by E of Droitwich. Area 869 acres. Pop. 185.

ODDINGTON, a parish of Gloucestershire, 2½ m. E of Stow-on-the-Wold. Area 1,660 acres. Pop. in 1841, 525; in 1851, 545.—Also a parish of Oxfordshire, 5 m. S by W of Bicester. Area 1,410 acres. Pop. in 1841 and 1851, 126.

ODDRODE, a township of Cheshire, in the p. of Astbury, 3½ m. S by W of Congleton. Area 3,692 acres. Pop. in 1841, 1,518; in 1851, 1,853.

ODDS, a peninsula in the NW of the island of Sieland, in Denmark, to the W of the Isafiord. Its inhabitants differ considerably in their appearance and manners from those on the E coast of the island.

ODEGA, a river of Portugal, which rises on the Serra-de-Montemuro, and flows into the Sadão, on the r. bank, after a course of 30 m.

ODELL, a parish of Bedfordshire, 8 m. NW of Bedford. Area 2,980 acres. Pop. in 1851, 538.

ODEMIRA, a river of Portugal, in Alemtejo, which rises in the Serra-de-Monchique, and falls into the Atlantic, 5 m. below Villa-Nova-de-Milfontes. It is navigable to the town of Odemira, about 20 m. from its mouth, and 58 m. SW of Beja. The town has a pop. of 2,000.

ODENAS, a village of France, in the dep. of the Rhone, cant. and 5 m. WSW of Belleville. Pop. 690.

ODENHEIM, a town of Baden, 14 m. S of Heidelberg. Pop. 1,000.

ODENKIRCHEN, a town of Prussia, in the reg. and 17 m. WSW of Dusseldorf, on the Niers. Pop. 1,100. It has manufactories of cotton, silk, and paper.

ODENSEE, or more correctly Odense, a town of Denmark, the cap. of the island of Funen, situated on a small river which runs into a bay of the same name about a mile from the town, 86 m. WSW of Copenhagen. It is a handsome town, though one of the oldest in Denmark, its origin being attributed to Odin, the deified hero of Gothic nations. Its chief manufactures are woollens, leather, iron wares, and soap. Pop. in 1846, 10,300. The Danish language is spoken here with purity. At a diet held here in 1528, the discipline of the Danish church was settled after the Reformation.

ODENSHOLM, a small low islet at the entrance of the gulf of Finland, in N lat. 59° 18′, E long. 23° 22′.

ODENWALD, a mountainous district of Hesse-Darmstadt, stretching between the Neckar and the Main. The Weschnitz, Winkel, Modau, and Schwarzbach, affluents of the Rhine, rise on its W flank; the Eiter and the Lax, affluents of the Neckar, and the Mumling and Gersprenz, affluents of the Main, on its l. Its highest points are the Felsberg, the Malchen, the Katzenbuchel, the Oelberg, and the Kaiserstuhl.

ODER, a river of Germany, the course of which is chiefly in the Prussian states. It rises in Moravia, about 14 m. ENE of Olmütz, on a spur of the Sudetes, and at an alt. of 990 ft. above sea-level; runs N, then SE, and then NE, and enters Silesia; flows through that prov., in which it receives the Ostrawitza and the Olsa, and passes Ratibor, Kosel, Oppeln, Brieg, Koeben, Glogau, and Neu-Salz, and receives the Neisse; enters Brandenburg, where it receives the Bober on the l., and the Wartha on the r., and passes Crossen, Frankfort, and Custrin; and turning NNE, enters Pomerania, where it divides into 4 branches, only one of which retains the name, while the three others are known as the Parnitz, and the Great and Little Redlitz. These several arms reunite in the lake of Damm, and after emerging from it, expand into the Stettin-haff, which discharges itself into the Baltic by three arms,—the Peene on the W, the Swiene in the middle, and the Dievenow on the E. These latter streams form by their windings the two large islands of Usedom and Wollin.—The total length of course of the O. is about 600 m. In the mountains of Silesia this river has a rapid course, and passes through extensive forests. On reaching the level ground, its impetuosity diminishes; but its volume of water, swelled by auxiliary streams, and subject to sudden increase, frequently inundates the plains on its banks. It becomes navigable for small boats so high as Ratibor, and for barges of 40 and 50 tons up to Breslau. It communicates by canals with the Elbe and the Vistula.

ODER, a river of Hanover, which rises in the Harz forest, 6 m. N of St.-Andreasberg; passes Lauterberg and Scharzfels; receives the Sieber, and falls into the Ruhme, in the principality of Grubenhagen, at a point 9 m. NE of Gottingen, after a course of 36 m.

ODERAU, a walled town of Moravia, 21 m. S of Troppau, on the r. bank of the Oder. Pop. 2,300. It has woollen factories.

ODERBERG, a town of Prussia, in the prov. of Brandenburg, on the Oder, 38 m. NE of Berlin. Pop. 2,200.—Also a town of Austrian Silesia, on the Oder, 20 m. NW of Teschen. Pop. 900.

ODEREN, a town of France, in the dep. of Haut-Rhin, 21 m. N of Befort. Pop. 1,200.

ODERNHEIM. See Gau-Odernheim.

ODERNHEIM, or Glan-Odernheim, a town of Bavaria, situated on the r. bank of the Glan, 25 m. SW of Mentz. Pop. 1,200.

ODERWITZ, a town of Saxony, 21 m. SE of Bautzen. Pop. 2,600, chiefly employed in linen manufactories.

ODERZO, a town of Austrian Italy, in the deleg. of Treviso, on the Manticano, an affluent of the Livenza, 25 m. NNE of Venice. Pop. 3,200. It was

the ancient *Opturgium*, and had a small port on the Adriatic, with which it communicated by means of the lagunes.

ODESSA, a port of European Russia, in the gov. of Kherson, on the W shore of a small bay of the Black sea, between the mouths of the Dniester and the Dnieper, formed by an arm of the Black sea which stretches about 10 m. N. in N lat. 46° 28′ 9″. E long. 30° 44′ 5″. It is entirely of modern erection. In 1778, the Russian gov. selected Kherson, at the mouth of the Dnieper, as a military and commercial port on the Black sea. But the place proved unhealthy, and in other respects inconvenient; and after the cession of Bessarabia, at the peace of Jassy in 1792, Catherine II. fixed on this place—then called Khodja-bey, and consisting of only a few houses—for the future mercantile emporium of her empire on this sea. Catherine bestowed on the new port the name Odessus, since Italianized. It possesses considerable advantages; without having a river, it has a fine bay, with good holding-ground, and sufficient depth of water almost to the very edge for the largest ships of war. Several regiments were employed on the construction of the public works, and in the course of two years considerable progress was made in the formation of the new port. The emperor Alexander followed up the views of Catherine. In 1803, he reduced the import and export duty; and in 1804 an entrepot was established at O., at which goods were allowed to remain for 18 months without paying duty. The pop. in 1804 had risen to 15,000. In 1820 it was 36,000; in 1833, 50,312; and in 1845, 70,877, exclusive of the garrison.

General description.] The town presents an imposing appearance from the sea, its bold cliffs being crowned with white buildings of considerable size, and in some instances of classical character. It is in the form of an oblong, and situated on a slope, which gives it the appearance of an amphitheatre. It is fortified in the modern style, and has on the E side a citadel that commands the port. The port itself is formed by two large moles, one of which, in the form of a quadrant of a circle, has regular parapets and embrazures for cannon; the interior is divided by smaller moles and quays. At the one extremity is the citadel, at the other the lazaretto. A row of barracks forms a line between the harbour and the town. A light-house has been erected on a projecting point on the S side of the bay. The roadstead is extensive, and the anchorage safe in summer, being sheltered from every wind but the NE. The result of observations made during several successive years, is, that on the average the navigation of the port is interrupted by ice during only 39 days in the year: although in particular years the gulf has remained frozen for two months together, while in others the navigation has been sometimes wholly unimpeded even in the month of January. A gigantic staircase of 200 steps conducts from the centre of the town to the beach. The streets of the town are wide, straight, and crossing each other at right angles, but badly paved, dusty in summer, and dirty in winter. The principal buildings are the churches, the admiralty-court, the custom-house, and the hospital, all adjoining the harbour; the exchange, the museum, the opera-house, and the theatre. To the N of the town are a number of warehouses for salt and salted provisions; and to the W, at some distance, are reservoirs for water, that article being scarce, and artesian wells having been sunk in vain. Firewood is also scarce. The establishments for education are a lyceum on the plan of those in France, and schools for trade and navigation; also schools for the instruction of girls. The chief disadvantages of the place are the scarcity of wood and water, and at particular seasons a degree of unhealthiness in the climate.

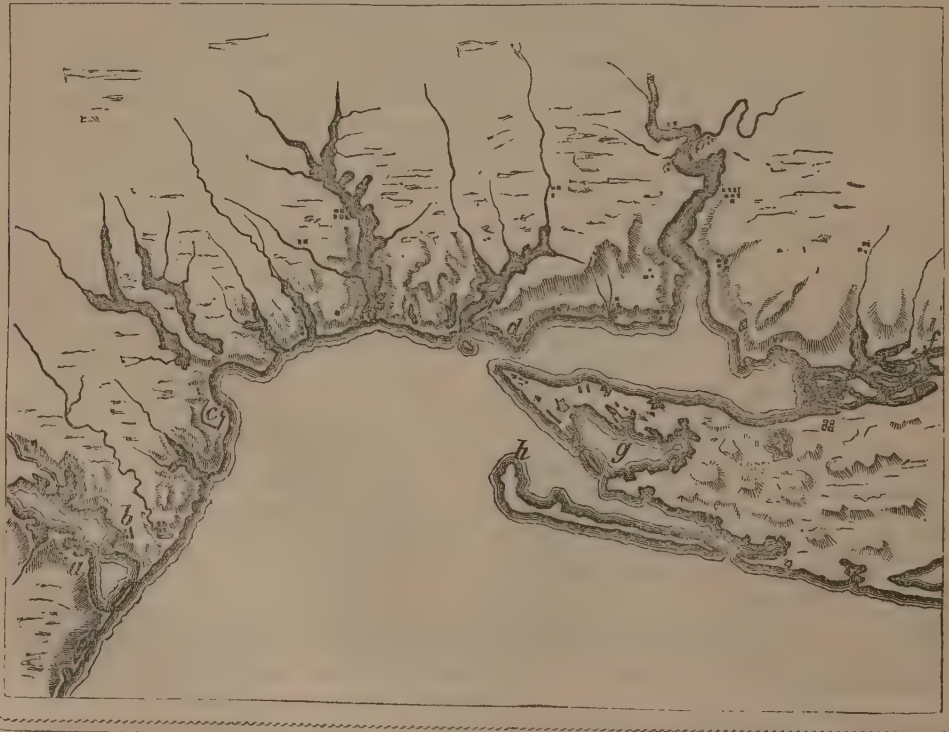
O. contained, in 1832, 6,494 habitations of various classes; 17 places of public worship, of different rites; 3 charitable institutions; 546 corn stores or magazines; 900 shops of various denominations; 4 chief hotels, and 1,535 cellars, of which 496 are used as the depositories of wines and vegetables. The expense of lodging was at one period very great; and even now a good floor, consisting of 7 or 8 rooms, cannot be had for less than an annual rent of from 1,200 to 2,000 roubles. In regard to education, O. possesses 8 public and 10 private seminaries for the instruction of the youth. The boys' schools form two-thirds of the whole, and contained, in 1832, 1,374 pupils; the girls' schools 397 pupils. Hence it appears that the proportion of female to male pupils is about 1 in 3; of female pupils to the female pop. 1 in 60; of male pupils to the male pop. 1 in 19; and of the whole of the pupils of both sexes to the total pop. 1 in every 28 inhabitants. The number of volumes imported into O. from foreign states was in 1831, 25,000: and in 1832, 40,000. The total number of books printed in O. in 1832 and 1833 was 16, of which 6 were works on scientific subjects; 6 works in general literature, and the remainder, elementary treatises connected with education. Besides the two public libraries—that of the city and of the society of rural economy—and a museum of antiquities, O. contained in 1832, 4 circulating libraries, two French, one Russian, and the other German, to which are attached reading-rooms, boasting 230 subscribers, or one in every 218 inhabitants. There were 5 periodical publications in French and Russian.

Trade and commerce.] The great article of export is corn from the Ukraine and neighbouring provs. It is brought in carts or waggons drawn by oxen, and loaded on an average with 5 chetwerts, or somewhat less than 3½ bush., which travel in companies, and stop at intervals, to let the oxen feed in the *steppes* or vast natural pastures by the way. In summer—the season when this conveyance chiefly takes place—several hundred waggons arrive in the town in a single day. The other articles produced in the Ukraine are tallow, hides, flax, and timber; but hitherto the export of these from O. has been small. Brewing and distilling are carried on on a large scale; and there are some manufactories of woollens, silk, gunpowder, and soap. A great disadvantage hitherto has been the want of mechanics for the town, and of farmers for the surrounding district. The government has spared no expense to procure both; settlers in the country round O. are allowed a house, a pair of oxen, a plough, a little money, and exemption from all taxes and military service during 25 years. The nature of the soil immediately around O., and the frequent recurrence of droughts, oppose serious obstacles to the pursuits of agriculture. The harvest of 1832 did not yield the previous sowing, and the whole quantity of corn obtained did not amount to 3,998 chetwerts. Though thirty years ago scarcely a garden was to be seen in the environs, there are now, at least, 226 flourishing gardens or vineyards: the grapes grown in the latter produced in 1832, 9,539 wedros, or about 30,000 gallons of wine.—In 1832, the number of manufactories in O. of different descriptions, (including 3 printing establishments,) was 30, which gave employment to 350 workmen. The mean number of workmen annually employed in the private workshops of artisans in the period of 10 years, from 1823 to 1832, was 2,627, or one in every 19 inhabitants; and assuming that each workman, one year with another, earns on the average 50 roubles per month, we find that the manufacturing costs of the work completed by the artisans of O. in

1832, was 1,764,600 roubles; and in 1823 that it was only 895,200, or considerably less than half. The number of capitalists in 1833 was 46. The fisheries on the borders of the Black sea are conducted by 489 individuals, divided into 46 companies. By the emperor Alexander's ukase of March 1804, already noticed, all foreign goods of which the importation by sea to O. was permitted, as well as those coming from other towns in Russia, were allowed to pass duty-free for Moldavia and Wallachia by the custom-houses of Mohilev and Doubassaa; for Austria, by those of Radzilow; for Russia, by those of Kezinsky; and foreign goods sent to O. by the said custom-houses were allowed to be shipped free of duty: these liberal institutions told well for the prosperity of O. which became one of the great commercial towns of Eastern Europe. But dazzled by the prospect of great profit to the customs, Russia adopted the ever-baneful system of prohibitive duties; and in 1822, an ukase abolished the freedom of the port of O. The effects of this unwise measure were soon apparent, and the emperor reinstated O. as a free port, for a term of 30 years, but with certain restrictions. In 1849, the czar prolonged the franchise of the port for five years, but raised the duties on imports from one-fifth to two-fifths, and to three-fifths on wine, tea, and sugar.

The exports through the port of O., from 1824 to 1832, averaged annually 16,431,289 roubles, and the imports 8,117,341; thus leaving an excess of exports over imports in the whole of the above period of considerably more than double. The greatest amount of exports and imports took place in 1830 and 1832, and the least in 1828 and 1829, in the first of which years the exports fell short of those of 1827.—The import trade of O. during the year 1849 exhibited a considerable increase over that of any previous period; for although the returns for 1847 showed an excess of 739,938 roubles in value over that of 1849, in these returns were included no less than 4,500,000 rs. remitted in specie to pay for grain exported chiefly to Great Britain to an unprecedented extent. During the year 1849, however, the imports consisted chiefly of foreign and colonial products, amongst which were 71,320 poods of raw cotton, 165,254 p. olive oil, 150,440 p. refined sugar, 39,524 p. raw sugar, and 30,072 p. coffee. Of manufactured goods the imports were in value: silk, 262,712 r.; cotton, 450,000 r.; linen, 76,283 r.; woollen, 416,978 r. The total amount of the foreign import and export trade in 1849 was 29,551,086 r., or about £4,500,000. The total value of imports was 10,373,360 silver r., being 1,184,557 silver r. more than in 1848; 739,938 less than in 1847; and 2,627,953 more than in 1846. The total exports during 1849 amounted to 19,177,626 silver r., against 20,873,078 in 1848; 34,764,962 in 1847, and 22,763,052 in 1846. The export of tallow in 1849 was smaller than for many years past, being only 145,634 poods against 452,841 in 1848. The quantity exported in 1849 was 1,714,138 chet., against 2,059,097 in 1848. The export of other breadstuffs was also inconsiderable as compared with previous years, with the exception of maize, which was larger than usual, amounting to 45,336 chet., and of meal which was exported to the extent of 47,907 sacks. Of the total quantity of breadstuffs exported during 1849, one-half went to Great Britain, the shipments of wheat alone for this country amounting to 840,612 chet. The export of wool in 1849 was larger than for any of the five previous years, being 248,278 poods (of which 117,420 p. were for England) against 103,161 p. in 1848, and 142,610 in 1847. The number of vessels which arrived at O. during the year 1849. was 911; whilst the number of departures was 909, against 1,045 sailed in 1848, 1,642 in 1847, and 1,331 in 1846.

In the subjoined chart of the NW angle of the Black sea, the site of Akerman is at *a;* of Ovidiopol, at *b;* of Odessa, at *c;* of Otchakov, at *d;* of Nikolaev, at the influx of the Ingul into the Bug, at *e;* and of Kherson, on the Dnieper, at *f;* Kinburn bay is marked *g;* and Tendra-point, *h.*



ODET, a river of France, in the dep. of Morbihan, which rises to the NE of Leuhan, and runs SSW to the gulf of Gascony.

ODEYPORE, a town of Hindostan, in the prov. of Malwah, in N lat. 23° 58′. It is situated on a rock, and contains a Hindu temple of some celebrity. —Also a town in the prov. of Bahar, district of Pulamow, in N lat. 23° 52′.—Also a town of Bengal, formerly the cap. of the independent kingdom of Tipperah, on the S bank of the Gumti, 25 m. E of Comillah.—Also a town of Hindostan, in the prov. of Gundwana, in N lat. 22° 37′.

ODEYPUR. See MEWAR.

ODEYPUR, or UDIPUR, a town of Hindostan, the capital of the district of Mewar, situated on the S side of the Banass river, 135 m. SSW of Ajmir, in N lat. 24° 35′, E long. 73° 44′. It is surrounded by an amphitheatre of hills, and can only be approached through three narrow defiles, barely wide enough to admit a carriage. When Chitur, the former capital, was taken by the Mahommedans, in the beginning of the 14th cent., the royal family took refuge in this place. Its palace is a fine building of marble on the banks of a large lake.

ODIARZA, a river of Portugal, in the prov. of Alemtejo, which rises near Beja, and runs E to the Guadiana, which it joins near Os-Pedroaos, after a course of 36 m.

ODIEL, a river of Spain, in the prov. of Seville, which rises near Santa-Ana; runs SW; and falls, after a short course, into the sea, near Huelva.

ODIHAM, a parish and town of Hants, 22 m. ENE of Winchester, on the road from London to Winchester. Area of p. 7,287 acres. Pop. in 1801, 1,485; in 1841, 2,817; in 1851, 2,811. The town is pretty-well built, and has some worsted-yarn and silk factories. There was formerly a royal palace and park here, the remains of which still retain the name of the palace. The celebrated grammarian, William Lilly, was born here in 1468.

ODOJEV, a town of Russia, in the gov. of Tula, on the l. bank of the Upa, 42 m. SW of Tula. Pop. 3,000.

ODOLO, a town of Austrian Lombardy, in the prov. and 12 m. NE of Brescia, on the Seriola. Pop. 1,000. It has forges, and manufactories of agricultural implements.

ODON, a river of France, in the dep. of Calvados, which falls into the Orne at Caen, after a NE course of 25 m.

O'DORNEY, a parish of co. Kerry, 4 m. N of Tralee. Area 7,227 acres. Pop. 3,142.

ODOWARA, a town of Japan, in the island of Nifon, 45 m. SSW of Jedo, said to contain 1,000 houses.

ODRA, a river of Spain, in the prov. of Burgos, which rises near Reboledo-de-Trasspana, and runs S to the Pisuerga, which it joins on the r. bank after a course of 50 m.

ODRAU. See OBERAU.

ODRINKA, a town of Russia, in the gov. and 18 m. SW of Charkov. Pop. 1,800.

ODROWAC, a town of Poland, in the palatinate of Sandomir, 12 m. ESE of Konskie.

ODRZYPOL, a town of Poland, in the palatinate of Sandomir, 18 m. NE of Opoczno.

ODSTOCK, a parish of Wilts, 3 m. S of Salisbury. Area 1,220 acres. Pop. in 1851, 181.

ODUCHAPA, a river of Peru, in the prov. of Loxa, which enters the Leon, in S lat. 3° 26′.

ODYK, a village of Holland, in the prov. of Utrecht, 5 m. SE of that city.

OE, a small island of Denmark, situated a little to the N of Laaland, in N lat. 54° 58′.

OEBISFELD. See OBISFELDE.

OED, a village of the archd. of Austria, 15 m. ESE of Saint-Polten.

OEDA, a village of Persia, in Farsistan, 50 m. W of Yezd.

OEDELEM, a town of Belgium, in the prov. of W. Flanders, 6 m. ESE of Bruges. Pop. 3,500.

OEDELFINGEN. See EDELFINGEN.

OEDENBURG, or SOPRONY-VARMEGYE, a palatinate in the W of Hungary, bounded on the W and N by the archd. of Austria; on the E by the river Raab; and on the S by the com. of Eisenburg. Its area is 1,300 sq. m. Its pop. in 1837 was 220,198, composed of a mixed race of German and Magyar descent, with about one-eighth of Croats, and some Jews. Towards the E this country is flat; but the rest of it is intersected by three ranges of mountains. On the NE is the lake of Neusiedel, and some extensive marshes, fed by the Wielka, the Ikva, the Repcze, and the Little Raab. It produces rye and wheat, with fruit in profusion. Near the cap., and in the vicinity of the town of Rust, is produced a red wine inferior only to Tokay. The chief mineral products are coal and lime, which are exported to the adjacent provs. The chief towns are Oedenburg, Rust, and Eisenstadt.

OEDENBURG, or SOPRONY,—the *Sopronium* of the Romans,—the cap. of the above palatinate, stands in a pleasant district, 37 m. SSE of Vienna, near the Raab branch of the Vienna and Cilly railway. Pop. in 1845, 12,216. It is neatly built, and has several Lutheran and Catholic churches, a Catholic and a Lutheran gymnasium, and a theatre. Fine woollens, glass, and potash, are made here; but O. derives its chief importance from its markets for corn and cattle, being an intermediate station between Hungary and Austria. Tobacco, wax, and honey, are also extensively traded in.

OEDENDORF, a village of Würtemberg, 2 m. NNW of Jailsdorf.

OEDENHEIM, a town of Würtemberg, near Heilbronn, on the l. bank of the Kocher. Pop. 1,400.

OEDENROODE (SAINT), a town of Holland, in N. Brabant, on the Dommel, 12 m. SSW of Bois-le-Duc. Pop. 1,200.

OEDERAN, or OEDERN, a town of Saxony, on the river Hölzelbach, 27 m. WSW of Dresden. It is neatly built, and has manufactories of linen, parchment, and pottery-ware. Pop. 2,500.

OEDING, a village of Prussia, in the reg. and 36 m. W of Munster. Pop. 300.

OEDT, a town of Prussia, in the reg. and 18 m. NW of Dusseldorf, near the r. bank of the Niers. Pop. 1,000.

OEFFINGEN, a village of Würtemberg, 4 m. NE of Canstadt. Pop. 800.

OEHNSBACH, a village of Baden, 6 m. SW of Achern.

OEHRHOLM, a village of Denmark, in the island of Sieland, about 9 m. from Copenhagen.

OEHRINGEN, a town of Würtemberg, on the river Ohr, 38 m. NNE of Stuttgart. It has a castle, the residence of the prince of Hohenlohe-Neuenstein, a high school, and a seminary for the education of schoolmasters. Pop. 3,150. It has manufactories of cottons and carpets, and a brisk traffic in corn and cattle.—Also a village of the grand-duchy of Baden, 6 m. SW of Radolfzell. Pop. 900.

OEIRAS, a town of Brazil, in the prov. and 120 m. ESE of Para, on the Araticu.—Also a town in the prov. of Piauhy, in S lat. 7° 5′, on the r. bank of an affluent of the Caminde.—Also a town of Portugal, in the prov. of Estremadura, on the r. bank and near the embouchure of the Tagus. It is a well-built place, with a pop. of 3,400. The counts of O. have a fine chateau here.

OEJEREN-SOE, a lake of Norway, in the bail. of Aggerhuus, 12 m. E of Christiania. It may be regarded as an expansion of the Glommen river, which traverses it.

OELAND, a long and narrow island in the Baltic, off the SE coast of Sweden, from which it is separated by a narrow strait called Calmar sound, between the parallels of 56° 13′ and 57° 5′ N. It is 83 m. in length, but in general only 6 m. in breadth. Its area is 600 sq. m. Pop. 31,000. A great part of the interior is enclosed by an oval chain of sand-hills, and consists of red chalk, with a slight covering of mould. A strip of country along the coast is under tillage, but is far from fertile. The inhabitants seek subsistence chiefly in fishing and navigation.—Also an island of Denmark, in the Lymfiord, about 5 m. long, and from 1 to 2½ m. broad. It contains four villages.

OELPER, a village of the duchy of Brunswick, 7 m. ENE of Bettmar, on the l. bank of the Ocher. Pop. 470.

OELS, a mediatized principality of Silesia, now forming part of the gov. of Breslau. It has an area of 740 sq. m., and belongs to the duke of Brunswick, who derives from it an income of £15,000 a-year. Its cap., of the same name, is situated on a small river, an affluent of the Oder, 16 m. ENE of Breslau. It is surrounded with walls, has a mansion or palace where the prince formerly resided, several Catholic and Protestant churches, a free school, a public library, and a museum of natural history. Pop. 6,000.

OELSE (Krummen), a village of Prussian Silesia, in the regency and 27 m. NW of Liegnitz, on the Bober.

OELSE (Langen), a village of Prussian Silesia, 5 m. SSE of Lauban. Pop. 2,600, a number of whom are linen-weavers.

OELSEN, or Olesznice, a town of Moravia, 25 m. N by W of Brunn. Pop. 1,400.

OELSNITZ, a town of Saxony, on the r. bank of the Elster, 6 m. SE of Plauen. Pop. 4,187. It has muslin, woollen, and linen manufactories. Pearls are occasionally found here in the Elster.

OENO, or Hercules Island, a small low coral island, 90 m. N of Pitcairn island, in S lat. 24° 01′, W long. 130° 41′.—*Beechey.*

OEREBRO, a central laen or province of Sweden, lying between the parallels of 58° 40′ and 60° 5′ N, and comprising the ancient prov. of Nericia, the W part of Westmannland, and a part of Wermeland. Its surface, amounting to 3,256 sq. m., is mainly composed of undulating plains. Lake Hielmar lies on its E frontier; on the SW is Lake Skagem; on the N, Lake Wetter; and in the interior, the Afvern, Tisaren, Sottern, Toften, and Miösen. The principal streams are the Svart-ae, Dylta-ae, Telgeae, Mangs-alfven, Saf-alven, and Svart-alfven. The climate is cold and rough; but, upon the whole, favourable to agricultural operations. Iron and timber are the chief exports. It is inhabited by a race of peasantry who preserve many of the traits and customs of their forefathers. The pop. in 1825 was 109,254; in 1844, 125,061.—The town of O., situated at the W extremity of Lake Hielmar, consists of one street about a mile in length. Several of the better houses, and almost all the others, are covered with turf, which grows to such height that it appears fit for mowing, and presents the extraordinary sight of sloping meadows sheltering the inhabitants of a whole town beneath their verdure. Its pop. was 4,317 in 1848.—The Royal Swedish railway, now in progress of execution, will connect O. and Hult, to which latter point there is conveyance by canal and lake from Gottenburg; and will probably be extended as far as Koping, where it will be in connection with steamers to Stockholm.

OEROEFE-JOKULL, a volcanic mountain of Iceland, near the S coast, 92 m. E of Mount Hecla. Alt. 6,240 ft. above sea-level.

ŒREGRUND, a port of Sweden, in N lat. 60° 20′, on the sound which separates the island of Græsoe from the continent. Pop. 700.

OEREKEDAL, a village of Norway, 18 m. SW of Drontheim.

OERELAND, a large peninsula of Norway, on the coast of S. Drontheim. It is the flattest tract of land in all Norway.

OERNER (Great), a village of Prussian Saxony, in the co. of Mansfield, on the Wipper. Pop. 800.

OESBYE, a village and parish of Denmark, in the duchy of Sleswick, 6 m. E of Hadersleben. Pop. 1,200.

OESEL, in Esthonian Saarma, a considerable island of the Baltic, at the mouth of the gulf of Riga, comprised in the Russian gov. of Livonia. It lies between the parallels of 57° 40′ and 58° 14′, and is about 70 m. in length, with a breadth varying from 3 to 50 m.; and an area of 1,144 sq. m. Its S point, the Svartver-ort, is in N lat. 57° 44′, E long. 22° 5′. Its pop., including that of the small adjoining islands of Moen and Runoe, was 40,000 in 1838. Its surface is in general level and well-watered, but the soil is stony and poor; when properly manured, however, it produces wheat, rye, and barley, and in good seasons oats and pease. The forests are extensive. The seal-fisheries on the coasts are productive; and there are quarries of a fine-grained stone which is largely exported. The principal town is Arensberg, on the SE coast.

OESTERBEHRINGEN, a village of Saxe-Coburg-Gotha, 9 m. NW of Gotha.

OESTERILD, a village of Denmark, 15 m. NE of Thisted, on the N coast of the Lymfiord.

OESTEROE, one of the Faroe islands, in N lat. 62° 10′, to the E of Stromöe. It is about 28 m. in length from NW to SE. and 9 m. in greatest breadth. On its SW coast is the harbour of Kongshaven. Its principal village, Næs, is on the S coast.

OESTHAMMER, a town of Sweden, 29 m. NNE of Upsala, on the Gall-frœrden, an arm of the Baltic, in N lat. 60° 15′.

OESTRICH, a town of the duchy of Nassau, 9 m. W of Mayence, on the Rhine. Pop. 1,900. The environs produce good wine.

OESTRINGEN, a town of Baden, 14 m. E of Spire. Pop. 1,600.

OETA. See Katavothra.

OETEGHEM, a town of Belgium, in the prov. of W. Flanders, 25 m. E of Ypres. Pop. 2,200.

OETIGHEIM, a village of Baden, 2 m. N of Rastadt. Pop. 1,000.

OETIKEN, a village of Switzerland, in the cant. of Zurich, 2 m. SE of Meilen, on the E shore of the Lake of Zurich. Pop. 110.

OETISHEIM, a town of Würtemberg, 4 m. S of Maulbronn, on a small affluent of the Enz. Pop. 1,100.

OETSCHER, a mountain of Upper Austria, among the Noric Alps, on the frontiers of Styria, in N lat. 47° 53′, which rises to the height of 6,450 ft. above the level of the sea.

OETTING (Old and New), two villages of Bavaria, between the Inn and the Salzach, 50 m. E by N of Munich, and 9 m. WNW of Burghausen. New O. is well-built, and contains 1,500 inhabitants.

OETTINGEN, a town now belonging to Bavaria, the capital of a principality of the same name, situated on the Wörnitz, 24 m. S of Anspach. Pop. 3,270. It is neatly built, and has several Lutheran

and Catholic churches and a gymnasium. It has manufactories of woollens and cottons. The prince of Oettingen-Spielberg has a castle here.

OEYRAS. See Oeiras.

OFALU. See Altdorp.

OFANTO, a river of Italy, the ancient *Aufidus*, which rises 4 m. E of Monte-Marano, and after flowing in an ENE course of 73 m. through Apulia, falls into the Adriatic 3 m. NW of Barletta, and several miles below the plain of *Cannæ*. The Olivento and the Loccone join it on the r. bank.

OFARA, a town of Nifon, in Japan, 100 m. NW of Jedo.

OFEN. See Buda.

OFENA, a town of Naples, in Abruzzo Ultra 2da, 4 m. N of Capistrano. Pop. 1,200.

OFERDINGEN, a village of Würtemberg, 6 m. ENE of Tubingen, on the r. bank of the Neckar. Pop. 450.

OFFAK, a port on the N coast of the island of Waygu, in S lat. 0° 46′, with a deep entrance half-a-mile wide.

OFFCHURCH, a parish of Warwickshire, 5 m. ENE of Warwick. Area 2,273 acres. Pop. 333.

OFFENAU, a village of Würtemberg, 4 m. NW of Neckarsulm, on the r. bank of the Neckar. Pop. 600, chiefly engaged in large salt-works in the vicinity.

OFFENBACH, a town of the grand-duchy of Hesse-Darmstadt, the chief place of the principality of Isenburg-Birstein, on the l. bank of the Main, 4 m. SE of Frankfort. It is neatly built, partly surrounded with a wall, and divided into three parts called the Old, the New, and the French district. It has several Lutheran churches, a synagogue, and a palace where the prince resides. Pop. in 1846, 9,684. It is the principal manufacturing town in the grand-duchy. Snuff and tobacco, wax, japanned goods, musical instruments, carriages, trinkets, and toys, are manufactured. The printing of books is likewise carried on here; and the wine produced in the vicinity forms an article of traffic.—Also a village of Bavaria, 4 m. NE of Lauterach. Pop. 1,200.

OFFENBURG, a town of Baden, the chief place of the circle of the Kinzig, 11 m. SE of Strasburg. Pop. 3,705. It is surrounded with walls, and has a theatre. The Basle and Marnheim railway has a station here, 17 m. SSW of Carlsruhe.

OFFENBURG. See Banya.

OFFENHAM, a parish of Worcestershire, 2 m. NNE of Evesham. Area 1,215 acres. Pop. 400.

OFFENSTETTEN, a village of Bavaria, 6 m. SSE of Kelheim. Pop. 350.

OFFERLANE, a parish of Queen's co., 3½ m. WSW of Munstrath. Area 48,927 acres. Pop. in 1831, 9,915; in 1841, 10,491.

OFFHAM, a parish of Kent, 8½ m. SW of Rochester. Area 707 acres. Pop. in 1851, 372.

OFFIDA, a town of the Papal states, in the deleg. and 9 m. NE of Ascoli. Pop. 1,200.

OFFINGEN, or Markt-Offingen, a town of Bavaria, 7 m. N of Nordlingen. Pop. 1,300.—Also a village of Würtemberg, 4 m. E of Riedlingen, on the Fusse. Pop. 390.

OFFLEY (Great), a parish of Hertfordshire, 3 m. WSW of Hitchin. Area 5,160 acres. Pop. 1,208.

OFFLEY (High), a parish of Staffordshire, 3 m. SW of Eccleshall. Area 2,727 acres. Pop. 786.

OFFLOW (Bishop's), a township in the p. of Abdaston, in Staffordshire, 10 m. WNW of Stafford. Pop. in 1841, 201; in 1851, 218.

OFFOLANKA, one of the smaller Friendly islands, in S lat 19° 35′.

OFFORD-CLUNY, a parish in Huntingdonshire, 5 m. NNE of St. Neot's. Area 960 acres. Pop. 369.

OFFORD-DARCY, a parish in Huntingdonshire, 4½ m. NNE of St. Neot's. Area 1,827 acres. Pop. in 1841, 306; in 1851, 419.

OFFRANVILLE, a town of France, in the dep. of Seine-Inferieure, 3 m. S of Dieppe. Pop. 1,610.

OFFTON, a parish of Suffolk, 4 m. SSW of Needham. Area 1,561 acres. Pop. in 1851, 410.

OFFWELL, a parish of Devonshire, 2½ m. SE by E of Honiton. Area 2,206 acres. Pop. 389.

OFIM, or Fum, a river of Upper Guinea, which rises 18 m. N of Coomassie, and flows S to the Chama.

OFNADINGEN, a village of Baden, 4 m. NNW of Staufen, on the r. bank of the Melin. Pop. 215.

OFWERUM, a village of Sweden, 90 m. N of Calmar, the seat of a cannon-foundry.

OGBOURNE ST. ANDREW, a parish of Wilts, 2 m. N of Marlborough. Area 5,348 acres. Pop. in 1841, 511; in 1851, 493.

OGBOURNE ST. GEORGE, a parish of Wilts, 2½ m. N of Marlborough. Area 3,585 acres. Pop. in 1841, 522; in 1851, 593.

OGDEN, a township of Monroe co., in the state of New York, U. S., 10 m. W of Rochester. Pop. 2,404.—Also a v. in Henry co., in Iowa.—Also a township in Lenawee co., in Michigan.—Also a v. in New Madrid co., in Missouri.

OGDENSBURG, the capital of St. Lawrence co., New York, U. S., situated at the confluence of the Oswegatchie with the St. Lawrence, 210 m. NNW of Albany. It has a safe and spacious harbour, and considerable trade. Pop. in 1840, 2,526.

OGEECHEE, a river of Georgia, U. S., which rises 7 m. NW of Greensboro; passes by Lexington, Louisville, and Georgetown; and flows SE, nearly parallel with the Altamaha, into Ossabaw sound, at Hardwick, 17 m. S of Savannah, after a course of 200 m.

OGELSTROMEN, a river of Sweden, which rises among the mountains bordering on Norway, and runs into the Angermann near Liden.

OGENTO. See Ugento.

OGESIMA, a small island of Japan, in the strait between Nifon and Xicoco or Sikokf.

OGGERSHEIM, a town of Bavaria, 4 m. WNW of Mannheim. Pop. 1,645.

OGGIONO, a small town of Austrian Italy, in the Milanese deleg. of Bergamo, situated on a small lake, 15 m. E of Como.

OGHER, a river of Russia, in the gov. of Livonia, which rises near Loubei, and runs W to the Southern Dvina, which it joins on the r. bank, after a course of 72 m.

OGHINSKI CANAL, a canal in Russian Lithuania, which joins the Schara and Jaselda, both head-branches of the Niemen and Dnieper, and thus forms part of a circuitous water-communication between the Baltic and the Euxine.

OGLASA. See Monto-Christo.

OGLE, a county in the N part of Illinois, U. S. Area 625 sq. m. Pop. in 1840, 3,497; in 1850, 10,020. Its cap. is Oregon.

OGLETHORPE, a county in the NE of Georgia, U. S. Area 490 sq. m. Pop. in 1840, 10,868; in 1850, 12,245. Its cap. is Lexington.

OGLIASTRA, a mountainous district on the E coast of the island of Sardinia, between the parallels of 39° 30′ and 40° 10′ N.

OGLIASTRO, a town of Sicily, 12 m. SSE of Palermo, near the l. bank of the Milicia. Pop. 1,800.

OGLIO, a considerable river of Austrian Italy, which has its source in the Rhætian Alps; flows through the lake of Iseo; traverses the fertile plains between Brescia and Cremona; and joins the Po near Borgoforte, about 8 m. SW of Mantua, after a

course of 130 m. It is navigable in the lower part of its course as far as Ponte-Vico, and receives in its progress the waters of the Cherio, the Mella, and the Chiese, besides a number of smaller streams.

OGLUKONURIA, a river of Kamtchatka, which flows into the sea on its W coast, in N lat. 55° 15′.

OGMORE, a hamlet of Glamorganshire, 3 m. SW by S of Bridgend, anciently a place of note, having a castle as early as the time of William Rufus, some remains of which are still discernible.—Also a small river which rises on the borders of Brecknockshire, and running S, falls into the Severn, a few miles W of Cowbridge.

OGNES, a hamlet of France, in the dep. of Aisne, 21 m. W of Laon. Pop. 350.—Also a village in the dep. of Oise, 15 m. ESE of Soulis.

OGNON, a river of France, which rises near St. Sulpice, in Vendée, and, after a course of 30 m., discharges itself into the lake of Grand-lieu, on the E, near St. Agnon.

OGONNELLOE, a parish of co. Clare, 4 m. NW of Killaloe. Area 9,926 acres. Pop. 3,162.

OGONO (Cape), a cape on the N coast of Spain, in N lat. 43° 27′, W long. 2° 40′.

OGORU, one of the smaller Friendly islands, 15 m. N of Annamuka.

O'GRADY, or Ogram, a lake of co. Clare, 1¾ m. WSW of Scariff. It measures 7 furl. by 5½; and has a surface-elevation above sea-level of 122 ft.

OGULIN, a town of Austria, in Military Croatia, the chief place of a regimental district in the generalat of Carlstadt, 32 m. E of Fiume. The district has an area of 920 sq. m.

OGULLA, a parish in co. Roscommon, 4½ m. SSW of Elphin. It contains the post-village of Tulsk. Area 6,213 acres. Pop. in 1841, 1,826.

OGURRAPURA, a town of Hindostan, in the prov. of Orissa, 9 m. SSW of Kondjur.

OGWELL (East), a parish of Devon, 1½ m. SW of Newton-Abbot. Area 1,249 acres. Pop. 316.

OGWELL (West), a parish of Devon, 2½ m. WSW of Newton-Abbot. Area 683 acres. Pop. 51.

OHAIN, a village of Belgium, in S. Brabant, 9 m. NNE of Nivelle. Pop. 1,600. It has several breweries and distilleries.

OHAMANENO, a port in the island of Ulietea, one of the Society islands, in S lat. 16° 45′.

OHANEZ, a town of Spain, in the prov. and 24 m. NNW of Almeria. Pop. 2,346.

OHERURUA, a harbour of the Pacific ocean, on the W coast of the island of Otaha, in S lat. 16° 38′.

OHETEROA, an island in the S. Pacific, in S lat. 22° 34′, W long. 150° 13′. The inhabitants are active and well-made, of a dark brown complexion. This island was discovered by Cook in 1769. Though not 20 m. in circumf., it is populous. It has no reef surrounding it.

OHEVAHOA, an island in the S. Pacific, in S lat. 9° 42′, W long. 139° 2′. It has a circuit of 15 or 16 leagues, and is steep and craggy.

OHIO, a noble river of North America, formed by the confluence of the Alleghany and the Monongahela, both rising in the Alleghany chain, in the NW angle of Virginia, and running parallel to each other for 60 m. in a direct line. The absolute course of the Monongahela is more than 200 m., but not above 130 m. in a direct line from S to N. It seems a larger and deeper stream at Pittsburg than the Alleghany, which in the dry season has not above 7 ft. water where deepest. The waters of the Alleghany are always clear and limpid, while those of the Monongahela, on the contrary, become muddy and turbid whenever there are a few days of successive rain in that part of the Alleghany mountains where it rises. The two streams unite on the W part of the state of Pennsylvania, in N lat. 40° 28′, and W long. 80° 8′, at an alt. of 1,138 ft. above sea-level. Each of the streams is 400 yds. wide at the conflux; after the junction, the united stream is more enlarged in depth than in breadth. From Pittsburg to the mouth of the O. is 1,188 m. by the course of the stream, according to Hutchins; and 1,074 m. according to Filson's account of Kentucky. Hutchins' estimate is certainly too great; later observers make its length from Pittsburg to its mouth only 614 m. in direct distance, and 948 m. by its course. For the space of 300 m. below Pittsburg, it runs between two ridges of hills, rising from 300 to 400 ft. in height: these appear in some points undulated at their summits; in others they seem to be perfectly level. They have their direction parallel to that of the Alleghany chain; and ridges gradually recede farther down the river, till they disappear from the view of travellers descending the O. After having burst its passage through a transverse chain, at the rapids near Louisville, it rolls its waters through a level and expanded country as far as the Mississippi. The general appearance of the O. is beautiful, placid, gentle, and transparent, except in the times of high water. It has two seasons of periodical inundations—namely, winter and spring. According to some, the vernal inundations of this river commence in the latter end of March and subside in July; according to other, they commence early in February and subside in May. This period is of course forwarded or retarded as the rivers thaw sooner or later, which may in some measure reconcile these apparently discordant statements. During these inundations, the O. is swollen to a prodigious height, varying in different places, as it is more or less expanded in breadth. It is a favourable circumstance for the country in the upper course of this river, that it has high and steep banks, and that having gradually hollowed out for itself a deep and comparatively narrower bed, like all its southern tributary streams, it flows as it were in a groove between them, which prevents the general level of the land from being overflowed for many miles, and thereby rendered marshy and unwholesome as in the Lower Missouri, and in the lower part of the O. itself. Yet high as these banks are, the O. is both a dangerous and troublesome neighbour to the towns which are not sufficiently far removed from them. That part of the town of Marietta situated at the junction of the Muskingum with the O., though elevated 45 ft. above the ordinary level of the stream, has been twice inundated, and consequently abandoned by the inhabitants. The town of Portsmouth, at the mouth of the Great Scioto, and 218 m. below Marietta by water, though elevated 60 ft. above the usual surface of the river, is also subjected to the same misfortune, which has materially affected the prosperity of the place. At Cincinnati, the average breadth of the river is 535 yds., and the banks 50 ft. in perpendicular height, yet these are annually overflowed. The winter floods commence in the middle of October, and continue to the latter end of December. Sometimes, in the course of the summer, abundant rains fall among the Alleghany mountains, by which the O. is suddenly raised; but such occurrences are rare. In the times of the two periodical floods—which taken together last half the year—ships drawing 12 ft. water may sail with ease from Pittsburg to New Orleans, a distance of 2,200 m. In these seasons, the passage to the falls may be accomplished in 9 or 10 days, but it is generally effected in 12 days. The difficulty of navigating the O. during the dry season, is only confined to the upper part of its course, or between Pittsburg and Limestone, a space of 425 m. by water; and is not

so much owing to the shallowness of the stream, as to its being divided by islands; for the depth of the Monongahela branch of the O. alone, at Pittsburg, is 12 ft. Michaux counted no less than 50 of these islands, in the distance of 390 m.; some of them only containing a few acres, and others exceeding a mile in length. Two canals have been constructed, one from Drayton to Cincinnati, and the other from Cleveland on Lake Erie to Portsmouth on the O., a distance of 309 m. The benefits arising from the completion of these canals is incalculable, securing an unbroken chain of inland navigation from New York to the gulf of Mexico, and to every part of the country E and W of the Missouri, as far as its waters are navigable. See next article. The great valley drained by this river exceeds in area 200,000 sq. m. The principal tributaries of the O. on the N, are the Beaver, Muskingum, Scioto, the two Miamis, Whitewater, and Wabash; on the S, the Kanawha, Sandy, Licking, Kentucky, Green, Cumberland, and Tennessee.

OHIO, the most easterly state of the W division of the North American confederation; bounded on the N by Michigan and Lake Erie; on the E by Pennsylvania and Virginia; on the S by Virginia and Kentucky; and on the W by Indiana. It extends from 38° 30′ to 42° 20′ N lat., and from 80° 35′ to 84° 47′ W long. It is about 220 m. in length and breadth; and contains 39,964 sq. m., or 25,576,960 acres. The surface of this state is remarkably level, and altogether free from mountains. In the SE, along the Ohio, are many low hills. It is remarkable, that the highest lands in the state, between the great rivers, are by far the most wet and marshy, while the driest tracts are along the banks of the rivers. In a general appearance, the country exhibits a great proportion of unbroken forest, here and there checkered with farms.

Rivers.] The Ohio, which gives name to this state, flows in a very serpentine SW course into the Mississippi. It forms the whole southern limit of the state, and in the lower part of its course divides Kentucky from Indiana and Illinois. From Pittsburg to Cincinnati it is above a third of a mile in width. Below Cumberland river, its average width is above a mile. Its depth varies 50 ft. according to the season. At Pittsburg, it is commonly frozen for several weeks in the depth of winter, and even for 400 m. below. Its banks are varied with rich cultivated intervals, and bold towering bluffs. Its current is commonly gentle, but varies from 2 to 4 m. an hour.—The Muskingum rises in the NE part of the state, and flows S into the Ohio. It is 200 m. in length; is navigable for boats 100 m.; and is connected by a canal with Lake Erie.—The Scioto rises in the W part of the state, and flows S into the Ohio. It is about 200 m. in length, and is navigable 130 m. There are rich and beautiful prairies on this river, and its valley is wide and fertile. The Ohio canal passes along this valley, and extends NE into the Muskingum.—The Great Miami rises in the W part of the state, and flows S into the Ohio. It is above 100 m. in length, and has a rapid current, but is difficult of navigation.—The Little Miami flows nearly parallel to the former, into the Ohio. Both these streams water a pleasant, healthy, and fertile country.—The rivers of the Erie basin have a shorter course, and are more obstructed by rapids and falls.—The Maumee rises in the NE part of Indiana, and flows through the NW part of this state into Lake Erie. It is broad and deep, but has an obstruction from shoals and rapids 20 m. above its mouth. It is connected with the Miami by a canal.—The Sandusky rises in the N part, and flows N into Lake Erie. It is 100 m. in length, and is navigable.—The Cuyahoga is a small stream in the NE, falling into Lake Erie. The Ohio canal passes along its valley to the lake.—This state has above 150 m. of coast upon Lake Erie. Sandusky bay, in the W, 20 m. in length, and from 3 to 4 m. wide, communicates with the lake by a narrow strait, and affords an excellent haven. Maumee bay, in the NW, a small basin, also affords a capacious and commodious harbour for ships. Several islands in Lake Erie belong to Ohio, among which is Put-in-bay-island, with a good harbour. The harbour of Cleveland, at the outlet of the Ohio canal, and those of Ashtabula, further E, and of Huron to the W, are frequented by steamboats and other lake craft.

Climate and Soil.] The general temp. of this state is some degrees colder than that of the Atlantic regions under the same parallel. The winters are often severe, and the Ohio has been frozen at Cincinnati for two months. The summer is subject to tornadoes, but the autumn is always temperate, serene, and pleasant. Along the valley of the Ohio, the weather is more equable and mild than in the interior. In the S part there is little snow; in the N, the snows are deep, and there is much sleighing in the winter. Near marshy spots and stagnant waters, fevers and agues prevail, especially among the new settlers; but in general, the state may be pronounced healthy.—Nine tenths of the surface of this state are susceptible of cultivation. The intervals of the rivers are highly fertile. In the interior are the largest tracts of rich level plain in any settled portion of the United States. The prairies produce no timber except a few scattered trees, and now and then a small grove. Some of them are marshy; the more elevated are called *barrens*, yet have often a tolerably fertile soil. The E and the SE parts of the state are the most hilly; but hardly any portion of the surface is sufficiently broken to be unfavourable to tillage. The marshy tracts in the N have an excellent soil, and may be easily drained when all the other good land is occupied.

Geology and Minerals.] In the geological formations of this region, the strata are in general but little disturbed, though upliftings or downthrows are occasionally manifest, but they are much cut through and worn away by the action of some mighty flood or floods. The surface is often strewn with numerous boulders of primary rock, so strikingly differing from the rock in place, as to have attracted the notice of the people, by whom they are called 'lost rocks.' The rocks of the SE part evidently belong to the carboniferous group forming a continuation of the great deposits of W. Pennsylvania and Virginia, and NE. Kentucky. This series of sandstones, clay, slates, and limestones, full of treasures of coal, salt, and iron-ore, appears to be terminated, toward the W, by a line drawn from the mouth of the Scioto, by Newark, towards the head of the Tuscarawas, and thence curving round to the E. The rest of the state seems to belong to the older or transition formations, but it has been represented to comprise extensive tertiary deposits. Coal is abundant in the E parts, as also iron; but there are few mines. Marble is plentiful, and salt-springs, which furnish water nearly as strong as that of the sea, are common. Near the falls of the Little Miami, are the Yellow springs, the waters of which are a strong chalybeate, and in esteem for their medicinal qualities. The Delaware White Sulphur springs have the same properties as the famous White Sulphur of Virginia. The mineral wealth of O., though as yet only in the infancy of its development, forms a large item in the resources of the state. In 1840 there were 72 furnaces for the manufacture of cast-iron, and 19 bloomeries, forges, and

rolling-mills for bar-iron, which together employed 2,268 men. The anthracite mines are comparatively limited; but the whole country is full of bituminous coal, which was produced to the amount of 3,513,409 bushels. Granite was quarried to the value of 195,831 d. These several interests have been much extended, and the facilities which have since been afforded for transportation have been a means by which every branch has become highly successful and productive.

Agriculture.] O. is essentially an agricultural region. Its products are as various as plentiful. The live stock in the state in 1840 was 430,527 horses and mules; 1,217,874 neat cattle; 2,028,401 sheep; 2,099,746 hogs; and the value of poultry of all kinds was 536,436 d. The wool produced was 3,685,315 lbs., and the value of the products of the dairy 1,848,869 d. The pork trade is very extensive. The number of hogs slaughtered in 1844 was 560,748; in 1845, 445,538; and in 1846, 420,833; and immense quantities of bacon, hams, salt pork, lard oil, stearine candles, soap, bristles, and prussiate of potash, are manufactured both for home use and export.—The grain crops are very large. The comparative yields in 1840 and 1847 were as follows:

	Wheat.	Barley.	Oats.
1840	16,571,661	212,440	14,393,103 bush.
1847	16,800,000	240,000	26,500,000 —
	Rye.	Buckwheat.	Indian corn.
1840	814,205	633,139	33,668,114 bush.
1847	1,000,000	1,200,000	66,000,000 —

The great importance of this state as a grain-growing country, from whence large supplies are exported annually to Great Britain and Ireland, will be seen in the following table, which shows as nearly as can be estimated the total crop of O. in 1848, and the rank which it bears to other states as to the crops:

Crops.		Rank.
Wheat,	20,000,000 bushels.	1st state.
Oats,	30,000,000 —	1st —
Indian corn,	70,000,000 —	2d —
Hay,	1,900,000 tons.	3d —
Potatoes,	5,000,000 bushels.	5th —
Buckwheat,	1,500,000 —	3d —
Tobacco,	9,500,000 lbs.	7th —
Rye,	2,800,000 bushels.	4th —

The value of these crops may be approximated thus:

Wheat,	15,000,000 d.
Oats,	8,000,000
Indian corn,	16,000,000
Hay,	8,000,000
Potatoes,	1,250,000
Buckwheat,	1,000,000
Rye,	1,500,000
Tobacco,	500,000
Total,	51,250,000

To the value of these crops must be added about 2,000,000 d. for wool, and 1,000,000 d. for cheese, besides a number of other articles; forming an aggregate amount exceeding the total value of the cotton crop for 1848.

Manufactures.] The capital invested in the manufactures of this state in 1840 was 16,905,257 d. The following were the values of the principal goods manufactured:—Machinery, 875,731 d.; hardware, 393,300 d.; various other metallic articles, 782,901 d.; granite, 256,131 d.; and bricks and lime, 712,697 d. The capital invested in these manufactures was 677,056 d. The woollen manufactures employed 206 fulling-mills and 130 factories, with 935 persons and a capital of 537,985 d. The value of goods produced was 685,757 d. There were in the cotton manufactures, 8 mills and 13,754 spindles, which employed 246 operatives, and a capital of 113,500 d., producing goods to the value of 139,378 d. Silk and flax mills were also in operation in various parts of the state, and mixed goods were made to a large amount. The manufacturing of hats, caps, &c., and leather articles, was extensively carried on; as also that of soap, spirits, earthenware, paper, cordage, &c.

Commerce.] The direct foreign commerce of O. is very small, but its productions are exported from ports in other districts to a large amount. The direct imports for the year ending 30th June 1846 were to the value of 102,714 d.; and the exports, 352,630 d. The exports consist entirely of domestic products and manufactures. In 1840 there were in Ohio 53 commercial, and 241 commission houses, in the foreign trade, with an aggregate capital of 5,928,200 d.; and 4,605 houses in the retail trade, with a capital of 21,282,225 d. O., after supplying her home consumption, had a surplus of wheat in 1847 amounting to 11,250,000 bushels, a great portion of which found a foreign market.—The first effort at the construction of public works was made in 1825, when the national road was commenced. On the same day the first ground was broken on the route of the Ohio canal. The Ohio canal and its branches furnish boat-navigation to the extent of 334 m. The Miami canal and branch extend 66 m. These canals are admirably constructed, and have been of great service to the state, although their aggregate net revenue has not as yet amounted to 6 per cent. In 1832, a large number of railways were incorporated in O., and in 1836 and 1837 the legislature passed an act, by which it was agreed that whenever half the stock of a turnpike company or two-thirds of a canal was taken up by individuals, the state would furnish the balance. State works were also commenced at this time, of a very extensive character, estimated to cost about 8,500,000 d. These were the extension of the Miami canal, the Wabash and Erie, the Walhonding, the Vernon, Mohican, the Warren co., the Hocking, the Muskingum river improvement, and the Maumee road. All these are completed.—The total value of property in this state was estimated at 136,142,166 d. in 1844; and at 439,876,340 d. in 1850.

Population.] In 1790 the pop. of O. was less than 5,000; in 1840, according to the census of the United States, it was 1,519,467; and in 1850, 1,981,940. The progressive increase of the pop. from one decennial period to another is exhibited in the following table:

Years.	Population.	Increase. Numerical.	Per cent.
1790	5,000	—	—
1800	45,000	40,635	807·2
1810	230,760	185,395	409·2
1820	581,434	350,674	152·0
1830	937,903	356,469	61 3
1840	1,519,467	581,564	63·1
1850	1,981,940	462,473	30 6

Educational resources, &c.] No state in the Union, if we except Massachusetts, is better provided with the means of education than O. It possesses 10 universities and colleges, all in a flourishing condition, and conducted on enlightened principles. Besides the above, there are 5 theological seminaries, 3 of which are under Presbyterian influence, and one each under that of the Baptists and Episcopalians. A school-of-law is established in the college at Cincinnati, in which are 3 professors. Medical schools are connected with the colleges at Cleveland and Cincinnati, each having, in 1847, 8 professors. In 1840 there were 73 academies and grammar-schools in this state, educating 4,310 young men, and 5,188 primary and common schools, with 218,609 scholars. The number of white adult persons unable to read and write was 35,394.—The Presbyterians, Methodists, and Baptists, are more numerous than any other denominations in O.

Government.] The legislative authority is vested in a senate and house-of-representatives, both of which collectively are styled the general assembly.

The representatives are chosen biennially, and must be citizens of the United States, and 25 years of age, having resided in the state one year, and paid a tax. Their number must never exceed 72, nor be less than 36. The senate is composed of members elected for two years, who must not exceed one-half nor fall short of one-third of the number in the house-of-representatives. A senator must be a citizen of the United States, 30 years of age, and have resided two years in the district from which he is chosen. The general assembly has the sole power of enacting all the state laws; the assent or signature of the governor not being necessary in any case whatever. An elector must have resided one year in the state, be 21 years of age, and a citizen of the United States.—The judiciary system comprises three several grades of courts, viz., the supreme court of 5 judges chosen by the people, courts of common pleas, and justices' courts. The supreme executive authority is vested in a governor chosen biennially by the people. He must be at least 30 years of age, and have resided in the state four years. He is commander-in-chief of the militia, and commissions all officers in the state, both civil and military.

Finances.] The finances of O., in Nov. 1846, are exhibited in the following aggregates: The receipts into the treasury during the year, including balances, amounted to 2,285,545 dollars, and the expenditures to 2,038,027 d. The total value of taxable property in the state was 150,293,132 d., and the taxes assessed amounted to 2,580,073 d. The public debt of O. was in 1846, 19,246,002 d., and the annual interest 1,164,260 d., the disbursement of which is included in the total expenditures. The annexed are the items of the state debt in 1846 and 1850:

	1846.	1850.
Foreign debt, . .	16,964,282 d.	16,566,773 d.
Domestic debt, . .	799,037	493,824
School fund lent to the state,	1,482,783	1,683,996
	19,246,002 d.	18,744,593 d.

Towns.] Cincinnati, the seventh town in point of pop. in the United States, is beautifully situated on the N bank of the Ohio. The pop. in 1840 was 46,382; in 1850, 116,108.—Columbus, the cap. of the state, is situated on the l. bank of the Sciota, immediately below the junction of Olentangy or Whitestone river, 142 m. from Cleveland, and 127 m. from Cincinnati. Pop. in 1840, 6,048; in 1850, 17,367.—Cleveland is situated on an elevated plain at the entrance of Cuyahoga river into Lake Erie, 195 m. from Buffalo. Its harbour is one of the best on the lake, spacious and safe. Pop. in 1840, 6,071; in 1850, 17,074. Fairfield and Ashtabula are considerable towns on the lake, and have good harbours. Sandusky is also a commercial depot. Springfield, on Mad river, is a rapidly increasing manufacturing and commercial town; and Zanesville, Portsmouth, Marietta, and Chilicothe, are also flourishing places, and located on the great lines of communication.

History.] O., previous to 1788, was an entire wilderness. In that year a settlement was made at Marietta, and in 1789 the country was placed under a territorial government, and called 'the Western Territory.' This name applied not only to O., but to all the district NW of the Ohio river to the Mississippi, and included the present states of Indiana, Illinois, Michigan, and Wisconsin. At a subsequent period it was known as 'the Territory NW of the Ohio.' The ordinance by which this territory was established forbids 'slavery' in any future state that may be formed within this district. O. became a state in 1802.

OHIO, a county in the NW part of Virginia, U. S., skirted on the NW and W by the Ohio, and intersected by Wheeling creek. Area 125 sq. m. Pop. in 1840, 13,357; in 1850, 18,008. The chief town is Wheeling.—Also a co. in the NW part of Kentucky, on the Ohio. Area 576 sq. m. Pop. in 1840, 6,592; in 1850, 9,762. The chief town is Hartford.—Also a township of Herkimer co., in New York, 108 m. NW of Albany. Pop. 692.—Also a township of Alleghany co., Pennsylvania, 11 m. NW of Pittsburg. Pop. 1,631.—Also a township of Beaver co., Pennsylvania. Pop. 1,273.—Also a township of Clermont co., Ohio. Pop. 2,895.—Also a township of Gallia co., Ohio. Pop. 424.—Also a township of Warwick co., in Iowa.

OHIO CITY, a town of Cuyahoga co., in Ohio, U. S., 145 m. NE of Columbus, on Lake Erie, at the mouth of the Cuyahoga, and connected by a floating-bridge and ferry with Cleveland, on the opposite bank. Pop. in 1840, 1,577.

OHIOPYLE FALLS, a cataract in the river Youghiogeny, Pennsylvania, U. S., about 60 m. above its union with the Monongahela. The river has a perpendicular fall of about 20 ft., and a total descent of 60 ft., within the space of a mile.

OHITAHU, an island in the S. Pacific, one of the Marquis of Mendoza's islands, in S lat. 9° 55′, W long. 139° 8′. It is about 9 m. long, and 21 m. in circumf. A narrow ridge of hills runs through its whole length, and sends down ridges to the coast, divided by deep, narrow, and fertile valleys. On the W side are several coves.

OHITATOAH. See Magdalena.

OHLAU, a town of Prussian Silesia, on the r. bank of the river Ohlau, 14 m. SE of Breslau, with a station on the railway to Vienna. Pop. 4,800. A large quantity of tobacco is raised in the environs; and woollen cloths, paper, and vinegar, are made here.—The river rises near Bernsdorf; passes Munsterberg; runs N, NE, and then NW; and falls into the Oder, near Breslau, after a course of 60 m.

OHM, a small river of Germany, in the Hessian territories, which falls into the Lahn, 3 m. N of Marburg, after a N and NW course of 30 m.

OHMEN (Nieder and Ober), two adjoining villages of Hesse-Darmstadt, in the bail. and 6 m. ENE of Grünberg, on the Ohm. Pop. of Nieder O. 920; of Ober O. 760.

OHOOPEE, a river of Georgia, U. S., which runs into the Altamaha, in N lat. 31° 31′.

OHR, a stream of Saxe-Coburg-Gotha, which flows into the Apfelstadt, on the r. bank, after a course of 18 m.

OHRA, a village of Prussia, in the reg. and 2 m. S of Dantzic. Pop. 1,300.

OHRDRUFF, a town of the duchy of Saxe-Coburg-Gotha, the chief place of the co. of Gleichen, a small territory belonging to the prince of Hohenlohe. It stands on the Ohr, 9 m. S of Gotha, and is surrounded with a wall. Pop. 4,311. It has manufactories of paper and porcelain, and saw and oil-mills; the weaving and bleaching of woollen and linen is also carried on here.

OHRE, a river of Prussian Saxony, forming part of the boundary between that prov. and Hanover. It flows through the N part of the gov. of Magdeburg, and joins the Elbe, after an E course of 62 m., a little to the S of Rogatz, after passing through the marshes of Dromling.

OHRNBAU, a town of Bavarian Franconia, on the Altmuhl, 6 m. SSE of Anspach.

OHTAKARI ISLANDS, a cluster of small islands on the E side of the gulf of Bothnia, in N lat. 64° 6′.

OI, a river of Asiatic Russia, which falls into the Yenisei, in N lat. 55° 16′.

OIAT, a river of Russia, which rises in the gov. of Olonetz, enters that of St. Petersburg, and joins the Svir, on the l. bank, after a W course of 92 m.

OICH, a brief river of the great glen of Inverness-shire, which conveys the superfluent waters of Loch-

Oich NE to the head of Loch-Ness, and has altogether a run of only 5½ m.

OICH (Loch), a lake in Inverness-shire, forming the summit-level of the Caledonian canal, from which, as from a centre, it descends towards the eastern and the western seas. It is not above 4 m. in length, nor more than 1 or 1½ m. in breadth.

OIES (Isle aux). See Goose Island.

OIGNIE, a village of Belgium, in the prov. of Hainault, dep. of Aiscan. There are large glass-works here.

OIGNIES, a village of France, in the dep. of Pas-de-Calais, 3 m. SSE of Carvin. Pop. 1,200.—Also a com. and v. of Belgium, in the prov. of Namur, 8 m. ESE of Carvin.

OIGNON, or Ognon, a river of France, in the dep. of Haute-Saone, which rises among the Vosges, near St.-Pierre-Melicey, and falls into the Saone, near Pontarlier, after a SW course of 90 m.

OIKELL, or Oykell, a large and romantic river of Sutherlandshire and Ross-shire, which rises in Assynt in Sutherlandshire; traverses two small lakes; and, from about 7 m. below its source, till it falls into the head of Dornoch frith, divides the two cos. Its length of course, exclusive of sinuosities, is about 32 m., and its direction is SE, E, and ESE. The Dornoch frith is strictly its estuary; and, if recognised in connection with it, would add at least 15 m. to its length. The principal tributaries are the Cassley and the Shin on its l. bank, and the Carron on its r. bank, just before it enters the Dornoch frith.

OIL CREEK, a river of Pennsylvania, U. S., which runs into the Alleghany, 8 m. E of Franklin.—Also a township of Crawford co., Pennsylvania, watered by Oil creek and its branches. Pop. 740.

OILGATE, a village in co. Wexford, 6½ m. NNW of Wexford. Area 10 acres. Pop. in 1841, 115.

OIL SPRING, a village of Alleghany co., New York, U. S., 280 m. W by S of Albany.

OIMBRA (Santa-Maria-de), a town of Spain, in the prov. and 45 m. SE of Orenze. Pop. 600.

OINARE, a large and rapid river of Venezuela, which runs into the Caribbean sea, in N lat. 10° 5′.

OINWAJAH, a trading settlement of N. America, in N lat. 44° 21′, W long. 93° 58′, 116 m. above the mouth of the St. Peter's river.

OIRO-BRANCO (Serra do), a chain of mountains in Brazil, in the prov. of Minas-Geraes, a ramification of the Serra-de-Mantiqueira, from which it branches off in a W direction, a little to the S of Villa-Rica.

OIRON, a town of France, in the dep. of Deux-Sevres, cant. and 6 m. ESE of Thouars. Pop. 900.

OIRSBEECK, a town of Belgium, in the prov. of Limburg, 12 m. NE of Maestricht.

OIRSCHOT, a town of Holland, in N. Brabant, situated near the river Aa, on the road from Breda to Eindhoven, 14 m. S of Bois-le-Duc, and 22 m. ESE of Breda. Pop. 3,997.

OISCONSIN. See Wisconsin.

OISE, a considerable river of France, which has one source near Chimay in Belgium, and another near Rocroy in the French dep. of Ardennes; flows in a SW direction past Guise and La Fère; becomes navigable at Chauny; and after passing Pontoise, falls into the Seine on the r. bank, at Conflans St. Honorine, after a course of 132 m. It communicates with the Somme, the Sombre, and the Scheldt, by means of canals. Its principal tributaries on the r. are the Noirieu, Breche, and Therain; on the l. the Ton, the Serre, Lette, Aisne, Antone, and Nonette.

OISE, a department in the NE of France, including portions of the old provinces of the Isle-de-France and Picardie; and bounded on the N by the dep. of Somme; on the E by that of Aisne; on the S by those of Seine-et-Marne and Seine-et-Oise; and on the W by that of Eure. It is about 69 m. in length, by 35 m. in breadth; and has an area of 582,569 hectares. The face of the country is gently undulating. The principal rivers are the Oise, which gives name to the dep. and intersects it from NE to SW; the Ourcq, the Aisne, the Epte, the Therain, and the Breche. All these streams have a S direction. In the NE and SW of the dep., a number of marshes present themselves. The soil is principally calcareous. The productions, as in the south of England, are corn, vegetables, fruit, a little wine of inferior quality, hemp, and flax. The quantity of corn sent from this dep. to Paris and the vicinity is considerable. Pear and apple orchards are numerous. From the fruit, cyder of good quality is prepared. The pastures, though inferior to those of England or Normandy, are better than in the interior of France, and considerable numbers of calves, cattle, and sheep are exported. Butter and cheese form important articles of produce, and bees are reared in particular districts with success. The mineral productions are unimportant. The principal manufactures are of linen, woollen, lace, and leather. —This dep. is divided into the 4 arrondissements of Beauvais, Clermont, Compiegne, and Senlis, which are subdivided into 35 cantons, and 700 communes. The pop. of the dep. in 1836 was 397,725; in 1851, 403,857. In 1839 it sent 5 members to the chamber of deputies, who were chosen by 3,105 electors.

OISELAY, a village of France, in the dep. of Haute-Saone, cant. and 4 m. ENE of Gy. Pop. 700.

OISEMONT, a town of France, in the dep. of the Somme, 21 m. W of Amiens. Pop. 1,100. It is situated in a fertile and agreeable district, and has some trade in corn, wool, and flax.

OISNITZ, a village of Hungary, in the com. of Eisenburg, 12 m. ESE of Radkersburg.

OISSEAU, a commune and market-town of France, in the dep. and 4 m. N of Mayenne. Pop. 3,870.

OISSEL-SUR-SEINE, a commune and village of France, in the dep. of Seine-Inferieure, 8 m. S of Rouen, with a station on the Paris and Havre railway. Pop. 3,149.

OISTERWYK, a village of Holland, in the prov. of N. Brabant, 9 m. SSW of Bois-le-Duc, on the Aa.

OISTIN'S TOWN, a small town of the island of Barbadoes, in a bay to which it gives name, on the S coast.

OISY, a village of France, in the dep. of Pas-de-Calais, cant. of Marquion, 15 m. E of Arras. Pop. 1,800.

OITOS, a narrow and difficult pass of the Carpathian mountains, between Moldavia and the district of Haromszek in Transylvania, to the NE of Bereczk.

OJA, a river of Spain, which rises near Ezcaray, in Logrono; runs N; and joins the Turon, on the r. bank, after a course of 30 m.

OJACASTRO, a town of Spain, in the prov. and 36 m. WSW of Logrono, 1 m. N of Ezcaray, on the l. bank of the Oja. Pop. 890.

OJALAVA. See Ozolava.

OJEN, a town of Spain, in the prov. and 21 m. WSW of Malaga. Pop. 1,800.

OJIJARES (Upper and Lower), two villages of Spain, in the prov. and 3 m. SW of Grenada, on the l. bank of the Genil. Pop. 1,500.

OJOS, a village of Spain, in the prov. and 27 m NW of Murcia, on the Segura. Pop. 780.

OJOS-NEGROS. a village of Spain, in the prov. and 42 m. SSE of Calatayud. Pop. 1,200. Iron is mined in the vicinity.

OKA, a river in the central part of European Russia, which rises in the gov. and 40 m. SW of Ore'

flows NE; and after receiving the Upa, Jizdra, Zna, Khasma, and Moskva, joins the Wolga at Nijni-Novgorod. It is navigable, and receives the tribute of a number of small streams. At Tula it is connected with the Don by the Joanovska canal.

OKA, a river of Asiatic Russia, which falls into the Angara, on the l. bank, near Bratskoï, after a NNE course of 500 m. Its principal affluents are the Tatshna on the r., and the Tes and the Ija on the l.

OKAMUNDEL, a district of Hindostan, forming the extreme W part of Gujerat. It is about 30 m. in length, by 15 m. in breadtn. Its principal town is Dwaraca.

OKANDA, a town of Nifon, in Japan, 55 m. E of Jedo.

OKASAKI, a town of Japan, in the island of Nifon, 15 m. ESE of Nagoya.

OKEFORD-CHILD. See CHILD-OKEFORD.

OKEFORD-FITZPAINE, a parish of Dorsetshire, formerly a market town, 7½ m. NW of Blandford-Forum. Area 2,633 acres. Pop. in 1841, 675; in 1851, 643.

OKENDON. See OCKENDON.

OKERAH, a town of Bengal, in the district of Burdwan, in N lat. 23° 28′.

OKHANSK, a town of Russia, in the gov. and 42 m. WSW of Perm, on the r. bank of the Kama.

OKHOLUN, a village of Denmark, in the duchy of Sleswick, 6 m. NW of Bredstedt, near the coast. Pop. 500.

OKHOTA, a river of Asiatic Russia, in the gov. of Irkutsk, which descends from the SE flank of the Stanovoi mountains, and flows into the bay of Kukhtui, after a SSE course of 220 m. It swarms with salmon, and its banks are frequented by immense flocks of water-fowl.

OKHOTZK, a circle in the gov. of Irkutsk, in Asiatic Russia, forming a maritime territory, extending between the parallels of 57° and 66° N, along the gulfs of Okhotzk, of Kamtchatka and Anadir. The coast is barren. About 10 or 12 m. inland, runs a low ridge of hills, which, though of no great elevation, is sufficient to arrest the influence of the sea air; beyond it, trees grow well, and rich meadows are found.—The town of O. is built upon a long, level, and narrow tongue of land, enclosed between the sea and the river Okhota, and composed chiefly of an accumulation of marine debris, in N lat. 59° 20′, E long. 143° 20′. It contains about 130 houses. It has a church and observatory, some magazines, a double row of shops, and a few clusters of log houses. The inhabitants consist of two priests, the officers of the court of justice, a few mariners, and Cossacks. It is the channel of trade between Irkutsk and Kamtchatka. Goods are conveyed down the Lena to Yakutsk; thence up the Aldan to its confluence with the Judoma; then up the Judoma, whence a short land-carriage conveys them to O. By far the greater part of the journey is performed by water; but the voyage is tedious and difficult. In the land part of the route, goods can be carried only on pack-horses or men's backs; and it is performed only in spring, to avoid the danger of sinking in morasses.

OKHOTZK, (SEA OF), a large gulf of the Northern ocean, between the parallels of 44° and 62° N, and the meridians of 136° and 176° E, enclosed between Kamtchatka, the circle of Okhotzk, Chinese Tartary, and Saghalien. Its opening into the ocean is partly closed by the Kurile islands and part of Jesso.

OKHRIDA. See OCHRIDA.

OKHTA, a town of Russia, in the gov. of Olonetz, at the S extremity of Lake Ladoga, on a small river of the same name.—Also a town in the gov. of St. Petersburg, a little to the E of the capital, of which it may be regarded as a suburb.

OKHVAT-JADEMIE, a lake of Russia, in the gov. of Tver, 40 m. SW of Ostakhov, traversed by the Southern Dwina.

OKI, an island of Japan, near the NW coast of Nifon, in N lat. 36° 10′, E long. 133°. It is 10 m. in length, by 5 m. in breadth.

OKIBEN. See KING'S ISLAND.

OKLADNIKOVO, a lake of Russia, in the gov. of Archangel, to the E of Mezen, which discharges itself by the Lokhtura into the Peza.

OKLANSK. See AKLANSK.

OKMIANY, a town of Russia in Europe, in the gov. of Vilna, district and 36 m. NW of Chavli.

OKNA, a town of Moldavia, in the district and 27 m. SSW of Baku, and 81 m. SSW of Jassy, on the l. bank of the Tatros. It is well-built and populous. In the vicinity is a productive salt-mine.

OKNA-MARE, a town of Little Wallachia, in the district of Vultsha, 9 m. SW of Rimnik, and 60 m. NNE of Craïova. Pop. 2,000. It contains 5 churches and several chapels. In the vicinity is an extensive salt-mine.

OKNISTY, a town of Russia in Europe, in the gov. of Vilna, district and 75 m. NNE of Wilkomirz.

OKOLA-VAEM, a river of Russia in Asia, in Kamtchatka, which flows W, and after a course of 75 m. discharges itself into the sea in N lat. 57° 40′. Near its embouchure is an island on which the Koriaks took refuge after putting to death the Russian sailors sent by Behring to procure guides.

OKONEE. See OCONEE.

OKOSIR, an uninhabited island of Japan, a little to the W of that of Yeso, in N lat. 42° 10′, E long. 139° 25′. It is 15 m. in length, and 6 m. in breadth, is enclosed by reefs, and covered with forests.

OKOUNE'VO, a lake of Russia in Asia, in the gov. and district of Yeniseisk, 90 m. NE of Turukhansk. It is 9 m. long, and discharges itself northwards into the Kursika, an affluent of the Yenisei.

OKOUNEVSKAIA, a town of Russia in Asia, in the gov. of Orenburg, district and 120 m. ENE of Tcheliabinsk, on the l. bank of the Miias, and on a lake of the same name.

OKRZEIA, a town of Poland, in the woiwodie and 34 m. SW of Siedlec, near the source of the Okrzeicza, an affluent of the Vistula.

OKSA, a town of Poland, in the woiwodie of Cracow, 29 m. WSW of Kielce, near the l. bank of the Nida. Pop. 240.

OKSKAISKAIA, a town of Russia in Europe, in the gov. of the Don Cossacks, and district of Tcherkask, 18 m. SW of Novo-Tcherkask, on the r. bank of the Don.

OKUNIEW, a town of Poland, in the woiwodie of Masovia, 11 m. W of Stanislawow, and 13 m. E of Warsaw, on the r. bank of the Dluga, an affluent of the Narew.

OLAD, a town of Hungary, in the com. of Eisenburg, 12 m. S of Güns, and 1½ m. NW of Steinamanger. Pop. 270.

OLAHFALU, a village of Transylvania, in the country of the Szeklers, lower circle and 11 m. ENE of Udvarhely.

OLAKY (WADY), a valley of the great desert of Nubia, extending between the Nile and the Arabian gulf, in N lat. 21° 50′. It affords good pasturage, possesses some trees, and after the rains contains some streams of water.

OLALLA (SANTA), a town of Spain, in Old Castile, in the prov. and 24 m. E of Burgos, in the valley of S. Vincente. Pop. 164.—Also a town in the same prov., 14 m. ENE of Burgos. Pop. 154.—Also

a town of New Castile, in the prov. and 30 m. WNW of Toledo, in a marshy locality, between the Alberche and Tagus. Pop. 1,000. It contains 2 parish churches, a convent, and an hospital, and some handsome houses.—Also a town in Andalusia, in the prov. and 42 m. N of Seville. Pop. 1,500.

OLAN, a mountain of France, in the confines of the deps. of the Upper-Alps and of the Isère, 27 m. NNE of Gap. It has an alt. of 4,372 yds. above sea-level, and encloses a portion of the Val-Godémard.

OLANCHO. See JORGE-DE-OLANCHO (SAN).

OLANCHO-EL-VIEJO, or MANTO, a town of Honduras, m. E of Comayagua, on the Guayapa.

OLAND. See OELAND.

OLAND, a small island of the North sea, near the Danish coast, and to the ESE of the island of Föhr. Pop. 280.

OLANDES (PUNTA DEL), a headland of the SW coast of the island of Cuba, in N lat. 21° 47′, W long. 84° 47′.

OLANGO, an island of the Asiatic archipelago, in the group of the Philippine islands, near the E coast of Zebu, in N lat. 10° 15′, E long. 122° 50′. It is about 6 m. in length from NE to SW.

OLAN-MOUREN, or TAITONG-HO, a river which has its source under the parallel of 38° N, in the district of Koko-nor in Tartary, and flows E and then SE to the l. bank of the Hoang-ho, which it joins in the Chinese prov. of Shen-si, 40 m. above Lan-chu.

OLARGUES, a canton, commune, and town of France, in the dep. of the Herault, and arrond. of Saint Pons. The cant. comprises 12 com. Pop. in 1831, 11,285; in 1841, 11,400.—The town is 11 m. NE of St.-Pons-de-Thomieres, on the Saur. Pop. 1,298. It has manufactories of candles and of hosiery, and several tanneries. In the environs are mineral springs, quarries of granite, and a fine grotto. Coal is also abundant in the locality.

OLASSINA, a village of Turkey in Europe, in Rumelia, in the sanjak of Ghiustendel, and district of Vrana. Iron is abundant in the vicinity.

OLASZI. See WALLENDORF.

OLAU, a circle and town of Prussia, in the prov. of Silesia, in the regency and 18 m. SE of Breslau, on the l. bank of the Oder, and on the r. of the Olau. Pop. in 1837, 4,273. It has a castle, containing a fine picture gallery. Tobacco is extensively cultivated in the vicinity.

OLAVEAGA, a port of Spain, in the prov. and 6 m. N of Bilboa, on the r. bank of the Anza, at its entrance into the gulf of Gascogny. It affords anchorage to vessels of the largest size.

OLAVE (ST.) MARY GATE, a parish in the N. R. of Yorkshire, adjacent to the NW side of the city of York, intersected by the Great North of England railway. Area 2,120 acres. Pop. in 1851, 2,970.

OLBEGA, a town of Spain, in the prov. and 24 m. E of Soria, near the base of the Moncayo, and not far from a little lake. Pop. 1,195. Iron and coal are found in the environs.

OLBERA, a town of Spain, in Andalusia, in the prov. and 50 m. SE of Seville, and 4 m. from the Guadalete. Major Scott says it is "a wretched-looking place, containing some 3,000 or 4,000 of the rudest-looking inhabitants of the Serrania." Some antiquaries identify it with the Roman *Ilipa*. It has several oil-mills. Pigs are extensively reared in the richly-wooded valleys in the vicinity.

OLBERNHAU, a town of Saxony, in the circle of Zwickau, and bail. of Lauterstein, 21 m. ESE of Chemnitz, on the l. bank of the Flohe. Pop. 1,775. It has manufactories of fire-arms and lace.

OLBERSDORF, a town of Moravia, in the circle of Troppau, 8 m. NW of Yagerndorf, and 5 m. NW of Troplowitz, on the Oppa. Pop. 1,700. It is enclosed by walls and ditches, and has a fine castle.

OLBERSDORF (KLEIN), a village of Saxony, in the bail. and 4 m. ESE of Chemnitz.

OLBERSDORF, or ALBRECHTSDORF, a town of Prussia, in the regency and 40 m. SSW of Breslau, circle and 2 m. W of Frankenstein, on the Pausebach. It has sulphureous baths.

OLBERSLEBEN, a village of the grand-duchy of Saxe-Weimar, in the circle of Weimar-Yena, bail. and 5 m. WNW of Buttstedt, and 14 m. N of Weimar. Pop. 680.

OLBRAMKOSTEL. See WOLFRAMITZKIRCHEN.

OLBRAMOWICE. See WOLFRAMITZ.

OLCHADI, a town of Russia in Europe, in the gov. of Vilna, district and 6 m. NW of Telsch.

OLCHANA, a town of Russia in Europe, in the gov. and district and 15 m. W of Kharkov.—Also a town in the gov. and 99 m. SSE of Kiev, district and 18 m. NE of Zvenigorodka.—Also a town in the gov. of Voronej, district and 15 m. SW of Ostrogojsk.

OLCHANSKAIA, a fortress of Russia in Europe, in the gov. of Orenburg, district and 9 m. W of Buzuluk, on the Olchanka. It is regularly built, and has well laid-out streets. The garrison consists of regular troops and Cossacks; the rest of the inhabitants are veteran soldiers. This fortress makes a part of the military line of Samara.

OLCSVA, a town of Hungary, in the comitat of Szathmar, 51 m. NE of Debreczin, near the l. bank of the Theiss.

OLD, or WOLD, a parish in Northamptonshire, 8 m. NW by W of Wellingborough. Area 1,650 acres. Pop. in 1831, 458; in 1851, 449.

OLDA, a town of Prussia, in the prov. of Westphalia, regency and 27 m. ESE of Munster, and circle of Beckum. Pop. in 1837, 1,673. It has several distilleries, and carries on a trade in flax.

OLDBERROW, a parish in Worcestershire, 2½ m. W of Henley-in-Arden. Area 1,185 acres. Pop. 56.

OLDBRIDGE, a village in the p. of Donore, co. Meath, on the r. bank of the Boyne, 2¾ m. W by N of Drogheda. It is celebrated as the scene of some of the most stirring actions of the battle of the Boyne.

OLDBURY, a parish of Salop, locally situated in Worcestershire, 4 m. NNE of Hales-Owen. Area 808 acres. Pop. in 1831, 126; in 1851, 131.

OLDBURY-ON-THE-HILL, a parish in Gloucestershire, 5¾ m. SW by W of Tetbury. Area 1,342 acres. Pop. in 1831, 414; in 1851, 485.

OLDBURY-UPON-SEVERN, a chapelry in Thornbury p., Gloucestershire, 2 m. NW by W of Thornbury. Pop. in 1801, 452; in 1851, 725.

OLDCASTLE, a township in Malpas p., Cheshire, 5¼ m. NW of Whitchurch, on the N bank of the Elf. Area 835 acres. Pop. in 1801, 205; in 1851, 108.

OLDCASTLE, a parish in Monmouthshire, 7 m. NNE of Abergavenny. Area 922 acres. Pop. in 1831, 62; in 1851, 47.

OLDCASTLE, a fishing harbour on the E coast of Clare island, off the mouth of Clew bay, co. Mayo.

OLDCASTLE, or CLOTYNGE, a parish and town in co. Meath. Area of p. 7,907 acres. Pop. in 1831, 4,718; in 1841, 5,079. The town stands on the road from Dublin to Killeshandra, 5 m. SE of Mount-Nugent. Pop. in 1831, 1,531; in 1841, 1,508.

OLD CODORUS, a township of York co., in Pennsylvania, U. S., 10 m. SW of York. Pop. 1,131.

OLDCOTT, a township in Wolstanton p., Staffordshire, 2 m. NE of Newcastle-under-Lyne, in the line of the Grand Trunk canal. Pop. in 1811, 544; in 1841, 1,295; in 1851, 1,683.

OLDEBOORN, a village of Holland, in the prov. of Friesland, arrond. and 8 m. N of Heereuveen.

cant. and 3 m. E of Akkrum, on the l. bank of the Boorn. Pop. 1,100.

OLDEBROEK, a village of Holland, in the prov. of Gueldres, arrond. and 35 m. N of Arnhem, cant. and 3 m. E of Elbing. Pop. 1,400.

OLDENBURG, a grand-duchy in the NW of Germany, consisting of several scattered portions. O. proper is a tract of country of an oblong form, extending between the parallels of 52° 30′ and 53° 43′; bounded on the N by the German ocean; on the E, S, and W, by portions of the Hanoverian territory. The grand duke possesses also the principality of Eutin or Lubeck, formerly the bishopric of Lubeck, situated in Holstein; and the lordship of Birkenfeld, ceded to him by Prussia, out of the territory on the Rhine. The extent and pop. of his states are as follows:—Grand duchy of Oldenburg proper, including the county of Delmenhorst, and the lordships of Varel, Jever, and Kniphausen, 2,250 sq. m., with 221,812 inhabitants; principality of Eutin or Lubeck, 170 sq. m., with 22,146 inhabitants; lordship of Birkenfeld, 170 sq. m., with 30,966 inhabitants. Total 2,590 sq. m., and 278,030 inhabitants.—The chief towns are Oldenburg the capital, Elsfleth, and Varel: none of these are large, and the other towns are insignificant.

The grand-duchy proper consists almost entirely of level ground, and is a marshy tract subject to frequent inundations. Towards the S, the surface attains an elevation of from 300 to 400 ft. above sea-level. In some places on the coast, the surface is so low that it requires large dikes, as in Holland, to prevent inundations. Along the rivers, the soil is rich, and composed of alluvial earth, but in many places it is marshy; in the interior, on the other hand, there prevails a sandy soil, which is often extremely barren, so that the duchy seldom raises enough of corn to maintain its pop. Yet its exports are the produce more of the soil than of manufacture, consisting in cattle, horses, flax, hemp, hops, rapeseed, butter, salt beef, and, in positions favourable to water-carriage, timber. The chief employments are tillage, grazing, and fishing; the making of linen, linen-yarn, and stockings, is also prosecuted, but there are few great manufacturing establishments of any kind. The forests cover an extent of nearly 170 sq. m. in the S part of the duchy. Turf is dug in the moors, and in this poor country forms an object of traffic of some importance. Amber is found at Varel and other places. On the coast ship-building and navigation employ a good many hands. The chief rivers are the Weser, the Hunte, the Haase, the Jahde, and the Delme. There are several small lakes; the largest of which is the Dummersee.

The prevailing religion is the Lutheran; but there are also a few Calvinists and Catholics.—The grand duke holds, with Anhalt and Schwartzburg, the fifteenth place in the smaller diet of the German confederation, with one vote *in plenum*. A constitution was granted by the grand duke in February 1849. For the purposes of administration, the country is divided into circles, each circle is subdivided into bailiwics, and each of these into parishes. In matters of religion, the Lutherans are subject to a general superintendent; the Catholics to an upper dean. The revenue is about £150,000.

History.] The house of O. is one of the most illustrious in Europe, the kings of Denmark, the emperors of Russia, and the late royal family of Sweden, being all descended from it. The county of O. is the ancient family property; to the duchy of Holstein the eldest branch of the family succeeded by marriage in the early part of the 15th cent.; and to the crown of Denmark in 1513. Holstein and O. now became the *appanages* of younger sons; but the latter fell to the crown of Denmark in 1667, by the extinction of the family of its counts. After the house of Holstein had succeeded to the throne of Russia, farther alterations took place. Denmark exchanged O. for the district of Kiel in that duchy; and the czar Peter III. ceded O. to his cousin Frederick Augustus, bishop of Lubeck. The emperor of Germany sanctioned this exchange, and in 1777 erected O. and Delmenhorst into a duchy, admitting the duke into the college of princes. In 1803, the reigning duke received a considerable increase of territory: the commission for settling indemnities, assigned to him in perpetuity the bishopric and chapter-lands of Lubeck, the bailiwics of Vechta and Kloppenburg in the bishopric of Munster, and the bailiwic of Wildeshausen in Hanover. In 1810 he was expelled from all his possessions, by Bonaparte; but after the battle of Leipsic in 1813, he returned, and at the congress of Vienna received the title of grand duke.—The second branch of this house is formed by the family of the dukes of Augustenburg; the third by the dukes of Glucksburg. The fourth branch is the house of the emperor of Russia, who is thus one of the heirs of the crown of Denmark. Yet the old law of succession, promulgated in 1665, and again in 1709, removed him as well as the other lines very far from the crown, since that law not only admitted the male, but also all female heirs and their descendants in one line before any heir of the other line could succeed. This order of succession would have called the prince of Hesse to the throne of Denmark; but the same order would have dissolved the union between Denmark and the duchies, since the two duchies claim the right of an exclusive male succession. Hence arose the necessity of imposing a new order of succession for the united monarchy after the war with the duchies; and that order was negotiated at Warsaw between the Danish and the Russian ambassadors. It was settled by the treaty of Warsaw, that upon the extinction of the present eldest line of the house of O., the house of Glucksburg should become the heir of the crown; and that henceforth the succession only should run in the male line. The whole line of the dukes of Augustenburg was thus excluded. With this arrangement the Danish parties seemed to be very well pleased at first, but it was at the same time settled, that after the extinction of the house of Glucksburg the house of the emperor of Russia should inherit the crown; and the former house furnishing only two masculine heirs, the possibility of becoming a subject of a viceroy of Russia must appear as a very near one to the publicist of Denmark. Hence a great agitation was created against the law-of-succession, which, in pursuance of the treaty of Warsaw, was proposed to the dissolved house of the commons at Copenhagen; and the ministers were obliged to dissolve the *folksthing*.

OLDENBURG, the cap. of the above grand-duchy, is situated on the river Hunte, in N lat. 53° 8′, E long. 8° 13′, 82 m. WNW of Hanover, and 76 m. WSW of Hamburg. Pop. in 1837, 5,564; in 1846, 7,829. It is fortified, and has two suburbs, and a mansion occupied by the grand-duke. It has several churches and hospitals, a house-of-correction, an observatory, a gymnasium, a seminary for schoolmasters, and a military school. Its chief trade is in wood. The manufactures consist of a sugar-refinery, a soap-work, and some tanneries. The high court of justice and offices of government are all held in this petty capital.

OLDENBURG, a town of Denmark, in the duchy of Holstein, 36 m. NNE of Lubeck, and 78 m. ENE of Gluckstadt, and 3 m. from the shore of the Baltic, on a canal, between two lakes. Pop. 1,600. It has two castles. This town was formerly a place of considerable importance, and was the cap. of Wagria in Wendish times.—Also a fortress of Prussia, in the prov. of Westphalia, reg. of Minden, and circle of Hoxter, and 18 m. ENE of Paderborn.

OLDENDORF, a village of Prussia, in the prov. of Westphalia, reg. and 19 m. W of Minden, circle and 11 m. SSW of Rahden, near the source of the Kleine-Aue. Pop. 580. It has manufactories of linen.

OLDENDORF (STADT). See STADTOLDENDORF.

OLDENDORF, STADT-OLDENDORF, or HESSISCH-OLDENDORF, an amt, bail., and town of Hesse-Cassel, in the prov. of Lower Hesse, and circle of Schauenburg. Pop. of bail. 5,685. The town is 8 m. NW of Hameln, and 27 m. SW of Hanover, on the Aue, near the r. bank of the Weser. Pop. in 1840, 1,227. It is surrounded by walls and ditches, and has three gates. It has an hospital, and possesses several manufactories of calico and of tobacco..

OLDENSTADT, a village of Hanover, in the gov. and principality and 24 m. SSE of Luneburg, and 3 m. ENE of Ueltzen, on the Wipperau. Pop. 385.

OLDENSWORTH, a town of Denmark, in the duchy and 27 m. WSW of Heswig, 5 m. N of Tonningen, and 9 m. SSW of Husum, near the r. bank of the Eider. Pop. 600. A sanguinary engagement took place here in the 13th cent.; by which the independence of N. Friesland was confirmed.

OLDENWORDEN. See Wörden.

OLDENZAAL, or Oldenzeel, a town of Holland, in the prov. of Over-Yssel, arrond. and 14 m. ESE of Almelo. Pop. 2,500. It is well-built, and has a classical school. Linen forms its chief manufacture.

OLDERSHAUSEN, a village of Hanover, in the gov. of Hildesheim, and principality of Gottingen. Pop. 285.

ODERSUM, a town of Hanover, in the gov. and 13 m. SSW of Aurich, bail. and 8 m. SE of Emden, on the r. bank of the Ems, on which it has a good port. Pop. 830. Its trade is chiefly in wood.

OLDESLOE, or Oldeslohe, a town of Denmark, in the duchy of Holstein, and district of Itzehoe, 15 m. WSW of Lubeck, and 27 m. NE of Hamburg, on the Trave, which is here navigable. Pop. 2,000. It has baths, and possesses extensive salt-works, tanneries, and distilleries. The trade consists chiefly in salt, tan, wood, brandy, and grain.

OLDHAM, a township and parl. borough in the p. of Prestwich, co.-palatine of Lancaster, 48 m. SE by S of Lancaster, and 7 m. NE of Manchester, with which it is connected by a branch of the Manchester and Leeds railway. The Oldham canal also connects it with various important districts. Area 4,617 acres. Pop. in 1801, 12,024; in 1831, 32,381; in 1851, 52,820. The town stands on an elevation near the W bank of the Medlock, and near the source also of the Irk, both of which streams have been of great utility in advancing its manufacturing growth. It is also in immediate vicinity to numerous coal-mines, which, since the more general substitution of steam for river-power, have likewise promoted its rapid development. The town consists of numerous streets extending chiefly along the Manchester and Leeds road, whence others branch off in different directions. The numerous cotton-mills and other manufactories form a characteristic feature of the place. The new town-hall is an elegant building. It has also a new's-room, a market-house, and several banks. In 1838 there were no less than 200 cotton-mills in the p., employing 15,291 hands. Hat-making is carried on here more extensively, it is said, than elsewhere in England. Its other manufactures are fustians, velveteens, calicoes, and silks. By the reform act, O., including the several townships of O., Chadderton, Crompton, and Rayton, was enfranchised, with the right of returning 2 members to parliament. The number of electors registered for 1837 was 857; in 1847, 704.

OLDHAM, a county in the N part of Kentucky, U. S. Area 220 sq. m. Pop. in 1840, 7,380; in 1850, 7,629. Its cap. is La Grange.

OLDHAMSTOCKS, a parish, partly in the N of Berwickshire, but chiefly in the extreme E of Haddingtonshire, consisting of a main body and a small detachment. The detached part lies in Berwickshire, 1¾ m. E of the S part of the main body. The chief streams are Dean-burn, which runs across the p.; traces for 2 m. to the sea the boundary between the cos.; and traverses, over great part of its course, a romantic wooded dell; Eye and Heriot waters, which, while they rise in the p., speedily leave it on the E; and Whare-burn and Monnynut water, tributaries of the Whitadder. Pop. of p. in 1831, 720; in 1851, 132 in Berwickshire, and 560 in Haddingtonshire.

OLD-HARBOUR, a harbour of Jamaica, on the S coast, in the co. of Middlesex, and p. of St. Dorothy, to the W of Port-Royal. The entrance is impeded by islets and rocks.

OLD-HEAD,—popularly 'the Old-head of Kinsale,'—a promontory in co. Cork, screening the W side of Courtmacsherry bay. It projects 2⅝ m. SSE from the line of the adjacent coast, and terminates at a point 7 m. ENE of the cape of Seven Heads. Its extremity is high and steep; and as seen from the sea, either to the E or to the W, it appears as if it were an island. On the rocky point at the S end is a lighthouse, in N lat. 51° 36′, W long. 8° 58′, which exhibits a fixed light, at an alt. of 236 ft. above high water, and within a ½ m. SSW ½ W from the old lighthouse tower.—Also a fishing harbour in the p. of Kilgeever, co. Mayo, at the head of a small cove on the S side of Clew bay, 1¾ m. ENE of Lewisburgh.

OLDIA, a group of islands in the N. Pacific, in the Radack archipelago, in N lat. 9° 30′, E long. 169° 20′. It comprises 65 islands, of which the principal are O., Ormed, and Edmegio. Each is under the government of a distinct chief. Their chief productions are the pandanus, the cocoa-nut, and the arum.

OLDISLEBEN, a town of the grand-duchy of Saxe-Weimar, in the circle of Weimar-Yena, on the Unstrut, 6 m. SE of Frankenhausen, and 27 m. NNW of Weimar.

OLDLAND, a chapelry in Bitton p., Gloucestershire, 5 m. ESE of Bristol, on the N bank of the Avon, and in the line of the Bristol and Bath railway. Area 2,589 acres. Pop. in 1851, 5,877.

OLDNEY, or Oldernay, a small island on the W coast of Sutherlandshire, flanking the S side of the entrance of Loch-Assynt.

OLD MAN'S BAY, an indentation of the S coast of Newfoundland, 105 m. E of Cape Ray, the SW extremity of the island.

OLDMILLS, a village in the p. of Carncastle, co. Antrim. Pop. in 1841, 117.

OLD PROVIDENCE, an island off the E shore of Central America, about 40 m. from the Mosquito coast, in N lat. 13° 21′, W long. 81° 22′, celebrated in former times as the haunt of buccaneers. It is about 4½ m. long, by 2⅜ m. in greatest breadth, and is of an irregular shape. It may be seen at a distance of 10 or 12 leagues, and is easily distinguished from the neighbouring isle of St. Andrew's by the outline of its abrupt and peaked mountains, the highest of which, nearly in the centre of the island, rises 1,190 ft. above the sea. Separated from its N end, by a channel of from 20 to 30 fath. wide, is the island of Catalina, forming the N boundary of a harbour so named, and affording secure anchorage in from 2 to 3½ fath.

OLD-ROAD-TOWN, a town on the SW coast of the island of St. Christopher, in the Little Antilles, 5 m. WNW of Basse-Terre, on the bay of Old-Road, and at the mouth of a small river.

OLDTOWN, a village in the p. of Clonmethan, co. Dublin, 4 m. S by W of Naul. Pop. 156.

OLD WATER, a rivulet in the extreme E of Kirkcudbrightshire, which rises on the E side of Aughenhay hill, and runs E and N to the Cairn, at a point 5½ m. above that stream's confluence with the Nith.

OLEAN, a township of Cattaraugus co., in New York, U. S., 293 m. W by S of Albany. Pop. 638.

OLEGGIO, or Olezzo, a town of Sardinia, in the prov. and 12 m. N of Novara, between the Tessino and Terdoppio. It is celebrated for its mineral springs, and has a very handsome establishment of baths, with gardens laid out in imitation of the English style, walks, and all sorts of amusements, which render it a fashionable and delightful place in the summer, enjoying distant views of the whole

range of the Alps and Apennines. The town is well-built, has several churches richly ornamented, and stands in the midst of a fertile and highly cultivated country. It contained in 1848, 976 houses, 1,255 families, and 7,420 inhabitants.

OLEIROS, a town of Portugal, in the prov. of Alentejo, comarca and 63 m. NNW of Crato, and 42 m. S of Coimbra.

OLEKMA, or Olokma, a river of Russia in Asia, in the prov. of Yakutsk, and district of Olekminsk, which descends from the NW side of the Stanovoi mountains; runs N; and falls into the Lena, on the r. bank, a little below Olekminsk, and after a course of 450 m. Its principal affluents are on the r. the Tungourka, Ilkimda, and Oioun, and on the l. the Tughir, Miakhi, and Tara.

OLEKMINSK, a town of Russia in Asia, cap. of a district, in the prov. and 375 m. WSW of Yakutsk, on the l. bank of the Lena, a little above the confluence of the Olekma. It was originally a fort, established for the purpose of levying the tribute in furs paid by Yakuts to the Russian government. It now contains a church and 30 houses. The inhabitants, though all of Russian extraction, speak the Yakuts language. Rye and barley are the only species of grain cultivated in the locality. Pasturing cattle forms the chief occupation of the people.

OLENEK, a river of Russia in Asia, in the prov. of Yakutsk, and district of Verkhne-Viliouisk, which runs NNE, and throws itself into the Arctic ocean, to the W of the mouths of the Lena, in N lat. 73°, E long. 122° 20′, and after a course of about 900 m. Alykit, Mikhailovo, Seganka, Makeimova, and Olensk, are the chief places on its banks.

OLENIE, an island of the Arctic ocean, off the coast of Russia in Europe, and a little to the W of the embouchure of a small river of the same name, in N lat. 69° 10′.

OLENII, a headland of Russia in Asia, in the district and 420 m. E of Okhotsk, to the N of the entrance of Yamskaia bay, and to the SW of the bay of Ijighinsk.—Also a headland in the gov. of Tobolsk, and district of Berezov, to the W of the entrance to the gulf of Obi, in N lat. 72° 40′, E long. 74° 20′.

OLENNOI, a small island of the N. Pacific, a little to the S of the peninsula of Alaska, in Russian America, in N lat. 54° 50′, W long. 163° 10′. It rises high, and is very steep.

OLENSK, or Oust Olenskoe′, a village of Russia in Asia, in the prov. and 840 m. NNW of Yakutsk, district and 750 m. N of Verkhne-Viliouisk, on the l. bank and at the embouchure of the Olenek, in N lat. 63° 8′.

OLERON, an island of the gulf of Gascony, comprised in the French dep. of Charente-Inferieure, and arrond. of Marennes. It lies to the N of the embouchure of the Gironde, and opposite that of the Charente, and to the S of the island of Ré, from which it is separated by a channel 9 m. in breadth. Pop. in 1831, 16,224; in 1836, 16,402; in 1841, 16,908. Its SE point is divided from the continent by a strait only about ¾ m. in width. Its length from NW to SE is about 18 m. Its greatest breadth is about 6 m., and its circumf. 48 m. On the NW point is the lighthouse of Chassiron, in N lat. 46° 2′ 52″, E long. 1° 16′ 7″. The soil possesses considerable fertility, producing corn, rye, barley, maize, legumes, wine, and brandy. Ship-building forms also an important branch of industry. On the coast are extensive salines, the salt of which is noted for its whiteness. The trade consists chiefly in salt, wine, and brandy. The island possesses five ports, La Flotte, Saint Martin, La Conarde, Loix, and Ars. It comprises 2 cants. and 6 coms Under the convention it bore the name of the Ile-de-la-Liberté. St. Pierre near the centre, and Oleron on the SE coast, are its chief towns.—O. long belonged to the counts of Anjou and dukes of Aquitaine. It was acquired by France under Charles V., and passed afterwards with Guyenne into the hands of the English. During the wars of the League it frequently changed hands. Its fortifications were constructed by Louis XIV.

OLERON (Gave d'), a river of France, in the dep. of Basses-Pyrénées, formed by the Gaves d'Ossau and d'Aspe, two streams which descend from the Pyrenees, and unite at Oleron; thence the O. runs NW; and throws itself into the Gave-de-Pau, on the l. bank, a little above Peyrehorade, and after a course of about 48 m. Timber forms its chief article of transit. Its principal affluents are the Vert, Jos, and Saizon on the l., and on the r. the Salcis.

OLERON, or Oloron, an arrondissement, canton, commune, and town of France, in the dep. of the Basses-Pyrénées. The arrond. comprises an area of 183,830 hect., and contains 8 cants. Pop. in 1831, 74,552; in 1836, 76,312; in 1841, 77,382. The cant. comprises 17 coms. Pop. in 1831, 15,535; in 1841, 16,074. The town is 15 m. SW of Pau, and 126 m. S of Bordeaux, at the confluence of the Gaves d'Ossau and d'Aspe. Pop. in 1789, 7,514; in 1821, 6,328; in 1831, 6,458; in 1841, 6,804. O. is divided into a high and a low town. The low town is divided into two parts by the Gave d'Ossau. The only promenade is a terrace planted with trees, by which the upper town is partly surrounded, and which commands a fine view of the Pyrenees and of the plains of Pau. O. has manufactories of hosiery, cloth, blankets, cutlery, combs in horn and wood for Spain and America, and shoes; numerous tanneries, paper and spinning-mills, and dye-works. The trade consists chiefly in wool, home-grown and Spanish, skins, salt meat, and wood. This town was sacked in 732 by the Saracens, and was afterwards entirely destroyed by the Normans. It was rebuilt by Centulle, viscount of Bearn, and erected in the 5th cent. into a bishopric, of which the bishop took the title of first baron of Bearn.

OLERSET, a hamlet in Glossop p., Derbyshire. Pop. in 1831, 304; in 1851, 493.

OLESA, a town of Spain, in Catalonia, in the prov. and 18 m. NW of Barcelona, at the foot of a mountain, near the l. bank of the Llobregat. Pop. 2,500. It contains two squares, two fountains, of which one is supplied by a mineral spring, and an hospital, and has manufactories of woollen fabrics.

OLESKO, a town of Austria, in Galicia, in the circle and 9 m. N of Zloczow, and 15 m. SW of Brody, on an arm of the Styr. Pop. 1,250. It contains a Catholic and 3 united Greek churches, and a convent.

OLESNICA, a town of Poland, in the gov. of Kielce, obwodie and 9 m. E of Stopnica. Pop. 950.

OLESNITZ, a village of Prussia, in the prov. of Posen, reg. and 51 m. WSW of Bromberg, circle and 3 m. W of Chodziesen, on the Bolinka. Pop. 230. It has paper, saw, and fulling-mills.

OLESNO. See Rosenberg.

OLESZNICE. See Oels.

OLESZYCE, a town of Galicia, in the circle and 45 m. WNW of Zolkiew, and 6 m. W of Lubaczow.

OLETTA, a canton, commune, and town of Corsica, in the arrond. of Bastia. The cant. comprises 4 coms. Pop. in 1831, 2,293; in 1841, 2,448. The town is 7 m. SW of Bastia. Pop. 1,004.

OLETTE, a canton, commune, and town of France, in the dep. of the Pyrenees-Orientales, and arrond. of Prades. The cant. comprises 16 coms. Pop. in 1831, 6,108; in 1841, 6,275. The town is 9

m. SW of Prades, and 36 m. WSW of Perpignan, on the l. bank of the Tet. Pop. 1,069. In the environs are several thermal sulphureous springs.

OLETZKO, Olezko, or Marggratowa, a circle and town of Prussia, in the prov. of E. Prussia, and reg. of Gumbinnen. The circle comprises an area of 120 sq. m., and contains 20,282 inhabitants. The town is 40 m. SSE of Gumbinnen, on the W bank of a lake of the same name. Pop. in 1837, 2,629. It contains a castle, a Lutheran church, and a large market-place, and has several tanneries. It was founded in 1560 by the margrave Albrecht.

OLEVANO, a town of the Papal states, in the comarca and 30 m. E of Rome, and 9 m. ENE of Palestrina. Pop. 1,000.—Also a town of Sardinia, in the dio. of Novara, prov. of Lomellina, and mand. of San Giorgio-di-Lomellina, on the l. bank of the Gogna, 5 m. S of Mortara. Pop. 990.—Also a town of Naples, in the prov. of Principato-Citra, district and 15 m. E of Salerno, cant. and 6 m. SE of Montecorvino. Pop. 2,100.

OLEVSK, a town of Russia in Europe, in the gov. of Volhynia, district and 60 m. W of Ovroutch. Pop. 556.

OLEZNICA, a town of Poland, in the woiwodie of Cracow, obwod and 7 m. E of Stobnica. Pop. 390.

OLFEN, a town of Prussia, in the prov. of Westphalia, reg. and 23 m. SW of Munster, circle and 6 m. SW of Ludinghausen, near the Lippe. Pop. 1,100. It has manufactories of linen and of shoes, and several dye-works.

OLGINATE, a village of Austria, in Lombardy, in the prov. and 18 m. E of Como, district and 5 m. E of Oggiano, on the r. bank of the Adda. Pop. 1,279.

OLGOPOL, a district and town of Russia, in Europe, in the gov. of Podolia. The town is 134 m. ESE of Kamenitz, and 144 m. NNW of Odessa, on the l. bank of the Savranka. Pop. 1,100. It has several distilleries and saltpetre works. The district comprises several steppes on which large herds of cattle are pastured.

OLGOUN. See Dulcigno.

OLHAO, a town of Portugal, in the prov. of Algarve, comarca and 1½ m. S of Faro, on the Atlantic. Pop. 1,500.

OLI, a river of Nigritia, in the kingdom of Borgu, which flows SE through the provinces of Kiama and Boussa, and joins the Quorra in about 9° 10′ N lat.

OLIA, a river of Russia in Asia, in the district of Okhotsk, which, after a course in a S direction of about 60 m., throws itself into Taouïskaïa bay. At its mouth is a small harbour.

OLIANA-Y-ANOVES, a town of Spain, in Catalonia, in the prov. and 54 m. NW of Lerida, near the l. bank of the Sègre. Pop. 750. It contains three parish churches and an hospital, and has manufactories of linen and of brandy.

OLIAPUR, a town of Hindostan, in the presidency and prov. of Bengal, and 21 m. ESE of Rangpur, near the r. bank of the Brahmaputra.

OLIAS, a town of Spain, in Andalusia, in the prov. and 6 m. E of Malaga, on a hill. Pop. 1,300. It has a considerable trade in cattle.—Also a town in New Castile, in the prov. and 6 m. N of Toledo, on a hill and on the road from Toledo to Madrid. Pop. 1,980. It has an hospital, and possesses manufactories of tape and of hosiery.

OLIENA, a village of Sardinia, in the div. of the Capo-Cagliari, prov. and district and 6 m. SE of Nuoro. Pop. 2,500. It is supposed to have derived its name from the quantity of oil that was formerly produced in the environs.

OLIERGUES, or Olliergue, a canton, commune, and town of France, in the dep. of the Puy-de-Dôme, and arrond. of Ambert. The arrond. comprises five com. Pop. in 1831, 8,097; in 1841, 8,420. The town is 15 m. NW of Ambert, on the l. bank of the Dore. Pop. 1,937. It has manufactories of camlets and of linen.

OLIETE, a town of Spain, in Aragon, in the prov. and 51 m. S of Zaragoza, and 30 m. WSW of Alcaniz, near the r. bank of the Rio-Martin, in a fertile locality. Pop. 1,683. It has manufactories of linen.

OLIFANT. See Elephant's River.

OLILIET, a populous village on the SE coast of Timer-Laut, in S lat. 7° 55′, E long. 131° 26′.

OLIM, a river of Russia in Europe, which has its source in the gov. of Voronej, in the district and to the W of Nijnii-Devitzk; runs N; enters the gov. of Orel; and throws itself into the Sosna, on the r. bank, and 24 m. SW of Jeletz.

OLIM-CHAN, a mountain of China, in the prov. of Yun-nan and dep. of Chun-ning, in N lat. 23° 20′, and E long. 100° 4′. It is the most southerly of all the snowy mountains in China.

OLINAMA, a town of the Sunda archipelago, in the island of Timor, on the bay of Coupang and near a considerable river. It contains upwards of 200 houses. Rice is extensively grown in the vicinity.

OLINDA, a comarca and town of Brazil, in the prov. of Pernambuco, 3½ m. N by E of Recife and near the shores of the Atlantic, in S lat. 8° 0′ 59″. Pop. in 1845, 8,000. It is pleasantly situated on a hill, and commands a fine view of the adjacent country and ocean. The streets are ill-paved, and the houses generally low and dilapidated, but the gardens with which the latter are surrounded, render the general aspect of the town agreeable. The principal edifices are the cathedral, a fine structure, and the episcopal palace, now very ruinous. It has besides several convents with handsome churches, an hospital, a college, a public library, and a botanical garden. It contains several distilleries, and has a considerable trade in cotton and sugar, the produce of the locality. This town was formerly a flourishing one. Since its capture by the Dutch in 1640 it has greatly decayed in importance. Olinda and Recife are now commonly comprised under the name of Pernambuco: which see.

OLINTEPEQUE, a village of Guatimala, in the state of that name and dep. of Quezaltenango. It contains the remains of an ancient Indian citadel.

OLIOUTORA, a river of Russia in Asia, in the NE part of Kamtchatka, which runs NE and throws itself into the bay of Olioutorskaïă, near the town of Olioutorskoï, and after a course of 120 m.

OLIOUTORS, a tribe of the Koriaks people, in Russia in Asia, in the district of Kamtchatka. They inhabit chiefly the banks of the Olioutora, construct boats of seal-skin, and use nets in fishing

OLIOUTORSKAIA, a bay of Behring's sea, in Russia in Asia, on the NE coast of Kamtchatka. It is 60 m. in depth, and at its entrance is nearly equal in breadth.

OLIOUTORSKII, a headland of Russia in Asia, in the district of Kamtchatka, on Behring's sea, to the SE of Olioutorskaïa bay, in N lat. 59° 50′, and E long. 170° 20′.

OLIOUTORSKOI, a town of Russia in Asia, in the district of Kamtchatka, on the l. bank and near the embouchure of the Olioutora, and 90 m. NE of Nijni-Kamtchatsk.

OLITA, or Olitta, a town of Poland, in the gov. of Augustow, obwodie and 38 m. W of Kalwarya, on the l. bank of the Niemen, opposite a Russian town of the same name, of which it was formerly a suburb. Pop. 220.—Also a town of Russia in Europe, in the gov. of Vilna, district and 39 m. WSW of Troki, on the r. bank of the Niemen.

OLITE, a town of Spain, in the prov. and 27 m. S of Pamplona, in a fine plain on the r. bank of the Cidacos. Pop. 2,748. It is still partially surrounded by remains of its ancient walls and ditches, and contains two parish-churches, one of which is remarkable for its finely sculptured portico, and the other for a gothic tower, two convents and the remains of a palace, built in the 15th cent. by Charles III. king of Navarre. This town is an ancient one, and was formerly the residence of the kings of Navarre.

OLIVA, a town of Prussia, in the prov. of West Prussia, regency and circle and 5 m. NW of Danzig, about 1½ m. from the shores of the Baltic. Pop. in 1837, 1,250. It has a fine church belonging to an ancient Cistercian abbey, and contains several forges, a copper work, and a paper-mill. A treaty was concluded here between the Swedes and the Poles in 1660.

OLIVA, a town of Spain, in Estremadura, in the prov. and 45 m. S of Badajos. Pop. 4,700. It has manufactories of linen.—Also a town in Valencia, in the prov. and 24 m. E of San Felipe, 3 m. from the shore of the Mediterranean. Pop. 6,000. It is built amphitheatrally on several picturesque hills planted with mulberry and olive trees. The streets are clean and well paved. It contains a fine square, an old castle, two parish-churches, and several convents. It has manufactories of linen goods and pottery ware. The environs are fertile in wine, silk, and oil.

OLLERTON, or Owlarton, a township in Knutsford p., Cheshire, 2½ m. SE of Nether-Knutsford. Area 1,215 acres. Pop. in 1831, 283; in 1851, 300. —Also a chapelry and village in Edwinston p., Nottinghamshire, 19 m. NNE of Nottingham. Pop. 937.

OLLIVET, a commune of France, in the dep. of the Mayenne and cant. of Moiron, 9 m. NW of Laval. Pop. 1,264. It has several forges and a foundery.

OLLO, a village of Spain, in the prov. and 12 m. NW of Pamplona, in a valley of the same name, on the l. bank of the Anoz. Pop. 220. The valley contains nine villages.

OLLOIX, a commune of France, in the dep. of the Puy-de-Dôme and cant. of Saint-Amand-Tallende, 15 m. S of Clermont-Ferrand. Pop. 1,150.

OLLOMONT, a village of Sardinia, in the prov. and 9 m. N of Aosta, on a mountain, on the l. bank of a torrent which throws itself into the Pellina, an affluent of the Doira-Baltea. Pop. 440. In the vicinity are valuable copper mines.

OLLON, a parish and village of Switzerland, in the cant. of Vaud, district and 1½ m. SE of Aigle, in a plain. Pop. of p. 2,692.

OLLONIEGO, a town of Spain, in Asturias, in the prov. and 6 m. SE of Oviedo, on a small affluent of the Nalon which is crossed in the vicinity by a substantial bridge. Pop. 1,400. It has an hospital.

OLMEDA-DE-LA-ABOLLA (La), a town of Spain, in New Castile, in the prov. and 24 m. ENE of Madrid, and on the brow of a mountain, 3 m. from the r. bank of the Tajuna. Pop. 396. It has a manufactory of cloth.

OLMEDA-DE-LA-CUESTA, a town of Spain, in the prov. and 33 m. NW of Cuenca. Pop. 580. It has manufactories of linen.

OLMEDA-DE-LAS-VALERAS, a town of Spain, in the prov. and 27 m. SSE of Cuenca. Pop. 800. It has manufactories of agricultural implements.

OLMEDA-DEL-ESTREMO, a town of Spain, in New Castile, in the prov. and 30 m. E of Guadalaxara, near the Tajuna.

OLMEDILLA, a town of Spain, in Leon, in the prov. and 21 m. SSW of Salamanca.

OLMEDILLA-DE-ALARCON, a town of Spain, in the prov. and 15 m. S of Cuenca, on the brow of a hill finely planted with vines. Pop. 796. It has an hospital.

OLMEDILLA-DEL-CAMPO, a town of Spain, in the prov. and 15 m. NW of Cuenca, near the Sierra-de-Altomir. Pop. 490.

OLMEDILLO, a town of Spain, in Old Castile, in the prov. and 45 m. SSW of Burgos, in the valley of Esgueva. Pop. 567.

OLMEDO, a judicial partido and town of Spain, in the prov. of Leon. The town is 30 m. S of Valladolid, on a height in the midst of an extensive plain, watered by the Eresma and Adagia. Pop. 2,200. It is enclosed by old walls, and contains six parish churches, numerous convents, and two hospitals. It has manufactories of linen, several brick-works, and a distillery. This place was formerly one of considerable strength. In 1446, and 1467, two sanguinary engagements took place under its walls.

OLMEN, a village of Belgium, in the prov. and 23 m. ESE of Antwerp, and arrond. of Turnhout, cant. and 3 m. SSE of Mol, on the l. bank of the Great Nethe. Pop. 1,060.

OLMES (Les), a village of France, in the dep. of the Rhone, cant. and 5 m. ESE of Tarare, and 14 m. SW of Villefranche. Pop. 300.

OLMET, a commune of France, in the dep. of the Puy-de-Dôme, cant. and 7 m. ESE of Courpiere, and 13 m. SSE of Thiers. Pop. 1,060.

OLMETO, or Olometo, a canton, commune, and town of Corsica, in the arrond. of Sartene. The cant. comprises 5 com. Pop. in 1831, 2,871; in 1841, 3,590.—The town is 8 m. NNW of Sartene, and 18 m. SSE of Ajaccio. Pop. in 1841, 1,986. In the vicinity are the thermal baths of Boraci.

OLMI-E-CAPELLA, a canton and commune of Corsica, in the arrond. of Calvi. The cant. comprises 4 com. Pop. in 1831, 1,529; in 1841, 1,666. —The town is 15 m. E of Calvi. Pop. 780.

OLMILLOS, a town of Spain, in Old Castile, in the prov. and 15 m. WSW of Burgos, in a fine valley. Pop. 275.

OLMILLOS-DE-SASAMON, a town of Spain, in Old Castile, in the prov. and 24 m. WNW of Burgos, in a fine plain, at the foot of Mount Citores. Pop. 600. It contains the ruins of a fine castle.

OLMO, a town of Spain, in Leon, in the prov. and 39 m. SSW of Valladolid, near the Guarena. Pop. 148. The locality is very unhealthy.

OLMOS-DE-ESGUEVA, a town of Spain, in Leon, in the prov. and 9 m. ENE of Valladolid, on the Esgueva. Pop. 230.

OLMUTZ, or Holomauc, a circle or administrative subdivision and town of Austria, in Moravia.—The circle is bounded on the N and NE by the circle of Troppau; on the E by that of Prerau; on the SE and S by the circle of Hradisch; and on the SW by that of Brunn; on the W by Bohemia; and on the NW by Prussia; comprising an area 99 m. in length from NNW to SSE, and 54 m. in breadth, and a total superficies of 1,950 sq. m. Pop. in 1837, 430.739. It is flat in the S, but very mountainous in the N and NE. The principal rivers by which it is traversed are the March and the Mohra. In the W part are several small lakes. Towards the S is a fine plain. Flax, grain, hemp, legumes, and wine, are the chief articles of agricultural produce. The mountains afford pasturage to large herds of cattle. It has manufactories of linen and woollen fabrics, cloth, glass, and paper, and several spinning-mills. This circle contains 47 towns and 793 villages.—The town, which is the cap. of the above named circle, is situated 44 m. NE of Brünn, 117 m. NNE of Vienna, and 138 m. ESE of Prague, in a marshy locality, on

the r. bank of the March, by an arm of which it is enclosed on the N, E, and S. Pop. in 1834, 12,207; in 1845, 12,560. O. has extensive fortifications, and has 5 suburbs. It is well-built; but the height of the houses, and the heavy porticoes with which many of them are decorated, give it a sombre aspect. It has a university with a library and museum, a gymnasium, an archiepiscopal seminary, an imperial gymnasium, and an hospital. The principal buildings are the cathedral, a fine Gothic structure founded by Wenceslaus III.; the episcopal palace, the custom-house, the arsenal, and the churches. It has manufactories of cloth, and several tanneries; and carries on an active trade in cattle imported from Russia and Moldavia. The archbishopric of this place is one of the richest ecclesiastical benefices in the empire. O. is very ancient, and was formerly capital of Moravia. It is supposed to be the *Strevinta* or *Eburum* of Ptolemy, and the *Julii-Mons* or *Juliomontium* founded by Julius Maximinus in 238. It sustained an unsuccessful siege by the Mongols in 1231.—A railway to connect O. with Ratibor, *via* Tropau, is projected.

OLNE, a commune of Belgium, in the prov. of Liege, arrond. and 7 m. W of Verviers, on the Vesdre. Pop. 2,874. It has manufactories of arms and of cloth, a spinning and several fulling mills, and several nail-works.

OLNEY, a parish and market town of Buckinghamshire, on the Ouse, 10 m. WNW of Bedford, and 16 m. ENE of Buckingham. Area of p. 3,140 acres. Pop. in 1801, 2,075; in 1831, 2,418; in 1851, 2,329.—The town consists of one long street. The church is a spacious building, ornamented with a tower and beautiful spire 185 ft. high. Lace-making and silk-weaving are the chief employments of the inhabitants. The poet Cowper long resided here and in the neighbourhood; and many of his finest descriptions are drawn from the contiguous scenery.

OLNHAUSEN, a village of Würtemberg, in the circle of the Neckar, bail. and 16 m. NE of Neckarsulm, and 1½ m. ESE of Widdern, on the r. bank of the Jaxt. Pop. 419. It has a Jewish school.

OLOCAN, a town of Spain, in Valencia, in the prov. and 60 m. NNW of Castellon-de-la-Plana, in the midst of lofty mountains. Pop. 500. It has an active trade in cattle and in wool.

OLOFSFORS, a mining village of Sweden, in the laen of West Bothnia, parish of Nordmaling.

OLOFSTROEM, a village of Sweden, in the prefecture of Bleking, haerad of Lister and parish of Gemshoeg, 42 m. W of Carlskrona. It has a forge, a copper work, a fulling mill, and a paper mill.

OLOMETO. See Olmeto.

OLONA, a river of Austria, in Lombardy, which has its source in the prov. of Como, a little to the N of Varese; traverses the prov. of Milan; divides at the town of that name into two arms, one of which, under the name of Lambro-Morto, runs E, and joins the Lambro, on the r. bank, at St. Angelo. The other, retaining the name of O., enters the prov. of Pavia, and throws itself into the l. bank of the Po, at St. Zenone, 14 m. SE of Pavia. The O. has a total course, in a generally SE direction, of 66 m. It is joined at Milan by the Naviglio-Grande and the Martesana canal. The river O. gave its name to a dep. of the kingdom of Italy. Its cap. was Milan.

OLONETZ, a government or administrative province and town of Russia in Europe. The gov. lies between 60° and 64° 30′ N lat., and between 29° 40′ and 41° 40′ E long.; and is bounded on the N and NE by the gov. of Archangel; on the SE by that of Vologda; on the S by the gov. of Novgorod; and on the SW by that of St. Petersburg, from which it is separated by the Oïat and Svir; and on the W by Lake Ladoga and the grand-duchy of Finland. It is 390 m. in length from NW to SE, and about 300 m. at its greatest breadth, comprising a total superficies of 51,100 sq. m. Pop. in 1841, 247,400; in 1846, 263,100. With the exception of a low range of hills of the same name, the surface of this gov. is generally level. It belongs to the basins of three seas, viz.: the Caspian, the White sea, and the Baltic. In the first of these is the Kovja; in the second, comprising the E and N, is Lake Latcha, in which the Onega river and lakes Sego and Vego have their sources. In the western part are lakes Onega and Ladoga, and the Svir, by which the waters of the former are conveyed into the latter. The principal tributaries of Lake Onega are the Vodla and Vitegra. Besides the larger lakes, there are, especially in the N part of the gov., numerous sheets of water of smaller dimensions. The soil is partly stony, and to a great extent marshy or covered with forests, and little capable of culture. Between lakes Onega and Ladoga are quarries of marble and porphyry, and in some of the mountains are mines of iron and copper. The trade consists chiefly in agricultural productions, the produce of the mines, and in dried and salted fish. The inhabitants are chiefly Russians, Fins, and Laplanders, and profess the Greek religion. The gov. is divided into 7 districts. Its capital is Petrozavodsk.—The town, which is the capital of a district of the same name, is 72 m. SW of Petrozavodsk, and 132 m. NE of St. Petersburg, 15 m. from the E coast of Lake Ladoga, on the Olonka, at the junction of the Megrega. Pop. 2,800. It contains 8 churches, 4 chapels, a prison, a custom house, and several public magazines. It has large building docks established by Peter the Great, and numerous saw-mills. The trade consists chiefly in skins. The district is intersected with mountains, and possesses little arable ground. It has quarries of marble, and mines of iron and copper. Pop. 30,350.

OLONETZ MOUNTAINS, a chain of mountains in the NW part of Russia in Europe, in the gov. of the same name, and on the confines of that gov. and of Finland. They make part of the great mountain line by which the waters of the basin of the Baltic are separated from those of the White sea, and join on the NW the mountains of Maanselka.

OLONNE, a commune of France, in the dep. of the Vendee, and arrond. of Les Sables, 3 m. N of Sables-d'Olonne, in the midst of a dried marsh, and near the shore of the Atlantic. Pop. 1,902. It has a small port. The trade consists chiefly in cattle, horses, mules, resin, coal, and salt. This was formerly a place of some importance. Its castle was demolished in 1689. The environs are very fertile.

OLONZAC, a canton, commune, and town of France, in the dep. of the Herault, and arrond. of Saint-Pons. The cant. comprises 13 com. Pop. in 1831, 8,902; in 1841, 9,119.—The town is 16 m. S of Saint-Pons, and 66 m. WSW of Montpellier, on the Landraugoul, near the Canal-du-Midi. Pop. 309.

OLORON. See Oleron.

OLOST, a town of Spain, in Catalonia, in the prov. and 42 m. N of Barcelona. Pop. 406. It has some spinning-mills.

OLOT, a judicial partido and town of Spain, in Catalonia, in the prov. of Gerona. The town is 15 m. NW of Gerona, on the Fluvia. Pop. 12,170. It is surrounded by ancient walls, and contains an hospital, barracks, and numerous fountains. It has manufactories of hosiery, coarse cloth, calicoes plain and printed, soap, paper, cutlery, leather, &c., and carries on an active trade. This town was destroyed by an earthquake in 1421. In the environs are several extinct volcanoes.

OLOT, an island of the North Pacific, in the Radack archipelago, in N lat. 8° 46′ 4″.

OLOUNDOUROUK, a town of Greece, in Livadia, 8 m. N of Lepanto, on the l. bank of the Fidari.

OLPAR, a town of Hindostan, in the presidency of Bombay, prov. of Gujerat, district and 14 m. NNW of Surate.

OLPE, a circle and town of Prussia, in the province of Westphalia, and regency of Arensberg. The circle comprises an area of 105 sq. m., and 23,959 inhabitants.—The town is 30 m. SSW of Arensberg, near the r. bank of the Bigge, at an alt. of 343 yds. above sea-level. Pop. in 1841, 1,811. It has several iron, steel, and copper works, and tanneries.

OLS, or Olessnice, a town of Austria, in Moravia, in the circle and 33 m. NW of Brünn.

OLS, or Olesnica, a circle and town of Prussia, in the province of Silesia, and regency of Breslau. The town is 19 m. ENE of Breslau, on the Oelse. Pop. in 1837, 5,801. It is the capital of a principality of the same name, and has a ducal gymnasium, one of the most richly endowed in the prov., and a fine castle belonging to the duke of Brunswick-Ols, with a library and museum.

OLSA, a river of Moravia, in the circle of Teschen, which has its source on the frontiers of Galicia, 17 m. S of Bielitz, and near that of the Vistula; waters Yablunkau, Teschen, and Freystadt; runs along the confines of Moravia and of Prussian Silesia; and joins the Oder on the r. bank, 2 m. NE of Oderberg, and after a course in a generally NW direction of about 60 m.

OLSENE, a village of Belgium, in the prov. of East Flanders, cant. and 5 m. SW of Deynse, and 16 m. SW of Ghent, near the Lys. Pop. 2,100.

OLSHAMMER, a town of Sweden, in the prefecture and 36 m. SSW of Œrebro, and haerad of Sundbo, on Lake Wetter. It has some trade in fish.

OLSNITZ, or Olssnitz, a town of Saxony, capital of the amt of Voigtsberg, in the circle and 30 m. SW of Zwickau, on the r. bank of the Elster, at an alt. of 415 yds. above sea-level. Pop. in 1834, 3,814. It has manufactories of cloth, hosiery, and leather. The pearl-fisheries of the Elster afford also a considerable branch of industry. In the vicinity is the ancient castle of Voigtsberg.

OLSTYNEK. See Hohfenstein.

OLSZANY, a town of Russia in Europe, in the gov. of Vilna, district and 15 m. S of Oschmiana.

OLSZTYN, a town of Poland, in the gov. of Kielce, 38 m. NNW of Olkusz. Pop. 1,638.

OLTEN, a town of Switzerland, in the cant. and 21 m. NE of Soleure, and 21 m. SE of Bâle, on the l. bank of the Aar, which is here crossed by a bridge, and at the junction of the Dünner. Pop. 1,634, Catholics. It contains some fine houses, and has a good port. Its industry, consisting in the manufacture of hosiery, cloth, and leather, is considerable; it has also an active trade in paper, cloth, wine, and spices.

OLTENITZA, a village of Wallachia, 32 geog. m. direct distance SE by S of Bucharest, on a slightly rising ground near the l. bank of the Arjisch, and 2½ m. above the influx of that stream into the l. bank of the Danube opposite Turtukan. The Danube, which is here 452 yds. broad, was crossed by the Turkish forces under Omer Pasha on the 3d and 4th October 1853, and a series of engagements took place with the Russian forces.

OLTISSI, a town of Turkey in Asia, in the pash. and 105 m. SSW of Akhalzike.

OLTUL, a district of Upper Wallachia, skirted by the Aluta on the W, and by the Danube on the S. Its chief town is Slatina.

OLU-BURLA, a town of Turkey in Asia, in Anatolia, in the sanjak of Hamid-ili, 33 m. N of Hamid, and 36 m. S of Afium-Kara-Hissar.

OLULA-DE-CASTRO, a town of Spain, in the prov. and 27 m. NNE of Almeira.

OLULA-DEL-RIO, a town of Spain, in the prov. and 36 m. NNE of Almeira, on the l. bank of the Almanzor. Pop. 900.

OLVA, a town of Spain, in the prov. and 30 m. ESE of Teruel, on the l. bank of the Mijares. Pop. 1,200. A good deal of coarse linen is made here.

OLVENSTADT, a village of Prussian Saxony, 3 m. NW of Magdeburg. Pop. 1,200.

OLVERA, a town of Spain, in the prov. and 64 m. ENE of Cadiz. It has an old Moorish castle. Pop. 6,000. A considerable quantity of linen is woven here; and there are numerous oil-mills.

OLVESTON, a parish of Gloucestershire, 4 m. SW of Thornbury. Area 4,787 acres. Pop. 1,669.

OLVIOPOL, a town of European Russia, in the gov. of Kherson, on the Bug, 124 m. NW of Kherson, in N lat. 48° 3′. Pop. 1,500.

OLYKA, a town of Russian Poland, situated near a lake 20 m. E of Lucko, and 21 m. N of Dubno. It was the chief place of a duchy belonging to the ancient house of Radzivil.

OLYMPIA, or Andilalo, a hamlet of Greece, in the Morea, situated on the Rufea or Alpheius, 10 m. E of Pyrgos, a little above the junction of the *Cladeus* with the Rufea. There are now few remains of the ancient town. The plain on which the world-renowned games were celebrated is now a large and fertile corn-field, the soil being formed by the muddy depositions of the Rufea. The earth, thus raised considerably above its original level, covers numerous ancient foundations and remains. The only monument of the position of which there is any certainty is the temple of Jupiter.

OLYMPUS, or Elymbo, a celebrated mountain of European Turkey, on the frontiers of Romelia, at the E extremity of the Cambunian range, and near the W coast of the gulf of Salonika, in N lat. 40° 4′, E long. 22° 21′, about 25 m. N of Larissa. Its summit is covered with snow during a part of the year; but, though accounted by the ancients the highest mountain in the world, its actual elevation is 9,745 ft. Mr. Urquhart gives an interesting and animated account of the ascent of this mountain in his *Spirit of the East*. Salonika, he says, was quite distinguishable from its summit; and Larissa appeared under his feet. "The whole horizon from N to SW was occupied by mountains, hanging on, as it were, to Olympus. This is the range that runs westward along the N of Thessaly, ending in the Pindus. The line of bearing of these heaved-up strata seems to correspond with that of the Pindus, that is, to run N and S, and they presented their escarpment to Olympus. Ossa, which lay like a hillock beneath, stretched away at right angles to the S; and in the interval spread far, far in the red distance the level lands of Thessaly, under that peculiar dusty mist which makes Nature look like a gigantic imitation of an unnatural effect produced on the scene of a theatre. When I first reached the summit, and looked over the warm plains of Thessaly, this haze was of a pale yellow hue. It deepened gradually, and became red, then brown, while similar tints far more vivid were reproduced higher in the sky. But when I turned round to the east, up which the vast shadows of night were travelling, the cold ocean looked like a plain of lead; the shadow of the mighty mass of O. was projected 20 m. along its surface; and I stood on the very edge. The structure of O. is very singular. The central group is marble, sometimes in thin layers, varying from very fine to very coarse-grained white, sometimes gray, with a little limestone dis-

persed through it. Looking towards the mountain, the sides seem all rounded; but looking from the centre, the escarpments present themselves as cliffs. Towards the base of the principal rock, a little gneiss appears overlying the marble. The water from the mountain winds round it in a vale somewhat irregular, formed by the back of the marble and the face of a mingled formation of stratified granite, gneiss, and mica shist: a more extensive vale and higher abutments succeed to this. Through this stratum the water escapes to the SW by a valley of denudation, and to the E finds its way along the face of the gneiss to the sea. At Sciathos I remarked a section of a rock-marble below, and mica schist above, conformably overlying, but supposed it displaced. At Naxia the marble and gneiss regularly alternate in layers, which seem identical with the stratification of O. Towards Tempe also mica schist abounds, of a burnt amber colour, which, together with the rugged and broken aspect of the hills, gives that region a volcanic look; and has perhaps led to the supposition that the passage of the Peneus was opened by an earthquake. Tempe is a valley of denudation."

OLYMPUS, a noble mountain of Asiatic Turkey, in the sanjak of Khodavendikar, to the S of the town of Brusah. Marshal Marmont estimates its alt. at 2,247 metres = 2,457 yds. above sea-level. Chestnut trees grow luxuriantly on the spurs of this mountain; at a greater height evergreens of all descriptions are seen; still nearer the summit, there is a considerable extent of table-land, which supplies pasturage to the flocks of the Turcomans who encamp on it during the summer.—There is another mountain of the same name in the S part of the island of Mitylene.

OLYMPUS (Mount), a remarkable mountain on the NW coast of North America, a little to the S of the straits of Juan-de Fuca, in about N lat. 47° 10′. It was so named by Captain Meares, who visited this coast in 1788. Its summit is covered with perpetual snow.

OM, a river of Asiatic Russia, which rises from a lake in the steppe of Barabinsk, in the gov. of Tomsk, and, after a WSW course of about 350 m., falls into the Irtish, on the l. bank, near the town of Omsk. It receives the Ugakla, the Itsha, the Kama, and the Tartas, on the r. bank.

OMA, or Haurauka, one of the Molucca islands, to the NE of Amboyna, in S lat. 3° 37′. It is about 9 m. long, and 6 m. wide, and has about 5,000 inhabitants. The principal village bears the same name. Its chief production is cloves.

OMACHIS (Grande), a river of Canada, which runs into Lake St. Pierre, in N lat. 46° 16′, after a SE course of about 60 m.

OMAGH, the capital of co. Tyrone, in the p. of Drumragh, at the formation of the Struhle river by the confluence of the Camowen and the Drumragh rivulets, 7 m. SSW of Gortin, and 86¾ m. NNW of Dublin. The site of the town is a rapid slope upon the side of one of a numerous series of tortuous vales and sinuous dells which cut all the circumjacent country into a labyrinth of hillocks, ridges, hills, and hollows. The main street is spacious, well-edificed, and cheerful. The county court-house is a handsome Grecian building. The county gaol is a large modern building on the N side of the town. The other public buildings are a church, four Protestant dissenting meeting-houses, a Roman Catholic chapel, a barrack, an infirmary, a fever-hospital, and a poor law union workhouse. O. is the market-town for an extensive linen-trade; and has long been known, in particular, for its bulky sales of brown linen. Its corn trade and its general retail trade are also of comparatively great extent. Pop. in 1841, 2,947.

OMAGUAS (San Joaquim de), a missionary settlement of Ecuador, in the prov. of Mainas, on the N shore of the river Amazon, in S lat. 4° 9′ 17″, 60 m. below the junction of the Rio-Tigre.

OMAN, a division of Arabia, comprising that portion of the coast which extends from about the latitude of the island of Mozeirah or 20° 48′ N, to Ras-el-Had or Cape Mussendun, in N lat. 26° 24′, forming a narrow strip of land of nearly 400 m. in length, but never exceeding 150 m. in breadth, bounded on the E by the Indian ocean, on the W by deserts or vast plains of loose drift-sand of unknown extent. A range of mountains traverses the whole prov. from Maskat to Sur, in a direction nearly parallel to the coast. Under the parallel of 23°, the Jebel-Akhdar runs in a direction nearly transverse to the coast-line, and terminates in Ras-Mussendun. Primitive limestone is the predominant rock. The Tehama or district of Batna is a fertile and well-watered region; but O. in general may be described as "a desert thickly studded with oases, and containing amidst its mountains numerous fertile valleys." [*Wellsted.*] The oases extend from Beni-Abu-Ali, in a WNW direction, and vary in size from 1 to 8 m. in circumf. When water can be readily obtained, the fertility of these oases is very great; they yield plentifully barley, dates, lentiles, grapes, mangoes, melons, oranges, and sugar-cane. Wheat is sown in the latter part of October, and reaped about the middle of March. Some tracts are thickly wooded with acacias and tamarisks, and aloes are numerous on the borders of the streams. The wild animals on the plains are jackals, foxes, hares, antelopes, and jerboas; hyenas are found near the mountains; wild hogs, goats, and a species of small panther, are met with on the Jebel-Akhdar. The Omany camel is greatly esteemed for strength and swiftness. They are valued at from 30 to 140 dollars. Goats abound; sheep are scarce; humped oxen are used for drawing water, ploughing, and treading out the grain. Doves, plovers, pigeons, and quails, are numerous. The inhabitants of this district have always been the most active and commercial of any Arabian people. Situated at the meeting point between India, Arabia, Persia, and Eastern Africa, O. has been always a species of depot for the commodities of these respective countries. The manufactures are few and rude. Canvass and coarse woollen and cotton cloths are woven; and the ruder operations of the blacksmith and silversmith are conducted in the towns. The Portuguese early invaded and took possession of Maskat, its principal port, which they retained for nearly 200 years. In the course of the last cent., Nadir Shah invaded and conquered O.; but his arms being occupied in other quarters, the native chiefs speedily regained their dominion. Rostak is the residence of the imam; but Maskat and Matara are the places through which the country is chiefly known to Europeans; Kalhat, Shinass, and Sohar, are also considerable towns. Wellsted estimated the entire pop. at 250,000. See Maskat.

OMAN (Sea of), a name sometimes given to that part of the Indian ocean which lies between Arabia on the NW; Beluchistan on the N; and Hindostan on the NE and E.

OMASUYOS, a province of Peru, to the W of Lake Titicaca. It is 40 leagues long from N to S, and from 16 to 20 leagues wide. That part of the prov. which runs along the great lake has a mild climate. It produces little corn, but its pastures feed a number of cattle, and it has gold-mines. It is chiefly inhabited by Indians.

OMATE, a volcanic summit of the Peruvian Andes, about 50 m. SE of Arequipa.

OMBAY, or Mallua, an island in the Eastern seas, between the 8th and 9th parallels of S lat., 20

m. NW of Timor. It is 45 m. in length from E to W, and about 13 m. in average breadth.

OMBERSLEY, a parish of Worcestershire, 4 m. W by N of Droitwich. Area 6,962 acres. Pop. in 1841, 2,267; in 1851, 2,364.

OMBLA, a river of Austrian Dalmatia, in the maritime territory of Ragusa. It issues from the foot of an immense rock, with a body of water "almost as large as the Thames at Richmond," and flows in a course of little more than 2 m. through a fertile plain, covered with country-houses, gardens, vineyards, and olive plantations, to a small gulf which branches out from that of Gravosa, a little to the N of Ragusa.

OMBLEZE, a village of France, in the dep. of Drome, cant. and 15 m. NE of Crest. Pop. 560.

OMBOS, or Kum-Ombos, a village of Upper Egypt, in the prov. of Thebes, 27 m. NW of Assuan, distinguished by the remains of two temples which still display the faded aspect of ancient grandeur.

OMBRIANO, a village of Austrian Lombardy, 2 m. WSW of Crema. Pop. 1,300.

OMBRONE, a river of Tuscany, which rises among the Apennines; runs S; and falls into the Mediterranean at Castell-Ombrone, not far from Groseto, after a course of 70 m. Its principal affluents are the Arbia, the Mersa, and the Lanzo, on the r.; and the Orcia on the l.

OMCHU, a river of Tibet, which joins the Lachu in Thaleayn, after a S course of about 120 m.

OMDIÑAR, a village of Lower Egypt, 7 m. NNW of Cairo.

OMEGNA, a town of the Sardinian states, in the prov. of Novara, on the r. bank of the Strona, near the lake of Orta, 16 m. S of Domo-d'Ossola. Pop. 1,500.

OMEKON, a river of Asiatic Russia, which descends from the NW flanks of the Stanovoi mountains, and joins the Indighirka, on the r. bank, after a NNW course of 90 m.

OMELLUR, a town and fort of Hindostan, in Travancore, 60 m. ESE of Cochin.

OMELNIK, a town of Russia, in the gov. and 54 m. SW of Poltava, on the r. bank of the Psiol.

OMER (Saint), a town of France, in the dep. of Pas-de-Calais, situated partly on an eminence, and partly in a marshy tract traversed by the river Aa, 22 m. SE of Calais, at the mouth of the canal of Neuf-Fossée, which unites the Lys and the Aa, and on the railway from Arras to Calais. It is built with tolerable regularity, the principal streets being broad and spacious, but bordered with low mean-looking houses, built for the most part of a yellow brick, which has a dingy and disagreeable appearance. The ramparts and some of the public edifices are built of red brick. The Place d'armes is surrounded on three sides by small and irregular houses, and on the fourth has the hotel-de-ville. A suburb called Haut Pont is situated to the N of the town, along the quays which border the canal. The only public buildings worth notice are the cathedral and the abbey-church of St. Bertin. The college has a library of 20,000 vols., but is best known as a seminary for the Catholic clergy of England and Ireland. Pop. in 1789, 14,612; in 1821, 18,246; in 1846, 18,424. A number of the inhabitants are occupied with the culture of the fertile grounds around the town; others are employed in the manufacture of woollens, leather, paper, starch, beet-root sugar, and tobacco-pipes. As a fortress, St. O., though little mentioned in the military history of late ages, is possessed of considerable strength, partly from its outworks, but more from the power its garrison possesses of inundating the adjacent country.—The cant. of St. O. comprises 16 coms., with a pop. in 1831 of 31,204; in 1841 of 34,199.—The arrond. has an area of 108,245 hect., and comprises 6 cants., with a pop. in 1831 of 103,073; in 1841 of 109,144.

OMERA, a village of Yemen, in Arabia, 16 m. N of Aden.

OMERCOTE, a town of Sind, 90 m. E of Hyderabad, with a fort.

OMERCUNTUC, a district and town of Hindostan, in the prov. of Gundwana, 28 m. NW of Ruttunpore. It is situated in a very wild and uncultivated country, near the sources of the three great rivers the Sone, the Nerbudda, and Mahanuddi, and forms a celebrated place of pilgrimage.

OMERO (Santo), a village of Naples, in Abruzzo-Ultra 1ma, 12 m. NNE of Teramo.

OMERPORE, a town of Hindostan, in the prov. of Berar, in N lat. 20° 23′.

OMESSA, a village of Corsica, 6 m. NE of Corté.

OMETA, a town of Hindostan, in the prov. of Gujerat, 20 m. E of Cambay.

OMETEPEC, a river of Mexico, which runs into the Pacific, in N lat. 16° 52′.—Also an island in the lake of Nicaragua, 25 m. E of Nicaragua. It is 20 m. in length, and from 7 to 8 m. in breadth, and is inhabited by Indians, who raise crops of maize, and possess some cattle. It is joined to the island of Madera by a neck of land, so low that when a breeze sets in from NE it is not unfrequently submerged. It attains an alt. of 5,100 ft. [*Baily*], 5,252 ft. [*Squiers*], in a volcanic mountain of regular conical form, but which, unlike its twin mount in Madera, is bare of wood. Numerous ancient Mexican remains exist upon it.

OMETEPTL, one of the largest islands in Lake Maracaybo.

OMEY, an island in the p. of Omey, co. Galway, 3 furl. W of the nearest part of the mainland, opposite the hamlet of Loughawee. It measures 1¼ m. in length, and 1 m. in breadth.

OMEY, Umma, or Umond, a parish on the coast of co. Galway, containing the town of Clifden. Area 20,835 acres, of which 513 acres are water. Pop. in 1831, 6,721; in 1841, 7,953. The W skirts of the Binabola mountains descend upon the E boundary, but contribute no great alt. to the area within that boundary. The principal lakes are Annagh, 207 ft. above sea-level; Nahillia, 511 ft.; Cregg, Nambracka, Shanakevar, Glenbrickeen, Fahy, Courhoor, Atalia, and Aughruskbeg. The coast is exceedingly broken, and deeply intersected by bays. The principal islands are Gooren, Roe, Dog, West Ferroonagh, East Ferroonagh, Cuddoo, Friar, High, Carrickawhilla, Carrickaloo, Omey, Drooagh, Glinsk, Innisturk, Eeshal, Turbot, Waverymore, Waverybeg, East Carricklahan, and West Carricklahan. The principal hamlets are Loughawee, Drumgaroe, Connacullew, and Streamstown.

OM-HANDAL, a district of Nubia, 90 m. NE of Shendy, on the r. bank of the Tacazze.

OMI, or Oits, a large lake of Nifon, in Japan, 100 m. long, and 10 m. broad, 15 m. NE of Meaco.

OMIGNON, a small river of France, which rises in the dep. of Aisne, near St. Quentin; runs from E to W; and joins the Somme, on the r. bank, after a course of 24 m.

OMMANEY (Cape), the S extremity of King George the Third's archipelago, at the entrance to Chatham sound, in N lat. 56° 10′, W long. 134° 34′. It constitutes a remarkable promontory, terminating in a bluff rocky cliff.

OMM-EL-SOGHAIR, an oasis in the desert of Barcah, in Tripoli, to the E of the oasis of Siwah.

OMMEN, a town of Holland, in the prov. of Overyssel, 22 m. NNE of Dewenter, and 14 m. E of Zwolle, on the r. bank of the Vechte. Pop. 760

OMMERSCHAUS, a village of Holland, in the prov. of Overyssel, 26 m. NNE of Dewenter, and 5 m. N of Ommen. There is here a large workhouse, or rather house-of-detention, for those persons from the free agricultural colonies who refuse to cultivate their land, or are found in other respects unmanageable. In place of separate allotments and separate cottages, as in the latter establishments, there is one central building here, surrounded by 18 farms of 32 hectares each; and around the whole is drawn a rivaut or canal, and a cordon of sentinels. The number of persons detained here in 1851 was 2,500.

OMO, a small island in the Eastern seas, near the E coast of Amboyna, in S lat. 3° 31′.

OMOA, or San Francisco-de-Omoa, a sea-port of Honduras, in the dep. of Santa Barbara, 15 m. E of the mouth of the Motagna, in N lat. 15° 20′. It is a fortress of some importance, and considered the key of Honduras.

OMOE, an islet of Denmark, in the Great Belt, 4 m. SW of Sieland, in N lat. 55° 9′. It is 5 m. in length, and about 1 m. in breadth. Pop. 200.

OMOLONE, a river of Asiatic Russia, which falls into the Kolyma, 80 m. from its mouth, after a course of about 200 m.

OMPOMPONOOSUC, a river of the United States, in Vermont, which, after an impetuous course of 30 m. flows into the Connecticut.

OMRAH, a town of Hindostan, in the prov. of Berar, in N lat. 21° 7′.

OMSEMIE′, a town of Kordofan, 90 m. W of Ibeit.

OMSK, a town of Asiatic Russia, the cap. of the gov. of Tomsk, at the junction of the river Om with the Irtish, in N lat. 54° 57′, E long. 73° 40′. Pop. 11,340. It is well fortified and surrounded by a large dry ditch. Being a frontier town, and intended as a barrier against the inroads of the Kirghises, O. terminates the military line of the Irtish, and begins that of the Ischim. The town is agreeable; the general's house, the church, and the military school, are handsome edifices. There is always a large garrison kept here; a trade in brandy, tobacco, and manufactured articles is kept up with the nomade tribes in exchange for cattle, horses, brown felt, mats, and coarse woollen carpets.—A tract called the Omskaya Oblast, or prov. of Omsk, extends about 1,200 versts from NW to SE, and 350 from NE to SW, beyond the military line formed by the Upper Irtish, and is reckoned to belong to Russia, although the wandering Kirghis are almost its only occupants.

OMSONTEH, a valley of Nubia, on the l. bank of the Bahr-el-Azrek, 52 m. N of Sennaar.

OMUDWARA, a district of Hindostan, in the prov. of Malwah, situated between the 24th and 25th parallels of N lat. It is wild and uncultivated, and contains no town of any consequence.

OMULEU, a river of Prussia, which rises near Balden, in the reg. of Konigsberg; passes Willenberg; enters Poland; flows through vast marshes, and joins the Narew on the r. bank, near Ostrotenka, after a SE course of 75 m.

OMUN, a town of Guinea, on an island in the Old Calabar river, in N lat. 6° 9′. Pop. 5,000.

OMURA, a town of Ximo, in Japan, 15 m. NNE of Nangasaki.

ONA, a river of Irkutsk, in Asiatic Russia, which falls into the Tasieeva after a course of about 100 m.

ONA, a settlement of Peru, in the prov. of Loxa, on the great road from Loxa to Popayan, 34 m. S by W of Cuenca.—Also a village of Spain, in the prov. and 30 m. NNE of Burgos. Pop. 750.

ONABAS, a settlement of Mexico, on the shore of the river Hiaqui.

ONANCOCK, a village of Accomac co., in Virginia, U. S., 185 m. E by N of Richmond.

ONAS, a town of Ximo, in Japan, 22 m. S of Funai.

ONATE, a town of Spain, in the prov. and 30 m. ESE of Bilbao. Pop. 4,236. It is situated among mountains in a valley; and is well built with regular streets, and a fine town-hall. It has large iron and copper works, and manufactories of nails and of guns. It suffered much during the Carlist struggle.

ONATEYA, or Onatiayo, one of the Mendoza islands, which lies about 5 leagues E of Ohittahu, and as much S of Ohevahoa, in S lat. 8° 9′. It is about 3 leagues in circuit.

ONCES (Rio-dos), a river of Brazil, in the prov. of Rio-Grande, which falls into the Rio-Doce. It is so named from the number of ounces which infest its banks.

ONDA, a town of Spain, in the prov. and 10 m. WSW of Castellon-de-la-Plana. Pop. 4,500. It has pottery and tile manufactories; and iron is wrought in the vicinity.

ONDARA, a town of Spain, in the prov. and 30 m. ESE of San Felipe. Pop. 1,200.

ONDARROA, a town of Spain, in the prov. of Biscay, 18 m. NE of Bilbao, on the bay of Biscay, at the embouchure of a small river of the same name. Pop. 1,173.

ONDE-FONTAINE, a village of France, in the dep. of Calvados, cant. and 3 m. SW of Aulnay, near the source of the Odon. Pop. 950.

ONDEGA, a village of Abyssinia, 50 m. SW of Tselga.

ONE (Cape), a headland on the coast of Algeria, in N lat. 15° 35′, W long. 2° 4′.

ONECOTE, a township in the p. of Leek, in Staffordshire, 4 m. E by S from Leek. Pop. in 1841, 427; in 1851, 438.

ONEEHOW, or Onehu, one of the Sandwich islands, in the N. Pacific, in N lat. 21° 52′. It is about 40 m. in circumf. The E coast is high, and rises abruptly from the sea; but the rest of the island consists of low ground, except a round bluff head on the SE point. It produces abundance of yams and fruit.

ONEGA, a large lake of European Russia, in the centre of the gov. of Olonetz, 85 m. ENE of the still larger lake of Ladoga, between the parallels of 60° 50′ and 61° 50′. Its length is about 135 m., its breadth from 30 to 45 m. It contains several islands, of which the basis is limestone. Several rivers, the principal of which is the Vodla, flow into it. Its waters are clear, and abound in fish. The Svir, a navigable stream coming from its SW extremity, carries its waters to Lake Ladoga. By the Vodla and the Mariienskoi course it is connected with the Volga.—Also a large river of European Russia, which rises to the E of the above lake in Lake Latcha, and flowing NW, falls into a gulf of the White sea to which it gives name, extending between the parallels of 63° 50′, and 65° N. The principal affluents of the O. are the Voloshka and the Mokha on the r., and the Kena on the l.—Also a town of Russia, in the gov. of Archangel, on the White sea, at the mouth of the river Onega, in N lat. 63° 53′, and 80 m. SSW of Archangel. Pop. 1,800. It is neatly built. It has some commerce in timber, grain, and furs.

ONEGLIA, a province of the Sardinian states, in Piedmont, which, until 1566, formed a distinct principality belonging to the house of Doria; bounded on the N by the div. of Coni; on the NE by that of Genoa; on the SE by the gulf of Genoa; on the SW by the prov. of San Remo; and on the W by Nice. It is covered on the N by ramifications of the Apennines. Its principal streams are the Aroseia, and the Impero. Its chief productions are

olive-oil, fruit, flax, and silk. It contains a surface of 100 sq. m.—Also a town of Piedmont, the cap. of the prov. of the same name, situated on the sea coast, at the mouth of the small river Impero, 41 m. ENE of Nice. Pop. 5,500. It has a small harbour, and a traffic in wine, fruit, and olive-oil. It is partially fortified, and contains some well-built churches and a gymnasium. It was the birthplace of Andrew Doria, the famous Genoese admiral.

ONEGLIA (Cape), a cape on the Sardinian coast, in the territory of Nice, in N lat. 45° 56′.

ONEHOUSE, a parish of Suffolk, 3 m. WNW of Stowmarket. Area 898 acres. Pop. in 1851, 432.

ONEIDA, a county of New York, U. S., situated NE of the centre of the state. Area 1,101 sq. m. The face of the country is generally level; the only tract that borders on a hilly character is a small portion of the E part; on the N and W from Oneida lake, it is almost a dead level. It is watered by the Black Mohawk and numerous small streams. Pop. in 1840, 85,310; in 1850, 90,818. Its chief towns are Whitesborough, Utica, and Rome.—Also a township of Eaton co., in Michigan, 130 m. W by N of Detroit.

ONEIDA (Lake), a lake of New York, U. S., chiefly in Oneida co. It is 22 m. long, and from 4 to 6 m. broad. It receives Wood creek on the E, and communicates with Lake Ontario by the Oneida which flows into the Oswego. It is a very beautiful lake abounding in fish.

ONEIDA CASTLE, a village in Oneida co., New York, U. S., 113 m. WNW of Albany. Pop. 400.

ONEIDA CREEK, a river of New York, U. S., which runs N into the E end of Oneida lake. It is 25 m. in length, and navigable to 3 m. from the lake.

ONEIL, a town of Hindostan, in the prov. of Malwah, 21 m. NW of Ujein.

ONEILLE. See Oneglia.

ONEKOSAN, one of the Kurile islands, in N lat. 49° 24′, E long. 154° 45′. It contains three extinct volcanoes.

ONEMACK (Point), a cape on the W coast of N. America, in N lat. 56°.

ONEMEN, a river of Asiatic Russia, which after a NE course of 90 m. flows into the S extremity of a gulf of the same name.

ONEONTA, a township of Otsego co., in New York, U. S., 20 m. S of Cooperstown, watered by the Susquehanna. Pop. 1,936.

ONESSE, a village of France, in the dep. of Landes, cant. and 9 m. WNW of Arguzan. Pop. 580.

ONEVY, one of the smaller Friendly islands, in the S. Pacific, near the N coast of Tongatabu, 5 m. NE of Observatory point.

ONEY, a small river of Herefordshire, which runs into the Lug, at Leominster.—Also a small river in Salop, which runs into the Teme at Ockley-park.

ONGAR. See Chipping-Ongar.

ONGAR (High), a parish of Essex, 6 m. WNW of Penkridge. Area 4,510 acres. Pop. in 1851, 1,147.

ON-GHIN, a river of Mongolia, which rises in the district of Orkhon; runs SE; and after a course of 210 m. flows into the Khuragen-Ulen-Nor.

ON-GHIN-ULA, a chain of mountains in Mongolia, which commences to the W of Orat, and stretches 150 m. towards the N, forming part of the In-shan chain.

ONG-KIN, a town of Corea, 58 m. SW of Hoang, on the Yellow sea.

ONGOBOLI, one of the small Friendly islands, 6 m. E of Neneeva.

ONGOLE, a district of Hindostan, in the Carnatic, between the 15th and 16th parallels of N lat. It is fertile, and well-watered by the rivers Gundegauuna and Mussy, and is included in the collectorship of Nellore.—The chief town, of the same name, is situated in N lat. 15° 31′, 170 m. N of Madras. It was formerly well-fortified, and a place of considerable consequence; but has lost much of its ancient splendour.

ONGOLOGUR, a town of Hindostan, in the prov. of Orissa, in N lat. 20° 36′, 52 m. WNW of Ketek.

ONI, a town of Imiritia, 65 m. NE of Kotakis, on the S flank of the Caucasus.

ONIBURY, a parish of Salop, 5 m. NW of Ludlow. Area 1,992 acres. Pop. in 1851, 362.

ONIL, a town of Spain, in the prov. of Valencia, 8 m. E of Villena. Pop. 2,690.

ONION, a river of Vermont, U. S., which rises in Cabot co.; flows S and SW, and passes by Montpellier; and runs W into Lake Champlain, 5 m. NW of Burlington. It is one of the principal rivers of Vermont, and flows through a fertile country. Between Colchester and Burlington, making its way through the Green mountain range, it has worn through a solid rock of limestone, forming a chasm 70 or 80 ft. deep; and at Bolton it has formed a similar chasm.

ONIS, or Onsa, an islet off the coast of Spain, in N lat. 42° 24′, W long. 8° 55′, at the NW entrance of Pontevedra bay. It is 2 m. in length, and about 1 m. in breadth; and is strongly fortified.

ONISIAN, a village of Irak, in Persia, 20 m. N of Khonsar.

ONKONG (Point), a cape on the W coast of the island of Celebes, in S lat. 2° 45′.

ONNAING, a town of France, in the dep. of Nord, 4 m. NE of Valenciennes. Pop. 3,420. Chicory is extensively cultivated in the neighbourhood.

ONO, an island of the Pacific, in S lat. 0° 39′, E long. 178° 55′.

ONOD, a town of Hungary, in the com. of Borsod, at the confluence of the rivers Kis, Hernath, and Sajo, 25 m. E of Erlau. Pop. 2,840.

ONON, a considerable river of Asiatic Russia, on the frontier of Chinese Tartary, which flows NE till, combined with the Ingoda, it forms the Shilka, which afterwards discharges itself into the Amur.

ONONDAGA, a county of the state of New York, U. S., centrally situated towards the N part of the state. Area 711 sq. m. Its soil is a fertile calcareous loam. In this co. are salt springs which yield a large revenue to the state, and beds of gypsum also of great value. The principal streams are the Oswego and the Seneca; besides these there are several other small creeks, and Otisco, Oneida, and Skeneatles lakes. Pop. in 1840, 67,911; in 1850, 85,900. —The township of O. is 5 m. S of Syracuse. Pop. 5,658.

ONONDAGA, or Salt Lake, a lake of Onondaga co., New York, U. S., which discharges its waters into Seneca river. It is a small collection of dirty water, not exceeding 8 m. in length, and from 2 to 4 m. in breadth. On its borders are very productive salt springs.

ONONDAGA HOLLOW, a village of Onondaga co., New York, U. S., 4 m. S of Syracuse. Pop. 350.

ONORE, or Hanawar, a seaport of Hindostan, in the prov. of North Canara, in N lat. 14° 16′, E long. 74° 34′, at the mouth of the Sheravatti, a small river which communicates with a fine salt-water lake extending E nearly to the foot of the mountains. This lake is studded with islands, and produces a great quantity of fish, which are salted by the natives, and form a considerable article of trade; and the neighbouring country produces pepper and rice, which are also exported. When the Portuguese first arrived in India, O. was the capital of an independent rajah, whom they subdued. It was subsequently taken from them by the Dutch, who appear to have relinquished

it; for in 1763 it was taken by Hyder Aly, and was then considered as one of the possessions of the rani of Bednore. Hyder Aly caused docks to be erected here for the purpose of building ships of war; but in 1768 it was taken by the British, before his plans were matured, and the buildings were destroyed. With the prov. of Canara, O. came ultimately into possession of the British in 1799, and is gradually recovering its prosperity.

ONOUGHT, a village on the N coast of the island of Aranmore, co. Galway, 4¼ m. WNW of Kilronan.

ONRUST, a small island in the Eastern ocean, off the N coast of Java, in the bay of Batavia. It is nearly of a circular form, about 4,800 ft. in circumf., and only about 6 or 8 ft. above the level of the water. The Dutch had formerly fortifications here, and also extensive works for the repairing and building of ships. These works were destroyed by a British armament when the island was in possession of the Dutch, but the Dutch have restored the ship-building yards.

ONSLOW, a county in the SE part of N. Carolina, U. S., on the coast. Area 720 sq. m. Pop. in 1840, 7,527; in 1850, 8,312.—Its chief town, of the same name, is situated on the E side of New River, 145 m. SE of Raleigh.—Also a town of Nova Scotia, 45 m. NNE of Halifax, at the head of Mines bay.

ONSLOW (Point), the S extremity of the Duke of York's island, in the N. Pacific, in N lat. 55° 50′.

ONSTWEDDE, a village of Holland, in the prov. of Groningen, 7 m. S of Winschoten.

ONTARI, a town of Hindostan, in the prov. of Gundwana, district of Billonjah, in N lat. 24° 13′.

ONTARIO, a county of New York, U. S., situated centrally in the W part of the state. Area 617 sq. m. The face of the country is considerably diversified, though none of it can be called hilly, and no part mountainous. The alluvial tracts are very extensive, and of a rich soil, especially along the Genesee river. It is well-watered by Genesee and Canandaigua rivers; and has Canandaigua lake in the centre, Seneca lake on the E, and Candia, Honeoye, and Hemlock lakes, on the W. Pop. in 1850, 43,977.

ONTARIO (Lake), the easternmost of that great chain of lakes which divides the United States from Upper Canada. It receives the waters of Lake Erie and the upper lakes through the Niagara, and discharges itself by the St. Lawrence, which issues from its NE extremity. It is of an oblong form; its greatest length being from SW to NE, in which direction it measures 160 m.; its circumf. is about 600 m. It lies between 43° and 45° N lat., and 76° and 79° W long. Its islands are 19 in number. Its surface is 333 ft. lower than that of Lake Erie, and 232 ft. above tide-level in the St. Lawrence. Its shores exhibit great diversity. Towards the NE they are low, with numerous marshy places; to the N and NW they assume a lofty character, but subside again to a very moderate height on the S. Of the many rivers flowing into Lake Ontario, if the Genesee and Oswego be excepted, there are none that lay claim to particular notice. All of them have a sandy bar across the entrance. There are some fine bays and inlets, wherein vessels of every description may find protection against bad weather. Burlington bay is both spacious and secure; but these advantages are rendered of little importance by its entrance, which is so shallow as to admit nothing larger than boats. Hungry bay affords good anchorage and safe shelter among its islands to ships of the largest size at all seasons. Kingston, Toronto, Niagara, and Coburg, are important points on its N or Canadian shore; Oswego, Sachett's harbour, and Port Genesee, on its S. It is connected with Sherborough on Lake Erie by the Welland canal; and with the Ottawa river by the Rideau canal. Very heavy squalls of wind frequently occur on Lake O., but they are unattended either with difficulty or danger, if met with the usual precautions every seaman is acquainted with. Of the numerous islands in this lake, Grand isle, which lies immediately at the outlet of the lake into the St. Lawrence, is the most considerable; below this, the islands are so numerous in the channel of the St. Lawrence that they have received the appellation of 'the Thousand Isles.'

ONTENIENTE, a town of Spain, in the prov. of Valencia, 12 m. SW of San-Felipe, on the r. bank of the Clariano. Pop. in 1845, 9,508. It has manufactories of woollens, linen, paper, and copper.

ONTIGOLA, a village of Spain, in the prov. of Toledo, 3 m. E of Aranjuez, on a small lake of the same name.

ONTONAGON. See Coppermine River.

ONZA, a river of Lower Guinea, in Congo, which rises in the kingdom of Ovando, and falls into the Atlantic, after a course of about 300 m. Its mouth is about 140 m. S from that of the Zaire.

ONZAIN, a town of France, in the dep. of Loir et-Cher, cant. of Herbault, 9 m. SWof Blois. Pop. 1,500.

ONZ-EN-BRAY, a village of France, in the dep. of Oise, cant. and 4 m. NW of Auneuil. Pop. 1,060.

ONZERNONE, a district of Switzerland, in the cant. of Ticino, lying between the Val-Maggia and Val-de-Centovalle, and containing the villages of Auresio and Loco.

ONZOLES, a river of Ecuador, in the prov. of Esmeraldas, which runs N, and enters the San Miguel, in S lat. 0° 58′.

*** OO. For names commencing with these letters, not found here, see under Ou and U.

OO, a village of France, in the dep. of Haute-Garonne, cant. and 4 m. W of Bagneres-de-Luchon. Pop. 300.

OOLO, or Ulla, a parish and village of co. Limerick, 4 m. ESE of Pallas-Green. Area of p. 6,859 acres. Pop. in 1831, 2,952; in 1841, 3,377. Pop. of the v. in 1841, 398.

OOLEN, a village of Belgium, in the prov. and 21 m. SE of Antwerp.

OOLTGENSPLAAT, a village of Holland, in the prov. of S. Holland, 18 m. SSE of Brielle. Pop. 1,950.

OORDEGHEIM, a village of Belgium, in the prov. of E. Flanders, 9 m. WSW of Dendermonde.

OOSNIEUWKERKE, a town of Belgium, in the prov. of W. Flanders, on the Mandelbeke, 4 m. WNW of Rousselaere. Pop. 3,500.

OOSTACKER, a commune and town of Belgium, in the prov. of E. Flanders, 1 m. SE of Ghent. Pop. 4,600.

OOSTANAULEE, a river of Georgia, U. S., which rises in Tennessee, and flowing SW, unites with the Etowah to form the Coosa, after a course of 110 m.

OOSTBOURG, a village of Holland, in the prov. of Zealand, 15 m. SSE of Middlebourg. Pop. 1,428.

OOSTBROEK, a village of Holland, in the prov. of Utrecht, 10 m. W of Amersfort. Pop. 1,000.

OOSTCAMP, a commune and town of Belgium, prov. of W. Flanders, 3 m. S of Bruges. Pop. 3,000.

OOST-EECLOO, a village of Belgium, in the prov. of E. Flanders, 6 m. WSW of Sas-de-Gand. Pop. 1,500.

OOSTERHOUT, a town of Holland, in the prov. of N. Brabant, 5 m. NNE of Breda. Pop. 7,800. It has large manufactories of pottery ware and of tiles; also three noted yearly fairs, at which large quantities of cloth, linen, and other articles, are sold.

OOSTERLAND, a village of Holland, in the prov. of N. Holland, 24 m. NNE of Alkmaer, at the N extremity of the isle of Wieringen.

OOSTERWYK. See OISTERWYK.

OOSTERZEELE, a town of Belgium, in the prov. of E. Flanders, 7 m. S by E of Ghent. Pop. 2,850.

OOSTMAL, a village of Belgium, in the prov. and 15 m. ENE of Antwerp. Pop. 900.

OOSTROOSEBEEKE, a town of Belgium, in the prov. of W. Flanders, 21 m. S by E of Bruges. Pop. 3,800.

OOSTVEEN, a town of Holland, in the prov. and 12 m. N of Utrecht.

OOST-VLETTEREN, a town of Belgium, in the prov. of W. Flanders, 9 m. NW of Ypres.

OOSTZANEN, a village of Holland, in the prov. of N. Holland, 5 m. N of Amsterdam. Pop. 1,000.

OOTEGHEM, a village of Belgium, in the prov. of W. Flanders, 7 m. E of Courtrai. Pop. 2,400.

OOTMARSUM, a town of Holland, in the prov. of Overyssel, 36 m. E of Zwolle. Pop. 1,474.

OPALA, a considerable river of Kamtchatka, in the S district of Nijni-Kamtchatsk. It takes its rise on the Opalskaïa-Sopka, the highest mountain in the peninsula, and flows in a W course to the sea of Okhotsk.

OPALEE, a river of Louisiana, which falls into the Tombigbee, about 40 m. above its junction with the Alabama.

OPALM, a town of Russia, in the gov. of Volhynia, 40 m. NNW of Vladimir, on the r. bank of the Bug. Pop. 1,800.

OPALNITZ, or OPALNICE, a town of Prussian Poland, in the reg. and 23 m. W by S of Posen. Pop. 900.

OPAR, a town and district of European Turkey, situated in the sanj. of Ochrida, in the mountains between Prespa, Dibra, and Elbassan, and inhabited by Albanians.

OPARO, an island in the Pacific, in S lat. 27° 36′, W long. 144° 11′. It consists of a cluster of high craggy mountains, forming in several places perpendicular cliffs, nearly from their summits to the sea. The intervals between the mountains may more properly be termed chasms than valleys, and are chiefly clothed with shrubs and dwarf trees. The tops of several of the highest hills were observed by Vancouver to be fortified, having a sort of block-house in the centre of each, with rows of palisadoes running a considerable way down the sides of the hills. Vancouver observed about 30 double and single canoes, mostly built after the model of those in the Society islands. He estimated the number of inhabitants at 1,500. They appeared to be well-fed, and had open and cheerful countenances. They had no marks of tattooing.

OPATOW, a town of Poland, 19 m. WNW of Sandomir, on the Opatowka, an affluent of the Vistula. Its houses, churches, and other edifices are entirely of wood.—Also a town of Moravia, 39 m. W of Brunn, on the l. bank of the Brtnicyka, an affluent of the Igla. Pop. 900.

OPATOWEK, a village of Poland, in the woivode and 6 m. E of Kalisch. Pop. 420.

OPATOWITZ, a town of Moravia, 24 m. W of Olmutz.—Also a town of Poland, in the obwodie and 32 m. ESE of Miechow, on the l. bank of the Vistula. Pop. 600.

OPBRAKEL, a town of Belgium, in the prov. of E. Flanders, cant. and 2 m. SW of Nederbrakel. Pop. 2,200.

OPDAL, a village of Norway, in the bail. and 78 m. SW of Drontheim.

OPDORP, a town of Belgium, in the prov. of E. Flanders, 6 m. E of Dendermonde.

OPECKON, a river of Virginia, which runs into the Potomac, in N lat. 39° 30′.

OPELOUSAS, a town of Louisiana, the capital of St. Landey parish, 217 m. WNW of New Orleans, on a branch of the Teche. Pop. 500. Franklin college was founded here in 1839.

OPELOUSAS PRAIRIE, a large tract of meadow ground in Louisiana, U. S., which extends from the gulf of Mexico nearly 80 m. N, and is bounded on the E and N by the Vermillion and Teche rivers, and on the W by the Mermentau river. This sea of grass is on an average 25 m. wide; and, including the sea-marsh, extends over upwards of 1,200,000 acres.

OPENSHAW, a hamlet of Lancashire, 3½ m. E by S of Manchester. Area 571 acres. Pop. 3,759.

OPFINGEN, a village of Baden, 7 m. W of Freyburg. Pop. 1,250.

OPHASSET, a village of Belgium, in the prov. of E. Flanders, 6 m. E of Nederbrakel. Pop. 1,000.

OPHERDICKE, a village of Prussia, in the reg. and 21 m. WNW of Arensberg.

OP-HEUSDEN, a village of Holland, in the prov. of Guelderland, 12 m. WNW of Nimeguen.

OPHIR, a locality of New South Wales. 113 m. W of Sydney, and 35 m. NW of Bathurst, on Summer-hill creek, near its junction with the Macquarie, which has become celebrated for its gold-diggings. The surrounding country is wild, barren, and mountainous; but bullock-drays can approach to within a short distance of the diggings. Scientific men, judging from the geological appearances of the country, had been for some time of opinion that gold might be found in various districts of the Australian continent. Amongst others, Count Strzelecki had stated his belief that gold existed in the vicinity of the Blue mountains, to the W of Sydney. The Rev. W. B. Clarke, a distinguished geologist, had also frequently through the local press expressed the same opinion. The success of the miners in California awoke attention to these suggestions, but until the month of May 1850 nothing practical resulted from them. An old shepherd, who kept sheep in the Wellington district, had for years been in the habit of occasionally visiting Sydney, and appeared to possess more money than could be gained at his humble employment: the suspicion arose that he was a gold-finder, but he kept the secret closely, and public curiosity was not attracted to the circumstance. On the 6th of May 1851 a Mr. Hargraves arrived at Bathurst, and announced to several of the most respectable inhabitants that he was engaged in exploring the surrounding country, and had been in communication with the executive government respecting discoveries which he had made in that district of extensive gold-deposits. Mr. Hargraves had spent eighteen months in California, and had travelled a distance of 600 m. in the interior of the S districts of that country. He visited most of the diggings in that locality, and particularly noticed the celebrated ones at the forks of the Yuba. Sixteen years before he had travelled over a large portion of the New South Wales district. The similarity observable between the Californian gold country and the interior of Australia struck him forcibly, and impressed him with the belief that gold existed as well in the latter as the former country. On his return to Sydney, he determined on making a tour of inspection. He started in the middle of January 1850, and travelled over a district extending upwards of 300 m. in length On the 12th of February he first dismounted and dug for gold, and was successful in finding some dust; in numerous other places where the geological appearances seemed favourable, he also searched, and in no instance did he fail to find the precious metal. At a particular spot on which he bestowed the name Ophir,—he perceived the best indications of an abundant yield, and at once organised a company of 9 persons to dig there. These men earned, at first, at the rate of about 45 shillings per diem each; but for want of proper implements and experience in washing the gold, half the amount gathered was lost. The fact of the existence of gold in Australia was thus placed beyond doubt. The news spread rapidly, and induced numbers to abandon their ordinary occupations, and start to the diggings. From Bathurst, Sydney, and every part of New South Wales, men flocked to O. Some wisely formed themselves into parties of from 3 to 9 persons for mutual labour and protection, and set off with drays laden with all the implements requisite for scientific gold-mining, and the stores necessary for a three months' bivouac. Others started alone, without either tools, provisions, or money, determined to scramble for fortune as best they might. Emigration to the gold mines became the madness of the moment; and in an incredibly brief time 2,000 men were employed digging for the precious metal at O., and a number besides scattered over the country immediately around it.

OPHIR (MOUNT), an isolated mountain on the peninsula of Malacca, in N lat. 0° 5′, E long. 100°, 45 m. ENE of Malacca. It has a triple-peaked summit, and attains an alt. of 5,693 ft. above sea-level. Its summit is granite. Gold-dust is found in considerable quantity around its base.—Also a mountain of Sumatra. See GUNONG-PASSAMAH.

OPHUNBECK, a town of Belgium, in the prov. of S. Brabant, 9 m. NE of Brussels. Pop. 1,520.

OPI, a town of Naples, in Abruzzo-Ultra 2da, 12 m. SSE of Gioja. Pop. 1,800.

OPIO, a village of France, in the dep. of Var, cant. and 3 m. S of Bar. Pop. 400.

OPLADEN, a village of Prussia, in the reg. and 15 m. SE of Dusseldorf, on the l. bank of the Wipper. Pop. 550.

OPOCHNIA, a town of Russia, in the gov. and 30 m. N of Poltava.

OPOCZNO, or Opotschno, a town of Poland, 66 m. SSW of Warsaw, on the l. bank of the Drzewica. Pop. 1,400.

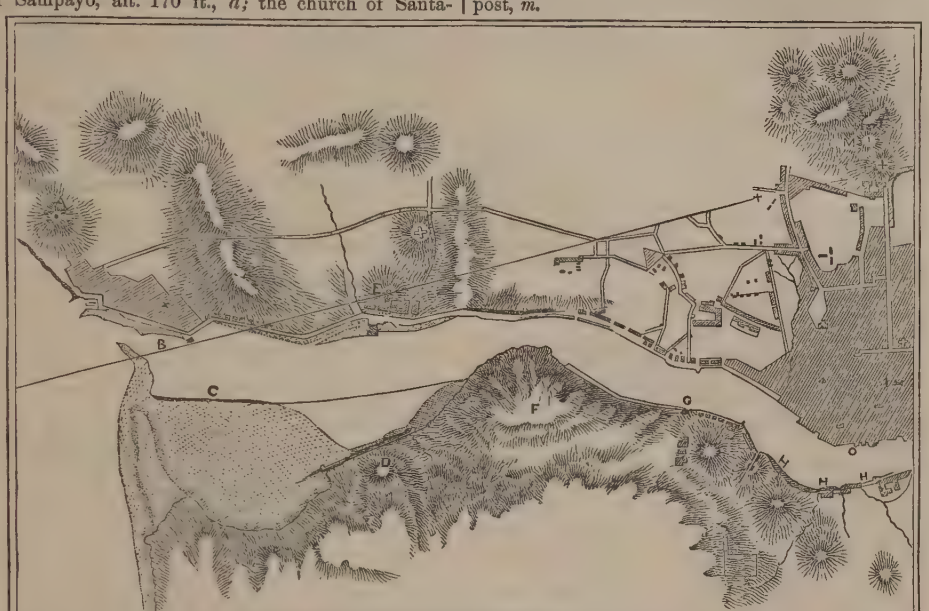
OPOLE, a town of Poland, 47 m. SE of Siedlec, on a small affluent of the Vistula. Pop. 1,200.

OPON, a river of New Granada, which joins the Magdalena, on the r. bank, in N lat. 6° 54′.

OPORTO, or Porto, a city of Portugal, in the prov. of Minho, on the N bank of the Douro, about 2 m. from its mouth, and 175 m. NE of Lisbon, in N lat. 41° 10′, W long. 8° 37′. It stands partly on two bluff craggy hills, and partly on the bank of the river, along which it extends above 1 m.—An old wall, 5 or 6 ft. thick, flanked at intervals with towers and further protected by a small fort, surrounds it. The city forms a half-circle resting on the base of the Douro. From the centre, long straight streets run, communicating with the several roads to Vallonga, Braga, Viana, and other towns. At the head of each street, nature has placed a strong fortification in the shape of rocky hills, so that a besieged force have only to plant cannon on these natural batteries, and to connect them with a wall of sufficient strength, protected by ditches and barricades. All this was done by the junta in the recent struggle. The batteries were well manned, the old wall repaired, and the barricades made of heavier materials than before. The intervals between the mounds alluded to, consist of valleys and gardens intersected by small stone walls, or by broken rocky ground most difficult of access, but the open parts are crossed by the fire of protecting batteries, and well covered by walls. Don Pedro took care to establish stockades in connection with all the important points, and the Douro was efficiently protected by a chain thrown across it half-a-mile above the town, and by several gun-boats and batteries on land in connection with them. The outer circle comprises many miles, so that, unless with a tremendous force, no false attacks to divert the besieged from the real one can be made.—The quay, which extends the whole length of the town, is of very simple construction: on one side is a street, the other side is walled and raised, though merely for the purpose of fastening ships' cables. The freshes in the river sometimes raise it 40 ft. above its ordinary level. The power of the flood is at such seasons tremendous, and the lower parts of O. and of its suburb Villa-Nova are inundated. The roadstead is spacious, and is commanded by the small fort of San-Joao-de-Foz, on the N bank of the river, near which is a lighthouse with a fixed light. The harbour, however, is difficult of access, partly from rocks at the mouth of the Douro, partly from the accumulation of sand brought down by the stream, which creates a shifting bar. It can only be entered at high water. Vessels of from 290 to 300 tons can sail up to O., and the Douro is navigable for river-craft 100 m. above the city. The ordinary rise of spring-tides is from 10 to 12 ft.; of neaps, from 6 to 8 ft.—The town is in general well built. From the strand rises a broad well-paved street, with causeys on each side, leading to two handsome oblique streets.. The other streets on the declivity of the hill are narrow, crooked, and dirty, but several on the top are fine and broad, and contain a few elegant houses. Indeed the greater part of the buildings of O. are light and neat; and it is allowed to be upon the whole the cleanest and most agreeable town in Portugal; the steepness of the hill, however, renders walking or riding difficult. On the E side of the town, the houses overhanging the side of the river are built on so steep a declivity as to be accessible only by steps cut out of the rock; but this inconvenience is compensated in some degree by the extreme beauty of the prospect which they command. The principal edifices are the cathedral, the episcopal palace, the town-hall, the royal hospital, the exchange, the opera-house, the churches, several of which are fine old buildings, and the convents; but many of the latter edifices were destroyed during the struggle of 1832. The city library and museum, heretofore a convent, forms one side of a handsome square, that of St. Lazarus, the centre of which is occupied by a public garden of small extent but rich in rare and beautiful flowers and shrubs. O. has a medical college, an academy of navigation and commerce, an episcopal seminary, several superior schools, and a public library. Its manufactures consist of silk, woollen, linen, and cotton goods, tobacco, leather, earthenware, and soap. It has also iron foundries and shipbuilding yards, and contains a naval arsenal and dockyard where ships are occasionally repaired.—On the opposite bank of the Douro there are two places, accounted distinct towns, but more properly suburbs of the city. The smaller and more westerly of these, called Gaya, is reputed to occupy the site of the small town of *Cale* mentioned by ancient writers. In a subsequent age, the situation of the present town of O. being found more commodious for navigation, from the greater depth of water along its bank, was built upon and called *Portus Cale*. In process of time it became the more considerable of the two, and took the title of O-Porto [*i. e.* the Port]. To the E of Gaya, and on the S bank of the Douro, is another small but populous town, called Villa-Nova-do-Porto, inhabited chiefly by coopers, porters, mechanics, and the lower orders. Altogether the pop. on the S bank is not short of 20,000; that on the N bank is estimated at about 60,000. Between Gaya and Villa-Nova are immense depots for storing the wine from the interior previous to its being embarked.

The vicinity of O. is mountainous, and exhibits traces of metallic ores; along the S bank of the river are indications of copper. The city itself stands on a band of granite 4 or 5 m. wide, on which mica slate and gneiss rest on both sides. To the E these rocks are overlaid by a band of sedimentary rocks chiefly clayslate; which, commencing on the coast about 30 m. N of O., runs down and crosses the Douro about 16 m. above the town. To the S of Vallonga, the slates overlie a deposit of anthracite in several beds, some of them from 4 to 6 ft. thick. This coal is now worked in several pits, and principally sent to O. Along with it are beds of red sandstone and black carbonaceous shales, with vegetable impressions strongly resembling ferns of the coal measures. In the shales above this coal are found many fossils, orthides, trilobites, and graptolites, most of them new species, but others well known in the lower Silurian rocks of Northern Europe. It would thus appear that the coal deposits of O. are included in the Silurian formations, and are thus far below the usual level of the coal. Similar clayslates and sandstones have been described near Amarante, where they form the celebrated wine district of the Upper Douro. The boundary between the granite and the slates is also the exact limit to the cultivation of the finer qualities of port wine.

In the subjoined chart of the mouth of the Douro, the situation of the light-house is marked *a;* the fort of San-Joao-de-Foz, *b;* an artificial breakwater, at the entrance of the river, on the S bank, *c;* the hill of Sampayo, alt. 170 ft., *d;* the church of Santa-Catherina, at an alt. of 140 ft., *e;* the heights of Farada, *f;* the convent of Sao-Antonio, *g;* the suburb of Villa-Nova, *h h h;* the city, on the opposite bank, O; the cathedral, *i;* and the signal-post, *m.*



Commerce.] O., situated at the mouth of the great river which forms the natural outlet for the produce of the N of Portugal, has long been a kind of emporium for the export of wine, particularly port. That wine, though deriving its name from this city, is produced, not in the adjacent country, but in the extensive prov. of Tras-os-Montes to the NW, and in some districts of Entre-Douro-e-Minho to the N. The average export from the place of growth, about 33,000 pipes, was and is kept to that standard by the old and new wine companies. From 1757 to 1833, during 77 years, under the old wine company's monopoly, the export to England and Ireland was 2,151,246 pipes, or 27,938 per ann. To the rest of the world during the same period it was 412,850 pipes, or 5,362 per ann.; being in all 2,564,096, or 33,300 pipes per ann. From 1834 to 1842 there were exported to Great Britain 233,469 pipes in 9 years, or 25,941 per ann.; to the rest of Europe 11,980, or 1,331 per ann.; and to the rest of the world 41,600 pipes, or 4,622 per ann. Total in 9 years 287,049, and per ann. 31,894. In the 9 years from 1843 to 1851, there were exported to England 205,746 pipes, or 22,861 per ann.,—a falling off of 3,080 pipes, yet the production of port wine has still greatly increased. The average product from 1849 to 1851 was 82,365 pipes. The Portuguese have shaped their legislation to keep up a monopoly by means of our high duties; thus they levy £3 8s. 4d. on all wine to Great Britain and the rest of Europe, where little is consumed: while America, Asia, and Africa, pay but 6d. export duties. Half of the sum thus levied goes to support the wine company's monopoly. The English merchant pays about £6, in defiance of the 4th art. of the treaty of 1842, which stipulates that no duties or restrictions shall be so exacted. The Portuguese strain a clause in the 15th art. of the treaty as an excuse for their right of thus burthening our trade. In 1718 the exports of port wine were within 9,010 pipes to all parts of the world of what they were in 1851. The old wine company's monopoly, first established by the Marquis Pombal, was broken up by Don Pedro in 1833. The present company was established in 1843, ostensibly to prevent adulterations. It appears that the company have a subsidy of £35,000, or one-half of the duties levied on the wines exported to Europe, or properly to England. The grant took place about 1843, at the date of the company's charter, and the customs levy the duty. The old company being abolished in 1833, and an enormous stock of wine having been destroyed during the siege of O., the company demanded that its loss should be made good by the public. The government, in lieu of paying their claims, renewed the privileges of the company in 1843, and gave them half the sum levied on the exportation of the wines to Europe. The company cannot interfere with the growth of the wines, but it can prevent a single pipe from being exported. It is styled the *Companhia de Agricultura das Vinhas do Alto Douro.* It has the power of the old company as to the wine exports, but it has no power to make bye-laws or ordinances for the cultivation of the vine, or to prevent adulteration. The term of its existence by charter is for 20 years. The subsidy of £35,000 enables the company to create an artificial scarcity, and increase the cost of the wine to the English consumer. At present the farmer cultivates his ground without any restriction; and the merchant himself may buy the grapes and make wine of the quality and character he desires, but no sooner is his wine housed, than a set of tasters, sent up to the Alto Douro by the company, enter his premises, sample his vats, and number the samples. The wines are classified by the tasters. The first quality must possess more than enough in itself: in other words, it must have body, flavour, colour, and richness to spare, for the purpose of doctoring other wines. The second class of wine is designated as wine *que tem para si so:* this must be a fine, pure, unloaded wine, and, not being strong enough to mix with other red wines, it is not allowed to be exported anywhere. The third quality is a simple light wine, *que nem para si tem,* or not enough for itself: it has little body and colour, but is a good table wine, and may be cheaply shipped with little or no brandy. It is the only wine used from the prince to the peasant in Portugal, being alone permitted to be used for home-consumption; and is a fine, exhilarating, racy wine. There is a fourth quality, called *refingo* or refuse, set aside for distillation; thus it appears that no pure wine is allowed to be exported at all. The law of the company classifies and limits the quantity of wine to be exported. In 1851, no less than 94,123½ pipes were classified by the tasters; of these 41,403 were set down as of the first quality. In order to enhance the value, only 20,000 pipes were allowed to be exported to Europe, and 21,403 pipes consequently fell into the second quality, in addition to 18,472 pipes rated as second quality, for exportation out of Europe. The exportations of wine from Portugal to England, by way of America, exists to a great extent, only 6d. export duty being paid out of Europe. The duty of £6 induced exporters to send their wines round by America, thus evading the payment of the European duties and of the *bilhette.* The average exportations to all countries out of Europe seldom exceeded 5,000 pipes: in 1848 no less then 12,953 pipes were sent to countries out of Europe, and above 8,000 found their way again to this country.—The lesser exports from O. are oil, sumach, oranges and other fruits, cream-of-tartar, cork, leather, and linen. The imports are woollen, cotton, and hardware manufactures, almost all from England; fish from the W of England and Newfoundland; from the Baltic, hemp and flax; from the United States, rice. O. is the central point for the exchange of British and Portuguese merchandise, and has long been the seat of a British factory. The commercial houses of the British in O. are about 30 in number.

Climate.] The climate of O. is moist in winter, but less from the vicinity of the Atlantic than from its position in the midst of mountains and woods. The cold is keen for the latitude, but it seldom

freezes. In summer the heat would be intense, were it not moderated by the winds which blow regularly from the E in the morning, from the S in the middle of the day, and from the W at night. The soil of the surrounding country is not fertile, but the gardens in the environs are beautiful, producing, according to their exposure, or their respective degrees of elevation, the fruits of the northern or southern latitudes.

History.] O. received many important privileges from John II. towards the close of the 15th cent., but most of them were withdrawn in 1757, in consequence of an insurrection of its inhabitants. O. was in the possession of the French during part of 1808, and the spring of 1809. It remained ever after undisturbed, for the French did not approach it on their second invasion of Portugal in 1810. In 1831-2 it took part with Don Miguel, and sustained a siege of upwards of a year by Don Pedro. In 1847 it pronounced in favour of the insurrection against Donna Maria.

OPOTSHKA, a town of Russia, in the gov. of Pskov, on an island in the river Velikaja, 79 m. S of Pskov. Pop. 1,000.

OPOTSHNO, or Opoczna, a town of Bohemia, 15 m. NE of Konigingratz. Pop. 1,100.

OPOUKINSKII (Cape), a headland on the sea of Behring, between the embouchures of the Opouka and the Okhuna, in N lat. 62°, E long. 174° 50′.

OPOUL, a village of France, in the dep. of Pyrenees-Orientales, cant. and 7 m. N of Rivesalles. Pop. 400.

OPPA, a river of Silesia, which rises in the Hirschberg, 4 m. S of Zukmantel; passes Olbersdorf and Troplowitz; and forms the boundary between the Prussian and Austrian divisions of Silesia, from Jagerndorf till it falls into the Oder, near Oderberg, after a SE course of about 60 m.

OPPATOWITZ, a village of Moravia, 27 m. W of Olmutz. Pop. 850.

OPPEAN, a town of Austrian Italy, situated in a marshy district to the W of the Adige, 13 m. S of Verona.

OPPEDE, a village of France, in the dep. of Vaucluse, 9 m. W of Bonieux. Pop. 1,400.

OPPELN, an extensive province of Prussian Silesia, comprehending the greater part of Upper Silesia, and nearly corresponding to the duchies of Oppeln, Neisse, and Ratibor, along with the Prussian part of those of Jagerndorf and Troppau. It has an area of about 5,000 sq. m.; and is divided into the 16 circles of Neisse, Grottkau, Oppeln, Rosenberg, Gross Strelitz, Lublinitz, Kosel, Leobschütz, Beuthen, Pless, Falkenberg, Ratibor, Tost, Neustadt, Rybnik, Kreutzburg. Its cap. is Oppeln. It consists almost entirely of hills and mountains, and on that account was formerly called High or Upper Silesia. It abounds in forests, and contains valuable minerals. The pop. in 1837 was 798,209, of whom 708,448 were Catholics. The old Slavonic dialect used in this prov. is now in a great measure confined to these mountains. It bears a great resemblance to Polish.—The district called the principality of Oppeln occupies more than the half of this gov. It lies to the S of the duchies of Breslau and Oels, and is inhabited almost exclusively by a rude race of Vandal descent. More than a third of its surface is covered with forests. It was governed by its own dukes of the race of Piast, till 1532, when the family becoming extinct, it escheated to Bohemia, and with the rest of Silesia, was acquired by Prussia in 1742.

Oppeln, the capital of the above principality, is situated on the Oder, 50 m. SE of Breslau, and 85 m. NE of Olmutz, at an alt. of 523 ft. above sea level. Its pop. in 1838 was 6,821. It is walled. The houses are in general lofty and massive. It has an old gothic cathedral, with several churches, a seminary for priests, two monasteries, a royal salt magazine, and an hospital. It has linen manufactories, tanneries, and some trade in wood.

OPPENAU, a town of Baden, 5 m. SE of Overkirch, on the r. bank of the Lierbach. The apparently trifling article of cherry-brandy is here a principal object of manufacture and export; also pitch, turpentine, and tar, prepared in the neighbouring mountains of the Black forest. Pop. 2,050.

OPPENHEIM, a town of Hesse-Darmstadt, 11 m. SSE of Mayence. Pop. 2,360. It has several churches, a synagogue, and an hospital. It was here that Sacken's corps of the Prussian army crossed the Rhine, on 1st January 1814, in the invasion of France.

OPPENHEIM, a township of Montgomery co., New York, U. S., on the N side of the Mohawk, 64 m. NW of Albany. Pop. 2,169.

OPPENWALER, a village of Würtemberg, 3 m. NE of Backnang, on the r. bank of the Neister. Pop. 670.

OPPIDO, a town of Naples, in Calabria Ultra, situated among the mountains which form the SW extremity of the Apennines, 20 m. NE of Reggio. Pop. 2,000. It is the see of a bishop. It was much injured by the dreadful earthquake of 1783.—Also a town of Naples, in the Basilicata, 50 m. NNE of Policastro. Pop. 3,400.

OPPIDOLO, a small fortified town, the chief place of the island of Pantellaria, in the Mediterranean. See Pantellaria.

OPPOLIE. See Oppeln.

OPPREBAIS, a village of Belgium, in the prov. of S. Brabant, 4 m. SW of Jodoigne.

OPSA, a town of Russia, in the gov. of Wilna, 12 m. NE of Vidzy.

OPSLO, a village of Sweden, at the mouth of the river Lo, forming an E suburb of Christiania.

OPUN, one of the Navigator's islands, in the S. Pacific, situated in S lat. 14° 9′, the most easterly of the group.

OPUS, a small island and fortress of Austrian Dalmatia, 67 m. SE of Spalatro, formed by two branches of the river Narenta, which falls here into the gulf of Venice. Pop. 800.

OPWYK, a village of Belgium, in the prov. of S. Brabant, cant. and 4 m. N of Assche. Pop. 2,600.

OQUAWKA, a village of Henderson co., in Illinois, U. S., 138 m. NW of Springfield.

OQUILLAS, a village of Spain, in the prov. and 32 m. S of Burgos. Pop. 130.

OR, a river of Asiatic Russia, which rises on the Monghodjar mountains, under the parallel of 49° 30′, in the Kirghiz territory; skirts the gov. of Orenburg, and falls into the Oural on the l. bank, after a N course of 180 m.

OR (Mont d'). See D'or.

ORACH, a small town of Bosnia, situated on the Drino, 35 m. SE of Seraglio.

ORADOUR, a town of France, dep. of Cantal, 15 m. SW of St. Flour. Pop. 1,000.

ORADOUR-FANAIS, a village of France, in the dep. of Charente, 9 m. NE of Confolens. Pop. 1,100.

ORADOUR-SAINT-GANEST, a village of France, in the dep. of Haute-Vienne, cant. and 3 m. NW of Dorat, on the r. bank of the Bram, an affluent of the Gartempe. Pop. 1,200.

ORADOUR-SUR-GLANE, a village of France, in the dep. of Haute-Vienne, cant. and 7 m. ENE of St. Jumien, on the r. bank of the Glane. Pop. 1,500.

ORADOUR-SUR-VAIRES, a town of France, in the dep. of Haute-Vienne, 21 m. W of Limoges. Pop. 3,300.

ORAHOVICZA, a town of Slavonia, on the marche of Naschitz, 42 m. E of Eszek, on an affluent of the Vucsicza.

ORAISON, a town of France, in the dep. of Basses-Alpes, cant. of Mees, on the Rancure, 21 m. SW of Digne. Pop. 1,600.

ORAK, an islet of Asiatic Turkey, in the gulf of Stanchio, 3 m. S of Budrun.

ORAKH, a town of Lower Wallachia, 90 m. E of Bucharest, on the l. bank of the Jalomnitza.

ORAMALA, a town of the Sardinian states, in the prov. and 15 m. NW of Bobbio. Pop. 3,000.

ORAN, a province of Algeria, organized under the recently-established French regime. Its coast-line extends 60 leagues, from the embouchure of the Shelif to the Wadi-Ajerud; on the NE it is bounded by the prov. of Algeria; on the S and SW by the Lower Atlas; on the W by the empire of Marocco. It has an estimated surface of 1,500 French sq. leagues. —The Jebel-Beni-Smiel, to the SE of Tlemsen, separates the upper basin of the Tafna from the basin of the Isser. The Chareb-er-Rieh separates the basin of the Shelif from that of the Habra. The latter district, the plain of Oran, and the Shelif territory, are the most fertile tracts. Lake Sale or Sebka, near Oran, is the largest sheet of water in the prov. The most considerable streams have a general course from E to W. The temp. of this prov. is generally higher than that of the other provs. of Algeria; but is moderated by the winds, which blow pretty steadily from the NW. Considerable tracts are covered with forests. The pop. in 1846 was estimated at 520,258, of whom 22,586 were Europeans, 298,500 Arabs, and 178,500 tribes of the Sahara.--The prov. is administratively subdivided into the divisions of Oran, Mostaganem, Tlemsen, Mascara, and the Sahara tribes.

ORAN, the capital of the above prov., is situated in N lat. 35° 75′, W long. 0° 78′, on the coast, 210 m. WSW of Algiers, and 142 m. NE of Tlemsen. It is built on the declivity and along the foot of a high mountain, called the Almeida, which overlooks it from the N, on the pinnacles of which stand Fort San-Gregorio and Fort Santa-Cruz. Its pop. was estimated in 1846 at 25,392, of whom 18,259 were Europeans. It is ill-supplied with water, and the adjacent territory is arid and barren. Its harbour is bad; but the port of Mers-el-Kebir is only 3 m. distant. O. was long a subject of contention between the Moors and the Spaniards. The latter, commanded by Ximenes, took it in 1509, and retained possession of it till the period of the Succession war, when in 1708 the Algerines, perceiving its defences neglected, found means to obtain possession of it. The Spaniards however regained it in 1732, and retained it till a recent period, when they restored the town, retaining only the port and castle of Mers-el-Kebir. In 1830 the French took possession of it.

ORAN, a parish in the co. and 5½ m. NW of Roscommon. Area 5,181 acres. Pop. in 1831, 2,136; in 1841, 2,114. O. was originally called Huaran-Hichlavach; and is alleged by monastic writers to have been the site of one of the churches founded by St. Patrick.

ORANBEG, a village in the p. of Oranmore, co. Galway, 1 m. E by N of Oranmore.

ORANGBALLONAH, a creek of New South Wales, in the co. of Bathurst, near Burrandong, an affluent of the Macquarrie.

ORANGE, a district in the SE of France, surrounded by the river Rhone, and the county of the Venaissin. It is 10 m. in length and 7 m. in breadth. After being under the dominion of the kings of Burgundy, this district obtained in the 11th cent. a separate government under counts who eventually received the title of princes. The house of Nassau succeeded to it by marriage; but on the failure of the direct line in 1702, by the death of William III. of England, several parties laid claim to the succession, of whom the chief was the king of Prussia. In 1713 Frederick-William I. of Prussia ceded his rights real or supposed to France; and the principality, annexed first to Dauphiny, afterwards to Burgundy, now forms part of the dep. of Vaucluse. The title however continues to be borne by the collateral descendants of William III., the present sovereigns of Holland.—The town of O., the chief place of the preceding principality, is situated in a fertile plain, on the small river Meyne, at a short distance from the l. bank of the Rhone, and 12 m. N of Avignon. It is surrounded by an old wall. Its streets are narrow, dark, dirty, and ill-paved. It has several churches, a Protestant church, a communal college, and an hospital; but no public buildings worth special notice. The only objects which recommend it to attention are its Roman remains. Of these the principal is a triumphal arch, situated about 200 paces N of the town. In the interior of the town are to be seen the remains of an amphitheatre, the great wall of which, like that of Nismes, is constructed of enormous blocks of hewn stone put together without cement. These monuments, together with the extent of ground enclosed by the ancient ramparts,—of which the foundations still exist, —prove that O., the ancient *Arausio*, at one time held a distinguished rank among the Roman colonies of Gaul. Its pop. in 1846 was 5,786. Its chief manufactures are linen, serge, and paper. It is the see of a bishop.

ORANGE, a parish of New South Wales, in the co. of Bathurst, bounded on the W by the Molong river, and on the E by Frederick's river.

ORANGE, a fort belonging to the Dutch, in the island of Ternate, in the Molucca group.—Also an island of the Philippine archipelago, in the W part of the Bashi group. Its NE point is in N lat. 20° 50′, E long. 121° 51′ 3″. It is about 9 m. in length, has little elevation, and is quite desert.

ORANGE, a county in the E part of the state of Vermont, U. S., comprising an area of 650 sq. m., bounded on the E by Connecticut river, and drained by Ompompanoosuc and Waits rivers, and by branches of White river. The N part is intersected by the E range of Green mountains. Granite, argillaceous slate, sulphuret of iron, and lead, are abundant in this co. Pop. in 1840, 27,873; in 1850, 27,285. Its cap. is Chelsea.—Also a co. in the SE part of the state of New York, containing a surface of 760 sq. m., bounded on the E by Hudson river, and drained by Delaware and Wallkill rivers. It is crossed in the W by the Delaware and Hudson canal, and intersected by the New York and Erie railroad. The soil is generally productive, and is noted for its pasturage. Pop. in 1840, 50,739; in 1850, 57,164. Its caps. are Goshen and Newburgh.—Also a central co. of the state of Virginia, containing an area of 38 sq. m., bordered on the N by Rapidan river, and drained by branches of North Anna and Rivanna rivers. The surface is hilly, but the soil is generally fertile. Pop. in 1840, 9,125; in 1850, 10,667. The cap., which bears the same name, is 84 m. NW of Richmond, at the foot of SW mountain. Pop. in 1840, 500.—Also a central co. of North Carolina, containing a surface of 1,300 sq. m., drained by branches of Neuse and Haw rivers. Pop. in 1840, 24,356; in 1850, 17,126. Its cap. is Hillsboro'.—Also a central co. of the state of Indiana, containing an area of 400 sq. m. It has a generally hilly surface, and is drained by Lost river and by Lick and Potoka creeks. Pop. in 1840, 9,602; in 1850, 10,818. Its cap. is Paoli.—Also a township of Orange co., in the state of Vermont, 14 m. SE of Montpellier. It has a hilly surface, and is drained by Jain branch,

an affluent of Onion river, and by the head branches of Waits river. The rocks are chiefly granite. Pop. in 1840, 984.—Also a township of Grafton co., in the state of New Hampshire, 40 m. NW of Concord. The surface is hilly, but the soil is productive. In the SW is a pond which discharges itself into Smith's river. Pop. 463.—Also a township of Franklin co., in the state of Massachusetts, 74 m. W of Boston. It has a hilly surface, and is drained by Millar's river. Pop. 1,501.—Also a township of New Haven co., in the state of Connecticut, 4 m. SW of New Haven, drained by Wopewang river. Pop. 1,329. The village was formerly called West Haven.—Also a township of Steuben co., in the state of New York, 201 m. W by S of Albany. It has a hilly surface, but the soil is fertile. It is drained by Mead's creek. Pop. 1,821.—Also a township of Essex co., in the state of New Jersey, 4½ m. NW of Newark, and 53 m. NE of Trenton. The surface is mountainous, but the soil, consisting of red shale, is generally well cultivated. It is drained by Second river, and by branches of Rahway river. Pop. 3,261. It contains the village of South Orange.—Also a township of Cuyahoga co., in the state of Ohio, intersected in the SE by the E branch of Chagrin river. Pop. 1,113.—Also a township of Hancock co., in the same state. Pop. 314.—Also a township of Meigs co., in the same state. Pop. 830.—Also a township of Shelby co., in the same state. Pop. 783.—Also a township of Noble co., in the state of Indiana. Pop. 242.—Also a township of Macomb co., in the state of Michigan. Pop. 193.—Also a township of Fayette co., in the state of Indiana, 49 m. E by S of Indianapolis. Pop. 1,187.

ORANGE (Cape), a headland at the N extremity of the coast of Brazilian Guayana, at the mouth of the Oyapok, in N lat. 4° 8′, W long. 51° 20′.—Also a headland at the N extremity of Tierra-del-Fuego, projecting into and forming the narrowest point of the strait of Magalhaens, in S lat. 52° 28′, and W long. 69° 26′.

ORANGE BAY, a bay of the W coast of Jamaica, in N lat. 18° 22′, E long. 78° 48′. It is about 6 m. in breadth at the entrance, and 3 m. in depth. It receives a river and contains a small island of the same name.—Also a bay on the E coast of Newfoundland, to the N of White bay, in N lat. 50° 35′, and W long. 56° 30′.

ORANGEBURG, a central district of the state of S. Carolina, U. S., comprising an area of 1,824 sq. m., bordered on the E by Congaree river, on the S by South Edisto river, and watered by North Edisto river and its branches. Pop. in 1840, 18,519, of whom 11,934 were slaves; in 1850, 23,624. Its cap., which bears the same name, is 43 m. S by E of Columbia, on the E bank of North Edisto river. Pop. in 1840, about 500.

ORANGERIE (Port de L'), a port on the S coast of one of the islands of the Louisiade archipelago, in the South Pacific, in S. lat. 9° 54′, E long. 149° 52′ 45″.

ORANGE RIVER. See Gariep.

ORANGE RIVER TERRITORY, a district of South Africa, including all the territory between the Orange or Nu-Gariep river, the Vaal river, and the Drakenberg mountains, and proclaimed a part of the British dominions on 3d February 1848. The Vaal river—sometimes called the Nu-Gariep, and sometimes the Yellow river—is the principal tributary of the Orange river. The Orange and the Vaal, rising near each other in the Drakenberg chain, take a wide circuit, the one to the SW, the other to the NW, and flow each a distance of about 400 m. before their junction at a point about 40 m. SE of Griqua-Town. The territory which they thus enclose on the S, W, and N, and the E frontier of which is formed by the Drakenberg chain separating it from Natal, is nearly as large as England, comprising between 40,000 and 50,000 sq. m.; and forming a great plateau, elevated from 2,000 to 3,000 ft. above sea-level. It is inhabited by about 80,000 natives, of various Bechuana, Namaqua, and half-caste tribes, and by some 15,000 or 20,000 Dutch boers and colonists of European origin. Over all these inhabitants, colonists and natives, the British sovereignty has been proclaimed. Subject to this supremacy, the native chiefs and tribes are still left to manage their own affairs according to their original laws and customs. It is divided into 4 administrative districts: viz., Griqua-Land, of which Bloem-Fontein and Queen's Fort are the principal settlements; Winburg, with a settlement of the same name; the Vaal-river district, in which Vreededorp or Harrismith is the principal location; and Caledon, in which is the settlement of Smithfield. The fullest accounts we yet possess of this territory are collected in a local journal of intelligence published at Bloem-Fontein. For the following details we are indebted exclusively to this source. The country may generally be designated a flat country; for, though varied by numerous hills and ridges, it seldom presents mountains of any great height, except in groups. From the absence of high ranges running through the country, rains cannot be said to be abundant, except in the neighbourhood of these groups of mountains. When rains fall, much water lodges in *vleys* or pools on the large flats; and from the very flatness of the ground, such showers sink deep in the ground, and become more beneficial to the herbage. Numerous water-courses carry off the superabundant waters to the great drains of the country, viz., the Vaal, Orange, Caledon, Modder, and Riet rivers. Nearly all the permanent streams are fringed with broad and thick belts of mimosas, affording admirable shelter for the flocks and herds of the farmer during the sharp frosts of winter. Along the banks of the rivers the pasturage is generally extremely sweet, well mixed with the favourite *boschjes* of the South African sheep-farmer. In the flatter portions of the country no grain can be reared—at least with anything like certainty—without irrigation; but in the neighbourhood of the high ranges of the Drakenberg and Wittebergen, all sorts of agricultural produce can be raised without receiving a drop of water but that which is supplied by the frequent rains of these mountain regions. Grain, fruits, and vegetables of all kinds, grow with great luxuriance,—with the exception, perhaps, of the orange and lemon, which only thrive in sheltered situations,—and few if any portions of the Cape colony could produce wheat to excel that of the sovereignty. The vine and tobacco thrive and yield abundantly. This sovereignty, however, must be looked on more as a stock-breeding country than as a corn one; for, though corn to an incredible amount can be raised, the great distance, even to the nearest seaport, prevents corn-farming being a profitable occupation; and there is not, moreover, on the spot consumption for one-thousandth part of what could be raised. This remark, however, does not apply to the easternmost portion of the sovereignty, N of Harrismith and the Wittebergen. There no irrigation is required; wheat of the finest description can be raised to almost any amount, and a good market is found for it at Maritzburg, the capital of Natal, distant 22½ hours on horseback from Harrismith, or 5 days with an ox-waggon. From the country on the sovereignty side of the Drakensberg being much more elevated than the highest portions of Natal, the climate is proportionately cool and agreeable, and better suited to Europeans. This part of the sover-

eignty is admirably suited for horse and cattle breeding. When occupied by Dutch farmers some years ago, their sheep increased to their utmost wishes, and were always in high condition. The other portions of the sovereignty are taken up by farmers occupied in stock-breeding, raising only sufficient grain for their own consumption, and the supply of the markets on the spot. Horses are bred in numbers, and of superior quality. Occasionally the 'horse sickness' of the colony is severe amongst this species of stock, but only when left during the summer months on the low sweet pastures. Merino sheep seem likely to be the principal stock of the lower portions of the country. They are found to be much more hardy than the Africander sheep, and in their fleeces produce annually a certain income to the farmer. Large quantities of wool have already been sent away, chiefly *via* Graham's Town. Perhaps the first feature that strikes a stranger on entering the country is the enormous extent of flats, covered in most instances with thousands of head of game, chiefly wildebeeste, springbok, blesbok, and quaggas. The fine pasturage of these plains supports the game in such excellent condition, that a man who has a gun and powder and lead need feel but little anxiety about subsistence. This abundance of food has its advantages and disadvantages to the farmer, as, although it affords him a ready means of supplying his people with meat, and thereby sparing his own flock, it also presents to the Hottentot so careless and free a life, that he has but little desire to enter into service so long as his ammunition lasts.

Administration.] By the publication of letters patent, dated 22d March 1850, her majesty accepted the addition to her dominions in Southern Africa, proclaimed by Sir H. Smith in 1848, and constituted therein a distinct and separate government, under the designation of the Orange River territory, distinct and separate in all respects, judicial as well as political, from the colony of the Cape of Good Hope. No law, custom, or usage, now in force in the Cape settlement, shall, it is declared, extend to or become of force in the new territory, nor any court or magistrate of the Cape hold or exercise any jurisdiction within it. The government of the new territory is vested "in the governor of the Cape, or a lieutenant-governor appointed by the Queen," who shall conform to and obey all orders addressed to him by the governor and commander-in-chief, and who with "such other persons, not less than 13, to be nominated by the Crown, shall constitute and be a legislative council for the said territory." Her majesty's assistant commissioners, immediately upon their arrival, addressed circulars to every commandant and field-cornet in the sovereignty, informing them that it was their intention to convene a meeting at Bloem-Fontein on the 21st of June 1852, to discuss matters of great importance. Those officers were requested to call together the inhabitants of their respective wards, for the purpose of electing three or more delegates, who might represent the community on that occasion. The order was scrupulously obeyed, and the delegates assembled on the 22d of June, when, amongst other things, the following proposition was submitted to them by Commissioner Owen: "The propriety of granting that, with the exception of the British resident,—the recorder, should that office be added,—and the 4 magistrates, the other members (of council) should be elected in their respective districts, so as to secure a just and equal representation of the interests of all parts of the sovereignty." And after full discussion it was resolved unanimously on this head, "that in reference to the constitution of the future council, all the members entitled to vote be duly elected by the community; that the civil commissioners be entitled to sit in virtue of their office, but not entitled to vote, unless elected in like manner as the other members." This resolution was presented to his excellency, and by him transmitted to her majesty's government. The result was the publication for the first time of letters patent of date March 1850, by which a council was established and ordained, exclusively nominated by the Crown, the members holding their appointments during pleasure. This council is empowered to "make and ordain all such laws and ordinances as may be required for the peace, order, and good government of our said territory." The imposition of taxes is not specifically mentioned.

The Dutch reformed churches within the sovereignty are under the supervision of the synod in the Cape colony. Churches have been or are being erected at the other seats of magistracy, to which clergymen are to be appointed; and there is, or is to be, a schoolmaster at each seat of magistracy. There is a weekly post from the colony to Bloem-Fontein, Smithfield, Winburg, Harrismith, and Pietermaritzburg in Natal.

ORANGETOWN, a township of Rockland co., in the state of New York, U. S., 123 m. S of Albany. It has a hilly surface, bordered on the E by Hudson river, and drained by Hackensack river. The soil consists of clay and red shale. Pop. in 1840, 2,771.

ORANGEVILLE, a township of Genesee co., in the state of New York, U. S., 257 m. W of Albany. It has a hilly surface, and is drained by Tonawanda creek and its tributaries. The soil, consisting of clay loam, affords good pasturage. Pop. in 1840, 1,949.—Also a village of Bloom township, Columbia co., in the state of Pennsylvania, 5 m. N of Bloomsburg, and 81 m. N by E of Harrisburg, on Fishing creek. It consisted in 1840 of about 40 dwellings.

ORANG-KUBU, a people of the island of Sumatra, who inhabit the interior of the kingdom of Palembang. They are said to be mild and peaceable in disposition.

ORANGO, an island of the Bijuga or Bissagos group, in N lat. 11° 10′, and W long. 16°. It is 25 m. in length from E to W, and 10 m. in breadth; and is the largest as well as most southerly of the group. On its S side is an extensive indentation containing several islands.

ORANI, a village of Sardinia, in the prov. and 9 m. SW of Nuoro, and 78 m. N of Cagliari, in the midst of fine verdant mountains. Pop. 1,752.—Also a town of Russia in Europe, in the gov. of Vilna, district and 30 m. SW of Nowo-Troki, on the r. bank of the Meritchanka.

ORANIENBAUM, a town of the duchy of Anhalt-Dessau, 7 m. ESE of Dessau. Pop. 2,010. It has a handsome palace.

ORANIENBAUM, formerly Cobrun, a small fortress of Russia, in Livonia, on the Dwina, opposite to Riga and 19 m. W of St. Petersburg. Pop. 1,400. Here is a palace built by Prince Menzikoff, converted afterwards into an hospital, but occupied again as a palace by the czar Peter III.

ORANIENBURG, a town of Prussia, in the prov. of Brandenburg, gov. of Potsdam, on the r. bank of the Havel, 19 m. N by W of Berlin. Pop. 2,990. It has cotton manufactories.—Also a town of Russia, in the gov. and 96 m. SSE of Riazan, at the confluence of the Yagodnia and the Stanovaia-Riassa. Pop. 2,500. It is fortified with a rampart and a dry ditch.

ORANIENPOLDER, a small seaport of Holland, in the prov. of S. Holland, on the Maese, near Delft.

ORANMORE, a parish in co. Galway, containing the villages of Menlough and Glanroe; the town of O. and the villages of Renville, and Newtown-Butler. Area of the barony of Galway section, 9,349 acres, of which 1,638 acres are in Lough Corrib. Area of the Dunkellin section, 9,989 acres. Pop. of the whole, in 1831, 6,993; in 1841, 7,952. The Corrib river flows in a divided channel, along the N part of the W boundary; and O. bay projects and ramifies from the NE extremity of Galway bay.—The town of O. stands at the head of Oranmore bay, $4\frac{3}{4}$ m. E of Galway. It has a small quay, and is a considerable thoroughfare. It gives the title of baron to the family of Browne of Castle-Macgarret. Pop. in 1831, 673; in 1841, 842.

ORANSAY, a small island of Scotland, off the W coast of the isle of Skye, the communication with which and the mainland is left dry at low water.

ORASCHUL, a town of Wallachia, at the influx of the Jalomitza into the Danube, 45 m. NE of Silistria. It has a small harbour on that great river, and some trade.

ORATAVA. See Orotava.

ORATOV, a town of Russia, in the gov. and 96 m. SSW of Kiev.

ORAVITZA-NEMET, a town of Hungary, in the banat and 52 m. SSE of Temesvar. Pop. 3,800. It is the seat of a mining court, and has mines of silver and copper in the neighbourhood.

ORB, a town of Bavarian Franconia, 40 m. NNW of Wurzburg, and 21 m. SSW of Fulda. Pop. 4,500. It has mineral springs and productive salt mines.

ORBA, a small river of Piedmont, which rises in the Genoese territory in mount Faiale, and falls into the Bormida, 3 m. S of Alessandria, after a course of 36 m.

ORBAIS, a town of France, dep. of the Marne, on the l. bank of the river Surmelin, 15 m. SW of Epernay. Pop. 950.

ORBAN, a village of France, in the dep. of Tarn, cant. and 6 m. NW of Realmont. Pop. 550.

ORBANSAY, a small island of the Hebrides, between Barray and S. Uist.

ORBASSANO, a town of Piedmont, 8 m. SW of Turin. Pop. 2,660.

ORBE, Orben, or Urbach, a town of Switzerland, in the cant. of Vaud, 7 m. SW of Yverdun, on the l. bank of the river Orbe, over which it has two bridges. Pop. 2,000. The most remarkable objects of the place are a curious hydraulic engine, and a good botanical garden. About a league from the town is a mine of petroleum.—The river O. issues from the lake Rousses, in the French territory; flows through the lake of Joux; runs for some way under ground; rises again in the district called Valorbe, and continuing a northward course, falls finally into the SW extremity of the lake of Neufchatel. Its principal affluents are the Ivigne and the Talert. An unsuccessful attempt was made to unite, by means of this river, the lake of Neufchatel with the lake of Geneva.

ORBE, a river of France, which rises near Roumieres, in the dep. of Herault, and flowing S, falls into the Mediterranean below Bezieres, after a course of 60 m.

ORBEC, a town of France, dep. of Calvados, 10 m. SE of Lisieux. Pop. 2,910. It has manufactories of serge and coarse woollens, cottons and silk ribbons; also a brisk traffic in cattle.

ORBELO, a mountain chain in the N of European Turkey, to the westward of the great Hæmus ridge in Romania. It rises to the greatest elevation to the S of Sophia. It contains silver, copper, and iron ores, and the Turks have here some valuable mines.

ORBIGNY, a town of France, dep. of Indre-et-Loire, 30 m. SE of Tours, and 12 m. NE of Loches. Pop. 1,155.

ORBIGO. See Orvigo.

ORBITELLO, a town and fortress of Tuscany, in the prov. and 94 m. S of Sienna, situated on a promontory projecting into the N side of Lake Orbitello. It has a commodious harbour, defended by several small forts. Pop. in 1840, 2,848.—The lake is 6 m. in length from NE to SW, and about 18 m. in circuit, but not of great depth. It communicates with the sea by a narrow inlet on the SW. It is chiefly remarkable for the size and number of eels which are caught in it, and which are sent to Rome, Naples, Florence, and other large towns.

ORCA, a town of Spain, in the prov. and 76 m. E of Guadalaxara. Pop. 671. There are mines of iron and of saltpetre in the neighbourhood.—Also a river of Sardinia, which descends from the E flank of Mount Iseran, and flows to the Po, which it joins on the l. bank, near Chivas, after an ESE course of 52 m.

ORCADES. See Orkney Islands.

ORCE, a town of Spain, in the prov. and 72 m. ENE of Grenada, near the source of a small river of the same name, an affluent of the Guadalquivir. Pop. 2,500. It has a strong fort, and a military arsenal.

ORCET, a village of France, in the dep. of Puy-de-Dome, 4 m. SE of Clermont-Ferrand. Pop. 1,450.

ORCHA, a town of Russia, in the gov. and 48 m. N of Mohilev, on the r. bank of the Dnieper, at the confluence of the Orchitza. Pop. 1,850. It is one of the oldest towns of the empire. The surrounding country is well-wooded, and fertile in flax and hemp.

ORCHAMPS, a village of France, in the dep. of Jura, 9 m. NE of Dole, on the r. bank of the Doubs. Pop. 840. Porcelain is manufactured here.

ORCHAMPS-EN-VENNES, a village of France, in the dep. of Doubs, 18 m. SSE of Baume-les-Dames. Pop. 750.

ORCHARD (Port), an inlet of Admiralty sound, in N lat. 47° 35′, W long. 124° 20′. See Juan-de-Fuca.

ORCHE, a town of Spain, in the prov. and 9 m. ESE of Guadalaxara, in a valley between the Henares and the Tajuna. It is a well-built town; and has considerable woollen manufactories.

ORCHIES, a town of France, in dep. of Nord, 10 m. NE of Douay, and 15 m. SE of Lille. Pop. 3,568. It has considerable iron works, manufactories of rape-seed oil, soap, and leather; and brick, tile, and pottery works.—The cant., comprising 9 com., had a pop. of 18,037 in 1841.

ORCHILLA, or Horchilla, a cluster of islands in the West Indies, near the coast of Venezuela. The largest island, the E extremity of which is in N lat. 11° 51′, W long. 66° 6′, is in the form of a crescent, and is low in surface, excepting its E and W capes, which are hilly. On one side, trees and verdure abound, on the other sides the soil is barren and produces few plants. The only animals are goats and lizards. The different islets are separated from each other by narrow channels; the navigation of which is very difficult and dangerous.

ORCHIMONT, a commune and village of Belgium, in the prov. of Namur, 24 m. SW of St. Hubert, near the l. bank of the Semoy.

ORCHON, a river of Chinese Tartary, which rises on the borders of the great desert of Shamo, and falls into the Selingha, in N lat. 50°, E long. 106° 14′. Fischer supposes the ancient Tartar capital of Karrakorum to have been situated upon its banks.

ORCHOWCK, a town of Poland, in the obwodie and 48 m. SE of Radzyn.

ORCIANO, a town of the States of the Church, deleg. and 12 m. S of Pesaro.

ORCIATICO, a village of Tuscany, in the prov. and 21 m. SE of Pisa.

ORCIERES, a town of France, dep. of Hautes-Alps, 14 m. NE of Gap, on the Drac. Pop. 1,459. It has some traffic in wool, cheese, and butter.

ORCINES, a commune and village of France, in the dep. of Puy-de-Dome, 4 m. W of Clermont-Ferrand. Pop. 1,700.

ORCI NOVI. See Orzi Nuovi.

ORCIVAL, a town of France, in the dep. of Puy-de-Dome, on the small lake of Pierre, 11 m. SW of Clermont.

ORCOP, a parish of Herefordshire, 8 m. WNW of Ross. Area 2,403 acres. Pop. in 1841, 570; in 1851, 631.

ORD OF CAITHNESS, a hill on the SE coast of the county of Caithness, which forms a high, steep, and cliffy headland, NE ½ E 18 m. from Tarbetness.

ORDADO, a rock in the Pacific, near the coast of Peru, 5 m. SE of Callao.

ORDAN-LABROQUE, a commune and village of France, in the dep. of Gers, 8 m. NW of Auch. Pop. 1,178.

C. Disappointment
Navigation of the Columbia River is free to all British Subjects

ORDEL, a small island in the Eastern seas, near the SE coast of Gilolo, in S lat. 0° 50′.

ORDESALL, or Ordsale, a parish of Nottinghamshire, 1½ m. S of E. Retford. Area 1,989 acres. Pop. in 1841, 955; in 1851, 1,342.

ORDIE, a small river of Perthshire, which falls into the Tay above Luncarty.

ORDINO, a village in the Val d'Andorra, in the Pyrenees, 30 m. SSW of Foix.

ORDINSKA, a town of Asiatic Russia, in the gov. and 180 m. SW of Tomsk, on the l. bank of the Obi.

ORDIQUHILL, a parish of Banffshire, 7 m. S of Portsoy. Pop. in 1841, 637; in 1851, 644.

ORDOM, a river of Marocco, which rises to the E of Mequinez, and joins the Sebu, on the l. bank, after a NW course of 100 m.

ORDU, a village of Asiatic Turkey, in the pash. of Sivas, 24 m. ESE of Fatsa, near the site of the ancient *Cotyora*.

ORDUNA, a town of Spain, in the prov. and 15 m. NW of Vittoria, on the l. bank of the Nervion, in a pleasant valley surrounded by steep and lofty mountains. Pop. 4,000. It is the chief place of a privileged district called the Four Towns. There is a good road from this place to Bilbao; and here is one of the chief custom-houses for merchandise going by land from France into Spain.

ORE, a parish of Sussex, 2 m. NNW of Hastings. Area 2,149 acres. Pop. in 1851, 1,745.

OREBRO. See Oerebro.

OREEHOUA, one of the smaller Sandwich islands. It is a single high hummock, separated from Onehow by a channel about 1 m. in breadth, and apparently of sufficient depth to admit of vessels to pass in safety. It is wholly composed of rugged naked rock, to all appearance destitute of soil.

OREGANA, a village of Spain, in the prov. and 27 m. E of Segovia.

OREGON, a county on the S border of Missouri, U. S. Area 1,600 sq. m. Pop. in 1840, 1,432.—Also a village in Holt co., in Missouri.

OREGON CITY, a village of Ogle co., in Illinois, U. S., 176 m. N of Springfield, on the N side of Rock river.

OREGON TERRITORY, an extensive territory of North America, including, in the widest application of the term, all the territory between the Rocky mountains, and the Pacific ocean N of the parallel of 42°, and S of that of 54° 40′,—a tract of country somewhat more than 1,150 m. in length, with an average breadth of about 450 m.; but now restricted to that portion of this territory which lies S of the parallel of 49°; and is bounded on the N by the British territories, from which it is separated by the parallel of 49°, which strikes the gulf of Georgia at Point Robert's, 5 m. S of the mouth of Frazer's river, whence the boundary-line passes through the Canal-de-Arro to De Fuca's straits; by the Rocky mountains on the E; by New California on the S; and by the Pacific on the W. It extends along the coast from Cape Mendocino, in N lat. 40° 29′, to Cape Flattery, in N lat. 48° 55′, or 600 m. of direct distance. Its longitudinal extent from E to W, along the parallel of 42°, is 650 m., but in the N does not exceed 450 m., only 9° of long. intervening between the Rocky mountains and the E shore of the gulf of Georgia, which separates the continent from the SE end of Vancouver's island.—From Cape Mendocino to Cape Flattery, the coast runs in an uninterrupted line, unbroken by islands, sounds, or gulfs, and differing in this respect from all the remainder of the NW coast, which, as far as Behring's straits, is studded with islands, and singularly broken with numerous creeks and sounds. The region between the parallels of 38° and 48° has been denominated New Albion,—an appellation founded on the opinion that Sir Francis Drake first discovered the NW coast of America between the above latitudes: but the fact is, that the coast of New California had been examined as far as N lat. 43°, by Cabrillo, an eminent Spanish navigator, in 1542, or 36 years previous to Drake's voyage. To speak correctly, the term New Albion ought to have been restricted to that part of the coast which lies beyond the limits of Cabrillo's discoveries, viz., from Cape Orford or Blanco to the entrance of the straits of San-Juan-de-Fuca. This coast was again examined by Sebastian Viscayno in 1602, to the mouth of a river, in 43° N lat., believed by Martin de Aguilar to be the W extremity of the straits of Anian. The mouth of the Columbia river was first discovered in 1775, by Quadra, commander of a Spanish voyage of discovery, who denominated it the entrance of Heceta, after one of his colleagues, and the river of Ascension. The same coast was afterwards examined to the N of Cape Orford, by Cook, but without seeing the mouth of the Columbia. The appellation Columbia was first given to that great river by the American navigator, Gray, not in memory of the great Columbus, but as the name of the sloop which he commanded when he entered the river in 1792. The whole coast was traced in the same year by Vancouver, who, being unable to discover any entrance between N lat. 45° and the channel of Fuca, doubted of the existence of such a river as the Columbia, or the entrance of Heceta, though one of his own lieutenants sailed a considerable distance up the river without any suspicion of its being the Columbia, and on the 4th June 1792, Vancouver took possession, with the usual formalities, of all the coast of New Albion, from 39° 20′ N lat. to the inlet of San-Juan-de-Fuca. In 1793, Mr.—afterwards Sir Alexander—Mackenzie crossed the Rocky mountains, and reached the Pacific in about 52° N. Soon after, the Hudson's Bay company established the fort of Alexandria, on the Frazer river,—discovered by Sir Alexander,—in about 52½° N. Mr. Howes appears to have been engaged exploring this NW territory about the same time as Mackenzie. How long Mr. Howes' operations were continued is uncertain; but he was in Great Britain in 1812, and before his return from America he had pushed on to the S as far as a point on Flathead river, where the company's establishment of Flathead-house now stands. Flathead-house was not an isolated position; it was a regular trading-station, connected with Fort Alexandria and the establishments E of the Rocky mountains by a chain of intermediate stations. In the same year that Astoria was founded by the agents of Mr. Astor of New York, at the mouth of the Columbia river, on the S bank, the N bank was occupied by Mr. David Thompson, an agent of the North-west company, in the name of the British government. During the presidency of Mr. Jefferson, in 1803, an expedition under Captain Lewis and Clarke was sent out to explore the western territory, and they and their followers were the first subjects of the United States who passed the Rocky mountains. They crossed a little to the N of 46° from the head-waters of the Missouri to the Arrowstone. They descended this stream, crossed the valley of the Flathead, and then descended the Salmon, Snake, and Columbia rivers, to the sea, where they wintered, near the last-mentioned, on its S bank. Towards the close of Mr. Jefferson's presidency—about 1807 or 1808—Mr. Astor, a German settler in New York, conceived the idea of forming an American fur company to rival the North-west and Hudson's Bay companies, and to form a permanent establishment at the mouth of the Columbia for the purposes of trade. In 1813 war

broke out between the United States and Great Britain; Mr. Astor claimed protection for his settlement; but Astoria was taken by a British cruiser in the course of the war. No attempt was made to re-occupy it on the part of the Americans; but, by the arrangement of 1818, they reserved the power of claiming it.

Physical features.] The general appearance of the O. territory adjoining the sea is flat, but rising gradually as it retires from the coast into hills of moderate elevation; farther eastward, the prospect is bounded by ranges of snowy mountains. The interior consists of extensive plains or prairies without timber, extending 350 m. from E to W, on both sides of the Columbia, but gradually contracting to the N. This district may be denominated the valley of the Columbia, as comprising all the open space between the Rocky mountains and another range of mountains which runs parallel with the coast as far as Cook's inlet, in N lat. 61° 29′, W long. 148° 43′. On the S of the Columbia the country is mountainous, and totally destitute of timber in that part which lies between the western Snowy range and the Rocky mountains. Between the W range and the sea timber is abundant, especially pines, some of which are said to attain a height of 250 ft., and to be from 36 to 45 ft. in circumf., frequently presenting a solid trunk for upwards of 170 ft. without a single protruding branch! The summits of the mountains are composed of rough craggy rocks, and are covered with snow the greater part of the year; but some sheltered and fertile valleys are found among them, and the country bordering upon the Oregon and its branches has a fertile soil. The prairies are covered with grass, and spangled in summer with beautiful flowers. Wild sage here grows to the size of a small tree, and forms one of the principal articles of fuel. The timber on the mountains is chiefly spruce, pine, and fir. The shore for some distance inland is covered with forests of pine and hemlock; and many of the trees attain here also an enormous height. The prairies in the spring of the year are covered with a profusion of pale pink flowers rearing their delicate stalks among the rough blades of the wild grass. These are too fragile to withstand the scorching heat of summer, but are succeeded by gorgeous flowers of red, yellow, purple, and crimson, sometimes growing singly, and at others spreading in beds of several acres in extent. Throughout this region hill follows hill, and hollow succeeds hollow, with the same regularity as the sweeping billows of the ocean. Occasionally a high broken bluff rears its solitary head, like some lonely sentinel overlooking the country, upon the top of which may frequently be seen an Indian, standing in bold relief against the sky, or seated upon some pleasant spot on its summit, and basking in the sunshine with that lazy air of enjoyment which characterises the race. Sometimes the traveller issues from the forest upon a beautiful prairie, spreading out as far as the eye can reach an undulating carpet of green, enamelled with flowers, and lit up by the golden rays of the setting sun. Occasionally a grouse bustles from among the high grass, and flies whirring over the tops of the neighbouring hills; and when the heat of the afternoon has yielded to the cool breezes of sunset, the deer, which during the scorching mid-day have nestled among the thickest groves which dot the prairie, begin to steal from their hiding-places, and are seen bounding over the green sward, or standing buried up to their heads among the tall flowers, and gazing wildly at some exploring party. The Indians often set fire to these prairies, when the flames spread with tremendous rapidity, and are said to present one of the grandest and most terrible spectacles in nature. The whole territory may be regarded as being divided into three plateaux or valleys, separated by ranges of mountains, which follow irregularly the direction of the coast. The first plateau lies along the Pacific, and extends from 100 to 150 m. to the Cascade range; the second, lies between the Cascade range and the Blue mountains; the third, between them and the principal range of the Rocky mountains. These several plateaux are distinguished by different soil, climate and productions. The S part of the W section, especially in the valley of the Willamette, is supposed to be the most fruitful in O.; it grows the finest wheat and other grains. The middle plateau is of a light sandy loam, having in the valleys a rich alluvium, but is barren on the hills. The third, or E section, is rugged and barren, except on the low grounds, which are adapted to grazing. Some of the Cascade mountains rise to the height of 4,000 ft. above the level of the sea; but in the Eastern, or great range, the summits sometimes reach the elevation of more than 6,000 ft., and these lofty altitudes are so continuous as to present a serious barrier. Only three places have yet been found in this chain that admit of passage. The first, and northernmost, was found by Lewis and Clarke, and lies in N lat. 46° 30′; the next is in 44° 30′, where a road is practicable; the third is the 'South Pass,' discovered by Col. Fremont. This last is the most eligible passage, and will become the great thoroughfare from the states to O. A range of mountains, called the Klamet, runs from the great range W towards the Pacific.

Rivers.] The principal river is the Columbia or Oregon, which rises in the NE, among the lofty elevations of the Rocky mountains, running for a great distance N, at an elevation of 3,600 ft. above the level of the sea, then S and SW, with numerous falls and rapids, receiving tributaries and increasing in volume, until it reaches the W base of the Cascade mountains. From this point there is a reach of 40 m. of still water navigation, which is again obstructed by short rapids, after which it continues to the Pacific, affording uninterrupted navigation for large vessels 120 m. from its mouth. See COLUMBIA. Lewis river rises in the SE, among the mountains, and runs NW until it joins the Columbia at Fort Wallawalla.—The Willamette rises in the SW part of the territory, and runs N about 100 m. into the Columbia, about 120 m. from the Pacific. These are the principal rivers yet explored. There are a number of small lakes in the territory.

Climate.] The climate of the three sections may be classed as mild, temperate, and severe. That of the western comes under the first class, having neither the extremes of heat during the summer, or of cold during winter; this is probably owing to the prevalence of the SW winds, and the mists which they bring with them from the ocean. The winters are short, lasting from December to February, and may be termed open. Snow seldom falls, and when it does, lasts but a few days. Frosts, however, occur in the latter part of August, which is accounted for by the proximity of the snowy peaks of the Cascade range, a mountain or easterly wind invariably causing a great fall in the temp. These winds, however, are not frequent. The wet season lasts from November till March; but the rains are not heavy, though frequent. The climate during winter is not unlike that of England, and as to temp. is equally mild with that of 10° lower lat. on the eastern coast of the American continent. The fruit-trees blossom early in April. The mean temp. at Nisqually from the middle of May to the middle of July was 67°, maximum 98°, minimum 39°; the barometer 30·04 in. From June to September, at Vancouver, the mean temp. was 66°, maximum 87°, minimum 51°. Out of 106 days, 76 were fair, 19 cloudy, and 11 rainy. The second or middle section is subject to long droughts, the summer is much drier and warmer, and the winter colder, than the western section. Its extremes of heat and cold are more frequent and greater; the mercury at times rises to 108° in the shade in summer, and falls as low as —18° in winter; the daily range of temp. is 40°. The atmosphere is, however, extremely pure and healthy. In summer the air is cooled by the strong W winds prevailing daily on the Columbia, which flow in to fill up the void produced by the heated prairie grounds. No dew falls in this section.—The climate of the third or eastern section is ex-

tremely variable, the temp. during the day differing 50° to 60°, renders it generally unfit for agriculture. In each day all the changes incident to spring, summer, autumn, and winter occur: this is true for nearly all seasons of the year.—[*Wilkes.*]

Soil and Productions.] The lands around Gray's harbour, clear of timber, are flat and wet, being for the most part salt marshes. Near the coast inside of Point Adams, at the confluence of Young's river with the Columbia, exists some good land. Above this the shores of the Columbia, as far as the mouth of the Willamette, are chiefly steep and rocky, with occasional patches of alluvial deposit. The hills on both sides are covered with stately timber, belonging mostly to the family of the *Coniferæ*. Majestic trees of cotton wood, maple, and *Arbutus procera*, with occasional belts of oak, line its shores and islands, and occupy the alluvial patches. In the neighbourhood of Fort Vancouver, on both sides of the river, the country presents a more encouraging aspect to the farmer. Close to the fort, rich and extensive tracts have been cleared and are now in a high state of cultivation. The best wheat lands are of a deep rich brown loam, originally of a very tenacious consistency, but now become friable by being tilled and cropped for a succession of years. The woodlands are of a brown sandy nature, and when cleared produce good crops of pease, oats, barley, rye, potatoes, and turnips. On the opposite side of the Columbia, near its junction with the Willamette, there are fine undulating prairie lands, which have been rightly designated 'the Garden of Oregon.' The depth and richness of the soil will stand comparison with the finest lands in the United States. A great many situations are to be found on the shores of the Columbia, between the sea-coast and the Dalles, suitable for the cultivation of the grape-vine. In the portion of country to the S of the Umpqua river, along the banks of the Klamet, where the finer European varieties would unquestionably succeed, a kind of fox-grape is found indigenous. Peaches, nectarines, apricots, cherries, and plums thrive well at Vancouver, and it is believed, that the deep rich soils in the valley of the Willamette are still better adapted to the growth of such fruits. Pears, and the English gooseberry, with the black, red, and white currant, all produce good crops. The raspberry and strawberry are found growing indigenous in woods and along banks of streams. Water and cantelope melons, with pumpkins, gourds, squashes and cucumbers, are grown. The melons are inferior in flavour to the same kinds of fruit produced in the state of Virginia, but equal to those of New Jersey, New York, or Pennsylvania. The vegetables cultivated are the following: beans, pease, cauliflowers, broccoli, cabbages, asparagus, carrots, parsnips, beets, turnips, radishes, lettuce, endive, onion, leeks, shallots, and scorzonera, with a variety of pot-herbs of the more common kinds. The soils on the Willamette are admirably adapted to the growth of esculents, as the onion, carrot, and cabbage. Towards the Umpqua the more tender kinds of vegetables would attain greater perfection. In the interior of Oregon, where settlements have been made, some opportunities have been presented to demonstrate with what success horticulture in this part of the country can be practised. At these, most culinary vegetables succeed. A variety of indigenous fruits and roots are used as food by the Indians of O. Of these, the *Camassia esculenta*, a kind of squill, having a bulb which resembles a small hyacinth root, is found in greatest abundance in meadows of the prairie country above Fort-Nezperces; it is also common in alluvial lands on the margins of rivers and streams. The tubers of several species of umbelliferous plants belonging to the genus *pencedanum*, and bulbs of various species of *calococtus* are also eaten by the Indians, but the roots being small, they do not form a very important article of food. They are found in the greatest abundance on dry prairies near the frontier of California. The roots of the *Lupinus littoralis* taste very much like liquorice. It is found on the low sand-hills between Gray's harbour and Chinook bay. The root of the *Lewisia rediviva* when macerated in water, forms a substance resembling starch. It is found only in the dry sandy districts of the interior. In time of scarcity the *Sagittaria sagittifolia* also becomes an article of food, but in plentiful seasons is seldom used by the Indians. The Indians collect the nuts or seeds of the *Pinus Lambertiana*, which grows to a great size on the Umpqua mountains, and store them away for winter-consumption. The seeds of the sunflower, madias, and numerous other annual and perennial plants, are collected in great quantities, and are generally scalded in hot water before being eaten. Among the numerous fruits indigenous to O. are: The *Fragana Chilensis*, a species of strawberry. It is found in the interior as far as Fort Colville, but is most abundant on the banks of the Columbia, near Vancouver, on Puget's sound, and in the Willamette valley. It ripens in June and July. The *Rubus spectabilis* has a yellowish fruit, of an oblong form, and somewhat translucent. The *Rubus strigosus* is smaller than the yellow, and of higher flavour; there is also a third species, bearing a black berry. There are several different species of blackberries, gooseberries, currants, and whortleberries, many of which are dried by the natives, and put aside for winter stores. The Indians make use of the dried leaves of the *Arbutus Uva-ursi* to mix with imported tobacco, which they smoke.—Quadrupeds and birds of every description abound; but they are comparatively scarce in the high country immediately W of the Rocky mountains. Every animal common to the NW coast of America, is to be found here; and the grizzly bear, so formidable to the Indians, is by no means a scarce animal in this quarter.—It is reported that gold and platina have been discovered in the middle region of the O. territory; and coal near the Willamette.

Population.] The number of Indians of different tribes in this country is estimated at 140,000. They retain most of the features of the savage character. To surprise a hostile tribe, to massacre them with every exercise of savage cruelty, and to carry off their scalps as trophies, is their highest ambition. Mr. Hale, in his report to Congress, says: "The Indians W of the Rocky mountains seem to be on the whole inferior to those E of that chain. In stature, strength, and activity, they are much below them. Their social organization is also more imperfect. The two classes of chiefs, those who preside in time of peace, and those who direct the operations of war, —the ceremony of initiation for the young men,— the distinction of clans or totems,—and the various important festivals which exist among the eastern tribes, are unknown to those of Oregon. Their conceptions on religious subjects are of a lower cast. It is doubtful if they have any idea of a Supreme Being. Their chief divinity is called the Wolf, and seems, from their descriptions, to be a sort of a compound being, half beast and half deity. They have no fixed habitations, and yet they are not properly speaking a wandering people. Nearly every month in the year they change their place of residence,—but the same month of every year finds them regularly in the same place. The circumstances which have given rise to this course of life are the following: 1. The territory of O. abounds beyond example in esculent roots of various kinds, which without cultivation grow in sufficient quantities to support a considerable population: more than 20

species, most of them palatable, and obtainable generally with little labour, are found in the different parts of this territory. At certain seasons the natives subsist almost entirely upon them. As the different species come to maturity at different times, the people remove from one root-ground to another, according to the time when experience has taught them to look for a new crop. 2. Several kinds of fruits and berries are found at certain seasons in great abundance, and offer another cause for a temporary change of place. 3. At a particular period of the year the salmon ascend the rivers to deposit their spawn, and then the Indians assemble in great numbers on the banks of the streams for the purpose of taking them. Two months afterwards the fish appear again, floating in an exhausted condition down the current; and though by no means so agreeable for food, are yet taken in large quantities, principally for winter stores. These two seasons of fishing are the occasion of two removals. 4. The tribes of the interior depend in part for their clothing on the buffalo skins which they obtain either by barter or by hunting; and for both these purposes it is necessary for them to visit the region near the foot of the Rocky mountains frequented by that animal. This however does not, except with some of the Shoshonees, give rise to a general removal of the tribe, but merely an expedition of the principal men, their families being left in the mean time encamped in some place of safety. The tribes near the coast remove less frequently than those of the interior. Some of them spend the summer on the sea-shore, and the winter in a sheltered nook on the banks of an inland stream. Others do not change their place of residence at all; but at the approach of summer they take down the heavy planks of which their winter habitations are made, bury them in the ground, where they will be out of the way of injury, and having put up a temporary dwelling of bark, brushwood, and matting, feel no apprehensions at leaving it for two or three weeks at a time, to fish, hunt, collect roots, and gather fruit." The tribes N of the Columbia exist in a still more degraded condition. The Carriers, Qualioguas, Tlatskanies, Umpquas, Soushwaps, Flat-heads, Chickeeles, Cowlitz, and Killamukes, with the Chinooks, the Yacones, and in part the Calapuyas, the Nootkas, and other tribes of Vancouver's island, are among the ugliest of their race. "They are below the middle size, with squat, clumsy forms, very broad faces, low foreheads, lank black hair, wide mouths, and a coarse rough skin, of a tanned or dingy copper complexion. This description applies more particularly to the tribes of the coast. Those of the interior — the Carriers, Soushwaps, and Selish — are of a better cast, being generally of the middle height, with features of a less exaggerated harshness. In the coast tribes, the opening of the eye has very frequently the oblique direction proper to the Mongol physiognomy; but in the others this peculiarity is less common. The intellectual and moral characteristics of these natives are not more pleasing than the physical. They are of moderate intelligence, coarse and dirty in their habits, indolent, deceitful, and passionate. They are rather superstitious than religious, and greatly addicted to gambling. All these disagreeable qualities are most conspicuous in the tribes near the mouth of the Columbia, and become less marked as we advance into the interior towards the N." Mr. Hale conjectures that, "if we might suppose that the hordes which at different periods overran the Mexican plateau had made their way through this territory, we might conclude that the numerous small tribes there found were the scattered remnants of these wandering nations, left along their line of march as they advanced from the frozen regions of the N into the southern plains." Laying out of view the Indian tribes which make this territory a part of their range, its present civilized pop. consists of about 800 or 900 British subjects, and about 10,000 citizens of the United States. The bulk of this pop., both British and American, is concentrated round the lower waters of the Columbia, chiefly occupying a region not much more than 100 m. in length from E to W, and probably not much more than 50 m. in breadth from N to S. The 800 or 900 men who compose the British portion of this people are all of them understood to be in the service of the Hudson bay company, and are engaged as hunters, trappers, or factors in the fur trade.

American settlements.] The Willamette is the chief seat of American colonization in O. On one side of this stream, and not distant from its banks, a range of high mountains stretch along, leaving between them and the river a plat of bottom-lands. About 5 m. up this river is a somewhat elevated spot supposed to be eligible for a town; and here one has been laid off, which is to figure in geography as Linntan. Near this place, and crossing the mountains, a good road conducts the traveller to Fallatry plains, which, it would appear, have attained some celebrity. Far to the westward, these prairie-lands present the most beautiful features of landscape, encircled as they almost entirely are by verdant mountains; promising settlements too are distributed here. Up the Willamette to 5 m. above Linntan, vessels of lighter burthen pass without difficulty; but above this only the smallest vessels and steamers can proceed, and these only to within a few miles of the falls.—Above the falls, which are 30 m. from the mouth of the river, the flourishing 'Oregon city,' with a pop. of several hundreds, is located. A canal in this vicinity is projected, to connect the upper and the lower navigation of the Willamette. Between 'Oregon city' and the chief town of the territory, situated on the river 95 m. from the mouth of the Columbia, several small settlements exist. These were originally seats of the retired servants of the Hudson's Bay company, but are now filling-up with other pop. The chief town of O. was originally the seat of a Methodist mission, and now numbers 200 families. The church, hospital, academy, mills, workshops, dwellings, &c., though rude, already mark the progress of art in that quarter, and a judicial and military organisation are in a state of infancy. The settlers are represented to be doing well. On the W side of the river, immediately opposite the falls, a 'city' called Linn city has been laid out, and improvements are going a-head. It already contains one tavern, one chair manufactory, one cabinet-shop, one gunsmith-shop, and one waggon-shop! Next on the list of 'cities' comes Multnomah city, immediately adjoining Linn city, and opposite to Oregon city. Multnomah city is located on a beautiful site, and must, says a local authority, in a short time be a city in appearance as well as name. The falls of the Willamette afford ample water-power for the erection of machinery of every description to any extent desired; and a canal on each side of the river, commencing at the head of the falls, and locked down for a distance of 1 m., would afford power for the manufacturing of everything necessary for internal purposes as well as transportation.

Washington territory.] The N part of Oregon was organised in 1853 into a separate territory, under the name of Washington territory. Its N frontier is the parallel of 49° to the crest of the Rocky mountains; on the E it is bounded by the Rocky mountains to the parallel of 46°, and on the S by the Columbia river from Fort Walla-Walla to its mouth. An

accurate survey of this territory is about to be undertaken by the United States government. Lewis and Clark, Father de Smet, the Irving Astoria map, and the Indian bureau and Topographical bureau maps, all represent the mountain-ranges of O. differently. Lewis and Clark exhibit four distinct ranges, with which the best recent explorations essentially agree, indicating at least three parallel ranges running nearly NW, instead of the more prevalent indication of a single N and S range. The Columbia river was thoroughly surveyed by Captain Wilkes, 2 sheets out of 6 being now published. It was also surveyed by Belcher in 1839, and 2 sheets are published among the Admiralty charts. The Coast survey has twice surveyed its mouth, and published one sheet. A comparison of these several surveys with Vancouver's indicates a remarkable degree of shifting in the sandbanks at its mouth. Shoalwater bay has been surveyed by the Coast survey, but the survey is not published. Grey's harbour has also been just surveyed, and this with Chickalees river has been surveyed and the survey published by Captain Wilkes. The Admiralty charts embrace the straits of Fuca, and many harbours on the mainland and on Vancouver's island. A coast survey reconnoissance has now extended up the entire Pacific coast, and along the S coast of the Straits of Fuca, and will soon be published. The surveys under Captain Wilkes, and his narrative, give full information of all the group of islands in the gulf of Georgia, and the channels leading to and making up Puget's sound, with much detail. The shores of this wonderful network of channels are so favoured in soil and location that they must soon possess great value. Through a surprising extent of line they are directly accessible for ocean vessels, and form, as it were, an immense network of harbours, penetrating far into the heart of the W half of Washington, the resources of which they will greatly aid in developing. Fort Nisqually and Olympia at the S extremity of Puget's sound, must rapidly advance with the growth of this territory. The interior portion of this section is but imperfectly known. The land-office surveys N of the Columbia have as yet made but little progress; but the sketches prepared in that office give more recent and correct information than is elsewhere to be found on the section between that river and Puget's sound. On penetrating further towards the Rocky mountains the country is essentially unknown. The narrative of Lewis and Clark, the book on Oregon missions by Father de Smet, published in New York in 1847, and Irving's Astoria, are the chief publications of value on this ground. These serve merely to show that the country bordering the Rocky mountains between 46° and 49° on both sides is still a fine field for exploration. The seat of the government has of course not yet been designated; but it is the opinion of many that Olympia, a town at the mouth of the Tenulquets or Shute's river, which flows into the S extremity of Puget's sound, under the 48th parallel of lat., will prove the most eligible point.

Pacific railroad.] By a recent act of congress the War department is authorised to survey the several proposed routes of a railroad from the Mississippi to the Pacific; and in pursuance of this authority, the secretary of war has placed under the charge of Governor Stevens the exploration and survey of a route from the sources of the Mississippi to Puget's sound. The first thing to be ascertained in the survey of this route is the practicability of the undertaking. A topographical survey will be made of the Rocky and Cascade mountains, between the 46th and 49th parallels, and of the intervening country, to determine the general course of the railroad, and to guide the civil engineers in determining its precise route. This reconnoissance will embrace the prominent features of the country, the mountain ranges and passes, the windings of rivers and streams and their dividing ridges, the prairies, and everything necessary for the construction of a map of the country. This will comprehend the important points of the Missouri and Columbia rivers, the *débouches* of the passes of the Cascade and Rocky mountain ranges, the fixing of the latitude and longitude of all important points, and all the facts bearing upon the construction of the road. It is not doubted that the controlling points will prove to be the passes of the Cascade and Rocky mountains; and the opinion is entertained that the location of a road between the two ranges, and for a long distance E of the Rocky mountains, may be suspended until these passes shall be thoroughly examined and a practical avenue discovered. It is proposed to construct a general map from the head-waters of the Mississippi to the Pacific; a map of Washington territory, and thence eastward to the head-waters of the Mississippi; maps of the Cascade range, Rocky mountains, and other critical points of the route, and of the mountain-passes. The Hudson's Bay company has manifested a laudable disposition to render every aid in its power to facilitate the operations of the expedition, and the hospitality of its posts and the friendly offices of its agents may be depended upon. "The information that will be furnished by Stevens's report and survey," says an American writer, "will have not a little to do with the well-being of millions Europe is yet to send to our shores. We have found that our western territory got filled up with pop. as fast as we gained an exact knowledge of its geography and facilities. The light which Stevens will shed over a region so little known will impart a new and almost electric impulse to the progress of pop. in a direct line from New York to the mouth of the Columbia river. There lies what is now the territory, and what will soon be the state of O. It has long been in the process of settlement. The operations of the English and American fur-traders had made that coast, with much of its interior and the road to it, known to our people; and in 1845, before the Mexican war began,—while California was yet a Mexican province, and its gold mines were unknown,—O. was rapidly filling up with Eastern people. Emigration to that quarter was for a while arrested by the rush to California; but when the first fury of the gold fever subsided, O. again resumed its importance, which, as an agricultural district larger than France, will be the seat of a powerful and rich empire. It assimilates closely to New England in its early settlers, its soil, its climate, and its domestic institutions; and it is filling up with the hardiest, the bravest, and the best pop. in the United States. O. is the purest Anglo-Saxon community beyond the limits of New England. The common objection urged against Governor Stevens's route is the winter snows; but there is little force in this objection: from all accounts the snow falls quite as deep on the mountains 1,000 or 1,500 m. to the S. Fremont's last expedition, with which the world is familiar, crossed the mountains nearly or quite 2,000 m. S of the Columbia river; and yet it is known that this expedition suffered more from the cold than any other we ever sent to the Pacific: several of the men, and all the animals perished. The real objections to Stevens's route are of quite a different character. The recent Memphis convention discussed this question in some of its principal aspects. Its members doubtless spoke the sentiments of the southern states on the subject. The south will oppose the northern route. They want to have the road run through slave-territory as far as slave-territory goes, especially through the great cotton-districts of Texas and Arkansas. Hence they desire to connect it with the great Central Texas railroad enterprise, which, if carried out, will surpass in magnitude the Erie road, which connects New York with Lake Erie, a distance of nearly 500 m. The next question that arises is, how this stupendous work is to be accomplished,—by the money of the national government, or by private capital guaranteed by the public credit and aided by the public lands? The South has always opposed every attempt to get the aid of the government to build public works; but so important is this Pacific road deemed to the southern states, that it will encounter no opposition from that quarter if they are satisfied with the route. The prevailing opinion in the Memphis convention, and throughout the south, seems to be in favour of granting liberal donations of the public domain, with perhaps the loan of the public credit, by guaranteeing the bonds of the company, taking a lien on the road itself. If this plan is adopted and a company well-organised, 100,000,000 dols., the estimated cost of the road, would soon be raised. The security to the lenders would be ample; for the amount of land along the line of the road would, when the road was done, be worth far more than the cost of the road itself. The revenue of such a road would be of necessity very great. If only the same number of passengers went over it as now regularly cross the isthmus to and from California, at 200 d. per head, it would give the road an income of from 40,000,000 d. to 50,000,000 d. But the freight business would be incalculable. The commerce of the Pacific ocean and the Eastern Asiatic world would flow through this new channel. New York would be brought within 20 days of Canton—nearer than England ever can be. It is thought, too, that so vast would be the influence upon the commerce of Europe, it would not only affect the business now done by the Cape of Good Hope, but perhaps in the end change the channels of European and Asiatic commerce. Be this as it may, the Pacific railroad, if it is ever completed, seems likely to affect the business of the entire world."

Political history.] It will be sufficient for our purpose to touch very lightly upon the salient points of the case presented by the British and American diplomatists, on behalf of their respective governments, with reference to the sovereignty of the Oregon territory. The claim of Great Britain was divisible into a right of joint occupancy, derived from treaty with Spain, and of exclusive dominion, arising out of priority of discovery and settlement. In 1790, by a convention between England and Spain for the peaceful settlement of a dispute caused by the seizure of British

vessels at Nootka-sound, it was agreed that "their respective subjects should not be disturbed or molested, either in navigating or carrying on their fisheries in the Pacific ocean or the South seas, or in landing on the coasts of those seas in places not already occupied, for the purpose of carrying on their commerce with the natives of the country, or of making settlements." This article clearly established the right of joint occupancy. The claim to exclusive sovereignty as against the United States, was founded upon the discoveries and purchases of British subjects on the NW coast, especially the discovery of the Columbia by an officer of the British navy, and the first establishment of posts on that river and its tributaries by our fur companies. On the part of the United States it was pleaded that the convention of 1790 was nullified by the outbreak of hostilities between Spain and Great Britain in 1796, and that its provisions had not been recognised by any subsequent treaty; that all the titles of Spain were transferred to the United States by the treaty of 1818; that the first navigation of the Columbia river, and the earliest exploration of the country it traverses, were accomplished by Americans; that the justice of the American claim was virtually acknowledged by the British government in its restitution of Astoria; and that, by reason of contiguity, the right of the United States to the O. territory was more potential than that of any other nation. The efforts of the negociators to effect a permanent arrangement between Great Britain and the United States having proved unsuccessful, the limits of their respective territories W of the Lake-of-the-Woods were left undetermined by the treaty of Ghent. The 3d art. of a convention signed at London on the 20th of October 1818, stipulated that all territories claimed by either Power between the Rocky mountains and the Pacific ocean should, with their harbours, bays, and rivers, be free and open for ten years to the vessels, subjects, or citizens of both, with the understanding that this agreement was not to be construed to prejudice the claims of either nation, or of any other, to any portion of the territories in question. These stipulations were renewed by a convention signed August 6, 1827, which embraced a supplementary provision empowering either of the contracting parties to annul and abrogate the arrangement at any time after the 20th of October 1828, on giving twelve months' notice. This arrangement continued in force up to 1845, when notice was given by the American government of its desire to suspend the temporary convention of 1818. Impartial writers of both countries were agreed that the positive claim of either country to the whole district was imperfect. English diplomacy therefore wisely rested on the defensive, and took up its ground on the Nootka-sound treaty, by which Great Britain enjoys the right of joint-occupancy. The following lucid and succinct summary of the British claim was drawn up by Mr. Huskisson at the close of the negociation in 1826:—"Great Britain claims no exclusive sovereignty over any portion of the territory on the Pacific between the 42d and the 49th parallels of latitude. Her present claim, not in respect to any part, but to the whole, is limited to a right of joint occupancy in common with other states, leaving the right of exclusive dominion in abeyance, and her pretensions tend to the mere maintenance of her own rights in resistance to the exclusive character of the pretensions of the United States. The rights of Great Britain are recorded and defined in the convention of 1790; they embrace the right to navigate the waters of those countries—to settle in and over any part of them—and to trade with the inhabitants and occupiers of the same. These rights have been peaceably exercised ever since the date of that convention—that is for a period of nearly 40 years. Under that convention valuable British interests have grown up in those countries. It is admitted that the United States possess the same rights although they have been exercised by them only in a single instance, and have not since the year 1813 been exercised at all; but beyond these rights they possess none. In the interior of the territory in question the subjects of Great Britain have had for many years numerous settlements and trading posts; several of these posts are on the tributary streams of the Columbia; several upon the Columbia itself; some to the northward, and others to the southward of that river. And they navigate the Columbia as the sole channel for the conveyance of their produce to the British stations nearest the sea, and for the shipment of it thence to Great Britain; it is also by the Columbia and its tributary streams that these posts and settlements receive their annual supplies from Great Britain. To the interests and establishments which British industry and enterprise have created, Great Britain owes protection; that protection will be given, both as regards settlement and freedom of trade and navigation, with every attention not to infringe the co-ordinate rights of the United States; it being the desire of the British government, so long as the joint occupancy continues, to regulate its own obligations by the same rules which govern the obligations of every other occupying party." In 1842, the American president, Polk, in a formal message to Congress, on the 5th of December, made the extraordinary announcement that "the United States have always contended that their rights appertained to the whole region of country lying on the Pacific, from 42° to 50° 40′ N lat." The claim put forth with so much boldness was of course scouted by Great Britain; but the alternative of a war between the two countries was happily avoided by the conclusion of a treaty at Washington, in June 1846, containing the following articles:

"Art. 1. From the point on the 49th parallel of N lat., where the boundary laid down in existing treaties and conventions between Great Britain and the United States terminates, the line of boundary between the territories of her Britannic Majesty and those of the United States shall be continued westward along the said 49th parallel of N lat. to the middle of the channel which separates the continent from Vancouver's island, and thence southerly, through the middle of the said channel, and of Fuca's straits, to the Pacific ocean, provided, however, that the navigation of the whole of the said channel and straits, S of the 49th parallel of N lat., remain free and open to both parties.

"Art. 2. From the point at which the 49th parallel of N lat. shall be found to intersect the great N branch of the Columbia river, the navigation of the said branch shall be free and open to the Hudson's-bay company, and to all British subjects trading with the same, to the point where the said branch meets the main stream of the Columbia, and thence down the said main stream to the ocean, with free access into and through the said river or rivers, it being understood that all the usual portages along the line thus described shall in like manner be free and open. In navigating the said river or rivers, British subjects, with their goods and produce, shall be treated on the same footing as citizens of the United States; it being, however, always understood that nothing in this article shall be construed as preventing, or intended to prevent, the government of the United States from making any regulations respecting the navigation of the said river or rivers, not inconsistent with the present treaty.

"Art. 3. In the future appropriation of the territory S of the 49th parallel of N lat., as provided in the first article of this treaty, the possessory rights of the Hudson's-bay company, and of all British subjects who may be already in the occupation of land or other property lawfully acquired, within the said territory, shall be respected.

"Art. 4. The farms, lands, and other property of every description, belonging to the Puget's-sound Agricultural company, on the N side of the Columbia river, shall be confirmed to the said company. In case, however, the situation of those farms and lands should be considered by the United States to be of public and political importance, and the United States' government should signify a desire to obtain possession of the whole or of any part thereof, the property so required shall be transferred to the said government at a proper valuation, to be agreed upon between the parties."

OREGRUND. See OEREGRUND.

OREGUE, a village of France, in the dep. of Basses-Pyrenees, cant. and 4 m. NW of St. Palais. Pop. 1,000.

OREL, or ORLOV, an interior province or government of European Russia, extending from 32° 50′ to 39° E long., and from 52° to 54° N lat.; and bounded on the N by the govs. of Kaluga and Tula; on the NE by Tambov; on the E by Voronej; on the S by Kursk; and on the W by Chernigov and Smolensk. It extends 230 m. from E to W; and has an area of 18,253 sq. m., with a pop. in 1846, of 1,502,900 Russians and Cossacks. Its surface is generally level. Its W portion belongs to the basin of the Black sea, and is watered by the Desna, a tributary of the Dnieper, and which is joined by the Botva, the Navlia, and the Nerusa; the central portion, watered by the Oka, a tributary of the Volga, and by its affluents the Orlik, and the Nerutsha, belongs to the basin of the Caspian; the E part enters the basin of the sea of Azov, being drained by the Don. The soil is fertile, and the climate temperate, so that this is one of the best corn districts in Russia. Hemp, flax, and linseed are also extensively grown. Its pastures also are good, and rear a number of horses. The sheep produce a sufficient quantity of wool for home use, but little for export; the rearing of bees forms an object of considerable importance to the agricultural pop. As yet manufactures have made little progress, and are nearly limited to the preparation of a few articles produced on the spot. There are, however, sugar manufactories, distilleries, tanneries, and steel-works. Iron, copper, mill-stones, and nitre, form articles of export. The trade of the province is of more consequence, its position rendering its capital an entrepot between the N and the S provinces of the empire. The gov. is administratively divided into 12 circles, viz.: Bolkhov, Briansk, Mzensk, Orel, Karetschev, Trubtshevsk, Sievsk, Dmietrovsk, Kromy, Malo-Arkhangelsk, Livny, and Jeletz. In 1833, this gov. possessed only 24 public schools, with 4,290 pupils.

OREL, the capital of the above government, is situated on the Oka, at the confluence of the Orel, or Orlik, in N lat. 52° 58′, E long. 35° 57′, 225 m. SSW

of Moscow. It is surrounded with palisades, and defended by an ancient citadel. Its houses are of wood, and arranged in narrow tortuous streets. It contains several churches and convents, an ecclesiastical seminary, and a gymnasium. Its pop. was 33,000 in 1846. It has considerable manufactures of cotton and woollen stuffs, and tanneries, distilleries, and a tallow-boiling house, and forms a main entrepot for the grain destined for the consumption of Moscow and St. Petersburg. It suffered much by fire in the year 1848.

ORELLANA. See AMAZON.

ORELLANA-LA-SIERRA, a town of Spain, in the prov. and 3 m. SE of Orellana-la-Vieja, near the Guadiana. Pop. 650.

ORELLANA-LA-VIEJA, a town of Spain, in the prov. and 52 m. E of Badajoz, near the r. bank of the Guadiana. Pop. 1,950. Iron, red ochre, and lead are mined in the vicinity.

ORELLE, a town of Savoy, 6 m. WNW of Morane, on the r. bank of the Arc. Pop. 1,200.

ORELLUDOS, a river of Ecuador, which runs SSE, and enters the Yapura or Caqueta on the l. bank. It gives name to a tribe of Indians on its banks.

ORENBURG, a government of Russia, mostly within the limits of Europe, but partly in Asia, stretching between the parallels of 47° 10′ and 56° 30′ N, and between the meridians of 48° and 65° E; bounded on the N by the gov. of Viatka, from which it is separated by the Kama, and by the gov. of Perm; on the NE by the gov. of Tobolsk; on the E and SE by the Kirghiz territory, from which it is in great part separated by the mountain-ranges of Naurzim, Or, Ilek, and Ural; on the S by the Caspian sea and the gov. of Astrakhan; and on the W by the govs. of Saratov, Simbirsk, and Kasan. It has an estimated area of 144,000 sq. m.; with a pop. in 1840, of 1,407,300; in 1846, of 1,948,500. It is one of the most mountainous districts of the empire, being pervaded through its centre by the great chain of the Urals, which in the SW part of the gov. sends off the Obchtchei-syrt; in the S, the mountains of Guberlinskaia; and in the SE, the Kitchik-Karatsha. The smaller division of the gov. situated to the E of the Urals and of the Kitchik-Karatsha, belongs to the basin of the Arctic ocean, and is watered by the Tobol, the Abuga, the Oui, and the Miias, and their tributaries. The W division belongs to the basin of the Caspian; and the Obchtchei-syrt here forms the dividing highlands between the basin of the Volga on the NW, and that of the Ural on the SE. The great tributaries of the Volga in this gov., are the Samara and the Kama, with its affluent the Belaia. The principal affluents of the Ural are the Or, the Sakmara, and the Ilek. The soil is in general highly fertile, and yields grain sufficient not only for internal consumption, but even as an object of exportation. It maintains also vast flocks and herds; and even the camel is bred on its plains, for the purposes of land-trade with interior Asia. The breeding of bees is here, as in many other parts of the empire, a profitable branch of industry. A great quantity of fish taken in the Ural, and of caviar or cured roe, is exported. The mountains are a source of inexhaustible wealth, being filled with the richest mines of copper and iron; and there are several saline lakes which yield a principal article of commerce. An important traffic is conducted by caravans with Bokhara, Khiva, and Afghanistan.—In 1833, this gov. contained 24 towns with a total pop. of 43,713; and only 15 schools with 2,419 pupils. It is divided into 12 districts. On the Tartar frontier this prov. is exposed to the incursions of the Kirghis and Kalmuk hordes, for defence against whom, the government has erected a chain of *Kreposts*, or frontier forts, forming a cordon from Sverino-Golovsk on the Tobol to Gurief at the embouchure of the Ural.

ORENBURG, a town in the above government, of which it was the cap. till 1702, when the seat of government was transferred to Oufa. It is situated in a vast plain, on the r. bank of the Ural, at the confluence of the Samara, in N lat. 51° 48′, E long. 55° 12′; and presents a striking appearance from its situation on the very edge of the desert. Its streets are straight and well-built; and it contains two cathedrals, a Tartar mosque, several churches, an exchange, a custom-house, a house-of-correction, a military school, and extensive barracks. Pop. in 1840, 13,500, of whom 9,009 were military. It has tanneries and tallow-boiling houses; but is chiefly supported by the trade with Tartary, Bokhara, and the interior of Asia, conducted by means of caravans, which traverse the vast intervening steppes. Through this channel are exported cloths of different qualities, velvets, Russia leather, linens, copper and iron utensils, sugar and other colonial produce, toys, glass, and various species of ornaments. The caravans bring back cotton wool, India muslins and cottons, Persian silks, a little gold-dust, *lapis lazuli*, and a few precious stones; also the skins, wool, and hair of different animals. The Kalmuks and the Kirghiz bring to the market of O. from 40,000 to 60,000 sheep, and 10,000 horses annually. The horses are transported into Russia, and the sheep are chiefly employed in the production of tallow for the Petersburg market. A considerable branch of traffic consists in the sale of golden eagles, which are highly valued by the Kirghiz. O. was the point from which the famous expedition to Khiva set out in 1839. The latter place is about 600 m. distant. The expedition was absent five or six months, but did not get much beyond the Emba, a river which forms the nominal Russian frontier, or not much above one-third of the distance, having lost all its camels by the intense cold.

ORENSE, an administrative province of Spain, forming the SE part of Galicia, and bounded on the N by the prov. of Lugo; on the NE by Villafranca; on the E by Zamora; on the S by Portugal; and on the W by the prov. of Vigo. It is traversed by ramifications of the great Cantabrian chain, under the names of the Sierra de Porto, Segundera, Seca, San-Mamed, Penama, and Penagache. The Mino or Minho intersects the prov. in the NW; the Lima runs through the SW. The territory is in general fertile, particularly along the banks of the Mino, the Sil, the Avia, and throughout the whole Limia, or plain of the Limia. Pop. in 1834, 319,038. It is subdivided into 11 partidos-judiciales, and 858 pueblos.—Its cap., of the same name, is situated upon the l. bank of the Mino, 46 m. SSW of Lugo. Pop. in 1845, 5,022. It is the see of a bishop. Its cathedral is built of granite, and is extremely rich in its ornamental architecture. On the E skirt of the town is a large cemetery; at the W extremity are abattoires. O. is renowned for its chocolate and hams.

ORESSATA, a town of Bosnia, in the sanj. and 63 m. W of Bagna-Luka, near the r. bank of the Unna.

ORESTE (SANTO), a town of the States-of-the-Church, situated on Mount Soracte, 22 m. N of Rome, at an alt. of 746 yds. above sea-level. Pop. 1,400.

OREZZA, a town of Corsica, 20 m. S by W of Bastia, celebrated for its mineral baths.

ORFAH, or URFAH, a town of Asiatic Turkey, in the pash. and 78 m. SW of Diyarbekir. It is a well-built town, with a pop. estimated at 30,000, Turks,

Greeks, Arabs, Armenians, and Jews. It has several handsome churches and mosques; and is a place of considerable traffic, forming an entrepot between N. Syria and Mesopotamia. The ruins of the ancient *Haran* or *Charan* are about 20 m. SE by S of Orfah.

ORFANO, a small town of European Turkey, in Romania, in the sanj. of Salonika, 27 m. SSE of Seres, on the gulf of Contessa, and near the ruins of the ancient *Contessa* and *Amphipolis*. It has a good roadstead, and considerable commerce.

ORFORD, a town of Suffolk, situated at the confluence of the Alde and Ore, 18 m. ENE of Ipswich. Area of p. 2,740 acres. Pop. in 1801, 751; in 1841, 1,028; in 1851, 1,045. It was once a place of considerable importance, but gradually fell into decay, from the loss of its haven, the mouth of which became blocked up by a bar. The most remarkable object in the town is the castle, situated on a rising ground, on a spot which appears to have been formerly the centre of the town. The church is of great antiquity. O., until disfranchised by the reform act, sent 2 members to parliament.

ORFORD, a township and village in Grafton co., New Hampshire, U. S., on the E side of the Connecticut, 64 m. NNW of Concord. Pop. 1,700. A bridge across the Connecticut unites the township with Fairlee in Vermont.

ORFORD (Cape), a conspicuous point on the NW coast of America, in N lat. 42° 52′, formed by a point of low land projecting from a high rocky coast a considerable way into the sea, and terminating in a wedge-like perpendicular cliff.—Also a cape on the SE coast of New Britain, in S lat. 5° 40′, E long. 151° 35′.

ORFORD-NESS, a cape on the coast of Suffolk, about 2 m. E of Orford, on which there is a lighthouse, in N lat. 52° 4′ 8″, E long. 1° 34′ 2″. A submarine telegraph line has been laid down between this point of the English coast, and Schevening on the coast of Holland, a distance in a straight line of 115 m.—Also a cape on the NE coast of Australia, in S lat. 11° 18′.

ORFUI, a headland of the E coast of Africa, in the Somauli territory, 90 m. S of Cape Guardafui.

ORGANA, a town of Spain, in the prov. and 60 m. NE of Lerida, partido and 15 m. SSW of Seu-de-Urgel, near the Segre. Pop. 1,023. It has a collegiate church and an hospital.

ORGAOS (Serra dos), a range of mountains in Brazil, which run parallel to the coast, through the provs. of Rio-de-Janeiro, São-Paulo, and Santa-Catharina, and attain an alt. of from 3,000 to 4,000 ft. above sea-level. It is separated by the rivers Parahiba and Parahibuna from the Serra Mantiqueira, and from the Aimores on the E by the Rio-Macacu. The principal ramifications of this chain are the Serras Bangu, Cubatão, Facão, Ilhagrande, Jerexino, Macacu, Orgãos, and Tejuco. The Serra Orgãos is in the prov. and 40 m. NE of Rio-de-Janeiro. It is separated from the Cordilheira-dos-Aimores by the Rio-Macacu, and terminates in that direction in a series of inaccessible peaks. The name, signifying 'Organ mountains,' originated in the fancied resemblance which the peaks of this serra, rising gradually one above the other, bear to the pipes of an organ. Their sides are clothed with a mass of gigantic vegetation, amongst which are Palms, Laurus, Ficus, Cassia, Bignonia, Solanum, Myrtaceæ, and Melastomaceæ. At an elevation of about 2,000 ft., a large species of bamboo, *B. Tagoara*, makes its appearance. The stems of the gigantic grass are often 18 inches in circumf., and attain a height of from 50 to 100 ft. The underwood at the foot of the mountains principally consists of Melastomaceæ, Myrtaceæ, Compositæ, Solanaceæ, and Rubiaceæ.

ORGARSWICK, a parish of Kent, 4 m. N by E of New Romney, and 18 m. S by W of Canterbury. Area 392 acres. Pop. in 1831, 8; in 1851, 6.

ORGAZ, a judicial partido and town of Spain, in the prov. of Toledo. The town is 15 m. SSE of Toledo, in a finely undulating plain. Pop. 2,670. Its streets are well-paved, and the houses generally neat in appearance. It has a parish-church, a castle, an hospital, and a custom-house; and possesses manufactories of woollen fabrics, leather, saltpetre, and brandy. In its vicinity is a mine of silver.

ORGE, a river of France, in the dep. of the Seine-et-Oise, which has its source in the cant. and 5 m. W of Dourdan; passes Arpajon; and, after a course, in a generally NE direction, of about 30 m., throws itself into the Seine, on the l. bank, 2 m. SW of Villeneuve-St.-George's. Its principal affluents are the Remarde and Yvette. Near Juvisy it is crossed by a fine bridge.

ORGELET, a canton, commune, and town of France, in the dep. of the Jura, and arrond. of Lons-le-Saulnier. The cant. comprises 26 coms. Pop. in 1831, 10,394; in 1841, 9,870. The town is 12 m. SSE of Lons-le-Saulnier, at the source of the Velouze. Pop. in 1841, 2,017. It has extensive tanneries, and several saw-mills. The locality is noted for its cheese. O. was almost entirely destroyed by fire in 1752. It was formerly fortified.

ORGERES, a canton and commune of France, in the dep. of the Eure-et-Loir, and arrond. of Chateaudun. The cant. comprises 17 coms. Pop. in 1831, 8,444; in 1841, 8,753. The village is 20 m. ENE of Chateaudun, and 24 m. SSE of Chartres, on the l. bank of the Connie-Plate. Pop. 380. It has manufactories of Tunis caps.—Also a commune in the dep. of the Ille-et-Vilaine, cant. and 9 m. S of Rennes. Pop. 1,189.

ORGES, a commune of France, in the dep. of the Haute-Marne, cant. and 3 m. N of Chateau-Vilaine, on the r. bank of the Aujon. Pop. 1,102. It has a blast-furnace and a finery.—Also a small stream in the same dep., which issues from a fountain near the village of the same name, and throws itself into the Aujon, on the r. bank, below the village of Pont-la-Ville, and after a course of about 3 m.—Also a department and commune of Belgium, in the prov. of Luxemburg, and arrond. of Neufchateau. Pop. of dep. 1,023; of com. 403.

ORGEVAL, a commune of France, in the dep. of the Seine-et-Oise, cant. and 3 m. W of Poissy, and 11 m. NW of Versailles. Pop. 1,593. It has a mineral spring.

ORGIANO, a town of Austria, in Lombardy, in the gov. of Venice, deleg. and 15 m. SSW of Vicenza, district and 6 m. SE of Lonigo. Pop. 2,000.

ORGNAC, a commune of France, in the dep. of the Correze, cant. and 6 m. SW of Vigeois, and 14 m. NNW of Brives. Pop. 1,254.

ORGON, a canton, commune, and town of France, in the dep. of the Bouches-du-Rhône, and arrond. of Arles. The cant. comprises 7 com. Pop. in 1831, 8,845; in 1841, 9,558. The town is 23 m. ENE of Arles, and 42 m. NNW of Marseilles, at the foot of a steep mountain and near the l. bank of the Durance. Pop. in 1841, 2,748. It has the remains of ancient walls and of a fortress, and in the vicinity is the still unfinished canal of Boisgelin. It is an ill-built and ill-paved town, but has a considerable trade in linen, and woollen fabrics, and in hardware.

ORGOSOLO, a village of Sardinia, in the div. of Cato Cagliari, prov. and 9 m. SSE of Nuoro, district and 8 m. NE of Fonni. Pop. 2,000.

ORGOUN, a mountain of Mongolia, in the country of the Khalkas, to the SE of Ourga.

ORGRAVE, or Orgreave, a hamlet in Alrewas parish.

ORGULLA, or URGULL, a mountain of Spain, in the prov. of Guipuscoa, immediately N of San Sebastian on the coast of the gulf of Gascogny, in N lat. 43° 19′. It has an alt. of nearly 1,333 toises = 2,813 yds., above sea-level, and forms an important landmark. On one of its slopes is the castle of Mota, containing a large cistern, barracks and an extensive magazine, and considered one of the most formidable fortresses in Spain.

ORI, a sanjak of Turkey in Asia, and pash. of Akhalziké.

ORIA, a river of Spain, in the prov. of Guipuscoa and partido of San Sebastian, which has its source in mount Horadada, commonly called Puerto-de-S. Adrian; runs in a generally N direction; passes Villafranca and Tolosa; becomes navigable at Belmonte; and after a course of 36 m. throws itself into the gulf of Gascogny, a little below Orio.—Also a town in Andalusia, in the prov. and 48 m. N of Almeria and partido of Purchena, on the slope of a hill of the same name, and on the road from Baza to Vera. Pop., including that of its dependencies, 5,670. It has a parish church, an elementary school, and a custom-house, and has manufactories of blankets and cotton counterpanes. In the environs are several silver mines.

ORIA, a town of Naples, in the prov. of Calabria-Citra, district and 11 m. SE of Castrovillari, cant. and 5 m. SSE of Cassano.

ORIA, or URITANA, a town of Naples, in the prov. of the Terra d'Otranto, district and 24 m. WSW of Brindisi, and 26 m. E of Tarento, on a hill between two small lakes. Pop. 4,300. It has a cathedral, several convents, and an hospital. This place formed one of the first establishments of the Greek refugees in the 15th century. Tobacco is extensively cultivated in the vicinity.

ORIATKHOVA, a town of Russia in Europe, in the gov. of the Don Cossacks, and district of Oust-Medvieditza, 300 m. NE of Novo-Tcherkask, on the r. bank of the Medvieditza.

ORICO-GUAÇU, a river of Brazil, in the prov. of Bahia, and comarca of Ilheos. It has its source in the Serra Cincura, and flows into the l. bank of the Rio-de-Contas.

ORIEKHOV, a district and town of Russia in Europe, in the gov. of the Taurida. The district consists of an extensive and completely desert plain. Pop. 100,000. The town is 210 m. NNE of Simféropol, and 75 m. SSE of Yekaterinoslav, on the l. bank of the Konskaïa. Pop. 1,600. It has a church.

ORIEL, or ORELI, a river of Russia in Europe, which has its source in the gov. of Kharkov, and district of Zmiev, near Efrémovskaïa; runs SW along the confines of the gov. of Yekaterinoslav and that of Poltova; passes Alexapol; and after a course of 135 m. throws itself into the Dnieper, on the l. bank, at Orlek. Its waters are sluggish and muddy.

ORIENT, a township of Aroostook co., in the state of Maine, U. S., 222 m. NE of Augusta. Pop. in 1840, 68.—Also a village of Southold township, Suffolk co., in the state of New York, 252 m. SSE of Albany, delightfully situated at the head of Oyster Pond harbour, and formerly called Oyster Ponds. It consisted in 1840 of about 50 dwellings.

ORIENT (L'). See LORIENT.

ORIENTAL. See EAST CAPE.

ORIGNY, or ORIGNY-SAINTE-BENOITE, a commune and town of France, in the dep. of the Aisne, cant. and 4 m. NNE of Ribemont, and 10 m. E of Saint-Quentin, on the l. bank of the Oise. Pop. in 1841, 1,892. It has manufactories of gauze, shawls, fine woollen and linen fabrics, and fringe. It formerly contained a Benedictine abbey.

ORIGNY-EN-THIERACHE, a commune of France, in the dep. of the Aisne, cant. and 4 m. SW of Hirson, on the r. bank of the Thon. Pop. 2,001. It has a manufactory of bone black, and is the centre of extensive manufactories of baskets.

ORIHMATTILA, a parish of Russia in Europe, in Finland, in the gov. of Kymmenegard and district of Œfre-Hollola, 30 m. SSW of Heinola.

ORIHUELA, a judicial partido and town of Spain, in Valencia, in the prov. of Alicante. The town is 39 m. SW of Alicante, and 105 m. SSW of Valencia, at the foot of a calcareous ridge, by which it is defended on the N, and on the river Segura which is here crossed by two bridges. Pop. 17,452. It is oblong in form, and consists of 4 parts, enclosed with walls, with 7 gates and defended by a fortress. The streets are generally straight and capacious, and furnished with foot-paths. The greater number of the houses are neat in aspect, many of them are even handsome. There are no public fountains, and the water of the Segura is employed for all domestic purposes. It contains 5 squares, and has a cathedral, 3 parish churches, numerous convents, 3 hospitals, a university, a classical school, 3 libraries, a colosseum, a theatre, cavalry barracks, &c. It possesses manufactories of linen, starch, soap, soda, and saltpetre, several silk-spinning-mills, tanneries, and numerous oil-mills. The trade consists chiefly in the productions of the locality.—The origin of O. is lost in antiquity. It was taken from the *Contestani* by the Carthaginians, passed from them to the Romans, and afterwards to the Goths. In 715 it was taken by the Moors, and held by them till 1264, when they lost it to the Arragonese. It was devastated by the plague in 1648, and in 1651 was to a great extent destroyed by an extraordinary inundation of the Segura. In 1706 it was taken by Bellenga, bishop of Murcia, and given up to pillage. In 1829 it was seriously damaged by an earthquake. Its name has undergone repeated modifications. By the Romans it was called *Orcelis*, by the Goths Orzuela, and by the Moors Orguella. The surrounding country is remarkable for its fertility. It forms a continuation of the huerta or plain of Murcia, and presents a succession of fields and gardens abounding with the richest productions, and verifying the proverbial saying in this part of Spain, Rain or no rain, there is always corn in Orehuela.

ORINDI-AÇU, a river of Brazil, in the prov. of Rio-de-Janeiro, which has its source in the Serrados-Orgãos, and flows into the Guapi-Açú.

ORINDI-MIRIM, a small river of Brazil, in the prov. of Rio-de-Janeiro, an affluent of the Guapi-Açú.

ORINOCO, a great river of South America, which absorbs all the streams that water Venezuela and the eastern part of New Granada, with the exception of the coast-rivers. The name given to this river by its first discoverers is unknown in the interior of the country, where it is called simply by a term signifying 'the River,' or 'the Great river.' The name *Orinucu* is Tamanatti; and Diego-de-Ordaz first heard it pronounced it 1531, when he ascended the river to the mouth of the Meta. According to La Cruz's map of South America the O. rises in a small lake, called Ipava, in N lat. 5° 5′, W long. 64° 30′. Schomburgk supposes its sources must be in about N lat. 2° 30′, and W long. 64° 58′. La Cruz's map represents it as running first a southerly course, then winding round the base of the circular range of the Mei mountains; then running SE and receiving a branch of the Parima or White river of Portuguese Guayana, through a gorge of the mountains, just before its entrance into a lake of the same name. Others represent it as separated in its whole course from both the river and lake of Parima; which latter opinion seems more probable, from the config-

ration of the mountains that separate the Parima from the O. Humboldt is of opinion that all that has been asserted of the lake-origin of the O. is fabulous; and that even the little reedy swamp or lake of Amucu is 4° of long. E of the district in which the real sources of the river must exist. Not far below Esmeralda—the uppermost Spanish mission on the stream—and a little S of the massive Mount Diuda [alt. 8,823 ft. above sea-level], it sends off a large and powerful branch, called the Cassiquiari, to the Rio Negro, a tributary of the Maranon, thus connecting the latter river with the O. See CASSIQUIARI. After throwing off this bifurcation, the O. turns to the NW, and pursues that course to the junction of the Ventuari at Santa Barbara. It then flows W, a little to the N of the parallel of 4°, to the junction of the Guaviare at San Fernando-de-Atabapo, in N lat. 4° 4′, W long. 68° 10′. Hitherto the O. has flowed westward for about 350 m., with a gentle current through a level alluvial plain; but from this point to the junction of the Meta, its course is northerly, gradually bending round a little towards the E, through a rocky country and with a swift current; and throughout this part of its course it separates New Granada from Venezuela. In its further progress NNE it receives the large streams of the Arauca and the Apure. Below the junction of the Apure its course is prevailingly E. It receives the Caura, at Cividad-Real; and 200 m. below Cividad-Real, receives the Caroni from the S, after a winding course of 400 m. Below Veta-Guayana, or Old Guayana, about 150 m. from the sea, the river forms an extensive delta, watered by innumerable channels, and extending 180 m. in length, by 120 m. in breadth. The entire course of the O. now traced is nearly semicircular; its mouths lie only a little to the E of the longitude of its sources. The mouths of this vast stream are above 50 in number, and 10 of them are navigable for large vessels. The chief mouth—which is the most southern, and in the direct course of the river —'the Boca-Grande, or Great Mouth,' is 18 m. in breadth. The current produced by the O. between the mainland and the island of Trinidad, is so strong that ships with all sail set, and with a favourable breeze, can with difficulty make head against it. Contiguous to the delta, and extending from the N banks of the river to the shores of the Caribbean sea, are the *Llanos altos* or elevated plains of the O. stretching about 350 m. from E to W, and more than 200 m. from N to S. The mouths of the stream are of difficult navigation, and require expert pilotage.

Inundations, &c.] Next to the majestic Maranon, the O. is perhaps the largest stream in the world in respect of depth and breadth; although in mere length it is surpassed by the Danube. Humboldt, who sailed down the stream from Esmeraldas to the sea, found the breadth, at 600 m. up the river, to be from 3 to 3½ m., and the depth 717 ft., without islands. At St. Thome, the breadth is 3,500 toises, or 4 m. and 1,265 ft., but there is a small island in the midst of the stream. Its depth at the same place is 65 fath. or 390 ft. in the month of March, when the river is at the lowest. The rise of the annual inundation is 78 ft., which of course gives a depth of 468 ft. in September, in a stream then exceeding 4¼ m. in breadth, without islands. At Angostura, where the river is narrowest, but about 1½ m. across, the rise is 120 ft. The tide, which is very strong at the mouths of the river, experiences so many subdivisions from the number of channels it enters, that it is scarcely perceptible at St. Thome, 360 m. up, by the windings of the stream, and then only in the summer, and when the wind is from the sea.—The inundations of the O. commence in April, and terminate in the month of August. The river remains all the month of September with the same quantity of additional water which it had acquired in the five preceding months; it is in that month, therefore, that the river appears in all its grandeur. The whole flat country is then one continuous sheet of water from 20 to 30 leagues broad, for 600 m. distance from E to W; and the rise is perceptible at 1,050 m. from its mouth, increasing as it approaches the sea. The inundation is not every year equal, but the difference never exceeds 6 ft. The approach of the rains which swell the O. and all its tributary floods is announced by the cries and frightful shrieks of the larger apes; while the cayman and the boa, long concealed in a torpid state under the hardened mud, burst with sudden and tremendous noise from their caverns. During the inundation of the delta, when the numerous islands inhabited by the Guaranos or Warrows are completely submerged, these Indians nestle among the tops of the fan-leaved palms, in extended hammocks constructed with netting made from the fibres of the leaves and lined partly with mud. On these pensile or hanging and humid floors, their women light their fires and cook their vegetable diet! The tree to which each family is attached furnishes moreover its sole subsistence. The pith of the fan-leaved palm, resembling sago, is formed into thin cakes; and its scaly fruits, in the different stages of their progress, afford some variety of excellent food. In October, the inundation commences its decline, and the plains are insensibly abandoned by the waters, which return to their ancient bed. Multitudes of rocks and islands now display themselves in the bosom of the river; and by the end of February the river is at its lowest state, which continues to the beginning of April. The direct course of the O. does not exceed 1,200 m.; but if its extraordinary windings be included, this length will be doubled, and the surface drained by its confluent streams may be estimated at 400,000 square miles.

Cataracts.] There are several cataracts and rapids on the O., amongst which Humboldt has distinguished those of Maypures and Atures. Neither of them is of great elevation, and both owe their existence to an archipelago of little islands and rocks formed by a series of transverse shelving granite rocks and dykes, between the parallels of 5° and 5° 40′ N. These rapids—or *raudals*, as the Spaniards call them—present an extremely picturesque appearance, and consist of a countless number of little cascades succeeding each other like steps. "When the traveller descends from the village of Maypures to the brink of the river, after clearing the rock of Manimi he enjoys a truly astonishing prospect. A sheet of foam stretches out before him for 4 m. [with a breadth of nearly 8,500 ft.]. Masses of rock, of an iron black colour, rear their rugged fronts, like towers, out of this misty cloud. Every island, every rock, is ornamented with luxuriant trees closely grouped together. A thick smoke constantly hangs suspended over the water; and through this foggy vapour which rises from the foam, shoot up the tops of lofty palm-trees. When the glowing rays of the setting sun are refracted by this humid cloud, the optical phenomena produced give an air of enchantment to the scene. The coloured arches successively appear and disappear, and their image incessantly hovers before the eye at the mercy of the wind. During the long season of the rains, the streaming waters accumulate little islands of vegetable earth round the naked rocks, adorned with Melastomas and Droseras, and small silver-leaved mimosas and ferns." [*Humboldt.*] The raudal of Atures closely resembles that of Maypures: like it, it is a cluster of

islands covered with palms, between which the river forces its way for 10,000 or 12,000 yds.

Communication with the Amazon.] "The communication," says Malte Brun, "which exists between the O. and the Amazon constitutes one of the most astonishing phenomena of physical geography. The Portuguese made this fact known to the world above 50 years ago; but the systematic geographers leagued together to prove that such conjunctions of rivers were impossible: in the present day we no longer stand in need of either analogies or critical reasoning. M. de Humboldt has navigated both these rivers, and has examined this singular arrangement of the land. It is now certain that the O. and the Rio-Negro flow along a plateau, which at this part has no actual declivity; a valley then occurs, and both their waters flow into it; they are thus united, and form the celebrated Cassiquiare, by means of which natural canal MM. Humboldt and Bonpland passed from the Rio-Negro into the O. It is believed that there are other communications between the Rio-Negro and the different tributary streams of the Amazon. The lake Parima, if it have only a temporary existence, may very possibly empty itself both by the O. and by the White river or Parima, which flows into the Amazon." The source of the third great water-course on the continent, the Rio-de-la-Plata, approaches so nearly in position and level to those of the other two, that hereafter, by a slight exertion of human industry, the whole may be united into one network of water-communication, opening up a vast system of internal commerce, and affording access to a new outport on the ocean. A *mesa* or eminence rising imperceptibly from the surrounding plain, forms the watershed from SW to NE between the affluents of the O. and the streams flowing to the N coast of Terra-Firma.

Navigation.] The exclusive privilege of navigating the O. by steam having been granted by the Venezuelan government to Mr. Vespasian Ellis, the United States charge-d'affaires to that republic, a company with a subscribed capital of 300,000 dols. was about two years ago formed in the United States; and, with the usual activity of American enterprise, measures were immediately taken for carrying their project into action. The object of the company, as we understand it, seems to be to establish itself as carriers for the trade which now flows down the O. from Bogota to its mouth, a direct line of 1,500 m., and embracing, by means of its tributaries, nearly three times that amount of river-coast. That trade at present scarcely extends beyond Angostura, not one-fourth of the distance, the extremely tedious nature of the voyage above Angostura driving commerce, in spite of a long inland journey, to the opposite or N coast of the continent, which runs parallel with the O. at the distance of 100 m., and to the river Magdalena. Beyond and around Angostura lies a country abounding in cattle, mules, tobacco, and indigo, drugs and dyewoods, which, from the impossibility of carrying them to a market, are of no value, the cattle being slaughtered for the sake of their hides, the meat and even the tallow being abandoned from the want of means to secure it—capital never having penetrated to the district in which it so abounds. Indigo and tobacco are indigenous weeds, and a variety of starch-yielding roots grow spontaneously and yield in prolific abundance. It will give a fair idea of the difficulties which at present attend and hamper the trade of the O. when we state that the average length of voyage up the river from this island to Angostura is 15 days, sometimes requiring a month, a large portion of the distance being passed by 'poling' along the banks of the river, or hauling by ropes which are carried forward and made fast to a tree; and the facilities and probability of a great impulse being given to the traffic by the introduction of steam-carriage may be easily calculated, when we reflect that this voyage will in future be reduced to 60 or 65 hours.

ORIO, a town of Spain, in the prov. and 6 m. WSW of San Sebastian, situated on the coast, at the mouth of the river Orio. Pop. 800.—Also a town of Austrian Italy, in the prov. of Lodi, 30 m. SSE of Milan. Pop. 1,390.—Also a village of the Sardinian states, in the prov. and 12 m. S of Ivrea. Pop. 900.—Also a small port of Greece, on the N coast of Negropont.

ORIOLA, a town of Portugal, in the prov. of Alemtejo, 15 m. S of Evora.

ORIOLO, a village of Naples, in the prov. of Calabria-Citra, 24 m. NE of Castrovillari.—Also a village of the Papal states, 27 m. NW of Rome.

ORISKANY-FALLS, a village of Oneida co., in the state of New York, U. S., on a creek of the same name which flows into the Mohawk. Pop. 600.

ORISSA, a province of Hindostan, situated between the 18th and 23d parallels of N lat., and bounded on the N by Bengal and Bahar; on the E by the bay of Bengal; on the S by the Godavery; and on the W by Gundwana. It stretches about 400 m. from NE to SW, and has an average breadth of 70 m. Area 28,000 sq. m. The principal modern subdivisions of this prov. are Cuttack, Mohurbunge, and Konjeur. O. Proper is almost wholly included in the modern division of Cuttack. The chief rivers are the Godavery, Mahanaddy, Byturni, and Subanrika. The greater part of the interior consists of rugged hills and uninhabited jungles, in which wild animals, particularly elephants, abound. Although generally a barren country, the SE part of it equals in fertility most parts of India. The grain chiefly raised is rice. The overthrow of the independent sovereignty of O., which extended as far as Hugli on the N, and beyond the city of Rajamundry on the S, took place in 1558. After the expulsion of the Afghans from Bengal by the Moguls, in the 16th cent., the former took refuge in O., and retained possession of parts of it, including the temple of Jagernaut, till 1615. After the decline of the Mogul empire, the most valuable parts of O. fell to the share of the Nizam, by whom, in 1765, the whole of the sea-coast, as far N as the Chilka lake, denominated the Five Circars, was transferred to the British. The other parts of O. were seized on by the Mahrattas, soon after their establishment at Nagpore in 1740; and they compelled the nabob Aly-Verdy-Khan to cede to them the extensive district of Cuttack, and all O. W of the Subanrika river, which had been attached to the gov. of Bengal. The war of 1803 against the Mahrattas, compelled them to restore the whole of these districts, and all the valuable parts of O. are now in the hands of the British. Some of the hilly regions are still in possession of native chiefs, who pay a trifling or nominal tribute to the Nizam, or to the British. The principal rivers of O. are Cuttack, Jagernaut, and Balasore.

ORISTANO, or Oristagni, a town on the W coast of the island of Sardinia, on a fine bay, and near the l. bank of a river of the same name, 53 m. NNW of Cagliari. Pop. 6,000. It is surrounded by lofty walls; but the only buildings worth notice are the cathedral, an hospital, and a school of the order of Piarists. A considerable tunny fishery is conducted from this place; and in the environs a large quantity of wine is made. The harbour is tolerably good, but is 2 m. distant from the town. The trade of the port chiefly consists in the export of wine, oil, and corn. The export duties in 1844

amounted to £317; the import, to £707. The river O., which here falls into the sea, is one of the largest in the island. It rises to the E of Buduso, and has a SW course of upwards of 60 m.

ORISTA-Y-TORRA, a village of Spain, in the prov. and 32 m. N of Barcelona, near the river Gabarresa. Pop. 1,250.

ORIVAL, a village of France, in the dep. of Seine-Inferieure, cant. and 1 m. N of Elbeuf, near the l. bank of the Seine. Pop. 1,200.

ORIZABA, a town of Mexico, in the state and 60 m. WSW of Vera Cruz, near the source of the Rio-Blanco. It has some manufactories of coarse cloth, and several tanneries. The valley in which the town is situated is overshadowed with verdant forests, above which rises on the NW, the volcano of Orizaba, or Citlaltepetl, covered with perpetual snow, which is clearly seen from the gulf of Mexico, its alt. exceeding 18,000 ft.

ORJACHOV. See PEREKOP.

ORJIBA, a town of Spain, in the prov. and 32 m. SSE of Grenada, on the Rio-Grande. Pop. 2,800.

ORJITZA, a town of Russia, in the gov. and 90 m. W of Poltava, on the r. bank of a river of the same name, an affluent of the Sula.

ORKNEY AND SHETLAND, a county in the extreme north of Scotland, consisting of the Orkney islands, the Fair isle, and the Shetland islands: see these articles. The area of the co. is 1,325 sq. m., or 848,000 acres; and of this 220,000 acres are cultivated, 112,000 are pastoral, and 516,000 are unprofitable. The valued rent in 1674, was £56,551 Scots, exclusive of fisheries and the kelp-manufactory. The annual rent of real property, as assessed in 1815, was £20,938; in 1843, £16,449. Pop. in 1801, 46,824; in 1831, 58,239; in 1841, 61,065; in 1851, 62,533. Inhabited houses in 1831, 10,296; families, 11,805. Inhabited houses in 1841, 11,569; in 1851, 11,334. The co. returns one member to parliament. Constituency in 1839, 526; in 1850, 643. Kirkwall, the only royal burgh, is the county-town. Though the two archipelagos have long been nominally one county or stewartry, Shetland, till the passing of the reform bill, had no vote for a member of parliament, and occupied the anomalous position of being part of the United Kingdom, and yet lying beyond the pale of the British constitution. In 1834, there were in the co. 28 parochial-schools, attended by 1,980 scholars; and 113 schools non-parochial, attended by 2,179.

ORKNEY ISLANDS, the southern section or archipelago of the northern isles of Scotland—the Orcades of the Romans—separated from the NE extremity of continental Scotland and of Caithness by the Pentland frith. They measure in extreme length from N to S, about 57 m., and in extreme breadth from E to W, about 27 m. At their S extremity, with the exception of the Pentland skerry, they are from 6 to 12 m. distant from the coast of Caithness; and they lie between the parallels of 54° 47′ and 59° 20′ N lat., and 2° 4′ and 3° 23′ W long. of Greenwich. Their aggregate area is computed to be about 384,000 acres; of which 84,000 are supposed to be in a productive state, and 300,000 pastoral or waste. They are grouped with considerable compactness; being separated from one another by sounds or straits, which are seldom more than 5, and very often less than 2 m. wide. The number of inhabited islands is 29; of small islands, locally called *holms*, covered with herbage, and regularly or occasionally stocked with cattle or sheep, 38; that of rocky islets, called *skerries*, which carry little or no herbage, and are altogether waste, is very considerable, but not accurately ascertained. These islands appear to have been at one time a continuous territory, and not improbably were attached to continental Scotland. Their geognostic features, in confronting coasts, have, in general, an exact correspondence; and their intersecting and separating friths and sounds are, to a great extent, so shallow as to offer serious obstacles to navigation. They are abruptly and boldly, though not in an alpine sense, mountainous in the extreme SW; but speedily subside into hills as they recede from the SW seaboard, and fall off in gentle slopes in the interior; and, with some exceptions, they stretch away toward the E and NE in valleys or undulating plans which are rarely 100 ft. above sea-level. The strictly rugged or boldest district is confined to Hoy and Walls; and occasionally exhibits some of the finest rock-scenery in Scotland The highest ground is the hill of Hoy, which has an alt. above sea-level of about 1,600 ft. The surface of the low grounds is now heathy, now covered with coarse pasture, and now vividly green or mellow, with good or even rich crops of grain; yet from the utter absence of trees, or even of tall shrubs, except in a few gardens principally around Kirkwall, from the great prevalence of heath, from the general want of distinctive contour along the surface, and from the constant monotonous alternation of low bleak grounds with rock-dotted belts of sea, the aggregate landscape is far from possessing attractions to one who has dwelt among the scenic beauties of either the lowland or the highland continent. The coast-line of nearly all the islands, except along the stern cliffs of the SW and W, is exceedingly curved, dentulated, and jagged, forming numerous recesses for bays and landlocked havens, in which fleets of the largest vessels may securely ride. The harbour of Long-Hope in Hoy, and that of Widewall, directly opposite in South Ronaldshay, in particular, afford shelter amid all winds, except a gale from the N, to vessels passing through the Pentland frith. The impetuous tides of the Pentland, which have a velocity of nearly 3 m. at neap, and the speed of 9 m. at spring, are nearly if not quite equalled by those of some of the intersecting sounds and friths. Ordinary neap-tides rise about 3½ ft., and ordinary spring-tides about 8 ft. Within 3 m. of the W coast, the depth of water is from 40 to 50 fath.; but at the same distance on the E side, it does not exceed 32 fath.

Climate.] The O. are strangers to the extremes both of summer heat and of winter cold. They have little snow, less frost, and never any great continuance of either. The mean heat throughout the year is 45°; and the widest general range of the therm. is between 25° and 75°. Rain often falls heavily, and is supposed to have a deeper aggregate than over an equal extent of country in most parts of Scotland. The heaviest rains and the prevalent and strongest winds are from the SW and the SE. Fogs are common even in summer; and both form and disperse with singular rapidity. Thunder-storms are most common in winter. The spring is cold and tardy; the summer, though of short continuance, is remarkable for rapidity of vegetation; winter is in general a continued series of high winds, heavy rains, and every varying storms. During about a month at midsummer, the light, owing jointly to the highness of the latitude, and the superior reflecting power of water over land, is so strong at midnight, that, when the sky is clear, a student may either read in the open air, or regale himself with the continued music of the lark, the land-rail, and other feathered songsters.

Geology and soil.] Primitive rock occurs only in the district around Stromness, in the SW of Pomona, and impinging upon Græmsay. It consists chiefly of gneiss, seeming totally to want the metalliferousness which so generally distinguishes that rock in other regions. Around the primitive strata lies a zone of conglomerate, whose base is argillaceous or silicious. All other parts of the islands, SE and N, appear to lie upon a field of schistose strata, ranging from the transition series considerably up the secondary formation.—Though sand in some places, and clay or moss in others, is found of great depth, the general soil of O. is shallow, lying upon either till or rock, and often so near as to be touched by the plough. Much the greater part of it is peat or moss, forming, from the nature and nearness of the subsoil, a wet, spongy, and irreclaimable moorland. Yet a considerable proportion of the moss is what the inhabitants call *yarfa* soil, consisting of bent moss, and easily improveable. Loams of various degrees of tenacity cover an area next in magnitude to that of the mosses. Sandy soils are extensive; and in a few spots, particularly in West-

ray, Stronsay, and Sandy, they degenerate into beds of loose drifting sand, entirely sterile, and superincumbent on the real soil. Of the arable lands, probably about one-third have sandy soils.

Agriculture.] Nearly all the land of O. is freehold, but burdened with payments in kind to the Crown, or to the earl of Zetland, as the Crown's donatory. Farms are of various sizes, from 6 or 8 acres to even upwards of 1,000; but they are for the most part small, averaging probably 10 or 11 acres; and are flung or maintained together in clusters called *towns*. An Orcadian town is a portion of ground, partly arable and partly in pasture, provided with a number of houses corresponding to the number of clustered farms, and severally occupied by the different farmers, whether proprietors or tenants. It was all originally, and in general still is, in *runrig*, belonging mixedly to the farmers, but apportioned to them in their respective shares. Much, perhaps the chief extent of the arable land of the islands, is periodically tortured out of heart by an alternate cropping of oats and bere, and is sustained as long and as fully as possible in its energies by a liberal dosing of sea-weed. Pasturing seems more suitable than husbandry for most of the land in O., and would probably long ago have become general but for the peculiar nature of the tenure.—The cattle do not seem to be of a breed materially different from those of Caithness and Sutherland. The only breed of native sheep seems to be the *ovis cauda brevi*, 'the short-tailed sheep' of Iceland, Shetland, the Hebrides, the interior of the Highlands of Scotland, and in general the far or mountainous N of Europe. Sheep of this breed, mixed with other breeds, and amounting jointly to about 50,000, run wild on the hills and common moors, and yield but trivial advantage to their owners. But on holms or separate grazing islands, and on some peninsulas artificially shut out from the adjacent commons, there are thriving and profitable flocks of Swedish Merinos, South Downs, Cheviots, and approved cross-breeds. The horses of O. now generally used appear to be descended from the breed of the northern counties of Scotland; and are reared in such numbers as to be sent back in considerable annual supplies to the land of their origin.—The pigs are of a middle size, generally black or dark-red in colour, flat-bodied, with backs highly arched, carrying a quantity of long stiff bristles over a fleece of coarse wool, their ears erect and sharp-pointed, their nose amazingly strong, and their whole figure and appearance bearing a closer resemblance than is found in any other of our domesticated breeds, to the wild boar.—Rabbits are found in most of the islands. Poultry of all sorts are reared, and particularly geese.

Manufactures.] The manufacture of linen yarn and cloth, somewhat extensively conducted in the O., received a severe check from the difficulty of obtaining flax during the war with the continent, and has dwindled away into a state approaching extinction.—The manufacture of kelp, during the halcyon days of that rude and congenial employment, was pursued with avidity. The greatest annual export occurred in 1826, and amounted to 3,500 tons, valued at £7 per ton.—Straw-plaiting, for ladies' bonnets and gentlemen's hats, has been a large but fluctuating manufacture. It was introduced about the beginning of the cent., and, about 10 or 15 years after its introduction, employed 6,000 or 7,000 females, and annually brought into the country about £20,000. The material then employed was split ripened wheat straw. A successful imitation of the Leghorn plait, from the unripe, unsplit, but boiled and bleached straw of rye, was afterwards introduced, and for some years employed 3,000 hands.—The only other manufactories are three distilleries, two of them at Kirkwall, and one at Stromness.

Fisheries.] The fisheries were long neglected, amid the absorbing attention given to the manufacture of kelp. Lobster-fishing is the only department of some standing; it was introduced by an English company; and was long vigorously conducted. The cod-fishery is now conducted by well-appointed sloops, and has a promising appearance. The herring-fishery in 1832 produced 65,000 barrels. English and Scottish whale-ships annually touch at the islands of both O. and Shetland, and obtain from them a large proportion of their quota of men for working the Baffin-bay fishery. The number of boats employed in the herring, cod, and ling fisheries in 1849 was 471, manned by 2,127 hands.—The registered vessels of O. and Shetland, in 1833—much the larger proportion of them belonging to O.—were 78, carrying 4,049 tons and 319 seamen. The vessels registered at Kirkwall in 1850 were 51 = 3,567 tons, and at Lerwick 64 = 2,225 tons. They are, for the most part, schooner-rigged; are well-built, uninsured, worked by able and sober seamen, and subject to fewer accidents than vessels of most other districts. They trade chiefly with the ports of England and of Ireland.

Population.] The Orcadians, though of the same parental stock as the Shetlanders, have fewer and less marked peculiarities of manner. The language spoken is a dialect of the English, considerably purer in vocables and pronunciation than that spoken in almost any part of the Lowlands of Scotland, but marked in the utterance by the sibilant and guttural softness which belongs more to the Celtic than the Saxon tongues. Funerals, as in England and Ireland, are attended promiscuously by men and women. The dress, the customs, and all characteristic properties, have little or nothing in common with those of the Celtic Highlanders.

History.] The O. islands seem to be the *Orcas* of Diodorus Siculus. Under their classical or Romanized name of *Orcades*, they became familiar to the Romans. *Orc* is one of the three principal isles of Britain mentioned by the Welsh Triads. *Orch*, in the British language, signifies what is outward, extreme, or bordering, and aptly designates the relative position of the islands during the British period; and joined to *ynys*, *enys*, or *inis*,—the words respectively in British, Cornish, and Gaelic, for 'an island,'—it occasioned the group, as Romanizing or purely Celtic influence prevailed, to be variously denominated Orcades, Orcadia, Orchadia, Orchades, Orkenies, and Orkneys. Such is the apparently clear and natural origin of the name as traced by the author of *Caledonia*. Yet a writer in the *Edinburgh Encyclopedia* says, "The origin of the name is undoubtedly Teutonic, and is probably derived from *orkin*, a large marine animal which has been applied both to whales and seals. Orkney, therefore, means 'land of whales or of seals.'" The same Celtic people who colonized South and North Britain, seem to have been the original or earliest inhabitants of the O. The O. appear to have become, toward the close of the 3d cent., or early in the 4th, the harbours of the ferocious seamen of northern Europe. In 570, Columba found one of the Orcadian chiefs at the court of the Pictish king Bridei II., and arranged with him a mission of his disciple Cormac to the Orkneys. In 876, Harold Harfager made a descent on the O. and Hebridean islands, and subdued both. On his return to Norway, he conferred the administration of O. on Ronald, the father of Rollo, the famous invader of Norway, and the great-great-grandfather of William the Conqueror. In 920, Sigurd, the brother of Ronald, received by peaceful cession from him the Orcadian dominion; and he afterwards added to it Caithness, Sutherland, Easter Ross, and Moray. The two brothers are jointly reckoned the founders of the Orcadian dynasty. A long line of Scandinavian *jarls* or earls who succeeded them, affected the style of independent princes. The whole race of Scandinavian earls or sea-kings were considered high in rank, skilful in peace, and redoubtable in war. They intermarried with the noble families of neighbouring countries, with the daughters of the petty kings of Ireland, and with the powerful royal families of Norway in Scotland. From the year 1098, when Magnus Barefoot, the powerful king of Norway, castigated the Orcadians, and made them smartingly feel his superiority, the earls acknowledged their dependence on the Norwegian crown. On the failure of the Scandinavian dynasty, the earldom passed to Malis, Earl of Strathern, who was married to the only daughter of the last Earl, Magnus V. In 1379, it passed to the line of St. Clair or Sinclair. While William Sinclair, the 3d of his name, held the earldom, the young king of Scotland—James III.—pressed with the difficulty of Christian I., king of Denmark, Norway, and Swe-

den, having demanded payment of a long arrear of "the annual of Norway"—married Margaret, the princess of Denmark; and, in 1468, obtained as her dowry 2,000 florins in money, and the impignoration of O. for 50,000 florins, and of Shetland for 8,000 more. As the islands were never ransomed from the pledge, they thenceforth became politically and entirely attached to Scotland. In 1470-1, the earldom of Orkney and the lordship of Shetland were, as to their "haill richt," purchased by James III. from the Sinclairs, and annexed by acts of parliament to the Crown, not to be alienated, except in favour of a lawful son of the king. For two centuries after their cession by Norway to the Crown of Scotland, O. and Zetland seem to have been much in the condition of a Turkish province undergoing the rival and emulating scourgings of a quick succession of rapacious pashas. In 1643, they were granted by Charles I. in mortgage to William, Earl of Morton. They were mortgaged by the next earl to assist Charles, and were afterwards confiscated by Cromwell. At the Restoration, they were given back to the earl of Morton. In 1609 they were again, by act of parliament, annexed 'for ever' to the Crown; and, during upwards of 30 years, they were anew leased out to various farmers-general. In 1707 they were restored in the old form of a mortgage—redeemable by the Crown for £30,000, but subject to an annual feu-duty of £500 to James, Earl of Morton. In 1766, the Earl of Morton sold the estate for £60,000 to Sir Lawrence Dundas, the grandfather of the present Earl of Zetland. The revenues of the see of O. are under the control of the commissioners of the woods and forests.

ORKUB, or PRECOP, a town of Servia, in the sanj. and 27 m. SE of Kinkovatz.

ORLA, a small river of Saxony, in the Voigtland, which rises E of Triptis, and falls into the Saale, near Orlamunda, after a WNW course of 21 m.—Also a village of Russia, in the prov. and 30 m. S of Bialystok.

ORLAMUNDA, a town of the duchy of Saxe-Altenburg, on the l. bank of the Saale, at the influx of the Orla, 14 m. S by E of Weimar. Pop. 1,154.

ORLAND, a township of Hancock co., Maine, U. S., on the E side of the Penobscot, 61 m. E by N of Augusta. Pop. 1,381.

ORLANDO (CAPO DI), a cape on the N coast of Sicily, 25 m. W by S of Melazzo, in N lat. 38° 7′ 46″, 82 m. SE of Palermo. It is a steep rock of moderate height, crowned by a ruinous pile called the castle. It is remarkable for sudden squalls, and heavy swells.

ORLATH, a village of Transylvania, 9 m. SW of Hermanstadt.

ORLAU, a town of Austrian Silesia, 12 m. NW of Teschen. Pop. 900.

ORLE, a village of Russia, in the gov. of Grodno, 36 m. SSW of Leda.

ORLEANS, a city in the central part of France, the cap. of the dep. of Loiret, situated on the r. or N bank of the Loire, 58 m. SSW of Paris, in N lat. 47° 54′ 12″, E long. 2° 45′ 49″. Pop. in 1789, 35,574; in 1836, 40,272; in 1841, 42,584. It is of an oblong form, extending along the bank of the river 1½ m., and surrounded by rich and highly-cultivated environs. It is built with tolerable regularity, the streets being in general straight, but they are narrow and incommodious. There are four squares or open spaces in the town, of which one, near the centre of the city, the Place du Martroy, is spacious and handsome. The finest street, the Rue Royale, extends in a straight line N and S from the central square to the extremity of the bridge over the Loire, a structure consisting of 9 large arches, equally admired for solidity and boldness and lightness of construction. It is 354 yds. in its entire length. The most recently constructed street, leading up to the W front of the cathedral, is also well-built and handsome. The houses are mostly in an antiquated style, and in the older parts of the city are chiefly of timber, and destitute even of the picturesque effect of mediæval buildings. Among the public edifices, the principal is the cathedral, one of the finest Gothic buildings in France. Its general plan is that of a Latin cross, with an apsidal east end, the west end terminating in three enriched portals with lofty flanking towers. The other churches and convents are numerous, but of little interest. The Mairie or town-house, an edifice of the 15th cent., now a museum, is in course of restoration. The court-of-justice, the mint, and the theatre, are also entitled to notice. The literary institutions are an academy, a secondary medical school, and a royal college or high school. The public library contains above 30,000 vols. There are public walks along the ramparts and the quays, but the most agreeable are along the banks of the river. In front of the Mairie is placed a fine statue of the Maid of Orleans, executed by the Princess Marie, daughter of Louis Philippe.

The position of O. is favourable to trade. Placed almost in the centre of the kingdom, and communicating by means of the Loire and its tributary streams with several fertile departments of the interior, it forms a great entrepot for their productions; while, on the other hand, the foreign commodities imported at Nantes, La-Rochelle, and some smaller ports, are forwarded to O., and subsequently distributed into different parts of the kingdom. The chief articles of export are corn, wine, brandy, and fruit. The manufactures of O. are chiefly stockings, woollens, hats, leather, and pottery-ware. It has also breweries, sugar-refineries, and tanneries.

O. is the seat of a prefect, and of the departmental offices. It is also the see of a bishop, and the seat of one of the great provincial courts of justice.—It is a place of great antiquity, having been besieged by Attila in 450. In the Middle ages it was the occasional residence of the kings of France. It has been the seat of 11 church-councils, and has since the middle of the 14th cent. conferred the title of duke, a title commonly held by a prince of the blood royal. In English history it is chiefly known by the memorable siege which it sustained against the English in 1428, and in which the celebrated Joan of Arc acted so distinguished a part. In French history it is farther known for a siege sustained in it by the Protestants against the Catholics in 1563. This siege was remarkable for the death of the duke of Guise, the first and most celebrated of the name.

The cant. of O., comprising 24 coms., had a pop. of 64,042 in 1831, and of 67,312 in 1841.—The arrond. has an area of 240,259 hect., and comprises 9 cants. Pop. in 1841, 144,032.—The ORLEANAIS, an ancient territorial division of France, comprising the O. propre, the Gatinais Orleanais, the Blaisois, the Sologne, and the Beauce, with a total area of 920,119 hect., is now partitioned among the departments of Indre, Indre-et-Loir, Loir-et-Cher, and Loiret. Its principal towns were O., Meuse, Beaugeney, Pithiviers, Cleic, Gergeau, Sully, and Ferté-Senecterre.

ORLEANS, a county in the N part of the state of Vermont, U. S., comprising an area of 675 sq. m., and lying between the E and W range of the Green mountains. It contains a portion of Memphremagog lake in the N, and is drained by Barton, Black, and Clyde rivers, affluents of Lake Memphremagog, and by the head-branches of Mississque and Onion rivers. It is hilly, but generally fertile and well-cultivated. Pop. in 1840, 13,634; in 1850, 15,705. Its cap. is Irasburg.—Also a co. in the NW part of the state of New York, containing a superficies of 362 sq. m. It is intersected from E to W by the Mountain ridge, and has a generally undulating surface. The soil, consisting of loam or gravel, with an intermixture of clay and sand, is fertile. It is drained by Oak, Orchard, Johnson's, and other creeks, affluents of Lake Ontario, and is crossed from E to W by the Erie canal. Pop. in 1840, 25,127; in 1850, 28,464. Its cap. is Albion.—Also a parish in the SE part of the state of Louisiana, containing an area of 160 sq. m. The surface is low and marshy, and, except on the streams, is incapable of successful cultivation. Sugar, cotton, rice, Indian corn, fruit, and

vegetables, are its chief productions. Pop. in 1840, 102,193, of whom 23,450 were slaves. Its cap. is New Orleans.—Also a township of Barnstable co., in the state of Massachusetts, 95 m. SE of Boston. It extends across the narrow part of Cape Cod, and is bordered on the E by Pleasant bay, in which there are several islands, included in the township. The surface is hilly, and the soil sandy and unproductive. Fishing and the manufacture of salt form the chief branches of local employment. Pop. in 1840, 1,974. —Also a township of Jefferson co., in the state of New York, 12 m. N of Watertown, and 172 m. NNW of Albany. It has an undulating surface, and is drained by Chaumont and Perch rivers. The soil consists of clay and loam, with a substratum of limestone. Pop. 3,001.—Also a village of Phelps township, Ontario co., in the state of New York, 190 m. W of Albany, on Flint creek. Pop. about 300.—Also a village of Orange co., in the state of Indiana, 86 m. S by W of Indianapolis. Pop. about 250.

ORLEANS (Island of), an island of Lower Canada, in the St. Lawrence, below Quebec, 20 m. long from SW to NE, and 5 m. broad. This island, next in size to that of Montreal, approaches it in fertility and richness of soil more nearly than any other part of the district of Quebec. Its W extremity is only 4 m. from Cape Diamond. The shores slope gradually to the beach; in some places there are a few rocky cliffs, but not of great extent or elevation. Bordering the N channel the beach is flat and muddy, with reefs of rocks running along it; but on the S side it is a fine sand, with only a few rocks sticking up here and there. The centre part is thickly wooded. The soil on the high lands is commonly a light good earth, mixed with sand, or sand and clay; on less elevated situations there is a fine black mould, which is likewise blended with sand. It is but scantily watered by the little river Dauphin, the rivulet Maheux, and a few trifling streams, all of which in summer-time nearly fail. A good road encompasses the island, and several others cross it. The pop. in 1825 was 4,022; in 1831, 4,349.

ORLEANS (New). See New Orleans.

ORLEAT, or Orliat, a commune of France, in the dep. of the Puy-de-Dome, cant. and 3 m. NE of Lezoux, and 7 m. W of Thiers. Pop. 1,164.

ORLESTONE, a parish of Kent, 5 m. S by W of Ashford, 2 m. N of the Grand Military canal, and 4½ m. S of the South-Eastern railway. Area 1,825 acres. Pop. in 1841, 316; in 1851, 334.

ORLETON, a parish in Herefordshire, 5 m. N by W of Leominster, in the line of the Leominster canal. Area 2,603 acres. Pop. in 1841, 603; in 1851, 618.—Also a chapelry in Eastham p., Worcestershire, 6½ m. E by S of Tenbury, on the S bank of the Teme. Pop. in 1841, 111; in 1851, 107.

ORLHONNAC, a village of France, in the dep. of the Aveyron, cant. and 5 m. SSW of Villefranche, near the r. bank of the Aveyron. Pop. 200.

ORLIAC, a village of France, in the dep. of the Dordogne, cant. and 8 m. N of Villefranche-de-Belvez, and 15 m. SW of Sarlat. Pop. 350.

ORLIANSK, a town of Russia in Europe, in the gov. of Simbirsk, and district of Samara. It makes part of the military line of Samara, and is inhabited exclusively by Cossacks and invalided soldiers.

ORLIENAS, a village of France, in the dep. of the Rhone, cant. and 4 m. NE of Mormant, and 10 m. SW of Lyon. Pop. 750.

ORLIK, or Oriel, a town of Russia in Europe, in the gov. and 90 m. S of Poltava, district and 27 m. SSE of Kobyliake, at the confluence of the Oriel and Dnieper.

ORLINGBURY, a parish of Northamptonshire, 4 m. NW by N of Wellingborough. Area 1,990 acres. Pop. in 1841, 351; in 1851, 330.

ORLOV, a town of Russia in Europe, in the gov. and 30 m. WSW of Viatka, on the r. bank of the river of that name, at the confluence of the Pleskikha. Pop. 3,600.—Also a town in the gov. and district and 21 m. NE of Voronej, on the r. bank of the Usman. Pop. 3,500. It was built in the 17th cent., by the czar Alexis Mikhailovitch, to defend the frontier from the incursions of the Nogais.

ORLOVKA, a town of Russia in Europe, in the gov. of Chernigov, district and 36 m. SW of Novgorod-Severskoi. Pop. 1,560.

ORLOVSKAIA, a town of Russia in Europe, in the gov. of the Don Cossacks, district and 66 m. NNE of Oust-Medvieditza, on the r. bank of the Medvieditza.

ORLOW, a town of Poland, in the woiwodie of Masovie, obwod and 21 m. SSE of Gostynin, and 19 m. ENE of Lenczy, in the midst of a marsh, on the l. bank of the Bzura, an affluent of the Vistula. Pop. 413.

ORLY, a village of France, in the dep. of the Seine, cant. and 5 m. SSE of Villejuef, and 7 m. SE of Sceaux, on the brow of a hill. Pop. 520. It contains the old tower of the church, which, in 1360, sustained a siege for 3 months against the English.

ORLYA, a village of Transylvania, in the comitat of Hunyad, 12 m. SSW of Vajda-Hunyad.

ORMAIG, a parish of Tasmania, in the co. of Monmouth, bounded on the W by Wallaby river, and S by the p. of Staffa.

ORMAIZTEGUI, a town of Spain, in the prov. of Guipuscoa and partido of Aspeitia, 21 m. SW of Villafranca. Pop. 550. It contains several fountains.

ORMEA, a town of Sardinia, in the dio. of Coni, capital of a mandemento, in the prov. and 20 m. S of Mondovi, and 21 m. NNW of Oneille, in the Apennines, on the l. bank of the Tanaro, and at an alt. of 809 yds. above sea-level. Pop. 4,750. It is a dull ill-built town, enclosed by an old wall, and defended by a small castle on an adjacent height. It has extensive manufactories of linen. This town suffered severely at the commencement of the campaign of 1796.

ORME-HEAD (Great), a steep limestone cliff, on the coast of Carnarvonshire, in N lat. 53° 20′ 0″, W long. 3° 51′ 7″. It has an elevation of 664 ft., and its ridge takes a SE direction for about 1¾ m. On its summit is a telegraph in connection with Holyhead and Liverpool.

ORMENYES, a district of Transylvania, in the lower circle of the comitat of Klausenburg. It contains the village of Mezo-Ormenyes.

ORMES (Les), a commune of France, in the dep. of the Vienne, cant. and 3 m. N of Dauge, and 13 m. NNE of Chatellerault, on the r. bank of the Vienne. Pop. 1,715. It has a fine castle with a magnificent park.—Also a village in the dep. of the Yonne, cant. and 6 m. WSW of Aillant-sur-Tholon, and 12 m. SSW of Joigny. Pop. 400.

ORMESSON, a hamlet of France, in the dep. of the Seine, cant. and 4 m. WNW of St. Denis, and com. of Epinay-sur-Seine, in the valley of Montmorency. It has a fine castle, and possesses manufactories of calico, plain and printed, and a cotton spinning-mill.

ORMIANEB, a town of Russia in Europe, in the gov. of Podolia, district and 15 m. NW of Kamenetz.

ORMIDIA, a town of Turkey in Asia, on the S coast of the island of Cyprus, on cape Griega, 15 m. S of Famagousta.

ORMIGOS. See Hormigos.

ORMISTON, a parish and village of Haddington-

shire, 2¼ m. S of Tranent. Area 3,245 acres. Pop. in 1841, 826, of whom 335 were in the v.; in 1851, 811.

ORMOERBEAR. See Morbeya.

ORMOND, an ancient Irish principality, or petty kingdom, on the l. bank of the Middle Shannon, in the middle of the N part of Munster. It nearly corresponded with the present baronies of Upper Ormond, Lower Ormond, and Owney and Arra, in co. Tipperary; but it figured less as a principality of the Irish period, than as an earldom of the period of the Anglo-Normans; and in the latter connection, its history is strictly identical with that of the earls and dukes of Ormond.

ORMOND ISLAND, an island at the E entrance of the strait of the Fury and Hecla, in N lat. 69° 46′, W long. 82° 45′. It is 9 m. in length, and 4 m. in breadth; and is separated from Liddon island on the W by a channel of little more than 1 m. in breadth.

ORMONDS (Les), a district of Switzerland, in the cant. of Vaud and district of Aigle. It is almost entirely enclosed by the Alps, and is liable to inundation. It is traversed by the Grande Eau. It comprises the communes of Ormonds-dessus, pop. 935; and Ormonds-dessous, pop. 1,574.

ORMOY, a commune of France, in the dep. of the Haute-Saone and cant. of Jussy, 24 m. NNW of Vesoul, on the l. bank of the Saone. Pop. 1,168.—Also a village in the dep. of the Haute-Marne, cant. and 6 m. SW of Chateau-Villain, on a stream, near the r. bank of the Aube.

ORMSBY, a parish in the N. R. of Yorkshire, 5 m. W by N of Guisborough, comprising the townships of Eston, Morton, Normanby, and Upsall. Area 8,948 acres. Pop. in 1831, 901; in 1851, 1,172.

ORMSBY-St.-MARGARET, a parish in Norfolk, 4¾ m. N by W of Yarmouth. Area with Scratby and St. Michael, 2,761 acres. Pop. in 1831, 720; in 1851, 884.

ORMSBY-St.-MICHAEL, a parish in Norfolk, 1¾ m. W by N of Great Ormsby. Area 1,220 acres. Pop. in 1831, 273; in 1851, 294.

ORMSBY (North), a parish in Lincolnshire, 5 m. NW by N of Louth. Area 1,707 acres. Pop. 131.

ORMSBY (South), a parish in Lincolnshire, 6 m. NNW of Spilsby. Area 2,377 acres. Pop. in 1831, 237; in 1851, 261.

ORMSIDE, or Ormes-Head, a parish in Westmoreland, 1¾ m. SSE of Appleby, on the S bank of the Eden. Area 2,034 acres. Pop. in 1851, 198.

ORMSKIRK, a parish and market-town in the co.-palatine of Lancaster, 35 m. S by W of Lancaster, and 12 m. N by E of Liverpool, comprising the townships of Bickerstaffe, Birkdale, Burscough, Lathem, and Scarisbrick, and the chapelry of Skelmersdale. Area 30,832 acres. Pop. in 1831, 14,608; in 1851, 16,490. The town consists chiefly of four streets, intersecting each other at right angles, with the market-place in the centre. Its pop. in 1851 was 5,548. Cotton-spinning and hat-making are carried on here. There are considerable coal-mines in the p., the transport of the produce of which is facilitated by the Leeds and Liverpool canal, which passes about 3 m. N of the town. O. is one of the polling-places for the S division of the co.

ORMUK, an island of the Arabian gulf, off the coast of Yemen and to the SE of Loheia. Its only inhabitants are a few fishermen.

ORMUZ, or Hormuz, an island in the Persian gulf, in N lat. 27° 12′, E long. 56° 25′, 45 m. N of Cape Mussendon, the ancient *Ozyris*. It is a mass of hills of rock-salt and sulphur, varying in colour as much as in shape, about 15 m. in circumf., and having a pop. not exceeding 300. The rocks which compose nearly the whole island sink abruptly near its N extremity into a plain comprising about 6 or 7 sq. m. of comparatively level country, terminating in a sandy spit that divides the harbour of O. into two parts, and on which stands the old Portuguese fort. When the Portuguese fleets had found their way round the cape into the Indian seas, their cupidity was soon excited by O., which was reported to be a place of immense wealth. They made several abortive attempts to obtain possession of it, but in 1515, the great Albuquerque sailed thither with a force so overwhelming that resistance was scarcely attempted. It continued to be one of the main seats of Portuguese power, and numbered under them 4,000 houses and 40,000 inhabitants, till the reign of Shah Abbas, when that monarch conceived the design of wresting this valuable appendage to the Persian empire, from a foreign power. His efforts would probably have been fruitless, had he not engaged the aid of an English squadron, which happened to be cruizing in the Indian seas, the commanders of which, conceiving themselves authorised to adopt any measures hostile to the Portuguese, readily engaged in the enterprise. The combined forces began with taking possession of the island of Kishme, 9 m. WSW, on which O. mainly depended for supplies. They then landed and obliged the Portuguese to evacuate the town, and retire into the castle, which was at last reduced by famine. The Persian monarch made it now his object to transfer the trade of O. to Gombrun situated on the coast opposite to it; and ultimately, in furtherance of this favourite object, the inhabitants were ordered to evacuate the place, leaving only a Persian garrison. About the end of the last cent., O. was taken possession of by the imam of Maskat; but as a city and mart, it had no longer any existence; it did not then contain more than 20 families. The fort has been put into a tolerable state of repair. The whole of the ancient city, near the N extremity of the island, is one mass of ruins, the reservoirs for water being the only buildings that are at all in a perfect state. The present inhabitants are chiefly employed in preparing rock-salt, from which the imam derives a considerable revenue. The island also produces copper, iron, red ochre, and sulphur.

ORNACHOS, or Hornachos, a town of Spain, in Estremadura, in the prov. and 54 m. ENE of Badajoz and partido of Almendralijo. Pop. 1,200.

ORNAIN, a river of France, which has its source in the dep. of the Haute-Marne and cant. of Sailly, near Germizey, 11 m. ESE of Joinville; passes through the NW extremity of the dep. of the Vosges; waters the S part of that of the Meuse, in which it bathes Gondrecourt, Ligny, Bar-le-Duc, and Rivigny; flows thence into the dep. of the Marne; receives the Saulx on the l., a little below Estressy; passes Vitry-le-Bruli; and, after a course in a generally NW direction of about 90 m., joins the Marne on the l. bank, about 1 m. N of Vitry-le-Francais. Timber from the forests of the Vosges forms the chief article of transit on this river.

ORNANS, a canton, commune, and town of France, in the dep. of the Doubs, and arrond. of Besançon. The cant. comprises 28 coms. Pop. in 1831, 13,314; in 1841, 13,975. The town is 12 m. SE of Besançon, on the Loue, in a picturesque situation, at an alt. of 398 yds. above sea-level. Pop. in 1841, 3,040. It has a library and a small seminary, and possesses manufactories of cheese, a flour and saw-mill, several tanneries, and a paper-mill. Cherries are extensively cultivated in the locality for the manufacture of kirschwasser.

ORNAVASSO, a town of Sardinia, in the div. of Novara, capital of a mandemento, in the prov. and

9 m. WNW of Pallanza, and 12 m. SE of Domo-d'Ossola. Pop. 1,652.

ORNBAU, a town of Bavaria, in the presidial and 8 m. SE of Herrieden, on the l. bank of the Altmuhl. Pop. 860.

ORNE, a department in the N of France, comprising a portion of the old provs. of Normandy and Perche; stretching between the parallels of 48° 12′ and 48° 48′ N, and between 1° E and 1° W long.; bounded on the N by the deps. of Calvados and Eure; on the E by Eure and Eure-et-Loir; on the S by Sarthe and Mayenne; and on the W by Manche. It has an area of 610,561 hectares. Pop. in 1821, 422,884; in 1841, 442,072; in 1851, 439,884.—The surface is elevated. A chain of hills intersects it from E to W, separating the basins of the Orne and the Seine from those of the Loire. The principal rivers are the Orne, the Mayenne, the Sarthe, the Eure, the Rille, the Dives, the Huisne, the Charenton and the Iton.—The soil is of various qualities. About 114,000 hect. are a rich loam. The chief productions of the dep. are wheat, rye, barley, oats, buck-wheat, hemp, flax, pulse, potatoes, and beet-root sugar. The consumption of corn is, however, greater than the quantity raised, great part of the dep. consisting of pasture and forest land. In 1839, 56,707 hect. were under wheat. Apples and pears are abundant here, as in the rest of Normandy; and a great quantity of cider and perry is made. The breed of horses is good; and cattle, hogs, and poultry are extensively reared for the Paris market.—The principal mineral product is iron, which is worked in various parts of the dep.; manganese and porcelain clay are also wrought. The manufactures of the dep. consist of coarse linens, lace, leather, paper, and glass, which, along with cattle, horses, and wood form the chief articles of export.—The dep. belongs to the diocese of Séez, and to the jurisdiction of the royal court of Caen. It is divided into the 4 administrative arrondissements of Alençon, Argentan, Domfront, and Mortagne, which are subdivided into 35 cants., and 513 coms. The chief town is Alençon.

ORNE, a river of France, which has its source in the neighbourhood of Séez; flows NW; becomes navigable at Caen, and discharges itself into the English channel, about 9 m. below that town after a course of 90 m. Its principal affluents are the Rouvre, the Noireau, and the Odon.

ORNES, a town of France, dep. of Meuse, 9 m. NE of Verdun. Pop. 1,000.

ORNETO, a village of Corsica, in the cant. of Tavagna, 21 m. S of Bastia.

ORO (Rio-del), a river of New Granada, in the prov. of Santa-Marta, which rises to the NE of Pamplona; runs N, and joins the Solia on the r. bank.—Also a river of the same state, in the prov. of Neiva, which enters the Magdalena.—It is the name of several other small streams in South America, in whose sands gold has been found.

ORO (Monte d'), a mountain in the centre of the island of Corsica, 6 m. S of Mont Rotondo, and 24 m. NE of Ajaccio. Alt. above sea-level 8,700 ft.

ORO (Monte dell'), a summit of the Rhetian Alps, to the W of Mount Bernina. Alt. above sea-level 2,590 metres = 2,832 yds.

ORODADA, a port on the coast of Peru, 6 m. S by W of Payta.

OROHOÑA, one of the highest peaks of the island of Tahiti. It has an estimated alt. of 8,480 ft., and appeared to Dr. Pickering, who ascended it about 1,500 ft., as if it were the centre from which the different ridges of the island radiate in ten or twelve directions towards the coast.

OROMUCTO, a river of New Brunswick, which rises in two small lakes in York co; runs N; and falls into St. John's river, 12 m. SE of Fredericton. It is navigable for small vessels 20 m. At its mouth is one of the oldest settlements in the country. By this passage the Indians have a communication with Passamaquoddy bay.

OROMTSHI, a town of Tibet, 48 m. E of Manas-Hotun.

ORON, a town of Switzerland, in the Pays-de-Vaud, 10 m. ENE of Lausanne, on the r. bank of the Broye.—Also a town of Spain, in the prov. and 42 m. NE of Burgos, on the Oroncillo, an affluent of the Ebro.

ORONHI, a town of Tibet, 38 m. W of Yolotou-Hotun.

ORONO, a township of Penobscot co., in the state of Maine, U. S., 75 m. NE of Augusta. Pop. 1,521.

ORONOKO, a village of Berrien co., in Michigan, U. S. Pop. 335.

ORONOZ, a village of Spain, in the prov. and 30 m. ENE of Pampeluna, on the l. bank of the Salazar. Pop. 150.

ORONSAY, one of the smaller Hebrides, on the W coast of Scotland, separated by a narrow channel from Colonsay. The walls of a priory, said to have been founded by St. Columba, are still to be seen on it.

ORONTES, El-Aazy, or Maklub, a river of Northern Syria, the largest by which that country is watered. It rises in two sources on the W slopes in the Anti-Libanus, in about N lat. 34° 5′, 10 m. NE of Baalbec, not far from the source of the Jordan; but while the latter river rolls southward to Lake Asphaltites, the O. flows in the opposite direction. At the village of Ar-Ras, the united streams fall into a more abundant stream anciently called *Typhon*, but now El-Aazy, which bursts at once from the foot of the Anti-Libanus, with a considerable volume of water. Entering the valley of Homs, the O. forms the Bahr-el-Kades, a lake 6 m. in length, by 2 m. wide, and issuing from its N extremity passes 1½ m. W of Homs; then sweeping round Mount Erbayn, passes through the city of Hamah, and flows NW through the valley of El-ghab. On reaching the plain of 'Umk, it makes a bold sweep to the NW, receives the Lower Karasu coming from the Aga-Denghiz, at Gazel-Burj; then skirts the slopes of Daphne, and winds in a tortuous course to the SW; and approaching the sea receives the Kutchuk-Karachai, and the Buyuk-Karachai; and entering the plain of Suweidujeh, winds along the foot of Mount Casius, 'till it passes over a difficult bar into the bay of Antioch, 21 m. by the windings of its course below Antioch. Its stream is in general so deep sunk in rocks, that it can be rendered subservient to the purposes of irrigation only by being laboriously raised with wheels. The rains which commence in November swell the river till the early part of January. In April and May, the melting of the snow again fills its bed; after which it gradually decreases in volume of water till November.

OROPESA, the capital of the prov. of Cochabamba, in Bolivia, situated on one of the tributary streams of the Rio-Grande, in a beautiful and fertile valley in N lat. 17° 22′. Pop. 17,000. Its inhabitants are chiefly employed in supplying the neighbouring provs. with fruits and grain.—There are some other inconsiderable settlements of this name in Spanish America.

OROPESA, a town of Spain, in the prov. of Avila, 20 m. W by S of Talavera-de-la-Reyna. Pop. 1,500.—Also a village in the prov. and 15 m. ENE of Castellon-de-la-Plana. Pop. 300.

OROPESA (Cape), a cape of Spain, on the coast of Valencia, in N lat. 40° 5′ 33″.

OROPO′, or Oropus, a village of Greece, in At-

tica, about 2 m. from the small bay of Ai-Apostolus, and 30 m. N of Athens, on the r. bank of the Asopus, formerly of importance in a military sense, as commanding the adjacent plain of Tanagra, a tract of great fertility. Some large blocks of hewn stone are all that remain of its ancient fortifications.

OROS, a village of Albania, in the sanj. and 45 m. SE of Skutari.

OROSEI, a town of Sardinia, in the prov. and 21 m. ENE of Nuoro, on the r. bank and near the mouth of a small stream of the same name, the *Cedrinus* of Ptolemy. Pop. 1,650. It exports corn, almonds, cheese, cork, cattle, hides, honey, and fruit, but in small quantities only.

OROSHAZA, a town of Hungary, in the palatinate of Bekesch, 28 m. W by S of Gyula. Pop. 9,000.

OROSZVAR. See CARLBURG.

OROTAVA, or CAORA, a town on the W side of the island of Teneriffe, beautifully situated on a gently sloping hill, in a valley about 25 m. from Santa-Cruz, at an alt. of 1,200 ft. above sea-level, amid fields of corn, gardens, and vineyards. It is a well-built, clean, airy little town, and has a small stream of water running through each of its streets. Pop. 8,000. It carries on considerable commerce by its port, Puerto-de-la-O. which is about 2 m. distant, and has a pop. of 4,500. The wines of the island are mostly shipped here. O. and its port were terribly devastated by a hurricane in November 1826.

OROTE, one of the Mariannes group, in the S. Pacific, in N lat. 13° 26′, E long. 144° 49′.

OROUY, a village of France, in the dep. of Oise, cant. and 4 m. N of Crepy. Pop. 600.

OROVESA, a lake of Finland, in the district of Kuopio, about 40 m. NW of Lake Ladoga. It communicates with Lake Pielis on the N, and Lake Kallavesi on the W.

OROYA (LA), a small Indian village of Peru, in in S lat. 11° 38′, W long. 75° 20′, 25 m. ENE of Yauli. It lies on the l. bank of a river of the same name, at an alt. of 12,010 ft. above sea-level, and communicates with the r. bank by a rope-bridge 50 yds. long. Pop. 200. From this place a road leads SE, over the level height of Cachi-Cachi to Jauja; and another road leads NE to Tarma.

ORPIERRE, a canton, commune, and town of France, in the dep. of the Upper-Alpes, and arrond. of Gap. The cant. comprises 8 com. Pop. in 1831, 2,718; in 1841, 2,597. The town is 27 m. SW of Gap, on the Soyan. Pop. 932. It has a Calvinist consistorial church, and carries on a considerable trade in prunes.

ORPINGTON, a parish of Kent, 7 m. SW of Dartford, and 22 m. WNW of Maidstone. Area 3,477 acres. Pop. in 1831, 842; in 1851, 1,203.

ORRELL, a township in Wigan parish, Lancashire, 3½ m. W of Wigan, and 1 m. S of the Leeds and Liverpool canal. Area 1,542 acres. Pop. in 1831, 2,518; in 1851, 2,762.

ORRELL AND FORD, a township in Sefton parish, Lancashire, 4½ m. N of Liverpool, on the Liverpool and Leeds canal.

ORRERY, an ancient barony in the N of co. Cork, now united to Kilmore. It gives the title of earl to the family of Boyle; but this title is now united to that of Earl of Cork. Both the fourth and the fifth earls were persons of considerable literary celebrity; the former, in particular, devoted the later years of his life to philosophical investigations, and patronized an ingenious watchmaker, of the name of George Graham, who invented the well-known machine or instrument which represents the composition, motions, and phases of the planetary system, and called it, in honour of his patron and benefactor, an orrery.

ORRES (LES), a commune of France, in the dep. of the Hautes-Alpes, cant. and 5 m. SE of Embrun. Pop. 1,119.

ORREST HEAD, a township in Windermere parish, Westmoreland, 6 m. SE by S of Ambleside.

ORRIN, a river which has its source in the SE corner of Ross-shire, flows E, and after a course of about 27 m. joins the Conan.

ORRINGTON, a township of Penobscot co., in the state of Maine, U. S., 70 m. NE of Augusta, bounded on the W by Penobscot river. It is intersected by a small affluent of that river, and has a generally fertile soil.

ORRISMORE, a large, boggy moor, in the parishes of Ballindoon and Moyrus, co. Galway, from 2 to 7 m. SSE of Clifden. This tract, about 7 m. by 4, generally speaking is a plain not much elevated above the sea. It is intersected by many low ridges of mica slate, and in the hollows between them are a multitude of lakes, in number about 143, of different sizes, and many of them having numerous and intricate arms. The quantity of red bog in O. is 14,000 Irish acres.

ORROIR, a dep. of Belgium, in the prov. of E. Flanders, and arrond. of Audenarde, watered by the Rhône. Pop. 902. It has manufactories of linen.

ORROLI, a village of Sardinia, in the div. of Capo Cagliari, prov. and 11 m. SE of Isili, and 36 m. NNE of Cagliari. Pop. 1,429.

ORSA, a parish of Sweden, in the prefecture of Stora-Kopparberg and haerad of Ofvan-Siljan, 54 m. NW of Falun.

ORSARA, a village of Naples, in the prov. of Capitanata, capital of a circondario, in the district and 6 m. NW of Bovino. Pop. 4,200.

ORSAY. See ORÇAY.

ORSCHWIHR, or ORSCHWEIR, a commune of France, in the dep. of the Upper Rhine, cant. and 4 m. N of Guebwiller, and 12 m. SSW of Colmar. Pop. 1,306.

ORSE, a commune of France, in the dep. of the Nord, cant. and 4 m. E of Cateau-Cambresis, on the slope of a hill, near the l. bank of the Sambre. Pop. 1,289.

ORSE, or ORSE-LE-PIERREUX (SAINT), a commune of France, in the dep. of the Dordogne, cant. and 6 m. N of Thenon, and 20 m. E of Perigueux. It affords good red wine.

ORSENNES, a commune of France, in the dep. of the Indre, and cant. of Aigurande. Pop. 1,702.

ORSERA, a town of Austrian Illyria, on the W coast of Istria, with a good harbour, near the mouth of the river Lemo, 4 m. N of Rovigno, in N lat. 45° 8′ 20″. Pop. 550.

ORSETT, a parish of Essex, 24 m. E by N of London. Area 4,134 acres. Pop. in 1831, 1,274; in 1851, 1,592.

ORSHA, or ORSHAN, a town of Russia, in the gov. and 40 m. N of Mohilev, on the Dnieper, which here receives the Orshitza. Pop. 2,000. It has 3 churches of the Greek communion, 5 Catholic monasteries, and a college of Jesuits.

ORSINFAING, a commune of Belgium, in the prov. of Luxemburg, and dep. of Villers-sur-Semois. Pop. 163.

ORSINVAL, a village of France, in the dep. of Nord, cant. and 2 m. NNW of Quenoy, on the l. bank of the Ronelle. Pop. 450.

ORSKAIA, a port of Asiatic Russia, in the gov. and 155 m. ESE of Orenburg, situated on the Or, about 1½ m. above its junction with the Ural. Like most other of the Russian frontier-towns, it is composed of one long straight street, bordered with wooden houses. It has several churches, a large market-place, and artillery-barracks. The Asiatic

caravans usually pass the latter river here, on their way to Orenburg.

ORSMAEL, a commune of Belgium, in the prov. of Brabant, and dep. of Orsmael-Gussenhoven. Pop. 413.

ORSMAEL-GUSSENHOVEN, a department and commune of Belgium, in the prov. of Brabant, and arrond. of Louvain, watered by the Ghete. Pop. of dep. 655; of com. 413.

ORSOGNA, a town of Naples, in the prov. of Abruzzo-Citra, 6 m. W of Lanciano.

ORSONG, or Oresung, a river of Hindostan, which rises on the SW of the prov. of Malwah, and, entering Gujerat, joins the Nerbuddah on the r. bank after a SW course of about 65 m.

ORSOVA (New), or Neu-Orschowa, a small town and fortress of Wallachia, situated on an island in the Danube in N lat. 44° 42′, 50 m. N by W of Viden, and 100 m. E of Belgrade. The fortress was frequently taken and retaken by the Turks and imperialists, but has remained in the hands of the former since the treaty of Sistow in 1789. The town consists of four filthy, narrow, and village streets.

ORSOVA (Old), or Alt-Orschowa, a fortress in the S of Hungary, in the military or frontier district of Temesvar, at the influx of the Czerna into the Danube, opposite to New O., and about 3 m. from the frontier. Pop. 900, chiefly Wallachians. Its custom-house and quarantine establishments give it importance, and it is a place of some trade. During the French continental blockade vast quantities of goods were sent up the Danube, and overland to O., on account of the merchants of Trieste.

ORSOY, a town of Prussia, on the W bank of the Rhine, at the confluence of the Kennell, 24 m. SE of Cleves. Pop. 1,500. It has manufactures of fine woollens.

ORT, a town of Lower Austria, 15 m. E of Vienna, near the l. bank of the Danube. Pop. 1,400.

ORTA (Lago d'), the *Lacus Cusius* of the ancients, a small lake of the Sardinian states, in the prov. of Novara, about 3 m. W of Lago-Maggiore. It is 6 m. long, and 1½ m. wide, and has within it the little islet of San-Giulio. Overhanging it is Monterone, the flanks of which are composed of enormous masses of red granite, exceedingly beautiful when reduced to a polished state.

ORTA, a small town of the Sardinian states, in the prov. of Novara, situated on the lake of Orta or San Giulio, 30 m. N of Vercelli. It has 2 chapels, and a number of convents.—Also a town of Naples, in the Capitanata, 26 m. SW of Manfredonia. Pop. 1,500.

ORTA-TAGH, a mountain-chain of Bokhara, to the NW of the city of Bokhara, which joins the Kelinebok.

ORTAKSHI, a village of Asiatic Turkey, in the sanj. and 18 m. ESE of Guzel-Hissar, near the l. bank of the Meander.

ORTE, a town of the Papal States, in the deleg. of Viterbo, on the Tiber, 36 m. N by W of Rome.—Also a town of Russian Poland, in the prov. of Bialystock. Pop. 900.

ORTEGA ISLES, two small islands in the S. Pacific, in the Salomon archipelego, in S lat. 8°, E long. 157° 20′.

ORTEGAL (Cape), a promontory of Spain, in Galicia, in N lat. 43° 46′ 40″, W long. 7° 54′ 0″, forming the SW limit of the gulf of Gascogny, and the most northern point of land in the kingdom.

ORTELSBURG, or Scytno, a town of E. Prussia, in the gov. of Konigsberg, situated on a small lake, in N lat. 53° 53′, 80 m. SSE of Königsberg. Several actions were fought here in 1807, between the Russians and the French.

ORTENAU, a district of Germany, lying between the Rhine on the W, the Black-forest on the E, and the Brisgau on the S. The greater part of this district belonged to Austria, but was ceded in 1802 to the duke of Modena, and came after his death to the Austrian archduke Ferdinand. It was assigned to Baden by the treaty of Presburg, in January 1806, and now forms part of the circle of Kinzig.

ORTENBERG, a small town of Hesse-Darmstadt, 22 m. ENE of Frankfort-on-the-Maine, near the l. bank of the Nidder.—Also a village in the grand-duchy of Baden, 1 m. SE of Offenburg.

ORTENBURG, a town of Bavaria, 5 m. S of Vilzhofen. Pop. 1,200.

ORTEZ, a small river of Buenos Ayres, which runs N into the Plata.

ORTHENVILLE, a commune of Belgium, in the prov. of Luxemburg, and dep. of Tenneville. Pop. 152.

ORTHEZ, or Orthes, a town of France, in the dep. of Basses-Pyrenees, situated on the declivity of a hill, on the r. bank of the Gave-de-Pau, 22 m. NW of Pau, and 30 m. E of Bayonne. Pop. 6,800. It has manufactories of flannel and leather, and its environs produce slate, pitcoal, and petroleum, and silver. It suffered greatly in the religious wars of the 16th cent. On the 25th of February 1814 the British obtained here a decisive advantage over the French under Soult, the latter being driven from a succession of positions, with a heavy loss both in killed and prisoners.

ORTHO, a department and commune of Belgium, in the prov. of Luxemburg, and arrond. of Marche, watered by the Ourthe. Pop. of dep. 1,132; of com. 200.

ORTHOSA, or Ortosa, a small seaport of Syria, in the pash. of Tripoli, on the coast of the Mediterranean, 12 m. N of Tripoli.

ORTI, a town of Naples, in Calabria Ultra 1ma, 2 m. S of Calanna. Pop. 1,000.

ORTLER, Orteler, or Ortel-Spitze, the highest mountain of the Austrian empire, situated in Tyrol, on the borders of the Engadine, in the co. and 9 m. NNE of Bormio, in N lat. 46° 30′ 16″, E long. 10° 32′ 31″. Its elevation is given by M. Mercey at 14,466 ft., but some measurements make it 15,400 ft., or very nearly as high as Mont Blanc. Its top was first reached in 1804, by Joseph Pichler, a chamois hunter of Passeyr.

ORTSHIK, a river of Russia, which rises to the S of Valki, in the gov. of Kharkov, and joins the Oriel on the r. bank, after a S course of 60 m.

ORSTON, a parish in Notts, 8 m. S by W of Newark, on the E bank of the Devon. Area 1,940 acres. Pop. in 1831, 439; in 1851, 461.

ORTON, a chapelry in Rothwell p., Northamptonshire, 4¼ m. W by N of Kettering. Area 940 acres. Pop. in 1831, 109; in 1851, 90.—Also a parish and market-town in Westmoreland, 8¼ m. SW by S of Appleby. The town is pleasantly situated on the road between Appleby and Kendal, and consists chiefly of one long irregularly built street. Area 24,430 acres. Pop. in 1831, 1,501; in 1851, 1,456.

ORTON, or Overton Great, a parish in Cumberland, 5 m. W by S of Carlisle, and 3 m. N of the Maryport and Carlisle railway, including the townships of O. and Baldwin-Holme. Area 4,277 acres. Pop. in 1831, 445; in 1851, 519.

ORTON-ON-THE-HILL, a parish in the co. of Leicester, 7 m. W by N of Market-Bosworth. Area 2,290 acres. Pop. in 1831, 350; in 1851, 330.

ORTON, or Overton-Longueville, a parish in the co. of Huntingdon, 4¾ m. N by E of Stilton. Area 2,400 acres. Pop. in 1831, 286; in 1851, 224.

ORTON WATERVILLE, a parish in the co. of

Huntingdon, 4½ m. N of Stilton. Area 1,350 acres. Pop. in 1831, 286; in 1851, 302.

ORTONA, a town of Naples, in the prov. of the Abruzzo-Citra, district and 9 m. N of Lanciano, and 12 m. E of Chieti, on the Adriatic, on which it has a small port. Pop. 6,900. It has a cathedral, and several churches and convents. Wine is extensively cultivated in the vicinity.

ORTRAND, a town of Prussia, in the prov. of Saxony, circle and 24 m. SE of Liebenwerda, on the l. bank of the Putsnitz. Pop. 1,820.

ORTUCCHIO, a town of Naples, in the prov. of Abruzzo-Ultra, district and 12 m. SE of Avezzano, cant. and 5 m. NW of Gioja, on the SE bank of Lake Fucino.

ORTUERI, a village of Sardinia, in the div. of Capo Cagliari, prov. of Busachi, district and 6 m. NNW of Meana, and 24 m. ENE of Oristano. Pop. 1,197.

ORUA. See Aruba.

ORULGANSKI MOUNTAINS, a chain of mountains in Siberia, dividing the valleys of the Lena and the Jana, and extending in a WNW direction to the Polar sea. Their geological formation is clay-slate.

ORULONG, a small island of the S. Pacific, in the Pelew archipelago, to the W of the island of Baubelthouap. It is about 3 m. in circuit, and is surrounded with steep rocks covered with wood.

ORUNE, or Oruni, a village of Sardinia, in the div. of Capo Cagliari, prov. and 12 m. NNE of Nuoro, district and 5 m. S of Billi. Pop. 1,438.

ORURILLO, a town of Peru, in the intendancy and 150 m. SSE of Cuzco, at the N extremity of Lake Titicaca.

ORURO, or San-Philippo-d'Oruro, a province and town of Bolivia, in the dep. of Charcas. The town is 105 m. WNW of Chuquisaca, and 66 m. WSW of Oropesa, in a fine valley, at an alt of 4,147 yds. above sea-level. Pop. 5,000. It contains several churches and convents. The climate of the prov. is cold, dry, and liable to tempestuous winds. It affords extensive pasture, and possesses large herds of cattle and lamas. It contains productive gold-mines.

ORUSCO, a town of Spain, in New Castile, in the prov. and 30 m. E of Madrid, partido and 18 m. SE of Alcala-de-Henares, on the brow of a hill, and on the r. bank of the Tajuna. Pop. 860. It has two paper-mills.

ORUST, an island of Sweden, in the Cattegat, in the stift and 28 m. NW of Gottenburg, in N lat. 58° 12′, E long. 11° 39′. It is 15 m. in length from NE to SW, and 12 m. in width. It has a level surface, and affords excellent pasturage. The rearing of cattle, fishing, and the culture of hops, form the chief branches of local industry.

ORVAL, a commune of France, in the dep. of the Manche, and cant. of Montmartin-sur-Mer, 3 m. SW of Coutances, near the r. bank of the Sienne. Pop. 1,290.—Also a village of Belgian Luxemburg, 9 m. S of Neufchateau.

ORVAULT, a village of France, in the dep. of Loire-Inferieure, cant. of La-Chapelle-sur-Erdre, 5 m. NW of Nantes. Pop. 1,845.

ORVIETO, a town of the Papal states, situated on a steep hill, 60 m. NNW of Rome, at the confluence of the Paglia and Chiana, in N lat. 42° 49′, E long. 12° 7′. Pop. 5,418. It is the see of a bishop, and has a cathedral, a fine Gothic edifice containing some good sculptures and paintings. Several of its other churches, chapels, and convents, are admired; and it has three or four large palaces. The only public institution worth notice is a college of Jesuits. —The deleg. of O. has an area of 167,750 hect., with a pop. in 1843 of 26,141.

ORVIGO, or Orrigo, a river of Spain, which rises in the Cantabrian chain, in the N of Leon; runs S; and joins the Esla, on the r. bank, after a course of 85 m., near Benavente.

ORVIN, or Illfingen, a village of Switzerland, in the cant. of Berne, 6 m. E of Courtelary. Pop. 659.

ORVISO, a village of Spain, in the prov. and 21 m. SE of Vittoria. Pop. 320.

ORWELL, a parish of Kinross-shire, 12 m. N of Dunfermline. Pop. in 1841, 2,715; in 1851, 2,569.

ORWELL, a river of Suffolk, which rises in the middle of the co., near Felsham; runs SE by Needham-Market to Ipswich, from whence it is navigable; and, uniting with the Stour at Manningtree, forms the fine harbour of Harwich. Above Ipswich it takes the name of the Gipping. Vessels of considerable burden ascend it to Ipswich.

ORWELL, a township of Rutland co., Vermont, U. S., on Lake Champlain. Pop. 1,504.—Also a township of Bradford co., Pennsylvania, 146 m. N of Harrisburg. Pop. 1,037.—Also a township of Oswego co., New York, 148 m. WNW of Albany. Pop. 808.—Also a township of Ashtabula co., in Ohio.

ORWIGSBURG, the capital of Schuylkill co., Pennsylvania, U. S., 62 m. NE of Harrisburg. Pop. 779.

ORXHAUSEN, a village of Brunswick, 3 m. W of Gandersheim, on the l. bank of the Gande.

ORZI-NOVI, a town of Austrian Italy, in the prov. of Brescia, on the Oglio, 34 m. E of Milan. Pop. 4,500.

ORZI-VECCHI, a village of Austrian Italy, in the prov. and 15 m. SW of Brescia, and 3 m. NE of Orzi-Novi. Pop. 1,020.

OSA, a river of Tuscany, in the prov. of Sienna, which rises to the W of the hamlet of Montiano, and flows SSE and then WSW to the Mediterranean, at Talamone-Vecchio, 3 m. NNW of the mouth of the Albegna.—Also a town of Russia, in the gov. and 62 m. SW of Perm, on the l. bank of the Kama. Pop. 1,000.

OSACCA, or Osaka, a city of Japan, the port of Meaco, at the embouchure of the Yedogava, in the isle of Nifon, in N lat. 35° 5′. It is the seat of an extensive trade, and one of the most flourishing cities in the empire. Its pop. is said to amount to 80,000.

OSA-DE-LA-VEGA (La), a town of Spain, in the prov. and 42 m. SW of Cuenca. Pop. 1,400.

OSA-DE-MONTREL, a town of Spain, in the prov. and 66 m. E of Ciudad-Real, on the site of the ancient *Lagosa*.

OSAGE, a river of Missouri, U. S., which flows into the Missouri, 153 m. above the confluence of the latter with the Mississippi, in N lat. 38° 35′. Its general course is W and WSW, through a rich and level country. At its junction with the Missouri it is 397 yds. wide. It is navigable for boats 600 m.; for steam-boats 200 m. Its banks are covered with timber, and possess in general a rich soil.—Also a co. of Missouri, a little SE of the centre of the state. Area 860 sq. m. Its cap. is Alexander. Pop. in 1850, 6,705.—Also the cap. of Benton co., in Arkansas, 200 m. NW by W of Little Rock.

OSAGES, a tribe of Indians in North America, who have settlements near the sources of the river of that name. They are divided into three bands, the Grand Osage, the Little Osage, and those of the Arkansas. The tribe is estimated to amount to 4,200. They have begun to pay some attention to agriculture.

OSAGE-WOMAN'S RIVER, a river of Missouri, U. S., which falls into the Missouri about 60 m. from the confluence of the latter with the Mississippi. It is 30 yds. wide at its mouth.

OSAKA. See Osacca.

OSARA, or Asara, a village in the Syrian desert,

near the r bank of the Euphrates, 30 m. SE of Kerkhissa.

OSASIO, a village of the Sardinian states, 18 m. S of Turin, in the prov. and 15 m. E of Pignerol.

OSBALDESTON, a township in Blackburn p., co. palatine of Lancaster, 4¼ m. NW by N of Blackburn. Area 980 acres. Pop. in 1831, 349; in 1851, 250.

OSBALDWICK, a parish in the N. R. of Yorkshire, 2½ m. E of York, comprising the townships of Murton and O. Area 1,740 acres. Pop. 372.

OSBANIKÉT, a village of Tartary, on the Sirr, 30 m. W of Tocat.

OSBASTON, a township in Cadeby p., Leicestershire, 1½ m. NE by E of Market-Bosworth. Area 1,230 acres. Pop. in 1831, 186; in 1851, 227.

OSBORNE ISLES, a group off the NW coast of Australia, in the E part of Admiralty gulf, in S lat. 14° 20′.

OSBOURNBY, a parish in Lincolnshire, 3 m. NW of Folkingham. Area 1,260 acres. Pop. 654.

OSCAR ISLE, one of the Ellice group, in the S. Pacific, in S lat. 8° 29′.

OSCARSTAD, a village of Sweden, 42 m. NW of Carlstad, on a small lake which communicates with Lake Wener.

OSCEOLA, a village of St. Clair co., in Missouri, U. S., 132 m. W of Jefferson city, on the S side of Osage river.

OSCH, or Oss, a town of Holland, in the prov. of N. Brabant, 12 m. NE of Bois-le-Duc. Pop. 3,500.

OSCHATZ, a town of Saxony, near the river Dollnitz, 32 m. NW of Dresden. Pop. 5,362, employed partly in woollen manufactures. In the neighbourhood is a mountain called the Culmberg, which was frequently occupied as a military station in the war of 1756.

OSCHERSLEBEN, a walled town of Prussian Saxony, in the principality of Halberstadt, 19 m. WSW of Magdeburg, on the Bode. Pop. 3,501.

OSCHIRI, a village of Sardinia, 18 m. N of Ozieri. Pop. 1,500.

OSCHITZ, a village of Bohemia, 21 m. N of Jung-Bunzlau. Pop. 600.

OSCHMIANKA, a village of Russia, in the gov. and 32 m. SE of Vilna.

OSENSOE, a lake of Norway, in the bail. of Hedenmarken. It is 15 m. in length from NW to SE, and about 1 m. in breadth, and discharges its waters by the Osenelv into the Gummen.

OSERA, or Osicerda, a village of Spain, in the prov. and 21 m. SE of Saragossa, on the l. bank of the Ebro. Pop. 275.

OSERO, or Losine, an island of Austrian Illyria, in the Adriatic, to the SW of the larger island of Cherso, with which its NE end is joined by a bridge. Its S point is in N lat. 44° 28′, E long. 14° 28′. A steep barren limestone chain runs lengthwise through it. The town of O., the ancient *Apsoros*, situated on the NE coast of the island, 15 m. SSE of Cherso, though containing only 400 inhabitants, is the see of a bishop, and contains a fine cathedral.—About 5 m. from the S end of the island is Lossin, or Lussin, a well-built town with upwards of 3,000 inhabitants, and a well-sheltered, but narrow port.

OSETES. See Ossetes.

OSETR, a river of Russia, which lies near Lipshina, in the gov. of Tula; runs E and N; and flows into the Oka, on the r. bank, near Gorodnia, after a course of 74 m.

OSGATHORPE, a parish in Leicestershire, 5 m. ENE of Ashby-de-la-Zouch, and 14 m. NW of Leicester. Area 1,220 acres. Pop. in 1831, 344; in 1851, 346.

OSGODBY, a parish in Lincolnshire, 3 m. NW by N of Market-Raisen. Area 1,710 acres. Pop. in 1831, 350; in 1851, 492.—Also a township in Lavington p., Lincolnshire, 2 m. NE by N of Corby. Area 1,150 acres. Pop. in 1831, 99; in 1851, 79.—Also a township in Hemingborough p., Yorkshire, 2 m. NE by E of Selby, and about 1 m. N of the Selby and Hull railway. Area 1,524 acres. Pop. in 1831, 170; in 1851, 185.—Also a township in Cayton p., Yorkshire, 2½ m. S by E of Scarborough, on the coast. Area 1,375 acres. Pop. in 1831, 64; in 1851, 59.

OSGYAN, a village of Hungary, in the comitat and 21 m. WSW of Gomor, and 42 m. NNW of Erlau. There is a Lutheran college here.

OSIAKOW, a town of Poland, in the woiwodie and 54 m. SE of Kalesch, obwod and 13 m. ENE of Wielun, on the r. bank of the Warthe. Pop. 180.

OSIDDA, a village of Sardinia, 8 m. SSW of Buddoso. Pop. 420.

OSIEC, a town of Poland, in the woiwodie of Siedlec, obwod and 46 m. W of Lukow, and 9 m. ENE of Czersk, in a marshy locality. Pop. 670.

OSIECZNO. See Storchnest.

OSIEK, a town of Galicia, in the circle and 8 m. S of Jaslo, near the l. bank of the Wisloka.—Also a small town of Poland, in the gov. and obwod and 20 m. SW of Sandomir, and 22 m. S of Opatow, near the l. bank of the Vistula, in a marshy locality. Pop. 590.—Also a town of Poland, in the gov. of Pollachia and obwod of Lukow. Pop. 1,000.

OSILO, a town of Sardinia, in the div. of Capo-Sassari, prov. and district and 6 m. E of Sassari, on a hill commanding an extensive and fertile plain. Pop. 2,000. On an adjacent height are the ruins of a castle belonging to the Doria family.

OSIMA, an island of Japan, near the S coast of the island of Nifon and prov. of Kinokuni, a little to the E of Cape Diun, the S extremity of Nifon.—Also an island of Japan, in the sea of that name, to the SW of the island of Jesso, in N lat. 41° 31′ 30″, and E long. 139° 19′. It is nearly circular in form, and near the centre has several rocky mountains, from which smoke is constantly emitted, and which occasionally pour out streams of lava.

OSIMO, a town of the Papal states, in the deleg. and 11 m. S of Ancona, near the l. bank of the Musone, beautifully and salubriously situated on a hill. Pop. 6,500. It is the see of the bishopric of Osimo and Cingoli, is well-built, and has a fine episcopal palace, and several churches and convents. It has manufactories of woollen fabrics. Corn and silk form its chief articles of trade. This town after a long resistance was taken by Belisarius from the Goths.

OSINOVA, a town of Russia in Europe, in the gov. of Voronej, district and 24 m. N of Starobielsk.

OSIO-DI-SOTTO, a village of Austria in Lombardy, in the prov. and 8 m. SSW of Bergamo, district and 1½ m. W of Verdello. Pop. 1,019.

OSKOL, a river of Russia in Europe, which has its source in the gov. of Kursk, a little to the SE of Tim, passes Staroi-Oskol and Novoi-Oskol; traverses the W part of the gov. of Voronej; enters that of Kharkov; and passing the Kupiansk, after a course in a generally S direction of about 210 m., throws itself into the Donetz, on the l. bank, 9 m. SE of Izioum. It is navigable, and abounds with fish.

OSKOL (Novoi), a district and town of Russia in Europe, in the gov. of Kursk. The district is flat and possesses little wood, but is generally fertile. Pop. 79,155. The town is 99 m. SE of Kursk, on the l. bank of the Oskol. Pop. 5,000. The environs are extremely fertile. The town, which was built in 1656, was peopled by colonists from several surrounding districts, but chiefly from that of Oskol-Staroi.

OSKOL-STAROI, a district and town of Russia in Europe, in the gov. of Kursk. The district is

scantily wooded, but produces in abundance grain and fruit, and pastures large herds of cattle. It has numerous distilleries. Pop. 77,810. The town is 78 m. ESE of Kursk and 69 m. WSW of Voronej, on a mountain near the r. bank of the Oskol, and at the junction of the Oskoletz. Pop. 6,000. It has several suburbs, 8 churches and a convent. It has an active inland trade. In the environs are extensive orchards and numerous tile-kilns.

OSLASTON, or Oslston and Thurvaston, a township in the p. of Sutton-on-the-hill, Derbyshire, 6¼ m. W by N of Derby. Area with Sutton-on-the-hill, 2,542 acres. Pop. in 1841, 441; in 1851, 524.

OSLAWAN, or Oslawany, a town of Austria in Moravia, in the circle and 14 m. W of Brunn, on the r. bank of the Oslawa, an affluent of the Iglawa. Pop. 1,162. On an adjacent height is an old castle. In the environs are extensive coal-mines.

OSLI, a town of Nubia, in Sheygheia, on the l. bank of the Nile, 9 m. S of Hannek.

OSMA, a town of Spain, in Old Castile, in the prov. and 33 m. WSW of Soria, and partido of Burga-del-Osma, at the foot of a mountain on the r. bank of the Ucero. Pop. 617. It is the see of a bishopric, and has a parish church, a university, a custom-house, and a public granary. A few traces only of its ancient walls are now to be seen. It has some manufactories of linen fabrics. This town, the *Uxama* or *Oxoma* of the Romans, is of great antiquity, and contains numerous Roman remains, of which a tower of a fortress and a cistern are in a good state of preservation. It was taken by Alphonso I. in 764 from the Moors; and again in 1019 by D. Sancho-de-Garcia, count of Castile.

OSMA, a river of Turkey in Europe, in Bulgaria and sanj. of Rustchuk, which has its source on the N side of the Balkan; runs N; passes Loftsha; and after a course of 120 m., throws itself into the Danube, on the r. bank, a little above Nikopol. It is the ancient *Osmus*.

OSMAN-BAZAR, a town of Turkey in Europe, in Bulgaria, in the sanj. and 42 m. SSE of Rustchuk. It has manufactories of *abas*, a coarse species of woollen cloak.

OSMANJIK, a town of Turkey in Asia, in the pash. and 150 m. NW of Sivas, sanj. and 45 m. N of Tchurum, on the r. bank of the Kizil-Irmak, which is here crossed by a fine bridge of 10 arches. It consists of about 450 houses, inhabited by Turks, and has an old castle on an isolated rock. The environs are adorned with gardens, orchards, and vineyards. This place is generally supposed to be the ancient *Pimolis*.

OSMAN-KEUI, a village of Turkey in Asia, in the pash. and 45 m. E of Diarbekir, on the l. bank of the Tigris, and on the slope of a rocky mountain, remarkable for the number and beauty of the excavations which are found in its acclivities.

OSMASTON, a parish in Derbyshire, 2¼ m. SE of Ashborne. Area 1,254 acres. Pop. in 1831, 289; in 1851, 366.—Also a parish in Derbyshire, 2½ m. SE by S of Derby, crossed by the Derby canal, and in the line of the Birmingham and Derby railway. Area 1,254 acres. Pop. in 1831, 172; in 1851, 125.

OSMINGTON, a parish in Dorset, 5¼ m. SE of Dorchester. Area 2,307 acres. Pop. in 1831, 421; in 1851, 485.

OSMOTHERLEY, or Osmunderley, a parish in the N. R. of Yorkshire, 6 m. ENE of North-Allerton, comprising the townships of Ellerbeck, Harsley West, Thimbleby, and Osmotherley. Area 7,220 acres. Pop. in 1831, 1,417; in 1851, 1,253.

OSMOTHERLY, a township in Ulverstone p.; co.-palatine of Lancaster, 2 m. NW by N of Ulverstone. Area 1,140 acres. Pop. in 1831, 293; in 1851, 325.

OSNABURG, or Osnabruck, a province of Hanover, lying between the grand-duchy of Oldenburg and the Prussian prov. of Westphalia. The prov. embraces the principality of O., with an area of 903 sq. m.; the county of Lower Lingen, comprising 127 sq. m.; the duchy of Arenberg-Meppen, with an area of 692 sq. m.; and the county of Bentheim, with an area of 399 sq. m. The pop. of the whole was 263,645 in 1833, and 269,747 in 1842, of whom the majority were Lutherans, and the rest Catholics. A large proportion of this principality consists of heaths, moors, and sandy eminences; and in no part is the soil fertile. The grain raised is chiefly rye, oats, and buck-wheat. Hemp and flax are extensively grown, but the quality is inferior. Of the coarse linen so well known by the name of Osnaburgs great quantities are manufactured, especially in the principality and in Lingen, from home-spun thread. The annual value of this linen, and of the linen yarn spun in the principality, was several years ago computed at nearly £200,000.—It is divided into six bailiwicks. This prov. was formerly the territory of a bishop, the see having been founded it is said by Charlemagne. After the Reformation, many of the inhabitants embraced the Lutheran faith; and it was arranged in the treaty of Westphalia that the bishop should be alternately a Catholic and a Lutheran, the chapter being left at liberty in their choice of the former, but limited in the election of a Protestant to the family of Brunswick-Luneburg. The Catholic bishop was generally an aged member of the chapter, and the Protestant a young prince. In 1802, it was agreed that the bishopric should devolve in perpetuity on the house of Hanover, as a compensation for certain territorial cessions. It was annexed in 1807 to the kingdom of Westphalia, but restored to Hanover in 1814.

Osnaburg, the capital of the above principality, is situated on the river Hase, a tributary of the Ems, 76 m. W by S of Hanover. Pop. 11,000. It is divided into an old and a new town, and is surrounded with walls and ditches. It is irregularly built, and many of the houses are very low. The principal buildings are the cathedral, which possesses several relics of antiquity; the town-house, in which was concluded the peace of Westphalia in 1648, O. having been the place of conference for the Protestant ambassadors, whose portraits are still preserved in the town-house; and the court of justice. The other public buildings are two Lutheran and two Catholic churches, a Lutheran orphan-house, three hospitals, a work-house, a Catholic and a Lutheran gymnasium with each 10 professors, and a house-of-correction. There are here manufactories of coarse woollens, leather, paper, and tobacco, and several large linen bleachfields. O. is the see of a Roman Catholic vicar-general; and the seat of the provincial government and chancery.

OSNABURG, a township of Stark co., in Ohio, U. S., 129 m. NE of Columbus. Pop. 2,330.

OSNABURG. See Maitea.

OSOGNA, a village of Switzerland, in the cant. of Ticino, 6 m. N of Bellinzona, on the l. bank of the Ticino. Pop. 262.

OSOPO, a fortress of Austrian Italy, in the prov. and 15 m. NW of Udine, on the l. bank of the Tagliamento.

OSORNILLO, a village of Spain, in the prov. and 27 m. NNE of Palencia, on the r. bank of the Pisuerga. Pop. 270.

OSORNO, a ruined town of Chili, on the l. bank of a stream of the same name, an affluent of the Bueno, 24 m. from the sea, and 212 m. S of La Conception. It was burnt in an incursion of the Araucanian Indians.—Also a volcanic mountain

in the Andes chain, in S lat. 40° 36′. It is almost a perfect cone in outline, and stands out in front of the cordillera clothed in eternal snow, yet emitting volumes of smoke, and when seen in activity from the deck of the *Beagle*, 80 m. off, presenting a most magnificent spectacle. "At midnight it appeared like a bright star, which gradually increased in size for three hours; and then, with the aid of a telescope, dark objects could be seen in constant succession, in the midst of a red glare of light, to be thrown up and to fall down again."

OSORNO-LA-MAYOR, a village of Spain, in the prov. and 32 m. N of Palencia, on the r. bank of the Abanades. Pop. 700.

OSPEDALETTO, a village of Austrian Lombardy, in the prov. of Lodiet-Crema, 3 m. W of Casal-Pusterlengo.

OSPEREN, a village of Belgian Luxemburg, 15 m. ESE of Diekirch. Pop. 550.

OSPICIO (Santo), a fortified town and harbour of the Sardinian states, in the prov. and 4 m. ESE of Nice.

OSPITALETTO, a village of Austrian Lombardy, in the prov. and 7 m. W of Brescia. Pop. 1,400.

OSPRINGE, a parish of Kent, 1 m. WSW of Feversham. Area 2,798 acres. Pop. in 1851, 1,111.

OSRUSHNAH, a town of Bokhara, capital of a district of the same name, 65 m. NNW of Samarcand. It is said to have had at one period of its history 70,000 inhabitants.

OSS. See Osch.

OSSA. See Osa.

OSSA, a river of Western Prussia, which rises in the circle of Rosenburg, and falls into the Vistula, 3 m. above Graudenz, after a sinuous course of 52 m. —Also a town on the S coast of the island of Gilolo, in N lat. 0° 45′, E long. 128° 22′, on the S side of a great bay of the same name, entering between Cape Salaway and Cape Tabo. It affords every convenience for ships touching at it for water, provisions, or spars.

OSSA. See Kissova.

OSSABAW, an island near the coast of Georgia, U. S., at the mouth of the Ogechee. It is low and sandy, and 20 m. in circumf.

OSSAU (Gave d'), a river of France, in the dep. of Basses-Pyrenees, which rises in the Pic-du-Midi; runs N to Arudy; then NW; and joins the Aspe, on the r., at Oleron.

OSSEG, a village of Bohemia, 20 m. NW of Leitmeritz. It has a large woollen manufactory, and a splendid abbey.

OSSEGHEM, a commune of Belgium, in the prov. of Brabant, and dep. of Molenbeek-Saint-Jean. Pop. 527.

OSSEL, a commune of Belgium, in the prov. of Brabant, and dep. of Brusseghem. Pop. 328.

OSSELLE, a village of France, in the dep. of Doubs, cant. and 3 m. WSW of Boussiere, on the l. bank of the Doubs. Pop. 520.

OSSEMEREE, a commune of Belgium, in the prov. of Namur, and dep. of Serville. Pop. 128.

OSSENBROEK, a commune of Belgium, in the prov. of East Flanders, and dep. of Oordeghem. Pop. 133.

OSSENDRECHT, a village of Belgium, in North Brabant, 13 m. N by W of Antwerp.

OSSENWEG, a commune of Belgium, in the prov. of Brabant, and dep. of Leau. Pop. 105.

OSSERO. See Osero.

OSSETES, or Osetintzy, a people who inhabit the N part of the mountains of Caucasus, from the Terek to the Phasis. They call themselves Ir or Irones; and have a language peculiar to themselves, composed in a great measure of Persian, mixed with some Slavonic and Finnish words. They are nominally subject to Russia. They have princes and a hereditary nobility, and can muster on an emergency 10.000 horsemen, but have scarcely any village with more than 100 inhabitants.

OSSETT, a township of Dewsbury p., in York shire, 3½ m. W of Wakefield. Area with Gauthorpe, 3,019 acres. Pop. in 1831, 5,325; in 1851, 6,266.

OSSI, a village of Sardinia, 3 m. SSE of Sassari. Pop. 1,500.

OSSIAC, a village of Austrian Illyria, in Carinthia, on a lake also called Ossiac, 15 m. WNW of Klagenfurth.

OSSIAN, a township of Alleghany co., in New York, U. S., 244 m. W by S of Albany. Pop. 938.

OSSIERI. See Osieri.

OSSIG, a village of Prussian Silesia, 12 m. NNE of Liegnitz. Pop. 350.

OSSIPEE, a township of Carroll co., in New Hampshire, U. S., 52 m. NNE of Concord, with a village of the same name, on the W side of Ossipee lake. Pop. 2,170.—Also a lake and river in Strafford co., New Hampshire. The lake has an area of 7,000 acres; and discharges itself by the river into the Saco, in Maine, 15 m. E of Lake Ossipee.

OSSIPEE (Little), a river of Maine, U. S., which runs into the Saco, 12 m. below the larger Ossipee.

OSSLAU, a village of Saxe-Coburg-Gotha, 3 m. NE of Coburg, on the l. bank of the Itz. Pop. 240.

OSSMANSTEDT, a village of the grand duchy of Saxe-Weimar, 6 m. NE of Weimar.

OSSOGNE, a commune of Belgium, in the prov. of Namur, and dep. of Havelange. Pop. 160.—Also a commune in the prov. of Hainault, and dep. of Thuillies. Pop. 130.

OSSOLA, a province of the Sardinian states, in the division of Novara; bounded on the N by Switzerland; on the SE by the prov. of Pallanza; and on the S by that of Valsesia. It is covered with ramifications of the Alps, amongst which lie the valleys of Formazza, Antegorio, Bugnanco, Antrona, and Anzasca. It is subdivided into 4 mandementi and 64 communi.

OSSOWIEC, a village of Poland, in the obwodie and 27 m. SW of Augustowo, on the r. bank of the Bobra.

OSSUN, a town of France, in the dep. of Hautes-Pyrenees, 7 m. SW of Tarbes. Pop. 3,016.

OSSUNA. See Osuna.

OSTABAT, a town of France, in the dep. of Basses-Pyrenees, on the Bidouze, 6 m. S by W of St. Palais.

OSTALRICK. See Hostalrich.

OSTANITZA, a town of Albania, in the sanjak and 26 m. NNW of Joanina. It is a poor town of 300 houses, occupying a superb site, and has upwards of 20 ruined churches.

OSTAPA, a town of Russia, in the gov. and 36 m. W of Poltava, on the r. bank of the Psiol.

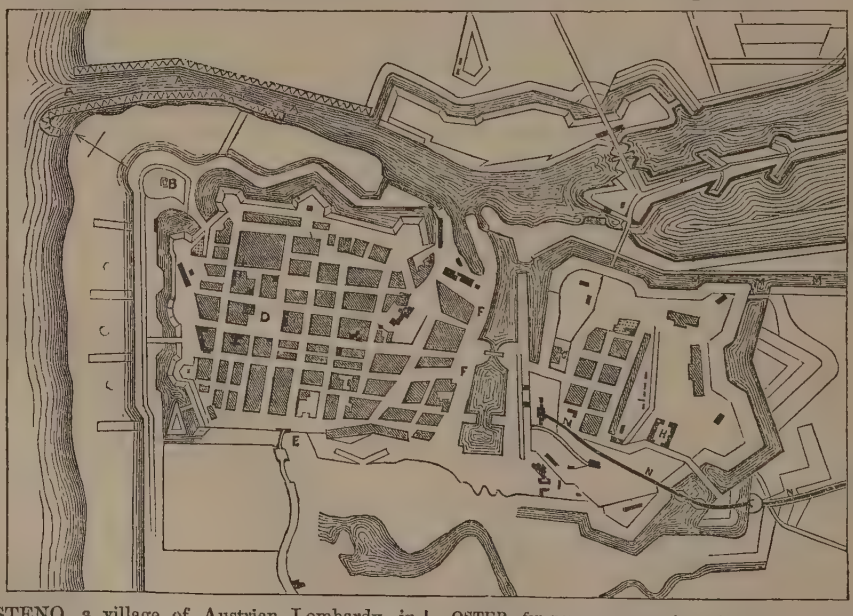
OSTASHKOV, a town of Russia, in the gov. and 110 m. W of Tver, in N lat. 57° 9′, E long. 33° 12′. Pop. 7,000. It is nearly surrounded by Lake Selig, which communicates with the river Volga by means of a canal, and gives the town the advantage of water-carriage to Novgorod and St. Petersburg. It has a trade in corn, wood, hides, tallow, wax, honey, and salt fish. The chief employments are the manufacture of leather, and the building of barks for the navigation of the Volga.

OSTDORF, a village of Würtemberg, in the bail. and 3 m. NNW of Ballingen. Pop. 950.

OSTE, a river of Hanover, which rises in the principality of Luneburg, in an extensive marsh; flows through the province of Bremen; and falls into the Elbe on the l. bank, 3 m. NE of Otterndorf, after a NW course of 80 m.

OSTEN, a village of Hanover, on the river Oste, 11 m. NW of Stade.

OSTEND, or Ostende, in Flemish and Dutch Oostende, a town of Belgium, in the prov. of W. Flanders, 14 m. W by N of Bruges, and 25 m. ENE of Dunkirk, on the coast, in N lat. 51° 14′, E long. 2° 55′. Pop. in 1835, 12,161; in 1845, 14,506. Its old fortifications, a great earthen mound and a moat around the town, are still kept up; and the approach to it may be rendered very difficult by inundating the surrounding country, which is low and perfectly level. One large battery, called Fort Wellington, is of modern construction. The streets are straight, and the houses in general well-built, but deficient in height. Their architecture is "neither Dutch, French, nor Flemish, but a mixture of all three;" and they are painted with all kinds of gaudy colours. In 1834 O. contained 1,403 houses, 57 streets, 5 squares, 3 churches, and 6 schools. It has no public edifices of importance except the town-house, and the baths on the levee or long rampart originally raised to protect the town from inundation by the sea. The Western gate, constructed in 1819, forms a handsome entrance.—The flat shore of Flanders has few good harbours: that of O. is reckoned one of the best; but it is formed only by the tide entering the mouth of a small river, and ships of burden can only enter at high water. A quay has been constructed, flanking the sides of the passage with extensive timber piers. It is cleared at low water by opening the sluices, and discharging in a copious stream the water collected on the land-side during the influx of the tide. At the inner extremity of the harbour, basins have been constructed for the accommodation of the canal boats.—O. has sugar and salt refineries, sailcloth and rope works, distilleries, soap works, and building docks. Its commercial prosperity was greatest between 1780 and 1794, having then been the residence of a number of merchants, chiefly English, attracted thither by the privilege of trading with India and elsewhere under the Austrian flag. On its capture by the French in 1794 the merchants transferred their business chiefly to Hamburg and Copenhagen, and the commerce of O. was of little importance for twenty years previous to 1814. The number of merchant vessels that entered the port in 1815 was 700, exclusive of packet-boats. In 1838, 581 vessels = 72,943 tons entered the port. In 1849, 444 vessels = 48,918 tons entered, and 401 = 45,608 tons cleared. The trade of O. is now chiefly confined to exporting the produce of Flanders, and, in return, supplying it with colonial and other foreign goods. The chief articles of export are wheat, clover-seed, flax, cattle, tallow, and hides. The linens shipped here come mostly from Ghent and Bruges, and a good deal of the trade of these places passes by way of O. The imports are coffee, sugar, tobacco, rum, oak bark, dyewoods, spices, salt, tallow, Spanish wool, French wines, and British cottons. The value of goods placed in the bonded warehouses of O. in 1845 was 3,332,000 francs; in 1848, 1,276,000 fr.—O. is 153 m. from London, and 106 m. by railway from Brussels. It is connected by an almost continuous line of railway, with the principal cities of Germany and Austria. It also communicates by a large canal with Bruges and Ghent.—In 1372, O. was a mere fishing village. It was enclosed with walls in 1445, and regularly fortified in 1583. O. is remarkable for a very long and obstinate siege, from 1601 to 1604, by the Spaniards, to whom it at last capitulated on honourable terms, after nearly 100,000 men had found a grave within and around its walls. In 1798, a detachment of English troops landed here, and destroyed the works of the Bruges canal; but, the wind shifting before they could reimbark, their retreat was cut off, and a part of them were obliged to surrender to the French. In September 1826, the explosion of a powder magazine seriously damaged the town.—In the subjoined chart the entrance to the fort is marked *a a a;* the lighthouse *b;* the levee *c;* the Grande Place *d;* the West gate *e;* the Quai de Empereur, *f f;* the arsenal *g;* the barracks *h;* the Ostend canal *m m m;* the railway to Brussels and Cologne *n n n.*



OSTENO, a village of Austrian-Lombardy, in the delegation and 15 m. N of Como, district and 5 m. SW of Porlezza, on the E bank of Lake Lugano.

OSTER, for names commencing with this word not found amongst the following, see Oester.

OSTER, a commune of Belgium, in the prov. of Luxemburg, and dep. of Odeigne. Pop. 142.

OSTER, or Ostr, a river of Russia in Europe, in the gov. of Tchernigov. It takes its rise in the district and to the SE of Borzna; runs W; passes Negin and Kozéletz; and after a course of about 108 m. throws itself into the Desna, on the r. bank, at a town of the same name. Several towns were founded on its banks by Vladimir I.—Also a town, capital of a district in the same gov., 45 m. SSW of Tchernigov, on the l. bank of the Desna, at the confluence of the Oster. Pop 2,000. It contains 4 churches, and the ruins of several convents and of the ancient dwellings of its Polish lords. It has a considerable trade and extensive fisheries. This town occupies a portion of the site of the ancient Gorodetz, which was twice ruined by the Polovtzis.

OSTERACH, a river of Hohenzollern-Sigmaringen, which has its source in Würtemberg, and flows into the Danube.

OSTERBERG, a village of Bavaria, in the circle of Swabia, to the W of Babenhausen. Pop. 640.

OSTERBRUCH, a village of Hanover, in the gov. and 25 m. NW of Stade, and 5 m. SE of Otterndorf. Pop. 700.

OSTERBURG, a town of Prussia, capital of a circle of the same name, in the prov. of Saxony, regency and 47 m. N of Magdeburg, on the Uchte. Pop. in 1837, 2,137. It has an hospital, and contains a brewery and a distillery of brandy. The circle comprises an area of 147 sq. m., and 28,494 inhabitants.

OSTERBURKEN, or Osterbarken, a town of Baden, in the circle of the Lower Rhine, amt and 9 m. SE of Buchen, on the Kirnaubach. Pop. (Cath.) 1,106.

OSTER-CAPPELN, a market-town of Hanover, in the gov. and principality, and 9 m. NE of Osnabruck. Pop. 516. It has a Catholic church.

OSTERDALEN, a parish of Norway, in the amt of Hedemarken, on the Glommen.

OSTER-EMS. See Ems.

OSTERENDE-OTTERNDORF, a parish of Hanover, in the gov. and 27 m. NW of Stade, and 1 m. E of Otterndorf. Pop. 1,320.

OSTERFELD, a town of Prussia, in the prov. of Saxony, regency and 19 m. SSW of Merseburg, circle and 8 m. S of Weissenfels, on a small river. Pop. in 1837, 1,179.

OSTERFINGEN, a village of Switzerland, in the cant. and 8 m. WSW of Schaffhausen, and district of Unter-Klettgau. Pop. 557. It has mineral baths.

OSTERHOFEN, a town of Bavaria, in the circle of Lower Bavaria, presidial and 9 m. NW of Vilshofen, and 18 m. NNE of Landau, on the Danube. Pop. 1,100. On an adjacent mountain is an ancient church of remarkable structure.

OSTERHOLZ, a market town of Hanover, in the gov. and 39 m. SW of Stade, and 11 m. N of Bremen, near the marsh of Düvels-moor. Pop. 740.

OSTERIA, a village of the Papal States, in the delegation of Forli, on the shore of the Adriatic, SE of Rimini.

OSTERLAND, an ancient country of Germany, in Saxony, between the Saale on the W, and the circle of the Erzgebirge on the E, and now comprised in the grand-duchy of Saxe-Weimar, and the duchies of Saxe-Altenburg and Saxe-Meiningen. Its chief towns were Neustadt-an-der-Orla and Altenburg.

OSTERNBURG, a parish of the duchy of Oldenburg, in the circle and bail., and 1 m. SE of Oldenburg. Pop. 1,300.

OSTERODE, a town of Hanover, in the gov. and 36 m. SSE of Hildesheim, and principality of Grubenhagen, 21 m. NE of Göttingen, in the Harz mountains, between the Söse and the Apenke. Pop. in 1845, 5,197. It is enclosed by walls; and has 3 suburbs, 3 churches, 2 hospitals, and a gymnasium. It possesses manufactories of linen, woollen, and cotton fabrics, white lead, nails, needles, wooden ware, soap, tobacco, and comfits, a copper foundery, several tanneries, and several breweries and distilleries. In the vicinity are quarries of chalk, alabaster, and gypsum.—Also a circle and town of Prussia, in the prov. of East Prussia, and regency of Königsberg. The circle comprises an area of 213 sq. m., and 27,496 inhabitants. The town is 75 m. SSW of Königsberg, at the confluence of the Drewenz with the lake of that name. Pop. 2,600. It is enclosed by walls, and has 3 suburbs, and 3 Lutheran churches. It has manufactories of cloth, hats, and of brandy, a saw-mill, and a brewery.

OSTER-RIISOER, or Oester-risoeer, a town of Norway, in the diocese of Christiansand, and amt of Nedenaes, on a tongue of land which projects into the Cattegat, 24 m. NE of Arendal, and 105 m. SW of Christiania. Pop. 1,794. It has a good port, and carries on an active trade in wood and iron. In the environs are 2 extensive forges.

OSTERSTADE, a marshy tract in Hanover, in the gov. of Stade, duchy of Bremen and bail. of Hagen. It affords pasturage to large numbers of cattle and horses.

OSTERSUND, a laen and town of Sweden, in the prov. of Jamtland. The laen or administrative prov. comprises an area of 435 Swedish sq. m., of which $\frac{11}{15}$ths have an alt. of 721 yds. above sea-level. Pop. in 1840, 45,769; in 1845, 49,077. It is mountainous in the W, towards the confines of Norway, but is elsewhere flat. Its produce in grain is insufficient for local supply, and pasturage is also scarce. Wood, iron, and copper, form its chief productions. It has several foundries and saw-mills, and some manufactories of linen and woollen fabrics. The laen comprises 3 hærads, 3 fogderi, and 58 parishes.—The town, which is the cap. of a laen of the same name, is 357 m. NNW of Stockholm, on Lake Stor, opposite the small island of Froson. Pop. 418.

OSTERVILLE, a village of Barnstaple township and co., in the state of Massachusetts, U. S., 72 m. SSE of Boston, on the E side of Oyster bay.

OSTERWALD, a village of Hanover, in the principality of Kalenberg, bail. and 4 m. NE of Lauenstein, and 20 m. SSW of Hanover, in a mountainous and woody locality. Pop. 360. It has a glass-work and a tile-kiln, and in the vicinity is a coal-mine.

OSTERWICK, a town of Prussia, in the prov. of Saxony, reg. and 44 m. WSW of Magdeburg, and circle of Halberstadt, on the Ilse. Pop. in 1837, 3,104. It is enclosed by walls, and has two churches and an hospital, and manufactories of cloth, linen, hats, and hosiery, several tanneries, a brewery, and a distillery of brandy.

OST-FRISE, or Ost-Friesland. See Friesland.

OSTHAMMER, a small seaport town of Sweden, in the laen and 65 m. NE of Stockholm, on the Aland's-Haff, opposite the island of Sodero. Pop. 550.

OSTHAUSEN, a village of the duchy of Saxe-Meiningen, to the W of Krannickfeld. Pop. 350.

OSTHEIM, a commune of France, in the dep. of the Upper Rhine, and cant. of Kayserberg, 8 m. N of Colmar, on the Techt. Pop. in 1841, 1,869.

OSTHEIM (Klein), a village of Bavaria, in the circle of Lower Franconia, presidial and 5 m. NW of Aschaffenburg, on the r. bank of the Main. Pop. 860. Cabbage is extensively cultivated in the environs.

OSTHEIM (Gross), a village of Bavaria, in the circle of Lower Franconia, presidial and 8 m. NNW of Obernburg, on the Radheim. Pop. 1,796.

OSTHEIM-VOR-DER-RHON, a town of the grand-duchy of Saxe-Weimar, in the principality and 39 m. SSE of Eisenach, on the Streu. Pop. 2,529. It is enclosed by walls, is well-built, and has a small college and an hospital. It has several spinning-mills and manufactories of linen, and has some trade in wine. In the vicinity are the ruins of the castle of Lichtenberg.

OSTHOFEN, a market-town of the grand-duchy of Hesse-Darmstadt, in the prov. of the Rhine, on the r. bank of the Muhl, 6 m. NNW of Worms, and 23 m. SSE of Mayence, on the Rhine. Pop. 2,740. It has a sulphureous spring.

OSTIA, a town of the Papal states, situated on the l. bank of the S branch of the Tiber, near its influx into the Mediterranean, 13 m. SW of Rome, in N lat. 41° 45′. Pop. 200. It is unhealthy, from the vicinity of the Pontine and other marshes. In the neighbourhood are extensive salt-works. O. was originally founded in 634 B. C. It was situated at the mouth of the Tiber, and as the supplies for the capital arrived by the river, it was of importance to improve the navigation, and to provide for the shelter of the fleet which usually lay in the roadstead. Accordingly the emperor Claudius determined to construct a new harbour, entirely independent of the river, but at the same time having a connection with it. The general plan of this work, as described by Suetonius, consisted of an extensive outer harbour, formed by two artificial moles, each projecting about 1,900 ft. into the sea, enclosing a space of about 130 acres. Between the extremities of the moles was situated another detached mole, which formed a breakwater, supported a lighthouse, and gave two entrances to the harbour, across which chains could be drawn to form a closed port in time of war. A small inner harbour was also constructed, in which vessels could always remain afloat. This covered about 7 acres, and communicated with the Tiber by means of two parallel canals furnished with stop-gates, in order that the water of the river might be turned through the harbour for scouring away the muds, or for other purposes. The walls of the moles were constructed upon arches, so as to give free access to the current; but at the same time they were sufficiently solid to break the sea, and to produce tranquillity within. This was very necessary; for, from the geological condition and the geographical position of O., the coast was subject to constant advance from the alluvial deposit brought down by the Tiber. By this means a delta has constantly been in progress of formation, and in the course of 2,480 years the line of shore has advanced about 3 m. 600 yds. All the attempts to improve the entrance of the Tiber were by this deposit rendered completely abortive. Eventually the ports of Claudius and of Trajan suffered the same fate; and although the works at O. were considered by the Romans as their greatest labour, they were of necessity abandoned, and the harbour of *Centum Cellæ* or Civita-Vecchia was constructed as a substitute. The site of the ancient O. was a little elevated above the surrounding sand and marshes. It is now marked by heaps of ruined buildings. The modern fort or castle consists of 3 lofty but ruinous brick towers, united by a curtain, and surrounded by a ditch.

OSTIAKS, a people of Siberia, forming a considerable proportion of the native race by which that region is peopled. The greater number are collected upon the Obi, in the gov. of Tobolsk, and extend northward along that river to the frontier of the Samoiedes. Another large section are scattered along the banks of the Jenisei. The O. are generally rather under than above the middling size; their figure is slender; their hair is commonly of a light red or yellow colour, and allowed to float loosely over their head. Fish forms their chief article of subsistence. Some of the richer classes have herds of rein deer, and even of cattle. Before the Russian conquest, the O. were governed by princes or hereditary chiefs, who still administer justice among them, though they enjoy no revenue. The obedience exacted from them by the Russian government consists chiefly in the payment of their tribute of furs. Their language has considerable affinity with that of the Finns, but still more with that of the Voguls, and has recently been ascertained to bear much affinity to the Hungarian. Some of them have submitted to Christian baptism; but the great majority still adhere to their ancient pagan or Shaman rites.

OSTIANO, a town of Austrian Italy, in the deleg. of Mantua, on the l. bank of the Oglio, 13 m. NE of Cremona. Pop. 5,400.

OSTIEN (Saint), a village of France, in the dep. of Haute-Loire, cant. and 3 m. NE of Saint-Julien-de-Chapteuil. Pop. 1,480.

OSTIGLIA, a village of Austrian Italy, in the prov. of Mantua, on the N bank of the Po, near the junction of the Mincio, 12 m. SW of Legnago. It represents the ancient *Hostilia Vicus*.

OSTIZ, a village of Spain, in the prov. and 9 m. NNE of Pampeluna. Pop. 300.

OSTR, a river of Russia, which rises in the gov. of Smolensk, and joins the Soja on the l. bank, at Kholm, after a SW course of 70 m.

OSTRACH, a village of the principality of Hohenzollern-Sigmaringen, 12 m. SE of Sigmaringen, on the Oster, a small affluent of the Danube. Pop. 1,100. In 1799, a French army under Jourdan was defeated here by the Austrians under the archduke Charles.

OSTRAU, or Ostrawa, a town of Moravia, on an island in the river March, 7 m. SSW of Hradisch. Pop. 2,140.

OSTRAU (Mahrisch), a village of Moravia, 6 m. SSW of Oderberg, on the l. bank of the Ostrawitza. Pop. 1,690.

OSTRAWITZA, a river of Moravia, which rises on the frontiers of Hungary, and joins the Oder on the r. bank, 2 m. N of Mahrisch-Ostraw, after a NNW course of 40 m.

OSTRITZ, a town of Saxony, on the Queiss, 7 m. S of Gorlitz, on the l. bank of the Neisse. Pop. 1,478.

OSTRO (Point), a cape on the coast of Dalmatia, 18 m. NW of Cattaro, in N lat. 42° 23′, E long. 18° 31′, at the W entrance of the gulf of Cattaro.

OSTROG, a town of Russian Poland, in the gov. of Volhynia, on the l. bank of the Vallia, an affluent of the Goryn, 120 m. ENE of Lemberg. Pop. 6,400. It is the see of the Greek archbishop of Volhynia and Jitomir. It has several Greek and Roman Catholic churches, a priory of the order of Malta, a college of Jesuits, and a military school. Its annual fairs are well-attended. The surrounding district is fertile and well-wooded.

OSTROGOISK, a town of Russia, in the gov. and 60 m. S of Voronetz, on the l. bank of the Sosna, in N lat. 51° 40′. It contains 11,000 inhabitants, a part of whom are Cossacks. It contains 10 churches, and a number of shops and magazines. At the fairs held here, great numbers of horses and oxen, brought hither from different parts of the Ukraine, are bought for the markets of Moscow and St. Petersburg. Tallow forms an important article of traffic.

OSTROLENKA, a town of Poland, on the l. bank of the Narew, 21 m. WSW of Lomza. Pop. 1,698, chiefly Jews. On the 25th February 1806, a corps of Russians suffered a severe loss here, in an action with the French; and here also, in 1831, the Poles obtained an advantage over the Russians.

OSTROPOLE, a village of Russian Poland, in the gov. of Volhynia, on the l. bank of the Slutsh, 60 m. SW of Jitomir. Pop. 1,142.

OSTROSATZ, a town of Bosnia, in the sanj. and 38 m. W of Bagna-Luka, on the l. bank of the Unna.

OSTROTCHATZ, a town of Bosnia, in the Her-

zegovina, 9 m. N of Mostar, on the l. bank of the Narenta.

OSTROV, a town of Russia, in the gov. and 36 m. S of Pskov, situated partly on an island in the river Velikaja, and partly on the r. bank of the stream. Pop. 900.

OSTROVA, an island of the Danube, belonging to the military or frontier part of the Banat of Temesvar, 12 m. below Semendria.—Also a town of European Turkey, in the sanj. of Monastir, on a small lake 45 m. WNW of Salonika.

OSTROVETZ, a town of Russia, in the gov. and 30 m. ESE of Vilna.

OSTROVIZZA, a town of Dalmatia, in the co. and 21 m. ESE of Zara.

OSTROVNO, a village of Russian Lithuania, on the Southern Dvina, 17 m. W of Vitebsk.

OSTROVSKUIA, a village of Russia, near the confluence of the Don and the Medvieditza, in the Don Cossacks territory.

OSTROW, a town of Prussian Poland, 49 m. NE of Breslau. Pop. 4,500.—Also a town of Poland, 22 m. NE of Lublin, on the r. bank of the Tysmienica. Pop. 1,500.—Also a village of Poland, in the obwodie and 26 m. SE of Ostrolenka. Pop. 580.

OSTROWIEC, a village of Poland, in the obwodie and 9 m. N of Opatow, on the l. bank of the Kamiena. Pop. 1,000.

OSTROWNOJE, a Russian settlement, consisting of a few huts surrounded by a palisade, on an island in the Lesser Aniuj, in N lat. 68°, E long. 196° 10′. A great annual fair is held here in the month of February, at which Russian merchants exchange tobacco, hardware, and beads for furs and walrus-teeth with the Tschuktschi.

OSTRUMJA, or STROMJEA, a town of Turkey, in the sanjak and 60 m. SSW of Ghiustendil, near the r. bank of the Radovitz. Pop. 1,500. In the neighbourhood are hot and cold baths.

OSTUNI, a town of Naples, in the province of Otranto, 30 m. NE of Taranto, and within 4 m. of the Adriatic. Pop. 6,000. It is the see of a bishop; but is remarkable for little except the number of its churches and convents. Its Latin name was *Hostunum* or *Speluncæ*.

OSUNA, a town of Spain, in the prov. and 36 m. ESE of Seville. Pop. 17,556. It is situated at the foot of a hill that screens it to the eastward, and the summit of which is occupied by an old castle. The streets are wide and well-paved, and the houses particularly good. It contains a university which was suppressed in 1824, and 14 convents; but has little or no trade. The vicinity is fruitful in olives and corn, and is nearly level in surface all the way to Seville. It is the *Urso* or *Genua Ursorum* of the Romans.

OSVEIA, a town of Russia, in the gov. and 100 m. NW of Vitebsk.

OSWALD (SANKT), a village of Austria, in the Muhl circle, 4 m. E of Freystadt.

OSWALDKIRK, a parish in the N. R. of Yorkshire, 3½ m. S of Helmsley. Area with Ampleforth, 3,573 acres. Pop. in 1831, 400; in 1851, 428.

OSWALDTWISTLE, a township in Whalley p., co.-palatine of Lancaster, 3 m. ESE of Blackburn. Area 4,770 acres. Pop. in 1831, 5,897; in 1851, 7,654. The cotton manufacture gives employment to a great number of the inhabitants.

OSWEGATCHIE, a river of St. Lawrence co., New York, U. S., which runs into the St. Lawrence at Ogdensburg, after a NW course of 120 m.—Also a township of St. Lawrence co., 16 m. W of Canton. Pop. 3,193.

OSWEGO, a river of New York, U. S., which has its sources very near that of the Mohawk. It passes through Oneida lake; and after a very tortuous course of 18 m. it receives the Seneca, besides the waters of several smaller streams and many small lakes, and flows NW to Lake Ontario. At the mouth of the river there is a good harbour; but it has falls near its mouth which prevent its navigation. A canal 62 ft. wide, and 7 ft. deep, has been carried past the falls.—Also a county in the N part of New York, U. S. Area 923 sq. m. Pop. in 1840, 43,619; in 1850, 62,150. Its chief towns are O. and Pulaski.—The town and port of O. lies on both sides of the river of the same name, at its entrance into Lake Ontario, 160 m. WNW of Albany. It is regularly laid out in streets 100 ft. wide; and its two parts are connected by a bridge 700 ft. in length. A canal connects it with the Erie canal at Syracuse. A pier 1,219 ft. in length is run out into the lake, and the depth of water within it is from 10 to 20 ft.

OSWEIL, a village of Würtemberg, 1 m. E of Ludwigsburg, near the l. bank of the Neckar. Pop. 1,100.

OSWESTRY, a parish and borough of the co. of Salop, 171 m. NW of London, and 18 m. NW of Shrewsbury. The parish comprises the townships of Llanforda, Trefarclwdd, Pontregaer with Llynymon, Maesbury, Morton with Cricieth, Middleton, Aston, Hisland with Wooton, Weston, Iweeney, and Treflach with Tresound. Area 15,703 acres. Pop. in 1831, 8,581; in 1851, 8,796.—The town, an ancient municipality, was at one time the chief flannel mart for North Wales; but the Shrewsbury merchants removed the mart to Shrewsbury in 1621, by refusing to attend at O. It had a pop. of 4,817 in 1851. The name of O. is connected with some of our earliest historical transactions.

OSWIECZYM, or AUSCHWITZ, a village of Galicia, on the r. bank of the Sola, near its junction with the Vistula, 15 m. WNW of Wadowice.

OSYTH-CHICK (SAINT), a parish of Essex, 11 m. SE of Colchester. Area 9,671 acres. Pop. 1,696.

OSZLAN, a town of Hungary, in the com. of Bars, 24 m. WSW of Kremnitz.

OTABALO, or OTAVALO, a town and district of Ecuador, in the dep. of Imbabu. It is 12 leagues long from NW to SE, and contains 8 towns or villages, the lands of which are laid out in plantations, principally of sugar-cane. Wheat and barley thrive well; sheep, black cattle, and horses are reared in numbers; and quantities of butter and cheese are exported. The native Indians are industrious, weaving cottons, bed furniture, and carpets of brilliant colours.—The town is situated 30 m. NNE of Quito, in N lat. 0° 14′. Pop. 15,000. The inhabitants manufacture cotton stuffs.

OTAGO. See article NEW ZEALAND, p. 557.

OTAHA, one of the Society islands, in the S. Pacific ocean, situated to the N of Ulietea, surrounded with a reef of rocks, but has a good harbour on the E. Its N end is in S lat. 16° 33′, W long. 151° 38′.

OTAHEITE. See TAHITI.

OTAKI, a town of Russia in Europe, in the prov. of Bessarabia, district and 60 m. E of Khotin, and 3 m. SW of Mohilev, near the r. bank of the Dniester. Pop. 1,500.

OTAMATE, a town of Mexico, in the state of Sonora, 80 m. S of Sinaloa, near the entrance of the Imaya into the gulf of California.

OTAVALO. See OTABALO.

OTCHAKOV, a village and port of Russia in Europe, in the gov. and 60 m. W of Kherson, and dist. of Tiraspol, 42 m. ENE of Odessa, on the r. bank of the Dnieper, at its entrance into the Black sea. Since the destruction of its citadel it has greatly sunk in importance; and since the founding of Odessa its trade and population have rapidly declined. The

Turkish buildings have given place to "some Russian cabins, and about 50 miserable shops." Its fortress, now dismantled, was the object of repeated struggles between the Turks and Russians in the latter half of the last cent. In 1788 it was taken by the Russians under Potemkin, after a siege of six months, during which upwards of 40,000 men fell within and around its walls.

OTCHERSK, a town of Russia in Europe, in the gov. of Perm, dist. and 9 m. SW of Okhantsk. It has extensive iron-works.

OTEGO, a creek of the state of New York, U. S., which has its source in Burlington, Otsego co., and empties itself into the E branch of Susquehanna river.—Also a township of Otsego co., in the same state, 22 m. SW of Cooperstown. It is partly hilly, and is drained by Otsdawa creek and Susquehanna river. Pop. 1,919. It has a village containing 300 inhabitants.

OTEIZA, a town of Spain, in the prov. of Navarra, partido and 9 m. ESE of Estella, and 21 m. SW of Pamplona, in a valley of the Solana. Pop. 732.

OTEO, a town of Spain, in the prov. of Alava, and partido of La Guardia, 18 m. SE of Vittoria, on the l. bank of the Ega. Pop. 167.

OTEPPE, a department and commune of Belgium, in the prov. of Liege and arrond. of Huy, watered by the Burdinnah. Pop. 600.

OTERO (El), a town of Spain, in New Castile, in the prov. and 24 m. WNW of Toledo, and partido of Escalona, on a mountain. Pop. 154.

OTERO-DE-CENTENOS, a town of Spain, in Leon, in the prov. and 48 m. NW of Zamora, and partido of Puerla-de-Sanabria, in a well-watered and salubrious locality. Pop. 306.

OTERO-DE-HERREROS, a town of Spain, in Old Castile, in the prov. and partido and 15 m. SSW of Segovia, at the foot of the Sierra-de-Guadarrama, in a cold and sterile locality. Pop. 696. It has a parish church and a custom-house.

OTERO-DE-LAS-DUENAS, a town of Spain, in the prov. and partido and 15 m. WNW of Leon. Pop. 180. It has a convent.

OTERO-DE-REY, a town of Spain, in Galicia, in the prov. and partido and 6 m. NW of Lugo. Pop. 175.

OTERO-DE-SORIEGO, a town of Spain, in Leon, in the prov. and 24 m. N of Zamora, and partido of Benevente. Pop. 116.

OTFORD, a parish in Kent, 3½ m. N of Seven-Oaks, on the E bank of the Darent. Area 2,852 acres. Pop. in 1831, 746; in 1851, 837.

OTHAM, a parish in Kent, 2½ m. SE by E of Maidstone, on a branch of the Medway. Area 947 acres. Pop. in 1831, 344; in 1851, 357.

OTHAM, a river of France, which has its source in the dep. of the Moselle, at Norroy-le-Sec, and 8 m. WNW of Briey; flows into the dep. of the Meuse; separates it for some distance from the dep. of the Moselle; and after a total course of about 24 m. unites with the Chiers, on the l. bank, a little below Montmedy.

OTHE, an ancient district of France, in Champagne, in the Senonais, now comprised in the departments of the Yonne and Aube. Aix-en-Othe was one of its chief places.

OTHE'E, a department and commune of Belgium, in the prov. and arrond. of Liege. Pop. 987.

OTHERY, a parish in Somersetshire, 4 m. NW by N of Langport. Area 1,820 acres. Pop. 681.

OTHMARSINGEN, a village of Switzerland, in the cant. of Argovia, dist. and 1½ m. ENE of Louisburg, and 9 m. E of Aarau, on the Bunz. Pop. 360. Cretinism prevails in the locality.

OTHRYS (Mountains). See Hellovo.

OTIS, a township of Hancock co., in the state of Maine, U. S. It contains several large ponds which discharge themselves into Blue-hill bay and the Penobscot river. Pop. in 1840, 88.—Also a township of Berkshire co., in the state of Massachusetts, 15 m. SE of Lenox. It is hilly, and is drained by the head branches of Farmington and Westfield rivers. Pop. 1,177.

OTISCO, a lake of the state of New York, U. S., in the W part of Onondaga co. It is 5 m. long, and 2 m. wide; and discharges itself by Nine Mile creek into Onondaga lake.—Also a township of Onondaga co., in the same state, 138 m. W by N of Albany. The surface is hilly; but it has a loamy soil, and is generally well cultivated. On the W it is bordered by a lake of the same name, and is drained by its outlet Nine-Mile creek. Pop. in 1840, 1,906. It has a village containing about 100 inhabitants.—Also a township of Ionia co., in the state of Michigan. Pop. 212.

OTISFIELD, a township of Cumberland co., in the state of Maine, U. S., 71 m. SSW of Augusta. It has a fertile soil; and is drained by Crooked river, an affluent of Sebago pond. Pop. in 1840, 1,307.

OTLEY, a parish in Suffolk, 6 m. NW of Woodbridge. Area 2,157 acres. Pop. in 1831, 616; in 1851, 616.—Also a parish and market-town in the W. R. of Yorkshire, 28 m. WSW of York. The p. comprises the chapelries of Baildon, Burley, and Denton, with the townships of Bramhope, Esholt, Farnley, Hawksworth, Lindley, Menstone, Newhall with Clifton, Otley, Poole, and Little Timble. Area 22,799. Pop. in 1831, 10,163; in 1851, 12,385. The church is a spacious and elegant edifice, and contains some interesting monuments. The town is situated in a highly-cultivated valley, watered by the Wharfe; its old thatched houses are disappearing, and the place is rapidly improving. The woollen and cotton trade employ collectively upwards of 1,200 hands within the p.

OTMATE, a village of Prussia, in the prov. of Silesia, regency and circle of Oppeln.

OTOMACOS, or Otomacs, a tribe of Indians, who inhabit the plains and forests to the W of the Orinoco, in Venezuela, in the prov. of Achaguas, between the Meta and Apure. These Indians are of nomadic habits, are ignorant of agriculture, and subsist on gum, roots, insects, reptiles, and on a species of earth. The earth which the O. eat is a soft unctuous clay, a true potter's clay of a yellowish-grey colour due to a little oxide of iron. They seek for it in particular spots on the banks of the Orinoco and the Meta, and select it with care. They distinguish the taste of one kind of earth from that of another, and do not consider all clays as equally agreeable to eat. They knead the earth into balls of about 5 or 6 inches diameter, which they burn or roast by a weak fire until the outside assumes a reddish tint. The balls are remoistened when about to be eaten. It is a proverb even among the most distant of the nations living on the Orinoco, when speaking of anything very unclean, to say it is "so dirty that the Otomacs eat it." Humboldt says: "We found heaps of balls in their huts, piled up in pyramids 3 or 4 ft. high. It is absolutely false that the earth is steatitic, and contains magnesia. Vauquelin did not discover any traces of this earth in it: but he found that it contained more silex than alumin, and 3 or 4 per cent. of lime. The O. do not eat every kind of clay indifferently; they choose the alluvial beds or strata that contain the most unctuous earth and the smoothest to the feel. The savage regards everything as nourishing that appeases hunger; when, therefore, you inquire of an O. on what he subsists during the two months when the river is the highest, he shows you his balls of clayey earth: this he calls his principal food, for at this period he can seldom procure a lizard, a root of fern, or a dead fish swimming at the surface of the water. But if the Indian eat earth from want during two months, he does not the less regale himself with it during the rest of the year: every day in the season of drought, when fishing is most abundant, he scrapes his balls of *poya*, and mingles a little clay with his other aliment. What is most surprising is, that the Otomacs do not become lean by swallowing such quantities of earth; they are, on the contrary, extremely robust, and far from having the belly tense and puffed up. The following are the facts which we were able to verify. The O., during some months, eat daily three quarters of a pound of clay slightly hardened by fire, without their health being sensibly affected by it. They moisten the earth afresh when they are going to swallow it. It has not been possible to

verify hitherto with precision how much nutritious vegetable or animal matter the Indians take in a week at the same time; but it is certain that they attribute the sensation of satiety which they feel, to the clay, and not to the wretched aliments which they take with it occasionally. No physiological phenomenon being entirely insulated, it may be interesting to examine several analogous phenomena, which I have been able to collect. I observed every where within the torrid zone, in a great number of individuals, children, women, and sometimes even full-grown men, an inordinate and almost irresistible desire of swallowing earth; not an alkaline or calcareous earth, to neutralize acid juices, but a fat clay, unctuous, and exhaling a strong smell. It is often found necessary to tie the children's hands, or to confine them, to prevent their eating earth, when the rain ceases to fall. At the village of Banco, on the bank of the river Magdalena, I saw the Indian women who make pottery continually swallowing great pieces of clay. The Negroes on the coast of Guinea delight in eating a yellowish earth, which they call *caouac*. The slaves who are taken to America try to procure for themselves the same enjoyment; but it is constantly detrimental to their health. They say, 'that the earth of the West Indies is not so easy of digestion as that of their country.' In the Indian archipelago, at the island of Java, M. Labillardière saw, between Surabaya and Samarang, little square and reddish cakes exposed to sale. These cakes, called *tanaampo*, were cakes of clay, slightly baked, which the natives eat with appetite. M. Leschenault, one of the naturalists of the expedition under the command of Captain Baudin, has published some curious details on the *tanaampo*, or *ampo*, of the Javanese. 'The reddish and somewhat ferruginous clay,' he says, 'which the inhabitants of Java are fond of eating occasionally, is spread on a plate of iron, and baked, after having been rolled into little cylinders in the form of the bark of cinnamon. In this state it takes the name of *ampo*, and is sold in the public markets. This clay has a peculiar taste, which is owing to the torrefaction; it is very absorbent, and adheres to the tongue, which it dries. In general it is only the Javanese women who eat the *ampo*, either in the time of their pregnancy, or in order to grow thin; the want of plumpness being a kind of beauty in this country. The use of this earth is fatal to health; the women lose their appetite imperceptibly, and no longer take without disgust a very small quantity of food: but the desire of becoming lean, and of preserving a slender shape, can brave these dangers, and maintains the credit of the *ampo*.' The savage inhabitants of New Caledonia also, to appease their hunger in times of scarcity, eat great pieces of a friable *lapis ollaris*. M. Vauquelin analysed this stone, and found in it, beside magnesia and silex in equal portions, a small quantity of oxide of copper. Goldberry had seen the Negroes in Africa, in the islands of Bunck and Los Idolos, eat an earth of which he had himself eaten, without being incommoded by it, and which also was a white and friable steatite."

OTOQUE, a small island of New Granada, in the bay of Panama, and dep. of Istmo, in N lat. 8° 30′ 35″, and W long. 79° 30′ 28″.

OTRADA, a village of Russia in Europe, in the gov. of Saratov and district of Tzaritzyn, on the Yeltchanka. It is inhabited by Germans, who employ themselves in the culture of the vine, tobacco, and mustard.

OTRANGE, a commune and village of Belgium, in the prov. of Limburg, arrond. and 4 m. SSW of Tongres, watered by the Jaer or Geer. Pop. 345. It has a flour-mill.

OTRANTO, Terra d'Otranto, or Provincia-di-Lecce, a peninsular district forming the SE extremity of the kingdom of Naples, and of Italy, and lying betwixt the parallels of 39° 47′, and 40° 52′ N. It is bounded on the NW by the prov. of Terra-de-Bari; on the NE by the Adriatic; on the E by the straits of Otranto; on the SE by the Ionian sea; on the S by the gulf of Taranto; and on the W by the prov. of Basilicato. It has a superficial extent of 2,504 Italian sq. m., with a pop. in 1820 of 314,216; in 1844 of 396,899, of whom about 50,000 were Greeks and Arnauts. It is traversed by a low calcareous ridge, an eastern branch of the Southern Apennines, which separates the streams flowing to the Adriatic from those of the gulf of Taranto. Though rugged and mountainous, this prov. is fertile; but suffers severely from want of water. The most important production is olives, whole forests of which grow wild; cotton of three species, tobacco, vines, and fruit, especially almonds and figs, are likewise raised; and the rearing of bees and silkworms forms an object of attention. The hilly nature of the ground is favourable to pasturage, and the extent of sea-coast to fishing. A large number of mules and asses are reared. The prov. is subdivided into the districts of Lecce, Taranto, Brindisi, and Gallipoli.

Otranto, a town and port in the Neapolitan province to which it gives name, situated on the Adriatic, in N lat. 40° 9′, E long. 18° 29′, 24 m. SE of Lecce. Pop. 1,600. It is tolerably fortified, but is ill built, and daily falling into ruin. Its harbour is indifferent, but some trade in olive-oil, fruits, and horses is conducted from it. Its castle, celebrated in the annals of romance, is "a fort of no considerable extent or power, but not entirely deficient in picturesque beauty." [*Craven.*] It occupies the site of the ancient *Hydruntum*. In 1810, Fouche, Bonaparte's minister of police, received the title of duke of O.

OTRANTO (Capo di), a cape of Italy, on the coast of the Adriatic, a few miles SE of the town of Otranto, in N lat. 40° 6′ 15″.

OTRAR, or Farab, a town of Khokan, situated upon the r. bank of the Sibun, 90 m. NW of Tunkat. It was formerly a place of considerable importance, and it is generally stated that Timur died at this place.

OTRICOLI, a town of the Papal states, in the deleg. and 26 m. SSW of Spoleto, situated on a hill near the l. bank of the Tiber. Pop. 800. The remains of the ancient *Ocriculum*, from which it takes its name, lie scattered along the banks of the Tiber.

OTSEGO, a county in the central part of New York, U. S. Area 892 sq. m. It is watered by the Susquehannah, and the Cherryvalley, Butternut, and Otsego creeks. Its cap. is Cooperstown. Pop. in 1840, 49,628; in 1850, 48,746.—Also a township in the co. of the same name, 66 m. W of Albany, to the W of Otsego lake, a sheet of water 9 m. in length, and from 1 to 2 m. broad, from which the Susquehannah issues.—Also a township in Allegan co., in Michigan, 149 m. W by N of Detroit. Pop. 480.

OTSELIC, a township of Chenango co., New York, U. S., 15 m. NW of Norwich. Pop. 1,621.—Also a river of the state of New York, which joins the Toughnioga, after a course of 43 m.

OTSHAKOV. See Otchakof.

OTSQUAGA CREEK, a river of New York, U. S., which flows into the Mohawk, after a course of 23 m.

OTTAJANO, a town of Naples, 12 m. E of the city of Naples, at the NE base of Vesuvius. It has a castle and 3 churches. Pop. 1,500.

OTTANGE, a village of France, in the dep. of Moselle, 9 m. NW of Thionville. Pop. 1,450. It has iron furnaces and foundries.

OTTAWA, Utawa, or Grande-Riviere, a great river of Canada, which issues from Lake Temiscanning, but has its remotest sources nearly 100 m. beyond that lake, in the highlands which separate the basin of Hudson's bay from that of the St. Lawrence; and flows in a SSE course of upwards of 400 m. to the St. Lawrence, separating, throughout nearly its whole course, Upper Canada on the W, from Lower Canada on the E. A little below its outlet from Lake Temiscanning, it receives the large tribute of the Montreal on its r. bank; and under the parallel of 46° 40′, it receives on the same bank the Little River issuing from Turtle lake. At the Allumettes, under the parallel of 46°, it divides into two channels which enclose between them an island 15 m. long, by 4 m. in breadth; and the S channel expanding below the falls and rapids forms the Lac-des-Allumettes. About 12 m. below the reunion of the two channels, it again bifurcates, and forms an island 20 m. in length, with an average breadth of 7 m. Under the parallel of 45° 30′, it begins to expand into the Lac-des-Chats, about 15 m. in length, by 1 m. in breadth; and 6 m. below the falls of the Chats, which are

from 16 to 20 ft. in height, it expands into Lake Chaudière, a sheet of water 18 m. in length, and 5 m. in breadth. Issuing from the SE end of the lake, it forms a series of rapids, till it reaches the Chaudière falls, the principal of which is 60 ft. in height. Below the latter falls, the river is navigable for steamboats 60 m. to the Long Sault at Grenville. Below this point it continues at intervals rapid and of difficult navigation, until it expands into the lake of the Two Mountains, a wide opening which unites with that expanse of the St. Lawrence which contains the island of Montreal. Its lower rapids are now avoided by a canal on the N bank of the river, and it is rendered navigable for about 90 m. Passengers ascending the river from Montreal, take coach to La Chine; thence go by steamer to Point Fortune; thence by stage to Lorignal; and thence by steamer to Bytown at the foot of the Chaudière falls.

OTTAWA, a county of Lower Canada, in the district of Montreal, skirted on the SW by the river of that name, and stretching from the parallel of 45° 34′ to that of 47° 54′. Pop. in 1844, 12,434.

OTTAWA DISTRICT, a district of Upper Canada, comprising the cos. of Prescott and Russell, and bounded by the Ottawa river on the N. Its principal villages are Hawkesbury, Caledonia, and Huttsfield. Pop. in 1848, 10,364.

OTTBORGEN, a village of Prussia, in the reg. and 45 m. SE of Minden, on the Nethe. Pop. 500.

OTTENAU, a village of Baden, on the Murg, 7 m. ESE of Rastadt.

OTTENBACH, a village of Switzerland, in the cant. of Zurich, on the Reuss, 9 m. SW of Zurich. Pop. 1,169.

OTTENBEUREN, a village of Bavaria, 42 m. SW of Augsburg. Pop. 1,500. It has a fine church and castle.

OTTENBOURG, a department and commune of Belgium, in the prov. of Brabant and arrond. of Louvain, watered by the Dyle. Pop. 907.

OTTENHAUSEN, a village of Austria, 6 m. SSE of Grieskirchen, on an affluent of the Traun.

OTTENHEIM, a village of Baden, on the Rhine, 7 m. WNW of Lahr.

OTTENSCHLAG, a town of Lower Austria, 8 m. SSE of Zwettel.

OTTENSEN, a village of Denmark, in the duchy of Holstein, 2 m. W of Altona. Pop. 1,500. The poet Klopstock was buried here.

OTTENSHEIM, a town of Austria, on the l. bank of the Danube, 6 m. WNW of Lintz, on an acclivity surmounted by a castle. Pop. 1,200. Alum and coal are mined in the vicinity.

OTTENSTEIN, a town of the duchy of Brunswick, near the l. bank of the Weser, 6 m. SW of Bodenwerder. Pop. 1000.—Also a town of Prussia, in the bail. of Munster, and principality of Salms, 32 m. WNW of Munster. Pop. 850.

OTTER, a river of Devonshire, which rises on Blackdown, and flows by a SSW course of 25 m. to the sea, 5 m. E of the mouth of the Ex.

OTTER BAY, a bay on the S coast of Newfoundland, between Bear-bay and Swift-bay.

OTTERBERG, a town of Bavaria, 5 m. N of Kaiserslautern. Pop. 1,400.

OTTERBOURNE, a parish in Southamptonshire, 4¼ m. SSW of Winchester. Area 1,508 acres. Pop. in 1831, 583; in 1851, 596.

OTTERBURN-WARD, a township in Elsdon p., county of Northumberland, 20 m. N by W of Hexham, on the N bank of the Reed. Area 8,517 acres. Pop. in 1831, 385; in 1851, 415. The village is pleasantly situated at the foot of a steep hill. It is celebrated as the scene of a desperate contest in 1388, betwixt the English and Scots, under Percy and Earl Douglas, in which the former was taken prisoner, and the latter was killed.

OTTER CREEK, a river of Vermont, U. S., which rises in Mount Tabor, on the W side of the Green mountains, runs N about 90 m., and falls into Lake Champlain, at Ferrisburgh. There are large falls in this river at Middlebury, Weybridge, and Vergennes. Between these falls the current is slow, and the river is navigable for the largest boats. The source of this river approaches within 30 ft. of the head-waters of the Hudson river, which runs in a contrary direction. It is navigable for sloops to Vergennes 6 m.—Also a river of Kentucky, which runs into the Ohio, in N lat. 37° 45′.—Also a river of Virginia, which runs into the Staunton, in N lat. 36° 55′.

OTTERDEN, a parish in Kent, 12 m. E by S of Maidstone. The village consists of a few houses scattered over different parts of what is called Otterden-street. Area 1,434 acres. Pop. in 1851, 181.

OTTERFORD, a parish in Somersetshire, 6¾ m. S of Taunton. Area 2,387 acres. Pop. in 1831, 406; in 1851, 461.

OTTERGEM, a commune of Belgium, in the prov. of E. Flanders, arrond. of Termonde. Pop. 431.

OTTERHAM, a parish in Cornwall, 6¼ m. NE by N of Camelford. Area 3,262 acres. Pop. in 1831, 227; in 1851, 198.

OTTERHAMPTON, a parish in Somersetshire, 5 m. NW of Bridgewater, on the W bank of the Parret. Area 1,117 acres. Pop. in 1831, 240; in 1851, 210.

OTTERINGTON (North), a parish in the N. R. of Yorkshire, 3 m. S of Northallerton, containing the townships of Thornton-le-Beans, Thornton-le-Moor, and North O. Area 3,625 acres. Pop. in 1831, 617; in 1851, 667.

OTTERINGTON (South), a parish in the N. R. of Yorkshire, 4½ m. S by E of Northallerton. Area 1,414 acres. Pop. in 1831, 241; in 1851, 412.

OTTER PEAKS, the summits of the Blue ridge, in Virginia, U. S., 100 m. W of Richmond. The E peak is 3,104 ft., and the W, 2,946 ft. above sea-level.

OTTER RIVER, a river of Louisiana, U. S., which joins the Arkansas.—Also a river which rises on the E side of the Rocky mountains, and falls into the Yellowstone.

OTTERNDORF, a town of Hanover, in the district of Hadeln, duchy of Bremen, on the Medem, 26 m. NW of Stade. Pop. 1,800.

OTTEROE, an island off the W coast of Norway, in N lat. 62° 43′. It is 11 m. in length.

OTTERSBERG, a town of Hanover, in the duchy of Bremen, on the r. bank of the Wümme, 17 m. ENE of Bremen. Pop. 1,000.

OTTERSLEBEN (Gross), a village of Prussian Saxony, in the reg. and 4 m. SW of Magdeburg. Pop. 1,300.

OTTERSTEIN, a summit of the Schneegebirge, in Prussian Silesia, near Glatz. Alt. 3,160 ft.

OTTERSWEYER, a town of Baden, 3 m. S of Bühl. Pop. 1,400.

OTTERTON, a parish in Devon, 3½ m. SW by W of Sidmouth, on the E bank of the Otter. Area 3,479 acres. Pop. in 1831, 1,178; in 1851, 1,231.

OTTERY-ST.-MARY, a parish and market-town in the co. of Devon, 12½ m. E by N of Exeter, and 15 m. SE of Tiverton. Area of p. 9,942 acres. Pop. in 1831, 3,849; in 1851, 4,421. The town is pleasantly situated on the E bank of the Otter. Its pop. in 1851 was 2,534. It is large, but irregularly built. The silk manufacture is carried on here, and there are tanyards and rope-walks. The church, originally collegiate, is the most distinguished object in the town, and resembles the cathedral of Exeter in

its construction. In Mill-street are the remains of the ancient mansion of Sir Walter Raleigh. O. was the birth-place, in 1772, of S. T. Coleridge. His father was vicar of the parish.

OTTIAMONT, a commune of Belgium, in the prov. of Namur, and dep. of Sombreffe. Pop. 125.

OTTIGLIO, a village of the Sardinian states, 20 m. NW of Alessandria. Pop. 1,600.

OTTIGNIES, a commune and village of Belgium, in the prov. of Brabant, arrond. and 10 m. NE of Nivelles, watered by the Dyle. Pop. 1,053.

OTTMACHAU, a town of Prussian Silesia, in the reg. of Oppeln, on the l. bank of the Neisse, 18 m. SW of Grottkau. Pop. 2,200.

OTTO, a township of Cattaraugus co., in the state of New York, U. S., 10 m. NW of Ellicotville. Pop. 2,133.

OTTOBEUREN. See Ottenbeuren.

OTTOCHACZ, a town of Croatia, on the river Suschizza, 6 m. W of Fiume. Most of the houses are built on piles.

OTTOJANO. See Ottajano.

OTTOKRIN, a village of Austria, 3 m. W of Vienna, near Kahlenberg.

OTTOMAN EMPIRE. See Turkey.

OTTONE, a village of the Sardinian states, 24 m. NE of Genoa, on the r. bank of the Trebbia.

OTTOWA, a county in the NW part of Ohio, U. S., skirted by Lake Erie on the N. Area 350 sq. m. Pop. in 1840, 2,248; in 1850, 3,308.—Also a co. in the NW of Michigan. Area 700 sq. m. Pop. in 1840, 708; in 1850, 6,490. Its cap. is Grand Haven. —Also a village in La Salle co., in Illinois, 130 m. NNE of Springfield. Pop. 500.

OTTRE, a commune of Belgium, in the prov. of Luxemburg, and dep. of Bihain. Pop. 235.

OTTRINGHAM, a parish in the E. R. of Yorkshire, 11½ m. E by S of Kingston-upon-Hull. Area 4,320 acres. Pop. in 1831, 627; in 1851, 663.

OTTROTT (Nieder), a village of France, in the dep. of Bas-Rhin, 15 m. N of Schelestatt. Pop. 1,100.

OTTSVILLE, a village of Bucks co., Pennsylvania, U. S.

OTTWEILER, a town of Prussia, in the reg. of Treves, 15 m. N of Saarbruck, on the r. bank of the Bliese. Pop. 2,500. It has manufactories of woollens and of pottery-ware.

OTTYNIA, a village of Galicia, 15 m. SE of Stanislawow, on the Worona.

OTUMBA, a town of the state of Mexico, 30 m. NE of the city of Mexico, in N lat. 19° 40′, inhabited by 10 or 12 Spanish families, and 400 Indians. Near this town are the pyramids of Teotehuacan.

OTUNGURRA, a town of Hindostan, in the prov. of Bahar, district of Chuta-Nagpore, in N lat. 23°.

OTWAY (Cape), a bluff head on the S coast of Australia, on Bass's straits, in S lat. 38° 51′, E long. 143° 29′. A lighthouse, with a revolving light at the height of 300 ft. above high-water, is erected upon it. It is the Cape Desaix of French geographers.

OTWAY (Port), an inlet on the W side of Holloway sound, on the W coast of Patagonia, 15 m. from Cape Tres-Montes, in S lat. 47°.

OTZBERG, a mountain of Hesse-Darmstadt, in the district of Dieburg, near Hering. Alt. 1,230 ft. On its summit is a castle.

OUAAURA. See Waara.

OUACHITTA. See Washita.

OUAN, a town of Corea, 53 m. WSW of Koang. —Also a town of China, in the island of Hainan, 75 m. S of Kiong-tcheou.

OUANNE, a town of France, in the dep. of the Yonne, 12 m. SW of Auxerre, near the source of a stream of the same name, an affluent of the Loing.

OUARREAU, a river of Lower Canada, which falls into the Assomption river, 3 m. below St. Paul.

OUARVILLE, a town of France, in the dep. of the Eure-et-Loire, 15 m. SE of Chartres. Pop. 800.

OUARY. See Warri.

OUCHE, a river of France, in the dep. of the Cote-d'Or, which rises near Lusigny, and falls into the Saone, about 12 m. below Dijon, after a course of 50 m. The canal of Burgundy runs along its bank.

OUCHITZA, a town of Russian Poland, in the gov. of Podolia, 23 m. ESE of Kamenetz. Pop. 2,000.

OUCHY, or Rive, a village of the Swiss cant. of Vaud, about 1 m. S of Lausanne, with a small harbour on the lake of Geneva.

OUCKENE, a canton and commune of Belgium, in the prov. of W. Flanders, and arrond. of Ypres. Pop. 2,149. It has manufactories of linen, and several spinning-mills.

OUCQUES, a commune and village of France, in the dep. of Loir-et-Cher, 16 m. N of Blois. Pop. 1,362. It has manufactories of linens and cottons.

OUDANULA, a town of Bengal, in the district of Rahjemall, at the foot of a range of hills which approach the W bank of the Ganges. In the vicinity of this place the intrenched camp of the nabob Cossim-Ali was attacked and carried by the British troops under the command of Major Adams.

OUDAPITTA POINT, a headland of moderate height on the N coast of Ceylon, in N lat. 6° 25′, E long. 80° 7′.

OUDA. See Uda.

OUD-BEYERLAND, a village of Holland, in the prov. of S. Holland, 14 m. W of Dort.

OUDDORP, a village of Holland, in the prov. of S. Holland, 25 m. WSW of Rotterdam.

OUDE, a province of Hindostan, situated between the 26th and 28th parallels of N lat., and bounded on the N by Nepal; on the E by the prov. of Bahar; on the S by Allahabad; and on the W by Delhi and Agra. In length it is estimated at 200 m., by 120 m. in breadth, with an area of about 23,950 sq. m. The whole surface is flat, being an extensive plain stretching northward to the lower ranges of Himalaya, and bounded on the S and W by the Ganges. The Ganges, the Gogra, the Sai, and the Gumti, are all navigable throughout their respective courses within the territory, but the three last rivers are little used in consequence of the imposition practised on traders; and even on the Ganges few boats frequent the Oude bank. It has a rich alluvial soil, extremely fertile, and well-watered by copious streams which intersect the country and flow to the Ganges. Good crops of wheat, barley, rice, and a variety of other grains, cotton, sugar-cane, indigo, and poppies, are grown. It is also celebrated for its grapes, mangoes, and other fruits. Some of the districts produce saltpetre and lapis lazuli. The climate is better than that of Bengal; the rains are neither so violent nor of so long a duration; and the four cold months of the year are delightful. The hot winds commence about the middle of March, and blow with violence till the first or second week in June. To the NE, near the hills, are extensive woods and plains covered with grass, which abound in game and animals of all kinds.—The principal towns of the prov. are Lucknow the capital, Fyzabad, Oude, Khyrabad, Goruckpore, and Bahreich. The inhabitants, estimated at 3,000,000, are about one-fifth Mahommedans, the other four-fifths are Hindus of all castes. The latter furnish three-fourths of the Bengal native infantry.

Oude, properly called Ayodhya, is a kingdom under British protection. A British resident constantly resides at the court of its ruler, and carries

on all the correspondence with Calcutta. A battalion of infantry is also always stationed at Lucknow, to preserve tranquillity, and to protect the persons of the king and the resident. The kingdom is divided into 25 *chucklas*, which yield a gross annual revenue of £1,280,000, exclusive of the jaghire lands. Each *chuckla* is farmed out to a private individual, who engages to pay the government the stipulated rent, after which he becomes invested with the entire revenue arrangements, the right of property in the soil belonging exclusively to the Crown. This system is fraught with evil; while the connexion with the Company is also very burdensome in a pecuniary point of view, and works ill as resulting in a kind of double government. There are not less than 100,000 soldiers in the service of Zemindars; and in more than half the districts are strong forts, surrounded with dense jungle, which perpetuate anarchy throughout this unhappy country. The present king, Mahommed Amjud Ali, ascended the throne on the death of his father, in May 1842.

OUDE, or AYODHYA, the ancient capital of the above province, long the residence of a Hindu dynasty, and subsequently the seat of the provincial government, is situated on the S bank of the Gogra river, in N lat. 26° 48′, E long. 82° 4′. Abulfazel states its length at 148 coss, and its breadth at 36 coss. These admeasurements must be greatly exaggerated; but though it bears little trace of former magnificence, its ruins extend along the river to the vicinity of the modern but also decaying city of Fyzabad. In the vicinity are two large tombs of great antiquity, which the Mahommedans venerate, believing that they are the tombs of the prophets Seth and Job. After the battle of Buxar, in 1764, the nabob Shuja-ad-Dowleh founded the city of Fyzabad on the ruins of the ancient capital, at the distance of 2 m. from the modern town, which was in consequence abandoned by its principal inhabitants, and is now in a ruinous state.

OUDE-BERKOOP, a village of Holland, in the prov. of Friesland, 9 m. E of Heerenveen. Pop. 500.

OUDECAPPELLE, a canton and commune of Belgium, in the prov. of W. Flanders, and arrond. of Furnes. Pop. 282.

OUDEGHEM, a village of Belgium, in the prov. of E. Flanders, cant. and 2 m. SW of Dendermonde. Pop. 1,300.

OUDEGYSELSTRAET AND TURKYEN, a commune of Belgium, in the prov. of E. Flanders, and dep. of Nieukerken-Waes. Pop. 205.

OUDE-HASKE, a village of Holland, in the prov. of Friesland, 18 m. S by E of Leuwarden. Pop. 900.

OUDEMAN, a commune of Belgium, in the prov. of E. Flanders, and dep. of Waterland-Oudeman. Pop. 120.

OUDENAARDEN. See AUDENARDE.

OUDENBOSCH, a town of Holland, in the prov. of N. Brabant, 12 m. W of Breda, on the Mesk. Pop. 1,800.

OUDENBOURG, a town of Belgium, in the prov. of W. Flanders, on the canal from Nieuport to Ostend, 11 m. WSW of Bruges. Pop. 1,080.

OUDENGOD, a commune of Belgium, in the prov. of E. Flanders, and dep. of Mooreghem. Pop. 108.

OUDENMEULEN, a commune of Belgium, in the prov. of E. Flanders, and dep. of Aeltra. Pop. 455.

OUDENSTOK, a commune of Belgium, in the prov. of Brabant, and dep. of Lang-Dorp. Pop. 248.

OUDE-PEKEL-A, a town of Holland, in the prov. of Groningen, 4 m. SSW of Winschoten.

OUDER-ANDE, a village of the island of Java, 12 m. SE of Bantam.

OUDERDOM, a commune of Belgium, in the prov. of W. Flanders, and dep. of Reninghelst. Pop. 167.

OUDERKERK, a village of Holland, in the prov. of S. Holland, on the l. bank of the Yssel, 6 m. E by N of Rotterdam. Pop. 1,400.—Also a village of the prov. of N. Holland, on the r. bank of the Amstel, 4 m. S of Amsterdam. Pop. 1,320.

OUDE-SCHAUS, a fort of Holland, in the prov. and 30 m. ESE of Groningen, on a bay of the Dollart.

OUDEVELDSTRAET, a commune of Belgium, in the prov. of E. Flanders, and dep. of Saffelaere. Pop. 668.

OUDEVELDSTRAETE, a commune of Belgium, in the prov. of E. Flanders, and dep. of Seveneeken or Zeveneeken. Pop. 320.

OUDEWATER, a town of Holland, in the prov. of S. Holland, on the Yssel, in N lat. 52° 1′, 5 m. E of Gouda. Pop. 1,900. It has extensive rope-walks. It was the birth-place of the well-known Jacob Arminius. In 1575 it was burned by the Spaniards.

OUDGHYR, a town of Hindostan, in the prov. and 45 m. NW of Bejapore, belonging to the Nizam. It has a small fort.

OUDINSK. See UDINSK.

OUDIPORE. See ODEYPORE.

OUDJEIN. See UJEIN.

OUDON, a town of France, in the dep. of Loire-Inferieure, on the N bank of the Loire, 15 m. NE of Nantes. It has a chateau with a curious ancient tower.—Also a river which rises near La Gravelle, in Mayenne, and runs S to the Mayenne, which it joins on the r. bank, after a course of 54 m. Its principal affluents are the Hiere and the Arraise.

OUDSHOORN, a village of Holland, in the prov. of S. Holland, on the Old Rhine, 8 m. E of Leyden. Pop. 1,300.

OUEI. See WEI.

OUELLE, a river of Lower Canada, which has its rise in a range of mountains in the township of Ashford, which border the S bank of the St. Lawrence, and, after a NE course of little more than 10 m., falls into the St. Lawrence, 40 m. below the island of Orleans.

OUEN (SAINT), a village of France, in the dep. of the Charente-Inferieure, cant. and 5 m. SSW of Marans. Pop. 350.—Also a village of the dep. of the Ille-et-Vilaine, cant. and about ¾ m. SE of St. Meen, and 11 m. WNW of Montfort. Pop. 1,150.—Also a village in the dep. of the Indre-et-Loire, cant. and 5 m. N of Amboise, on the Ramberge, and 17 m. ENE of Tours. Pop. 600.—Also a village in the dep. of the Nievre, cant. and 9 m. NW of Decize, and 11 m. ENE of Nevers, at the foot of a woody hill. Pop. 560. It has an iron-mine.—Also a hamlet in the dep. of Calvados, cant. and com. of Caen. Pop. 1,150.

OUEN (SAINT), or OUEN-SUR-SEINE (SAINT), a commune of France, in the dep. of the Seine, cant. and 1½ m. SW of St. Denis, and 5 m. N of Paris, pleasantly situated on the r. bank of the Seine. Pop. in 1841, 1,190. It is noted as the place in which the celebrated declaration to the charter was signed by Louis XVIII., on the 2d May 1814. It has manufactories of silk and cotton fabrics, cashmeres, bricks, pottery, and soap, several ice-houses, extensive subterranean granaries, and a spinning-mill; and carries on a considerable trade in cattle, sheep, pigs, and legumes. A little to the W of the village is the port of St. O., a large basin, the water of which is supplied by artesian wells, and which communicates with the Seine by a lock capacious enough for the admission of vessels of the largest size. A steam-engine of 40 horse-power is kept constantly at work, in order to maintain the water

at the necessary level. According to some authors, King Dagobert had a castle in this village.

OUEN-DES-ALLEUX (Saint), a commune of France, in the dep. of the Ille-et-Vilaine, cant. and 5 m. N of St.-Aubin-du-Cormier, and 12 m. W of Fougeres, near the r. bank of the Cuesnon. Pop. 1,085. It has several tanneries.

OUEN-L'AUMONE (Saint), a commune of France, in the dep. of the Seine-et-Oise, cant. and 1½ m. S of Pontoise, on the slope of a hill on the l. bank of the Oise. Pop. 1,500. It has a fine castle. In the environs are the ruins of the celebrated abbey of Maubuisson, founded in 1236 by Blanche of Castile, and destroyed during the First revolution.

OUEN-DE-LA-COUR (Saint), a village of France, in the dep. of the Orne, cant. and 3 m. NNE of Bellême, and 8 m. S of Mortagne. Pop. 2,542.

OUEN-DE-MINBRE' (Saint), a village of France, in the dep. of the Sarthe, cant. and 1½ m. NE of Frenay-le-Vicomte, and 17 m. WNW of Mamers. Pop. 1,030. It has manufactories of linen.

OUEN-DE-LA-ROUERIE, or Royerie (Saint), a commune of France, in the dep. of the Ille-et-Vilaine, cant. and 3 m. W of Antrain, and 15 m. NW of Fougeres. Pop. 2,076.

OUEN-DES-TOITS (Saint), a commune of France, in the dep. of the Mayenne, cant. and 6 m. N of Loiron, and 8 m. NW of Laval. Pop. 1,750. It has several tanneries.

OUESSANT. See Ushant.

OUFA. See Ufa.

OUFFET, a canton and commune of Belgium, in the prov. of Liege, and arrond. of Huy. Pop. of cant. 893; of com. 688. It has manufactories of pottery, and of straw-hats.

OUGARNEE, or Owengarney, a small river of co. Clare, which rises S of Lough O'Grady, and runs 12 m. SSW past Six-Mile-Bridge to the Shannon.

OUGHAVAL. See Aughaval.

OUGHTER (Lough), a lake in co. Cavan. Its length is 3¾ m.; its breadth is 3 m.; and its area comprises 3,334 acres. Its surface-elevation above sea-level is 160 ft. Its shores are intricate; and its scenery is interesting and beautiful. Its principal islands are Inch Trinity and Eonish.

OUGHTERARD, a town in the p. of Kilcommon, co. Galway, on the W shore of Lough Corrib, 8 m. S by W of Cong. The Feagh forms a series of rapids immediately above the town; flows through it from end to end; and finally dives into the earth, and passes through a natural tunnel of limestone into Lough Corrib. Pop. in 1841, 718.—Also a parish in co. Kildare, 5 m. NE of Naas. Area 2,919 acres. Pop. in 1831, 223; in 1841, 460.

OUGHTERLEAGUE, or Bill, a parish of co. Tipperary, 3¼ m. N by W of Golden-bridge. Area 2,617 acres. Pop. in 1831, 975; in 1841, 1,100.

OUGHTMANA, a parish in co. Clare, containing the villages of Aughinish and Finavarra. Area 9,843 acres, of which 34 acres are in Lough Murree. Pop. in 1841, 2,075.

OUGREE, a canton and commune of Belgium, in the prov. and arrond. of Liege. Pop. 1,420.

OUGUELLA, a village of Portugal, in the prov. of Alemtejo, comarca and 18 m. NNE of Elvas, near the r. bank of the Gebora. Pop. 140.

OUIATSHUAN, Ouiguatshouan, or Widtshuan, a river of Lower Canada, which rises 7 m. above Lake Quaquagamache, and flows into the SW corner of Lake St. John, after a course of 60 m. About 1 m. from its influx into the lake, it forms a magnificent fall of 236 ft.

OUILLY-LE-BASSET, a village of France, in the dep. of Calvados, cant. and 9 m. W of Falaise. Pop. 750.

OUISCONSIN. See Wisconsin.

OULART, a village in the p. of Millenagh co. Wexford, 9 m. NNE of Wexford. Pop. in 1831, 161; in 1841, 283.

OULER (Lough), a small lake in the p. of Derrylossery, 2½ m. N of Glendalough, co. Wicklow. It lies at an elevation of 1,829 ft. above sea-level.

OULES, a village of France, in the dep. of the Isère, cant. and 3 m. WNW of Bourg-d'Oysans, and 17 m. ESE of Grenoble. Pop. 230. In the adjacent mountain of Grand Galbert is a mine of copper.

OULLINS, a commune of France, in the dep. of the Rhone and cant. of Saint-Genis Laval, 4 m. S of Lyon, near the r. bank of the Rhone. Pop. in 1841, 3,673. It has manufactories of printed muslin, tin, and pinchbeck, and a fine glass-work.

OULMES, a commune of France, in the dep. of Vendée, cant. and 6 m. S of Saint Hilaire-sur-l'Autise, and 9 m. SE of Fontenay-le-Comte. Pop. 601. It has manufactories of linen.

OULSTON, a township in Coxwold p., in the N. R. of Yorkshire, 8 m. SW by S of Helmsley. Area 1,502 acres. Pop. in 1831, 215; in 1851, 197.

OULTON, a township in Wigton p., Cumberland, 2 m. NNW of Wigton. Pop. in 1831, 379; in 1851, 421.—Also a parish in Norfolk, 3½ m. WNW of Aylsham. Area 1,849 acres. Pop. in 1831, 386; in 1851, 384.—Also a parish in Suffolk, 3 m. W by N of Lowestoft. Area 1,997 acres. Pop. in 1831, 809; in 1851, 742.

OULTON, or Old Town, a chapelry in the p. of Rothwell, W. R. of Yorkshire, 5½ m. NNE of Wakefield. The church, a beautiful specimen of the pointed style of architecture, was erected in 1828, at a cost of £16,000. The village is pleasant and rural. Dr. Richard Bentley was born here in 1661.

OULTRE, a canton and commune of Belgium, in the prov. of E. Flanders, and arrond. of Audenarde, watered by the Dendre. Pop. of cant. 1,726; of com. 736.

OULX, a town of Sardinia, capital of a mandemento, in the prov. and 14 m. SW of Susa, and 15 m. NE of Briançon, on the r. bank of the Doire, at the confluence of the Bordonechia. Pop. 1,200. It is well-built and has a communal college.

OUNDLE, a parish and market-town in Northamptonshire, 30 m. NE of Northampton, and 12¼ m. SW by W of Peterborough, on a gentle declivity, nearly surrounded by the river Nene. Area of the p. 5,300 acres. Pop., including the hamlets of Ashton, Biggin, Churchfield, and Elmington, in 1831, 2,450; in 1851, 3,108. The town is well-constructed, and the streets are well-paved and lighted. The church is a fine edifice, in the early English style.

OUPEYE, a canton and commune of Belgium, in the prov. and 9 m. N of Liege. Pop. 812. Coal is wrought in the vicinity.

OUR, a commune of Belgium, in the prov. of Luxemburg, and dep. of Opont. Pop. 146.

OURAL. See Ural.

OURCE, a river of France, which has its source in the dep. of the Upper Marne, and cant. of Auberive, a little to the SE of Poinsenot; runs NW; traverses the NE part of the dep. of the Cote d'Or; enters that of the Aube; passes Essoyes; and after a course of about 66 m., throws itself into the Seine, on the r. bank, a little above Bar-sur-Seine. Its principal affluents are the Grame, Digenne, and Cunfin-de-Beaumont.

OURCHES, a village of France, in the dep. of the Meuse and cant. of Void, 9 m. from Commercy, and 29 m. from Bar-le-Duc, on the Meuse. Pop. 250. It has a large wax bleachery.

OURCQ, a river of France, which has its source in the forest of Ris, in the dep. of Aisne, and runs

SE to the Marne, which it joins on the r. bank, near Lisy, after a course of 50 m. Its principal affluents are the Saviere and the Corey.

OURE. See OARE.

OUREM, a walled town of Portugal, in the prov. of Estremadura, 48 m. S of Coimbra, and 12 m. E of Leiria. Pop. 3,000.—Also a village of Brazil, in the prov. of Para, on the r. bank of the Rio-Guama, 48 m. E of Para.

OURIQUE, a town of Portugal, in the prov. of Alemtejo, 32 m. SW of Beja. Pop. 2,400.

OURJOUM, a village of Russia, in the gov. and 94 m. S of Viatka, on the Ourjoumka, an affluent of the Viatka, in N lat. 57° 18′. Pop. 450.

OURO (ILHA DO), an island formed by the Rio São-Francisco, in the Brazilian prov. of Sergipe, 12 m. above the Ilha-do-Ferro.

OURO (RIO DO), a river of Brazil, in the prov. of Mato-Grosso, which runs NE to the Rio-Diamantino.—Also a river in the prov. of Rio-de-Janeiro, a tributary of the Capivari.

OURO-BRANCO, a village of Brazil, in the prov. of Minas-Geraes, 10 m. SE of Ouro-Preto. Pop. 1,600.

OUROE, an island of Denmark, in the S part of the Ise-fiord, on the N coast of Sieland. It is 4 m. in length.

OURO-FENO, a village of Brazil, in the prov. of Goyaz, 8 m. E of the town of Goyaz.—Also a hamlet in the prov. of Mato-Grosso, 26 m. NE of Mato-Grosso.

OURO-PRETO, formerly VILLA-RICA, a city of Brazil, the capital of the prov. of Minas-Geraes, in S lat. 20° 40′, W long. 44° 55′, 200 m. NW of Rio-de-Janeiro, and 6 m. SW of Marianna. It stands on one side of the Serra-de-San-Sebastião, which forms the NW boundary of a deep narrow valley, through which runs a small stream called the Riberão-de-Ouro-Preto, or Rio-do-Carmo; and is divided into an upper and lower town. The upper town contains a number of handsome buildings, the barracks, the treasury, and the palace of the provincial government, also the finest of the six churches which the city contains. The houses are built of stone, two stories high, covered with tiles, and whitewashed. The pop. is about 8,000. A preparatory college in which Latin, French, English, philosophy, mathematics, and pharmacy are taught, was founded here in 1840. About 1 m. from the city is a botanic garden. This town conducts a very brisk trade with the interior and with Rio.

OUROUER, a commune and village of France, in the dep. of Cher, cant. of Nerondes, 20 m. NE of St. Amand-Mont-Rond. Pop. 1,480.

OUROUX, a commune and village of France, in the dep. of La Nièvre, cant. and 4 m. WSW of Montsauche. Pop. of com. 2,018.

OUROUX (ST. ANTOINE D'), a village of France, in the dep. of Rhone, 18 m. NNW of Villefranche. Pop. 950.

OUROUX-SUR-SAONE, a village of France, in the dep. of Saone-et-Loire, 6 m. SE of Chalons-sur-Saone. Pop. 1,850.

OURRID (LOUGH), a lake of co. Galway, 1½ m. in length. It lies immediately W of Halfway-house, and has a surface-elevation of 156 ft. above sea-level. A mountain which overhangs the N side of the lake has an alt. of 2,128 ft.

OURS (SAINT), a village of France, in the dep. of Puy-de-Dome, cant. and 2 m. NE of Pont-Gibaud. Pop. 1,808.

OURTH, a commune of Belgium, in the prov. of Luxemburg, and dep. of Beho. Pop. 217.

OURTHE, or OURT, a river of Belgium, which rises near Engreux in Luxemburg, in two headstreams; runs N; passes La Roche and Durbuy, and falls into the Meuse, on the r. bank, at Liege, after a sinuous course of 75 m. Its principal affluents are the Aisne, Ambleve, and Weeze.

OURVILLE, a canton and town of France, in the dep. of Seine-Inferieure, 32 m. NW of Rouen. Pop. 1,340.

OUS, a parish and village of Norway, 15 m. SSE of Bergen.

OUSBY, or ULFSBY, a parish in Cumberland, 8½ m. ENE of Penrith. Area 6,000 acres. Pop. 295.

OUSDEN, a parish in Suffolk, 6½ m. ESE of Newmarket. Area 1,200 acres. Pop. in 1851, 384.

OUSE, a navigable river of Yorkshire, forming the principal branch of the Humber trunk river. It is formed by the junction of the rivers Swale and Ure or Yore, running southwards from the northern districts of Yorkshire. From the junction, about 5 m. below Boroughbridge, where the whole mass of waters acquires the name of Ouse, from an insignificant rivulet also falling into it, the river runs by Nun-Monkton, where it is joined by the Nidd; thence flows gently to York, where it is joined by the Foss; afterwards bounds the E and W ridings southwards to Nun-Appleton, where it is reinforced by the waters of the Wharfe; and passing onwards, by Selby eastward, to its successive junctions with the Derwent, the Aire, and the Don, all very considerable rivers, falls into the Humber at its confluence also with the Trent. This noble river is navigable throughout its whole course, and even its headstreams, the Yore and the Swale, are also partly navigable; as are its tributaries the Foss, the Wharfe, the Derwent, the Aire, and the Don. See YORKSHIRE. Previously to 1834, the navigation of the O. from Selby up to Boroughbridge, a distance of nearly 39 m., was so much impeded by shoals that all vessels drawing more than 5 ft. water were compelled to wait until the spring-tides set in for sufficient depth of water to ascend. Sea-borne vessels and steamers drawing from 11 to 12 ft. water now at all periods navigate to York, a distance of 80 m. from the Humber.

OUSE, or GREAT OUSE—as it is sometimes called, to distinguish it from the Little Ouse, one of its tributaries; or LESSER OUSE, as it is sometimes also called, to distinguish it from the Ouse of Yorkshire above described—a river rising in the SE corner of the county of Northampton, and passing successively through the cos. of Buckingham, Bedford, Huntingdon, Cambridge, and Norfolk, in which articles its more particular course will be found fully traced, to its efflux into the Wash at LYNN-REGIS: which also see. It is navigable to Bedford; and its earliest navigable tributary is the Ivel, which is navigable from its junction at Tempsford below Bedford to Shefford. In its course through Cambridgeshire it is joined by the Cam, which is navigable to Cambridge from Denver sluice near Downham, to which point the O. is diverted, in a straight line, through the New Bedford river, from above its natural junction with the Cam. The Stoke, navigable to Stoke-ferry, and the Wisbeach canal from the river Nene, also join it at Denver sluice, whence the navigation descends to the Eau-brink cut, and the junction at Lynn with the Nar, another navigable river.

OUSEBURN (GREAT), a parish in the W. R. of Yorkshire, 4¼ m. SE by S of Aldborough. Area 840 acres. Pop. in 1831, 534; in 1851, 629.

OUSEBURN (LITTLE), a parish in the W. R. of Yorkshire, 5 m. SE by S of Aldborough, comprising the townships of Kirkby-Hall, Thorp-Underwoods, Widdington, and Little O. Area 4,066 acres. Pop. in 1831, 511; in 1851, 566.

OUSEFLEET, a township in Whitgift p., W. R

of Yorkshire, 6 m. SE by E of Howden. Area 1,690 acres. Pop. in 1831, 243; in 1851, 227.

OUSEL. See BUCKINGHAMSHIRE.

OUSSELGHEM, a canton and commune of Belgium, in the prov. of W. Flanders, and arrond. of Courtrai, watered by the Lys. Pop. 1,193. It has several spinning-mills.

OUST, or AOUST, a river of France, which rises in the forest of Lorge, in the dep. of Cotes-du-Nord; runs SE; and joins the Vilaine, on the r., near Redon, after a course of 90 m. It is navigable from Maletroit. Its principal affluents are the Lié, Trinité, Duc, Claye, Aff, and Artz.—Also a cant., com., and v. of France, in the dep. of Ariège, arrond. and 8 m. SE of St. Girons. Pop. of com. 1,621; of cant. 18,037.

OUSTON, or ULSTAN, a township in Chester-le-street p., co.-palatine of Durham, 9 m. N of Durham. Area 636 acres. Pop. in 1831, 273; in 1851, 300.

OUSTON-WITH-NEWBOLD, a parish in Leicestershire, 7½ m. S by E of Melton-Mowbray. Area 2,460 acres. Pop. in 1831, 197; in 1851, 178.

OUTARVILLE, a canton and com. of France, in the dep. of Loiret, arrond. and 9 m. W. of Pithiviers. Pop. of com. 485; of cant. 11,985.

OUTCHESTER, a township in Bambrough p., Northumberland, 2½ m. E by S of Belford. Area 1,044 acres. Pop. in 1831, 111; in 1851, 118.

OUTDORP, a village of Holland, in the prov. of S. Holland, 12 m. SW of Brielle. Pop. 1,000.

OUTEIRO, a village of Brazil, in the prov. and 380 m. W of Para, near the E shore of Lake Urubuquaca.—Also a town of Portugal, in the prov. of Tras-os-Montes, comarca and 12 m. SE of Braganza. Pop. 1,600.

OUTRAGH, or OUGHTERAGH, a parish in co. Leitrim, containing the town of Ballinamore. Area 21,689 acres. Pop. in 1831, 8,449; in 1841, 9,255. Bencroy, the highest ground, situated on the N boundary, has an alt. of 1,707 ft. above sea-level. Lough St. John lies on the SW boundary, and has a surface-elevation of 205 ft. above sea-level.

OUTRAGH, or OUTERAGH, a parish in co. Tipperary, 3 m. NNE of Cahir. Area 1,547 acres. Pop. in 1831, 692; in 1841, 554.

OUTRATH, a parish in co. Kilkenny, 2¼ m. S by E of Kilkenny. Area 2,050 acres. Pop. 599.

OUTREAU, a village of France, in the dep. of Pas-de-Calais, cant. of Samer, near the l. bank of the Liane, 1 m. SSW of Boulogne. Pop. 1,420.

OUTRE-FURAND, a village of France, in the dep. of Loire, cant. and 1 m. E of St. Etienne, on the Furand. Pop. 2,500. It has bottle-works.

OUTRE-L'EAU, a commune of Belgium, in the prov. of Limburg, and dep. of Alken. Pop. 712.

OUTREPREZ, a commune of Belgium, in the prov. of W. Flanders, and dep. of Herseaux. Pop. 125.

OUTRETOUXHE, a canton and commune of Belgium, in the prov. of Liege, and arrond. of Huy. Pop. 133.

OUTREWE, a commune of Belgium, in the prov. of Liege, and dep. of Housse. Pop. 102.

OUTSEATS, a hamlet in Hathersage p., Derbyshire. Pop. in 1831, 202; in 1851, 221.

OUTWELL, a parish partly in Cambridgeshire, and partly in Norfolk, 5 m. SE of Wisbeach. Area 3,018 acres. Pop. in 1831, 986; in 1851, 1,648.

OUVANE, a mountain-rivulet of co. Cork, which rises among the Shchy mountains, and runs 7½ m. SW to the head of Bantry-bay.

OUVEILLAN, a village of France, in the dep. of Aude, cant. of Genestas, 6 m. N of Narbonne. Pop. 1,010.

OUVEZE, a river of France, which rises near Montauban; runs W, passing Buis and Vaison; and then turning S, falls into the Sorgue on the r., 9 m. NE of Avignon.

OUVILLE-L'ABBAYE, a village of France, in the dep. of Seine-Inferieure, cant. and 3 m. NW of Yerville. Pop. 650.

OUZOUER-LE-MARCHE, a canton, commune, and village of France, in the dep. of Loir-et-Cher, arrond. and 22 m. NNE of Blois. Pop. of cant. 8,301; of com. 1,251.

OUZOUER-SUR-LOIRE, a canton, commune, and village of France, in the dep. of Loiret, arrond. and 8 m. NW of Gien. Pop. of cant. 5,508; of com. 730.

OUZOUER-SUR-TREZE'E, a commune and village of France, in the dep. of Loiret, cant. of Briare, 8 m. E of Gien. Pop. 1,488.

OVADA, a town of the Sardinian states, in the prov. and 9 m. SW of Acqui, on the Orba.

OVAMPO, a recently discovered nation of S. Africa, on the W coast, to the N of the Damara, between the parallels of 16° and 19° S. Mr. Galton, the first explorer of their territory, describes them as a people of comparative civilization, well centralized and with strong local attachments, "honest, laborious, and neat, yet still with much of the Negro in them." Their country is fertile, and they raise considerable quantities of corn. Ondonga, their capital, is in S lat. 18° 4′, E long. 15° 14′, between 70 and 80 m. S of the great river Amorongo-Achillanda, the Nourse of our maps.

OVAR, a town of Portugal, in the prov. of Beira, 9 m. SSW of Feira, and 18 m. S of Oporto, on the Ovar, an affluent of the Vouga. It is a well-built town, with 10,500 inhabitants.

OVELGONNE, a town in the duchy and 16 m. NE of Oldenburg, on a small affluent of the Weser. Pop. 700.

OVELINGEN, a commune of Belgium, in the prov. of Limburg, and dep. of Gelinden. Pop. 204.

OVENBROEK, a commune of Belgium, in the prov. of W. Flanders, in the dep. of Ousselghem. Pop. 260.

OVENDON, a township in Halifax p., Yorkshire, 1½ m. NW of Halifax, comprising the villages of Illingworth, Mixenden, Hebble-Bridge, Holdsworth, Wheatley, and Bradshaw. Area 5,170 acres. Pop. in 1831, 8,871; in 1851, 12,738.

OVER, a parish in Cambridgeshire, 9½ m. NW of Cambridge. Area 3,700 acres. Pop. in 1831, 989; in 1851, 1,256.—Also a parish and market-town in the co.-palatine of Chester, 4½ m. W of Middlewich, comprising the townships of Low, Oulton, O., and Wettenhall. The town consists chiefly of one long irregular street. Area of the p., 7,469 acres. Pop. in 1831, 2,928; in 1851, 2,926.—Also a tything in Almondbury p., Gloucestershire, 6½ m. NW of Bristol. Area 2,890 acres. Pop. in 1851, 107.

OVERBECK, a commune of Belgium, in the prov. of E. Flanders, and dep. of Asper. Pop. 593.—Also a commune in the prov. of W. Flanders, and dep. of Markeghem. Pop. 440.—Also a commune in the prov. of E. Flanders, and dep. of Wetteren. Pop. 403.

OVERBOULAERE, a canton and commune of Belgium, in the prov. of E. Flanders, and arrond. of Audenarde. Pop. of cant. 1,596. The village is 6 m. SE of Audenarde, near the l. bank of the Dendre.

OVERBROEK, a commune of Belgium, in the prov. of E. Flanders, and dep. of Meerendre. Pop. 395.—Also a commune in the prov. of Limburg, and dep. of Wellen. Pop. 378.

OVERBURY, a parish in Worcestershire, 5½ m. NE of Tewkesbury, comprising the chapelries of Alstone, Teddington, and Little Washbourn, with

the hamlet of Conderton. Area 3,820 acres. Pop. in 1831, 817; in 1851, 956.

OVERDA'A AND STEENPAEL, a commune of Belgium, in the prov. of Antwerp, and dep. of Eschen. Pop. 106.

OVERDORP, a commune of Belgium, in the prov. of Brabant, and dep. of Wambeke. Pop. 584.

OVEREYNDE, a commune of Belgium, in the prov. of Limburg, and dep. of Houthaelen. Pop. 102.

OVERFLAKKEE, or ZUIDVOORN, an island of Holland, in the prov. of S. Holland, at the influx of the Maese into the German ocean, between the branch called the Haring Vliet on the N, and the Krammer on the S, from the adjacent island of Ostvoorn by the small stream called the Flakkee.

OVERHEEMBEECK, a commune of Belgium, in the prov. of Brabant, and dep. of Nederoverheembeeck. Pop. 479.

OVERHEET, a commune of Belgium, in the prov. of E. Flanders, and dep. of Berlaere. Pop. 292.

OVERHESPIN, a canton and commune of Belgium, in the prov. of Liege, and arrond. of Huy, watered by the Gèthe. Pop. 248.

OVERJMPE, a commune of Belgium, in the prov. of E. Flanders, and dep. of Lede. Pop. 355.

OVERLAER, a commune of Belgium, in the prov. of Brabant, and dep. of Hougaerde. Pop. 168.

OVERMANDEL, a commune of Belgium, in the prov. of E. Flanders, and dep. of Roosebeke. Pop. 802.

OVERMEIRE, a canton and com. of Belgium, in the prov. of E. Flanders, and arrond. of Termonde. Pop. of cant. 3,158; of com. 529. It has several breweries and oil-mills.

OVEROTH, a commune of Belgium, in the prov. of Liege, and dep. of Baelen. Pop. 129.

OVERPELT, a canton and com. of Belgium, in the prov. of Limburg, and arrond. of Hasselt, watered by the Dommel and Halvenschebeek. Pop. of cant. 1,377; of com. 127. It has a distillery and several breweries.

OVERPOUCKE, a commune of Belgium, in the prov. of E. Flanders, and dep. of Meerendre. Pop. 426.

OVERREPEN, a canton and com. of Belgium, in the prov. of Liege, and arrond. of Tongres. Pop. of cant. 334; of village, 178.

OVERSCHIE, a village of Holland, in the prov. of S. Holland, 3 m. NW of Rotterdam, on the Schie. Pop. 2,400.

OVERSLAG, a commune of Belgium, in the prov. of E. Flanders, and dep. of Wachtebeke. Pop. 434.

OVERSLEY, a hamlet in Arrow p., Warwickshire, ¾ m. SE of Alcester, on the E bank of the Arrow. Area 1,660 acres. Pop. in 1851, 308.

OVERSTONE, a parish in Northamptonshire, 4¾ m. NE by N of Northampton. Area 1,940 acres. Pop. in 1831, 203; in 1851, 226.

OVERSTOWEY, a parish in Somersetshire, 7½ m. W by N of Bridgewater. Area 3,647 acres. Pop. in 1831, 592; in 1851, 561.

OVERSTRAND, or OXSTRAND, a parish in Norfolk, 2½ m. SE by E of Cromer. Area 598 acres. Pop. in 1831, 178; in 1851, 260.

OVERTON, a parish in the co. of Southampton, 3½ m. ENE of Whitchurch. Area 6,572 acres. Pop. in 1831, 1,507; in 1851, 1,550.—Also a township in Malpas p., co.-palatine of Chester, 13 m. SSE of Chester. Area 708 acres. Pop. in 1831, 111; in 1851, 122.—Also a parish and village of Flintshire, 4½ m. NNW of Ellesmere. It unites with Flint in returning a member to parliament; and is one of the polling-places for the co. Area 4,398 acres. Pop. in 1831, 1,746; in 1851, 1,479.—Also a chapelry in Lancaster p., co.-palatine of Lancaster, 3½ m. SW of Lancaster, on the W bank of the Lune. Area, with Sunderland and Saltmarshes, 6,314 acres. Pop. in 1831, 336; in 1851, 334.—Also a parish in the N. R. of Yorkshire, 5 m. NW of York, on the river Ouse, comprising the townships of Shipton, Skelton, and O. Area 5,163 acres. Pop. in 1831, 704; in 1851, 699.—Also a parish in Wilts, 2½ m. S by W of Marlborough, including the chapelry of Alton-Priors and the tything of Stowell. Area 8,030 acres. Pop. in 1831, 923; in 1851, 1,025.

OVERTON, a county on the N side of Western Tennessee, U. S. Area 890 sq. m. Pop. in 1840, 9,279; in 1850, 11,217. It is intersected by the Obies river. Monroe is the chief town.—Also the capital of Claiborne p., in Louisiana, 406 m. NW of New Orleans.

OVER-WATER, or OVER-MERE, one of the lakes of Cumberland, situated between Binsey and Cald-Bek fells. It is about a ½ m. in length, and a ¼ m. in breadth; but is neither characterised by beauty of situation nor picturesque scenery.

OVERWINDEN, a canton and commune of Belgium, in the prov. of Liege, and arrond. of Huy. Pop. 300.

OVERWINGHE, a commune of Belgium, in the prov. of Brabant, and dep. of Winghe-St.-Georges. Pop. 238.

OVERYSSEL, or OVER-IJSSEL, a province of Holland, lying between the parallels of 52° 8′ and 52° 52′ N; and bounded on the N by Friesland and Drenthe; on the E by Hanover; on the SE by Prussia; on the S by Gueldreland; and on the W by the latter prov. and the Zuyder-zee. It has an area of 60·530 German or 1285·5 English sq. m.; with a pop. in 1841 of 205,701; in 1851, of 218,702. The surface is generally level and low, and presents large tracts of marshy ground; towards the E and the centre are some slight elevations. The whole belongs to the basin of the Zuyder-zee. The principal rivers are the Yssel, the Zwarte-water and its affluent the Vecht, the Schipbeek, and the Havelteraa, all slow-flowing streams. In the NW are some small lakes. The climate is humid, and in some places unhealthy, from the exhalations arising from standing waters. The soil is chiefly sandy, with a large proportion of bog-land. On the borders of the Yssel are tracts of rich clay; and there are excellent pasture-lands bordering on the Zuyder-zee. The productions are wheat, rye, oats, buck-wheat, potatoes, a little fruit, and rape-seed. Timber and oak-bark are exported, but the rearing of cattle and sheep is the most important branch of industry. Butter, cheese, tallow, hides, wool, turf, and linen, are also articles of export. The prov. contains 20 towns and 40 villages. The chief town is Zwolle.—The inhabitants of this prov. retain more of the ancient national costume and manners than is to be found in other parts of Holland. Their condition is represented by a recent writer in the *Morning Chronicle* as being "more than usually easy. Their houses," he says, "are models of cleanliness and comfort. Some of the peasant-farmers have not less than 100 servants of both sexes in their employ, all well paid, well clothed, and well fed. We may take the average price of a day's labour on the farm at 60 cents., or about 1s. English money, exclusive of certain articles of food. The costume of the peasantry is picturesque without pretension. The men wear velvet trousers, and jackets of woollen cloth; the head-dress is a fur cap, or a woollen one trimmed with fur. The costume of the women consists of a woollen petticoat—sometimes dark, sometimes gaily coloured, according to the taste of the wearer—and a jacket of the same; a kind of half-cap half-bonnet, of curious antique shape, with long stiff folds, something like those the children

wear in Ireland to protect their faces from the sun. Over this is worn a straw hat; their shoes have round toes and large silver buckles; and to complete the toilette, whether in summer or in winter—for the same heavy dress is always worn—the woman coming on her marketing business into the town carries on her arm a great woollen mantle, as a protection against sudden mists or rain. The universal passion of the women for jewellery is a marked feature in their character, which they share with certain of the people of Northern Germany inhabiting the Prussian and Hanoverian provinces not far distant. This jewellery is of the largest and most ponderous kind; and its beauty of form seldom bears any fair proportion to its massiveness or intrinsic value. In character they are reserved, cold, taciturn, inaccessible to foreigners, obstinate, but strongly patriotic, and deeply tinged with nationality. The women are generally more handsome than the men; but they do not come up in beauty to the Frisian women. Their children are taught in their tenderest years the great lesson that they must labour for their subsistence. You see the boys coming into the towns from the country—children of from eight to nine years—groaning under the weight of a heavy yoke, to which is appended on each side a huge milk pail or can. Whatever the physical injury, however, the effect of the moral training is excellent; they are a sober, plodding, industrious, honest race. Education here is very good,—not showy or superficial, but sound."

OVID, a town of Seneca co., New York, U. S., 189 m. W of Albany, between Seneca and Cayuga lakes. Pop. 2,721.—Also a v. in Franklin co., Ohio; and a township in Branch co., in Michigan.

OVIDIOPOL, a town of European Russia, in the gov. of Cherson, on the l. bank of the Dniester, near its embouchure in the Black sea, 21 m. SSW of Odessa. Its harbour is shallow and insecure. Pop. 1,400. It conducts some commerce with Akermann in salt. Its site has been identified with that of the ancient *Tomi*, the place of exile of Ovid, whence its name. Pop. in 1786, 7,495; in 1845, 10,500.

OVIEDO, a province of Spain, bounded on the N by the gulf of Gascogny; on the E by the prov. of Santander; on the S by those of Leon and Villafranca; on the W by Lugo. It has an area of 173·45 German sq. m., and is nearly identical with the old prov. of ASTURIAS: which see. Pop. in 1849, 510,000.

OVIEDO, the chief place of the above prov., situated in a plain at the confluence of the Ovia and the Nora, in N lat. 43° 22′. Its streets are straight, regular, and well-paved, meeting in a handsome central square. It is a bishop's see, and has a cathedral in the Gothic style, rich in relics, and containing the remains of many of the kings and queens who reigned in the N of Spain at the time that the rest of the peninsula was in the hands of the Moors. The university, founded in 1580, is a neat edifice. The castle, episcopal palace, 3 churches, 3 monasteries, 3 convents, 3 hospitals, and a theatre, form the other public buildings. A fine aqueduct of 41 arches supplies the town with water from Gitoria. The trade of the place is chiefly in colonial produce landed at Gijon, and in coal, which is wrought in the vicinity. Hats, combs, leather, metal buttons, and fire-arms, are manufactured in the town. A few miles from O. are the hot springs of Rivera-de-Abajo.

OVIGLIO, a town of the Sardinian states, the cap. of a mandemento, in the prov. and 9 m. WSW of Alessandria, on the l. bank of the Balbo. Pop. 2,200.

OVILI, a town of Russia in Europe, in the gov. and 84 m. NNE of Vilna, district and 57 m. ENE of Wilkomirz.

OVINDOLI, a town of Naples, in the prov. of Abruzzo-Ultra, district and 8 m. NNE of Avezzano, cant. and 5 m. NW of Celano.

OVING, or UVING, a parish in Bucks, 5¾ m. NW of Aylesbury. Area 971 acres. Pop. in 1831, 384; in 1851, 442.—Also a parish in Sussex, 2½ m. E of Chichester. Area 2,946 acres. Pop. in 1851, 876.

OVINGDEAN, a parish in Sussex, 2¾ m. E by S of Brighton. Area 1,618 acres. Pop. in 1851, 149.

OVINGHAM, a parish in Northumberland, 11 m. W of Newcastle-upon-Tyne, in the line of the Carlisle and Newcastle railway, comprising the townships of Dukershagg, Eltringham, Harlowhill, Hedley, Hedley-Woodside, Horsley, Mickley, Nafferton, Ovington, Prudhoe, Prudhoe-Castle, Rouchester, Spittle, Welton, Whittle, Wylam, and O. Area 15,740 acres. Pop. in 1831, 3,028; in 1851, 3,962.

OVINGHAM, a parish of New South Wales, in the co. of Northumberland, bounded on the N by the p. of Belford and Whittingham; on the W by that of Vere; and on the E by that of Rothbury.

OVINGTON, a parish in Essex, 6½ m. ESE of Haverhill. Area 705 acres. Pop. in 1831, 179; in 1851, 152.—Also a parish in Norfolk, 1½ m. NE by N of Watton. Area 1,497 acres. Pop. in 1831, 230; in 1851, 314.—Also a township in Ovingham p., Northumberland, 12½ m. W of Newcastle. Area 1,105 acres. Pop. in 1831, 339; in 1851, 405.—Also a parish in Southamptonshire, 2 m. W by S of New Alresford. Area 1,270 acres. Pop. in 1831, 179; in 1851, 163.—Also a township in Forcett p., Yorkshire, 9 m. NW of Richmond, on the S bank of the Tees. Area 530 acres. Pop. in 1851, 173.

OVINOV, a headland of Russian America, on Behring's sea, in N lat. 57° 40′, W long. 163° 15′.

OVO, a reef or rocky island of the Archipelago, to the N of Candia, in N lat. 30° 37′ 50″, E long. 25° 34′ 40″.—Also a headland of Naples, in the prov. and on the gulf of Otranto, 22 m. SE of Tarento, in N lat. 4° 16′ 40″, E long. 17° 35′.

OVOCA, or AVOCA, a superbly scenic river in co. Wicklow, formed by the confluence of the Avonbeg and Avonmore. From the point of confluence, it flows 3½ m. S to the confluence with it of the Aughrim river, and 4 m. SE thence to the sea immediately below Arklow. The confluence of the Avonbeg and the Avenmore is now topographically as well as poetically known under the designation of 'The Meeting of the Waters;' and its place of confluence with the Aughrim river, as 'The Second Meeting of the Waters.'

OVRUTSH, or OWRUCZ, a town of Russia in Europe, cap. of a district, in the gov. of Volhynia, 90 m. N of Jitomir, and 120 m. W of Chernigov, on the l. bank of the Narynia. Pop. 2,500. It has an abbey belonging to the order of St. Basil, the inmates of which are divided between the Romish and the United Greek churches. O., anciently called Vrutshi, belonged to the Drevliens. Under the Polish government it depended upon the woiwodie of Kiev, and was the chief place of a dietine.

OVUTSI, a town of Japan, in the island of Sikokf and prov. of Sanaki, 36 m. WNW of Ava.

OWASCO, a township of Cayuga co., in the state of New York, U. S., 3 m. SE of Auburn, bordered on the SE by a lake of the same name, and drained by several of the affluents of that lake. It has an undulating surface, but is fertile, and highly cultivated. Pop. in 1840, 1,319. It has a village, containing about 150 inhabitants. The lake is 12 m. long, and about 1 m. broad, and abounds with trout and other fish. It discharges itself by a stream of the same name into Seneca river.

OWASSO, a township of Shiawassee co., in the state of Michigan, U. S., 82 m. NW of Detroit. Pop. in 1840, 234. The village is on Shiawassee river.

OWEGO, a township of Tioga co., in the state of New York, U. S., 161 m. WSW of Albany. It has a hilly surface, and is drained by a creek of the same name, and by Susquehanna river. Pop. in 1840, 5,340. It has a village, containing about 1,800 inhabitants. The creek has its sources in Courtland and Tompkins cos., and joins the Susquehanna at Oswego village.

OWEN, a town of Würtemberg, in the circle of the Danube, bail. and 5 m. S of Kirchheim, and 22 m. SE of Stuttgart, on the r. bank of the Lauter, in a fine valley at the foot of the Teck. Pop. in 1840, 1,629. It has an old church, containing the tombs of the ducal family of Teck. On the Teckberg, which has an alt. of 2,309 ft. above sea-level, are the remains of the celebrated fortress of Teck. Marble is quarried in this mountain.

OWEN, a county in the N part of the state of Kentucky, U. S., comprising an area of 320 sq. m., bounded on the SW by Kentucky river, and drained by Eagle creek. Pop. in 1840, 8,232, of whom 1,281 were slaves; in 1850, 10,456. Its cap. is New Liberty.—Also a central co. of the state of Indiana, containing a surface, generally undulating, of 396 sq. m., watered by the W fork of White river and its tributaries, and Mill creek, a branch of Eel river. Its soil is fertile and well-wooded. Pop. in 1840, 8,359; in 1850, 12,040. Its cap. is Spencer.

OWENASS, a rivulet of Queen's co., which rises on Baunreehcong, whose summit soars to an alt. of 1,676 ft. above sea-level, and runs 9 m. ENE and NE past the town of Mountmellick to the river Barrow, at a point 1¼ m. below Mountmellick. It receives the tributary streams of the Blackwater and the Murglash.

OWENBEG, a rivulet in co. Kerry, which rises near the SE extremity of the Clanruddery mountains, and runs 6 m. NNE through a mountainous region to the Feale, about ⅝ m. below Wellesley-bridge.—Also a rivulet of co. Sligo, which rises among the Ox mountains, at an elevation of upwards of 1,500 ft. above the level of the sea, and flows 12 m. E to the Unchion, Arrow, or Ballysadere river at the village of Collooney.

OWENCARROW, a rivulet in co. Donegal, which issues from Lough Veagh, at an elevation of 149 ft. above sea-level, and runs 4 m. NNE to Lough Glen, at an elevation of 84 ft. above sea-level. The superfluence of Lough Glen to the sea takes the name of Glen river.

OWENCOCKER, a rivulet of co. Donegal, which rises among the mountain heights of Benbane, and runs 8 m. NW and W to the head of Loughrusbeg estuary, a little below the village of Ardara.

OWENDUFF, a rivulet of co. Mayo, which rises among the mountains, at an elevation of upwards of 1,500 ft. above sea-level, and 3 m. N of Clew bay, and runs 7 m. N, and 3 m. W, to the W side of Tulloghaan bay. Its chief tributary is the Tarsaghaunmore.—Also a rivulet in co. Wexford, which rises about 2½ m. SSE of New Ross, and flows 8 m. to the head of Bannow bay.—Also a parish in co. Wexford, 5½ m. SE by S of New Ross. Area 7,980 acres. Pop. in 1831, 2,348; in 1841, 2,625.

OWENEA, a rivulet in co. Donegal, which issues from Lake Ea, and flows 10 m. W to the head of Loughrusmore estuary.

OWENMORE, a rivulet of co. Mayo, which issues from the small lake Lugacolliwee, at an elevation of 791 ft. above sea-level, and runs NW, ESE, and SSW to the formation of the Errive, at the confluence of the Owenduff.—Also a river of co. Mayo, formed by the confluence of a stream of 5½ m. of length from the S, with a voluminous and ramified stream which comes down from Tyrawley. It runs 10½ m. W to the head of Tulloghaan bay, receiving in its progress the tribute of the Munhin, coming from the great lake of Carrowmore. The O. is the largest and most important in the NW of Mayo; its principal supply of water is derived from the N sides of the Corlieve and Nephinbeg mountains.

OWENREAGH, a small and early tributary of the river Roe, co. Londonderry. It rises among the Sperin mountains, and runs about 4 m. N to the Roe.—Also a rivulet of co. Tyrone, which rises among the mountains, 2¾ m. S by W of Fintona, and runs WNW, N, and ENE, to the Drumragh, at a point 2¾ m. above Omagh.

OWENSBORO, a village of Davies co., in the state of Kentucky, U. S., 166 m. WSW of Frankfort, on the S side of Ohio river. Pop. about 200.

OWEN-SOUND, an arm of Georgian bay, Upper Canada, forming a long narrow inlet at the SW extremity of the bay. On Big bay, a branch of the O. sound, is a settlement of Chippewa Indians.

OWENSVILLE, a village of Somers township, Westchester co., in the state of New York. U. S., 115 m. S of Albany, on Croton river, containing in 1840 about 20 dwellings.

OWER-MOIGNE, a parish in Dorsetshire, 6 m. SE of Dorchester. Area 3,271 acres. Pop. in 1831, 379; in 1851, 400.

OWERSBY (North and South), a parish in Lincolnshire, 4½ m. NW by N of Market-Raisen. Area 5,528 acres. Pop. in 1831, 407; in 1851, 448.

OWEY, an inhabited island in the p. of Templecroan, co. Donegal. It lies a ½ m. WNW of the nearest part of the mainland, and 3 m. NNE of Arran. It has a low surface, and measures about 3 m. in circumf.

OWHEL, or Ouel (Lough), a lake in co. Westmeath, extending SE from within ⅝ m. of Bunbrosna to a point 2 m. from Mullingar. It sends from the SE end the new-born Brosna, and from the NW end a stream to Lough Iron, and thence to the river Inny; and it serves also, in the direction of the Brosna, as the grand reservoir for the summit-level of the Royal canal. Its length is 3½ m.; its extreme breadth 1⅝ m.; and its area comprises 2,527 acres. Its surface-elevation above sea-level is 326 ft. in summer, and 329 ft. in winter.

OWLPEN, or Oldpen, a parish in Gloucestershire, 2½ m. E of Dursley. Area 720 acres. Pop. in 1831, 255; in 1851, 82.

OWL'S HEAD, a cape on the SE coast of Nova Scotia, in N lat. 44° 42′.

OWMBY, a parish in Lincolnshire, 6½ m. W by S of Market-Raisen, on a branch of the new river Ancholme. Area 1,860 acres. Pop. in 1851, 289.

OWNING, or Beaulieu, a parish in co. Kildare, 2½ m. N by W of Pilltown. Area 40,030 acres. Pop. in 1831, 1,281; in 1841, 1,352. The N district, and a small part of the NW border, are mountainous; but the other districts consist of tolerably good arable land. A summit in the N has an alt. above sea-level of 1,006 ft.; and one on the NW boundary has an alt. of 788 ft.

OWRAM (North), a township in Halifax p., Yorkshire, 2 m. NE of Halifax. Area 3,400 acres. Pop. in 1831, 10,184; in 1851, 15,285.

OWRAM (South), a township in Halifax p., Yorkshire, 2 m. SE of Halifax. Area 2,280 acres. Pop. in 1831, 5,751; in 1851, 7,380.

OWREGARE, or Uregare, a parish of co. Limerick, 2 m. SE of Bruff. Area 4,844 acres. Pop. in 1831, 1,872; in 1841, 1,903.

OWSLEBURY, a parish in Southamptonshire, 4½ m. SSE of Winchester. Area 5,331 acres. Pop. 861.

OWSTON, a parish in Lincolnshire, 7 m. N by W of Gainsborough, on the W bank of the Trent, in-

cluding the township of Butterwick-West, and Kelfield. Area 5,350 acres. Pop. in 1851, 2,613.

OWSTON, or ANSTON, a parish in the W. R. of Yorkshire, 5 m. N by W of Doncaster, including the townships of O. and Skellow. Area 1,944 acres. Pop. in 1831, 292; in 1851, 236.

OWSTWICK, a township partly in the p. of Garton and partly in that of Roos, E. R. of Yorkshire, 12 m. ENE of Kingston-upon-Hull. Area 1,330 acres. Pop. in 1831, 125; in 1851, 103.

OWTHORNE, a parish in the E. R. of Yorkshire, 16 m. E by S of Kingston-upon-Hull, comprising the townships of S. Frodingham, Rimswell, Waxholme, and Owthorne. Area of p. 4,430 acres. Pop. in 1831, 401; in 1851, 462. The original parish church was partly washed away in 1816, owing to the strength of the tide on this coast. A submarine forest was recently discovered on the coast, below Owthorne, extending along the shore for some hundred yds., and probably a considerable way below low-water-mark, into the sea.

OWTHORPE, a parish in Nottinghamshire, 7½ m. SE of Nottingham, in the line of the Grantham canal. Area 1,700 acres. Pop. in 1851, 137.

OWYHEE. See HAWAII.

OXBOROUGH, a parish in Norfolk, 3 m. ENE of Stoke-Ferry. Area 2,518 acres. Pop. in 1851, 293.

OXBOW, a village in Jefferson co. in New York, U. S., 176 m. NW of Albany. Pop. 250.

OXCOMBE, a parish in Lincolnshire, 6 m. NE by N of Horncastle. Area 1,021 acres. Pop. 34.

OXENDEN (GREAT), a parish in Northamptonshire, 13 m. N by W of Northampton. Area 1,620 acres. Pop. in 1831, 239; in 1851, 222.

OXENHALL, a parish in Gloucestershire, 1¾ m. NW of Newent. Area 1,887 acres. Pop. in 1831, 306; in 1851, 288.

OXENHOPE, a hamlet in the p. of Bradford, Yorkshire, 8 m. NNW of Bradford, in the vicinity of Haworth. The worsted weaving manufacture is largely carried on at this place. Pop. in 1831, 2,980.

OXENTON, a parish in Gloucestershire, 4½ m. E by S of Tewkesbury. Area 1,050 acres. Pop. in 1831, 166; in 1851, 139.

OX MOUNTAINS, a range of mountains in co. Sligo. It commences at the SW vicinity of the village of Ballysadere; extends WSW to the extremity of the co.; and connects with the Lurgan hills, in co. Mayo. The principal summits named in an order from ENE to WSW, have alts. above sea-level of 602, 1,238, 1,778, 1,685, 1,332, 1,446, 1,208, 1,047, and 1,363 ft. The declivities are prevailingly broken, rugged, and moorish; but are greatly diversified by numerous patches of tillage-land.

OXFORD, an ancient city, the capital of Oxfordshire, the seat of a bishopric, and of a celebrated university, situated at the confluence of the rivers Cherwell and Isis or Thames, 21 m. SW by S of Buckingham, 45 m. E by S of Gloucester, and 54 m. NW of London. The view of the city from all the neighbouring heights is highly interesting and picturesque. The principal approaches to the city are from the four cardinal points, and are all imposing. The High-street, the principal street of the city, is upwards of a mile long, and so superbly edificed as to be generally esteemed one of the most strikingly beautiful in Europe. Its sides are adorned with the colleges of University, Queen's, and All-Souls'; and its extremities are overlooked by the embattled tower of Carfax-church, and the lofty pinnacles of Magdalen college. The thoroughfare which extends from the N to the S approach, and intersects the High-street at right angles, is 246 ft. broad, and upwards of 2,000 ft. long, and consists almost wholly of private houses, many of which are large and detached. The other streets for the most part run parallel to the two principal ones; but are comparatively crowded, narrow, and unimposing. The aggregate of modern buildings is now great, and has gone far to modernize the city: yet in what really constitutes O.,—in the magnificent collection of edifices, the museum, the labyrinth of great and noble and ancient buildings which are connected immediately and remotely with its university,—recent change or modernizing is all but utterly unknown. The buildings, though in some instances affording noble specimens of the best Saxon or early Norman architecture, pertain in no case to the highest school of edification, either classic or Gothic; yet they furnish examples of almost all styles, ecclesiastical, secular, and collegiate, classic and picturesque.

Ecclesiastical buildings.] The Cathedral church is cruciform, and measures 154 ft. from E to W, and 102 ft. from N to S. A square tower of two stories rises from its centre, and is surmounted by an octagonal spire. St. Mary the Virgin's church, in which the chief members of the university usually attend divine service, is a beautiful Gothic structure built in 1498, and consisting of a spacious nave and aisles. and a chancel without aisles. All-Saints' church, built at the commencement of the 16th cent., is a fine building of 72 ft. by 42 ft., in the style of ecclesiastical architecture which was worked into popularity by Sir Christopher Wren. The church of St. Peter's in the East, originally the university church, and said by Wood to have been "the first church built of stone that appeared in these parts," is believed to have been partly erected by St. Grimbald in the 9th cent., but has undergone many enlargements, dilapidations, and remodellings. Beneath the chancel is one of the finest and best-preserved crypts in England. Carfax or St. Martin's church is very ancient, stands below the level of the circumjacent ground, and consists of a nave, two narrow aisles, and a chancel. St. John's church, built about the year 1424, is one of the finest ecclesiastical edifices in O. It consists of the choir and transept of a cruciform building without the nave. St. Giles' church, erected in the 12th cent., on the site, as some writers suppose, of "an ancient British temple," consists of a nave, two aisles, and a chancel, and has at the west end an embattled tower. The other churches of O. possess little architectural beauty, and have no association of peculiar interest.

Civic buildings.] The Town and County hall is a large and elegant edifice, erected about the middle of last cent. The Music hall, built in 1748, has a plain but well-proportioned front. The City bridewell, situated in a large open area, was completed in 1789, and is a substantial and well-arranged structure. The Town and County jail is spacious, and has been frequently altered; it consists of several separate buildings and yards arranged in imitation of Gothic castellated towers. O. castle formerly occupied the site of the jail. The city markets, opened in 1774, show an arcade with ranges of shops along the whole of their front.

University buildings.] The first schools for all the colleges of the university, designed to supersede separate schools attached *singulatim* to the halls, were erected at the commencement of the 15th cent., by Thomas Hokenorton, abbot of Ouseney, and consisted of ten apartments, allotted to different branches of tuition. A school for divinity, with a library in the upper division, was added in 1427; and this school still remains. The other schools were all rebuilt in the beginning of the 17th cent.; and, with the picture-gallery and part of the Bodleian library, form a splendid quadrangle, 3 stories high, and terminating in an embattled parapet and jagged pinnacles. The style of the entire buildings is chiefly Gothic. In the school or lecture-room of moral philosophy is a collection of statues, busts, and marbles; and in an apartment on the north side of the schools are arranged the Arundelian marbles, the collections of Grecian monuments by Seldon and Sir George Wheeler, and many curious relics.—The Bodleian library, partly in the quadrangle of the schools, and partly adjacent, originally consisted of three spacious rooms disposed in the form of the letter H; but in addition to these, it now comprises several other apartments.—The Picture gallery occupies the third story of three sides of the quadrangle of the schools.—The Seldonian theatre, in which the principal public meetings of the university are held, built in 1664-9, is one of the first works of Sir C. Wren. Its ground-plan is that of the theatre of Marcellus at Rome; and so ingeniously is the interior arranged, that in the small area of 80 ft. by 90, accommodation is afforded for nearly 4,000 persons. The roof rests entirely upon the side walls, and the ceiling is very elaborately painted. The art of printing, which was in full operation at O. so early as 1478, was first conducted under the sanction of the university in the Seldonian theatre. The university presses were set up in a large room at the top of the theatre, in 1669; they were removed, in 1713, to the Clarendon printing-house; and were again removed, in 1830, to the new University printing-office.—The Clarendon printing-house is a fine building, two stories high, and 115 ft. long. In front is a Doric portico.—The new University printing-office, situated at the extremity of the N suburb of the city, is a fine building of the Corinthian order. The press-room, on the ground-floor, measures 200 ft. by

28 ft., and is the largest in the kingdom.—The Radcliffe library is the most conspicuous and imposing object in an exterior view of the whole urban landscape; and occupies a site decidedly favourable to near architectural effect,—standing in the centre of a square area, the sides of which are formed respectively by St. Mary's church, a part of All-Souls' college, the schools, and the great front of Brazen-nose college. Its rustic basement forms a regular polygon of 16 sides, and 100 ft. in diameter. A circular story rises from the basement; and an upper circular story of much smaller diameter bears aloft a noble cupola surmounted by a lantern, which possesses an elevation of 60 ft., and prominently figures in almost every scenic combination of the city's structures. The edifice was built in 1737-49, by Gibbs, from a bequest of £40,000 by Dr. Radcliffe.—The Ashmolean museum, situated beside the theatre, was erected by Sir C. Wren, for the reception of a rich assemblage of rarities in nature and art presented in 1682 by Elias Ashmole. The structure is admired for the justness of its proportions.—The Observatory, situated on the N outskirts of the city, in the vicinity of the University printing-office, was built in 1786 by Wyatt, at an expense of nearly £30,000, defrayed by the trustees of Dr. Radcliffe. The central elevation is upwards of 100 ft. In the interior are a lecture-room, a library-room, apartments for observation, a dwelling-house for the observer, and a highly valuable set of astronomical instruments.—The buildings which belong to the several colleges and halls will be noticed each in its appropriate place.

The University.] The period at which the university of O. was founded has been the topic of frequent, manifold, and in some respect unmeaning dispute. The earliest places of education in O., whoever established them, appear to have been cloistral schools; and, in one form or other, were probably coeval with the establishment of monasteries. Secular schools, such as were held in private houses, seem to have speedily followed; and when several of these became clustered in one house, they were called a *hall* or *hostel*, and placed under a governor or principal. As O. possessed monasteries in the time of Alfred, and was frequently the scene of his residence, that prince may be supposed to have encouraged any claustral school which existed in the place, or even to have founded one or more new seminaries. Robert D'Oyley, who obtained the government of the city under the Conqueror, founded in O. castle a college of secular canons, which was placed under the control of a warden, and rapidly rose into celebrity. Henry I. was educated at O.; and, during his reign, granted its teachers and scholars some important privileges. Vacarius, a native of Lombardy, established in the city a school of Roman law in the reign of Stephen. Richard I., who was born at O., erected in it several new schools at his private expense, and gave general encouragement to its literary institutions. In the reign of Stephen, and again in that of Henry III., the students are asserted to have amounted to 30,000; and even at the founding of Merton college, in 1274, they are said to have amounted to 15,000. But these figures are manifestly gross exaggerations, and only indicate in a general way that the place had become a distinguished and crowded seat of education. In the latter part of Henry III.'s reign, a taste arose for building colleges, a charter of incorporation was granted to the university, and the aggregate educational institutions of the city proximately assumed their present form. In the reign of Edward II., new privileges were granted, lectures on the Hebrew language were instituted, and a vexatious and agitating claim of the preaching friars to confer degrees on their own authority was torn from them by the university. In the reign of Richard II. occurred the great and glorious sensation under the divinity lectures of Wycliffe, the warden of Canterbury college. Though seven endowed colleges were founded before the close of the 14th century, and most of the large number of hostels or halls continued still to exist, many of these buildings at the expiry of that century were either thinly attended by students or temporarily alienated to uses different from those of their original destination. On Erasmus repairing hither, in the reign of Henry VII., and commencing tuition in the Greek language, a strong party opposed him. In the early part of Henry VIII.'s reign, the university received rich accessions to its institutional appliances from Cardinal Wolsey; and it afterwards won the king's special favour by giving an opinion favourable to his divorcing Queen Catharine. Under Elizabeth, it sustained agitation, and perhaps permanent injury, from the rigid enforcement of subscription to the articles of the nascent Established church, and the consequent exclusion of a large proportion of its members who were favourable to the doctrines of the Puritans. In the reign of James I., the university acquired the right of sending 2 members to parliament. During the period of Charles I., it obtained some important additions to its privileges; and afterwards, when the king had only a partial allegiance, and an insecure throne, it displayed the most thorough loyalty to his person, and made great but unavailing sacrifices in his cause. Many professors and heads of colleges were in consequence expelled by the commissioners subsequently appointed, to "reform the discipline and correct the doctrines" of the university; and yielded place to Presbyterian and Independent successors. The Puritans, however, had but brief possession, and were all turned adrift at the Restoration. No public event of much interest has occurred in the university's history since the Revolution.

The university has always been governed by statutes of its own making. These were in 1629 digested into a code, under the appellation of *Corpus Statutorum Universitatis Oxoniensis*, and, in this form, except on points where modern exigencies have compelled amendment or abrogation, they continue to be in force. The style or title of the corporation is 'The Chancellor, Masters, and Scholars, of the University of Oxford.' The chancellor, the highest officer, holds his office for life, is usually a nobleman of distinction who is elected by the members of convocation, and attends only on extraordinary occasions. The vice-chancellor, the highest resident officer, is annually nominated by the chancellor from the heads of colleges, but of late has generally held office by reappointment for four years; he convenes all courts and meetings, enforces the laws, punishes delinquents, licenses taverns in the city, and is a magistrate for Oxford, Oxfordshire, and Berkshire; and he appoints 4 deputies from the heads of colleges. The seneschallus or high-steward, is appointed by the chancellor, and approved by convocation; he is always a nobleman, and holds his office for life; he assists the chancellor, vice-chancellor, and proctors in the execution of their respective duties. The proctors are two masters of arts, of at least four years' standing chosen out of the several colleges by turns; they are the immediate guardians of the laws of the university, and in all respects the acting magistrates; and, after being chosen, they nominate 4 masters of arts to be pro-proctors, or to act as their deputies. The public orator is chosen by the convocation; he writes public letters and addresses, and presents honorary degrees to those on whom they have been conferred. The keeper of the archives, the assessor, the university council, the registrar of the university, librarians, clerks of the market, and delegates of the press, of accounts, of appeals, of estates, and of privileges, are officers sufficiently described by their respective names. The whole corporate business of the university is transacted in two distinct assemblies, called the House-of-Congregation, and the House-of-Convocation. The chancellor or vice-chancellor, or one of the latter's four deputies, and the two proctors or their respective deputies, preside in both houses, and on all occasions indispensably require to be present. The House-of-Congregation consists of doctors of every faculty resident in the university, heads of colleges and halls, professors, public lecturers, masters of schools, public examiners, the deans and censors of colleges, and masters of arts above one year's standing,—all of whom are called regents; and it occupies itself almost exclusively with the passing of graces and dispensations, and the granting of degrees. The House-of-Convocation consists of all the same members as the former, and of masters of arts in their first year, and persons who have been regents, and retain their names on the books, but have retired from the university; and it transacts all important business, and exercises power on all matters connected with the university's affairs or interests,—subject, however, to some marked restrictions in the department of legislation. A weekly court of record is held by the vice-chancellor, for the recovery of debts within the limits of the university; and a weekly meeting, composed of the vice-chancellor, the proctors, and the heads of houses, is held for deliberation on all matters affecting the university's liberties and privileges. The two representatives of the university in parliament are chosen by the vice-chancellor, the doctors, and the regent and non-regent masters, in convocation.

The regius professorships of divinity, civil law, medicine, Hebrew, and Greek, were founded by Henry VIII. The professorship of divinity has since had annexed to it the canonry of Christ-church, and the rectory of Ewelme; that of law, a lay-prebend in the Cathedral of Salisbury; that of medicine, the mastership of the hospital at Ewelme; and that of Hebrew, a canonry of Christ-church. A regius professorship of modern history and modern languages, was founded by George I. in 1724. A regius professorship of botany was founded by George III. in 1793; and a previous professorship in the same department, was founded, in 1728, by Dr. Sherard, and endowed with £3,000. The Margaret professorship of divinity was founded by the Countess of Richmond; and has since had annexed to it a prebend in Worcester cathedral. It is usually held by biennal re-election for life. The professorship of Natural philosophy was founded, in 1618. The Savilian professorships of Geometry and Astronomy were founded in 1619. The Camden professorship of ancient history was founded in 1622, and endowed with the manor of Bexley in Kent. A prelectorship of anatomy was founded in 1623, and appointed to be held by the regius professor of medicine. The professorship of music was founded in 1626, but is held on one appointment during only a year. The Laudian professorship of Arabic was founded in 1636. The professorship of Poetry is held for only five years, yet admits of one reappointment. The Anglo-Saxon professorship was founded in 1750, is held for only five years, and admits only an Englishman and a bachelor. The Vinerian professorship of common law was founded in 1755. The Clinical professorship, for reading clinical lectures in the Radcliffe infirmary to the students in medicine, was founded in 1772. The Aldrichian professorships of anatomy, the practice of medicine, and chemistry, were founded in 1803; the second and third are in the gift of the Convocation, while the first is annexed to the prelectorship of anatomy. The professorship of Political economy was founded in 1825. In 1842, her Majesty was pleased to found two additional regius professorships in theology; the one in Pastoral Theology, comprehending instruction in ministerial duties, composition and delivery of sermons, knowledge and history of liturgies, rubrics, and the like; the other in Ecclesiastical History and the study of the Ancient Fathers. An anatomical lectureship, distinct from the prelectorship in the same department, was founded about 1750. A readership in Arabic is maintained out of the almonry bounty; and readerships in experimental philosophy, in mineralogy, and in geology, are maintained by grant

from the Crown. The two Radcliffe travelling fellowships are each endowed with £300 a-year; and can be held for only ten years, at least half of which must be spent in travels beyond sea. The Vinerian fellowships and scholarships, the former two in number, and endowed with £50 a-year each, and the latter, five in number, and endowed with £30 a-year each, are also held for ten years. The Craven scholarships, two in number, are held for 14 years. Ten select preacherships are filled by annual appointment, and cannot be held longer than two years. Twelve of the 24 Whitehall preacherships established by George I., in 1724, belong to Oxford, and can be held only by fellows of colleges. The Bampton lectureship, for a series of eight lectures upon fixed and fundamental topics in divinity, is annual, and cannot be held twice by the same person. The university sermons of each Sabbath morning during term, are preached in rotation by the heads of houses, the dean and canons of Christ-church, the two professors of divinity, and the professor of Hebrew.—The university patronage, apart from that of the colleges, comprehends only 8 livings, situated in the counties respectively of Berks, Cornwall, Cumberland, Hants, Leicester, Northampton, Oxford, and York.

The periods during which the university is open are called *terms*, and are four in number; Michaelmas, from 10th October till 17th December; Hilary, from 14th January till the day before Palm Sunday; Easter, from the tenth day after Easter Sunday till the day before Whitsunday; and Trinity, from the Wednesday after Whitsunday till the Saturday after the first Tuesday in July. The following table shows the proportion of students in the university who proceeded on to degrees, between the years 1831 and 1838:

			Obtained honours.			Obtained degrees.					
Year.	Number matriculated.	Passed examination.	Classical honours.	Mathem. honours.	Both.	B.A.	M.A.	In Civil Law (ordinary).	Ditto (honorary).	Medicine.	Divinity.
1831	387	279	107	22	15	228	178	9	6	2	16
1832	377	275	104	21	17	269	175	5	8 [B. Assoc.]	1	11
1833	384	291	135	25	16	292	186	4	1	8	13
1834	360	292	120	21	15	304	207	11	76 [Installation]	7	16
1835	369	292	105	22	8	272	173	20	6	5	1
1836	369	275	121	28	20	298	200	7	1	6	21
1837	421	261	124	24	18	246	161	6	1	2	14
1838	393	274	105	24	10	264	181	13	1	10	12
Mean	382	279	115	23	15	271	183	9		5	13

The proportion of those who enter different professions cannot be estimated. The degrees in civil law are only taken either for practising in doctors commons, or by the statutes of particular colleges. Those in divinity, chiefly by those who have preferment in the church; while the great body of those who take orders have only the degrees of B.A. or M.A. In medicine alone can the proportion be estimated; which is to those who pass the examination in Arts—a necessary preliminary—as 1 to 55·8. The difference between the number who are matriculated and those who pass the examination, is occasioned, 1st, by those who fail in the examination; 2d, those who, from various causes, do not remain in the university: such as being directly or indirectly sent away on account of irregular conduct, &c. The ratio of this difference to the number who pass, or of irregular to regular men, will be found 1 to 2·67. The mathematical honours which imply all degrees of attainment in mathematical science, from the highest to a knowledge of somewhat more than the mere letter of four books of Euclid—form the only public test of any cultivation of science in the university. The proportion, then, of those who evince any, even the smallest, knowledge of science, to those who pass the examination, is 1 to 12.—The following summary of the members of the university up to January 1851, shows an increase, as compared with the summary of January 1850, of 58 members of convocation, 47 members on the books, and of determining bachelors 7; and a decrease of 34 matriculators, and 5 regents:

	Members of convocation.	Members on the books.
1. University,	132	260
2. Baliol,	179	345
3 Merton,	95	176
4. Exeter,	241	445
5. Oriel,	199	387
6. Queen's,	149	271
7. New,	96	172
8. Lincoln,	121	219
9. All Souls,	85	119
10. Magdalen,	152	189

23. St. Alban Hall,	6	21
24. St. Edmund Hall,	62	101
	3,294	6,060

The average number of students matriculated annually in the first 13 years of this cent. was 267. It rapidly rose at the termination of the war. In 1814 it was 359; and in 1815, 372. The average annual number from 1814 to 1840 inclusively was 334. During that interval the largest number admitted in one year was 422, in 1829. The matriculations fell off considerably from 1831 to 1834, when they did not exceed 318. In 1835 the numbers began to rise again, viz., to 370, and in 1838 to 413. From 1840 to 1850 they averaged more than 400. The largest number admitted between those years was in 1849, when 446 was matriculated. In 1851 they fell to 359. The number actually resident now is about 1,300. There are at this moment more students in O. than at any time in the last two centuries. The number of those who have passed the final examination for B.A. during the last 10 years has annually averaged 287; and as the number of the matriculated annually averaged 400, it follows that not quite three-fourths of those who enter the university proceed to a degree. The report of the hebdomadal board states that the number of persons now living who have been educated at O. must be "between 4,000 and 5,000 more than were living 30 years ago." This increase, however, does not appear to be proportioned to the increase of the pop. and wealthy of England during the last 30 years. The total number of members of the university on the 31st Dec. 1850 was, as above stated, 6,060. The number of undergraduates on the books, resident and non-resident, was 1,402; the number of members of convocations, 3,294. The remaining 1,364 members were either graduates who had not yet acquired the franchise, or graduates who, having lost it by removing their names from the books, had not yet recovered it by the statutable means. The graduates of all ranks residing in O. do not exceed 300. These results appear small when the large endowments of the college are considered: the education imparted does not conduce to the advancement in life of many persons except those intended for the church. The commissioners report that "the number of students at Cambridge is greater than at O., though the accommodation within the college walls at Cambridge is more limited, and the endowments much less considerable. This," the commissioners remark, "may arise from the greater facilities for admission to a popular college in Cambridge, to the absence of a religious test at matriculation, and to the great advantages of open fellowships and scholarships. But, however accounted for, the fact of such a superiority in numbers proves that O., which has more colleges and ampler revenues than Cambridge, ought to send forth a larger number of students than at present." There are four public examiners, who are nominated by the vice-chancellor and the proctors, and must afterwards be approved by the convocation. Several public prizes are given annually by the chancellor, and from the revenues of certain foundations, and may be competed for by all the members of the university. The university commissioners, in their report of 1852, propose to give the university, with proper reserves, full power of self-government. To carry this power into effect, they propose to create a Senate, preserving the name of the 'Congregation,' consisting of all heads of houses, the proctors, all professors and public lecturers, together with the senior tutors of all colleges and halls; and to give this body authority to originate measures, and power to appoint delegacies or standing committees for special purposes. This body is proposed rather as an addition to the existing branches of the academic legislature, the hebdomadal board still retaining its executive powers and its right to originate measures, and the convocation still having that veto into which prescription has narrowed its functions. Such an addition, however, has long been required, and till recently its place was supplied by a species of mixed committee or conference, that mediated between the hebdomadal board and the convocation,—the lords and commons of the university. It is proposed to give the most important functions of the university, the supervision of studies, the appointment of examiners, and the management of the public libraries, to the professorial body alone, that body, however, being very extensively remodelled. It is also proposed that the proc-

tors shall severally hold office for two years, the first year of the one coinciding with the last year of the other; the duties of the office being confined to matters of discipline, and the election being vested in congregation without the restraint of the Caroline cycle. Among other proposed changes affecting the state and discipline of the university, may be mentioned the abolition of promissory oaths, the discontinuance of the distinction between noblemen, gentlemen commoners, and commoners; a check on the credit given to undergraduates by the early presentation of bills, and the recovery of debts in open court, and liberty for the foundation of halls as well as for residence in private lodgings, under due superintendence, without connection with any college or hall.—As regards the studies of the university, the commissioners propose a public examination before matriculation; the option of some special branch of study in the latter part of the academic course; four professorial boards for the regulation of studies, viz., for theology, mental philosophy and philology, jurisprudence and history, mathematical and physical science; the entire reconstruction and re-endowment of the professorships, partly by the application of college fellowships to the purpose; the election of professors by the crown, or the proposed congregation, instead of the convocation; the removal of restrictions from university scholarships and prizes, and the formation of libraries and museums of physical science under the entire management of the professors.—In the changes proposed in the constitution and government of the colleges are the utilizing of fellowships by attaching professorial duties; the creation of scholarships tenable for a limited term; the opening of all foundations to the whole university except in special cases; the election of heads of houses from the whole body of masters of arts; the regular and effective visitation of the colleges, with annual reports to the Crown; and the power of making and repealing statues.

Revenues.] The total revenues of O. university, arising from all sources, are £457,490; while those of Cambridge are £377,406; and those of Dublin are £92,300. The ordinary expenses of the university, as distinct from the several colleges, are £7,000 a-year; its ordinary income is £7,500 a-year. The report of the university commissioners, in 1852, recommends that publicity should be given to the university accounts, and accounts of all fees payable. Some of the fees, it states, are levied without authority, and idle forms are kept up for the sake of fees; while in the university of Cambridge an intelligible statement of the university fees, drawn up in a tabular form, appears every year. The payments from students are not included in the college income of £7,500 a-year. The proctors receive £700 a-year each; the pro-proctors £320; the bedells £1,550; and the examiners £1,600. The university pays towards paving and lighting O. £2,000 a-year. The average income of the heads of houses is £1,100 a-year; of fellows, taking in the canons of Christ Church, £234 a-year. There are 557 fellowships in O., of which about 35 are vacant every year. The revenue arising from the university press, by the printing of Bibles and prayer-books, is about £8,000 a-year.—The colleges are 19 in number, and the halls 5; and they are corporate bodies belonging to the class called eleemosynary, and, contrary to common opinion, are quite distinct from the corporation of the university. The halls, though in some instances possessing exhibitions toward the maintenace of certain students, are not endowed with estates as the colleges are; but with respect to discipline, courses of studies, length of residence, examinations, degrees, dress, fees, expenses, and every academical privilege, they occupy the same footing as the rest of the university. Each college and hall has a president, who is elected for life, and is variously styled, in the different institutions, master, principal, president, provost, and warden. Fellows and scholars of colleges are supported wholly or in part from the revenues of the foundation. The fellows with the master, are proprietors, and, except at Wadham college, they have the option, if they remain unmarried, of holding their fellowships for life, or of accepting some equivalent preferment. Some of the fellowships are of small value; others yield a competent provision; and others are comparatively opulent. The scholars are simply students who receive a certain sum of money for a given number of years, generally four.

University college affects to have been founded in 872, and was restored or rather instituted by William of Durham in 1249. On the foundation are a master, 12 fellows, and 17 scholars and exhibitioners. The buildings of the college present, on the S side of the High-street, a front of about 260 ft. long, and 3 stories high, regular, substantial, and of the old English architecture, with some mixture of the Italian; pierced at equal distances from the extremities by two gateways; and surmounted over these by two low, broad, massive, battlemented towers.

Baliol college was founded somewhere between 1263 and 1268, by John Baliol of Bernard-castle, and his wife Dervongilld. On the foundation are a master, 12 fellows, and 14 scholars. The buildings of the college display an unpleasing irregularity of architecture; possess more interior accommodation than external beauty; and, while of various dates, are in no part older than the time of Henry VI. The library was once celebrated for its wealth; but, though still comprising a valuable collection of printed books, was severely and permanently damaged by the visitors in the reign of Edward VI.

Merton college was founded at Malden, in Surrey, in 1264, and removed to Oxford in 1274, by Walter de Merton, bishop of Rochester. The society, as a corporate body, is the most ancient in the university, and consists of a warden, 24 fellows, 14 postmasters, 4 scholars, 2 chaplains, and 2 clerks. The buildings of the college are situated in John-street, and arranged into three courts or quadrangles. The splendid chapel of the college is used as the parish-church of St. John's.

Exeter college, originally called Stapledon hall, was founded in 1314, by Walter de Stapledon, bishop of Exeter. The present foundation, additional to the rectorship and 25 fellowships, includes 12 exhibitions. The buildings of the college form a quadrangle, whose interior is nearly a parallelogram of 135 ft. The principal front facing the street is 220 ft. long.

Oriel college was founded in 1326, for a provost and 10 fellows, by Edward II. The present society consists of a provost, 18 fellows, and 15 exhibitioners. The principal buildings of the college form a quadrangle, rebuilt at different periods of the 17th cent. The front toward the street is simple and uniform. The interior court is eminently pleasing. Additional to the quadrangle, are two ranges of buildings, erected early in the 18th cent., as lodgings for students; and between these stands the library, a chaste classical edifice, built under the direction of Wyatt.

Queen's college was founded in 1340, by Robert Egglesfield, chaplain to Philippa, queen of Edward III. The society at present consists of a provost, 24 fellows, 2 chaplains, 8 taberdars, 4 scholars, 12 probationary scholars, 4 exhibitioners, and 3 clerks. The buildings of this college stand on the N side of High-street, opposite University college, and form a chief feature of power and beauty in that superb vista of architectural magnificence. With the exception of the library, they were all built during the last cent., and are in the Grecian style of architecture. They are arranged into two courts, and constitute an oblong of 300 ft. by 220. The interior of the chapel is richly ornamented in the Corinthian style; its ceiling is painted to represent the ascension; and its windows are nearly all filled with painted glass. The library, built toward the end of the 17th cent., is 123 ft. long, and proportionally wide.

New college was founded in 1386, by William of Wykeham, bishop of Winchester. The fellows and scholars are all supplied from the college of Winchester; and an annual election takes place there to fill all vacancies. The buildings are separated from the N side of Queen's college only by a narrow lane; and consist of a spacious and chief quadrangle, a small adjacent cloistral quadrangle, and a series of buildings, called Garden-court, for the use of students. The N side, consisting of the chapel and the hall, is a chaste, undefaced, and interesting specimen of Gothic beauty.

Lincoln college was founded in 1427, by Richard Fleming, bishop of Lincoln. The present society consists of a rector, 12 fellows, 8 scholars, 12 exhibitioners, and 1 Bible clerk. The buildings consist chiefly of two quadrangles of respectively 80 and 70 ft. The street front is low and irregular; and the elevations of both courts are low, plain, and simple.

All Souls' college was founded in 1437, by Henry Chichele, archbishop of Canterbury. The buildings consist chiefly of two large quadrangles, of separate dates and widely different character. The more modern quadrangle encloses a court of 172 ft. by 155. Its S side is occupied by the hall and the chapel; the N by a magnificent range of building, used as the library, and corresponding in architectural pretension to the sumptuous Radcliffe library which it confronts. The library is 198 ft. long, 32½ ft. wide, and 40 ft. high.

Magdalen college was founded in 1456, by William of Waynfleet, bishop of Winchester. The buildings are situated at the E entrance of the city, on the border of the Cherwell; and impress a stranger with an idea of great sumptuousness in Oxonian architecture. The great quadrangle contains the chapel, the hall, the library, and a considerable proportion of the more private buildings; and everywhere presents an aspect of venerable grandeur. The chapel is highly finished and elegant within. The hall is curiously carved in its wainscotting, roofed in modern Gothic, enriched with many portraits, and on the whole, elegant and spacious. Attached to the college are extensive and tastefully disposed pleasure-grounds. The college is required by its statutes to entertain the kings of England and princes of Wales, whenever they visit O.

Brasen-nose college was founded in 1509, by William Smith, bishop of Lincoln. The present society consists of a principal, 20 fellows, 32 scholars, and 15 exhibitioners. The principal buildings consist of a large quadrangle, which remains nearly as it was constructed by the two founders; and of a smaller quadrangle, built in the 17th cent. The library is ornate in the interior, and was arranged by Wyatt.

Corpus Christi college was founded in 1516, by Richard Fox, bishop of Winchester. The original part of the buildings is a quadrangle, situated between Merton and Christ-church, and enclosing a court of 101 ft. by 80. Its whole appearance is simple and beautiful.

Christ-church college was founded in 1525, by Cardinal Wolsey, suppressed in 1545, finally established at the erection of the see of Oxford in 1546, and remodelled by Queen Elizabeth in 1561. The principal buildings consist of the cathedral, already described in the paragraph on Ecclesiastical edifices, two spacious quadrangles, and two smaller courts. The great west front is 382 ft. long, and displays great architectural magnificence and force. Over the grand gateway in the centre rises a noble tower, outre in its character, yet dignified and beautiful; begun by Wolsey, but completed in 1681 by Sir Christopher Wren; and containing 'Great Tom of Oxford,'—a bell of 17,000 pounds in weight, whose evening toll at 9 o'clock summons all the scholars of the university to their respective colleges. The kitchen of this college is pro-

bably the most splendid building of its class in Europe. The hall is impressively grand, and one of the finest of any class in the kingdom. The great-room is 115 ft. long, 40 ft. wide, and 50 ft. high: its ceiling is of exquisitely carved oak, with occasional gilding; its windows are of intersected Gothic; and its sides are of pannelled wainscot, and display an extensive collection of portraits. Under this magnificent apartment is the common-room, adorned with several good portraits. The second great quadrangle of the college consists of a library and annexed apartments on one side, and of three superb ranges of lodgings on the other sides. Its usual name is Peckwater court. The library side, 141 ft. long, exhibits a superb front, adorned with Corinthian columns. The whole ground-flour of this side, though divided into two apartments, forms a picture-gallery, rich especially in works of the great Italian masters. The grounds attached to the college are extensive.

Trinity college was founded in 1554, by Sir Thomas Pope, of Tittenhanger, Hertfordshire. The buildings consist of one quadrangle, containing the hall, the chapel, the library, the president's house, and some lodgings. They display great irregularities of style, and, excepting the front, which contains the chapel and a tower, and is classic and pleasing, they possess few or no architectural attractions. The pleasure-grounds attached to the college are extensive.

St. John's college founded in 1557, by Sir Thomas White, merchant-tailor of London, is situated near the N entrance of the city, and consists of two pleasing quadrangles, accompanied with gardens.

Jesus' college, founded in 1571, by Dr Hugh Price, treasurer of St. David's, sustains a principal, 19 fellows, 18 scholars, and several exhibitioners. The buildings consist of two quadrangles. The first quadrangle measures 90 ft. by 70; and, in the interior elevations, is wholly Gothic. The second quadrangle measures 100 ft. by 90; and is loftier and more interesting than the low three-storied first quadrangle.

Wadham college, founded in 1613, by Nicholas Wadham, Esq., of Merifield, Somersetshire, forms one quadrangle of nearly 130 ft. each way. Three sides are occupied with the lodgings of the society; the E side is occupied with the hall, the chapel, and the library. The hall is one of the largest in the university. The gardens attached to the college are extensive, and tastefully arranged. The Royal society originated in this college, and held its earliest meetings in a room over the gateway.

Pembroke college, originally Broadgate Hall, was founded in 1620, by Thomas Tesdale, Esq., of Glympton in Oxfordshire, and the Rev. Dr. Wightwick, rector of Ilsley in Berkshire. The present society consists of a master, 14 fellows, and 22 scholars and exhibitioners The buildings consist chiefly of two diminutive courts; and, with two small exceptions, were built in the 17th cent.

Worcester college, originally Gloucester Hall, was founded in 1714, by Sir Thomas Cookes, of Bentley, Worcestershire. The present society consists of a provost, 21 fellows, 16 scholars, and 3 exhibitioners. The buildings, with the exception of part of the old monastic seminary, present a chaste and noble appearance. In front is the library, with the hall projecting on one side, and the chapel on the other. The library is 100 ft. long.

The Halls.] St. Mary's hall, originally the parsonage-house of St. Mary's church, in 1333 was converted into an academical hall. The buildings form a quadrangle; and were all either rebuilt or improved during last cent.—Magdalen hall, adjoining Magdalen college, was built about 1353. About 1518, it was constituted an independent academical hall. In 1816, the members obtained an act of parliament conferring on them the buildings of the extinct establishment of Hertford college; and, in 1822, removed to their new possession.—New Inn hall was conferred in 1392, on New college, and seems to have been made an academical hall, under its present name, in 1438. It was celebrated for a time as a seat of study for the law; it has lately been restored by its principal, who, at his own expense, has erected a handsome edifice for the accommodation of its students.—St. Alban hall, situated on the E side of Merton college, in 1547 was transferred to Merton college; and, some time after, received the status of a regular academical hall. The buildings form a plain but commodious quadrangle.—St. Edmund hall was, in 1559, re-established as an academical institution. During the last two centuries the buildings have been much enlarged.

Diocese.] O. is one of the six bishoprics established by Henry VIII. The seat of the new bishopric was fixed, in 1542, at the magnificent chapel of Ouseney abbey; and it was transferred, in 1546, to the greatly inferior structure which continues to be the cathedral. The archdeaconries of Berkshire and Buckinghamshire, nearly co-extensive with the cognominal counties, were recently added to the see by the ecclesiastical commissioners. The income of the bishop, on the average of three years ending in 1831, was returned at £3,106 gross, or £2,648 nett; in 1845 it was returned at £5,000 nett. The revenue of the cathedral, in its joint and intimately blended connexion with the diocese and Christ-church college, was, in 1831, £25,899 gross; and the nett revenue, irrespective of houses for the dean and canons, was £12,203. The dean and canons have no separate revenues. The cathedral establishment consists of bishop, dean, 3 archdeacons, and 8 canons, besides chaplains, clerks, choristers, and almsmen.

Trade, &c.] O. has no staple manufacture, and continues, as in every past age, to derive most of its support and importance from the university. A large transit trade, especially in grain and coal, is occasioned by the junction of the Oxford canal with the Thames; and is facilitated by quays, wharves, and other accommodations. Races are held annually in the Port-Meadow, a tract of 440 acres belonging to the freemen. Theatrical performances are not allowed.

Municipal affairs.] A charter given to O. by Henry II., conferred the same rights and privileges as those of the city of London, and appointed the mayor to act with the lord-mayor of London as chief butler at the coronation. The municipal receipt for 1840 was £2,674; for 1850, £7,804. The corporation, under the reform act, consists of a mayor, 9 aldermen, and 30 councillors. The magistrates have no jurisdiction within the university, or over its members.—The city returns 2 members to parliament. Constituency in 1835-6, 2,506; in 1847, 2,881.—The boundary of the burgh both for municipal and for parliamentary purposes, was enlarged by the boundary and municipal reform acts.—The pop. in 1801 was 11,749; in 1831, 20,649; in 1851, 27,943.

History.] O. is believed by most writers to have been originally called Oxenford, and to have received that name from the Saxons, on account of the frequent passage of oxen across the river at its site. In 979, and 1002, the town was burnt by the Danes; and in 1009, it was again fired by them. It was the residence of Edmund Ironside, and the scene of his assassination; it was for many years the residence of the court of Canute; and it was the meeting-place, in 1022, of a great council for translating the laws of Edward into Latin,—in 1026, of a parliament for confirming the edicts of Edgar,—and, in 1036, of a wittenagemote for settling the succession of the crown on the death of Canute. Harold Harefoot—to whom, on the last of these occasions, the crown was awarded—made O. the scene of his coronation, his residence, and his death. On the invasion of England by the Normans, O. was one of the towns which defied their power; and, in 1067, it was besieged by the Conqueror in person, and taken by storm. Before William's death, however, the town became reconciled to the Norman yoke, and began to reassume its literary character. During the civil war between Stephen and the empress Maud, the latter sustained a siege of three months in the castle of Oxford from her rival. In 1349, so great a pestilence occurred that upwards of one-fourth of the students were swept away. Early in the reign of Henry VII. the plague riotted during six weeks over the city and the colleges, and destroyed, or chased from them, nearly all their inhabitants; and during the remainder of that reign, as well as in the course of the next, it frequently reappeared, and filled all the locality with dismay. In the reign of Mary, of bloody memory, O was the scene of the martyrdom of Ridley, Latimer, and Cranmer. During the reign of Elizabeth, the city was frequently devastated by pestilence; and, in 1577, occurred what was called 'the black assize,'—the sudden seizure upon an assembly in a judiciary court of a severe malady which, within 40 hours, carried off the judge, the sheriff, several justices, and upwards of 300 other persons. Charles I., when compelled to retire from the metropolis, adopted O. as his residence, the seat of his court, and the head-quarters of his army. The city was obliged, after the battle of Naseby, to surrender to the parliamentarians under Fairfax. Cromwell visited the city, and held the office of chancellor of the university. Two parliaments were held here in the reign of Charles II. After the Revolution, O. was regarded as the grand retreat of Jacobitism.

OXFORD, a township of Upper Canada, in the Johnstown district, bordered on the NW by the Rideau canal and river. Pop. in 1842, 2,960.

OXFORD, a county in the W part of the state of Maine, U. S., comprising an area of 1,600 sq. m. It has a mountainous surface, and contains a chain of lakes which flow into Umbagog lake, and thence into Androscoggin river. This river and the Saco are the chief rivers in the county. The soil is in some parts very fertile. Pop. in 1840, 38,351; in 1850, 39,706. Its capital is Paris.—Also a township of Oxford co., in the state of Maine, 50 m. SW of Augusta. It

has a fertile soil, and is drained by Little Androscoggin river. Pop. in 1840, 1,254.—Also a township of Worcester co., in the state of Massachusetts, 52 m. W of Boston. It has a hilly surface, and is watered by French river, a branch of Quinnebaug. The soil consists of gravelly loam. Pop. 1,742.—Also a township of New Haven co., in the state of Connecticut, 55 m. SW of Hartford. It has a hilly surface, bordered on the SW by Housatonic river, and drained by Nangatuck river, and one of its branches. The soil consists of gravelly loam. Pop. 1,626.—Also a township of Chenango co., in the state of New York, 10 m. S of Norwich. The surface is undulating, and the soil fertile and well-cultivated. It is intersected by Chenango river, and by the canal of the same name. Pop. 3,179. It contains a village with 1,300 inhabitants.—Also a township of Warren co., in the state of New Jersey. It has a mountainous surface, bordered on the W by Delaware river, and drained by Pequest creek, and its tributary Beaver brook. It contains several fertile valleys. Pop. 2,853. Its chief place is Belvedere.—Also a village of Chester co., in the state of Pennsylvania, 41 m. SW of Philadelphia. Pop. about 100.—Also a township of Philadelphia co., in the state of Pennsylvania, bounded on the SE by Delaware river, and watered by Tacony and Sessisocksink creeks. The surface presents a gentle declivity. The soil is chiefly sandy loam. Pop. 1,582.—Also a township of Butler co., in the state of Ohio, 105 m. WSW of Columbus. Pop. 3,388. This township is the property of the Miami university.—Also a township of Coshocton co., in the same state. Pop. 760.—Also a township of Delaware co., in the same state. Pop. 774.—Also a township of Erie co., in the same state. Pop. 736.—Also a township of Guernsey co., in the same state. Pop. 2,252.—Also a township of Tuscarawas co., in the same state. Pop. 826.—Also a township of Oakland co., in the same state. Pop. 574.—Also a village of Granville co., in the state of North Carolina, 45 m. N of Raleigh, on the W side of Fishing creek. Pop. 450.—Also a village of La Fayette co., in the state of Mississippi, 160 m. NNE of Jackson.

OXFORD (East), a township of Upper Canada, in the Brock district. Pop. (chiefly Canadians) in 1842, 1,280. The soil is mostly light and timbered with pine.

OXFORD (North), a township of Upper Canada, in the Brock district, bounded on the SE by the township of W. Oxford. Pop. (chiefly Europeans) in 1842, 444. The soil is fertile and well-wooded.

OXFORD (West), a township of Upper Canada, in the Brock district, separated from N. Oxford on the NW by the E branch of the river Thames. It has an undulating surface and is well-settled. Pop. (chiefly Canadians) in 1842, 1,321. It contains the villages of Ingersol and Beachville.

OXFORD FURNACE, a village of Oxford township, Warren co., in the state of New Jersey, U. S., 52 m. N by W of Trenton, on a branch of Bequest creek. It contains extensive beds of magnetic iron-ore.

OXFORDSHIRE, an inland county of England, situated between 51° 28′ and 52° 9′ N lat., and 1° 2′ and 1° 38′ W long. of Greenwich; bounded on the NW and N by Warwickshire; on the NE by Northamptonshire; on the E by Buckinghamshire; on the SE, S, and SW by Berkshire; and on the W by Gloucestershire. Its boundary-line over most of its contact with Northamptonshire, is the river of Cherwell; and, over all the long contact with Berkshire, the Isis, or Thames. The form of the co. begins on the N, at what is called the Three-shires stone, in a complete point or apex; it somewhat irregularly expands till it attains a breadth of 38 m.; it then suddenly contracts, at its middle, and for some distance in the vicinity of Oxford, to a mean breadth of 7 m.; and at no point S of the city does it expand to a greater breadth than 12 m. Its greatest length from NNW to SSE, is 50 m. Its area is 756 sq. m., or 483,840 acres; being in point of size the 31st of the English cos.

Surface.] The S district possesses in general a fine contour, and presents a charming alternation of hill and valley. The Chiltern hills, which chiefly occupy it, abound in variety and grace of scene. Their principal ridge runs across the co. from NE to SW, near Stockenchurch, Nuffield, and Chalkenden. Nettlebed-hill, in the ridge, is 820 ft. above sea-level, and expands into the table-land of Nuffield-common, only 63 ft. inferior in alt. to Nettlebed-hill. An elevated platform rises immediately E of Oxford, stretches away between the valleys of the Cherwell and the Thame, and sends up on its N edge, the hill of Becley, its highest ground. The whole central district, with the exception of this range of marked yet inconsiderable upland, totally wants that inequality of surface which is essential to power and character in landscape; yet it boasts a profusion of wood, and a wealth of general cultivation which display to the eye at every rude turn, a captivating though limited beauty of prospect. The N district is not only prevailingly flat, but wants sufficient sylvan adorning, and it often fatigues the eye by a rude and frigid monotony of scene.

Rivers.] The Stour, a tributary of the Warwickshire Avon, rises a little within the NW boundary; and the Ouse, in the early part of its course, traces a short way the NE boundary, and receives a tiny affluent from the interior. Excepting the trivial aggregate of area drained by these streams, the whole co. belongs to the basin of the Thames. This monarch of England's rivers first touches the co. a little below Lechdale in Gloucestershire, and performs a boldly sinuous course of about 70 m. along the boundary, to a point a little below Henley. Though anciently called the Thames over its whole course, it is now uncontestedly called so only below the influx of the Thame; and, down to that point, is very generally named the Isis. The Windrush, after a course of 16 or 18 m. through Gloucestershire, from the Cotswold hills, achieves a run of about the same length SE through O., passes Burford, and Witney, and enters the Thames by several channels. The Evenlode comes in about 9 m. below its source in Gloucestershire; passes Charlbury; and performs within the co. an entire run of about 22 m. Two tributaries of this stream, respectively 5 and 12 m. long, flow to it from the vicinity of Chipping-Norton. The Cherwell, about 9 m. below its source in Northamptonshire, strikes nearly the northern extremity of O.; passes Banbury and East Adderbury; and, chiefly in the interior of the county, though partly on its boundary, achieves a distance southward of about 30 m. Two noticeable affluents of this stream are the Sorbrook and the Ray. The Thame rises on the borders of Buckinghamshire; strikes O. at the town of Thame; runs E and thence S to Dorchester; and has an entire course of 17 m. before touching the county, 5 m. along the boundary, and 10 m. in the interior. The Windrush, the Evenlode, the Cherwell, and the chief tributaries of the two latter, drive numerous mills.

Geognostic structure.] The Chiltern hills form part of the long range of chalky heights which extends from Norfolk to Wiltshire, and forms the NW margin of the chalk-basin of London. The lower formations of the cretaceous series crop out from the foot of the hills; the chalk marl prominent; the upper green sand little more than discernible; the gault or Tetsworth blue marl prominent; and the iron sand, or lower green sand, with its subordinate beds of ochre, occupying a depth of 50 ft. The upper division of the oolitic series, consisting of the Purbeck, the Port-

land, and the Rimmeridge beds, look out from beneath the iron sand, and attain their highest point in the co. in the iron sand and ochre-capped hill of Shotover, 600 ft. in alt., situated not far from Oxford. The coral rag, belonging to the middle division of the oolitic series, occupies the platform between the Cherwell and the Thame, and stretches W across the Thames into Berkshire. The Oxford clay, which constitutes the lowest stratum of the middle oolites, crops out from beneath the coral rag, and traverses all the central district of the co. as far as to Bicester, Woodstock, Witney, and Bampton; and, with merely the Portland bed incumbent on it, all the intermediate formations being absent, it occupies also the eastern district. The lias beds, inferior in their geognostic position to the oolites, rise to the surface in a small projecting part of the co. frontier near Chipping-Norton, and in the valley of the Cherwell, part of the NE frontier; but in the aggregate of the two districts or pendicles, they occupy only a very small area. The lower division of the oolites occupy all the rest of the co.—The clays in several parts near Oxford were formerly used with some success by potters. The ochre of Shotover is accounted "the best of its kind in the world, being of a true yellow colour, and very weighty." Very fine marl is often found at a small depth from the surface in the central district. The sandstone of the oolite formations is quarried in several places, particularly near Burford, and forms the material of St. Paul's cathedral in London, and of not a few other noted structures throughout the country. The limestone or forest marble of Wichwood is occasionally used as a coarse marble.

Climate and soils.] The N district, owing to the want of wood, is comparatively chill during the greater part of the year, and unpleasantly warm in summer. The Chiltern district, in tepid seasons, shows more fogs among its woods and hills than rest on the adjacent valleys; and the chalk-lands which skirt its heights are subject to both earlier and longer frosts than the rest of the co.—Mr. Young, in his *Agricultural Survey*, assumes the area of the co. to be only 474,836 acres, and distributes it as to soil into 79,635 acres of red land, 164,023 of stone brash, 64,778 of Chiltern chalk, and 166,400 of miscellaneous soils. The red land occurs in the N district, and consists of a rich and very fertile loam. The corn-brash, which prevails chiefly in the central district, consists of decomposed sandstone, chalk, and limestone, and is generally a loose, dry, friable sand or loam, upon a porous subsoil. The Chiltern-chalk occupies the SE district, and is properly rather the subsoil than the soil. On the whole, the land of this co. is occasionally equal to the best in England, and aggregately superior to that of the greater part of the kingdom.

Woods and pastures.] Camden describes the woods of O. as forming in his day a principal boast of the co. The natural woods of the S are still extensive, and consist of beeches with a thin interspersion of slender though occasionally tall oak and ash trees. The forest of Wichwood consists of oak, ash, elm, and beech, and is 6,720 acres in extent. Among numerous plantations, a conspicuous example is the great belt at Blenheim, not less than 13 m. in extent.—"The greatest glory of O.," says Gibson, in his continuation of Camden, "is the abundance of its meadows and pastures. As the banks of about 70 streams and streamlets which water the co. are beautifully fertile, pasture-lands may easily be conceived to have been in a former age its grand boast. Extensive old pastures have existed even on the red land, as well as on the less wealthy soils, from time immemorial. The best grass-land in the co. is that in the vicinity of Water-Eaton. Most of the pasture-land occurs in the central district, and has to a great extent been much improved by under-draining. The dairy system is chiefly prevalent, and expends itself principally in the department of butter. In the district around and SE of Oxford, the fattening of calves for the shambles, by suckling them upon the cows, is preferred to the dairy. The improved short-horned breed of cattle are at present the greatest favourites both for the dairy and for calves. Oxen may still be seen moving sluggishly along with the plough in some districts. Sheep form a large aggregate stock throughout the co., in connection both with the pastures and with the turnip husbandry; and much skill is displayed in the rearing of them. When the object sought is the quality of mutton and wool, the South Downs are still preferred; but when the object is quantity, combined with speed and cheapness, they are generally supplanted by the Leicesters. Farm-horses are for the most part good and active. The Berkshire hog is most commonly reared. Huge boars have long been reared and fattened in the district around Oxford for the purpose of being converted into brawn.

Agriculture.] Though commons of small extent still exist in numerous parishes, enclosing, as well as other approved practices, has been very greatly extended. Otmoor, a commonage tract of 4,000 acres, near Islip, was recently enclosed. In general, the present condition of the arable land, and of the arts of tillage and cropping, entitle the co. to a respectable rank among the agricultural districts of England. The course of crops on the lighter soils is the four-year Norfolk rotation, usually lengthened to six years with pulse and oats, or crops of equivalent character; on the heavier soils, which have been drained and lie on irretentive subsoils, it is the convertible system, or such as divides the whole arable land into moieties under artificial grass and under rotation crops. Some large estates under entail, and others which belong to ecclesiastical or other corporations, are let on lease-terms, very unfavourable to the encouragement of agricultural enterprise, and exhibit an aspect decidedly inferior in culture to that of lands more judiciously let. Some other estates suffer nearly as much from an opposite course,—shortness of lease, and stringency of restricti e clauses.

Manufactures.] The manufactures are neither numerous nor important; and in 1831 employed only 711 males, and a proportionate number of females. Blankets are made at Witney, Hailey, and Crawley. Plush and girth-making employ some hands at Banbury, West Shefford, Bourton, and Wardington. Glove-making employs about 60 men, and a large number of women, in Woodstock and places in its vicinity. The making of woollen girths and horse-cloths employs a few persons at Chipping-Norton. Lace-making is a common occupation of females in the southern part of the co.

Navigation.] The Oxford canal, the only one in the co., and a work of great advantage to it, enters nearly at the apex in the extreme N; follows the course of the Cherwell; crosses it near Deddington at the junction of the Suire; and communicates with the Thames near Oxford. Its level of junction with the Thames is, in the ordinary state of the river, 192 ft. above the level of the sea; and its commencement is in a junction with the Coventry canal at Longford in Warwickshire, 316 ft. above sea-level. It is 91 m. long, and was begun in 1769, and completed in 1790. It is 28 ft. wide at the surface, 16 ft. wide at the bottom, and 4½ ft. deep. It has 42 locks, and is crossed by upwards of 250 bridges. The canal affords a water-communication from the Thames at Oxford to all the canals of central England, and to the basins of the Severn, the Mersey, the Wash, and the Trent.—The Thames is navigable for small river-craft up to the highest point of its connection with the co., and a brief distance beyond; and for vessels of considerable burden to Oxford, or the influx of the Cherwell. Steam-navigation upon the river from London to Oxford was commenced in 1838, in a boat called the Shell, drawing only 2 ft. water, and impelled by two 20-horse high-pressure engines. The aggregate length of turnpike roads is about 350 m. The Great Western railway passes the S extremity of the co.; the London and Birmingham railway passes several miles to the N of its N extremity. A railway line on the mixed gauge, 10 m. in length, connects Oxford with the Great Western line at Didcot.

Divisions, towns, &c.] O. contains the city and university of Oxford; the boroughs of Banbury and Woodstock; the market-towns of Bampton, Bicester, Burford, Chipping-Norton, Thame, Henley-upon-Thames, Watlington, and Witley; and the considerable villages of Ensham, Deddington, Hook-Norton, Caversham, Headington, Charlbury, Dorchester, Bensington, Bloxham, and Stokenchurch. Inhabited

houses in the co. in 1831, 29,334; in 1841, 32,141; in 1851, 34,360.—The co. is divided into 14 hundreds. These, arranged as nearly as possible in an order from N to S, and from E to W, are Banbury, Bloxham, Wootton, Ploughley, Chadlington, Bullington, Bampton, Thame, Leuknor, Porton, Ewelme, Dorchester, Binfield, and Longtree. The largest of these is Chadlington, and the smallest Thame; the most populous is Wootton, and the least populous Dorchester. Additional to the hundreds is the area of the city and liberty of Oxford.—The co. is in the Oxford circuit; and has at Oxford its assizes and quarter-sessions, its county gaol and its house of correction.—O., previously to the Reform act, sent to parliament 2 members for the county, 2 for the city, 2 for the university, 2 for Woodstock, and 1 for Banbury; and, since the Reform act, it sends the same total number, 3 of which, however, are for the co., and only 1 for Woodstock. The place of election for the co. is Oxford; and the polling-stations are Oxford, Deddington, Witney, and Nettlebed. The number of electors registered and polled for the county in 1837, was 5,253; in 1841, 5,721; in 1846, 5,384. —The number of persons charged with criminal offences in the three septennial cycles terminating in 1820, 1827, and 1834, was respectively 746, 942, and 1,425; and the annual average number in these cycles was respectively 106, 134, and 203. The number of committals in 1840 was 359; in 1849, 303.

Ecclesiastical affairs.] This co. till lately, formed the whole dio. of Oxford, and still forms the larger part of it, and is in the prov. of Canterbury. Excepting 10 parishes, which are in the peculiar jurisdiction of Dorchester, and were formerly under Dorchester abbey, and excepting, also, a few other parishes which are peculiars or otherwise exempt, the archd. of Oxford comprehends the whole co.; and it is subdivided into the rural deaneries of Aston, Burcester, Chipping-Norton, Cuddesden, Deddington, Henley, Witney, and Woodstock, and the deanery of the city of Oxford. In 1829, the total number of livings in the co. was 203; the patronage of 16 of which was in the Crown, 39 in the church, and 75 in the universities, 71 in private individuals, and 2 in the inhabitants. In the same year, the total number of dissenting congregations was 99; of which 44 were Wesleyan Methodist, 14 Independent, 12 Particular Baptist, 8 Roman Catholic, 6 Home Missionary, 3 Presbyterian, and 2 Arminian Methodist not Wesleyan.—In 1833, there were in the co. 66 infant-schools, attended by 1,381 children; 510 daily schools, attended by 14,558; and 284 Sunday schools, attended by 16,738.

General statistics.] The assessed property of this co. in 1815, amounted to £713,147; in 1842 to £1,025,420. The rental or actual value of property assessed to the poor in 1847 was £1,199,127. The expenditure on the poor in 1834 was £120,616; in 1844, £77,470; in 1847, £87,033. The rate per pound in the latter year was 2s. 5d., while that for all England was only 1s. 6¾d.

The population of the co., in 1801, was 109,620; in 1831, 152,100; in 1841, 161,573; in 1851, 170,286, being an increase of 51·78 per cent. in 50 years, the increase for all England and Wales in that period being 101·04 per cent. The pop. of 1831 consisted of 31,770 families, 15,304 of whom were chiefly employed in agriculture, 9,454 in trade, manufactures, and handicraft, and 7,012 otherwise occupied.

History.] Most of O. appears to have been inhabited, in aboriginal British times, by the tribe of the *Dobuni*. In the Roman division of England, O. formed part of the province of *Flavia Cæsariensis*. The Dobuni so late as 614, fought with the West Saxons, and sustained defeat, at Beamdune or Bampton. When the heptarchy was crumbling toward ruin, O. passed, with other districts of southern Mercia, into the possession of Wessex. Oxford was four times completely reduced to ashes. At the division of England, in 1016, between Canute and Edmund Ironside, O. appears to have fallen to Canute; and, in 1015 and 1018, Oxford was the scene of two great councils or assemblies of the Danes and the Anglo-Saxons. Subsequent public events in the county, up to the war of the Roses, were connected chiefly with the city or castle of Oxford, and are noticed in that article.

OXHANGAR, an island of Russia in Europe, in the gulf of Bothnia, on the coast of Finland, gov. of Kuopio and district of Nedre-karelens, in N lat. 63° 18′, and E long. 21° 2′. It is 9 m. in length, and about 3 m. in breadth.

OXHEY, a hamlet in Watford and Cashiobury p., Hertfordshire, 20½ m. WSW of Hertford, on the banks of the Colne. Pop. in 1821, 560; in 1851, 694.

OXHILL, a parish in Warwickshire, 4 m. SW of Kineton, watered by a branch of the Stour. Area 1,800 acres. Pop. in 1831, 326; in 1851, 319.

OXHOFFT, a village of Prussia, in the regency and to the NW of Danzig, on the shore of the Baltic. Pop. 190.

OXIA, an island of the Ionian sea, in the group of the Kurzolari islands, off Cape Skropha, on the Greek coast, and a little to the S of the embouchure of the Aspropotamo, in N lat. 38° 18′, and E long. 21° 7′. It is about 3½ m. in length from NE to SW, and half that extent in breadth. Its inhabitants are few in number, and find their chief employment in agriculture.

OXIBA, a town of Ecuador, in the dep. and 60 m. N of Guayaquil, on the l. bank of the Baba, an affluent of the Caracols.

OXLEY, a district of New South Wales, in the co. of Cumberland, extending southwards from Broken-bay.—Also a creek in the co. of Stanley, an affluent of Brisbane river.

OXLEY PEAK, a summit of New South Wales, in the Liverpool range, on the NW confines of Brisbane co.

OXLEY TABLE-LAND, a plateau of central Australia, about 20 m. SE of the confluence of the Bogeen river, with the river Darling.

OXNA, a small island in the p. of Tingwall, Shetland. It measures about 3 m. in circumf., and lies 4 m. SW of Scalloway. Pop. in 1841, 19; in 1851, 21.

OXNAM, a rivulet of Roxburghshire, which rises 2½ m. from the English border, runs 5½ m. NNW to the village whence it derives its name, and thence N to the Teviot, ¾ m. above the v. of Eckford.—Also a parish in the E division of Roxburgh, 33 sq. m. in area. The S and part of the E boundary, is formed by the water-shed of the Teviots, between Blackhall-hill and Fairwood-fell, a distance of 7 m. The swells or summits of the ridge have here an alt. of about 2,000 ft. Pop. in 1831, 676; in 1851, 669.

OXNEAD, a parish in Norfolk, 3¼ m. SE of Aylsham, on the river Bure. Area 644 acres. Pop. in 1831, 72; in 1851, 57.

OXNEY, a parish in Kent, 5½ m. NE of Dover. Area 313 acres. Pop. in 1831, 7; in 1851, 26.

OXOMERIA, a town on the NW coast of the island of Tino, in the Greek archipelago, 10 m. NW of S. Nicolo.

OXSPRING, or Oxpring, a township in Penniston p., Yorkshire, 1½ m. E of Penniston. Area 530 acres. Pop. in 1831, 283; in 1851, 278.

OXTEAD, or Oxted, a parish in Surrey, 2½ m. ENE of Godstone. Area 3,627 acres. Pop. in 1831, 959; in 1851, 1,064.

OXTON. See Channelkirk.

OXTON, a township in Woodchurch p., Cheshire, 7¼ m. NE of Great Neston. Area 802 acres. Pop. in 1831, 234; in 1851, 2,007.—Also a parish in Nottinghamshire, 5 m. W by S of Southwell, watered by a branch of the Trent. Area 3,580 acres. Pop. in 1831, 778; in 1851, 850.

OXUS, or Amu, a great river of Central Asia, which rises in about N lat. 37° 27′, E long. 73° 40′, in Lake Sir-i-Kol, on the high ridge and table-land of Pamir, which borders on the SE extremity of Chinese Turkestan, and may be regarded as the termination on the NE of the great mountain system of the Kuen-Lün. Lieut. Wood, whose energy was rewarded by his being the first European who ever beheld the sources of this great river, having reached Issar, in N lat. 37° 20′, and at an alt. of 10,000 ft. above sea-level, found the valley of the Oxus dividing at this point into two, which, when a little beyond Kila-Panj, bore respectively E 20° S and N 40° E. The former, he was told, conducted into Chitral, Gilgit, and Kashmir, and the latter across the table-land of Pamir to Yarkand in China. He had now to ascertain, if possible, which of the two streams he was to trace: one of them, it was certain, must lead to the source of the O. Lieut. Wood saw reason to choose the *durah* or narrow valley of Sir-i-Kol; and ascending mountain, ravine, and pass, in constant succession chiefly on the frozen river, suffered so severely from the intense cold that most of his party had to be left behind: "In the early part of next day," he says, "we continued our route through a narrow, rough valley, resembling in its principal features the portion traversed the preceding day; but, towards noon we descended to the river, and taking to its icy surface, held on till nightfall. The change was indeed agreeable: for, though the snow on the elevated table-ridges, of which the sides of the river are here formed, rarely exceeded 2 ft. in depth, our horses were frequently engulphed in wading through the drift which was collected on the margins of these plateaux. The river in this day's march held its course for upwards of a mile through a narrow strait, not more than 40 yds. across in its widest part, and walled throughout the whole distance by perpendicular banks 80 ft. high. On emerging from this gut, the ravine opened and resumed its old character." Next day their elevation was 14,400 ft. above the level of the sea, and a portion of the escort could go no farther. Lieut. Wood pushed on with those who would accompany him, and the sequel is thus told: "We had no occasion to remark the absence of snow this day, for every step we advanced it lay deeper and deeper; and near as we had now approached to the source of the O., we should not have succeeded in reaching it had not the river been frozen. We were fully two hours in forcing our way through a field of snow not 500 yds. in extent. Each individual of the party by turns took the lead, and forced his horse to struggle onward until exhaustion brought it down in the snow, where it was allowed to lie and recruit whilst the next was urged forward. As we neared the head-waters of the O., the ice became weak and brittle. After quitting the surface of the river, we travelled about an hour along its r. bank, and then ascended a low hill, which apparently bounded the valley to the E; on surmounting this, at 5 o'clock in the afternoon of the 19th of February 1838, we stood, to use a native expression, upon the Bam-i-Dúniah, or 'Roof of the World,' while before us lay stretched a noble but frozen sheet of water, from whose W end issued the infant river of the O. This fine lake lies in the form of a crescent, about 14 m. long from E to W, by an average breadth of 1 m. On three sides it is bordered by swelling hills, about 500 ft. high, whilst along its S bank they rise into mountains 3,500 ft. above the lake, or 19,000 ft. above the sea, and covered with perpetual snow, from which never-failing source the lake is supplied. From observations at the W end I found the latitude to be 37° 27′ N by mer. alt. of the sun, and long. 73° 40′ E by protraction from Langer Kish, where the last set of chronometric observations had been obtained. Its elevation, measured by the temp. of boiling water, is 15,600 ft., as my therm. marked 184° F. The temp. of the water below the ice was 32°. The hills and mountains that encircle Sir-i-kol give rise to some of the principal rivers in Asia. From the ridge at its E end flows a branch of the Yarkand river, one of the largest streams that water China; while from its low hills on the N side rises the Sirr, or river of Kokan; and from the snowy chain opposite, both forks of the O., as well as a branch of the river Kuner, are supplied. When the lake is swollen by the melted snow of summer, the size of the infant river is correspondingly increased, and no great alteration takes place in the level of the lake itself. The aspect of the landscape was wintry in the extreme. Wherever the eye fell, one dazzling sheet of snow carpeted the ground, while the sky overhead was everywhere of a dark and angry hue. Clouds would have been a relief to the eye, but they were wanting. Not a breath moved along the surface of the lake; not a beast, not even a bird, was visible. The sound of a human voice would have been music to the ear, but no one at this inhospitable season thinks of invading these gelid domains." The O. first runs SSW, and enters the Kunduz territory of Badakshan, through which it runs NNE to about the parallel of 38°, where it is again deflected to SSW in the Darwaz territory. It then skirts the N frontier of Kunduz, and flowing W, enters Bokhara at a point about 35 m. NE of Balkh. Up to this point of its course it brings with it the drainage of Darwar and Kunduz in the rivers Tapalak, Abi-Hissar, and Sureh-Ab, all joining it on the r. bank; and the river of Kunduz, the Abi-Akswar, and the Abi-Chulum, on the l. bank. Passing Termez, Kelif, and Khoja-Salih, it turns NW, and pursues that general direction through the vast plain of Bokhara, celebrated as the original seat of Timur, the great Asiatic conqueror. At a point about 70 m. W of the city of Bokhara, it enters the desert of Khiva, and at length falls into the S extremity of the Aral sea, by two principal mouths, after a course of more than 1,300 m. It has been generally believed that it fell anciently into the Caspian, and was turned artificially into its present receptacle. Under the parallel of 42° 40′ it gives off on its l. side an arm which flows to the S prolongation of the Aral; and from this branch, an ancient water-course has been traced in a SSW direction to the head of the bay of Balkan, on the E coast of the Caspian. The O. is a large, broad, and deep stream. Near Balkh, in the summer season, when its waters are at the lowest, it is fully equal to the Jumna when at its highest state; near Bokhara it is 1,000 yds. broad, and when the snows are melting it spreads to a breadth of 4 m. This harmonizes with Arrian, who states that the O., where his hero crossed it, was three-fourths of a mile broad and unfordable. Mention is made of a large river nearly equal to the O., and called the Khizil Daria, or 'Red river,' as joining it below the cultivated delta of Khawarism, and having its source in the hills of Uratuppeh: we have not facts to confirm this, and the matter is uncertain. The O. has a large delta in the lower part of its course, all the branches of which have different names, like those of the Ganges in Bengal. This circumstance, of course, renders its hydrography intricate and perplexed.

OXWICH, a parish in Glamorganshire, 9 m. S by W of Castell-Elwchwr. Area 1,602 acres. Pop. 369.

OXWICK-WITH-PATTESLEY, a parish in Norfolk, 3 m. S by W of Fakenham. Area 719 acres. Pop. in 1831, 74; in 1851, 70.

OYAMBRE (Cape), a cape on the N coast of Spain, in N lat. 43° 25′.

OYANISUS, a tribe of Indians who inhabit the banks of the Oyapok, in Guayana. They are mild and sociable in disposition, and industrious in their habits. They cultivate a species of cotton which is said to be greatly superior in quality to that of Cayenne or of Pernambuco; and employ themselves also in the chase and in fishing, in both of which the bow is the principal weapon which they use.

OYAPAPU, a small river of Guayana, which runs E, and enters the Aruy.

OYAPOK, a river of Guayana, which rises in the Serra-Tumucumaque; runs NE; and enters the Atlantic to the E of Cape Orange, 70 m. SE of Cayenne, after a course of 200 m., forming a kind of bay 4 leagues wide, and into which several other rivers flow. It separates French Guayana from Brazil. Its principal affluent is the Camopi.

OYARZUN, a town of Spain, in the prov. of Guiposcoa, 6 m. SE of Saint-Sebastian, on the r. bank of a river of the same name which flows into the gulf of Gascogny by a NW course of 12 m. Pop. 3,400. The houses are in many instances decorated with carving, and hung with balconies.

OYCKE, a village of Belgium, in the prov. of E. Flanders, cant. and 4 m. WNW of Audenarde. Pop. 1,200.

OYE, a village of France, in the dep. of Doubs, 4 m. SSW of Pontarlier. Pop. 400.—Also a v. in the dep. of Pas-de-Calais, 18 m. NNW of Saint-Omer. Pop. 1,600.—Also a v. in the dep. of Saone-et-Loire, 9 m. SSW of Charolles. Pop. 1,040.

OYKELL. See Oikell.

OYNE, a parish in the district of Garioch, Aberdeenshire, bounded on the NW and N by the river Shevock. It has a superficial extent of about 11,000 acres. Bennachee towers aloft a little S of the centre of the p. Pop. in 1801, 518; in 1831, 796; in 1851, 919.

OYNGAVA, a river of Japan, in the island of Nifon, which flows into the bay of Totomina, after a course of 60 m.

OYOLAVA, one of the larger Navigator's islands, in the S. Pacific, in S lat. 14°. It is separated from Maouna or Massacre island by a channel about 9 leagues wide. According to Perouse, by whom it was visited, Tahiti can scarcely be compared with it for beauty, extent, fertility, and population.

OYON, a village of Spain, in the prov, and 3 m. NNE of Logrono. Pop. 650.

OYONNAX, a town of France, in the dep. of Ain, 9 m. N of Nantua, on the Cersouille. Pop. 2,368.

OYRIERES, a village of France, in the dep. of Haute-Saone, 6 m. SSE of Champlitte. Pop. 550.

OYSKAVELEN, a mountain on the W coast of Norway, in about N lat. 64° 15′. Alt. 4,400 ft.

OYSTER BAY, a township of Queen's co., New York, U. S., on Long Island sound, 28 m. E of New York. Pop. 5,865. On the N is a bay of the same name, in Long Island sound.

OYSTER CREEK, a river of N. Carolina, which runs into the Atlantic, in N lat. 34° 50′.—Also a river of New Jersey, which runs into the Atlantic, in N lat. 39° 44′.

OYSTER HARBOUR, a bay on the SW coast of Australia, in S lat. 34° 58′, E long. 118° 15′, discovered by Vancouver in 1791. The water on the bar extending from shore to shore is only 17 ft, though the depth increases from 5 to 7 fath, on each side.

OYSTER HAVEN, a large bay, or long and narrow creek, in co. Cork. It opens ¾ m. E of the entrance of Kinsale harbour, and penetrates the land 2½ m. N; a ramification of it deflects at a point 1⅜ m. inward from the entrance, and penetrates the land 2¼ m. NW. Good anchoring ground occurs 1½ m. above the entrance; but the bay is so near the excellent harbour of Kinsale, as to be little frequented by vessels.

OYSTER ISLAND, an island in co. Sligo, in the bay of Sligo, 1½ fur. from the nearest part of the mainland, and 3¾ m. WNW of Sligo. It is the site of a beacon, and of two of the three lighthouses of Sligo.

OYSTER ISLAND, an island in the bay of Bengal, 9 m. SSW of the N point of the Aracan river, rising little above the level of the sea, and surrounded by rocks.

OYSTERMOUTH, a parish in Glamorganshire, 5 m. SW by S of Swansea. A railway commences in the town of Swansea, at the terminus of the Swansea canal, and is carried in a SW direction to O. Area 5,194 acres. Pop. in 1831, 1,164; in 1851, 1,938.

OZAMA, a river of Hayti, formed by the confluence of the two streams, the Isabella and Ozama, which, descending from the central chain, unite about a league above the capital, and flow in a beautiful wood-girt channel, as wide as the Thames at Chelsea, retaining the name of the Ozama.

OZAN, a township of Hempstead co., in Arkansas, U. S. Pop. 1,400.

OZAR, a village of Sistan, in Persia, 186 m. SE of Zareng.

OZARINTZI, a village of Russia, in the gov. of Podolia, 9 m. N of Mohilev.

OZARKS (The), a broad range of mountainous ridges, on the W side of the Mississippi, 600 or 700 m. from N to S, and about 100 m. in breadth.

OZAROW, a village of Poland, in the obwodie and 15 m. N of Sandomir. Pop. 1,000.

OZERK, a county in the S part of Missouri, U. S. Area 1,200 sq. m. Pop. in 1850, 2,296.—Also a village in Franklin co., Arkansas, 121 m. NW of Little Rock.

OZERNAIA, a fortress of Asiatic Russia, in the gov. of Orenburg, on the r. bank of the Ural, so named from the lakes by which it is surrounded. It is fortified and garrisoned. The v. contains a church, and 200 houses.

OZERNITZA, a village of Russia, in the gov. of Grodno, 12 m. W of Slonim.

OZERNOI, a village of Kamtchatka, 150 m. SSW of Verkhne-Kamtchatsk. It is situated on a fine river which runs out of a lake 30 m. distant in the Tigil ridge, and empties itself into the sea 60 m. below O.

OZERO. See Osero.

OZIERI, a town of Sardinia, 30 m. ESE of Sassari. It is built on both sides of a gorge, in which it is so ensconced that it is invisible until arriving at the surrounding declivities. Its houses are of a dark calcareous stone, and the principal street is paved, —a rare circumstance in Sardinia. It contains 8 churches, and 3 convents. Pop. 8,000.

OZILLAC, a village of France, in the dep. of Charente-Inferieure, cant. and 4 m. SSE of Jonzac. Pop. 1,100.

OZLEWORTH, a parish in Gloucestershire, 2 m. E of Wotton-under-Edge. Area 1,114 acres. Pop. in 1831, 153; in 1851, 88.

OZOLLES, a village of France, in the dep. of Saone-et-Loire, cant. and 4 m. SE of Charolles. Pop. 1,200.

OZORA, a town of Hungary, in the com. of Tolna, 31 m. S of Stuhl-Weissenburg.

P

PA. See Pa-chu.

PAAR, a river of Bavaria, which flows into the Danube, 3 m. below Ingolstadt, after a NNE course of 75 m.

PAARDENBERG, or Horse Mountain, a mountain-range of S. Africa, in the Cape district of Drakenstein, 18 m. N of Paarlberg, so named from the number of wild horses or zebras that formerly frequented it.

PAARL, a village of S. Africa, in the district of Drakenstein, 18 m. NNE of Stellenbosch. The surrounding district is rich in vineyards, and celebrated for its fruits.

PAARLBERG, a mountain in the territory of the Cape of Good Hope, to the N of the peninsula on which Cape Town is situated, on the W part of the district of Stellenbosch. It has its name from a chain of large rocks, which present a remarkable appearance, somewhat resembling a large necklace. Two of them placed near the central and highest point, are called the Diamond and the Pearl. They are said to be of very coarse granular granite, while the hill itself is composed of sandstone.

PAASDORF, a village of Lower Austria, on the r. bank of the Zaya, 27 m. NNE of Vienna. Pop. 1,000.

PABAY, an island off the coast of the isle of Skye, and 2½ m. SE of Scalpa. It is about 1 m. long, and ¾ m. broad, and is used for pasturing cattle. It forms a flat table scarcely 60 ft. above sea-level, with an abrupt and precipitous edge towards the SE. Pop. in 1841, 21; in 1851, 14.

PABBA, a small island of the Hebrides, 6½ m. S of Barra. It is nearly 1½ m. long, and 1 m. broad; and consists of a single hill of gniess rising 800 ft. above sea-level. Pop. in 1841, 25; in 1851, 10.

PABBAY, one of the isles which compose the district of Harris, 3½ m. N of Bernera. It measures 2½ m. from E to W, and 1½ m. from N to S. It has a conical appearance, and rises to a peak probably 1,000 ft. above sea-level. It once supplied the district with corn; but the sand-drift has now covered its SE side. Towards the SW, which is sheltered by Bernera, it is productive; but, on the NW, where it is exposed to the spray from the Atlantic, little vegetation is discoverable. Pop. in 1841, 338; in 1851, 25.

PABER, a river of Hindostan, which descending from the Himalaya, runs SW and S to the Tonsa, in a rapid course of 63 m. through a valley elevated from 6,000 to 7,000 ft. above sea-level.

PABIANICE, a village of Poland, in the gov. of Kalisch, 10 m. NE of Lask, on the Dobryczynka. Pop. 500.

PABLO (San), a village of New Granada, on the r. bank of the San Juan, 84 m. NNE of Buenaventura.—Also the name of numerous other inconsiderable settlements in South America.

PABNENKIRCHEN, a village of the archd. of Austria, in the Mühl circle, 6 m. NNW of Grein.

PABOU BAY, a bay in the gulf of St. Lawrence, on the N shore of Chaleur bay. It presents a port for small craft, and has a fishing hamlet upon its bank.

PABU (Saint), a commune and village of France, in the dep. of Finistere, 9 m. NE of Brest. Pop. 1,238.

PACAJAZ, or Pacaya, a river of Brazil, in the prov. of Para, which flows into the Taigipuru, or S arm of the Amazon.

PACAJES, a province of Bolivia, bounded on the N by Chucuito and the great lake Titicaca; on the E by La Paz and Sicasica, from both of which it is separated by the Desaguaro river; on the S by Oruro, Paria, and Carangas; and on the SW and W by the prov. of Arica, which is separated from it by the lofty chain of the Cordillera. Its surface is elevated; its climate cold; and its soil not very productive. Its inhabitants are chiefly Indians, employed in tending cattle and sheep. A mine of talc in this district supplies the whole of Peru with plates of that substance, which serve instead of glass for churches and houses.—The cap., of the same name, is situated on the l. bank of the Rio Verde, 80 m. SSW of La Paz. Its chief commerce consists in the sale of cattle to the neighbouring towns.

PACAMOROS. See Jaen-de-Bracamoras.

PAÇANHA, a village of Brazil, in the prov. of Minas-Geraes, 90 m. NE of Ouro-Preto.

PACA-NOVA, a river of Brazil, in the prov. of Mato-Grosso, which rises in the Serra-Parecis, and joins the Guapore on the r. bank.

PACANOW, a village of Poland, in the gov. of Kielce, 5 m. SE of Stopnica.

PACAXA, a river of Brazil, in the prov. of Para, which joins the Xingu on the r. bank, in S lat. 5° 30′.

PACARAIMA (Sierra), a mountain range of Brazil, under the parallel of 40° 10′, and stretching from E to W between the meridians of 60° and 64°, between the basins of the Orinoco and the Rio Negro. It has the Parime mountains on the W, and the Acarai mountains on the E.

PACAUDIERE (La), a canton and commune of France, in the dep. of the Loire, arrond and 14 m. NW of Roanne. Pop. of cant. in 1841, 7,542; of com. and v., 1,956.

PACCALUNGANG, a town and fort on the N coast of the island of Java, 282 m. E of Java, the seat of a resident, and of a considerable pop. of natives and Chinese.

PACCHACAMAC, or Pachacama, an Indian hamlet, and an ancient ruined town of Peru, in the prov. of Cercado, situated at the base of a hill, in the valley of Lurin, about 18 m. S of Lima. This was a celebrated locality before the conquest of Peru, on account of a temple originally dedicated to the greatest deity of the Yuncas, whom they called Pacchacamac, *i. e.* 'Creator of the Earth.' Pizarro is said to have taken from this temple, then dedicated by the Incas to the Sun, an immense quantity of gold. The ruins of the temple are situated upon a hill near the coast, estimated by some travellers at 558 ft., but by others stated not to exceed half that height. This hill rises in three terraces from a rectangular base measuring 500 by 400 ft. The total height of the temple walls still standing is 80 ft. "At the SE extremity," says Captain Wilkes of the American exploring expedition, "the three distinct terraces are not so perceptible, and the declivity is more gentle. The walls, where great strength was required to support the earth, were built of unhewn square blocks of rock; these were cased with sun-dried bricks which were covered with a coating of clay or plaster, and stained or painted of a reddish colour. A range of square brick pilasters projected from the uppermost wall, facing the sea, evidently belonging originally to the interior of a large apartment: These pilasters gave it the aspect of an Egyptian structure. In no other Peruvian antiquities have pilasters been seen by us. On one of the N terraces were also remains of apartments; here the brick appeared more friable, owing to a greater proportion of sand; where they retained their shape, their dimensions were 9 inches in width by 6 inches deep, varying in height from 9 inches to 2 ft.; and they were laid so as

to break joint, though not always in a workmanlike manner. The remains of the town occupy some undulating ground, of less elevation, a ¼ m. to the N. This also forms a rectangle, one-fifth by one-third of a mile in size; through the middle runs lengthwise a straight street, 20 ft. in width. The walls of some of the ruins are 30 ft. high, and cross each other at right angles. The buildings were apparently connected together, except where the streets intervened. The larger areas were again divided by thinner partitions, and one of them was observed to contain four rectangular pits, the plastering of which appeared quite fresh. No traces of doors or windows towards the streets could be discovered, nor indeed anywhere else. The walls were exclusively of sun-dried brick, and their direction, NE and SW, the same as those of the temple, which fronted the sea. Some graves were observed to the S of the temple, but the principal burying-ground was between the temple and town. Some of the graves were rectangular pits, lined with a dry wall of stone, and covered with layers of reeds and canes, on which the earth was filled in to the depth of a foot or more, so as to be even with the surface. The skulls brought from this place were of various characters: the majority of them presented the vertical elevation, or raised occiput, the usual characteristic of the ancient Peruvians, while others had the forehead and top of the head depressed. The bodies were found enveloped in cloth of various qualities, and a variety in its colours still existed. Various utensils and other articles were found, which seemed to denote the occupation of the individual; wooden needles and weaving utensils, netting made in the usual style, a sling, cordage of different kinds, a sort of coarse basket, fragments of pottery, and plated stirrups. They also found various vegetable substances: husks of Indian corn, with ears of two varieties, one with the grain slightly pointed, the other, the short and black variety, which is still very commonly cultivated; cotton seeds, small bunches of wool, gourd-shells with a square hole cut out, precisely as is done at present. These furnished evidence of the style of the articles manufactured before the arrival of the Spaniards, and of the cultivation of the vegetable products; when to these we add the native tuberous roots (among them the potato) cultivated in the mountains, and the animals found domesticated, viz., the llama, dog, and Guinea-pig, and the knowledge of at least one metal, we may judge what has since been acquired."—*Wilkes' Expedition.*

PACE, a commune and village of France, in the dep. of Ille-et-Vilaine, 7 m. NW of Rennes. Pop. 2,789.—Also a village in the dep. of Orne, 4 m. W of Alençon.

PACECO, or Paccio, a village of Sicily, 6 m. SE of Trapani.

PACEM, a town on the N coast of Sumatra, 120 m. SE of Acheen.

PACENTRO, a town of Naples, in the prov. of Abruzzo-Ultra 2da, 39 m. SE of Aquila. Pop. 3,000.

PACHA, a river of Russia, which rises near Ledia, in the gov. of Novgorod, and running W and then N, joins the Svir on the l. bank, after a course of 150 m. Its principal affluent is the Kapcha.

PACHACHACA, a river of Peru, which runs N, traversing the prov. of Albançay, and enters the Apurimac.

PA-CHAI-TING, a district and town of China, in the prov. of Kwei-chu, and div. of Tu-yun-fu.

PACHECA, an island in the bay of Panama, in N lat. 8° 3′.

PACHETE, a district of Bengal, in the prov. of Bahar, situated principally on the S side of the Dummuda river. It has an area of 2,779 sq. m. Some parts of it are hilly and covered with jungle; but it contains a number of towns, and is not deficient in pop. Its chief products are rice and cotton. The principal town is Rogonathpur, through which runs the great military road from Calcutta to Benares.—The remains of its former capital, of the same name, are in N lat. 23° 36′, 126 m. NW of Calcutta. At present the spot presents only a few huts built of mats and bamboos, and thatched with grass.

PACHINO, a village of Sicily, 14 m. S of Noto, near Cape Passaro. Pop. 1,200. It has a small port.

PACHITEA, a river of Peru, which rises on the E side of the Andes, and running E, and then N, falls into the Ucayaci, on the l. bank, after a course of 240 m.

PA-CHU, a district and town of China, in the prov. of Chih-le, and div. of Shun-teën-fu, 60 m. S of Peking, in N lat. 39° 8′, E long. 116° 28′.—Also a district and town in the prov. of Shan-tung, and div. of Tsaou-chu-fu.—Also a district and town in the prov. of Sze-chuen and div. of Paou-ting-fu, on the r. bank of the Kia-ling-keang, and 24 m. NE of Shun-king-fu, in N lat. 31° 50′ 32″, and E long. 106° 45′ 2″.

PACHUCA, a town in the state and 50 m. NE of the city of Mexico, at an alt. of 8,141 ft. above sea-level. It has a magnificent church, besides other public buildings. In this town were the royal coffers, where the treasurer and accomptant for the Crown of Spain collected the royalty of one-fifth of all the silver produced in the Real-del-Monte mines.

PA-CHUI, a river of China, in the prov. of Shen-si, which runs N, and joins the Wei-ho on the r. bank.

PACHUQUILLA, a village of Mexico, in the neighbourhood of Pachuca, said to be the first Spanish village built in the vale of Anahuac.

PACIFIC OCEAN, the general name borne by the vast expanse of ocean which stretches, through 133 degrees of lat., from the Arctic circle on the N to the Antarctic circle on the S; and on the NE and E is bounded by the W coast of the American continent and an imaginary line drawn from Cape Horn to the South pole, which it is assumed divides it from the Atlantic; while on the NW and W, its limits are defined by the E coast of Asia, the chain of the Sonda isles, the E coast of Australia and Van Diemen's Land, and an imaginary line drawn from South-west cape in the latter island to the South pole, which geographically divides it from the Indian ocean. Measured from the bottom of the gulf of Siam on the NW, to the bottom of the bay of Panama on the SE, it has an extent of 13,650 m. Its equatorial breadth exceeds 10,000 m. Between the tropics, its average width is about 8,300 m. Its area has been roughly estimated at 50,000,000 sq. m.; but this estimate varies greatly according as geographers include or exclude its subordinate seas. Some detach from their estimate the Indian ocean, which, though belonging to the Pacific according to its most natural boundaries, as above traced, has some special characteristics. The Pacific ocean contains several land-locked seas. Along its Asiatic coast we have the China sea or Southern sea of China, surrounded by the Philippines, Borneo, and the peninsula of Indo-China. Then follows the Northern Chinese sea, comprising the Yellow sea and the sea of Japan, shut in by the Japanese islands. Immediately to the E of this lies the great sea of Okhotsk, surrounded on the E by the peninsula of Kamtchatka, and on the S by the Kurile chain; while Behring's sea, on the E side of the great peninsula of Kamtchatka, may be regarded as circumscribed on the E and S by the peninsula of Alashka, and its prolongation in the Kurile chain. The great gulf of California, on the American coast, has an open mouth, and can hardly be classed among the land-locked; but in the SW part of the Pacific, we see the two islands of New Guinea, New Britain, the Salomon archipelago, the New Hebrides, and New Caledonia, forming a barrier on the N and E to that portion of the Pacific which washes the E shores of Australia, and to which, in consequence of the peculiar physical formation of its islands and reefs, some geographers have given the name of the Corallian sea. The general outline of the P. is on the whole more regular than that of the other great collection of water, the Atlantic. It is also vastly richer in islands, both continental and pelagic.

Basin.] The shores of the P., as compared with those of the Atlantic, are high and rocky; and its basin, or the extent of land-surface the drainage of which flows into it, is thus comparatively limited. The mountain-chains which skirt in succession the E coast of Australia, and divide the waters flowing E and W, in few places reach 100 m. distance from the coast. In Eastern Asia, the Kuen-Lun, the Ala-Shan, and the Kinghan mountains; and in Northern Asia, the Yablonoi-Krebet, the Udskoi mountains, and the Stanovoi-Krebet,—form a watershed gradually approaching the E coast, and ultimately striking it. In N. America, the vast range of the Rocky mountains, and their prolongation in Sierra-de-los-Mimbres and Sierra-Madre, and still more, in Central America, the volcanic range of Guatimala,—and in S. America, the Northern and Southern Andes, and the great Patagonian chain,—form an almost continuous line of watershed approaching closely to the Pacific coast, and giving origin to rivers on their W slope of comparatively small length of course compared with the gigantic streams which, descending from their E sides, spread over a vast breadth of continent before they discharge their tribute into the Arctic or the Atlantic oceans. When to this feature of the P. basin is added the consideration of the line of islands and peninsulas which skirt its coasts, and are surrounded by seas of comparatively small depth, we can easily realize the generalization that the configuration of the bed of the P. is that of "an immense basin sunk in, the broken and elevated edges of which present on all sides the abrupt termination of the continental masses of land." It is on this great line of fractures, on the borders and all round the P., that the great majority of the active volcanoes of our globe are to be found. Over its bottom, too, are scattered numerous volcanic islands exhibiting

marks of recent subterranean activity. Hence some geographers regard this vast basin as occupying the place of a continent which in some now distant age united the two great continental masses of our globe, or perhaps became sunk and submerged as the Asiatic and American continents rose on either side.

Winds.] The great equatorial trade-wind, which may be regarded as continually blowing from E to W around the globe, begins to make itself felt at a certain distance from the W coasts of America; and blows almost without interruption as far W as the E limits of the Corallian sea of Flinders, and to within 300 or 400 m. of the coasts of Asia. The parallels of 2° and 25° N. may be regarded as defining the zone of the NE trade-wind; the limits of the SE current are less fixed, but it is found as far as the parallel of 21° S. The region of calms, where the force of the descending current seems to neutralize the horizontal current, is comprised between the parallels of 2° or 3° N and 2° S. In the region of variable winds, N of the trade winds, the winds usually blow from NW and W; in that S of the trade-winds, NW winds prevail, and are usually succeeded by SW veering to SE; after which they come gradually round to N and NW.

Currents.] The Antarctic drift current carries the waters of the Antarctic seas towards the coast of South America, where a comparatively narrow branch stream skirts the coast northwards till it is deflected into the great equatorial current running across the whole breadth of the Pacific towards the islands and coasts of Asia.—In the N part of the P. a current sets easterly from the China sea along the coasts of Japan towards Behring's straits.

Navigation.] Ships bound from the W coast of S. America directly to China usually steer directly to the Mendana isles, and thence shape their course gradually northwards, crossing the equator in about 160° E, and shaping their course N or S of the Philippines according as the monsoons blow. Another route is NW from the points of S. America, and W from those of Mexico, to within about 10° E of the Sandwich islands; and from these islands nearly W, between the parallels of 15° and 20°, to the Chinese sea. Vessels sailing from the Chinese sea to the W coasts of N. America get to the N of the parallel of 30°, and keep to the N of it until they approach the coast of California. Vessels sailing from Sydney to S. America keep to the S of 30° until they get within the influence of the Peruvian coast-stream flowing N.—The efforts now making to connect the navigation of the Atlantic and the Pacific by canal or railway across the isthmus of Panama, joining the two great portions of the American continent, if successful, will offer vast facilities for trade between Great Britain and her colonies in Australia and New Zealand, and with China, the Spice islands, the Philippines, and all the W coast of America. The line between England and New South Wales, by the isthmus and across the P., is shorter by nearly 2,000 m. than that by the Red sea and Torres strait, and is considerably less than that by the Cape of Good Hope. The ocean between Panama and Sydney also presents peculiar facilities of navigation in its unusually fine weather, steady moderate breezes, regular currents, and equable temp. "Perhaps in no part of the world," says an able naval authority, Captain Fitzroy, "could screw steamers be employed to more advantage, if their course was from Panama to Tahiti and Sydney, returning eastward by New Zealand and Callao." See article PANAMA.

Historical notice.] On the 25th of September 1513, Vasco Nunez de Balbao first beheld the sea-horizon of the P. from the summit of the Sierra-de-Quarequa, in the isthmus of Panama, and bestowed upon his magnificent discovery the name of MAR-DEL-SUR. On the 27th of November 1520, Magellan entered the P. from another point, and, charmed by its tranquillity, bestowed upon it the appellation of OCEANO PACIFICO. "Little more than a hundred years ago," says a writer in the *Daily News*, "Anson brought back, in the solitary and battered surviving vessel of his fleet, the plunder of the Acapulco galleon, and—what was of far more consequence—information relating to what was then known of the P., collected with unprecedented care and skill, and imparted to the public with unprecedented liberality. It did not amount to much: although for more than a century a continuous line of Spanish settlements had been formed along the E shores of that ocean from San-Francisco to Chili, and although Mexico, Peru, and the Philippines were subjects of the same crown, little more was known of the P. than when Nunez first gazed on its waters, while halting midway on his march across the American isthmus. Of the W boundary of its waters, Japan, Formosa, the Philippines, and New Guinea alone were known, and even these imperfectly. Australia had yet to be discovered. Of the multitudinous islands that stud its bosom not above a dozen had been seen by Europeans. A few coasting-traders crept occasionally along the American coast, and once a-year one solitary ship sailed between Acapuleo and Manilla. How altered now! A territory and a state of the North American union have been organized in California and Oregon. To the N of them are English and Russian colonies. To the S are the independent Spanish republics of Mexico, Guatimala, Nicaragua, Costa-Rica, Grenada, Ecuador, Peru, Bolivia, and Chili. The English have colonized the E shores of Australia; the Dutch have taken possession of New Guinea; the Philippines, formerly accessible to none but Spaniards, are resorted to by all European nations; and though Japan is still closed against strangers, China is being opened; Russian keels have ploughed the waters of the Amur, and Russian settlements extend from the Chinese frontier to Behring's straits. The Hawaiian group of islands is *de facto* a flourishing American colony; Tahiti and the Marquesas are French settlements; New Zealand and the Auckland group are English colonies; while on most of the remaining islands and island groups thriving European squatters are to be met with. American and European trading vessels ply from island to island, supplying the natives with manufactures, and receiving the produce of their rude husbandry and fisheries in return. The sails of whalers whiten the ocean. The P. has, in the course of little more than half-a-century, been transformed from a mysterious ocean, in which a few adventurous European explorers found only a few straggling savage tribes, into a thronged and busy mart of commerce for the merchants of every clime."

PACKA (NEU), a village of Bohemia, 9 m. NE of Getshin. Pop. 1,750. It has muslin factories.

PACKINGTON-WITH-SNIBSTON, a parish, partly in Leicestershire, and partly in Derbyshire, 1½ m. S by E of Ashby-de-la-Zouch. Area 2,360 acres. Pop. in 1831, 730; in 1851, 1,294.

PACKINGTON (GREAT), a parish in Warwickshire, 3¾ m. SE by S of Coleshill. Area 2,451 acres. Pop. in 1831, 334; in 1851, 301.

PACKINGTON (LITTLE), a parish in Warwickshire, 3¼ m. S by E of Coleshill, on the river Blyth, and crossed by the Derby and Birmingham railway. Area 1,110 acres. Pop. in 1831, 150; in 1851, 143.

PACKWOOD, a parish in Warwickshire, 4¾ m. NNE of Henley-in-Arden. Area 1,655 acres. Pop. in 1831, 319; in 1851, 305.

PAÇO D'ARCOS, a hamlet of Portugal, in the prov. of Estremadura, comarca and 9 m. W of Lisbon, and 1½ m. NE of Oeiras, on the r. bank and near the entrance of the Tagus into the Atlantic. It has a marine depot for the succour of vessels exposed to danger in crossing the bar.

PACOBAHIBA, a parish of Brazil, in the prov. of Rio-de-Janeiro, bounded on the N by the small river Bongo; on the E by the Rio-Suruhi; on the S by the bay of Nitherohi; and on the W by the Rio-Inhomirum; and watered by the rivers Piranga, Ynia, and Magua. Pop. 2,000. The jaboticaba, banana, and cacao-trees, grow here in great abundance.

PACOLET, a river which has its source in the state of N. Carolina, U. S., in the Blue ridge; flows into the state of S. Carolina; and enters Broad river in Union district, at Pinkeyville.

PACOTES, a group of rocky islets at the entrance to the bay of Espirito-Santo, in the prov. of that name in Brazil.

PACOTI, a small river of Brazil, in the prov. of Ceara, which has its source in Lake Aquiras; separates the parishes of Mecejana and Aquiras; and flows into the sea.

PACTOLUS, or BAGGULY, a river of Turkey in Asia, in Anatolia, in the sanj. of Aiden. It issues from the Dolab-dagh; runs first N, then NW; and joins the Kodus or Ghiediz Chai, 17 m. WSW of Adala, and after a course of about 18 m. It bathes the village of Sart, near which are the ruins of the ancient *Sardis*.

PACUHI, a small river of Brazil, in the prov. of Minas-Geraes, and comarca of Rio-de-Jequitinhonha. It descends from the mountains in the district of Formiga; runs W a distance of about 20 leagues; and throws itself into the Rio-São-Francisco, on the r. bank, a little above the confluence of the Rio Paracatu.—Also a river in the same prov. and comarca, which has its source in the W side of the Serra Branca; runs WNW; is joined by the Cachoeirinha on the r.; and flows into the Rio Verde, an affluent of the São Verde.

PACULA, a mining village of Mexico, in the state and 210 m. NW of Vera Cruz. It has mines of argentiferous lead.

PACUR, a town of Senegambia, in the Yalofs territory, 6 m. SW of Warrhokh.

PACY-SUR-EURE, or PASSY, a canton, commune, and town of France, in the dep. of the Eure, and arrond. of Evreux. The cant. comprises 30 coms. Pop.

in 1831, 8,756; in 1841, 8,885. The town is 11 m. E of Evreux, and 8 m. SW of Vernon, in a fine valley, on the Eure, which here forms an island, and becomes navigable. Pop. 1,387. It has a considerable trade in corn, cattle, woollen and linen fabrics, and yarn. It is an ancient town, and was formerly fortified, and of much greater extent.

PACZOW. See PATZAW.

PADAGUEL, a lake of Chili, in the prov. and to the N of Santiago, formed by the Colima and Lampa. It is 6 m. in length.

PADAMO, or MAQUIRITARI, a river of Guayana, which takes its rise in the Sierra Maragna, near the sources of the Orinoco; traverses the Sierra Parima; and after a course, in a generally SSE direction, of about 150 m., joins the Orinoco, on the r. bank, at the foot of Mount Duida. Its banks are inhabited by the Maquiritaris and Guainares.

PADANG, a group of small islands in the Indian ocean, near the W coast of Sumatra, to the W of the town of the same name, in S lat. 1°, E long. 100° 20′.—Also a headland on the W coast of Sumatra, to the WSW of the town, and to the S of the embouchure of the river of the same name, in S lat. 0° 56′, E long. 99° 57′ 45″.—Also a town of Sumatra, in the Menangkabau district, capital of the residency of the same name, and of the gov. of the W coast of Sumatra, and on the Panang river, about a mile above its entrance into the sea. It has a square fort, defended by four stone bastions, and a dry ditch about 6 ft. in depth and very broad, but is commanded by adjacent mountains. The river, over the bar, has about 10 ft. of water. This town is one of the principal Dutch establishments, and carries on an active trade with Java and with the interior. The trade from Java consists principally of rice, salt, native clothing, and a few supplies for the European and Chinese inhabitants of the place; in return P. sends coffee and pepper. There is a disgraceful traffic carried on between Padang and the island of Nias, a little further up the coast, by Chinese, who visit that island and purchase its inhabitants, for whom they find markets all along the coast. Those brought to P. are not, indeed, sold as slaves; but they are registered at the resident's office, and held as bond-debtors for different terms of 7, 15, and even 20 years. During this servitude they are treated as slaves, but are free at its expiration; they have also the option of buying their liberty in the meantime, if they can raise the means, and the proprietor is not at liberty to refuse a sum equivalent to the value of the unexpired term of service. These Nias people are, men and women, a fairer race than Malays, and speak a language of their own. Many of the men become expert carpenters, bricklayers, blacksmiths, &c., which enables them to earn money and purchase their freedom; and for such skilled artisans the master can demand no more as the price of their freedom than the balance due upon their services. This settlement was formed by the Dutch in 1649. It was taken by the English in 1783, and again the following year, and in 1814 was finally restored to Holland.

PADANG-GUCHI, a river of Sumatra, which has its source in the Pasumah district; runs SW; and throws itself into the Indian ocean, in S lat. 4° 36′, after a course of about 15 m.

PADANG-MEW, a small town of Burmah, in the territory of the subjected Kiayn, on the r. bank of the Irawaddi, 10 m. SW of Prome or Pri.

PADARAN (CAPE), a headland of Annam, on the SE coast of Cochin-China, and district of Champu, in N lat. 11° 23′, E long. 109° 2′. To the N of this cape is a good harbour of the same name.

PADAUIRI, a river of Brazilian Guayana, which has its sources in the Sierra Unturan or Iraguaca, runs first S, then SE, and afterwards S; and joins the Rio Negro, on the l. bank, to the E of Thomar.

PADBURY, or PATHBURY, a parish in Buckinghamshire, 2½ m. SE by S of Buckingham. Area 1,900 acres. Pop. in 1831, 708; in 1851, 660.

PADDINGTON, a parish in Holborn division of Ossulstone hund., Middlesex, 4¼ m. WNW of St. Paul's. Area 1,227 acres. Pop. in 1831, 14,540; in 1851, 46,305. The Great Western railway commences in this parish, on the W side of the Paddington canal, whence the line is carried forward, through excavation, 2¼ m., to the Birmingham, Bristol, and Thames Junction railway, which is carried under the Paddington canal by a tunnel, and branches from the Birmingham railway to the Great Western at Wormwood Scrubs.

PADDLESWORTH, a parish in Loningborough hund., Kent, 3½ m. NW by N of Folkestone. Area 349 acres. Pop. in 1831, 54; in 1851, 50.

PADEE-THUR, or WEST BAY, an inlet of the Indian ocean, on the coast of Beluchistan, enclosed on the E by Cape Arubah.

PADEFIL-COLAM, or PADEVIEL-COLOM, a great artificial lake in the N part of the island of Ceylon, and district of Mulpattu. It is fed by two small streams which flow into its NE side.

PADERBORN, a circle and town of Prussia, in the reg. of Minden. The circle comprises an area of 75 sq. m. Pop. in 1845, 28,012.—The town is 42 m. S of Minden, and 19 m. ENE of Lippstadt, on the Pader, 3 m. above its confluence with the Lippe, on the railway from Berlin to the Rhine. Pop. in 1837, 7,895; in 1846, 8,720. It is enclosed by a wall, and has two public squares, a cathedral, a Lutheran and 3 Catholic churches, a synagogue, an hospital, an orphan's asylum, and several other charitable institutions, a university, a gymnasium, a theological seminary, and a custom-house. The streets are narrow and irregular. Of its ancient edifices the most remarkable is the Fürstenberger-hof, the ancient palace of the sovereigns of Germany. It possesses several manufactories of starch and tobacco, and breweries, and has some trade in mercery. This town is one of great antiquity, and was for some time the residence of Charlemagne. In the middle ages it formed part of the Hanseatic league. In 1802 it passed into the hands of Prussia.

PADERNE, a village of Portugal, in the prov. of Algarve, 5 m. ENE of Silves. Pop. 1,900.

PADERNELLO, a village of Austria, in Lombardy, in the prov. and district and 6 m. W of Treviso.

PADERNO, a village of Austria, in Lombardy, in the prov. and 9 m. W of Brescia.

PADERU, a village of France, in the dep. of the Aude, cant. and 4 m. SW of Tuchan, and 31 m. SE of Carcassonne, at the confluence of the Valette and Verdouble. Pop. 340.

PADFIELD, a township in Glossop p., Derbyshire, 10 m. N by W of Chapel-in-le-Frith. Pop. in 1831, 1,102; in 1851, 2,051.

PADIHAM, a township in Whalley p., co.-palatine of Lancaster, 3½ m. W by N of Burnley, on the N bank of the river Henburn. Area 1,917 acres. Pop. in 1831, 3,529; in 1851, 4,509.

PADILLA, a town of Spain, in New Castile, in the prov. and 21 m. NNE of Guadalajara. Pop. 276.

PADILLA, or S.-ANTONIO-DE-PADILLA, a village of Mexico, in the dep. of Tamaulipas, 21 m. NW of New Santander. The ex-emperor Iturbide was shot here on the 19th July 1824.

PADILLA-DE-ABAJO, a village of Spain, in Old Castile, in the prov. and 30 m. WNW of Burgos, partido and 11 m. NW of Castrojeriz, in a marshy

PADUA.

A. Fullarton & Cº London & Edinburgh

and unhealthy locality, near the l. bank of the Pisuerga. Pop. 559. It is noted as the birth-place of Donna Maria de Padilla.

PADILLA-DE-ARRIBA, a village of Spain, in Old Castile, in the prov. and 31 m. WNW of Burgos, partido and 13 m. NW of Castrojeriz, near the l. bank of the Pisuerga. Pop. 470.

PADILLA-DE-DUERO, a village of Spain, in the prov. and 22 m. E of Valladolid, partido and 3 m. NW of Penafiel, in a plain near the l. bank of the Duero, a little below the confluence of the Duraton. Pop. 300. It has manufactories of coarse woollen and linen fabrics.

PADILLAS, a town of New Mexico, in Bernalillo co., near the W bank of the Rio-del-Norte, at the foot of a high mound, 4 m. N of Isletta, and 4 m. S by E of Pajarilo.

PADITZ, a village of Saxe-Altenburg, 1 m. SSE of Altenburg, on the l. bank of the Pleissa.

PADOLA, a river of Austrian Lombardy, rising in Monte-Croce, and flowing to the Piave, which it joins on the r. bank, after a SE course of 12 m.

PADRE (Isla del), a long narrow island off the coast of Texas, between the inlet of Aransas on the N, and the Barra-del-Santiago on the S; stretching 91 m. N and S, with an average breadth of little more than 1 m. It is separated from the mainland by the Laguna-del-Madre.

PADRE (Puerto del), a port on the N coast of the island of Cuba, in N lat. 21° 15′, W long. 76° 22′.

PADRE (San), a town of Naples, in the prov. of Terra-di-Lavoro, 9 m. S of Sora, on the r. bank of the Melfa. Pop. 2,250.

PADRIA, a village of Sardinia, 21 m. SE of Alghero. Pop. 1,500.

PADRO (Monte), a mountain of Corsica, in N lat. 42° 28′, E long. 8° 58′, rising to an alt. of 1,261 toises = 2,688 yds. above sea-level.

PADROES, a town of Portugal, in the prov. of Alemtejo, on the l. bank of the Oeiras, an affluent of the Guadiana, 14 m. ESE of Ourique.

PADRON, or Padrao (Point), the W point of the entrance of the river Zaire or Congo, in S lat. 6° 8′ 30″, E long. 12° 13′ 53″. It is a peninsular projection formed by the combined depositions of the sea and river, the internal or river-side presenting a deposit of mud overgrown with mangoes.

PADRON, a judicial partido and town of Spain, in Galicia, in the prov. of Corunna. The partido comprises 38 parishes. The town is 12 m. S of Santiago, on the l. bank of the Sar, which is here crossed by an old Roman bridge. Pop. 6,090. It is well-built, and has a parish and a fine collegiate church. This town is one of great antiquity, and bore under the Romans the name of *Iria Flavia*.

PADRONES, a town of Spain, in Old Castile, in the prov. and 22 m. E of Burgos, partido and 14 m. W of Bribiesca, in a mountainous locality, at the source of the Caderechas. Pop. 150.

PADSTOW, a parish and sea-port in Cornwall, 30 m. W by S of Launceston, and 29 m. N by E of Falmouth. Area 3,864 acres. Pop. in 1831, 1,822; in 1851, 2,224. The town stands on an estuary, formed by the confluence of the river Camel and other streams, opening into St. George's channel. A considerable trade is carried on with Bristol, Wales, and Ireland, in iron, coals, timber, groceries, and general merchandise; and there are good quays for loading and unloading vessels. The imports generally consist of iron, coals, and bale-goods: the exports of corn, block-tin, and slates. In 1831 there were 74 vessels, chiefly under 100 tons burden, belonging to the port; in 1850 the number registered was 63 under, and 52 above 50 tons burden. This harbour is the only secure shelter for vessels between the Land's-end and Hartland-point, a distance of 24 leagues; but access is difficult and sometimes dangerous. The character of the whole coast is marked by inaccessible cliffs, broken at intervals by sandy beaches, which are rendered equally fatal by the heavy ground sea from the Atlantic ocean. Within 30 years, no fewer than 175 vessels have been wrecked or stranded within the limits of the port. Large quantities of sand are obtained upon the Dun bar in the harbour. The amount of sand taken from this harbour was estimated in 1836 at about 100,000 tons per annum, a large proportion of which was transported into the interior from Wade bridge by the Bodmin railway, and its branch, up the Camel, to Wineford.

PADUA, or Padova, an administrative province of Austrian Lombardy, in the gov. of Venice; bounded on the N by the prov. of Treviso; on the E by that of Venice; on the S by the Polesina, from which it is separated by the Adige; and on the W by the provs. of Vicenza and Verona. Area 624·84 Italian sq. m. Pop. in 1837, 291,352; in 1843, 305,203. Its surface is flat, except towards the W, where it rises into the beautiful Euganean hills. It is well-watered, and the soil is fertile. Its principal rivers are the Brenta, the Bacchiglione, the Frassino, and the Adige. It is subdivided into 12 *distretti*, and 103 *comunita*. Its principal towns are its capital of the same name, Mirano, Noale, Camposampiero, Piazzola, Conselve, Piove, Montagnana, Este, and Monselice.

Padua, the capital of the above prov., situated between the rivers Brenta and Bacchiglione, 22 m. W of Venice, in N lat. 25° 24′, E long. 11° 52′, at an alt. of 88 ft. above sea-level. Pop. in 1837, 35,225. It is surrounded by old walls and a broad ditch, the circuit of which is nearly 6 m. It is traversed by several canals; but the streets are narrow, dirty, ill-paved, and bordered on each side by arcades which, though affording a pleasant shade in hot weather, give the town a gloomy appearance. The houses are in general old, but lofty and well-built, and several of the public edifices are of magnificent architecture. The Palazzo-della-Ragione, or town-hall, has an arched saloon said to be the largest hall in Europe, being 276 ft. long, 86 ft. broad, and 75 ft. high, so constructed that the roof has no support but the walls. Near the town-hall is situated the palace of the Podesta, remarkable for its saloon of the Doric order and its valuable paintings. The churches, monasteries, and convents of Padua are very numerous. The cathedral, a large brick edifice, built between the years 1123 and 1400, is less remarkable for its architecture than for its paintings and interior decorations. The church of St. Antonio, an ancient edifice in the Gothic style, is likewise rich in sculpture and painting. The church of St. Giustina is a fine marble edifice, with a library and a number of valuable paintings. The square called the Prato-della-Valle is surrounded by a circular stream of water brought from the Brenta, bordered with a double row of statues representing the most distinguished natives of the place. The Café Pedrocchi is one of the largest and finest establishments of the kind in Europe.—The university of P., founded in the 13th cent., was at one time celebrated throughout Europe, and was resorted to by crowds of students even from countries beyond the Alps. Its buildings are the work of Palladio, and among the finest of the kind in Europe. The observatory, the botanical garden, the anatomical theatre, the cabinet of natural history, and the hall of midwifery, are all on a large scale, and well kept up. The university was new-modelled in 1814, and now consists of the three faculties of mathematics and philosophy, medicine, and law. The number of professors is 35; the aver-

age number of students, 350. The Episcopal seminary has a library containing about 55,000 vols. and 800 MSS. The printing-office of the university is celebrated. The city is the see of a bishop and the seat of the superior courts of the deleg., and of an academy of sciences and arts. It has two gymnasia, and several schools, hospitals, and charitable institutions.—Its manufacturing industry is limited to the manufacture of woollens and silks; but it has some trade in wine, oil, corn, and cattle.—P. is a city of ancient origin. Virgil attributes its foundation to Antenor. In the Gothic ages it was obliged successively to bend to the yoke of Alaric, of Attila, and the Lombards; but at last found means to form itself into an independent state. In the 14th cent., it fell under the sway of the Carrara family; and in the 15th, was incorporated into the Venetian territory.

PADUCAH, a village of M'Cracken co., in the state of Kentucky, U. S., 284 m. WSW of Frankfort, on the S bank of the Ohio river, below the confluence of the Tennessee. Pop. in 1840, 1,000.

PADUL, a town of Spain, in Andalusia, in the prov. and 12 m. SW of Granada, and partido of Orgiba, on the S side of the Sierra Nevada. Pop. 2,700. It has a considerable trade in articles of Spanish broom manufacture. To the W is a lake, 5 m. long, and 1½ m. in breadth, on which the surrounding country depends for irrigation.

PADULA, a town of Naples, in the prov. of Abruzzo-Ultra, district and 12 m. W of Teramo, cant. and 8 m. WNW of Montorio. Pop. 440.—Also a town in the prov. of Calabria-Citra, cap. of a circondario, in the district and 6 m. SE of La Sala, and 57 m. ESE of Salerno. Pop. 8,000. It has 6 churches, and an hospital.

PADULES, a town of Spain, in Andalusia, in the prov. and 23 m. NW of Almeria, and partido of Canjayar, in a stony but fertile locality, near the r. bank of the Beyres. Pop. 888. In the vicinity are several lead-mines.

PADULI, a town of Naples, in the prov. of Principato-Ultra, district and 12 m. W of Ariano, and 21 m. NNE of Avellino, on a hill. Pop. 2,700. It has a collegiate church, a convent, and an hospital.

PADWORTH, a parish in Berks, 8 m. SW by W of Reading, on the SE bank of the Kennet. Area 1,175 acres. Pop. in 1831, 234; in 1851, 284.

PAEESHT-KHANA, an expansion of the Gundava or Mula pass, in Beluchistan, to the ENE of Khozdur, at the junction of the Panduran and of the road from Kelat, and at an alt. of 3,500 ft. above sea-level. It possesses considerable fertility, producing wheat, rice, and pulse, and affording pasture to large flocks of sheep and goats. The wild caper, Indian fig-tree, and mimosa, are also indigenous in the locality. It is inhabited by Brahuis.

PAEJJAENE, a lake of Russia in Europe, in the grand-duchy of Finland, between the district of Tavastehus on the W, and that of Kymmenegard on the E. It is about 75 m. in length from N to S, and 25 m. at its greatest width. It discharges itself by means of a series of small lakes on the SE into the Kymmene.

PAEL, a department and commune of Belgium, in the prov. of Limburg, and arrond. of Hasselt. The dep. comprises 2,003 inhabitants. The v., 12 m. NW of Hasselt, in a marshy locality, has a pop. of 466.

PAER, a commune of Belgium, in the prov. of Brabant, and dep. of Werchter. Pop. 152.

PAER (Saint), a commune of France, in the dep. of the Seine-Inferieure, cant. and 3 m. N of Duclair, and 12 m. NW of Rouen, near the r. bank of the Austreberte. Pop. 1,339. It has a paper-mill.

PAESANA, a town of Sardinia, capital of a mandemento, in the prov. and 13 m. WNW of Saluzzo, on the r. bank of the Po. Pop. 1,050.

PÆSTUM, the site of some celebrated remains of antiquity, near the coast of the gulf of Salerno, and 25 m. SSE of the town of Salerno, in Naples. The surrounding country is low and marshy; and the beautiful remains of its temples are conspicuous objects from almost every part of the gulf.

PAFFENDORF, a village of Prussia, in the prov. of the Rhine, reg. and 10 m. W of Cologne, circle and 1½ m. W of Bergheim, on the l. bank of the Erft. Pop. 485. It has several breweries, 2 distilleries, and numerous factories.

PAGAN, or San Ignacio, an island of the North Pacific, in the Ladrone or Marianne archipelago, to the S of Grigan island, in N lat. 18°. It is about 45 m. in circumf., and contains three volcanic craters. It is richly covered with wood.

PAGAN PLAINS, a level tract of New South Wales, in the district of Liverpool plains.

PAGANI, a village of Naples, in the prov. of the Principato-Citra, district and 11 m. NW of Salerno.

PAGANICA, a town of Naples, in the prov. of Abruzzo-Ultra, district and 6 m. ENE of Aquila. Pop. 2,100.

PAGANICO, a town of Naples, in the prov. of Abruzzo-Ultra, district and 12 m. NNW of Aquila, cant. and 3 m. S of Montereale.—Also a town of Tuscany, in the prov. and 12 m. S of Sienna, at the confluence of the Lanzo and Ombrone.

PAGANO, or Pagnano, a village of Austria, in Lombardy, in the deleg. and 21 m. WNW of Treviso, district and ¾ m. W of Asolo. Pop. 1,200. It has manufactories of silk and cloth.

PAGAO, or Pagoes, an island of Brazil, in the prov. of Para, in the Madeira, above the junction of the Piraia-Nara.

PAGAR-GUNONG, a district in the SE part of the island of Sumatra, to the SSE of the district of Pasumah-Lebar.

PAGARUGONG, a town of Sumatra, capital of the Menangkabu district, 90 m. NE of Padang, and 75 m. from the coast.

PAGE, a county towards the NE part of the state of Virginia, U. S., containing an area of 160 sq. m., bounded on the E by the Blue ridge, and drained by the S fork of Shenandoah river. The surface is hilly, but generally fertile. Pop. in 1840, 6,194; in 1850, 7,597. Its cap. is Luray.

PAGE, a river of New South Wales, which has its source in the Liverpool range; runs through the co. of Brisbane; and discharges itself into the Hunter at Segenhoe.

PAGEAS, a commune of France, in the dep. of the Haute-Vienne, cant. and 2 m. NNE of Chalus, and 17 m. NW of St. Yrieix. Pop. 1,373.

PAGES, a group of low rocky islets, three in number, at the S entrance to Backstairs passage, and to the E of Kangaroo island, South Australia.

PAGHAM, a parish in Sussex, 4½ m. SSE of Chichester, on the coast. Area 4,376 acres. Pop. in 1831, 958; in 1851, 1,022. The harbour, constituted by a sudden irruption of the sea in the beginning of the 14th cent., consists of low ground of considerable extent, over which the tide flows at high water, and is entered by a crooked channel which continues some distance inland.

PAGHAN-MEW, or Pugan, an ancient town of Birmah, in Mranmapyee, on the l. bank of the Irawaddi, 111 m. SW of Ava, and 260 m. from Rangoon, in N lat. 21° 9′, E long. 94° 35′. It consists chiefly of numerous mouldering pagodas and other ruins, covering a space of ground stretching 6 or 7 m. along the river, and 3 m. inland, and was for many centuries capital of the Birman empire. The flour-

ishing town named Neoundoh, about 5 m. to the N, and equally remarkable for the number of religious edifices which it contains, may be regarded as the successor of this ancient capital.

PAGLESHAM, a parish in Essex, 4 m. NE by E of Rochford. Area 1,828 acres. Pop. in 1851, 491.

PAGLIA, a river of Italy, which has its source in Tuscany, in the prov. of Sienna, and capitanate of Radicofani, near San-Paulo-a-Celle; flows thence into the Papal states; receives the Chiana-Potificia on the l., near Orvieto; and 5 m. ESE of that town throws itself into the Tiber, on the r. bank, and after a course, in a generally SE direction, of 36 m.

PAGLIA-ORBA (Monte), a mountain of Corsica, on the confines of the arrond. of Calvi and Corte, in N lat. 42° 20′ 34″, E long. 8° 52′ 8″. It joins Mount Cinto on the N, and has an alt. of 1,359 toises = 2,896 yds. above sea-level. The Golo descends from its S side.

PAGLIARA, a town of Naples, in the prov. of Abruzzo-Ultra, district and 7 m. WSW of Avezzano, cant. and 8 m. SE of Tagliacozzo, at the foot of a mountain. Pop. 420.

PAGLIETA, a town of Naples, in the prov. of Abruzzo-Citra, district and 12 m. NW of Il-Vasto, and 21 m. SE of Chieti, pleasantly situated on a hill. Pop. 2,500. It contains 4 churches.

PAGLION, a river of Sardinia, in the dio. and prov. of Nice, which has its source near Luceram, and after a course, in a generally SSW direction, of 18 m., flows into the Mediterranean at Nice.

PAGNEY, a village of France, in the dep. of the Jura, cant. and 4 m. N of Gendrey, and 17 m. NE of Dole, near the l. bank of the Oignon.

PAGNY-LA-VILLE, a village of France, in the dep. of the Cote-d'Or, cant. and 5 m. NNE of Seurre, and 17 m. ENE of Beaune, on the l. bank of the Saone. Pop. 550.

PAGNY-LE-CHATEAU, a village of France, in the dep. of the Cote-d'Or, cant. and 5 m. NE of Seurre, and 19 m. E of Beaune, on a hill. Pop. 325.

PAGO, a town of Naples, in the prov. of the Principato-Ultra, district and 15 m. NW of Ariano, cant. and 3 m. ENE of Pesco-la-Mazza, on a hill. Pop. 1,750. The environs afford excellent wine and oil.

PAGO, an island of the Adriatic, in the gulf of Quarnero, and circle of Zara, separated from the coast of Croatia by the Morlacca channel, and on the N by a channel of the same name, from the island of Arba. It is about 36 m. in length, and comprises an area of 108 sq. m. It is extremely irregular in outline. On the N it forms a long and narrow peninsula, terminating in Cape Loni, and near its centre is Lake Zascha, an extensive inlet which communicates by means of a strait with the Morlacca channel. The climate varies from the extreme of cold in winter to that of heat in summer; and the soil, which is generally rocky and sterile, produces indigenously only a few aromatic plants. Wine, however, is successfully cultivated in some parts, and sheep are reared in great numbers on the pasture. Towards the SW are extensive salt-works, the produce of which forms an important article of export. Wood is scarce on the island, but it has abundance of coal. The inhabitants, about 4,500 in number, are of Sclavonic origin.—Its chief town bears the same name, and is 18 m. NNW of Zara, on Lake Zascha. Pop. 2,210. It has a port.

PAGODA. See Avarella (Cape).

PAGORMONT, a town of Russia in Europe, in the gov. of Vilna, district and 39 m. W of Rossiena.

PAGTGOEDEREN and Guesenhoek, a commune of Belgium, in the prov. of E. Flanders and dep. of Cluysen. Pop. 168.

PAHANG, a state of the Malay peninsula, extending between 2° 15′ and 4° 15′ N lat., and bounded on the N by the state of Tringano; on the E by the China sea; on the S by the state of Johore; and on the E by that of Salangore, from which it is separated by a range of mountains which run along the centre of the peninsula. Pop. 50,000. It is watered by a river of the same name. Its principal productions are tin and gold; of the former it exports annually about 100,000 lbs. weight. The raja of P. is nominally subordinate to the sultan of Johore.—The town, which bears the same name, is 135 m. NE of Malacca, at the mouth of the Pahang, a river of considerable breadth but shallow, and here divided by an island into two channels, both navigable for vessels of small dimensions. The town is small and is enclosed by a palisade formed of the trunks of trees, rising about 24 ft. in height, and defended at each extremity by a bastion similarly constructed. The houses are built of wood and bamboos. The pop. is from 8,000 to 10,000.

PAHAQUARRY, a township of Warren co., in the state of New Jersey, U. S., 15 m. N of Belvidere, bounded on the W and SW by Delaware river, and on the E by Blue mountain. It is generally mountainous. Pop. in 1840, 370.

PAHARPUR, a village of the Punjab, 20 m. S of Leia, in a level tract, on the l. bank of an arm of the Indus.—Also a large town of Afghanistan, in the Derajat and district of Damaun, on the road which runs through the Largee valley to Dera Ismail Khan, and 20 m. NNE of that town.

PAHLI, a town of Hindostan, in the prov. of Ajmir, district and 42 m. NE of Judpur.

PAHMI, a town of Upper Guinea, in the kingdom of Inta, 45 m. N of Sallagha, and 240 m. NE of Kumassie.

PAHO, a river in the W part of the island of Celebes, in the Mandhar territory, which throws itself into the bay of Mandhar in S lat. 3° 15′, and E long. 119° 30′.

PAIECZNO, a small town of Poland, in the gov. of Kalisch and obwod of Piotrkow. Pop. 1,500.

PAIFVE, a department and commune of Belgium, in the prov. and arrond. of Liege. Pop. 219.

PAI-JOSE, a lake of Brazil, in the prov. of Goyaz, and serra of Pirénneos. It gives rise to the Rio-das-Almas.

PAIKAL. See Baikal.

PAILHAREZ, a village of France, in the dep. of the Ardeche, cant. and 3 m. W of St. Felicien, and 14 m. W of Tournon.

PAILLART, a village of France, in the dep. of the Oise, cant. and 3 m. NNE of Breteuil, and 22 m. NNW of Clermont, on the Noye. Pop. 756. It has a manufactory of paper, and several flour, oil, and tan-mills.

PAILLAS (Port de), a col or pass of the Pyrenees, in Spain, on the confines of the Val d'Aran and of Catalonia, and near the source of the Garonne.

PAILLES, a commune and town of France, in the dep. of the Ariege, cant. and 5 m. SSE of Fossat, on the r. bank of the Leze. Pop. 1,200.

PAILLET, a commune of France, in the dep. of the Gironde and cant. of Cadillac, 20 m. SE of Bordeaux, near the r. bank of the Garonne. Pop. 885. It produces excellent wine.

PAILLINOI, or Canonistro, a headland of Turkey in Europe, in Rumelia, in the sanjak of Salonika, and at the extremity of the peninsula of Cassandra, in N lat. 39° 55′, and E long. 23° 46′.

PAILTON, a hamlet in Monks-Kirby p., Warwick, 5 m. NNW of Rugby. Pop. in 1851, 636.

PAIMBŒUF, an arrondissement, canton, commune, and town of France, in the dep. of the Loire

Inferieure. The arrond. comprises an area of 77,505 hect., and contains 5 cant. Pop. in 1831, 42,129; in 1841, 43,346. The cant. comprises 3 com. Pop. in 1831, 5,718; in 1841, 5,859. The town is on the l. bank of the Loire, which has here a clear breadth of 2 m. at a distance of 8 m. above its embouchure, and 26 m. WNW of Nantes. Pop. in 1789, 5,525; in 1831, 3,648; in 1841, 3,900. It has a communal college, a hydrographical school, an hospital, extensive building-docks, and an excellent harbour. The latter consists of two parts of unequal size, distinguished as the Chaussée-Neuve and Quatre-Amarres. It can afford accommodation to vessels of the largest size, and carries on an active trade in grain, flour, wood, butter, fowls, pork, &c. This town at the commencement of the 18th cent. was a mere hamlet, and owes its prosperity chiefly to its connection with Nantes, of which it is considered the port.

PAIMOGO, a town of Spain, in Andalusia, in the prov. and 45 m. NW of Huelva and partido of Cerro, at the foot of the Sierra-de-Arroche and about 3 m. from the Portuguese frontier. Pop. 2,310. It has a parish church, a custom-house, and a public granary, and a number of Roman antiquities. The rearing of cattle forms the chief branch of local industry.

PAIMPOL, a commune, town, and port of France, in the dep. of the Cotes-du-Nord, and arrond. of St. Brieuc. The cant. comprises 8 com. Pop. in 1831, 19,155; in 1841, 20,145. The town is prettily situated on a hill, at an alt. of 65 yds. above sea-level, 25 m. NW of St. Brieuc, and 9 m. E of Trequier, on a bay of the British channel, opposite the island of Brehat. Pop. in 1841, 2,043. It has mineral baths, a hydrographical school, and a good and commodious port and roadstead; and possesses manufactories of cordage, a salt-refinery, and several refineries. Its trade, which is considerable, consists chiefly in corn, hemp, flax, lint-seed, yarn, honey, wax, butter, drapery, feathers, hair, and salted meat. This town was occupied in 1590 by the English, then auxiliary to the royal troops. In 1593 it was taken and sacked by the Leaguers.

PAIMPONT, a commune of France, in the dep. of the Ille-et-Vilaine, cant. and 4 m. WNW of Plelan, and 14 m. SW of Montfort, on a small lake. Pop. in 1841, 3,499. It has extensive iron and steel works, a foundry, manufactories of tools, nails, and of artificial stones, a tannery and bleacheries.

PAIN-DRAS, or PAIEN-I-DURAS, a village of Ladak, near the Duras river, 45 m. NE of Cashmere, on the road thence through the Bultul pass to Leh, and at an alt. of 9,000 ft. above sea-level.

PAINGTON, a parish in Devon, 6 m. E of Totness. Area 5,092 acres. Pop. in 1851, 2,746.

PAINKHANDI, a pergunnah or subdivision of Hindostan, in Gurhwal, in the district of Kumaon. It is generally mountainous, and rises in the peak of Ramni to the height of 22,700 ft. above sea-level. The forests, consisting of fir, yew, cedar, pine, horse chestnut, walnut, sycamore, and service trees, contain great numbers of wild hogs, deer, boars, and pheasants. The pergunnah comprises 22 villages.

PAINOUR, a fortress of Tibet, in the prov. of Ndzang, on a rocky acclivity, near a river of the same name, which is here crossed by a massive stone bridge, 24 m. SE of Shigatze and 180 m. WSW of Lassa. The Painour or Djouangdze descends from the N side of the Himalaya mountains; runs first N, then NW; and after a course of about 120 m., joins the Yarou-dzang-bo on the r. bank, a little to the NW of Shigatze. The locality is noted for the manufacture of fine woollen fabrics.

PAINS-CASTLE, a village in the p. of Llanbdwr, Radnor, 5 m. NW of Hay, on a branch of the Wye.

PAINSVILLE, a village of Amelia co., in the state of Virginia, U. S., 49 m. SW of Richmond. Pop. in 1840, 60.—Also a township and village of Lake co., in the state of Ohio, 30 m. E of Cleveland, bounded on the N by Lake Erie, and drained by Grand river. Pop. 2,580.

PAINSWICK, a parish and market-town in the co. of Gloucester, 6 m. SSE of Gloucester, and about 3 m. E of the Great Western railway, including the tythings of Edge, Shepscombe, Spoonbed, and Strondend. Area 5,815 acres. Pop. in 1831, 4,099; in 1851, 3,464. The town is situated on the declivity of Spoonbed-hill, at the foot of which flows a branch of the river Stroud. It is irregularly built, but contains some good houses. The inhabitants are chiefly employed in the woollen manufacture.

PAINT, a township of Venango co., in the state of Pennsylvania, U. S. Pop. in 1840, 491.—Also a township of Somerset co., in the same state. Pop. 487.—Also a township of Holmes co., in the state of Ohio, watered by a branch of Sugar creek. Pop. 1,361.—Also a township of Highland co., in the same state. Pop. 2,560.—Also a township of Fayette co., in the same state. Pop. 1,210.—Also a township of Ross co., in the same state, watered on the W and S by a creek of the same name. Pop. 1,380.—Also a township of Wayne co., in the same state, 95 m. NE of Columbus. Pop. 1,610.—Also a creek which has its source in Madison co., and which, after a course of 60 m., enters the Scioto 5 m. below Chilicothe.

PAINTED POST, a township of Steuben co., in the state of New York, U. S., 22 m. SE of Bath. It has a hilly surface, but the soil, generally gravelly loam, is highly productive. Pop. in 1840, 1,674.—Also a village of Erwin township in the above named co., 212 m. W by S of Albany, at the junction of Conhocton and Tioga rivers. Pop. about 450.

PAIOL, a small town of Brazil, in the prov. of Minas-Geraes, and district of Minas-Novas.—Also an island to the SE of the entrance to the bay of Nitherohi, or of Rio-de-Janeiro. The most frequented passage into the bay lies between this island and the lighthouse.

PAIPORTA, a village of Spain, in the prov. and partido and 3 m. S of Valencia, on a torrent which discharges itself into Lake Albufera. Pop. 1,130. It has a church noted for its fine tower.

PAIR, a commune of Belgium, in the prov. of Liege, and dep. of Clavier. Pop. 100.

PAIR (SAINT), a village of France, in the dep. of the Manche, cant. and 2 m. SE of Granville, and 14 m. NW of Avranches, near the shore of the British channel. Pop. 1,600.

PAIRAY, a river of France, in the dep. of the Vendee, which has its source a little to the NW of Avrillé; runs WSW; receives the Gui-Chatenay; and after a course of 11 m. throws itself into the Atlantic 3 m. SSW of Talmont.

PAIRE', a commune of France, in the dep. of the Vienne, and cant. of Couhé, 33 m. S of Civray, on the Dive. Pop. 1,173.

PAIROIR, a commune of Belgium, in the prov. of Namur, and dep. of Bioul. Pop. 116.

PAIROIS, a commune of Belgium, in the prov. of Hainault, and dep. of Carnieres. Pop. 176.

PAISLEY, a parish and town in the upper district of Renfrewshire. Area of p. 16,153 acres, which may be arranged thus:—Arable or in cultivation, 12,500; natural pastures and meadows, 1,500; moss, sites of houses, roads, waters, &c., 1,153; woods and plantations, 1,000. The highest point is 760 ft. above the surface of the river Cart at high-water mark. Coal, sandstone, limestone, greenstone, ironstone, and aluminous schist are abundant within the p. Pop. in 1801, 31,197; in 1841, 60,963; in 1851, 60,250.—The town is situ-

ated near the centre of the p., and is spread out on both sides of the river White Cart, 3 m. from its junction with the Clyde. The distance of the cross of Paisley from that of Glasgow is 7¾ m. From Greenock Paisley is distant 16 m., and from Edinburgh 52 m., by the turnpike roads. The parliamentary burgh is spread over a surface of about 3 m. by 2½ m. including a very small portion of the p. of Renfrew, and has a total area of 3,520 acres. Pop. in 1841, 48,125; in 1851, 47,952. In 1841 the revenue of the corporation amounted to £3,474. The value of its property at that time was £69,047; its debts, £43,086. In 1848-9 the revenue was £3,000.—Under the reform act of 1832, Paisley returns one member to parliament. The constituency, parliamentary and municipal, in 1841 was 1,175; in 1849, 1,243.—With regard to public buildings, the first place is due to the abbey-church of the monastery, which was established here about the year 1163. The edifice has been 265 ft. in length. The internal measurement of the nave is 93 ft. in length, and 59½ ft. in breadth, including the width of the aisles. The transept measures internally 92½ ft. by 35 ft.; and the choir, which has been without aisles, 123½ by 32 ft. The nave has been employed as a parish-church ever since the Reformation. The County-buildings, erected in 1818-21 at an expense of £28,000, stand on the W bank of the river. Their general form is quadrangular, and the style of the exterior castellated. The front division contains a court-house, county-hall, council-chambers, and a number of offices for different departments of public business. The eastern range consists of the correction-house and common jail, with a chapel. On the opposite side of the area of the cross are the Coffee-room buildings, erected in 1809. At the suburb of Williamsburgh, barracks for the accommodation of a battalion of infantry were erected in 1822. Of the places of worship, we may particularize the High church, a handsome building with a lofty spire, which occupies an eminence, and is seen from a great distance; St. George's church, a spacious Grecian structure; one of the Secession churches, also Grecian; and the Episcopal chapel, which is of chaste Gothic. All these are modern structures. Although Renfrew is the county-town, P. has been the seat of the court of the sheriff of the county since 1705. An association called the Philosophical institution was established in 1808, for the delivery of lectures on different branches of science and literature, and has since been carried on with various degrees of success. A Mechanics' institution which had existed for some years was incorporated with it in 1825. A government school-of-design has been established for some years. There are 3 public libraries and several printing presses. By the returns of 1801, 1811, and 1821, P. ranked as the third town in Scotland in point of pop., coming next to Glasgow and Edinburgh. In 1831 Aberdeen exceeded it to the amount of a few hundreds. In 1841, while Aberdeen had increased still more in proportion, Dundee had got a-head of both, thus reducing Paisley to the rank of the fifth town. The decrease of pop. has arisen from depression of trade in 1842; and the prevalence of fever in 1847; and of cholera in 1849. Since this latter date, however, the town has been rapidly improving.

It was not long after the Union with England that the spirit of manufacture began to show itself in P. The fabrics produced were at first coarse checkered linen cloth, and imitations of striped muslins, called Bengals; checkered linen handkerchiefs, some of them beautifully variegated by the manner in which the colours were disposed, were added; and these were succeeded by fabrics of a lighter and more fanciful texture, consisting not only of plain lawns, but likewise of such as were striped with cotton, and others that were ornamented with a great variety of figures. About 1730 the making of white sewing thread was begun, and was prosecuted to such an extent that P. became the principal seat of that manufacture. Towards the end of the century, this manufacture began to decline, and was gradually superseded by an article made of cotton. By the middle of the 18th cent., the making of linen gauze was a considerable branch of trade. In 1759 the manufacture of silk gauze was first attempted here, in imitation of that of Spitalfields. Its success was so complete, that it not only became the great distinguishing business of the town, but filled the country round to the distance of 20 miles. About 1785, the change of fashion, on which this trade must entirely depend, had an unfavourable effect. It was gradually dropt, and the skill of the Paisley weavers being directed to muslins, this branch in turn rose to an unexampled height of prosperity. Of late years comparatively little has been done in it; but the fabrics designed for the London market are not surpassed anywhere in point of taste and elegance of execution. The ornamenting of muslins by fine needlework employs a great number of young women, and is carried to great perfection. In 1817 the silk gauze began to revive, and has since thriven well.—In 1805 the shawl manufacture was introduced, and has gradually become the staple trade of the place. Imitations were at different times made of Tibet shawls and Cashmere shawls, and of the striped scarfs and turbans worn by the nations of the East, which, from their resemblance to the skin of the animal of the name, are called 'zebras.' For making the Cashmere shawls the genuine wool is imported, and the first cloth of this description made in Britain was fabricated in P. Some of the most beautiful are manufactured from Australian wool, and also of a fine wool imported from Germany. Another beautiful and ingenious species of shawl manufactured here is that known by the French name of the caterpillar, 'chenille,' from its variegated colour and softness of feel. About the year 1823 the manufacture of crape dresses, damask and embroidered shawls, similar to those imported from Canton, was introduced, and has since been extensively prosecuted. The shawls chiefly made now are of three qualities: the first is wholly silk; the second, half-silk and half-cotton; the third, wholly cotton. Machinery, invented by a Frenchman, has since 1834 been advantageously employed in finishing the shawls, in the operation of clipping, which was formerly done in a tedious and comparatively clumsy way by the hand. All the trades depending upon the shawl branch have necessarily increased, in particular that of dyeing, in which from 400 to 500 hands are employed. In the beginning of 1837 the number of looms employed in all kinds of weaving in P. was ascertained to be about 6,000; of which 5,700 were employed by Paisley houses, and the remaining 300 by Glasgow ones. About 2,000 looms were employed in the country, chiefly in the neighbouring villages, but including some hundreds in Kilmarnock, Perth, Largs, Strathaven, &c.—In the town are large factories for spinning cotton, founderies of iron and brass, flour-mills, and timber-yards, breweries, distilleries, and a large soap work.

PAITCHA, or Bai-tsha, a river of Mongolia proper, which has its source on the E side of the Inchan or Khinghan mountains, about 50 m. NE of Dolomor or Tchao-naiman; hence runs NE; and joins the Kara-Muren on the r. bank, and after a course of about 90 m.

PAITONE, a village of Austria, in Lombardy, in the prov. and 9 m. E of Brescia, district and 8 m. SE of Salo. Pop. 250. In its vicinity are beds of fine marble.

PAIVA, a river of Portugal, in the prov. of Beira, and comarca of Lamego. It has its source near a town of the same name; runs first W, then N; receives the Povoa on the l.; and after a course of about 42 m. throws itself into the Douro, on the l. bank, 5 m. S of Penafiel.—Also a town, 17 m. S of Lamego, and 11 m. NE of Eixo, near the l. bank of the river of the name, not far from its source.

PAIZAC, or PEYZAT, a commune of France, in the dep. of the Dordogne and cant. of Lanouaille, 33 m. ESE of Nontron, on the r. bank of the Haute-Vezère. Pop. 2,278.

PAJARA, a town in the central part of the island of Fortaventura, Canary islands.

PAJARES-DE-LAMPREANA, a town of Spain, in Leon, in the prov. and partido and 17 m. NNE of Zamora. Pop. 321.

PAJARES-DE-LOS-OTEROS, a town of Spain, in the prov. and 18 m. SSE of Leon, and partido of Valencia-de-Don-Juan.

PAJEHU, or PAJAU, a village of Brazil, in the prov. of Alagoas, on the r. bank of a river of the same name, between the Serra Negra and the Rio São-Francisco. It is inhabited by Indians of the Choco tribe. The river P. has its source in the Serra-Cairiris; runs S. bathing the slopes of the Serra-Negra; and throws itself into the Rio São-Francisco. This river is liable to inundation. Its banks are inhabited by civilized Indians of the Choco tribe, and by the Vouve, Pipinan and Umas tribes.

PAJONAL. See PAMPAS.

PAJOROS. See PAXAROS.

PAKA (NEW), or NOWA PAKA, a town of Austria, in Bohemia, in the circle of Bidschow, 21 m. N of New Bidschow, on the Moleschka. Pop. 2,482.

PAKAMILA, or BUKA-MEALA, a territory of Lower Guinea, to the E of Loango, intersected by the range of the Complida mountains. It is noted for its ivory. Its chief town, which bears the same name, is situated at the junction of the Heilige Geist mountains with the abovenamed chain, and about 200 m. NE of Loango.

PAKAN-BARA, a town of Sumatra, in the district of Menangkabau, and near the source of the Siak, 30 m. NW of Pagarugong, and 105 m. NNE of Padang.

PAKANG, a town of Hindostan, in Nepaul, in the district of Chayenpoor, on the S flank of the Himalaya mountains, and on the confines of Tibet. It is said to be inhabited during the summer only, the intense cold of its winters occasioning its being altogether deserted during that season.

PAKANG-YE, or PAKHAN-NGE, a town of Burmah, in the Mraumepyee, on the l. bank of the Irawady, opposite Sembewghewn, and 150 m. SW of the city of Ava.

PAKEFIELD, a parish in Suffolk, 2½ m. SSW of Lowestoft. Area 771 acres. Pop. in 1831, 472; in 1851, 718.

PAKENHAM, a parish in Suffolk, 5 m. NE by E of St. Edmund's-Bury. Area 3,696 acres. Pop. in 1831, 979; in 1851, 1,134.

PAKENHAM, a parish of Tasmania, in the co. of Somerset, bounded on the E by the Macquarie river, and on the S by Blackman's river.

PAKENHAM, a headland of Russian America, on the S coast, at the entrance of Port Wells, towards the NW extremity of Prince William's sound, in N lat. 61°, and W long. 147° 32′.

PAK-PATTEN, a town of the Punjab, 8 m. NNW of Mamoke Ghat, an important ferry over the Ghara. It is noted as the residence, and contains the shrine of Shekh Faridu-Din, a celebrated Mahommedan saint, and is said to occupy the site of the altars built by Alexander to mark the limits of his conquests in the East.

PAKHRA, a river of Russia in Europe, in the gov. of Moscow, which has its source in the district of Vereïa, near Chelimovo; traverses the district and town of Podol; and after a course in a generally E direction of 48 m., throws itself into the Moskva, on the r. bank, 21 m. SE of Moscow.

PAKILLAH, a fortress of Persia, in the prov. and 130 m. W of Kirman, on the road thence to Shiraz, and a little to the E of a defile traversed by that road, and by an affluent of the great salt lake of Baldnegan.

PAK-NAM, a town of Siam, on the E bank of a small offset of the Menam river, 5 m. from the shore of the Gulf of Siam, and about 18 m. SE of Bangkok. It is described as forming a slender range of houses all built on piles, and extending about 3 m. along the river. It has a large fortress, and the river on both sides is well fortified.—The name Pak-nam, signifying a river's mouth, is one of frequent occurrence in Siam.

PAKORMUNGOR, a village of New South Wales, in the district of Wellington, near the source of the Bogan.

PAKOSC, or PAKOSOZ, a town of Prussia, in the prov. of Posen, regency and 26 m. S of Bromberg, circle and 13 m. NNE of Mogillno, in an island of the Netze, a little below the efflux of that river from a lake. Pop. in 1837, 792. It contains a Catholic church and a convent.

PAKRACZ, a town of Austria, in Hungarian Sclavonia, in the gsp. or comitat and 25 m. WNW of Posega, on the l. bank of the Pakra, an affluent of the Troboss. Pop. 1,000. It is the see of a Greek bishop, and contains a Greek and a Catholic church, and an old castle.

PAKROJANTY, a town of Russia in Europe, in the gov. of Vilna, district and 18 m. NW of Rossiena.

PAKS, or PATSCH, a market-town of Austria, in Hungary, in the gsp. and 15 m. NNE of Tolna, and 14 m. SSW of Földvar, near the r. bank of the Danube. Pop. 7,292. It has a Catholic and a Protestant church, and a synagogue.

PAL-EN-CHALANÇON (SAINT), a commune of France, in the dep. of the Upper Loire, cant. and 8 m. NW of Bas-en-Basset, 18 m. NNW of Issengeaux. Pop. 2,415. It has manufactories of lace and blond.

PAL-DE-MONS (SAINT), a commune of France, in the dep. of the Upper Loire, cant. and 5 m. S of St. Didier-la-Seauve, at the foot of a mountain, and on a small affluent of the Duniere. Pop. 1,780. In the vicinity are mines of sulphureous lead.

PALACHKOVTZI, a town of Turkey in Europe, in Bosnia, in the sanj. of Srebernik, 39 m. NE of Bagna-Louka, and 57 m. N of Trawnik, on the l. bank of the Okrina.

PALACHY, a town of Hindostan, in the presidency of Madras, prov. and 18 m. S of Coimbatur, district and 33 m. W of Daraporam. It contains a fort, a Hindu temple, and about 300 houses. In 1800, numerous coins of Augustus and Tiberius were found in the vicinity.

PALACINOS, a town of Spain, in Leon, in the prov. and 20 m. NW of Salamanca, partido and 8 m. NE of Ledesma. Pop. 37.

PALACIOS (Los), a town of Spain, in the prov. and 21 m. S of Seville, and partido of Utrera, in a fertile plain. Pop. 1,835.

PALACIOS-DE-CAMPOS, a river of Spain, in the prov. and 18 m. NW of Valladolid, on the l. bank of the Sequillo. Pop. 750.

PALACIOS-DEL-ALCOR, a village of Spain, in the prov. and 12 m. NNE of Palencia. Pop. 270.

PALACIOS-DEL-ARZOBISPO, a village of Spain, in the prov. and 18 m. NW of Salamanca. Pop. 300.

PALACIOS-DE-LA-SIERRA, a town of Spain, in the prov. and 38 m. SE of Burgos, on the l. bank of the Arlanza. Pop. 880.

PALACIOS-DE-LA-VALDUERNA, a village of Spain, in the prov. and 36 m. SW of Leon, between the Tuerto, an affluent of the Orbigo, and the Valduerna, an affluent of the Esla. Pop. 450.

PALACIOS-DE-RIO-PISUERGA, a village of Spain, in the prov. and 30 m. WSW of Burgos, on the l. bank of the Pisuerga, over which there is here a fine bridge. Pop. 150.

PALACIOS-RUBIOS, a village of Spain, in the prov. and 30 m. E of Salamanca, near the r. bank of the Guarena. Pop. 350.

PALADRU, a lake of France, in the dep. of the Isère, 9 m. SSE of La Tour-du-Pin. It is about 2½ m. in length from SW to NE.

PALÆA-KAIMENI. See KAIMENI.

PALÆO-CASTRO, or PALEOKASTRO, a general name given in modern Greece, to almost every spot where there is a collection of Hellenic ruins.

PALÆO-CASTRO BAY, a small inlet on the E coast of Candia, between Cape Sidero on the N, and Cape Salamona on the S.

PALÆO-CHORI, a village of Greece, in the SE of the Morea, 9 m. E of Misitra, on the r. bank of the Iri, or Ensitar, remarkable as occupying the site of the ancient Sparta.

PALÆO-PHANARO, a village of Greece, in the Morea, 6 m. SSW of Lala.

PALÆOPOLIS, a village of Greece, in the Morea, 2 m. E of Gastuni.

PALÆOVUNI, or ZAGORA, a mountain of Greece, 9 m. S of Livadia.

PALAFURGEIL, a town and promontory of Spain, in the prov. of Gerona, near Palamos, 28 m. ESE of Gerona. Pop. 2,800.

PALAGONIA, a town in the interior of Sicily, in the Val-di-Noto, 30 m. NW of Syracuse.

PALAIRAC, a village of France, in the dep. of Aude, cant. and 7 m. E of Monthoumet, on the Verdouble.

PALAIS (LE), a village of France, in the dep. of Creuse, cant. and 4 m. W of Pontarion, on the l. bank of the Thorion. Pop. 450.—Also a town of France, the chief place of the island of Belle-isle, in the dep. of Morbihan, on the N coast of the island. It is fortified, and has a castle, and a tolerably good harbour. Pop. 1,800. It was taken by the English in 1761, but restored at the peace.

PALAIS (SAINT), a town of France, in the dep. of Basses-Pyrenées, on the Bidouze, 21 m. SE of Bayonne. Pop. 1,200.

PALAISEAU, a town of France, in the dep. of Seine-et-Oise, 12 m. SSW of Paris, on the l. bank of the Yvette. Pop. 1,800.

PALAJA, a town of Tuscany, 18 m. SE of Pisa.

PALAMCOTTA, a town of India, in the Carnatic, 39 m. SSW of Pondicherry.—Also a town in the Madras district of Tinnevelly, the head quarters of a brigade of British troops.

PALAMOS, a town of Spain, in the prov. and 30 m. SE of Gerona, on a bay of the Mediterranean. It is fortified and defended by a strong castle. On the 10th of December 1810, a party of British seamen and marines attacked this place, destroyed the batteries, magazines, and vessels laden with provisions for Barcelona, but mistaking their way in their return, were attacked by the French, and after sustaining a heavy loss, were compelled to surrender.

PALAMOW, a district of Bengal, situated in the SW of the prov. of Bahar. It is a hilly territory, and covered with jungle, and is therefore probably one of the least populous and worst cultivated districts of India. It is intersected by the Burnah or Coyle river, which falls into the Sone, and by means of which timber and other heavy articles may be floated down to Patna. The inhabitants are in general a low class of Hindus. It is included in the collectorship of Ramghur. Its towns are Jainagur, Chichery, Bisraimpore, and the capital of the same name, which is situated in a valley on the E side of the Coyle river, in N lat. 23° 52′.

PALAMPONG, a town on the W coast of the island of Leyta, in N lat. 10° 58′, E long. 124° 14′.

PALANA, a town on the E coast of the island of Luçon, in N lat. 16° 30′, E long. 121° 45′.

PALANCIA, a river of Spain, which rises to the W of Bexis in Valencia; and flows into the Mediterranean, after a SE course of 30 m., 3 m. E of Murviedro.

PALANDA, an ancient settlement of New Granada, in the dep. of Assuay, situated on the river Palanda, which, descending from the E flank of the Andes, runs into the Chinchipe, on the r. bank.

PALANK, a large village in Hungary, on the river Ipoly, 25 m. NE of Gran.

PALANKA (HASSAN-PASHA), a small town of Servia, the cap. of a circle and seat of a *starashin* or judge, on the route from Semlin to Jagodin.

PALANQUINOS, a village of Spain, in the prov. and 9 m. SE of Leon, on the l. bank of the Esla.

PALAPA, a port on the N coast of the island of Samar, in the Philippine archipelago, in N lat. 12° 38′.

PALAPUT, a town of Hindostan, in the dist. of Barahmal, 68 m. SW of Arcot.

PALAR, or PALAUR, a river of the south of India, which rises in the E part of the prov. of Mysore; and after an ESE course of 220 m. through the Carnatic, passing Vellore and Arcot, falls into the bay of Bengal, near Sadras.

PALATA, a town of Naples, in the prov. of Sannio, 9 m. NW of Larino. Pop. 2,050.

PALATINATE (LOWER), or PALATINATE OF THE RHINE, an ancient territorial division of Germany, situated on both sides but chiefly on the W side of the Rhine, having Mentz on the N, Alsace on the S, and Lorraine on the SW. It comprised the principalities of Simmern, Deux-Ponts, and Veldenz, the county of Spanheim, and the Palatinate proper or Electoral Palatinate. It is now partitioned between Bavaria, Prussia, and France. The title of Palatine took its rise from the ancient *palatia* or palaces which the emperors had in different parts of Germany. In remote ages, temporary judges were nominated to preside in the courts held in these palaces, with the title of *Pfalz-graf*, or *Comes Palatinus*.

PALATINATE (UPPER), an ancient province of Germany, bordering on Bohemia, and now forming part of Bavaria. This country formed for several centuries a part of the dominions of the elector-palatine; but in 1620, it was lost, after the battle of Prague, by the elector Frederic V., the unfortunate son-in-law of James I., and has remained ever since in possession of Bavaria.

PALATINE, a township of Montgomery co., in the state of New York, U. S., 56 m. WNW of Albany. The surface is hilly, and is drained by Garoga creek, an affluent of the Mohawk, by which the township is bounded on the S. The soil is generally fertile. Pop. in 1840, 2,823.

PALATINE-BRIDGE, a village of Palatine township, Montgomery co., in the state of New York, U. S., 51 m. WNW of Albany, on the N side of Mo-

hawk river, opposite Canajoharie, with which it is connected by a bridge. Pop. in 1840, 200.

PALATSHA, a town of Asiatic Turkey, in the sanjak of Mentesha, on the l. bank of the Buyuk-Mendere.

PALAWAN, or Paragoa, a large island in the Eastern seas, extending between the N extremity of Borneo and the SW extremity of Mindoro, with which and the Philippines it forms an extensive chain of islands. Its extreme length from NE to SW, between the parallels of 8° 27′ and 11° 30′ N, may be estimated at 275 m.; its average breadth at 32 m. It is intersected throughout its length by a chain of hills; the coast-district is plain and flat to the bottom of the hills. The productions are maize, yams, dye-woods, cowries, wax, tortoise-shell, and beche-de-mer or sea-slug, the last being abundant. Ebony and laka wood are abundant; and there are hot springs, and mines of gold. The W side of the island is inhabited by a savage people who seldom frequent the coast. The greater part of this island was formerly under the dominion of the Sulus, but is little known to Europeans.

PALAYE (Sainte), a village of France, in the dep. of Yonne, cant. and 3 m. WSW of Vermanton.

PALAZINO, a small town of Austrian Italy, in the prov. of Mantua, on the Mincio.

PALAZUELO-DE-BEDIDJA, a village of Spain, in the prov. of Valladolid, and partido of Rioseco, 4 m. NW of Medina. Pop. 839. It has a parish church, a custom-house, a public granary, and an hospital.

PALAZUELOS, a village of Spain, in the prov. and 36 m. NNE of Burgos, near the r. bank of the Gerta. Pop. 190.—Also a village in the prov. and 45 m. NE of Guadalaxara. Pop. 400.

PALAZUELOS-DE-LA-SIERRA, a village of Spain, in the prov. and partido and 12 m. SE of Burgos. Pop. 280.

PALAZZO, a port of Dalmatia, at the NW extremity of the island of Mileda, in N lat. 42° 47′ 6″. —Also a town of Naples, in the prov. of Basilicato, 18 m. ESE of Melfi. Pop. 3,800.

PALAZZOLO, a town and castle of Piedmont, 12 m. WNW of Casale.—Also a town of Sicily, in the Val-di-Noto, 20 m. W of Syracuse. Pop. 6,000.

PALAZZUOLO, a town of Italy, in the grand-duchy of Tuscany, 23 m. NE of Florence.—Also a town of Austrian Italy, in the prov. of Brescia, on the Oglio, 14 m. ESE of Bergamo. Pop. 3,200.

PALCAMAYO, a river of Peru, in the prov. of Pataz, which runs N, and unites with the Pangon to enter the Ucayali.

PALCATI-NOR. See Balkash.

PALCIPA, a lake of La Plata, in the prov. of Tucuman, to the NE of Lake Andalgada. A river of the same name flows into it on the W side.

PALCONDAH, a town of Hindostan, in the Northern Circars, 24 m. NW of Cicacole.

PALCOTE, a town of Bengal, in the district of Chuta-Nagpore, situated among the hills, in N lat. 22° 58′.

PAL-DE-CHALANÇON (Saint), a town of France, in the dep. of Haute-Loire, cant. and 6 m. NW of Bas. Pop. 2,250.

PAL-DE-MONS (Saint), a village of France, in the dep. of Haute-Loire, cant. and 4 m. S of Saint-Didier-le-Seauve. Pop. 1,690.

PALEMBANG, a state of Sumatra, on the E coast, extending, between the parallels of 2° and 4° 30′ S lat., along the river Moesie or Palembang; and bounded on the N and E by the straits of Banca; on the S by the Lampoong country; on the W and SW by a ridge of mountains which separate it from Bencoolen; and on the NW by the territories of the sultan of Jambi. Towards the sea-coast it is flat and marshy, and unfit for cultivation. The articles of commerce supplied by this country are pepper, rattans, gambir, silk, cotton, damar, ivory, cat's-eye, sulphur, salt, wax, rice, benzoin, indigo, tobacco, areca, buffaloes, and gold, most of which articles are brought from a great distance up the country. The forests abound, among other valuable productions, with the ebony tree. The pepper-trade at P. was formerly exclusively in the hands of the Dutch, and at least 2,000,000 lbs. were annually exported. A metallic composition named *calin*, found here, formed also a very lucrative branch of trade: but the most considerable article of commerce was the tin of Banca, which the sultan was obliged to furnish to the Dutch monopolists at a comparatively low rate. The interior parts of the country are divided into provinces, each of which is assigned as a fief or government to one of the royal family or a noble. The present rulers, and a great portion of the inhabitants of the city, are supposed to have come originally from Java. The power of the monarch is unlimited; but he has no revenue except what is derived from his monopolies, especially that of pepper and tin. The Mahommedan religion prevails throughout all the dominions of the sultan, with the exception of a district near the coast, called Salang, where the natives live in the woods like wild animals. The language of the king and his court is the high dialect of Java, mixed with some foreign idioms. In 1812 the kingdom of P. was conquered by a handful of British troops under Colonel Gillespie. The sultan, who had made himself universally odious by his atrocious cruelties, and particularly obnoxious to the British by his unprovoked massacre of the Europeans resident in his capital, was dethroned, and his brother raised to the sovereign power; but in 1816 the Dutch restored the deposed sultan.

Palembang, or Palimbang, the capital of the above district, and the emporium of the inland commerce of Sumatra, is situated in a flat marshy tract, on the l. bank and above the delta of the river, about 60 m. from the sea. The river is here about 1,200 ft. in breadth. The city is intersected by several little branches of the river, which form a number of islands, whence it has received the appellation of 'the City of Twenty islands.' The houses of the sultan and his son are square areas surrounded with high brick walls. Each of these contains several detached buildings of the pavilion form, surrounded by portions of ground planted with fruit-trees and ornamental shrubs; and in front is a battery facing the river, formed of a rampart of mud about 20 ft. thick, faced within and without with bamboos, and pierced with embrazures. The houses of the common people are of bamboos and mats, and thatched. Some of them are raised on stakes; others, which are constructed on rafts of wood or bamboo, float on the river, where they rise and fall with the tide, and are fastened to the shore with ropes of rattan. Some of these floating-rafts are described as very large, having, in addition to commodious dwelling-houses and out-offices, pleasant gardens, with trees and various plants. About 2 m. above P. the river divides into two large branches, that on the l., leading to a country seat of the sultan, consisting of several bungalows and gardens situated on a cluster of small islands, called, in allusion to their multitude, Pulo Saribu, or 'the Thousand islands.' The Dutch factory, which was demolished by the sultan, was on the r. bank, which is higher than the l., and where there are consequently more extensive tracts of dry ground. Immediately below the site of the factory is a small branch of the river called Sungi-Awar, which gives name to the adjoining campong or street

inhabited chiefly by about 700 Chinese families, who are the principal merchants and artisans in the place. On the l. bank of the river, a little below the palace, is a colony of about 300 Arabs, among whom are some merchants of eminence. The remaining inhabitants of P. are Malays, and are estimated at between 20,000 and 30,000.—The river on which the city is situated rises in the district of Moesi, within two or three days' journey of Bencoolen, and running E receives many subsidiary streams, and falls into the straits of Banca, in S lat. 2° 18′, E long. 105° 8′. There is a bar on which the depth is only 2¼ fath. at low water; but after passing that, it is reckoned to have a sufficiency of depth to carry a frigate as far up as the town. The river is of very considerable breadth. Its banks are low and woody, resembling the Sunderbunds at the mouth of the Ganges. It swarms with alligators.

PALEMERDY, a town of Hindostan, in the district of Madura, in N lat. 9° 26′.

PALENA, a town of Naples, in the prov. of Abruzzo-Citra, cant. and 6 m. WNW of Lama. Pop. 2,000.

PALENCIA, a province of Spain, comprising the NE part of the kingdom of Leon, and bounded on the N by Santander; on the E by Burgos; on the S by Valladolid; on the W by Leon and Toro. Area 258 sq. Spanish leagues. Pop. in 1834, 148,491. It is divided into the 7 partidos of Astullido, Baltanas, Carrion, Cervera-del-Pisuerga, Frechilla, P., and Saldana. The N part of the prov. is hilly; the rest, level. It is watered by the rivers Carrion, Cieza, and Pisuerga. The soil is fertile. Timber is very scarce. The chief manufactures are woollens and leather, which are exported to the adjacent provs.

PALENCIA, the chief town of the above prov., is situated in a beautiful and fertile tract called the Tierra-de-Campos, on the l. bank of the Carrion. 97 m. WNW of Madrid. It is a bishop's see, and has a good cathedral, 4 churches, 2 hospitals, 11 monasteries and convents, and 11 poor-houses. Most of these, and many of the private houses, are of Gothic architecture; but the only remarkable edifices are the cathedral and the church of San Antolin. The pop., amounting to 10,500, is partly employed in manufacturing blankets, serges, pottery-ware, and leather.

PALENQUE (SAN DOMINGO DE), a village of Mexico, in the prov. of Chiapa, 240 m. NNW of Guatimala, on an affluent of the Usamasenta. About 12 m. SW from this v., on a stream called the Otolum, are extensive ruins, known as the Casas-de-Piedras, of peculiar structure, and stamped with the impress of great antiquity. The buildings yet discovered are few in number compared with the endless hills of wrought stone,—for they can hardly be called ruins,—which are here strewed around in every direction. These ruins were first surveyed by Capt. Del Rio in 1787; but an account of them was not published till 1832, by Dr. P. F. Cabrera.

PALENZUELA, a town of Spain, in the prov. and 32 m. SW of Burgos, on the r. bank of the Arlanza, at the foot of a high mountain. Pop. 2,000.

PALEO-CASTRO. See PALÆO-CASTRO.

PALERMO, an intendancy or administrative province of the island of Sicily, stretching from the centre of the island to the Tyrrhenian sea. Area 1,250 Italian or geog. sq. m. Pop. in 1817, 405,251; in 1826, 409,000; in 1848, 490,000. It is divided into the 4 *distretti* of P., Corleone, Termini, and Cefalu; which are distributed into 33 *circondarii*, and 72 *comuni*.—Its cap., of the same name, and which is also that of the island, the residence of the viceroy and seat of the high tribunals, lies on the SW shore of a small bay on the NW coast, in N lat. 38° 6′ 44″, E long. 13° 20′ 15″. Its situation is picturesque in the highest degree: the sea, hills, and lofty mountains, present on every side beautiful and striking prospects. It is nearly of a circular form, and was formerly surrounded with a strong wall; but its fortifications are now quite neglected, except on the side towards the sea, and even on this side they are far from being strong. The interior of the town has a splendid and imposing appearance, being filled with public monuments, palaces, churches, monasteries, fountains, and statues. The principal streets are the Cassaro or Toledo, and the Strada-Nuova, which traverse the city, intersecting each other at right angles in the centre. These streets are broad and regular, and lined with lofty and uniform edifices, many of which have balconies, fountains, and statues in front: most of the other streets are narrow, winding, and dirty, and paved only in the centre, where every one walks. The Cassaro and Strado-Nuova form at their point of intersection a square, called from its figure Piazza-Ottangolare. Each of the sides of this piazza is composed of handsome buildings; and from this spot there is a beautiful view of the two main streets, and of the principal gates of the city by which they are terminated at the distance of half-a-mile.—P. is crowded with religious establishments, there being above 40 monasteries, 50 convents, and an immense number of churches. The finest of these is the cathedral, or Madre-Chiesa as it is commonly termed, an old Gothic edifice erected in the 12th cent. Its exterior is magnificent and simple; the interior is supported by 80 pillars of oriental granite, and divided into a number of chapels, some of which are very rich, particularly that of St. Rosalia, the patroness of P. It contains some superb monuments of the Norman kings of the island. The Chiesa-del-Palazzo is entirely encrusted over with ancient mosaic. The church of San-Giuseppe is a handsome edifice, richly ornamented, and containing some beautiful columns of grey Sicilian marble nearly 60 ft. high. The Palazzo-Reale, or palace of the viceroy, is an immense mass of discordant parts, built at different periods, but its apartments are of a noble size, and richly adorned. In a square in front of the palace is a statue of Philip IV. of Sicily, surrounded with four other statues representing the cardinal Virtues, all of them of fine white marble. Many of the palaces of the nobility are admired for their architecture; but there is commonly a want of taste in their interior decorations. The buildings of the university are extensive, and contain an observatory, and cabinets of natural history and medals. There are professors in various branches of science, but the number of students is small.—The charitable institutions of P. are numerous; the principal are the great hospital, the hospital of St. Bartholomew, and the Albergo-de-Poveri or poor's house. The principal public walk is the Marina, a terrace about 80 paces in breadth, extending above a mile along the shore, in front of a range of fine palaces. It is divided into an upper and a lower terrace. Adjoining the Marina are the public gardens, which are tastefully arranged, and interspersed with statues and fountains. There is also a botanical garden at the extremity of the Marina, abounding in shady avenues of oranges and citrons, and containing a valuable collection of plants.—The harbour is well fortified and capacious, being capable of containing 30 sail-of-the-line, besides several hundred merchantmen. At its entrance there are a lighthouse and two citadels. It is protected by the two headlands of Monte-Pellegrino and Capo-Zafferano; but is dangerously open to swells from the NE; and even at the anchoring-place, ships do not lie secure whenever a W wind blows.

The trade of P. is not very extensive, consisting chiefly of silk, in which above 900 looms are employed. The silk-manufacture, and the rearing of the worms, were introduced into the island in the 11th century, by Roger, king of Sicily. Gloves and stockings of great beauty and fineness are manufactured of the silk thread obtained from the Pinna Marina,—a species of fish caught on the N coast of the island. The principal articles of export are silk and satins, and the produce of the adjacent country, viz. wine, oil, and brandy, together with large quantities of fish, chiefly tunnies, the taking and curing of which affords employment to a considerable number of persons in the months of May and June.

The pop. of P. was returned in 1826 at 168,000; in 1831, at 173,478; of this number the nobility, clergy, and beggars constitute a large proportion. Many of the nobility are poor, and not a few are entirely without resources to support their dignity. —The heat in summer is very great, continuing for some months between 80° and 90°; in winter it seldom falls below 50°. During the blowing of the sirocco, the therm. sometimes rises above 112°. The inhabitants generally shut up their houses and shops a little before noon, to enjoy a siesta of 3 or 4 hours. The town has occasionally suffered severely from earthquakes.

P. was anciently called *Panormus*, a name derived, according to Diodorus Siculus, from the excellence of its harbour. Sicilian writers trace its origin back to a very remote period; but according to Thucydides it was originally colonized by the Phenicians, who were induced to settle here from the convenience of the port and the beauty of the situation. It afterwards fell successively into the hands of the Greeks and of the Carthaginians. The latter made it the capital of their possessions in the island, and a considerable place of commerce. In the first Punic war it was taken with difficulty by the Romans, who treated it as a free and allied state, and permitted it to be governed by its own laws. It continued faithful to the Roman republic and empire till, in 821, it fell under the power of the Saracens, who made it the metropolis of the island. In the 11th cent., the Normans took it from the infidels, and made it the seat of their empire; since that period it has been considered as the capital of the islands. It is the seat of the viceroy and the Sicilian parliament, and the residence of the principal nobility; and is the see of an archbishop, who is primate of all Sicily. The chief magistrate of P. is commonly a nobleman of the highest rank; his power is inferior only to that of the viceroy. He, along with six senators, has the management of the civil government of the city, and is appointed yearly by the king or the viceroy.

PALERMO, a township of Waldo co., in the state of Maine, U. S., 19 m. ENE of Augusta. It has an undulating surface, and is generally fertile. Pop. in 1840, 1,534.—Also a township of Oswego co., in the state of New York, 15 m. SE of Oswego, and 157 m. WNW of Albany. It has an undulating surface, and is drained by Catfish river. The soil is chiefly sandy loam. Pop. 1,928.

PALESTINE, formerly denoted the whole Land of Canaan, bounded on the N by Syria, on the E by Arabia Deserta, on the S by Arabia Petrea, and on the W by the Mediterranean sea. From the period of its conquest by the Israelites under Joshua to the Babylonish captivity, it was called the Land of Israel; and the name Palestina was restricted to the small maritime tract extending from Joppa S to the frontiers of Egypt, inhabited by the Philistines, and which was successively subjected to the kings of Israel, Syria, Egypt, Persia, and Macedonia. After the return of the Jews from Babylon, the whole country from Tyre to Egypt was recognised in the enumeration of the Roman provs. by the name of *Palestina*, consisting of four provinces, viz. *Judæa*, *Samaria*, *Galilea*, and *Peræa*. In modern times the term Palestine denotes a Turkish pashalic, which includes the territory between the pashalic of Damascus and the Mediterranean; and between two lines drawn from the sea-coast, the one S of Gaza and the other N of Joppa, so as to comprise only the country of the Philistines, together with a portion of Judea and Samaria; but the name is generally employed to denote the whole of what is called the Holy Land, and was formerly comprehended in the Roman province of Palestina.—P. was formerly divided into several pashalics. The coast was for a considerable period divided into two pashalics,—those of Acre and Gaza; the former extending from the vicinity of Djebail nearly to Jaffa; the latter from Jaffa to El-Arish. These two were still more recently united, and formed the pashalic of Acre. The interior, comprehending Jerusalem, Hebron, Nablous, Tiberias, and in fact the greater part of P., were included in the pashalic of Damascus, which comprehended all the districts E of the Jordan once possessed by the half-tribe of Manasseh, and the tribes of Reuben and Gad. Under Mehemet Ali of Egypt, the district of Acre included the whole of the mountainous territory of the Druses, and the coast of Southern Phœnicia, from the Nahr-el-Kelb, S to Cape Blanco, the ancient *Scala Tyriorum*, and the *Album Promontorium* of Ptolemy. This latter portion was not included in the early Israelitish territory; but the mountainous tract bounding it on the SE, now called the Druse territory, and the Bekaa or valley between the two Lebanons, as far as the point of junction of the two ranges, was given to them. From this point, the boundary of the country of the ancient Israelites ran SW, along the summit of the eastern chain, or Antilibanus, to the point where it diverges into two ranges, including in its angle the upper valley and sources of the Jordan. From the head of this angle, the boundary ran along the summit of the SE range, called Mount Hermon, to its southern point. From thence, the E limit ran along the W boundary of the Hauran, crossing in its way the range of Mount Gilead, and thence proceeding southwards over a hilly rugged region, to the river Arnon, the N frontier of ancient Moab, whilst the territory of the ancient Ammonites lay to the E of this line. This limit was included in the original grant, and is quite independent of the subsequent conquests of David. Under Solomon, the E boundary was carried to the Euphrates, and the NE to Hamath in Syria, on the Orontes, in 34° 45′ N lat. It was then that the kingdom of Solomon reached 'from sea to sea,' namely, from the Mediterranean sea to the Red sea; and from 'the river'—the Euphrates—to the ends of the land, at the brook Sihor, or the torrent of El-Arish; or, as it is expressed elsewhere, from Tiphsah, or Thapsacus, to Gaza. In this large sense it included the whole of the modern pashalic of Damascus, the Syrian desert, and the country of the Ammonites, Edomites, and Moabites, now included under Arabia. The portion of modern Syria to which the term Palestine is properly applied, is a long narrow stripe of territory, extending from 30° 40′ to 33° 32′ N lat., or 207 m. along the coast; and nowhere above 50 m. broad, from the sea to the Jordan, nor above 60 m. from the coast to the Dead sea; and having a total superficies of between 11,000 and 12,000 sq. m. Even including the Transjordanic portion, its utmost breadth seldom exceeds 80 m.; and in the N part its breadth is not above 50 m. from Mount Hermon to the sea. See articles Acre, Damascus, Jerusalem, and Syria.

PALESTRINA, a town of the Papal states, in the comarca and 24 m. ESE of Rome, and 12 m. SE of Tivoli. Pop. 4,316. It is a dirty ill-built town, with crooked streets and decaying houses. It occupies the site of the ancient *Præneste*. From the summit of its citadel a splendid view is obtained over the plains of Rome, and towards Anagni. See also PELESTRINA.

PALET (LE), a commune of France, in the dep. of the Loire-Inferieure, cant. and 4 m. WSW of Vallet, and 13 m. SE of Nantes, on a height near the r. bank of the Sevre-Nantaise. Pop. 1,492. It produces good wine.

PALETIVOE, a desert island, in Palk strait, near the NW coast of the island of Ceylon and 15 m. of Jaffnapatam.

PALETSH, a market-town of Turkey in Europe, in Servia, in the sanj. and 39 m. W of Semendria, and 21 m. SW of Belgrade, at the junction of the Kolubara with the Danube.

PALETTE, a headland of the island of Celebes, on the W side of the Bay of Bony, in S lat. 3° 15′, and E long. 120° 45′.

PALGRAVE, a parish of Suffolk, 4 m. NNW of Eye. Area 1,474 acres. Pop. in 1851, 740.

PALGUNGE, a town of Hindostan, in the presidency of Bengal, prov. and 96 m. SSE of Bahar and district of Boglipur, near the r. bank of the Burracor. It was formerly fortified.

PALHANPUR, a town of Hindostan, capital of a Mahommedan principality of the same name, in the prov. of Gujerat, 36 m. NNE of Pultun, 80 m. NNW of Ahmedabad, on the confines of the desert of Cutch. Pop. 30,000. It has a fortress about a mile and a half in circumference, defended by 29 towers, and enclosed by a deep ditch. It was substantially built of brick by Bahadur Khan, but is now much dilapidated. The inhabitants of the principality are chiefly Coolies, the wild character, of whom, in this locality, tends to maintain its present state of semi-independence. This state pays to the Guicower a tribute of 50,000 rupees per annum.

PALI, a headland of Turkey in Europe, in Albania, in the sanj. of Scutari, 6 m. NNW of Durazzo, in N lat. 41° 23′ 5″, and E long. 19° 25′ 59″.

PALIACODE, or PALLICODE, a town of Hindostan, situated at the extremity of Udeadurgum pass, leading from Mysore into the Baramal districts, 11 m. W of Darampuri.

PALIANGAN, an island of the Asiatic archipelago, in the group of the Sulu islands, in N lat. 6° 5′, and E long. 120° 50′. In its centre is a salt lake.

PALIANO, a town of the Papal states, in the comarca and 33 m. ESE of Rome. Pop. 3,042.

PALIASTOMI, or BALEASTON, a lake of Russia in Asia, in Georgia, in the khanate of Guria, near the entrance of the Rioni into the Black sea. It is 6 m. in length from N to S.

PALIBOTHRA. See PATNA.

PALICONDA, a town of Hindostan, in the presidency of Madras, and prov. of the Carnatic and district of Nellore, 21 m. WSW of Ongole.

PALICZ. See PALITSH.

PALIERES, a village of France, in the dep. of the Puy-de-Dome, cant. and 4 m. SW of Chateldon, and 7 m. NNW of Thiers. Pop. 1,345.

PALIGGIANO, a town of Naples, in the prov. of Otranto, district and 15 m. WNW of Tarento, cant. and 5 m. S of Mololo. Pop. 2,000.

PALIGHAT, PALICAUD, or PALIGHAUTCHERRY, a town of Hindostan, in Malabar, 68 m. SE of Calicut, situated in the middle of the teak forests on the bank of the Paniany, by which, during the rainy season, timber may be floated down to the port of Paniany. In 1792 it was ceded, with the district, to the British.

PALINGES, a commune and village of France, in the dep. of Saone-et-Loire, 8 m. N of Charolles, near the l. bank of the Bourbince. Pop. 1,548.

PA-LING-HEEN, a district and town of China, in the prov. of Hu-nan, and div. of Yo-chu-fu.

PALINGUIR, one of the Philippine islands, about 15 m. in circumf., situated to the N of Luçon.

PALINURO (CAPE), a promontory on the coast of Naples, near the entrance of the gulf of Policastro, in N lat. 39° 59′ 10″, to the W of a small fort.

PALISEUL, a town of Belgian Luxemburg, 20 m. SE of Charlemont.

PALISSE (LA), a town of France, in the dep. of Allier, on the Bebre, 28 m. SE of Moulins. Pop. 2,400.—The arrond. has an area of 160,758 hectares, and comprises 6 cantons. Pop. in 1841, 74,920.

PALISSE, a village of France, in the dep. of La Correze, cant. and 4 m. NW of Neuvic. Pop. 750.

PALITSH, or PALICZ (LAKE), a lake of Hungary, in the palatinate of Bacs, to the E of Theresienstadt. It is 12 m. in circumf.; and contains a considerable quantity of alkaline salt.

PALIURI (CAPE), a cape on the coast of European Turkey, in the gulf of Salonica, in N lat. 39° 50′.

PALIZADA, a town of Mexico, in the state of Tabasco, the principal place on the Usamasinta river, and within two days' sail of the Laguna-de-Terminos.

PALIZZE, a town of Naples, in Calabria-Ultra 1ma, 27 m. SSW of Gerace. Pop. 1,000.

PALKAH, a town of Hindostan, in the prov. of Lahore, 120 m. NNE of Amritsir.

PALK'S STRAITS, an arm of the sea which separates Ceylon from the coast of Coromandel. It has shoal water generally all over it, and is only frequented by small coasting-vessels.

PALLA, a small island in the Eastern seas, about 6 m. in circumf., situated to the S of Sangir, in N lat. 3° 5′.

PALLABATULA, or PALABADULA, a hamlet of Ceylon, on the ascent to Adam's Peak, by the road from Ratnapura. It is 4½ m. above Gillemallé, or Ginnemalle, and 4 m. from Diabetine. It is the last inhabited station on the ascent. "Behind it rises, in dark majesty, the great and massive group of hills, out of which the conical summit of the Peak towers grandly into the sky; and perched upon that summit is seen, for the first time, the picturesque, Chinese-looking temple which the Buddhists have erected over the sacred footsteps. All description must fall short of the extraordinary grandeur of the scene at P. The immense base of the mountain stretches far away on the one hand, apparently illimitable in extent; while darkly and gloomily the side of the mountain, like a black wall, sinks almost perpendicularly downwards into a valley far beneath. On the other hand, variegated ranges of hills, richly clothed with foliage, stretch away to the level plain which skirts the island."

PALLANZA, the most northern prov. of Piedmont; bounded on the W and NW by the Leponine Alps from Monte-Rosa to Monte-Griesio; on the NE by the river Ticino, from its sources in Monte-Griesio to the Lago-Maggiore; on the E by that lake; and on the W by a line drawn from near Arona W to Monte-Rosa. Area 2,255 sq. kilom. Pop. 95,598. Its surface is highly mountainous and rugged, and intersected everywhere by deep ravines and mountain-torrents converging from the Alps on the W and N towards the lakes Maggiore and Orta. In the plains and valleys of the S a considerable quantity of corn, maize, and potatoes is grown; but the cereal crops are not sufficient for the internal consumption. Wine is extensively made; and chestnuts and fruits are abundant. The forests and woods are exten-

sive; and the mineral produce is considerable. The manufactures embrace glass, leather, pottery, and paper. There are several small cotton and silk mills.—The prov. takes its name from the principal town which is finely situated on Lago-Maggiore, 32 m. N of Novara; and contains 5 piazzi or squares, 15 churches, and some handsome public buildings. Pop. in 1848, 2,062, in 342 houses. It has some trade carried on chiefly by the lake.

PALLASGREEN, a village in the p. of Greane, co. Limerick, 8½ m. NW by W of Tipperary, pleasantly situated among beautifully-wooded hills. Pop. in 1831, 379; in 1841, 201.

PALLAS-KENRY, a small town in the p. of Chapel-Russel, co. Limerick, 1 m. S of the Shannon, and 5½ m. NNW of Adare. Pop. in 1841, 783.

PALLAVICINO. See Busseto.

PALLI, a small town of Diarbekir, in Asiatic Turkey, 85 m. NE of Diarbekir.

PALLICE, or Pallas, a hamlet in the p. of Forgney, 1½ m. E by S of Ballymahon, co. Longford. It possesses celebrity as the birthplace of Oliver Goldsmith; but is now a collection of mere cabins, and retains not a vestige of the house in which the poet was ushered into life.

PALLISER (Cape), a cape on the E coast of New Britain, in S lat. 4° 22′.—Also a cape at the S extremity of the northern island of New Zealand, forming the NE point of Cook's strait, in S lat. 41° 38′.

PALLISER'S ISLANDS, a cluster of islands in the S. Pacific, to the S of the chain of the Ruric isles, in S lat. 15° 40′. The largest is about 15 m. long, and 9 m. broad.

PALLUAU, a town of France, in the dep. of Indre, on the r. bank of the river Indre, 20 m. NW of Chateauroux. Pop. 1,260.—Also a village of France, in the dep. of Vendee, 12 m. NW of Bourbon-Vendee. Pop. 420.

PALM ISLANDS, a chain of islands near the NE coast of Australia, extending about 30 m. in length, at the entrance of Halifax bay.

PALMA, an island off the coast of Africa, belonging to the group of the Canaries, between the parallels of 28° 49′ 30″ and 28° 29′ 30″, 15 leagues W of Teneriffe. It is about 25 m. in length, and 15 m. in breadth, and has a superficies of 25 sq. leagues. The pop. in 1742 was 17,580; in 1835, 33,089. It is very elevated; some of its peaks exceeding 7,000 ft. in elevation above sea-level. The coasts are fertile, and produce wheat, maize, barley, and rye. The vine succeeds well, and produces wine for exportation. Brandy, almonds, silk, honey and wax are also objects of trade. The sugar-cane is cultivated throughout the island. One of the principal branches of industry is fishing, which is carried on upon the coast of Africa, in vessels of from 20 to 30 tons. Its capital. Santa Cruz, is on the E side in N lat. 28° 43′ 0″, E long. 17° 45′ 30″. On the SW side is the port of Tassacorta.

PALMA, the capital of the island of Majorca, in the Mediterranean, situated in N lat. 39° 34′ 4″, at the bottom of a large bay, formed by Capes Blanco and Cala-Figuera. It stands on the slope of a hill, and, viewed from the bay, presents a picturesque appearance, the vast mass of the cathedral towering over the houses and fortifications. It is surrounded by walls flanked with 13 bastions, and has on the land side a dry ditch and several outworks, but is not capable of sustaining a long siege. The streets are narrow and ill paved, but with few exceptions, clean and well-drained; and there are some fine *plazas* or squares. In general the architecture is European, but of the Spanish style of the 16th cent. In some quarters the projecting eaves of the houses make almost a roof for the street. Of the public buildings, the most conspicuous is the cathedral, a large and handsome Gothic building, with beautiful painted windows, a tower remarkable for the boldness and delicacy of its architecture, and three aisles with lofty vaulted roofs. The palacio-real, or government-house, where the captain and intendant-general of the province reside, is an irregular but large building, with an imposing front, and contains a chapel, an arsenal, barracks, and a state-prison. The town-house attracts attention by the sculpture and ornaments on its entablature. It possesses a series of pretended portraits of all the great men of Majorca, from Hannibal down to Don Jacques II. P. contains 5 parish churches, 15 convents, and 4 hospitals. There are here a theatre, a plaza-de-toros or bull-ring, an opera, several academies of science and art, and museums, and a library of 40,000 vols. The pop. is about 30,000. Their chief employments are weaving woollens and silk, with some trade and navigation. The harbour is secure: it has a mole of nearly ¾ m. in length, and defended by two strong forts.—P. was long the capital of Majorca when a kingdom, and is still the residence of the chief magistrates of the Balearic and Pithyusæ islands. The bishop of P. is a suffragan of Valencia, and the see and chapter are both richly endowed.

PALMA, a town of Sicily, on the coast, 14 m. SE of Girgenti, near the r. bank of a small river of the same name. It is noted for the quantity of sulphur and of soda produced in its vicinity. It has a small harbour. Pop. 600.—Also a town of Spain, in the prov. and 30 m. SW of Cordova, on the l. bank of the Guadalquivir, near the confluence of the Genil. Pop. 6,000.—Also a town of Austrian Illyria, on the Natisone, near Aquileja.—Also a town of Naples, in the prov. of Terra-di-Lavoro, 4 m. SSE of Nola. Pop. of town and district 6,800.—Also a small town of Portugal, in Estremadura, on the r. bank of the Cadaon, 28 m. E of Setubal.—Also a river of Brazil, in the prov. of Goyaz, which descends from the Serra-do-Duro, and flows into the Paranan, near São-João-da-Palma.

PALMA (La), a town of Spain, in the prov. and 27 m. NE of Huelva, near the r. bank of the Tinto. Pop. 3,200.

PALMA (Nuestra Senora de la), a city of New Granada, in the prov. of Tunja, on the r. bank of the Magdalena, 54 m. NW of Santa-Fe. Its inhabitants carry on a considerable commerce in sugar and sweetmeats, and in linen and cotton manufactures.

PALMA (Cape), a promontory of Italy, on the E coast of the marquisate of Ancona, in N lat. 43° 3′.—Also a promontory on the N coast of Cuba, in N lat. 21° 47′.

PALMA-DI-SOLO, a small port of the island of Sardinia, on the S coast of the district of Cagliari, 15 m. SE of Villa-de-Iglesias.

PALMAJOLA, an island belonging to Tuscany, situated between the island of Elba and the mainland, 5 m. S by W of Piombino. It is inhabited by fishermen.

PALMA-NOVA, a town and fortress of Austrian Italy, in the Venetian prov. and 12 m. S of Udina, on the river Noja. It is built with considerable regularity; and pretty strongly fortified. Its fortifications consist of 9 bastions, surrounded by a broad and deep ditch. Pop. 4,500.

PALMAR, a river of Lower Guinea, in Benin, which runs S between the districts of Lagos and Jabu, and falls into Crado lake, an inlet of the bight of Benin, in E long. 4°.

PALMAR (Point), a headland of Ecuador, in the district of Pichincha, to the W of Mount Quaques, under the equator.

PALMARES (Rio-dos), a river of Brazil, in the prov. of São-Pedro-do-Rio-Grande, which has its source to the S of Tramandahi, and falls into the N extremity of Lake Patos.

PALMARIA, an island of the gulf of Genoa, at the extremity of the tongue of land which encloses the gulf of La Spezzia on the W, in N lat. 44° 2′ 37″, E long. 9° 53′ 23″. It is 2 m. in length from E to W, and about 1½ m. in breadth.

PALMARICI, a town of Naples, in the prov. of the Terra-d'Otranto, district and 21 m. SE of Lecce, cant. and 6 m. W of Otranto. Pop. 513.

PALMARIN, or Palmerin, a village of Senegambia, in the kingdom of Sin, on the Atlantic, 36 m. N of the embouchure of the Gambia, and 150 m. S of St. Louis. It has a considerable trade in ivory and fur.

PALMAROLA, or Palmerola, an island of the Tyrrhenian sea, in the group of the Ponza isles, of which it is the most westerly, dependent on Naples, in the prov. of the Terra-di-Lavoro, district and 48 m. WSW of Gaeta, and 36 m. SW of Terracina. Its S point is in N lat. 40° 54′ 40″, E long. 12° 52′ 55″. It is 2 m. in length, and about ¾ m. in breadth. It is uninhabited, and difficult of access.

PALMAS, an island of the Pacific, in the bay of Choco, near the coast of the prov. of Buenaventura, New Grenada, and about 5 m. in circumf. It was discovered by Pizarro in 1527.—Also a port of Ecuador, in the prov. of Pichincha, at the mouth of a small river, and enclosed on the S by Palmas point.

PALMAS (Cape), a headland of Upper Guinea, at the W extremity of the Ivory coast, and NW of the gulf of Guinea, in N lat. 4° 21′ 18″, E long. 7° 48′ 28″. Extending along its E side is a roadstead sheltered from the S winds, and affording the best anchorage on the Guinea coast. A little to the SW is a group of rocky islets.

PALMAS (Gulf of), an inlet or channel of the Mediterranean, between the SW coast of the island of Sardinia and that of Santa Antioco, in N lat. 39°, E long. 8° 30′, and enclosed on the N by a chain of islets extending from Sperone point on the W, to Point Sarzi on the E. It forms the safest and most capacious roadstead in the island. On its banks are several salt-works.

PALMAS (Ciudad-de-las), or Canaria, a town of the Canary islands, capital of the Gran Canaria, near the E coast of the island. Pop. 9,000. It is divided into two parts by the Guinguada which is here crossed by a bridge, is regularly built, and contains several fine fountains, public squares, and promenades. It has a cathedral, a fine Gothic structure, several convents, 2 hospitals, a large almshouse, and a seminary. The harbour, called Luz, lies 3 m. to the E of the town, and is defended by the castle of Gando and several forts. To the S is the Caldera-de-Vandama, a fine crater, in the basin of which is a country house with vineyards and orchards.

PALMAS, or Difuntos (Laguna-de-los), a lake of Urnguay, 160 m. ENE of Monte-Video, and 6 m. from the shore of the Atlantic. At its N extremity is the fort of S. Teresa, erected by the Portuguese.

PALMAS (Ilha das), a group of islands, three in number, in the prov. of Rio-de-Janeiro, bay of Nitherohi, and a little to the E of the Ilha-do-Governador. They derive their name from the palm-trees with which they are covered.—Also a group of three islands in the prov. of São-Paulo, opposite the bay of Paranagua.—Also an island of the prov. of Santa-Catharina, at the S side of the entrance of the bay of that name.—Also a river of the prov. of São-Pedro-de-Rio-Grande, tributary to the channel or Rio-de-São-Gonçalo, between Lakes Mirim and Patos.

PALME (Etang-de-la), a lagune of France, in the dep. of the Aube, cant. and SE of Sigean, and 15 m. S of Narbonne, near the Mediterranean, from which it is separated by a narrow island, intersected by two channels, that of Grace-de-la-Jongrausse on the N, and the channel of Fracique on the S. It is 3 m. in length from N to S, and about 2 m. in breadth at its widest part, and receives several streams, of which the Treilles is the largest. It derives its name from a village near its W bank.

PALMEIRA-DOS-INDIOS, a town of Brazil, in the prov. of Alagoas, and Serra-do-Barriga.

PALMEIRAS, a town of Brazil, in the prov. of São-Paulo, and comarca of Curitiba. Pop. 2,150. It has a parish church, and an elementary school. The district is watered by the Castelhano. Agriculture forms the chief industry of the locality.

PALMEIRINHA, a headland of Lower Guinea, in Angola, 24 m. SW of St.-Paul-de-Loanda.

PALMEL, a department and commune of Belgium, in the prov. of Brabant, and arrond of Brussels. Pop. of dep. 2,841. The village is 14 m. W of Brussels, on the r. bank of the Dendre. Pop. 1,032. It has several breweries.

PALMELLA, a town of Portugal, in the prov. of Estremadura, comarca and 5 m. NE of Setubal, and 20 m. SE of Lisbon, on the slope of a mountain, on the summit of which is an ancient fortress still in a good state of preservation, and commanding a magnificent view of the surrounding country. Pop. 2,750. It possesses 2 parish churches, 3 convents of which one is in the above-named fortress and is the residence of the grand prior of the order of Santiago, an almshouse, an hospital, and a classical school. This town, which is supposed to have been founded by the Celts, was greatly enlarged by the Romans. It was taken from the Moors in 1147 by Don Alonzo Henriquez, and again in 1165.

PALMELLA, a village of Brazil, in the prov. of Matto-Grosso. It was originally a military station, formed to repress the aggressions of the Guaicurus.

PALMER, an island of New South Wales, in the Clarence river, and district of that name.—Also a township of Hampden co., in the state of Massachusetts, U. S., 81 m. W of Boston. It has a hilly surface, and is watered by Ware and Swift rivers. The soil is fertile. Pop. in 1840, 2,139.

PALMER-DEPOT, a village of Palmer township, Hampden co., in the state of Massachusetts, U. S., on the Boston and Albany railroad.

PALMERSTON, an island of the S. Pacific, to the WNW of the Harvey islands, and SE of Navigator's archipelago, in S lat. 18° 4′, W long. 163° 10′. It consists of a group of small islets, 8 or 9 in number, connected together by a reef of coral rocks, and lying in a direction nearly circular.

PALMERSTON (Cape), a headland of Australia, on the NE coast, to the N of Broad sound, in S lat. 21° 30′, E long. 149° 20′.

PALMERSTOWN, a parish in co. Dublin, 3½ m. SSE of Garristown. Area 1,580 acres. Pop. in 1831, 321; in 1841, 285.—Also a parish in co. Dublin, containing the village of P. and part of the town of Chapel-Izod. Area 1,517 acres. Pop. in 1831, 1,533; in 1841, 1,411. Pop. of v. in 1841, 201. This v. gives the title of Viscount, in the peerage of Ireland, to the noble family of Temple, who claim descent from Algar, Earl of Mercia, previous to the Norman conquest. In 1722, Henry Temple, Esq., was created Baron Temple and Viscount Palmerstown; and, in 1802, Henry-John, the third Viscount, since then so well known as a statesman and a minister of state, succeeded to the title.—Also a hamlet in the parish of Templemurray, co. Mayo, 2 m. WNW of Killalla.

PALMERTOWN, a range of mountains in the

state of New York, U. S., commencing in the NW part of Washington co., and running S between lakes Champlain and George, through Warren and Saratoga counties. They rise to the height of about 1,200 ft. above sea-level.

PALMETTO-POINT, a headland of the island of St. Christopher, in the Little Antilles, on the S coast, in Trinity parish, to the SE of Digby bay. It has a fort.—Also a headland of Jamaica, on the S coast, in the co. of Cornwall and parish of Westmoreland, in N lat. 18° 12′, W long. 78° 10′.

PALMI, a district and town of Naples, in the prov. of Calabria-Ultra. The district comprises 7 cant. The town is 21 m. NNE of Reggio, and 15 m. SSW of Nicotera, on the gulf of Gioja. Pop. 7,000. It consists of 8 broad straight streets, uniting in a fine square, with a fountain in the centre; and contains 3 churches, one of them collegiate. It was once a flourishing place, but was to a great extent destroyed by an earthquake in 1783.

PALMITAR, a town of Brazil, in the prov. of Santa-Catherina, on the Rio-Sahi.

PALMNIEKEN, a village of Prussia, in the prov. of East Prussia, regency and 27 m. NW of Königsberg, circle and 11 m. NNW of Fischhausen, on the E side of the gulf of Danzig. Pop. 80. It is the residence of an inspector of the coast. Yellow amber is found in the vicinity.

PALMOLI, a town of Naples, in the prov. of Abruzzo-Citra, district and 15 m. SSW of Il-Vasto, cant. and 5 m. N of Celenza, on a high mountain. Pop. 2,420. It has a fortress and a convent.

PALMONES, a river of Spain, in Andalusia, in the prov. of Cadiz, formed by the junction of two streams, which unite about 9 m. above its entrance into the strait of Gibraltar.

PALM-TREE-CREEK, a river of North Australia, an affluent of Dawson river.

PALMYRA, a celebrated city of antiquity, the ruins of which are situated in an oasis in the pash. of Damascus, at a direct distance of about 90 m. nearly due E of Hamah on the Orontes, 147 m. SE of Aleppo, and 180 m. NE of Damascus. These interesting remains have been successively visited and described by various European travellers since the latter end of the 17th cent. They occupy a space of about 3 sq. m. near the E declivity of a mountain-range running N and S. On opening upon the ruins of P, says Mangles, "as seen from the valley of the Tombs, we were much struck with the picturesque effect of the whole, presenting altogether the most imposing sight of the kind we had ever seen. It was rendered doubly interesting by our having travelled through a wilderness destitute of a single building, from which we suddenly opened upon these innumerable columns and other ruins, on a sandy plain on the skirts of the desert. Their snow-white appearance, contrasted with the yellow sand, produced a very striking effect." Great, however, he proceeds to say, was their disappointment when on minute examination they found that none of the columns exceeded 40 ft. in height, or 4 ft. in diam.; those of the famed avenue have little more than 30 ft. of alt.; whereas the columns of Baalbec are nearly 60 ft. in height, and 7 ft. in diam., supporting a rich and beautifully wrought epistylium of 20 ft. more; and the pillars are each constructed of only three pieces of stone, while the smallest columns at P. are formed of six, seven, and even eight parts. In the centre of the avenue, however, are four granite columns, each of one single stone, about 30 ft. high; but one only is still standing. "Take any part of the ruins separately," says this traveller, "and they excite but little interest. Altogether, we judged the visit to P. hardly worthy of the time, expense, anxiety, and fatiguing journey through the wilderness which we had undergone to visit it. The projecting pedestals in the centre of the columns of the great avenue have a very unsightly appearance. There is also a great sameness in the architecture, all the capitals being Corinthian, excepting those which surround the temple of the Sun. These last were fluted; and, when decorated with their brazen Ionic capitals, were doubtless very handsome; but the latter being now deficient, the beauty of the edifice is entirely destroyed. The sculpture, as well of the capitals of the columns, as of the other ornamental parts of the doorways and buildings, is very coarse and bad. The three arches at the end of the avenue, so beautiful in the designs of Wood and Dawkins, are excessively insignificant: the decorated frieze is badly wrought, and even the devices are not striking. They are not to be compared to the common portals of Thebes, although the Egyptians were unacquainted with the arch. Every thing here is built of a very perishable stone: if it deserves the name of marble, it is very inferior even to that of Baalbec; and we are inclined to think, the ruins of the latter place are much more worthy the traveller's notice than those of P." The quarry whence the materials for the city were obtained is about 1 m. distant in the plain. The rock has been wrought with great regularity; several masses lie hewn as if ready for removal; and such is their size, that it would exceed the power of common machines of the present day to lift them. They are of a pink-tinted carbonate of lime. In this rock is a curious cave, in which sulphur and alum are collected by the Arabs. The mouth of it is about 30 ft. in breadth, and 10 or 12 ft. in height; and it continues of these dimensions for a short distance, till it sends off two shafts in opposite directions. "One of these," says a recent visitor, "we entered by a hole through which we crept on our stomachs; for it appeared at this point to be choked up by rubbish from the falling in of the rock. The main shaft had been worked nearly straight, and was rudely arched; the depth of it might be from 30 to 50 yds. From it issued occasionally lateral excavations, but apparently of subsequent date to the principal one; and in some places the matrix of the rock was strongly sulphureous, for it took fire on holding the candle a while to it. Beautiful efflorescent crystals of plumose alum, resembling tufts of snow-white silk, hung from the roof in certain places, or jutted from the sides, but were too perishable to bring away. In parts a yellow clay, wet and plastic, was found; in some places the walls of the cave were nearly pure argil. The cave is of high antiquity, according to the tradition of the inhabitants, and probably coeval with P. It is well worth examination, and will repay the curiosity of the general traveller. In the plan of P.," adds this traveller, "so accurately taken by Wood, as far as it goes, the remains of the wall of Justinian, to the E and SE, are not inserted. They are, however, very distinctly visible, running N and S, distant a little more than a quarter of a mile from the temple of the Sun. This seems to be the quarter of the private residences, as there are few fragments of columns hereabouts. A few huts are scattered amongst the ruins. The women of this community are celebrated for their comeliness; and it is not unusual for the chiefs of the Bedouin tribes to give a very rich dowry of camels and sheep for a Palmyrene maiden."—P. appears to have been founded by Solomon, under the appellation of Tadmor, and from its situation was called Tadmor in the Wilderness. It is said to have been destroyed by Nebuchadnezzar; and the present remains, being evidently of Grecian origin, cannot be supposed to be those of the city of Solomon. In what manner, and at what period, the city of P. rose to that distinguished wealth and splendour which its ruins attest, has been nowhere distinctly recorded. The origin of this prosperity, however, must have been its becoming the emporium of the trade of India, the commodities of which were brought up the Persian gulf, and then carried across the Syrian desert by way of P. Its sequestered situation and peaceful pursuits appear to have withdrawn it in a great measure from the view of the Romans, when they carried their victorious arms through Asia. Mark Antony made an attempt to possess himself of this city; but the inhabitants fled with their effects to the other side of the Euphrates, across which the Roman general was unable to penetrate. The only brilliant part of the history of P. was under Odenathus and his queen Zenobia. The latter was distinguished by the energy of her character and the vicissitudes of her fortune. She wrested Mesopotamia from the Persians; defeated Heraclianus, the Roman general, which rendered her mistress of Syria; and then subdued Egypt and the greater part of Asia Minor. Her sudden greatness, however, was speedily succeeded by a fall as remarkable. Aurelian carried his arms into Asia, defeated her armies, recovered all the eastern provinces, and obliged her to shut herself up within the walls of P. The place was reduced, and Zenobia was carried prisoner to Rome, and, to use the language of Gibbon, "the seat of commerce, of arts, and of Zenobia, gradually sunk into an obscure town, a trifling fortress, and at length a miserable village."

PALMYRA, a township of Somerset co., Maine, U. S., 215 m. NNE of Boston. Pop. 1,500.—Also a township of Wayne co., in New York, 195 m. W by N of Albany. Pop. 3,549. It contains a thriving village of the same name on the Erie canal.—Also a township of Portage co., Ohio. Pop. 1,359.—Also a township of Montgomery co., Tennessee, on the Cumberland.—Also a township of Lebanon co., in Pennsylvania.—Also the cap. of Fluvanna co., in Virginia, on the Rivanna, 62 m. WNW of Richmond.—Also a township of Lenawee co., in Michigan, 75 m. SW of Detroit. Pop. 850.—Also the cap. of Marian co., in Missouri, 111 m. NNW of Jefferson city.

PALMYRAS PARK, a low headland in the bay of Bengal, in N lat. 20° 44′, E long. 87° 6′, 10 leagues NE of False point.

PALNAUD, a district of Hindostan, in the Carnatic, situated principally between the 16th and 17th parallels of N lat., and on the S side of the river Kistnah, ceded to the British in 1801, and now comprehended in the collectorship of Guntur. The

chief towns are Macheria, Timerycotta, and Currumconda.

PALO, a village of the Papal states, in the deleg. of Spoleto.—Also a town of Naples, in the prov. and 12 m. SW of Bari. Pop. 5,400.—Also a port on the SE coast of Sicily, to the W of Cape Passaro.

PALO (Cape), a cape of Albania, on the Adriatic, in N lat. 41° 44′.

PALOCSA, or Plautsch, a town of Hungary, in the com. of Saros, 15 m. NW of Szeben, on the l. bank of the Poprad.

PALOMAR, a town of Spain, in the prov. and 27 m. NNE of Teruel. Pop. 800.

PALOMARES, a town of Spain, in the prov. and 24 m. SW of Cuenca. Pop. 1,500.—Also a village in the prov. and 5 m. WSW of Senlee.

PALOMAS, a town of Spain, in the prov. and 42 m. ESE of Badajoz, on the Palomillas.

PALOMBARA, a town of Italy, in the Papal states, 9 m. NW of Tivoli, on the Teverone. Pop. 2,694.

PALOMBARO, a town of Naples, in Abruzzo-Citra, 12 m. SW of Lanciano. Pop. 1,500.

PALOMETA, a small river of Peru, in the prov. of Santa-Cruz-de-la-Sierra, which runs N and enters the Piray.

PALOMINO, a river of New Granada, in the prov. of Santa Marta, which runs N, and enters the sea.

PALORA, a river of Ecuador, in the prov. of Macas, which runs E till it enters the Pastaza, in S lat. 1° 47′.

PALOS, a town on the W coast of Celebes, in a bay to which it gives name, in S lat. 0° 56′.

PALOS (Cape), a promontory of Spain, on the coast of Murcia, in N lat. 37° 37′ 15″, 18 m. E of Cartagena.

PALOS-DE-MOGUER. See Moguer.

PALOTA, or Palotta, a town of Hungary, at the foot of the Bakonyerwald, 8 m. WSW of Stuhl-Weissenburg. Pop. 4,000. It is said to have been formerly a thriving place, but suffered greatly from repeated attacks made on it by the Turks between 1593 and 1603.

PALOTSA. See Palocsa.

PALPAH, a district of Northern Hindostan, situated between the 28th and 29th parallels of N lat., and forming one of the numerous principalities subject to the rajah of Nepaul. It is intersected by the Gunduk, and is mountainous and unproductive.—Its cap., of the same name, is situated on the banks of the Gunduk, in N lat. 28° 11′.

PALPAL, a small river of Chili, in the prov. of Itata, which, after uniting with the Temuco, enters the Dinguilli.

PALS, a town of Spain, in the prov. and 27 m. ESE of Gerona, near the embouchure of the Ter. Pop. 1,500.

PALU, a town of Asiatic Turkey, situated on the edge of a hill upon the banks of the Murad-Chai, or Eastern Euphrates, the summit of which is covered with ruins, supposed to be those of *Balisbiga*. The pop. amounts to about 1,000 families, Turks, Armenians, and Kurds, who find employment in weaving, tanning, dyeing, and cultivating the soil. The Euphrates is here extremely rapid.

PALUD (La), a town of France, in the dep. of Vaucluse, near the Rhone, 14 m. NNW of Orange. Pop. 2,493.

PALUDE, a small town of Erzerum, in Armenia, in N lat. 38° 35′.

PALUDI, a town of Naples, in Calabria-Citra, 6 m. SE of Rossano. Pop. 1,770.

PAMADA, a town of the Birman empire, situated on the banks of the Irawadi, 24 m. N of Prome.

PAMAKASSANG, a town of the island of Madura, 42 m. W of Sumanap. Pop. 5,000.

PAMALANG, a town on the N coast of the island of Java, in S lat. 6° 45′, 18 m. E of Tagal.

PAMANUKAN, a town of Java, situated on a river of the same name, which runs into the sea, on the N shore of the island, 80 m. E of Batavia, in S lat. 6° 12′.

PAMBAMARCA, or Pimbamarca, a lofty mountain of Ecuador, 20 m. N of Quito, in S lat. 0° 10′, covered with perpetual snow. It was one of those chosen by the academicians of Paris, who visited this kingdom to measure a degree on the equator.

PAMBER, a parish of Hants, 5 m. NNW of Basingstoke. Area 2,150 acres. Pop. in 1831, 473; in 1851, 644.

PAMBUN, a town of Celebes, on the W coast, 120 m. N of Macassar. It is the residence of a rajah. The inhabitants cultivate cotton, and manufacture cloth, which they barter for rice and gold dust. They trade with Macassar and Batavia.

PAMBUR, a town of Hindostan, in the Punjab, on the route from Kishtewar to Cashmere, in N lat. 33° 38′.

PAMIERS, a town of France, in the dep. and situated on the river Ariège, 12 m. N of Foix. Pop. 5,920. Its chief manufactures consist of woollens, cottons, caps, hats, paper, and vermicelli. The only building worth notice in it is the cathedral. It has a communal college. The surrounding country is fertile.—The cant. had a pop. of 15,595 in 1841.—The arrond., comprising 6 cants., has an area of 132,266 hectares. Pop. in 1841, 78,756.

PAMIR, a high table-land of Asia, on the western limit of Little Tibet, between the parallels of 37° and 38° N, and the meridians of 73° and 74° E. The Oxus has its sources on this plateau, at an elevation of 15,600 ft. above sea-level. See article Oxus. Lieut. Wood regards this table-land as the focus in which all the great mountain-chains of Asia converge.

PAMLICO SOUND, a bay on the coast of N. Carolina, U. S., between the parallels of 35° and 35° 40′ N, 80 m. long, and from 8 to 20 m. broad. It is separated from the Atlantic ocean in its whole length by a beach of sand, or rather a series of sandy islets, hardly a mile wide, and generally covered with trees and bushes. Through this bank are several inlets by which boats may pass; but the inlet between Ocracok island and Core bank is the principal entrance. This sound communicates with Core and Albemarle sounds; and receives the Pamlico or Tar river, the Neus, and other small streams.

PAMPANGAN, a town of the island of Luçon, in the Philippine group, on the E coast. The inhabitants, and those of the surrounding country in general, have adopted the religion and manners of the Spaniards.

PAMPARA, a village of Bambarra, in Africa, 156 m. W of Sego.

PAMPARATO, a town of Piedmont, in the prov. and 10 m. S of Mondovi, on the Casotto. Pop. 1,750.

PAMPAS, extensive plains of South America, in the S part of the La Plata federacy, extending for many hundred miles from the shores of the Atlantic to the main ridge of the Andes which separates Chili from the old viceroyalty of Buenos Ayres. They may be regarded as commencing on the N under the 22d parallel of S lat., with a breadth of about 280 m. To the S of the 26th parallel they have a breadth of 460 m.; but beyond the 40th parallel they do not exceed 350 m. The P. of Buenos Ayres extend N and S from the parallels of 34° 30′ to that of 40° S. As far as we are yet acquainted with this vast level, it appears to be an immense bed of alluvium tranquilly deposited during the lapse of many ages. The P. of Buenos Ayres, at the time of its discovery by the Spaniards, exhibited the same character as it does at

the present day. Endless plains, with a poor, though in the low ground a cheerful growth of grass, interrupted by paths, and here and there hedged in with strips of algarobias and acacias. Besides the grave bizcacha, the tururu, and similar small animals, ostriches, herds of guanacos, and a scarce pop. of men present themselves. All these remain; but the Spaniards brought with them between 1,530 and 1,532 horses and horned cattle, which, getting wild, have increased in such immense numbers, that during the war of General Rosas with the Indians, 20,000 horses were often lost in a few days. These animals wander about in countless herds, sometimes numbering about 15,000 in a single herd, so that horses and cattle have but little value. See article BUENOS AYRES, p. 109.—The W winds meeting with no interruption, sweep over those pampas with unequalled fury, and are often dangerous to vessels navigating the river Plate. These hurricanes are called *pamperos*.

PAMPAS-DEL-SACRAMENTO, the name borne by those pampas which run in a direction nearly N and S through Peru, between the Ucayale and the limits of the Brazilian territories, and to the N are bounded by the river Amazon. These vast plains are shaded with forests of eternal verdure, and many of the rarest vegetable productions occur in those regions. Balsams, oils, gums, resins, incense, cinnamon, cocoa, cascarilla, and spices, are abundant. But notwithstanding its valuable produce, and the inviting aspect of its evergreen forests, the warmth and humidity of the climate are such as to render the country unhealthy, and few, even among the native tribes, are said to live beyond 50 years of age. This vast region was first discovered by European travellers about the year 1726.

PAMPATAR, a port of Venezuela, on the SE coast of the island of Margarita, 50 m. NE of Cumana.

PAMPELONNE, a town of France, in the dep. of Tarn, on the l. bank of the Viaur, 12 m. N of Albay. Pop. 2,100.

PAMPELUNA, or PAMPLONA, a town of Spain, the cap. of Navarra, situated on the banks of the Arga, in N lat. 42° 50′, W long. 1° 42′, 210 m. NNE of Madrid. It stands partly on an eminence, partly on a plain, and is surrounded by mountains at the distance of 6 or 8 m. It is fortified, but derives its chief defence from two castles, one in the inside, the other on the outside of the walls. The pop. is estimated at about 15,000. It is "a clean, well-built, inhabitable little city." The bishopric of P. is one of the oldest in Spain. The religious edifices are the cathedral, 4 churches, and 13 monasteries; none of which edifices are remarkable for their architecture. It has a theatre, some fine fountains, and a plaza-de-toros in the centre of a very handsome square. It conducts a considerable commerce with France in wool and silk.—This town is supposed to have been built by Pompey, after the defeat of Sertorius, and to have been called *Pompeiopolis*. It has long been accounted one of the principal strongholds of the N of Spain.

PAMPIGNY, a village of Switzerland, in the cant. of Vaud, 4 m. SW of Cossonay.

PAMPILHOSA, a village of Portugal, in the prov. of Beira, 15 m. SSE of Arganil.

PAMPLIEGA, a town of Spain, in the prov. and 15 m. WSW of Burgos, on the Arlanzon.

PAMPLONA, a city of New Granada, in the prov. of Tunga, situated on a river of the same name, an affluent of the Sulia, in a lofty plain, surrounded on all sides by mountains, 185 m. NE of Bogota. Pop. 3,000. Gold and copper are mined in the vicinity.

PAMPUR, a town of Cashmere, on the N bank of the river Jhelum, in N lat. 34° 3′.

PAMPUS, a channel of the Zuyder-Zee, leading to the harbour of Amsterdam. See AMSTERDAM.

PAMUNKY, a river of Virginia, U. S., formed by the North and South Anna rivers. It runs SE, and unites with the Mattapony to form York river.

PANAGIA (CAPE SANTA), a promontory on the E coast of the island of Sicily, in N lat. 37° 7′.

PANAGUR, a town of Hindostan, in the prov. of Malwah, district of Gorrah, 180 m. NNE of Nagpur.

PANAMA, a town of New Granada, situated in N lat. 8° 57′, W long. 79° 30′, on the S side of the isthmus to which it gives name, on a tongue of land shaped like a spear-head, extending a considerable distance into the gulf of the same name. It is 30 m. in a direct line nearly ESE of Chagres, upon the Atlantic side of the isthmus. Its principal streets extend from sea to sea across the little peninsula. Its buildings are generally of stone, and in the old Spanish style. Until within these two years, everything within the walls reminded you of a bygone age: the private residences, the stores, the hotels, the cathedral, the churches, the convent, the splendid but never completed Jesuit college, and the city walls, all are of solid masonry. The roofing, with scarcely any exceptions, is of tiles, and the floors are of brick. The old city is bounded on three sides by the sea, and surrounded by a wall, which has been preserved with great care, with a ditch and two bastions on the land side. In the centre of the town is the Plaza, with an old cathedral on one side, and the state-house on the other; and through the town runs the Calle-de-las-Monjas, or what is now called by the Americans Main-street. It consists of old-fashioned Spanish houses, with broad verandahs, and folding doors instead of windows, which a few years ago looked sedate and sleepy enough; but a strange metamorphosis has come over it, with the rest of the town, in the glaring red and gilt sign-boards hung across the streets in every direction. One large house is now covered with every fanciful description of parti-coloured notice of entertainment. A blue sign-post, inscribed 'American Hotel' in bright red, hangs from one story; 'American Hotel' in white is painted over another; and 'ice,' 'good lodging,' 'brandy smashes,' 'cheap board,' are painted in every conceivable vacant spot all over the house. This splendid establishment is warranted to hold 240 travellers, principally in a long room lined on both sides with three tiers of benches, and a table down the middle, on which 36 people usually sleep, three in a row! There are seven other hotels in this street for the accommodation of Californian emigrants, besides three restaurants, and as many newspaper offices, all of which cover their houses with sign-boards of all colours and dimensions. The town is further enlightened by no fewer than three American newspapers,—the Daily Echo, the Star, and the Herald, containing information from California, South America, the States, and Europe. The present P., however, is not the same city which sent forth the savage swineherd with his bloodthirsty crew to uproot and destroy the empire of the Incas. Old P., now a miserable ruin, about 6 m. down the coast, was deserted after Morgan and his buccaneers had crossed the isthmus and sacked the town. A mouldering heap of stones overgrown with creepers, in a pestilential swamp, is all that remains of that proud city, once the key of the Pacific, and one of the brightest jewels in the Castilian crown. After the destruction of P. by Morgan, in 1670, the former site was deserted, and the new town built where it now stands about 6 m. W of the ancient position. It has been frequently devastated by fire.—The anchorage is bad and inconvenient for shipping, so that vessels usually lie off an island called Toboga, about 10 m. from P

The pop. of the canton and town in 1822 was 16,724, chiefly Negroes and Mulattoes. That of the town itself is now about 5,000, mostly Americans, English, and French, and a few old Spanish families, within the walls; and about as many without the walls, most of whom are natives.

Lines of steam communication.] The distance from

England in geog. m. is, to Panama,	4,470
From Panama to San Blas,	1,750
From Panama to Lima,	1,320
From Panama to Valparaiso,	2,612
From Panama to Canton,	10,360
From Panama to Sydney, New South Wales,	8,020

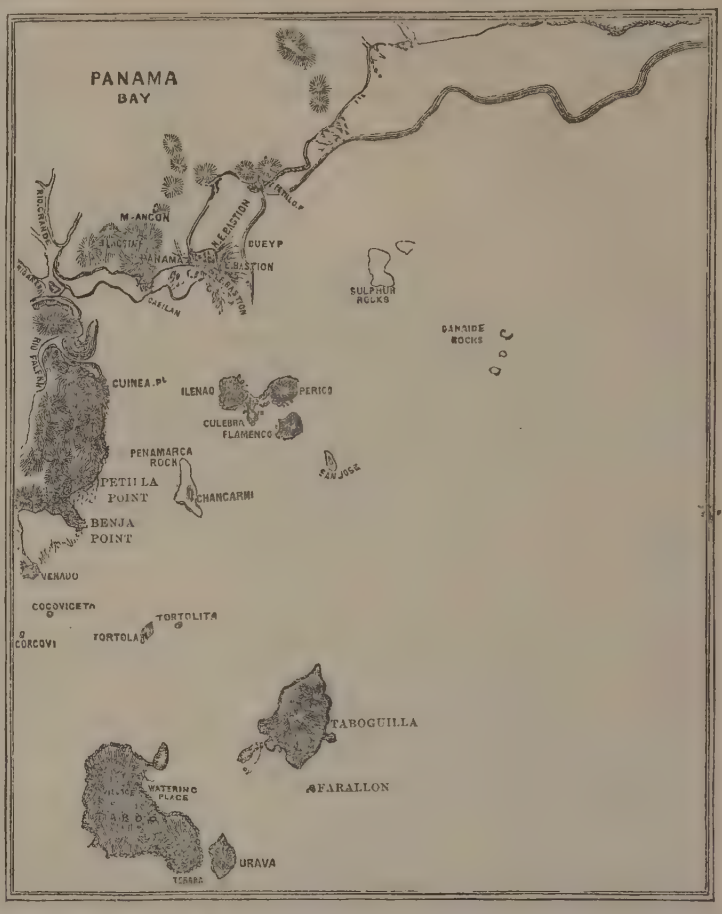
A monthly communication is at present kept up by the ships of the Pacific Steam navigation company between P. and Valparaiso, touching at the intermediate Chilian, Bolivian, Peruvian, and New Granadian ports. According to contract entered into with the Admiralty, a semi-monthly mail service, in conjunction with the West India mail packets between Chagres and Southampton, commenced on 1st April. The great speed of the new and powerful vessels enabled the Pacific company to reduce very considerably the time between Valparaiso and Panama. According to the table of sailings approved by the Admiralty, the Pacific company's steamers leave P. on the 15th and 30th of every month, touching at Buenaventura, Payta, Callao, Pisco, Islay, Arica, Cobija, Caldera. and Coquimbo; and they arrive at Valparaiso on the 1st and 16th of each month. The steamers stay at Valparaiso about six days, and then return by the same route to P., leaving Valparaiso on the 7th and 22d of every month, and reaching P. on the 23d and 7th. The stoppages of the packets at Callao is about 3¼ days both out and home, but at the other ports the stoppages are only from 1 to 6 hours, just sufficient to allow of the embarking and disembarking of mails and passengers. The average speed of these packets, as required by the Admiralty, is 10¼ knots an hour.

Two companies are at present organizing in England for the navigation of the Pacific *via* P. The Australian Direct Steam navigation company proposes to maintain a direct line connecting England with Australia, and crossing the isthmus of P. to Sydney and Melbourne alternately coaling at Otaheite or other convenient station. The speed and regularity with which paddle-wheel steamers, on the Cunard and Collins' lines, have performed their passages across the North Atlantic, having established a conviction that this mode of propulsion is best calculated for long voyages, at high velocity, it is proposed by the Australian Direct Steam company to employ paddle-wheel steamers of about 3,000 tons, with commensurate engine power. These vessels will proceed at stated periods from Milford-haven to Aspinwall (Navy Bay), on the Atlantic side of the isthmus; whence passengers and cargo will be conveyed by railway to P. on the Pacific side, and there re-embarked for Australia, accomplishing the whole distance, to or from, in about 55 days. The directors decided that Milford-haven, as the port of departure, promises advantages which few other ports can supply, viz. safe anchorage,—entrance and exit at all times,—facilities of repair,—supply of suitable coals,—and easy communication by rail with London, Manchester, and all the manufacturing districts. The directors state that during the months January, February, March and April last the specie transmitted across the isthmus—from Peru and Chili. from the western coast of Mexico, and from California—amounted to 20,410.796 dollars, exceeding £4,000,000; and that the passenger traffic by the same route and for the same period amounted to 10.568 persons, irrespective of those conveyed by the San-Juan-de-Nicaragua line; and argue that the existing extent of traffic affords no adequate idea of the vast trade which will arise to feed this line when in full operation, with all the important advantages of a completed railway and of a systematic conduct of business. Large additions to this vast traffic must necessarily flow from the increasing intercourse between North America and the Australian colonies, facilitated as such intercourse is by the powerful lines of steamers already established between the United States and the isthmus of P. in the N. Atlantic. and between California and P. in the N. Pacific. The augmented line of steamers also employed by the Pacific Steam Navigation company between Valparaiso and P. must considerably swell the stream. These great results, the directors argue, stand in perfect independence of a line projected which will, in all probability, at no distant period, connect California and China, and likewise of traffic the natural result of conveyance of passengers and valuable merchandise diverted from old and circuitous routes.

The other English company, under the designation of the Australian Pacific Mail steam-packet company, proposes to conduct its operations by means of first-class iron vessels, of not less than 1,200 tons and 250-horse auxiliary power respectively, maintaining a monthly communication between P. and Sydney, (touching at the Society islands and New Zealand,) in connexion with the vessels of the Royal Mail company, the Pacific Steam Navigation company, and the United States Mail Steam Packet company, running between California and P. Passengers from England will reach Chagres, by the vessels of the Royal Mail Steam Packet company, in 19 days. By the time that the operations of this company are matured, the railway across the isthmus, now in course of construction, will be so far completed as to admit of the transit from sea to sea being made, without risk or fatigue in a few hours. For the passage across the Pacific, care will be taken to provide suitable vessels, and machinery well adapted for attaining a high degree of speed, so as to insure the quickest practicable communication, which will be much facilitated by the moderate character of the winds prevailing in the Pacific ocean. Assuming an average of 9 knots an hour, (a rate of speed which, under the circumstances, may fairly be expected,) the run will be accomplished in about 38 days: making an aggregate of about 58 days from Southampton to Sydney.

PANAMA (Isthmus of), the name generally given to that portion of Central America which stretches between the Atlantic and Pacific oceans on the N and S, from the meridian of 77° to 81° W, in a semicircular form around the great gulf of P., and politically forms the department of Ystmo in New Granada. The great American cordillera is here broken into detached mountains which gradually sink in alt. as they approach Chagres on the side of the Atlantic, and Chorrera on the side of the Pacific. The prevailing rock is limestone. On the Atlantic side there is a succession of very wet lands, separated only occasionally by slight elevations, which are always rounded, seldom showing rock at the surface, and heavily wooded. These isolated hills are the leading peculiarity in the physiognomy of the country. Their height is seldom more than 200 or 300 ft., and the few which seem so precipitous as not to be covered with trees are probably composed of a rock too indestructible to form a soil. "I could not see," says a very recent American traveller, "that they had any such relation to each other as, taken together, to constitute a ridge, or even to have any approach to a linear arrangement. The base of these hills in the middle of the isthmus is an elevation of less than 300 ft., so that the highest points of the hills are only about 600 ft. above the sea. These hills, with possibly one or two exceptions, are of igneous origin. Ten miles from Aspinwall is a quarry of trap of a dark green colour, not crystalline like green stone, though when viewed at a little distance very much resembling it and yet so soft that it is as easily wrought as soapstone. It is used extensively in the stone structures of the road, and notwithstanding its softness will probably prove a durable rock. At 14 m. from Aspinwall there is another ledge opened, which is unquestionably an igneous rock, though it contains sufficient uncombined carbonate of lime to effervesce with acids. It is a very durable rock, but from its hardness it cannot be wrought, and must be used in the rough state. Within a short distance of Barbacoa, the loose materials at and near the surface are filled with rounded masses of a very perfect trap rock, closely resembling the loose trap rocks on Long Island. At Barbacoa, the present terminus of the railroad, occurs a light, drab-coloured, perishable rock, which exhibits on the weathered edges lines of delicate stratification, but contains no fossils whatever, and soon becomes reduced by exposure to a white greasy clay, which I regard as volcanic. The rock for the S abutment of the bridge across the Chagres is very similar, but of a lighter colour and softer than that at Tiger-hill, 10 m. from Aspinwall. Two miles further on the line of the road at Baila-Mona, this same trap again appears, as well as at several places along the Chagres river to Cruces. The old Spanish road from Cruces to Panama shows a great number of sections of this soft trap, and scarcely any other rock occurs. All this trap shows a tendency to separate into plates parallel to the general surface, from which it appears that these hills are not the remnants of a great trap bed, which, with the exception of these knobs, has been carried off by denuding causes, but the hills were originally pushed up in their present form. Above the trap, and in some cases in contact with it, there is a layer of pebbles, probably not of great thickness, which consists wholly of water-worn fragments of the trap itself. I could find no pebbles

of granite, seldom one of transparent or milky quartz, and none of any mechanical rock. This layer occurs in many places along the bed of the Chagres; the same bed is also seen at Gatun. Above the bed of pebbles along the Chagres is an alluvial deposit of 30 or 40 ft., containing no fossils. At Gatun the gravel bed is succeeded by a highly fossiliferous rock, containing such shells as cyprea, strombus, murex, cardium, sharks' teeth, &c. Above this, and every other formation on the isthmus, is a brick-red clay, frequently becoming less red, and in some instances passing insensibly into a nearly white unctuous mass. It is often 30 or 40 ft. in thickness, and never contains, so far as we yet know, any fossils. The red clay passes by imperceptible gradations, as the distance from the surface becomes greater, into a solidified and often distinctly marked trap." The streams which, descending from the slightly elevated water-shed of the isthmus flow N towards the Atlantic, are the Chagres, the Pequeni, the Trinidad, and the Gatun, which all unite in one stream before reaching the sea. See CHAGRES. On the S or Pacific side, are the Rio-Grande, the Caymite or Chorrera, the Pacora, the Indio, and the Ballano or Chepo. The Rio-Grande has its mouth about 2 m. from the town of P., and in its upper course approaches near to that of the Ovispo, an affluent of the Chagres. The Caymite discharges itself 10 m. W of P. The Pacora and Indio unite in a deep, broad, rapid stream, about 18 m. E of P. The Ballano or Chepo rises in the prov. of Darien, and falls into the gulf of San-Miguel. See MIGUEL (GULF OF SAN.) A great portion of the isthmus is still in the hands of the aborigines. The pop. of the European settlements consists chiefly of Mulattoes and Negroes, the number of Whites being comparatively small, except in the town of P., and the other larger towns. The total pop. of the dep. of Ystmo was returned in 1822 at 101,550, of whom 66,188 were in the prov. of P., and 35,367 in that of Veragua.—The climate is hot and rainy. The rains commence in April, and are fully established towards the end of May, when they fall in torrents. Save a few days about the 24th of June, the rains continue for eight months, until the end of December, with a temp. ranging from 75° to 87°.



Railway.] The communication between the shores of the two great oceans across the isthmus from Chagres and Porto-Bello to Panama, had been for ages conducted by a road scarcely anything better than a goat-track; nearly impassable during the rainy season or the greater part of the year; and so intersected by precipices, deep ravines, and swollen torrents, as to make the passage of about 37 m., even in the dry season, and with relays of horses, seldom short of 24 hours. Since the United States have become masters of California and its extraordinary mines, the isthmus has been encumbered by travellers and goods, and the Americans, discontented with the existing means of transport across the isthmus between the ports of Chagres and P., organized a company for the construction of a railroad, which will reduce the journey to one or two hours. The company has obtained from the government of New Grenada the concession of the line, with exclusive privileges for 15 years, the government giving them also the necessary land in lieu of monetary assistance. By art. 35 of a treaty negociated in 1848, it is stipulated that the citizens, vessels, and merchandise of the United States shall enjoy in the ports of New Grenada, including those of the part of the Grenadan territory generally denominated Isthmus of P. from its southernmost extremity unto the boundary of Costa-Rica, all the rights enjoyed by Grenadan citizens, and that this equality of favours shall be made to extend to the passengers, correspondence, and merchandise of the United States, in their transit across the said territory, from one sea to the other. The government of New Grenada guaranties that the right of way or transit across the isthmus, shall be open and free to the government and citizens of the United States, and for the transportation of articles of produce, manufactures, or merchandise, of lawful commerce, belonging to the citizens of the United States; that no other tolls or charges shall be levied upon citizens of the United States, or their merchandise than is, under like circumstances, levied upon Grenadan citizens; that any lawful produce, manufacture, or merchandise, belonging to the citizens of the United States, thus passing from one sea to the other, in either direction, for the purpose of exportation to any other foreign country, shall not be liable to any import duties whatever; nor shall the citizens of the United States be liable to any duties, tolls, or charges to which native citizens are not subjected in passing the said isthmus. "And in order," the treaty proceeds, "to secure to themselves the tranquil and constant enjoyment of these advantages, and as an especial compensation for the said advantages, and for the favours they have acquired by the 4th, 5th, and 6th articles of this treaty, the United States guaranty, positively and efficaciously, to New

Grenada, by the present stipulation, the perfect neutrality of the before-mentioned isthmus, with the view that the free transit, from the one to the other sea, may not be interrupted or embarrassed in any future time while this treaty exists; and, in consequence, the United States also guaranty, in the same manner, the rights of sovereignty and property which New Grenada has and possesses over the said territory." The capital is fixed at 5,000,000 dollars; the line to be completed in 8 years from the date of the concession. An officer of Engineers of the United States army was sent to the isthmus for the purpose of surveying the land; and his labours confirmed the statement made by the French engineer, M. Garella, sent thither by M. Guizot, that the line could be constructed without any greater elevation than 90 metres, or 295 ft. above the sea, and that its length might be reduced to 74 kilometres, or 45 m. Supposing no higher gradient to be required, the expense would not be more than 16,000,000 francs, including materials. The construction of the line is now proceeding with. The route adopted leads from Limon, or Navy bay to P., by Gorgona. It is to be carried about 36 m over elevations of nearly 300 ft., through one tunnel, and over large viaducts and bridges. See articles CHAGRES and NAVY BAY.

Mr. Asa Whitney, the enthusiastic projector of the great Pacific railway between the western states of America and San Francisco, contends that the relative geographical, commercial, and social position of Europe and America is such as to indicate that the true line of commercial intercourse between western Europe and the islands in the Pacific and Indian ocean, and the coast of China, must be across the American continent, under a parallel far to the N of the isthmus. "The routes proposed across the American continent at the isthmus of Darien, Panama, Nicaragua, or Tehuantepec, are all one and the same thing," Mr. Whitney argues, "as regards any results that they might produce upon commerce. Even for travel, there could be but little difference between them; it is a long bad sea-voyage from anywhere to them, and a still longer sea-voyage from them to anywhere, with a climate destructive to animal and vegetable substances, and with a tax upon life and health far out of proportion to any reward that even successful commerce might promise. Were an open strait formed from Darien at any point for 600 m. N, so that the two oceans were mingling their waters, no commerce between Europe and any parts of Asia would pass through it." This assertion Mr. Whitney proceeds to verify in the following manner: "First, we will take a globe and a string: place the end of the string at London or Liverpool, bring the string straight over to P., which straight line makes a shorter distance than a vessel can sail; then take the string tight and straight over the globe, S of the Sandwich islands, as the trade-winds would force a vessel's course, to the Ladrones, where the trades are lost, and you come in contact with the monsoons, according to which a vessel must run S or N, and then to China; from the Ladrones bring the string direct to Canton, and there cut it off, which gives the exact distance in straight lines from London to Canton *via* P. The course of a vessel from England would be, first, to 28° N lat., and 30° W long.; thence to the straits between San Lucia and St. Vincent, and to Chagres over to P.; then to the Ladrones and to Canton, distance 15,760 m. actual sailing, requiring 109½ days for its performance, at an average for all the time of 6 knots per hour; but the homeward voyage and same route would require a greater distance of sailing. With very strong head-winds, all from the Ladrones (upwards of 8,000 m.) to P. the better return course would be to run down the coast of Japan, pass the Fox islands, and over to the coast of Oregon, and then up the coast to P., and from Chagres pass the Havannah, and keep the gulf stream to near Long island, and past Halifax to England. Now place the end of the same string at Canton, bring it down through the Chinese sea and Sunda straits into the Indian ocean and on to the Cape of Good Hope, thence past St. Helena, inside the Cape-de-Verds, and to the same point of England from whence you first started, and you will find a long piece of the string left; and the distance which has been sailed, 13,330 m., at an average of 6 knots per hour would require 92 days for its performance, or 2,430 m. and 17½ days against the Isthmus routes. The voyage outward, owing to the trade-winds between the Equator and the Cape, would be of a greater distance, say some 1,200 m.; but it is worthy of notice that the shortest known voyage between England and China by an English vessel was by a war-vessel from England to China in 85 days, in 1842; and voyages out and home average about the same length of time, about 120 days. While at this point it may be worthy of remark that from Canton to St. John's, Newfoundland, the route to within the Cape-de-Verds would be precisely the same as from Canton to England, and about the same distance. We will now go to Sydney, the very nearest point of Australia to P. Place the end of the string at Sydney, bring it straight over to P., to Chagres, and then to England, and cut it off the exact length. Then start again at Sydney, carry the string over the globe around Cape Horn, and up to England; or take the string S round all Australia, by the Cape of Good Hope to England, and the distance of the two routes is about the same—200 m. in favour of Panama; but the actual sailing distance is the other way. We will follow a vessel's course from Sydney to England *via* P. first to 120° W long., between 36° and 33° S lat., passing N of New Zealand; thence from the parallel 30 of Coquimbo, to Callao and to Panama, to Chagres and to England, as before directed, and as has been performed, is 15,848 m., requiring at 6 knots an hour 110 days. Now go back to Sydney, and follow a vessel's course to England around Cape Horn; first we sail around the cape to the straits of Le-Maire, passing south of New Zealand, thence to 40° S lat.; and to Cape Frio, to the Equator, and to England, distance as has been performed 13,380 m., requiring, at 6 knots, 96 days, or 2,018 miles and 14 days against P. By the Cape of Good Hope, time and distance about the same, with a more favourable climate. A continent," Mr. Whitney proceeds to argue, "will naturally build its emporium or great commercial depot at a point the nearest and most convenient for access to the best foreign commercial marts for its products; but Australia is a world of itself, and when its growth in population enables it to attain to a commercial importance within its own means, its commerce and principal intercourse, owing to a lesser expense for transport, and for the therefore more certain and better return for the products of agricultural labour, must naturally be within its own radii, with India, China, Japan, the islands of the Pacific and Indian oceans, and with the NW coast of America, and not with Europe and the Atlantic slope of America; geographical position and the unerring laws of trade would force this result. But while England sends her surpluses to Australia, and continues to consider it necessary to have intercourse with them, Nature as well as interest points to the nearest place of access as the one most easy to communicate with and make exchanges, and that point is of W. Australia, and is in actual sailing distance nearly 3,500 m. nearer to England *via* the Cape of Good Hope, than Sydney to England *via* P., and with far better depot stations for fuel on the route. It must be apparent to any one who will examine a globe, that for a steam-communication between England and any part of Eastern Asia, to run up to the Cape-de-Verds, or even to the coast of Africa, to St. Helena, down to the Cape, to the Isle of Bourbon, or Mauritius, and so on; or from the Cape to Kerguelen or St. Paul's, and to W. Australia or even Sydney, would be less distant, better routes, and with better depots for fuel than *via* the Isthmus of Mexico. To and from any other commercial parts of Asia, the distance and time would be still greater against Panama. Were there an open strait at the isthmus of Mexico, a ship bound from New York to Canton would pass through it, and the distance would be 13,138 m., and might be performed, at an average of 6 knots per hour, in 91 days; but a return voyage would, owing to the trade-winds, require 110 to 120 days; and the return voyage would always for that cause be made, as it now is, round the Cape of Good Hope, and distance as has been sailed 14,255 m., and in 75 days, but 99 days would be a fair run. Owing to the trade-winds blowing constantly W from P., as far as the Ladrone islands, a vessel could not sail direct from any island in the Pacific or Indian ocean, or from any port of Asia, directly to P., but would be compelled to run first towards Cape Horn, and then up to P., or down the coast of China, Japan, Fox islands, and over to the coast of Oregon, and then up the coast to P.; therefore, were the isthmus an open strait, the commerce of Europe and that of the Atlantic slope of North America could not be carried on through it."

PANAMA, a village of Chautauque co., in the state of New York, U. S., 345 m. W by S of Albany.

PANAMARIBA, a river of Guayana, which runs into the Atlantic, in N lat. 6°.

PANAMBURT-COTA, a town of Hindostan, in the prov. of Malabar, district of Wyenaad, 45 m. NNE of Calicut, on the Kobbany.

PANAMGUELY, a town of Hindostan, in the Carnatic, 22 m. NNE of Cape Comorin.

PANAON, or PANAHAN, one of the Philippine islands, in the strait of Surigao, in N lat. 9° 55′, E long. 125° 8′. It is about 45 m. in circumf., and is watered by a number of small rivers.

PANAOUETICK, a river of Canada, which runs into the Saguenay, in N lat. 48° 24′.

PANAPA, an island at the mouth of the Orinoco, separated from the S shore by a channel which is very shallow in summer. Between this island and the N coast lies the principal channel of the Orinoco.

PANAR. See PANAUR.

PANARAGA, or PANAROGO, a town of Java, situated on the S side of the island, 60 m. E of Mataran.

PANARANO, a town of Naples, in the prov. of Principato-Ultra, 99 m. NW of Avellino. Pop. 1,350.

PANARIA, a small island in the Lipari group, situated between Lipari and Stromboli, 28 m. N o. Melazzo in Sicily, in N lat. 38° 37′. It is only 8 mf in circuit; and, though its base is of granite, it is covered in many parts with a rich soil. It is little elevated above the level of the sea. Pop. about 200. It was the *Hycesia* of the ancients.

PANARO, a river of Italy, which rises in a small lake on the N flank of the Apennines, and falls into

an arm of the Po, near the town of Bondeno, after a NNE course of 90 m. Its principal affluents are the Scultella on the l., and the Zena on the r. It becomes navigable at Bonporto, where it is joined by the canal of Modena, which connects it with the Secchio.

PANARUKAN, a town of Java, situated on a river which enters the sea by several mouths about 20 m. W of Cape Sandano, the NE extremity of the island, and opposite the island of Madura. It was formerly the capital of an ancient principality. It has a fort which stands about ¾ m. from the sea, on a marshy plain.

PANASRESTI, a village of Armenia, 28 m. NW of Kars.

PANAT, a village of France, in the dep. of Aveyron, cant. and 4 m. SW of Marcillac. Pop. 220.

PANAUR, a river of Hindostan, which rises in the E of Mysore, near Ballapur; winds through the Eastern Ghauts, and discharges itself into the gulf of Bengal by two arms, one near Gudelur, and the other at Fort St. David, after an ESE course of 240 m. Its principal affluents are the Markadahar and the Torindjaron on the l., and the Kedolom on the r.

PANAY, one of the Philippine islands, lying SE of Mindoro, and NW of Negros, between the parallels of 10° 25′ and 11° 46′ N. It is 120 m. in length from NE to SW, and from 50 to 98 m. broad. Its area is estimated at 4,500 sq. m. Its surface is mountainous and thickly wooded. The soil is fertile, and is in many parts well cultivated. Rice, sugar, cacao, pepper, yams, fruits, and ebony and Campeachy wood, are among the principal productions. The island possesses an excellent breed of horses.

PENAZOL, a commune and village of France, in the dep. of Haute-Vienne, 4 m. E of Limoges, near the l. bank of the Vienne. Pop. 1,050. Druggets and flannels are made here.

PANBRIDE, a parish of Forfarshire, at the mouth of the frith of Tay, 6 m. SW of Arbroath. Area 5,400 acres. Pop. in 1841, 1,389; in 1851, 1,372.

PANCALIERI, a town of Piedmont, in the prov. of Pinerolo, on the l. bank of the Po, 16 m. S of Turin. The surrounding country is very beautiful.

PANCA-POINT, the NE extremity of the island of Java, at the W entrance of the straits of Madura.

PANCAWIR, a town of Hindostan, in the prov. of Malwah, in N lat. 24° 14′.

PANCE′, a village of France, in the dep. of Ille-et-Vilaine, cant. and 3 m. NNE of Bain, on the r. bank of the Saumon. Pop. 1,270.

PANCHARD, a village of France, in the dep. of Seine-et-Marne, cant. and 2 m. NW of Meaux. Pop. 372.

PANCHBERARAH, a town of Hindostan, cap. of a small district of the same name, in the prov. of Cashmere, in N lat. 34° 32′. It was formerly esteemed one of the holy places of the Hindus.

PANCHES, a prov. of New Granada, now comprised in the dep. of Bogota. It is 15 leagues in length from E to W, and 12 from N to S. Its surface is rough, and full of mountains and ravines; but is well watered by several large rivers, and fertile in maize and vines. The cap. is Tocaima.

PANCORVO, a town of Spain, in the prov. and 36 m. NE of Burgos, and 9 m. SW of Miranda-de-Ebro, in a narrow mountain-defile. Pop. 1,600. It has a strong castle, which was held by the French from 1808 to 1813.

PANCRAS (Saint), a parish of Middlesex, comprising a portion of the northern parts of the metropolis. Area 2,600 acres. Pop. in 1841, 129,763; in 1851, 166,956. The North-Western and the Great Northern railways have their termini in this p. See article London.

PANCRASWEEK, a hamlet of Devonshire, 4 m. WNW of Holsworthy. Area 2,210 acres. Pop. in 1841, 540; in 1851, 460.

PANCRAZIO (Santo), a village of the duchy of Parma, 3 m. WNW of the city of Parma.—Also a village of Naples, in the prov. of Terra-d'Otranto, 18 m. SSW of Brindisi. Pop. 550.

PANCSOVA, or Pantshova, a town of Hungary, near the confluence of the Temes and the Danube, and on the l. bank of the former river, 8 m. ENE of Belgrade. Its situation is pleasant, and advantageous for trade with Turkey. Pop. in 1845 about 11,000, consisting of Wallachians, Rascians, Germans, and Greeks.

PANCZE′L-CSEH, a district of Transylvania, in the Hungarian territory, and upper circle of Doboka.

PANDALAM-GOURCHY, a town of Hindostan, in the presidency of Madras, and prov. of the Carnatic, district and 33 m. NE of Tinnevelly, and 66 m. SSE of Madura.

PANDAN, a headland of the W coast of the island of Mindoro, in the Philippine archipelago, in N lat. 12° 46′, E long. 120° 50′. Opposite this cape is a group of rocks and islets of the same name.—Also a town on the W side of the island of Panay, in the same archipelago, in N lat. 11° 38′, and E long. 121° 56′.

PANDELKO, a village of Russia in Europe, in the gov. of Saratov and district of Kouznetzk. The inhabitants are Tartars, and employ themselves chiefly in the manufacture of tallow.

PANDELON (Saint), a village of France, in the dep. of the Landes, cant. and 3 m. S of Dax, near the l. bank of the Luy, an affluent of the Adour. Pop. 460. In the environs are several saline springs.

PAN-DE-MATANZAS, a lofty conical-shaped mountain, on the N coast of the island of Cuba, a little to the W of Matanzas. It serves as a signal to vessels, on their reaching the W entrance of the old Bahama channel.

PANDERRAS, a district of Little Tibet, about 120 m. SW of Leh. An animal resembling the jackal, and locally named the daroudan, is found here, the skin of which forms a warm article of clothing, and the flesh of which is said to be salutary in leprosy.

PANDEX, a village of Switzerland, in the cant. of Vaud, district and 2 m. E of Lausanne, and circle of Pully, on the Pandèze, and near the lake of Geneva. It has a glass manufactory, and in the vicinity is a mine of coal.

PANDI, a village of New Grenada, in the dep. of Cundinamarca, and 14 leagues NE of Bogota, on the road to Ibaque, and near the Rio-de-la-Somma-Paz. The valley of Iconozo, or of Pandi, lies N and S on a line perpendicular to a chasm at whose bottom rolls the torrent of Summa-Paz. Setting out early in the morning from Bogota, Fonsagasouga may be reached the same day; and from that village 6 hours more will carry the traveller to Mercadillo, the last inhabited spot before reaching El-puente-de-piedra, *i. e.* 'the Bridge of stone,' as it is called by the Indians of the neighbourhood. From Mercadillo, a descent of some 25 minutes brings the visitor to the bottom of the ravine, through the thick woods which hang on the slope of the mountain. Before ascending the opposite side, his eye catches sight of a small wooden bridge constructed after the fashion of the country—that is, by flinging trunks of trees from brink to brink, and covering them transversely with branches, supporting a floor of earth and flint-stones about a foot in depth. A slender balustrade, placed on each side of the bridge, excites some surprise, for bridges of the same description and scarcely

3 ft. in width seldom have the slightest lateral protection afforded, and the thick brushwood encumbering the precipice here completely conceals the gulf. But when the traveller stands on the centre of the bridge, he sees through its tangled foliage an abyss of immense profundity, from whose depth arises a deadened sound like that of some torrent flowing leagues away. A bluish reflected light, and long lines of a dirty white foam slowly sailing down the stream and disappearing under the bridge, give evidence of a deep black water, flowing from E to W, between the close and narrow walls. The total perpendicular height from the level of the water to that of the upper part of the wooden bridge is 262 ft. The cleft itself is about a league in length, from the point at which the torrent engulfs itself between its rocky walls, to its issue from their gradually diminishing perpendiculars. The mean width of the chasm is from 30 to 35 ft.

PANDINO, a district and town of Austrian Lombardy, in the prov. of Lodi and Crema. The district comprises 15 com. The town is 8 m. NNE of Lodi, and 20 m. ESE of Milan. It is enclosed by an old wall 27 ft. in height, flanked with small towers, and has a square castle flanked with four crenellated towers. Pop. 1,450.

PANDIWARA, a town of Hindostan, in the prov. of Gujerat, 21 m. S of Sommy, near the banks of the Rupini, a small but clear stream of salt water.

PANDO, a river of Buenos Ayres, which runs S, and enters the Plata near its mouth.—Also a parish and village about 20 m. NE of Monte-Video.

PANDORE REEF, a coral bank near the NE coast of Australia, in S lat. 11° 23′, E long. 143° 57′. —Also a coral reef in the S. Pacific, in S lat. 12° 11′, E long. 171° 52′.

PANDOUR, Pandur, or Szent-Istven, a village of Hungary, 26 m. S of Kalocsa, in the com. of Pest, remarkable chiefly for giving name to the Servian or Rascian foot soldiers, who came first into notice as soldiers in 1741, when Baron Trenk marched 1,000 of them as militia against the Prussians. Since 1750 they have been organized as regular troops, and were of great service to Austria, both in the war of 1756, and in those of the first French Revolution.

PANEAS. See Banias.

PANELLA, or Pennala, a town of Hindostan, in the prov. of Dowlatabad, 15 m. NE of Daman. In 1676, the Mahratta chief Sevaji took possession of this place, and erected in its vicinity a strong fortress, which commaded the high road from Bejapore to Surat.

PANERAZIO-DI-BARBARONA, a town of Austrian Italy, 12 m. S of Vicenza, remarkable for a hot sulphureous spring.

PANERMO, a port on the W coast of the island of Skopelos, in the Grecian archipelago, 10 m. from the v. of Skopelos.

PANG, a district and town of China, in the prov. of Sze-chuen, and div. of Ching-tu-fu, in N lat. 30° 56′, E long. 104° 2′.

PANGAIMOTA, a small island in the Friendly archipelago, in S lat. 21° 7′.

PANGANSANE, Pantiana, or Pangesana, an island in the Eastern seas, near the S coast of Celebes, separated from the island of Bouton on the E by a strait which at the narrowest part is not more than a cable's length across. It is about 52 m. in length from N to S, and 16 m. in average breadth. The N part is low, marshy, and unhealthy; but it is in general well peopled.

PANGASMAN, a small island in the Sulu archipelago, in N lat. 6° 6′.

PANGATARRAN, a long flat island in the Eastern seas, in the Sulu archipelago, in N lat. 6° 15′. It is about 10 m. long, by 4 m. in breadth. It is an entire bed of coral rock, but vegetation flourishes, and the island abounds in cocoa-nut trees.

PANGBORNE, a parish in Berks, 5½ m. NW by W of Reading, on the S bank of the Thames, and crossed by the Great Western railway, which has a station here. Area 1,925 acres. Pop. in 1851, 800.

PANGGHA, a town of Butan, 21 m. SSW of Tassisudon, near the l. bank of the Chinchu.

PANGIMODU, a small island in the S. Pacific, at the entrance of the harbour of Tongatabu.

PANGLO, one of the smaller Philippine islands, 60 m. N of Mindanao.

PANGO, a province of Lower Guinea, which the Catholic missionaries describe as situated along the Zaire, immediately above the cataracts, with a town of the same name on the banks of the river.

PANGORA, a river of Peru, in the prov. of Guanta, which runs E, and unites itself with the La Sal.

PANG-SHAN, a district and town of China, in the prov. of Sze-chuen, and div. of Mei-chu, in N lat. 30° 15′. E long. 103° 44′.

PANG-SHWUY, a district and town of China, in the prov. of Sze-chuen, and div. of Se-yang-chu, in N lat. 29° 14′ 24″, E long. 108° 13′ 52″.

PANG-TSIH, a district and town of China, in the prov. of Keang-se, and div. of Kew-keang-fu, in N lat. 30° 1′ 40″, E long. 116° 35′ 10″.

PANGUE, a small river of Chili, in the prov. of Maule, which runs NNW, and enters the Maule.

PANGUEI, a small island in the Eastern seas, near the coast of Queda, in N lat. 5° 50′.

PANGUSHUN, a town of Spain, in the prov. and 36 m. NE of Burgos, on the l. bank of the Herranz, an affluent of the Ebro.

PANGVATO, one of the Sanghir islands between Celebes and the Philippines, in N lat. 3° 24′.

PANGY, a town on the E coast of the island of Celebes, in Gunong-Tellu bay, in S lat. 1° 6′.

PANHA, a town of Hindostan, in the prov. and 30 m. ENE of Serinagur, situated on the declivity of a mountain near the l. bank of the Alaknandra. The neighbourhood abounds with lead and copper ores. The richest lead-mines are situated 6 m. to the S, at a place called Dhanpore; but the richest vein of copper is about 8 m. to the N of it.

PANIANY, or Ponany, a seaport of Hindostan, in the prov. of Malabar, on the S bank of the Palicaud river, in N lat. 10° 45′, E long. 75° 55′. It consists of about 500 houses, and nearly 40 mosques and Hindu temples. The inhabitants are generally of the class of Mahommedans called Moplas or Moplays, said to be descended from Arabians who settled in India before the era of the Hejira. They are all engaged in commerce, and some of them have accumulated much property. The exports from P. are teak-timber, pepper, catechu, rice, iron, and cocoanuts; but the mouth of the river being closed by a bar, the trade is principally carried on by means of large boats. The river is not navigable, even for boats, more than 30 m. In 1792, this port, with the prov. of Malabar, was annexed to the British possessions.

PANICOCOLA, a town of Naples, in the Terra-di-Lavoro, 6 m. NNW of Naples. Pop. 2,200.

PANIEFOULE, a lake of Western Africa, in the kingdom of Walo, 36 m. E of St. Louis, communicating with the Senegal.

PANIPUT, or Panipot, a district and town of Hindostan, in the prov. of Delhi, between the r. bank of the Jamna and the canal of Delhi. It is a place of considerable extent, and was formerly surrounded with a brick wall 4 m. in circuit. The district produces sugar, and the town carries on a considerable trade in that article, and in salt and grain. P. is

celebrated as the scene of two of the greatest battles recorded in the history of Hindostan. The first took place in 1525, between the Mogul army of Baber, consisting of little more than 13,000 cavalry, and an innumerable host of Afghans and Hindus, commanded by the emperor Ibrahim Lody, in which the emperor was killed, his army completely routed, and the empire of Delhi transferred from the Afghans to the Moguls. The second occurred in 1761, between the combined Mahommedan armies, commanded by Ahmed-Shah-Abdalli, king of the Afghans, and that of the Mahrattas, commanded by Bhow-Sedasiva, nephew of the peishwa. The former consisted of 80,000 cavalry and infantry, with 80 pieces of cannon. The latter amounted to 70,000 regulars, and 15,000 Pindaries, with nearly 200 pieces of cannon of different calibres, from 1 to 48-pounders. The armies had remained in front of each other and inactive for a considerable time: at length, on the 7th of January 1761, the Mahrattas marched out of their intrenchments, and having challenged their adversaries to the combat, a bloody contest ensued, which continued nearly the whole of the day, until the Mahrattas gave way and took to flight. They were pursued for 40 m., and a prodigious number of them put to the sword. It was not for many years afterwards that the Mahrattas again ventured to cross the Chumbul.

PANISSIE'RE, a commune and town of France, in the dep. of the Loire, cant. and 8 m. NE of Feurs, at the foot of a lofty mountain. Pop. in 1841, 3,753. It has manufactories of plain and damask linen.

PANJAB. See PUNJAB.

PANJANG (PULO), an island of the Indian ocean, near the W coast of the peninsula of Malacca, 12 m. E of and bearing a close resemblance to the island of Junkceylon. It is about 36 m. in circumf.—Also an island of the Sunda archipelego, a little to the S of the island of Madura, in S lat. 6° 36′, and E long. 113° 40′. It is about 9 m. in length. Pop. 5,580.—Also a small island near the N coast of New Guinea, in the bay of Geelvink, in S lat. 3° 19′, and E long. 135° 26′ 45″.

PANJAS, a village of France, in the dep. of the Gers, cant. and 9 m. S of Cazaubon, and 27 m. WSW of Condom, near the r. bank of the Midon. Pop. 800.

PANJIM. See GOA (NEW).

PANKAL-PINANG, a town of the island of Banka, Sunda archipelego, on a small river, near the E coast and 105 m. ENE of Palembang. Pop. 1,600. It has extensive tin-mines.

PANKEIRA, a town of Hindostan, in the prov. of Kandeish, 69 m. ESE of Surat.

PANKOV, an island of the Arctic ocean, off the W coast of Nova-Zembla, and near the strait of Matotchkin.

PANLANG, a town of Burmah, in Pegu, in the prov. of Talain-pyee, on the l. bank of a river of the same name, a branch of the Irawadi and 21 m. WNW of Rangoon. It is a large and flourishing place.

PANNAH, or PUNNAH, a town of Hindostan, in the prov. of Allahabad, cap. of a small state in the district of Bundelcund, 120 m. WSW of Allahabad, on an affluent of the Ken. It is supposed to be the *Panassa* of Ptolemy. The tract in which it is situated is enclosed by a chain of mountains, 24 m. in length, and about 6 m. in breadth, and noted for their diamond mines. These mines were formerly highly productive. The locality possesses little cultivation, but yields large quantities of ebony.

PANNALL, a parish of the W. R. of Yorkshire, 2½ m. SE of Harrogate, on the Leeds and Thirsk railway. Area 4,520 acres. Pop. in 1841, 1,413.

PANNANICH, a village in the p. of Glenmuick, Aberdeenshire, on the Dee, 39 m. W of Aberdeen. It is noted for its mineral waters.

PANNAVIA, a bay of Upper Guinea, on the Gaboon coast, to the E of the gulf of Biafra, and to the S of the embouchure of the Camarones.

PANNECE, a commune of France, in the dep. of the Loire Inferieure, cant. and 4 m. S of Riaillé, and 10 m. NNW of Ancenis, at the foot of a hill, near the r. bank of the Havre, an affluent of the Loire. Pop. 1,153.

PANNELLAH, a town and fortress of Hindostan, in the presidency of Bombay, prov. and 30 m. W of Bejapur, district and 9 m. NW of Kolapur, in the midst of the Western Ghauts. It was formerly considered one of the strongest fortresses in this part of India. In 1660 it was taken by stratagem by the famous Mahratta chief Sevaji. It subsequently sustained an unsuccessful siege by the king of Bejapur, but was taken by Aureng-Zeib.

PANNENGAMMO, a district in the N part of the island of Ceylon. It contains a town of the same name.

PANNES, a village of France, in the cant. and 4 m. WNW of Montargis, on a plateau, near the Orleans canal. Pop. 1,100.

PANNI, a town of Naples, in the prov. of Capitanate, district and cant. and 5 m. SW of Bovino, and 12 m. ENE of Arjano, on a mountain. Pop. 2,500.

PANNOH-CA-PIR, a village of Sind, 42 m. NE of Omercote.

PANNOV, a district on the SE coast of the island of Ceylon.

PANOIAS, or PANOYAS, a town of Portugal, in the prov. of Alemtejo, comarca and 8 m. NW of Ourique, on the r. bank of the Rio-des-Alvedas. Pop. 770.

PANOMI, a town of Turkey in Europe, in Rumelia, in the sanj. and 18 m. S of Salonica.

PANORE, a town of Hindostan, in the presidency of Madras and prov. of Malabar, 6 m. NE of Mahi.

PANORMOS, a harbour of the Archipelago, on the N coast of the island of Myconi, in N lat. 37° 30′, and E long. 25° 21′.—Also a port on the SE coast of the island of Skiathos, in N lat. 39° 10′, and E long. 23° 30′. It possesses little accommodation.

PANOUSE (LA), a village of France, in the dep. of the Aveyron, cant. and 2 m. NW of Severac-le-Chateau, and 18 m. N of Milhau, near the l. bank of the Aveyron. Pop. 880.

PANTALEO (SAN), an island of the Mediterranean, in the group of the Egades, to the W of Sicily and a little to the SSE of the island of Burrone. It is about 1½ m. in circuit, and is uninhabited. It contains the ruins of the ancient Motye.—Also a village of Sardinia, in the dio. of Capo-Cagliari, prov. and 14 m. NNE of Cagliari, district and 5 m. E of Ussana. Pop. 1,034.

PANTALEON (SAINT), a commune of France, in the dep. of the Correze, cant. and 2 m. NE of Larche, and 5 m. WSW of Brives, on the r. bank of the Vizere. Pop. 1,266.—Also a village in the dep. of the Lot, cant. and 4 m. NE of Moncuq, and 11 m. SW of Cahors. Pop. 660.—Also a village in the dep. of the Saone-et-Loire, cant. and 1 m. from Autun, on the Arroux. Pop. 221.

PANTANO, or PANTANOMYO, a town of Burmah, in Pegu, in the delta of the Irawadi and 45 m. W of Rangoon.

PANTANO-SALSO, a lake of Naples, in the prov. of the Capitanate, district and cant. and 6 m. S of Manfredonia. It is about 5 m. from N to S, and about 3 in breadth, and is traversed by the Candelaro, an affluent of the gulf of Manfredonia.

PANTAR, an island of the Asiatic archipelago, in the group of the Sunda islands, between Lomblem

from which it is separated by the strait of Alu and Ombay, in S lat. 8° 30′, and E long. 124° 10′. It is 36 m. in length from N to S, and 18 in breadth.

PANTASMA, a river of Guatimala, which has its source in the E part of the state of Honduras, traverses the Mosquito territory, and throws itself into the Caribbean sea, a little to the S of Cape Gracias-a-Dios; and after a course in a generally ENE direction of 300 m.—Also a tribe of Indians who inhabit the E part of Guatimala.

PANTEAGUE, a parish in Monmouthshire, 4 m. WSW of Usk. Area 4,040 acres. Pop. in 1831, 1,584; in 1851,

PANTELARI'A, or PANTELLARIA, an island of the Mediterranean, belonging to Naples, and administratively dependent on the prov. of Girgenti in Sicily, situated in N lat. 36° 48′, E long. 11° 58′. It is of elliptical contour, about 12 m. long from NW to SE, and from 5 to 7 m. broad. It is 56 nautical m. from the SW coast of Sicily, and 36 m. from the coast of Africa. It is entirely volcanic. The external border is formed of a succession of beds of trachytic lava of a greenish-grey colour. Within this border rises, as from the bottom of a vast crater, the principal mountain-mass of the island, called Il Bosco, the summit of which is 3,500 ft. high, composed of pumice, and numerous lava streams which have issued from its flanks; from numerous spots on the sides of the mountain aqueous vapour issues; and copious hot springs occur at its base, which accumulate in a lake of salt water 6,000 ft. in circumf., milk warm and soapy to the touch and taste. The interior presents a broken surface, intersected with ravines and valleys, and covered with brushwood of evergreen oak and shrubs. The soil is moderately fertile, and olives, figs, vines, and cotton are cultivated; and in most seasons sufficient corn for the internal consumption. The pop. is about 7,000.—On the NW side of the island are the town and castle, and harbour of P. The town is a large but poorly built place. Wine, oil, cotton, orchilla, raisins, and a little alum are exported. There is not a single spring of pure water on the island.

PANTFIELD, a parish of Essex, 2 m. NNW of Braintree. Area 1,475 acres. Pop. in 1851, 275.

PANTIANA. See PANGANSANE.

PANTIN, a canton, commune, and town of France, in the dep. of the Seine, and arrond. of Saint-Denis. The cant. comprises 12 com. Pop. in 1831, 23,523; in 1841, 50,159. The town is 5 m. SE of St.-Denis, and 2 m. NE of the walls of Paris, near the canal of Ourcq. Pop. in 1841, 1,323. It contains numerous villas and gardens; and has manufactories of blankets, beet-root sugar, and chemical substances, several spinning-mills, lime-kilns, gypsum-works, &c. The trade consists chiefly in grain, flour, wine, brandy, vinegar, and gypsum.

PANTOJA, a town of Spain, in New Castile, in the prov. and 15 m. NE of Toledo. Pop. 280.

PANTON, a parish of Lincolnshire, 3 m. ENE of Wragby. Area 1,996 acres. Pop. in 1851, 182.

PANTON, a township of Addison co., in the state of Vermont, U. S., 71 m. WSW of Montpellier. It has a level surface; and is bounded on the W by Lake Champlain, and watered by a small branch of Otter Creek river. Pop. in 1840, 670.

PANTSHA, a town of Turkey in Europe, in Moldavia, in the district of Putna, 105 m. S of Jassy.

PANTURA, a town on the W coast of the island of Ceylon, and district of Raggam, 18 m. SSE of Colombo, at the mouth of a branch of the Kallu-ganga.

PANTUR-CHUK, a village of Cashmere, 5 m. S of Sirinagur, on the r. bank of the Jailum.

PANTZE-KHOTON, a town of China, in Mandshuria, cant. and 105 m. SW of Kirin.

PANUCO, a town of Mexico, in the state and 285 m. NW of Vera Cruz, at the confluence of the Rio-Tula with the Panuco or Tampico. It is tolerably well built, and formerly possessed a considerable trade in fustic. See also TAMPICO.

PANWARRA, a town of Hindostan, in the presidency of Bengal, prov. of Allahabad, district and 30 m. W of Juanpore.

PANWELLY, a town of Hindostan, in the presidency and 24 m. E of Bombay, prov. of Aurungabad, and district of Kalliani, on the Pan, about 8 m. above its entrance into the sea of Oman. It is large, and possesses an active trade. A fort was constructed here in 1680 by the Mahratta chief Sevadji.

PANZA, a village of Naples, in the prov. and 24 m. WSW of Naples, district of Puzzuoli, cant. and 1½ m. SSE of Forio, on the SE side of the island of Ischia. Pop. 770. It has a small fort, and possesses several thermal springs.

PANZA-CONGO. See SALVADOR (SAN).

PAO (RIO-DEL), a river of Venezuela, which has its source in the mountains enclosing the lake of Valencia on the S; runs first W, then S; passes near San-Juan-Baptista-del-Pao; and after a total course of about 135 m. falls into the Coxeda, on the l. bank, and 39 m. SW of Calaboza.

PAO-D'ASSUCAR, a headland of Brazil, in the prov. of Rio-de-Janeiro, at the W side of the entrance of the bay of that name, in S lat. 22° 56′ 8″, and W long. 43° 14′ 43″.

PAO-DE-NAO, a small port of Upper Guinea, on the Gabun coast, at the mouth of the Campo.

PAOLA, or PAULA, a district and town of Naples, in the prov. of Calabria-Citra. The district comprises 5 cant. The town is 15 m. WNW of Cosenza, on a rising ground, near the shore of the Tyrrhenian sea. Pop. 5,000. It is defended by a fortress and 2 towers, and contains several churches, 3 convents, and 2 hospitals. It has manufactories of cloth, silk fabrics, and pottery. This town is noted as the birth-place of Francis-de-Paula. About ¾ of a mile from the town is the convent of St. Francis.

PAOLI, a village of Fredypin township, Chester co., in the state of Pennsylvania, U. S., 78 m. ESE of Harrisburg, 16 m. W by N of Philadelphia, on the railroad to Lancaster.—Also a village of Orange co., in the state of Indiana, 94 m. S by W of Indianapolis, on Lick creek. Pop. 450.

PAOLO (SAN), a town of Naples, in the prov. of Capitanate, district and 8 m. NW of San-Severo, and 24 m. NNW of Foggia, on a hill. Pop. 2,788. It has a fine palace, 2 churches, 2 oratories, and a convent. At the distance of 3 m. on the banks of the Civitate, are the ruins of the ancient *Teanum Apulorum*.—Also a town in the prov. of the Terra-di-Lavoro, district and 1½ m. ESE of Nola, and cant. of Saviano. Pop. 1,780.—Also a town of Sicily, in the prov. and 24 m. SW of Syracuse, district and 8 m. S of Noto, on a height.

PAOLO-D'ARGON. See BUZZONE.

PAOLO-DE-LOANDO (SAN). See LOANDO.

PAOLOS, a village of Asiatic Turkey, 15 m. W of Sivas.

PAO-NING. See PAOU-NING-FU.

PAOS, a town of Portugal, in the prov. of Beira, comarca and 38 m. ENE of Aveiro, and 21 m. NW of Visen, on the r. bank of the Vouga. Pop. 1,420.

PAOTE, or POOTE (LA), a commune of France, in the dep. of the Mayenne, cant. of Prez-en-Pail, 33 m. NNE of Mayenne. Pop. 3,261. It has a wax-work and bleachery.

PAO-TING. See PAOU-TING-FU.

PAOU, an island of the S. Pacific, in the Fiji archipelago, extending between 16° 18′ and 17° 1′ S lat., and between 178° 15′ and 179° 22′ E long. It

possesses a circumference of about 150 m., and is the principal island of the group. The interior is covered with mountains and forests. Sandal-wood abounds in the SW part of the island, and forms its principal production. The inhabitants, who are numerous, are represented as cruel, warlike, and perfidious, and to be addicted to cannibalism. An attempt was made by the crew of an American vessel which was wrecked here in 1808 to form a settlement on the island, but the savage character of the natives rendered it abortive. The name Tacanova, by which the W part is distinguished, is frequently used to denote the entire island.

PAOU, a town of the Corea, in the prov. of King-ki, 99 m. SSE of Han-yang.

PAOU-CHING, a district and town of China, in the prov. of Shen-se, div. and 12 m. NW of Han-chung-fu, in N lat. 33° 4′, and E long. 107° 7′.

PAOU-CHU, a district and town of China, in the prov. of Sze-chuen, div. and 78 m. NNW of Ching-tu-fu, in N lat. 31° 42′, and E long. 103° 32′.

PAOU-CHUAN, a town of the Corea, in the prov. of King-ki, and 24 m. E of Han-yang.

PAOU-FUNG-HEEN, a district and town of China, in the prov. of Ho-nan and div. of Joo-chu, 120 m. SW of Kae-fung-pu, in N lat. 33° 55′, and E long. 113° 6′.

PAOU-GAN, a district and town of China, in the prov. of Shen-se and div. of Yen-gan-fu, in N lat. 37° 2′, and E long. 108° 37′.

PAOU-GAN-CHU, a district and town of China, in the prov. of Chih-le, div. and 18 m. SE of Seuen-hwa-fu, and 75 m. WNW of Pe-king, in N lat. 40° 22′, and E long. 115° 14′. It is enclosed by a substantial wall, and is well-built. In its centre is a triumphal arch. The inhabitants employ themselves chiefly in carpentry.

PAOU-GING, a district and town of China, in the prov. of Keang-su and div. of Yang-chu-fu, in N lat. 33° 15′, and E long. 119° 20′.

PAOU-HOU-CHAN, a headland of China, in the prov. of Kwang-tung, at the NE extremity of the island of Hai-nan, in N lat. 20° 0′, E long. 110° 57′.

PAOU-KANG-HEEN, a district and town of China, in the prov. of Hoo-pih and div. of Yun-fang-fu, 216 m. NW of Woo-chang-fu, in N lat. 31° 54′, and E long. 111° 15′ 12″.

PAOU-KE, a district and town of China, in the prov. of Shen-se and div. of Tungkeang-fu, 102 m. W of Se-gan-fu, on the l. bank of the Hwei-ho, in N lat. 34° 20′, and E long. 107° 13′.

PAOU-KING-FU, a division and town of China, in the prov. of Hoo-nan. The div. comprises 5 districts. The town is 135 m. SW of Chan-sha-fu, on the r. bank of the Lo-keang, in N lat. 27° 3′ 36″, and long. 111° 21′ 20″.

PAOULU, a village of Turkey in Asia, in Anatolia, in the sanjak and 18 m. SE of Boli, on the N side of the Ala-dagh. It has several thermal baths.

PAOUM, a small island of the South Pacific, in the archipelago of the New Hebrides, between the islands of Ambrim and Apee, in S lat. 16° 30′, E long. 170° 28′ 45″. It presents from one point of view the appearance of two distinct islands.

PAOU-NING-HEEN, a district and town of China, in the prov. of Yun-nan and div. of Kwang-nan-fu.

PAOU-NING-FU, a division and town of China, in the prov. of Sze-chuen. The div. comprises 9 districts. The town is 135 m. NE of Ching-tu-fu, on the l. bank of the Kia-ling-keang, at the junction of the Tom-ho, in N lat. 31° 32′ 24″, and E long. 105° 58′ 30″. It is small but well-built, and is advantageously situated for trade. The surrounding country is mountainous. The musk cat is common in the locality.

PAOU-SHAN, a district and town of China, in the prov. of Keang-su and div. of Tae-tsang-chu.

PAOU-SHAN-HEEN, a district and town of China, in the prov. of Yun-nan and div. of Yung-chang-fu.

PAOU-TE-HEEN, a district and town of China, in the prov. of Chih-le and div. of Shunteen-fu, 54 m. ESE of Pe-king, in N lat. 39° 45′, and E long. 117° 20′.

PAOU-THYNE, or Heugha, a river of British Indo-China, which separates the prov. of Yé from that of Tavoy, and throws itself into the gulf of Bengal, to the SE of that of Martaban. The tide extends to the distance of about 21 m. above the mouth of this river.

PAOU-TIH-CHU, a division and town of China, in the prov. of Shan-se. The div. comprises 1 district. The town is 135 m. NW of Tae-yuen-fu, near the l. bank of the Hwang-ho, in N lat. 39° 4′ 44″, and E long. 110° 48′ 30″. It is very irregularly built, on the summit of a steep mountain, and is enclosed by a wall constructed partly of brick and partly of stone.

PAOU-TING-FU, a division and town of China, in the prov. of Chih-le. The div. comprises 17 districts. The town is 90 m. SSW of Pe-king, in N lat. 38° 53′, and E long. 115° 35′ 59″. This town ranks next to the capital, and is the residence of the viceroy. The district in which it is situated is one of the most fertile in China.

PAOU-TING-HEEN, a district and town of China, in the prov. of Chih-le and div. of Shun-teen-fu, 66 m. S of Pe-king, in N lat. 39° 2′, and E long. 116° 25′.

PAOU-TSING-HEEN, a district and town of China, in the prov. of Hoo-nan and div. of Yung-shun-fu, in N lat. 28° 45′, and E long. 109° 31′.

PAPA, a headland of Greece, on the NW coast of the Morea, at the entrance to the gulf of Patras, in N lat. 38° 13′, E long. 21° 25′. It is the *Araxum Promontorium* of the ancients.—Also a town of Hungary, in the circle beyond the Danube, comitat and 29 m. NW of Veszprim, on the l. bank of the Tapolcza, an affluent of the Marczal. Pop. 13,540, of whom 2,672 are Jews. It contains a fine Catholic church.

PAPADULA, a name borne by two small rocky islets off the coast of Asiatic Turkey, near the port of Kelindri, in N lat. 36° 7′.

PAPAGALLO, a river of Mexico, which runs into the Pacific ocean, 18 m. SE of Acapulco.

PAPAGAYO (Gulf of), a gulf on the W side of the isthmus of Nicaragua, to the W of the lake of Nicaragua, from which it is separated by a narrow neck of land.

PAPAGAYO (Point), the S extremity of the island of Lancerota, in the Canary group, in N lat. 28° 51′, and E long. 18° 21′.

PAPAGAYOS, a group of small islets off the coast of Brazil, in N lat. 22° 50′.

PAPAKERRY, a river of Hindostan, which rises to the NE of Ballapur, in Mysore, and joins the Pennar, on the r. bank, after a NNE course of 120 m.

THE PAPAL STATES,

A district of Central Europe, comprising the dominions of the Pope, the Stato della Chiesa, or States of the Church, as it is commonly designated. It is a connected country of Central Italy, principally comprised between the parallels of 40° and 45° N, having only two insulated districts,—the duchy of Benevento, within the limits of the kingdom of Naples, and the principality of Ponte-Corvo, which is also surrounded by Neapolitan territory. The boundaries on the NW are the Lombardo-Ven-

etian states, from which it is separated by the Po; on the NE is the Adriatic; on the SE the kingdom of Naples; on the SW the Mediterranean, or, as it is called here, the Tyrrhenian or Tuscan sea; and on the W the grand-duchy of Tuscany, and the duchy of Modena. From the mouth of the Po on the NE, to Monte-Circio on the SW, the Papal states extend 260 m.; their greatest breadth from W to E is 95 m; in some parts it is only 20 m. Their coast line extends along the Adriatic from the Po to the Tronto, 175 m., and 120 m. along that of the Mediterranean. Liechtenstern calculated their superficial extent so low as 670 German sq. m., and Crome at 715. Balbi assigns to them a superficies of 17,000 British sq. m.; a very recent admeasurement estimated the area at 18,117 geog. sq. m. The States of the Church have remained nearly as they were settled by article 103 of the treaty of Vienna. That article restored to the Holy see the Marshes, with Camarino and their dependencies, also the duchy of Benevento and the principality of Ponte-Corvo. In virtue of the same article, the Holy see retook possession of the legations of Ravenna, Bologna, and Ferrara, saving, however, that part of Ferrara situated on the l. bank of the Po, which Austria gave to herself, as well as the right of garrisoning the forts of Ferrara and Comacchio. The protest made by the Pontifical government in favour of its ancient possessions has hitherto remained a dead letter. In 1816 a census of the pop. gave 2,354,719 souls; in 1835, the pop. was returned at 2,732,036. In 1848, during the revolutionary regime, the following statement of the population of the different states, and the number of representative deputies assigned to each by the new constitution was officially issued:—

	Pop.	Deputies.
Bologna,	350,588	12
Ferrara,	219,109	7
Ravenna,	172,595	6
Forli,	202,546	7
Total for the legations,		—32
Urbino-et-Pesaro,	235,386	8
Ancona,	167,117	6
Macerata,	233,004	8
Fermo,	104,003	3
Ascoli,	83,980	3
Camerino,	37,705	1
Total for the marshes,		—29
Perugia,	216,587	7
Orvieto,	25,253	1
Spoleto,	126,360	4
Rieti,	69,755	2
Total for Umbria,		—14
Viterbo,	123,874	4
Civita-Vecchia,	24,700	1
Roma,	171,380	6
Comarca,	142,894	5
Frosinone,	142,234	5
Velletri,	58,313	2
Total for Rome and comarca,		—23
Benevento,	22,422	1
Total number of deputies,		—99
Aggregate pop.,	2,929,807	

Physical features.] The States of the Church compose a mountainous country, having any large extent of level country only in the N towards the Po, and in the SE towards the mouth of the Tiber. The mountains belong to the Apennines, and are as barren as those of Tuscany and the Genoese dominions, but much higher. Their highest points are the Velino to the NW of Rome, and the Monte-della-Sibilla on the boundaries of Abruzzo. The principal ridge of the Apennines, which intersects the Papal territories nearly in their centre, is granite, upon which lie mica, schist, and in some instances gneiss; the lateral branches are partly calcareous, partly volcanic tufa, basalt, and lava. In the large valleys which spread between the mountain-ridges, the whole fertility of an Italian soil and climate is displayed. The northern plain between the Po, the Apennines, and the Adriatic, resembles the plain of Lombardy. It includes the marshy district of the Valle-di-Comacchio. The Campagna-di-Roma, or plain of Rome, is a continuation of the Maremma of Sienna, but is interrupted by the vanguards of the Apennines. What is properly called the plain of Rome, begins at the foot of the mountains of Viterbo, and stretches to the boundaries of Naples, exhibiting an undulated surface. The summits of the mountains are barren, their declivities and glens are fertile, but there is no great extent of forest-land, or of timber. Along the level coast pestilential swamps frequently overflown by the sea occur. Here, along the arid plains, the traveller journeys often many miles without encountering a human being; extensive wastes variegated by bare swellings of earth sprinkled with a few wretched shrubs, alone meet his eyes; for the least sign of life he looks in vain; perhaps a solitary patch of cultivated ground at a distance, serving by contrast only to increase the horrors of the scene, is the sole proof that man has not entirely quitted even this land of death. Towards the SE the plain declines pretty rapidly. The Astura, the Amiseno, and other small rivers form the Pontine marshes, which stretch from the mouth of the Astura to Terracina, and of which the ancient Cæsars and the popes of modern Rome have often but in vain attempted the draining. Pius VI., indeed, succeeded in draining and putting parts of them into cultivation at great expense, and a high road has been established through them; but the air continues unhealthy, and the unwholesome influence of the swamps still spreads over all the surrounding country.

Rivers and lakes.] The Mediterranean washes the SW coasts of the States of the Church from Montalto to Terracina, and the Adriatic from Po-di-Primaro to Tronto; there are no large bays, but good harbours exist at Civita-Vecchia and at Ancona. The Mediterranean receives the Tiber, the Fiora, the Palidoro, and the Amiseno. Into the Adriatic fall the Po with its different arms, the Mentone, the Savio, the Uso,—a small coasting-river in Forli, remarkable for having been by a papal decision in 1756 declared to be the famous *Rubicon*, though the inhabitants of Cesana believe the Pisciatella to be the true Rubicon, — the Chienti, the Tenna, and the Tronto. The Po is the largest river, but the Tiber is the most celebrated. See articles Po and Tiber. —There are several navigable canals, of which those of Bologna, Cento, and Imola, are the most remarkable.—Of inland lakes, the largest is that of Perugia or Trasimeno, famous for Hannibal's victory over the Romans. The other principal lakes are the Lago-di-Bolsena, formerly called *Vulsinius;* the Lago-di-Bracciano, formerly called *Sabatinus;* the charming lake of Albano; the Lago-di-Nemi; the lakes of Fogliana, Monaco, Crapolace, and Saressa in the Pontine marshes; and the extensive Valli-di-Comacchio, which is rather a swamp into which the sea flows than a lake, but is remarkable for the quantity of fish it contains. — There are numerous mineral springs, among which those at Rome, the warm bath at Bracciano, the Bagni-di-Staliano, and the springs at Viterbo, are the most remarkable.

Climate.] The climate of the Papal states is very mild, and mainly belongs to the second Italian region: the Apennines are, however, covered here with snow from October to April, and the orange does not flourish in the legations N of the Apennines. The heat is softened by the sea-breeze; but the sirocco is felt on the coasts of the Mediterranean. In the Maremma near the Mediterranean, particularly in the neighbourhood of the Pontine marshes, pestilential exhalations spread fevers and ague, which is also the case in the neighbourhood of the Po, and over the whole

plain of Rimini. See articles CAMPAGNA and MAREMMA.

Agriculture and productions.] Agriculture is carried on in the same manner here as in the rest of Italy: the lands are in the hands of great proprietors, and are either split into small farms, or cultivated in large estates by factors. But the activity of Lombardy and Tuscany is only found in the plain of the Po; the rest of the country is quite neglected, for the Romans are even more lazy than their northern neighbours, though five-sevenths of the whole pop. depend on agriculture. Beans are a common article of food; in the marsh of Ancona onions are reared in immense quantities; vegetables and melons are abundant; saffron and soda are exported; hemp is a staple-ware of Bologna; olives prosper everywhere, but the oil is not well prepared; tobacco is grown in several places; and the sugar-cane, indigo, and cotton, are cultivated near Terracina. The best wine is raised at Montefiascone, Orvieto, and Monte-Cavo. The plain of Rome produces oranges and lemons which are considered the best in Italy, pomegranates, almonds, figs, chestnuts, and pistachio-nuts; laurel and myrtle adorn the groves; lilies, narcissi, carnations and other flowers cover the meadows; and where nothing else will prosper, or has got possession of the soil, the oleander, rosemary, and cistus grow abundantly. The Apennines produce almond, fig, and chestnut-trees, and the forests of oaks and firs in which the blow of an axe has never been heard. In the forest of Terracina the cork-tree is found, which is rare in Italy. Horses are numerous, but little is done to improve the breed. On the mountains, asses and mules are generally used. The oxen are very fine and employed in agriculture; cows are also numerous, on some large estates 2,000 are kept only for their calves, the milk being of no value. Sheep are extensively reared on the coasts of the Mediterranean. They are of two species: the *Negretti* is a small and lively breed, with short legs, and a coarse wool of which the frocks of all the orders of mendicants, and the coats of shepherds, postillions and coachmen, are usually made. The Pouille has long legs, long hanging ears, and a fleece of snowy whiteness, and as fine as that of the Aragon breed. About the middle of May these sheep are driven from the plains of Rome to the mountains of Norcia and Abruzzo, whence they return in October. Goats are numerous; herds of swine, sometimes amounting to 2,000 in number, are kept on the large estates of the Campagna, where they run about half-wild in the forests.—Alum mines are wrought at Tolfa; and about 4,000,000 lbs. of sulphur are raised. Iron ore is abundant but little wrought. From 70,000,000 to 80,000,000 lbs. of salt are annually made, of which one-half is exported. Fishing might be rendered very productive if it was carried on with more activity and industry, for the Adriatic abounds in fish, and the Mediterranean also; and fish to the value of 1,500,000 scudi are annually imported to supply the enormous consumption occasioned by 160 fast days. Bees are extensively kept and honey is exported; but there is not sufficient wax produced for the enormous consumption of the churches. The climate is very favourable to the silk-worm, and the mulberry is extensively planted. The silk of Fossombrone is thought to be the finest in Europe; that of Bologna is also very good. Gall-nuts and cantharides are objects of exportation.—The present pope has distinguished himself by his efforts to improve the agricultural resources of his territories. At an early period of his pontificate, he called together at the Quirinal palace a numerous assembly of the principal landowners of the Roman territory, who chiefly held in mortmain of the chapter of St. Peter, and in a vigorous allocution told them that he would no longer tolerate individual neglect in allowing so many broad acres to remain unproductive, and so many peasantry to remain unemployed; he gave them notice that a vigilant eye would be kept on the management of the gigantic territorial districts confided to their care; denied that they might do as they liked with their own while there existed hands unemployed and mouths unfed within the boundary of their estates; told them that if he found labourers in want of work on their properties he would himself find occupation for them at the proprietors' expense; and finally dismissed the astonished feudal lords with a new, but firm, impression that duties as well as rights formed part of their landed inheritance. To understand the full value of this bold step on the part of Pius IX., besides exhibiting him as inclined at that period of his fortunes, to rely on the support of the people alone, without reference to the suffrages of an effete aristocracy, it is necessary to bear in mind that, as already stated, five-sevenths of the whole pop. depend on agriculture, which forms the real resources of the kingdom. Among nearly 3,000,000 of inhabitants, if the produce of the soil were equally distributed, each native of the Papal dominions would be entitled to exactly 750 lbs. weight of good available food. The annual

Pastoral and grazing produce amounts to	350,000,000 lbs.
Grain of all sorts, rice, vegetables „	1,900,000,000 lbs.
Total lbs.	2,250,000,000

Now the surface of the country, hill and plain, has been ascertained to present, in the form of cultivated ground, an area of 16,071 sq. m.; while there remains in a state of neglect, though susceptible of culture, an extent of 1,315 sq. m., in addition to only 731 sq. m. quite incapable of improvement; presenting a total of 18,117 sq. m.

Manufactures and Commerce.] The existing manufactures in the Papal states merely supply the home-consumption. Woollen fabrics are the principal, but their total yearly value does not exceed 300,000 scudi. Silk-weaving is carried on at Bologna, though not to the same extent as formerly; other articles of manufacture are broad-cloths, paper, leather, alum, vitriol, sulphur, cords, plate, artificial flowers, and stone-ware. The most flourishing branch of manufacture as regards exportation, is the refining of sulphur. The Papal dominions possess two good harbours on two different seas, and more might easily be established; nevertheless there is no active commerce, and little navigation. Commerce is mostly carried on by foreigners. The Tiber and the Po are the only navigable rivers. The free navigation of the Po has been secured by treaty of 3d July 1849. The roads, with the exception of those which lead to Rome and Naples, are very bad. A system of railroads has been projected, to consist of six main lines: viz.—1st, from Rome to the frontiers of Naples; 2d, from Rome to Civita-Vecchia; 3d, from Civita-Vecchia to the confines of Tuscany; 4th, from Bologna to the frontiers of Tuscany; 5th, from Bologna to Ferrara; and 6th, from Forli to Ravenna. These lines were to be executed by the State in conjunction with private companies. Their total length was estimated at 1,025 kilometres or 620 m., and the expense at £10,500,000. These lines are yet only projections; but thanks to English capital and activity, the Romans may expect to traverse the Campagna per rail, at least to Frascate, before another year. The Pia-Latina line now forming will pass by Frascate, Albano, and Velletri, to Frosinone, where for the present it will end, the jealous fears of King Ferdinand having interposed to prevent its being brought any nearer to his frontier. The rapid transmission of

news however appears not to present so many objections as the rapid transmission of travellers, for the electro-telegraphic line from Naples to Rome is now complete, and the magic wires have actually entered the Eternal city at the Lateran gate, and stretch across the ample piazza to the staircase of Pontius Pilate. The communication with Tuscany is less advanced, and the whole of the interior arrangements are yet to be made.

Inhabitants.] With the exception of about 15,000 Jews living at Rome and Ancona, the mass of the inhabitants of the Papal dominions are Italians and descendants of those Romans who once governed the whole civilized world; the modern Romans possess lively feelings often rising to enthusiasm, a luxuriant fancy, and a penetrating understanding; they are irritable and passionate, susceptible to grandeur and beauty, and generally possess an extraordinary talent for music. Even the lowest classes have little of that rudeness, ignorance, and heaviness, which are so often seen in northern nations; they are cheerful and gay like the sky and the face of nature around them, which everywhere invites to enjoyment. Such a nation seems created to occupy a high station; but if their happier qualities have been repressed or ill-directed, and what was virtue in the fathers has become vice in the children; an irresistible inclination to idleness and pleasure is prevalent among all classes, and to this is often joined an unbounded jealousy and vindictive temper, prompt to seek satisfaction even at the dagger's point. The pomp and ceremony of the Roman church seem almost necessary to a people who feel only through the medium of their eyes, and who are rarely devout but when surrounded by glare and magnificence. The spirit of military idleness which the laws of Romulus rendered sacred, is still maintained in its fullest extent, though under another form, and the diversions of the people continue to be necessities for which the State must provide. 'Bread and sports' is still the watchword of the Romans. From the game called *mora*, and the exercise of quoits and foot-ball, both favourite diversions among the ancient Romans, to horse-racing, and wading through the inundated Piazza-Navona in the dog-days—from the festivities of the vintage to the Saturnalian carnival—from the fire-works of the castle of St. Angelo to the illuminated cupola of St. Peter's,—all is pleasure and amusement. The opera is the favourite recreation of the well-educated class of the Italians, and particularly of the Romans. It is the policy of all despotisms, to encourage the enervating arts, and to turn, if possible, the energies of youth into the voluptuous paths and mazes of elegant sensuality. 'Motus docere gaudet Ionicos,' and music has effectually done for Italy what tobacco did for the Turks. Ever since the introduction of operas here, and chibuks there, all energy has departed from the children of Dante, as well as from the followers of the prophet. The old Saracen sword was left to rust in the scabbard, to be replaced by the peaceful pipe, and the war-cry of the Viscontis, the Gonzagas, old Dandola, and old Doria, has been superseded by the modern modulations of Signor Squallini, late from the Scala or the Pergola. It is pitiful to see the young nobles of this once valorous land, totally absorbed, day and night, in the frivolities of the gamut." The Romans delight in *conversazioni*, and in the coffee-houses the public journals are read with the utmost eagerness. Their language is not so pure as that of Florence; but their pronunciation is much more harmonious.

Religion, &c.] The Roman Catholic church is established here in its greatest splendour. At the head of the ecclesiastical establishment stand the pope and the college of cardinals. The *cardinal vicarius* who is at the same time bishop of Rome, and the *cardinal pœnitentiarus* who issues all dispensations and absolutions, are both important officers. Besides the college of cardinals, there are 6 archbishops and not less than 72 bishoprics! Innumerable convents—of which the greater part had been abolished during the French domination—have been re-established. The training of the future priest is begun early enough. "Persons intended for the priesthood," says Mr. Vicary, "are dedicated to its service from childhood; their habits are thus early formed, and, by a long and rigorous education they acquire the power of parting with every consideration, and place their pleasures and their hopes in the profession to which they look forward. The innocent recreations, intended by nature as an exercise whereby body and mind receive equal accessions of strength, are pastimes of the world, and must not be shared by the embryo priest. From the earliest years, also, they are equipped in complete ecclesiastical dress, they are perfect parish priests in miniature, with the black flowing robe, the slouched hat, and shoes adorned with white buckles. You meet them of various sizes, from the boy 'just breeched' to the youth entering his twentieth year. It is wonderful how these children have acquired, even in their features and gait, the gravity of their order. As they pass you in the strada or piazza, from the air of dignity they assume and the look of consequence they bear, you can scarcely refrain from believing that they have not just concluded some service, or are hastening to their clerical duties." The different religious orders are immensely rich.—The number of universities, of which there were 10 formerly, has been reduced to 3, which exist at Rome, Bologna, and Perugia. There are several learned societies and academies, and a considerable number of public libraries. Printing-offices are numerous; that of the Propaganda has done much to advance the knowledge of Oriental languages. It has ever been a lamentable custom with the papal government to grant an employment rather with a view of serving the individual employed than of having the duties of the office satisfactorily performed, and although the Vatican was once excepted from this rule, it appears to be no longer a department sacred to literary distinction, if we may judge by the appointment of an obscure abate to the post so honourably occupied in the last cent. by Garampi, Giovenazzi, Gaetano Marini, and Assemanni, and in our own times by the astounding linguist Mezzofanti, recently deceased, and the learned Cardinal Mai, the chief and perhaps only literary character amongst the members of the sacred college. Rome is still the school of fine arts for the whole world. The greater part of the landed property is in the hands of the clergy, who are divided into regular and secular clergy. The former are very rich; but the latter, with the exception of the higher ranks, are poor and uninfluential. The clergy govern the state, and fill all the higher offices. The nobility are rich, and the higher classes enjoy great privileges; the citizens are poor, and the peasants are oppressed and miserable. The nature and tenets of the Roman Catholic religion are too well-known to require any detail from us. The machinery provided for keeping up the influence of Rome throughout its wide spiritual domains is thus described and commented on by Mr. Vicary: "The college of the Propagation of the Faith is on an extensive scale. Its front extends towards the Piazza-di-Spagna. In the construction, accommodation has been consulted rather than ornament. Here there are professors of almost all languages in which young men are instructed for the

ministry, and sent upon foreign missions. The wealth of this college is unbounded; and it is all expended for the purpose of increasing the confines of the church. A cardinal resides in the house, and is prefect or president, with a long string of officers under him. The scholars vary from 200 to 400, and are of all nations. I have seen Jews of Asia Minor, Africans, and even a Chinese, in the academical dress,—a long gown with a red border. I attended a rehearsal, which takes place upon every Epiphany, in the theatre. The youths had each a written subject, which they in their turn read aloud to the audience. The number of languages, to which some dialects were, however, added, was 49. Arabic, Persian, Chinese, Hebrew, Irish, were among the number. They acquitted themselves well, and showed how perfect is that system of education which is pursued in the establishment. When they are complete masters of the language, and have received orders, they proceed upon their mission; and, as they are generally accomplished men, they are no doubt successful. This college has ever been a favourite of the popes, and the great engine of conversion. It was established for the very purpose of supplying a superior class of ministers, not so much to combat the positions of the reformers, as to counterbalance the inroads they have made upon the church, by fresh accessions in other lands. Hence, India and the Pacific are supplied from this source; and from their knowledge of the tongues of the people to whom they are sent, joined also to an acquaintance with their character, we cannot be surprised if they are favourably received, and that the cause they have in hand progresses. I am surprised that we have not taken a leaf from their book, and established a similar institution, and for a similar purpose." Thus far Mr. Vicary: but there is force in the remark of one of his reviewers, that "ecclesiastics trained from infancy as above described cannot fail to be deficient in the necessary robustness and versatility of character. Among civilised and educated nations the modern *elèves* of the Propaganda may do to keep within the pale of their church those who have been brought up in it, but with the exception of some bookish dreamers, and effeminate minds craving excitement, they have little chance with the pupils of any alien sect. Not thus were the missionaries trained who carried the Roman Catholic faith into Ethiopia, China, and the isles of ocean, before the Protestant churches had been awakened to the duty of 'teaching all nations.' The Xaviers, and other devoted teachers of this class, were men before they were priests—and they were all the better priests in consequence." Within these few years evening schools have been established for the instruction of the working classes of Rome. The founders of the system were two citizens, Michel Gigli, an advocate, and Giacomo Casoglio, a poor wood-engraver. The instruction given in these schools consists in reading, writing, arithmetic, and religious teaching; to each school an oratory is attached, in which the scholars collect on holydays for religious service, and for games of exercise and diversion. There are in Rome elementary schools besides, in which children are taught reading and writing, leaving them to follow religious duties in their parishes; but the children are scarcely able to handle the instruments of any occupation whatever before they leave the school, thus leaving their moral and intellectual education quite imperfect. Signor Morichini, in the preface to the regulations for the evening schools for artisans, states that there exist in Rome 55 of these schools for children; two pious schools, one of which directed by the fathers of the faith; 3 Christian schools and several parish schools, in all, 64. Supposing each to receive 60 individuals, the number of children frequenting schools in Rome would be 3,600. In 1839 a subscription was opened to found 4 schools for artisans, upon the system of Senors Gigli and Casoglio. In 1842 Duke Cæsar Cesarini founded himself a new evening school, contiguous to his palace, so that, adding to it the schools of Gigli and Casoglio, which contained 335 pupils, Rome had 8 evening schools, receiving 1,002 young workmen. The directors and masters serve gratuitously. The expenses for 6 of these schools, with three oratories, amounted to 1,118 crowns, from which, deducting 114 for the charges of the oratories, it results that each of the schools costs about 167 crowns.

Government.] The government of the Papal states is an elective monarchy. The pope, who has the legislative and executive power, is elected by the college of cardinals from amongst themselves. The number of cardinals is generally about 70—seldom more than 2 or 3 under or over that number. Of these the greater part are altogether insignificant and passive, and mere tools in the hands of a few active leaders, who are generally divided, when a conclave is held, into two factions or parties,—the one consisting of those who had held office in the time of the last pope,—the other of those who had been raised into consequence by his immediate predecessor: for as popes are generally elected in advanced life, their partisans survive them for a long time, and by experience and management, exercise an influence quite equal to that which belongs to the more recent possessors of authority. A third interest in conclaves—and often the most considerable of any—is that of the foreign cardinals, who represent the political views of the Catholic states to which they respectively belong. Since the middle of the 16th cent., when the overbearing supremacy of the holy see first began to be questioned, the Catholic powers have commonly insisted on the papal election being made on the principle of the balance of power,—and France, Spain, and Portugal, have always claimed and exercised the power of interposing with an absolute *veto* against any individual nomination. It is enough to exclude any candidate, that the representative of any of these powers shall announce *Il mio Re non vuole.* Austria substantially enjoys the same right, though it is not formally recognised. Since the time of Adrian VI., who was obtruded by Charles V., all the popes have been Italians. The cardinals are resolute not to give themselves a foreign master; and the states that must otherwise contend for the preference, are generally content with the compromise. The only other general principle seems to be, that the choice shall fall on one with talent enough to save the office from degradation and abuse, but not of that commanding genius which would defy control or disdain assistance. Constitutionally, the pope is a very absolute sovereign; but, in practice, he is generally only the head of an oligarchy. Being elected, the successor of St. Peter reigns and governs: but it must be admitted, that if his power be absolute in principle, there does not exist any government surrounded with more controlling power. In fact, the sacred college, whether met in consistory, presided over by the pope, or divided into numerous special congregations, decides on all spiritual and temporal matters belonging to the church. To speak of the latter only, they are submitted to civil congregations or boards, which are like the divisions of a great council of state attached to the different departments. Thus, there is the Congregation of Good government, the Consulting board, the Congregation of Rivers and Roads, the Study commission, the Congregation for auditing Public accounts, and revising Public administrations, &c. Each of these special councils is presided over by a member of the sacred college, and has specified powers. Over these councils there is the pope and his council of ministers. When the election is completed, the new elected pope is publicly proclaimed, and crowned with great solemnity with the triple crown, which is attached to a mitre, after which he takes possession of his episcopal church of the Lateran. His residence is at Rome, where he has two splendid palaces, the Vatican and Quirinal. He is obliged always to wear a particular kind of dress, and the ring of St. Peter. He calls himself *Servus Servorum*, and *Catholicæ Ecclesiæ episcopus;* and is addressed by the titles of 'Holiness' and 'Holy Father.' He has a numerous court. The cardinals are equal in rank, and have a particular dress, with a red hat. Their dignity is not accompanied by any revenue; but they are of course always in possession of rich benefices. They are named by the pope; but most of the Catholic powers have a right of presentation. The principal ministers of the pope are chosen from among them. Each cardinal, and consequently each pope, has to swear to certain articles, among which are the inalienability of all the benefices and lands of the Church considered as the dominions of St. Peter.—The *Giornale di Roma* of the 11th September 1850 publishes two of the long-expected organic laws promised by the *motu proprio* of his holiness of the 12th Sept., 1849. Both these laws are promulgated by Cardinal Antonelli in the name of the pope; one relates to the organization of the ministry, and the other establishes a council of state. By the former law all the branches of public administration are divided into 5 ministerial departments, viz.—the interior, grace and jus-

tice, finance, war, and, lastly, commerce, agriculture, manufactures, fine arts, and public works. This division, however, is declared not to be definitive, the number of ministers being liable to be increased or diminished by his holiness according to circumstances. Besides the titular ministers, his holiness may grant the title of minister of state, without special functions, to any person he may think deserving of the distinction. Every minister has a deputy to represent him in the management of his department. The relations of the Holy see with the other Powers are always and exclusively confided to a cardinal secretary-of-state, who is the organ of the sovereign for the promulgation of legislative acts, and to whom also belong all matters relating to treaties, protection of pontifical subjects, passports, naturalization, and legalization of foreign documents. The 5 ministers form a council-of-ministers, to which their deputies are not admitted. The cardinal secretary-of-state is president of the council-of-ministers. Each minister proposes to his holiness the laws and regulations he may think necessary in his department; and such proposals are discussed in the council-of-ministers. The minister of the interior presides over the internal administration of the state, provinces, and municipalities, and has control over the governors of provinces, the provincial councils, the magistrates and councils of communes, the direction of woods and forests, and the censorship of the press. The minister of grace and justice controls the tribunals of the state, judges, advocates, attorneys, and chancellors; he grants pardons and commutations of sentences in the name of his holiness, and regulates the discipline of the judicial order. The tribunals of ecclesiastical jurisdiction, however, depend from the cardinal secretary-of-state. The minister of finance has the direction of the property of the state, the mint, custom-house, public debt, stamp and registry duties, post-offices, and lotteries; the revenue force also is under his orders. The minister of commerce, agriculture, manufactures, fine arts, and public works has control over chambers and institutions of commerce, the exchange, brokers, mercantile navy, declarations of literary or manufactural property, weights and measures, agricultural institutes, fairs and markets, ancient and modern monuments, and public roads, canals, and bridges. The minister of war has the superintendence over the army, fortresses, arsenals, &c. All affairs of importance, to whatever department they belong, are to be discussed in the council-of-ministers. Those which have already received the papal sanction cannot be again discussed by the council without the special permission of his holiness. The council of ministers has the right of general control over all the ministerial departments. By the second law the council-of-state is composed of 9 ordinary and 6 extraordinary councillors. It is presided over by the cardinal secretary-of-state, and has a prelate for vice-president. The ordinary and extraordinary members must be at least 30 years of age, pontifical subjects, and in the exercise of their civil rights. The extraordinary councillors have no habitual duties; they are only called to the sittings in case of absence, or to increase the votes of the council in certain cases. The vice-president, ordinary and extraordinary councillors, the secretary, and the subaltern functionaries of the council-of-state are named by his holiness. No councillor of state can exercise the business of advocate or attorney. The council-of-state discusses matters relating to government or to administration, as well as to disputed affairs. It is divided into two sections: one for legislation and finance; the other for the interior. The former section takes cognizance of all matters belonging to finance and justice; the latter discusses all affairs relating to the other ministerial departments. The more important matters referred to the council-of-state consist of projects of new laws, the interpretation of existing ones, questions of competence of ministers, the examination of municipal laws and of the acts of provincial councils, and all affairs directly sent to the council-of-state by the pope. The power of the council-of-state in undisputed matters is merely consultative; its resolutions, whether taken in the general or in the sectional sittings, are considered as mere opinions. In all disputed matters of administration the council exercises the functions of a magistrate within the limits to be determined by a special regulation. The ministers may be present at the general and at the sectional sittings. When, at a general sitting, the cardinal president or the vice-president declares the discussion closed, the council immediately proceeds to the vote. Six councillors, 5 of whom must be ordinary, and either the president or vice-president, form a quorum. The sections cannot deliberate unless there be at least 3 councillors present, two of whom must be ordinary. All the members present sign the resolution or opinion which they have voted; it is then submitted by the president to the pope if the affair has been sent by him to the council; if not, it is submitted to the council of ministers, or to the competent minister, upon whose report the pope decides. The general sittings of the council-of-state take place once a-week; the sittings of the sections twice a-week. The cardinal president may convoke extraordinary sittings when he thinks proper. The ordinary councillors and the secretary have a fixed salary.

Provincial administration.] The territory of the States of the Church is divided into 20 provinces. under the appellations of *comarca*, legations, and delegations, as follows:—First, the comarca or province of Rome, and the commissariat of Loretto. Second, the 6 legations of Bologna, Ferrara, Ravenna, Forli, Urbino-et-Pesaro, and Velletri. Third, the 13 legations of Ancona, Ascoli, Benevento, Camerino, Civita-Vecchia, Fermo, Frosino, Macerato, Orvieto, Perugia, Rieti, Spoleto, and Viterbo. These provinces are administered by a legate, assisted in the 6 legations by councillors taken from among the more influential inhabitants. In these legations the legate is always to be selected from among the cardinals. The municipalities of Rome and Bologna are administered under a special organization.

Revenue.] The revenue of the Papal states is greatly diminished in comparison with those times when the pope received tithes from the whole Christian world. Balbi supposes it may amount to £1,237,000; but there is a considerable deficit, the expense always exceeding the revenue; and the debts are supposed to amount to nearly £25,000,000. A statement of the revenues and expenditure of the pontifical government was for the first time published in 1847. It appears by it that for the year 1846 the amount of the customs was £1,012,000. The total revenue amounted to £1,895,720. The actual expenditure amounted to £2,000,000, leaving a deficit of about £110,000. The following is a general statement of the receipt and expenditure of the pontifical states:

I. Receipt.	
1. Predial imposts, landed property, &c.,	3,280,000 cr.
2. Monopolies, customs, and taxes on consumption,	4,120,000
3. Stamps and registries,	550,000
4. Post-office,	250,000
5. Lotteries,	1,100,000
Total gross revenue,	9,300,000
Deduct expenses of administration	2,220,000
Nett revenue,	7,080,000
II. Expenses of Administration.	
1. Predial imposts, landed property, &c.,	760,000
2. Monopolies, customs, and taxes on consumption,	460,000
3. Stamps and registries,	90,000
4. Post-office,	150,000
5. Lotteries,	760,000
Total,	2,220,000
III State Expenses.	
1. Sacred palaces, sacred college, ecclesiastical congregations, and diplomatic body abroad,	500,000
2. Public debt,	2,680,000
3. Expenses of state government,	530,000
4. Justice and police,	920,000
5. Public instruction, fine arts, and commerce,	110,000
6. Charities, and acts of public beneficence,	280,000
7. Public works, cleaning & illuminating Rome,	580,000
8. Troops of the line and carabineers,	1,900,000
9. Other military charges, health and marine,	290,000
10. Public festivals, and extra expenses,	44,000
11. Reserve fund,	100,000
Total,	7,934,000

Military and Naval force.] The army consisted in 1840 of 9,300 infantry, of which 6,000 were natives, and 3,300 Swiss; 640 dragoons, 160 mounted chasseurs, 800 artillerymen, 1,700 gendarmes, 300 arquebusiers, 1,200 customhouse officers, and 80 men of the noble guard,—in all 14,600 men, not including a reserve of 6,000 men and 3,000 national guards for Rome and Bologna. The annual expense of keeping up this force was 1,756,029 Roman scudi, or about £380,000. The States of the Church are divided into 3 military divisions, those of Rome, Bologna, and Ancona. There is no navy; there were formerly a few galleys, but they have been destroyed. It is in contemplation to build a few small vessels of war.

Ancient or Roman history.] We have adverted to the origin of Rome in our general historical paragraph upon Italy. Rome was governed by kings for nearly two and a half centuries, until 509 B. C. Junius Brutus and Tarquinius Collatinus were placed

at the head of the new-created republic as first consuls in that year. Long wars with the Etrurians and Latins mark the beginning of this epoch; the people also maintained a perpetual struggle against the power of the patricians or Roman nobility, and at last obtained the appointment of tribunes to protect their rights. Nevertheless, a series of perpetual wars, during which in great necessities a dictator was placed for six months at the head of affairs, exhausted the resources of the common people, and reduced them to the situation of dependents upon their creditors the patricians. In 499 B. C. the laws of the Twelve Tables, which partly confirmed ancient customary laws, and partly introduced a constitution borrowed from the Greeks, were promulgated. The decemvirs or first magistrates were chosen only among the patricians, and were invested with dictatorial powers. The people at last, after many struggles, obtained political equality with their patrician brethren in 366 B. C., when it was decreed that one consul should be elected from among the patricians, and the other from the plebeians,—an arrangement which was afterwards extended to other offices. In 389 Rome, with the exception of the capitol, was sacked by the Gauls under Brennus. After the defeat of the invaders by Camillus, the Romans appeared at the head of the Italian tribes. A long struggle with the Samnites, which lasted for 50 years, at last terminated in favour of Rome, and rendered her the most powerful state in Italy. When the Romans sought to extend their dominions over Lower Italy, and attacked the Tarentines, they became involved for the first time in a war with a foreign king, Pyrrhus of Epirus, whom the Tarentines invited to their aid. Pyrrhus was twice victorious, at Pandosia and at Asculum; but was defeated in 275 at Benevento. After the conquest of Tarentum, the Romans next directed their views abroad, and towards Sicily. This brought on the first struggle with Carthage, which lasted 23 years, during which the Romans formed a navy and defeated the Carthaginians at sea B. C. 260. From this period the struggle between Rome and Carthage was a contest for the command of the Mediterranean. Hamilcar the Carthaginian general endeavoured to maintain possession of the eastern point of Sicily; but the naval victory of the Romans in 241 forced Carthage to make peace, and to yield Sicily and the neighbouring small islands to her rival. In 237 the Romans took possession of Sardinia; and in 227 Carthage became bound by treaty not to extend her possessions in Spain beyond the Ebro, and not to attack Saguntum which had formed an alliance with Rome. During this period Cisalpine Gaul also became a Roman province by conquest. In 218 a second war broke out between Rome and Carthage, which lasted 17 years. Hannibal, the general of the Carthaginians, conquered Saguntum, crossed the Pyrenees, marched through Gaul, and, scaling the Alps, descended upon the N of Italy, and won the battle of Cannæ; but whilst his army rested at Capua, the Romans collected their forces; and after several desperate struggles the Carthaginians were compelled to evacuate Italy. In 201 Hannibal lost the battle of Zama in Africa, and Carthage was forced upon a humiliating peace by which she lost all her possessions in Spain. The Romans also conquered part of Asia; but in becoming acquainted with the wealth and manners of the East, they laid the foundation of that national luxury which finally consumed the vitals of the state. By the conquest of Corinth, B. C. 146, the whole of Greece became a Roman province, and in the same year the ancient and powerful republic of Carthage was annihilated after the defeat of its last army, the city itself laid in ashes, and the whole state annexed to the Roman empire. The thirst for conquest had now become unappeasable at Rome, while internal contentions agitated the republic, and her leading generals struggled for the supreme power. Sylla was created perpetual dictator, which office he voluntarily resigned in B. C. 79; Pompey having completed the conquest of Spain, of Syria, and other parts of Asia, was honoured with a brilliant triumph at Rome in 61. Cæsar,—whose deep-laid plans were not then anticipated by any one,—returned from Lusitania in the year 60, and allied himself to Pompey and Crassus, persuading them that their common interest demanded this coalition. Cæsar having been named proconsul of Gallia, completed the entire subjection of the Gauls, and crossed over to Britain, a part of which he overran. In the meanwhile civil dissensions distracted the state, and led to those events in which Cæsar and Pompey played a leading part. After many struggles the fate of the latter was decided in the battle of Pharsalia, B. C. 48, and Cæsar was named dictator for ten years, with the title of Imperator. A strong party, however, headed by Brutus and Cassius, opposed his growing power; and he fell by the hands of conspirators in the senate-house. Another triumvirate was now formed against the republican party by Octavianus, Cæsar's adopted son, Antony, and Lepidus, and a new civil war arose. Brutus, Cassius, and the republicans, were defeated by Octavianus and Antony at Philippi; and the two victors afterwards contended between themselves for the dominion of the world, when Octavianus defeated Antony and his ally Cleopatra, in the battle of Actium, and made himself master of the republic. Octavianus accepted the title of Augustus, declining that of dictator; he left all the forms of the republic nominally subsisting, but united all the real power of the state in his own person. Augustus died A. D. 14, and was succeeded by his step-son Tiberius, who was at last strangled in his bed by his own favourites, in A. D. 37. His successor Caligula, too, was assassinated in 41. He was succeeded by Claudius, a weak old man, whose adopted son and successor, Nero, surpassed in tyranny and cruelty all his predecessors. He fell by the hands of one of his freed slaves, in 68. In the two succeeding years no fewer than four emperors assumed the supreme power; viz., Galba in January 68, Otho in January 69, and Vitellius in April 69; and Vespasian, who reigned from 69 to 79, and under whom tranquillity was re-established in the empire. Vespasian was succeeded by his son Titus, whose short reign from 79 to 81 was marked by justice, benevolence, and mildness. Under his brother Domitian, who succeeded him, all the despotism of Tiberius and Nero seemed to awake anew. He was strangled, and Nerva succeeded him, and reigned till 98. Trajan, one of the noblest princes who ever adorned a throne, reigned from 98 to 117. Successful in war, he united Dacia, Moldavia, Wallachia, and Transylvania to the empire, and also made Armenia a Roman dependency. His successor Hadrian, who reigned from 117 to 138, improved the internal institutions of the country; but the most happy times of Rome were under the reign of his two successors, Titus Antoninus Pius, and Marcus Aurelius Antoninus, which epoch lasted 42 years. From the close of this period we date the decay of the Roman empire. Marcus Aurelius's son, Commodus, proved himself a monster in cruelty. His successor Pertinax was an excellent man, but reigned too short a time to carry into effect his plans for the improvement of the empire. After his reign the imperial dignity was sold by the guards, and bought by Didius Julianus, who was superseded by Septimius Severus, who reigned from 193 to 211, and restored something like order to the empire. His son, Caracalla, proved another Nero. Heliogabalus reigned from 218 to 223. His successor, Alexander Severus, who reigned from 223 to 236, was a model of virtue in a degenerate age. Under Maximinus, who reigned from 236 to 238, the military despotism which had been fostered in the state reached its greatest height. From the death of this prince the empire gradually declined; Decius was defeated and slain by the Goths in 251, and Valerian defeated and taken prisoner by the Persians in 261; but in 272 Aurelian defeated the empress Zenobia and carried her captive to Rome. Constantine, who succeeded to the diadem of the Roman empire in 323, embraced the Christian religion. Under him the whole constitution of the state was changed, and the seat of empire transferred to Constantinople. Dissensions, however, again broke out, and the empire was several times divided and reunited, until, after the death of Theodosius, it was divided between his two sons, Arcadius and Honorius, of whom the latter received the western empire in 395. An epoch of exterior wars and internal disputes followed. In the reign of Maximus, Genseric plundered Rome in 455. Nine insignificant emperors succeeded Maximus till the entire dissolution of the empire under Romulus Augustulus in 476, when Odoacer, the chief of the Heruli, made himself master of Rome, and assumed the title of king of Italy. He was conquered by Theodoric, king of the Ostrogoths, of whom we have spoken in our general historical introduction to Italy.

Modern history.] When Narses, the general of Justinian, had conquered the Goths and their allies in 552, the central part of Italy was treated like a conquered province of the Eastern empire, and governed by an officer who had the title of *exarch*, and held his court at Ravenna. Aistolph, king of the Langobards, conquered Ravenna and the whole of the exarchate; but was forced by Pepin in 755 to relinquish it to Stephen, bishop of Rome. This donation was renewed by Charlemagne in 774. The policy of the popes in favouring the Normans in Lower Italy procured them the protection of these warriors. Under Gregory VII., in 1075, the power of the popes reached its greatest height. The crusades in 1096 favoured the policy of the Roman see, of which the power was also increased by inheriting the territory of the countess Matilda of Tuscany. To oppose the house of Hohenstaufen in Italy, the pope called the house of Anjou to the throne of Naples in 1265. Internal convulsions, excited by the boundless ambition of the popes and their vicious lives, forced them to transfer their court from Rome to Avignon, where it remained from 1360 to 1378. Avignon had been bought by Clement VI. from Joanna, queen of Naples and countess of Provence. The popes while at Avignon being wholly under the influence of the kings of France, were scarcely recognised by the Romans and Germans; but in 1378 the papal see was again re-established in Rome. The greatest pope of the 16th cent. was Leo X., who was elected in 1513. Julius II. acquired Bologna in 1513, and Ancona in 1532. Ravenna was taken from the Venetians; Ferrara in 1598 from Modena; and the last duke of Urbino left his states in 1626 to the pope. The temporal and spiritual power of the popes began to decline gradually from this date. Sextus V. by his politic administration retarded for a while the decay of the power of the popedom; but the prodigality and follies of his successors produced new evils and fresh civil dissensions. Clement XIV., a wise and liberal man, in 1773 abolished the order of the Jesuits. In 1783 Naples freed itself from the feudal obligations it had hitherto held towards the pope; and the emperor Joseph II. checked the influence and power of the priests in the Austrian dominions. The victories of the French in Italy forced the pope to yield, in the peace of Tolentino, Avignon to France, and Romagna, Bologna, and Ferrara, to the Cisalpine republic. A movement in Rome against the French in 1797 afforded a pretext for the taking of that city by the French troops, and the carrying away of Pius VI. as a prisoner to France. Pius VII. was enabled by the Austrians to resume possession of Rome on the 14th of March 1800. By the concordat made with Buonapate in 1801, the pope again lost part of his worldly power. In 1807 new disputes with France arose, in consequence of which Ancona, Urbino, Macerata, and Camerino, were incorporated with the kingdom of Italy; and in 1809 the whole papal dominions were seized and partly incorpo-

rated with France. A revenue of 2,000,000 francs was assigned to the pope, who was compelled to take up his residence in France, until the events of 1814 allowed his holiness to resume possession of the States of the Church. He was succeeded by Leo XI., who died in February 1829, and was succeeded by Pius VIII. The elevation of Pius IX. to the pontificate, in 1846, was at first attended with many auspicious omens. Cardinal Mastai Ferrati had just entered his fifty-fifth year when elected, an age in which the intellectual powers are full of vigour, and when ambition dominates in heroic minds. The new pontiff granted a general amnesty to political offenders, with few exceptions; and the reader may be surprised to hear that there were 2,000 victims incarcerated out of a population of only 3,000,000. He then dismissed the mercenary troops, and organized a national guard. His next measure was to appoint a permanent mixed council of civilians as well as ecclesiastics: all men of approved liberal sentiments. He abolished the cruel laws which oppressed the Jews, and remitted many oppressive imposts which distressed the people, particularly the duty on salt. Unhappily the revolutionary furor of 1848 was carried to excess in Rome, and Pius IX. was induced to flee to Gaeta, and from that town to address an appeal for support to the different Catholic powers of Europe. Austria and Naples gladly prepared to march upon Rome; while France hastened to anticipate their influence on Roman affairs by despatching a strong body of troops to Civita-Vecchia, whence General Oudinot ultimately marched upon and took possession of Rome. The results of this complication of affairs are thus summed up in a message of the French president: "Our arms have overthrown at Rome that turbulent demagogy which throughout the Italian peninsula had compromised the cause of true liberty, and our brave soldiers have had the signal honour of replacing Pope Pius IX. on the throne of St. Peter. The spirit of party will fail in obscuring this memorable deed, which will form a glorious page for France. The constant aim of our efforts has been to encourage the liberal and philanthropical intentions of the Holy Father; the pontifical power pursues the realization of the formulas contained in the *motu proprio* of the 2d of September 1849. Some of the organic laws have already been published, and those which are to complete the *ensemble* of the administrative and military organization in the States of the Church will not long be delayed. It is needless to say that our army, yet necessary for the maintenance of order at Rome, is equally so for our political influence, and which, having rendered itself illustrious by its courage, is no less admired for its discipline and its administration."

PAPALLACTA, a village of Ecuador, at the base of the E flank of the Andes, on the Coco, 60 m. ESE of Quito. It formerly possessed a considerable trade with the surrounding country.

PAPALOAPAN. See Alvarado.

PAPANDAJANG, a volcano in the W part of the island of Java, and prov. of Sukapura, 102 m. SE of Batavia. This volcano was previous to the eruption in 1772 one of the loftiest in the island. On that occasion it was considerably reduced in alt., and buried 40 villages with its debris, while 2,957 of the inhabitants of the surrounding district perished.

PAPANODIZIA. See Prinkipos.

PAPANTLA, a village of Mexico, in the state and 135 m. NW of Vera-Cruz, in a fine plain, watered by the Nautla. The adjacent woods abound with vanilla. About 6 m. from the village are some curious Aztec ruins.

PAPAS, a lake of New Grenada, at the SW extremity of the dep. of Cundinamarca, and in the prov. of Neiva, 36 m. SSE of Popayan. It is about 9 m. in length, and 3 m. in breadth at its widest part. The Magdalena issues from its E side.

PAPASQUIARO, a town of Mexico, in the state and 330 m. S of Chihuahua and 75 m. WNW of Durango. Pop. about 5,000.

PAPA-STOUR, one of the Shetland islands, forming the principal part of the p. of Walls. It lies on the S side of the entrance of St. Magnus bay, about 2 m. from Sandness. It is 2½ m. in length from SE to NW, and 1½ m. in breadth. Its soil is comparatively fertile. The pop. in 1841 was 382; in 1851, 359.

PAPA-STRONSAY, one of the Orkney islands, divided from the NE side of Stronsay by a channel from 2 to 4 furl. broad. It is about 3 m. in circuit. Pop. in 1841 and in 1851, 28.

PAPA-WESTRAY, one of the Orkney islands, 23 m. N of Kirkwall. It is 3½ m. in length from N to S, and 1 m. in breadth. Pop. in 1841, 340; in 1851, 371.

PAPAZLI, a town of Turkey in Europe, in Rumelia and sanj. of Sophia, 15 m. ENE of Philoppopoli, near the r. bank of the Maritza, between two branches of the Lark.

PAPENBERG. See Takabokousima.

PAPENBURG, a town of Hanover, in the gov. of Osnabruck, circle and 30 m. NNE of Meppen, and 27 m. SSE of Embden, in a marshy locality, on several canals, the principal of which joins the Ems on the r. bank, at the Drostersyhl. Pop. 3,620. It has two Catholic churches and three schools, and possesses extensive building-docks, manufactories of sail-cloth and cordage, several saw-mills, distilleries of brandy, and lime-kilns.

PAPENDRECHT, a town of Holland, in the prov. of S. Holland, arrond. and 12 m. W of Gorcum, cant. and 5 m. WNW of Sliedrecht, on the r. bank of the Merwede, a branch of the Meuse. Pop. 1,000.

PAPERVILLE, a village of Sullivan co., in the state of Tennessee, U. S., 309 m. E of Nashville, on a branch of Holston river.

PAPEY, a small island of the Atlantic, near the E coast of Iceland, in N lat. 64° 12′, and W long. 16° 30′.

PAPHOS. See Baffa.

PAPIMUAGEE, a lake of Lower Canada, 165 m. NE of lake St. John. The Belsiamitis issues from its SE extremity, and flows into the N side of the estuary of the St. Lawrence.

PAPINACHOIS, a river of Lower Canada, which flows SSW, and after a course of about 60 m., joins the Saguenay on the l. bank. It gives name to a tribe of Indians who inhabit the NE part of Lower Canada.

PAPMEZO, a village of Hungary, in the circle beyond the Theiss and comitat of Bihar, 10 m. NNW of Belényes, on the r. bank of the Hollada.

PAPO, a mountain of Upper Guinea, on the Gold coast, in the kingdom of Assin, near the l. bank of the Birrim, 19 m. NE of Cape Corse.

PAPOCZ, a town of Hungary, in the circle beyond the Danube and comitat of Eisenburg, on the Raab, 28 m. NE of Steinamanger, and 12 m. W of Marczalto. Pop. 760. It has a considerable trade in poultry. Tobacco is extensively reared in the environs.

PAPOUL (Saint), a commune and town of France, in the dep. of the Aude, cant. and 5 m. E of Castelnaudary, on the Limbe. Pop. 1,396. St. P. was originally an abbey, the foundation of which is attributed to Charlemagne; and of which it still possesses some remains.

PAPOUS. See New Guinea.

PAPOZZE, a village of Austrian Lombardy, in the prov. of Polesina, district and 6 m. SSW of Adria, and 15 m. ESE of Rovigo, on the l. bank of the Po. Pop. 2,283. It has a considerable trade in bread, grain, and cattle.

PAPPENHEIM, a town of Bavaria, the cap. of a seignory of the same name, in the circle of Middle Franconia, on the r. bank of the Altmühl, 32 m. SE of Anspach. Pop. 2,100. It has two castles, two Lutheran churches, a school and an hospital. Tape is its chief article of manufacture. The counts of P. were hereditary marshals of the German empire.

PAPRA, or Papara, a town of Burmah, on the N coast of the island of Junkceylon. A narrow strait by which the island is separated from the mainland bears the same name.

PAPROLZAN, a village of Prussia, in the prov. of Silesia, regency and 66 m. SE of Oppeln, circle and 7 m. NNE of Plesse, in a marshy locality. Pop. 289. It has extensive iron-works.

PAPSO-DERVEIN, a town of Turkey in Europe, in Rumelia, in the sanj. and 23 m. SSE of Monastir.

PAPUA. See New Guinea.

PAPUDO, a port of Chili, in the district and 30 m. NW of Quilota, and 39 m. N of Valparaiso, on the North Pacific, in N lat. 32° 31′ 15″, and W long. 71° 29′ 8″.

PAPWORTH-SAINT-AGNES, a parish partly in Cambridgeshire, partly in Hunts, 4½ m. NW of Caxton. Area 1,290 acres. Pop. in 1831, 106; in 1851, 151.

PAPWORTH-SAINT-EVERARD, a parish adjoining the above. Area 1,091 acres. Pop. in 1831, 107; in 1851, 126.

PAQUET BAY, a bay of the NE coast of Newfoundland, between capes Partridge and St. John. This is the most easterly point to which liberty of fishing is permitted to French vessels.

PARA, or Gram Para, the largest and most northerly of the provinces of Brazil, extending between the parallels of 4° 30′ N and 9° 40′ S, and between 45° 10′ and 72° 40′ W long.; and bounded on the N by Venezuela, from which it is to some extent separated by the Serras Tunahy and Pacaraina, and by English, Dutch, and French Guayana, the boundary lines of which are marked by the Serra-Tumucumac and the Oyapok river; on the E by the Atlantic, the Turyassu towards the prov. of Maranham, and the Uraguay towards that of Goyaz; on the S by the prov. of Mato-Grosso; and on the W by Peru, from which it is separated for some distance by the Javary, and by Ecuador. It has an area of about 950,000 sq. m. Pop. in 1840, 290,000, of whom 100,000 were Indians. With the exception of part of its N frontier, in which there are some mountains, its surface is generally flat. It is watered by the Amazon, by which it is intersected from W to E, and by its gigantic affluents, the principal of which are the Javary, the Jutay, the Jurna, Teffé, Coary, Purus, Madeira, Tapajos, and Xingu, on the r.; and on the l., the Yapura, the Rio Negro and its tributary, the Rio Branco, the Yatuna, the Paru, and the Anaurapara. These great rivers constitute a vast system of water-communication, offering facilities for the inland navigation of this large territory unequalled perhaps in the world. The main stream of the Amazon, 180 m. wide at its entrance, is navigable for large vessels more than 2,000 m. On the E it is watered by the Tocantins, the embouchure of which is separated from that of the Amazon by the island of Marajo. Several other islands stud the coast, the general character of which is low and marshy.—The climate is warm at all seasons of the year; but the heat is tempered by the morning and evening breezes which blow alternately from the land and the sea. The surface is to a great extent covered with trees of the most magnificent dimensions, and a variety of productions little known in the other provinces of the empire prove the soil to be of the richest description. Rice, manioc, millet, legumes, sugar, coffee, cotton, indigo, numerous varieties of fruit, some of them unknown in Europe, are here extensively cultivated. The cocoa-tree and the *pechurim*, the fruit of the latter of which is valued as forming a good substitute for the nutmeg, are also common. The fig and vine thrive in a few localities. The forests afford excellent timber, tan and dye-woods, oils, gums, and medicinal plants.—Domestic and wild animals, and birds of the species common to other parts of Brazil, are here to be met with in great numbers. The rivers and sea-coast abound with fish. Of the latter, one of the most remarkable is a large species locally named the *Peixe-Boy*, which yields considerable quantities of oil, and the flesh of which bears a close resemblance to veal. Turtles of enormous size are common; and a silk-worm, the cocoons of which are three times the size of those of the ordinary species, and of a fine yellow colour, occurs here on the orange trees.—The mineral productions of the prov. consist chiefly in silver, emeralds, crystal, granite, ochre, often approaching in colour to the finest vermillion, and white clay. In 1839 the total value of the imports of the prov. amounted to 1,559,338,000 reis = £389,834. Its exports at the same period, consisting chiefly of rice, dye-woods, timber, cacao, drugs, spices, and caoutchouc, were estimated at 1,236,837,000 reis. The bounties of Nature are unfortunately neutralised here by absurd fiscal and prohibitive duties, and the gov. of the prov. does not at present pay its expenses. The general revenue for 1844 was only £14,791, while the expenses amounted to £23,958.—The prov. returns 1 senator and 3 deputies to the Brazilian congress. Its provincial assembly consists of 28 members.—This province comprises—1st, the districts or comarcas of Para proper, viz.: Xingutania, Tapajonia, and Mundrucama; 2d, the Solimoes territory, comprising the districts of Purus, Coary, Teffe, Jurua, Intay, and Javari; and, 3d, Brazilian Guayana.—The chief town, named also Para, Para-de-Belêm, Belêm, or Santa-Maria-de-Belem, is situated in a fine plain, at the confluence of a river of the same name, with the estuary of the Tocantins—here also called the Para—at the confluence of the Guama, in a plain, 1,650 m. NNW of Rio-de-Janeiro, and 75 m. from the shore of the Atlantic, in S lat. 1° 28′, W long. 48° 22′. Pop. in 1840, 10,000. The streets are straight, and the chief ones paved. The houses, which are chiefly built of stone, are substantial and elegant. The principal buildings are the cathedral, the episcopal palace, and seminary formerly a Jesuit's college, and the governor's palace. It contains, besides numerous churches and chapels, several convents, a college, a normal school, an hospital, an arsenal, and a printing establishment; and possesses a botanic garden and several squares. The tide rises 11 ft. in the harbour, and affords depth for vessels of the largest size. Its trade, which is considerable, consists chiefly in rice, cacao, cotton, coffee, cloves, tapioca, chestnuts, caoutchouc, sarsaparilla, and isinglass.

PARA, a river of Russia, which rises 42 m. SE of Sapojok, in the gov. of Tambov; flows NW; and joins the Oka on the r. bank, at Chilovo, after a course of 90 m.

PARA (Rio). See Amazon.

PARABIAGO, a village of Austrian Lombardy, in the delegation and 15 m. WNW of Milan, district and 7 m. SSW of Saronno, on the r. bank of the Olona. Pop. 2,120. It has manufactories of silk.

PARABITA, a village of Naples, in the prov. of the Terra-d'Otranto, district and 12 m. E of Gallipoli, and 24 m. S of Lecce. Pop. 1,700. It has two convents.

PARACALE, a village and port of Luzon, on the NE coast, 135 m. ESE of Manilla.

PARACATU, a river of Brazil, in the prov. of Minas-Geraes, and comarca of Sabara. It descends under the name of the Rio-Escuro from the Serra-de-Tiririca, a little to the W of Paracatu-do-Principe; runs in a generally E direction; and throws itself into the São-Francisco, on the l. bank. See also Sabara.

PARACATU-DO-PRINCIPE, a town of Brazil, in the prov. of Minas-Geraes, and comarca of Sabara, 300 m. NNW of Villa-Rica, in an elevated and salubrious situation, on a river of the same name. Pop. 1,000. The streets are straight and well-paved; and it contains 2 handsome fountains, a parish church, 3 chapels, and a Latin school. The houses are built of wood and earth. In the environs are mines of gold and diamonds.

PARACELS, an assemblage of islands and rocks in the China sea, extending between 15° 46′ and 17° 8′ N lat., and between 111° 10′ and 112° 44′ E long., 150 m. SE of Haïnau, and at about an equal distance from the E coast of Cochin-China. They form several groups, the principal of which are those of Discovery, Amphitrite, and Voadore. This archipelago is politically considered a dependency of the Annam empire. It abounds with turtle and fish, and some of the larger islands are covered with wood. It is resorted to for fishing by the Cochin-Chinese.

PARACLET (Le), a hamlet of France, in the dep. of the Aube, cant. and 3 m. ESE of Nogent-sur-Seine, and commune of Saint Aubin, on the Ardusson. Pop. 15. It has an extensive manufactory of files and of steel. It contains the ruins of the monastery founded by Abelard in the 12th cent., and of which Heloise was abbess for 32 years.

PARACLIFTA, a village of Sevier co., in the state of Arkansas, U. S., 142 m. SW by W of Little Rock, on the N side of Little river, a branch of Red river.

PARACOMBE, a parish of Devon, 11 m. NE by N of Barnstaple. Area 4,363 acres. Pop. in 1831, 409; in 1851, 460.

PARACORIO, a town of Naples, in the prov. of Calabria-Ultra, district and 12 m. SE of Palmi, cant. and 3 m. ESE of Sinopoli-Superiore, pleasantly situated on a hill. Pop. 850.

PARACUELLOS, a town of Spain, in the prov. and 42 m. SE of Cuenca, on the summit of a mountain. Pop. 640. It has a considerable trade in household linen of local manufacture.

PARACUELOS, a town of Spain, in the prov. and 18 m. NW of Guadalaxara, and 20 m. N of Alcala-de-Henares. Pop. 500. It has a Franciscan convent.

PARACULLOS-DE-XILOCA, a village of Spain, in Aragon, in the prov. and 3 m. S of Calatayud, on the r. bank of the Xiloca, at the foot of a calcareous mountain. Pop. 886. It has several thermal springs. Gypsum is quarried in the environs.

PARAD, a village of Hungary, in the comitat and 26 m. NNW of Hevest, 16 m. W of Erlau, at the foot of the Matra mountains, and on an affluent of the Tarna. It has mineral baths, and mines of gold and silver.

PARADA-DO-BISPO, a town of Portugal, in the prov. of Beira, comarca and 6 m. ENE of Lamego, near the confluence of the Tavora and Douro.

PARADAS, a town of Spain, in Andalusia, in the prov. and 24 m. ESE of Seville, and 3 m. WSW of Marchena. It derives its name from the castle of Las Paradas, situated in its centre, and belonging to the dukes of Arcos. Pop., chiefly agricultural and pastoral, 4,320. It has an hospital.

PARADE (La), a commune and town of France, in the dep. of the Lot-et-Garonne, cant. and 3 m. WSW of Castelmoron, and 17 m. SE of Marmande, on a height, on the r. bank of the Lot. Pop. 1,243.

PARADELLA, a town of Portugal, in the prov. of Beira, comarca and 33 m. N of Trancoso, and 11 m. W of San-João-da-Pasqueira.

PARADILLA, a village of Spain, in the prov. and 9 m. W of Palencia. Pop. 90.

PARADINAS, a town of Spain, in the prov. and 21 m. ESE of Zamora, and 27 m. NE of Salamanca, on the l. bank of the Guarenna. Pop. 264.

PARADISE, a village of Strasburg township, Lancaster co., in the state of Pennsylvania, U. S., 52 m. W of Philadelphia. Pop. in 1840, 125.—Also a township of York co., in the same state. Pop. 2,117.—Also a village of Cole co., in the state of Illinois, 81 m. E of Springfield, near the head of Little Wabash river.

PARADISO, a village and port on the E coast of the island of Rhodes, 11 m. S of the town of Rhodes.

PARADOX LAKE, a lake in Essex co., in the state of New York, U. S. It is 4 m. long, and from a ½ m. to 1 m. broad.

PARAGOA. See Palawan.

PARAGUA, a river of Guayana, which rises on the N flank of the Sierra-Pacaraina; runs N, and then W; and joins the Caroni, on the l. bank, in N lat. 7° 5′, after a course of 250 m.

PARAGUANA, a peninsular prov. of Venezuela, in the dep. of Sulia, which stretches out into the Caribbean sea, to the NE of the gulf of Maracaybo. It is about 48 m. in length from SSW to NNE, and is intersected by the parallel of 12° N. An elevated mountain-ridge intersecting it longitudinally terminates in Cape-San-Roman. Its surface is chiefly occupied with pasture-grounds.

PARAGUASSU, a river of Brazil, in the prov. of Bahia, which descends from the E flank of the Serradas-Almas, and, running E, flows into the bay of Todos-los-Santos, after a course of 280 m. Its principal affluent is the Jacuhipe, on the l.

PARAGUAY, an inland state of South America, lying between the parallels of 24° and 27° 30′ S, about midway between the Atlantic and the Andes; and bounded on the N and E by Brazil, from which it is separated by the Xexuy, an affluent of the Paraguay, and the river Parana; on the SE, S, and W by the provinces of the Argentine confederation, from which it is separated by the Parana and the Paraguay; and on the NW by Bolivia. The country has an area of about 74,000 sq. m.; but appears never to have been otherwise than very scantily peopled; from 300,000 to 400,000 being the utmost limit of its pop. Its figure is compact, and is nearly circumscribed by the Parana and its tributary the Yajuari, and the Paraguay and Rio-Blanco. The Serra-Amambahy enters P. on the N from the Brazilian frontier, and sends off a branch towards the Paraguay, which terminates a little to the S of the city of Assumpcion; while another branch runs SSE, for some distance in a direction nearly parallel to the Parana, and then crosses that river, and runs on to join the mountains of Corrientes. These two branches of the Serra-Amambahy enclose the basin of the Tebiquariguazu, an affluent of the Paraguay, and the largest river which has its rise within the frontiers of P. The other streams which originate within the P. territory are the Haimbeguazu, the Ibiticuray, the Acaray, and the Monday, all affluents of the Parana; and the Carimbuti, an affluent of the Xexuy. The larger frontier-rivers, when swollen during the rainy season, overflow their banks, and inundate the adjacent country, often to the extent of several hundred miles; and after the inundations subside, these waters remain spread out into lakes of great superficial extent but of little depth, while large tracts which have been submerged are left dry, and present a soil of extreme fertility, enriched as it annually is by the depositions of the river.

Climate and productions.] The climate of P. is in general moist and temperate, though in some parts it is cold, and white frosts are common in July and August. All kinds of grain, beans, pease, potatoes, melons, cucumbers, and European vegetables, are early grown. There is a species of vine of which good wine is made; magueys, sugar-cane, and maize, from the latter of which the Indians make their favourite drink, are abundant; tobacco, and chinchona or Jesuit's bark, sarsaparilla, rhubarb, jalap, sassafras, guaiacum, dragon's blood, nux vomica, vanilla, and cacao, are abundant. Among the larger trees are the *timbabi*, supplying a fine yellow gum which is formed into beads and necklaces; the cedar, the *curi*

or pine, and the algarrobo or carob tree, which is here made to supply a species of bread. One of the most important vegetable productions is *matté*, or Paraguay tea, a plant which rises about a foot and a half high, with slender branches, and leaves something like those of senna. The gathering and preparing of this herb afford considerable employment. The operation consists in drying the leaves, which are scattered on shelves for the purpose over a fire, and are then put up into packages of from 7 to 8 arrobas of 25 lbs. each. There are two sorts of this leaf. The first, which is most esteemed, is that which is made of the tender part of the leaves; the other, or inferior sort, is made of the thick part. The consumption of this article, not only in P., but throughout the Argentine provinces, Peru, and Chili, is incredible. All drink two or three times in the course of the day, making an infusion of it like tea, with warm water and sugar. So indispensable is this species of Western tea that the mines would stand still if the owners were to neglect to supply the workmen with it. It has been calculated that 2,000,000 piastres worth of this herb is exported from P. every year. It is infused and made nearly in the same way as Chinese tea, excepting that the branches are used along with the leaves, and that it is drank out of the vessel it is made in through a silver or glass pipe, and as soon as possible after infusion. Its smell and colour are said to resemble and to be nearly as fine as that of the best Indian teas.—The pomegranate, peach, fig, lemon, and orange, flourish in P., as do the cocoa-nut and other palms. The native fruits are very numerous. Among them are the jujube, the *chanar*, the *yacani*, the *quabira* from which candles are made for the churches, the *quembe* yielding a delicious pulp, the *mammon* growing on the trunk of a tree and resembling a melon, the *tatay* having a fruit like the mulberry, the *alaba*, the *anguay* whose pips of a rich violet colour and triangular shape are used by Indian women for necklaces, the *tarumay* resembling the olive, the *molle* yielding a fragrant gum, the *bacoba*, banana, anana, and manioc. The cotton tree grows to a great size. The most ferocious animal is the jaguar or tiger, which often commits great havoc amongst the cattle. The puma or congar, called also the American lion, is a fierce animal, though not to be compared to the African lion; and the black bear is here large and ferocious, destroying the cattle whenever they are exposed to his ravages. The ant-bear is a very common animal, feeding principally on ants, which it catches by placing its long tongue on their nests. The tapir or river-cow, the capibara or water-pig, and various other amphibious animals, frequent the rivers of P.—The cassowary or American ostrich is the largest bird seen in the plains of P. It is remarkable for its immense size, fine plumage, and swift motion. There are several different species of humming-bird. Geese and other water-fowl abound in the lakes and along the shores of the great rivers. Goldfinches, nightingales, larks, green parrots, long-tailed parrots, and peacocks, enliven the forests; nor are there wanting ostriches and birds of prey, amongst which there is one called *tuca*, resembling the crow, but having a beak of singular length, and beautifully variegated with a distribution of red, yellow, and black streaks.—Mosquitoes and an innumerable variety of insects are the plague of this fine country, and infest both the waters and the land. Snakes, vipers, and scorpions are numerous. The boa constrictor haunts the moist places adjoining the rivers. The vampire bat, which, seizing on a person asleep, sucks the blood so as to endanger the life of its victims, occurs in many places.

Commerce.] The trade of P. consists in the export of its tea, tobacco, sugar, cotton, hides, tallow, wax, honey, cattle, horses, mules, wool, and leather. Hitherto, what little external commerce it has possessed has been chiefly carried on by the river Paraguay, the journey to Buenos Ayres by land being seldom performed excepting by couriers, who are obliged to wade and swim over rivers, and are exposed to the attacks of the wandering Indians. Even the navigation of the Paraguay itself has been impeded by them; the Payaguas tribe often collecting 60 or 70 canoes, with 5 or 6 men in each, who, armed only with long lances and clubs, would attack and carry any vessel unprovided with means of resistance. The whole territory is surrounded by native tribes equally inveterate and ferocious. On the W are the Tobas and Moscobies; on the S the Abipones; on the N the Guaycurus or Mbayas, and the Panaguas; the E alone is free from any immediate neighbours of this description, though on the distant mountains in this quarter called Yerva, are the Monteses, who give much trouble to the people employed in collecting *matte*, which grows spontaneously in their vicinity. P. is not a country adapted to the production of wheat, and must always rely on a foreign supply of breadstuffs, except Indian corn, which it produces very well. It has no manufactories, and must supply itself also from abroad with most of the articles of that class which its new wants and its vast resources will at the same time demand and enable it so easily to pay for. By treaty concluded on 15th July 1852, between Urquiza, then provisional director of the Argentine confederation, and Don C. A. Lopez, president of the republic of P., the river Parana was opened up by the confederation to the flag of P., and the Paraguay and its affluents, in like manner to the Argentine flag, and the P. government undertook to grant a port on the river Pilcomayo, as high up as possible to facilitate the commercial transit by land route to Bolivia. A writer in the *British Packet* remarks that "as regards commercial prospects, the amicable recognition of the political independence of the republic of P., and the consequent opening of our interior rivers to foreign flags, the right hand of fellowship and intercourse extended to Bolivia, and the convergence of Argentine interests in a national focus, cemented by reciprocal interests, and guaranteed by recognised rights, cannot fail to give a salutary and lasting impulse to the trade of the river Plate. In due course P. must become an important outlet for European manufactures; but after the fairy tales that have been told of its wealth and teeming population, we think there is a danger of its immediate importance, as a consumer of foreign products, being greatly overrated. As to primary necessities, the Paraguayans require nothing, as an isolated existence of more than 40 years clearly demonstrates; and a reasonable period must be allowed to foster, if not create, a taste for the fineries and luxuries that will doubtless follow in the course of their progressive advancement." Formerly all goods from Great Britain destined for the Argentine confederation, the republic of P., and even the S part of Brazil, were sent to Monte-Video or Buenos Ayres, and appear in the returns of the Board-of-Trade under the head of 'Shipments to the river Plate;' thence they were reshipped into smaller vessels, carrying the Argentine colours, but manned in general by French or Italian seamen, and thence ascended the rivers to where they were destined, bringing back country produce in return, which was again reshipped into larger vessels destined to Europe, at the ports of either Montevideo or Buenos-Ayres. A civil war, of course, interrupted even these communications. The value of the importations for 1852—a year of over-supply—was supposed to be about £80,000; the average

annual wants of the people was estimated at £60,000. All the other cities in the interior consumed a full proportion of British goods; and we know from official sources that, while in 1851, 100,000 tons of shipping was sufficient to convey the whole of the productions of Europe to Buenos Ayres, no less than 2,000 vessels, of an average of 36 tons each, or an aggregate of 72,000 tons, were employed from Buenos Ayres on the river coasting trade. See articles PARANA, and PLATA.

Towns and villages.] Since the dictatorship of Dr. Francia terminated, this country has been administratively divided into 8 departments, and 28 municipalities. The number of Indian villages, originally founded by the missionaries, is very considerable. They generally consist of stone or mud houses covered with tiles, having a large square in which are the priest's house and a good church, the number of inhabitants in each being seldom less than 600, and often exceeding 2,000. The only towns of importance are the capital Assumpcion, Villa-Rica, and Concepcion.

History.] P. was first discovered by Sebastian Cabot, who entering the river Plata, in 1526, sailed up the Parana, and thence entered the Paraguay. He was succeeded in 1536, by Juan-de-Ayalas, whom Don Pedro-de-Mendoza, the first governor of Buenos-Ayres, despatched with a body of troops, military stores, and other necessaries to explore the territory. Juan-de-Salinas founded the city of Nuestra-Senhora-de-la-Assumpcion, the capital of the prov. The discovery of the country was prosecuted by Alvarez Nunez, whose eminent services, on the death of Don Pedro-de-Mendoza, procured him the government of Buenos-Ayres. In subjugating this country, the Spaniards exercised great cruelty on the unfortunate inhabitants. In 1554 the first bishop of P. brought with him laws and regulations for the protection of the Indians; but there being no power to enforce the due execution of these regulations, the natives still continued under bondage, and their numbers gradually wasted away. To supply workmen for the Spanish plantations, Parana was afterwards conquered. The city of Ciudad Real was founded; and 40,000 Indians were reduced to slavery. In 1556 the Jesuits made their appearance in P., and by gentleness and policy, succeeded in obtaining an ascendency over the minds of the natives, and in reducing them under the yoke of civilized life. Their success in this benevolent work was truly astonishing. They collected the natives into towns and villages, which soon increased under their influence and direction, spreading over the wilderness, and gradually extending on all sides. The principal missions of the Jesuits were in Uruguay, on the S of the Parana. This country was one of the first of the South American states which threw off the authority of the mother country. Its geographical position, on the head waters of the Rio-de-la-Plata, or rather at the head of navigation, and 1,500 m. from the Atlantic, has not only secured its independence, but protected it entirely from any attempt at its re-subjugation. It exchanged the authority of old Spain for the rule of one of the most remarkable men who has performed a part in the government of states during the present century. For upwards of thirty years the celebrated Dr. Francia continued to maintain his authority over P. by a system of the most remorseless tyranny and capricious cruelty of which there is any example in the history of the world. One of the means by which his power was continued unimpaired to the moment of his death, was a policy of non-intercourse and isolation, as complete and inflexible as that of the island of Japan. The laws of the country (which were nothing but the edicts of Francia, who united all power in his own person), forbade the entry of any human being into the territory of Paraguay, on any pretext whatever. Of the few who by any chance did enter, none were permitted to return; a very few did escape, and from their imperfect reports only has the world for half a century had any consciousness of the existence of this republic, so called. The talents of Francia, profiting by the perpetual confusions and civil wars of the surrounding provinces, enabled him to protract so long this singular anomaly. Being himself the strongest power, and standing perfectly aloof from all connections whatever, he was allowed his own way for the third of a century, and died in the full possession and exercise of his power. After his death the present President, Lopez, was appointed. Although Lopez is not a tyrant, he has still but very gradually relaxed the system of Francia in respect to foreign intercourse. He long steadily refused to make treaties, though repeatedly solicited thereto, not only by the South American states, but by the European powers. In 1852, after the success of General Urqueza against Rosas, he was persuaded to make a treaty with the Argentine confederation, and now has signed and caused to be ratified, one with England, the United States, France, and Sardinia. All these powers, acting at one and the same time, and in concert, have at last succeeded in obtaining the same conditions of intercourse and trade.

PARAGUAY, a noble river of South America, which has its origin in the lofty mountains with which the central part of the Brazilian prov. of Matto-Grosso is covered, in some small lakes on the S side of the Sierra-Pary, under the parallel of 13° 30′ S; and flowing S through that prov. to Pildoris, a little below Fort Nova Coimbra, in S lat. 20° 20′, from that point to its junction with the Parana, at the SW extremity of Paraguay, forms the western frontier of Brazil and of Paraguay, separating the former state from Bolivia, and the latter from Bolivia and from the Argentine confederation. Its total length of course exceeds 1,200 m. Within the Brazilian territory, its great affluents are the Jauru on the l., and the San Lourenco and Tacoary on the r. The Pilcomayo is the only large stream it receives on the l. bank below Pildoris, at the confluence of the Tacoary; and the Corrientes, Ipane-Guazu, Xexui, and Tabiquari are its chief affluents on the r. bank within the territory of Paraguay. The navigation of this noble river was long closed to the commerce of Europe by the policy of Dr. Francia, the dictator of the state to which it gives name, and his successor Lopez on the one hand, and that of Rosas, the tyrant of Buenos-Ayres, on the other. On the fall of the latter chief, however, the navigation of the Parana, and all its great sister-streams, were thrown open to all flags; and steam-navigation will gradually penetrate to the higher portion of the P., which presents an uninterrupted inland navigation through nearly 19° of lat., over a mud bottom, and without a rock or stone to impede the passage. Brazil is preparing to reap her share in the advantages of this treaty by founding a new city, Albuquerque, on the r. bank of the river, on the extreme frontier of the prov. of Matto-Grosso, which already numbers 1,000 inhabitants; and Bolivia will doubtless exert herself in the establishment of steam-navigation on the Pilcomayo. A treaty has recently been negociated with the president of Paraguay, by which British subjects are free to navigate the river, and to settle and carry on commerce in any of the towns of that state, instead of being restricted to the city of Assumpcion as hitherto. Similar treaties have also been made with France, Sardinia, and the United States. By a treaty of 15th July 1852, between the Argentine confederation, and the republic of Paraguay, the river P. from bank to bank, is declared to belong in perfect sovereignty to the republic of Paraguay; but the republic concedes to the Argentine flag the free navigation of the P. and its affluents. See PARANA.

PARAHIBA, a province of Brazil, bounded on the N by that of Rio Grande-do-Norte; on the E by the Atlantic; on the S by the prov. of Pernambuco; and on the W by that of Ceara. It is 360 m. in length from E to W, and about 90 m. in breadth, and comprises an area of nearly 20,000 sq. m. Its surface is generally mountainous; the Serra-de-Cayriris intersecting it in the W, and spreading its ramifications over the entire country. The principal rivers are the Parahiba, the Mamanguape, the Camaratuba, the Gramame, the Guaju, and the Miriripe. From its elevated character, this portion of Brazil is exposed to high winds and frequent droughts, but the climate generally is temperate and salubrious. The soil is fertile, and produces besides cotton of excellent quality, sugar, varieties of fruit and legumes, rice, mandioc, millet, and tobacco. The woods afford excellent timber, gums, resin, &c. The ounce and jaguar are occasionally met with here; the mountain-goat, locally called *veados*, pigs and cattle are abundant. Birds are extremely numerous. The pop., estimated in 1838 at 55,124, but, which 5 years previous is said to have amounted to 100,000, comprises two Indian nations, viz.: the Cahités to the S

of the Parahiba, and the Potyguaras to the N of that river; each of which is subdivided into several tribes. The prov. contains 3 comarcas, viz.: São-Brejo-d'Area, Parahiba, and Pombal. It returns 5 deputies to the imperial assembly, and 2 senators to the upper house. Its provincial assembly is composed of 28 members.—Its chief town, which bears the same name, is 75 m. N of Olinda, and 1,380 m. NNE of Rio-de-Janeiro, on the r. bank of a river of the same name, and about 12 m. from the shore of the Atlantic. Pop. 15.000. It consists of an upper and a lower town. The latter, locally distinguished as the Varadouro, is the commercial quarter. The principal streets are broad and paved; the houses, some of which are spacious, are generally only a single story in height, with arcades in front, usually employed as shops. The principal buildings are the churches, the governor's house, formerly the Jesuit's college, the town-house, the treasury, and the intendency. It has also numerous convents, 2 fine fountains, 2 hospitals, a prison, a Latin-school, and barracks. The port is defended by two forts, near which is good anchorage. The trade consists chiefly in cotton, sugar, dye-woods, drugs, gums, &c. The environs are fertile and well cultivated, producing grain, legumes, sugar, and cotton.—Also a river, which has its source in the Serra Jabitaca, a branch of the Cairiris-Velhos; traverses in a ENE direction the prov. of the same name; passes Parahiba, and 12 m. below that town, throws itself into the Atlantic, by a wide embouchure divided into 2 channels by the island of São-Bento, and after a course of upwards of 300 m. It has an easy and spacious entrance to the S, near Cape Ledo, and is defended by a battery. Its principal affluent is the Guarahu.

PARAHIBA, or Parahiba-do-Sul, a river of Brazil, which has its source in the E part of the prov. of São-Paulo, on the N side of the Serra-do-Mar; runs first W; then bends abruptly ENE; enters the prov. of Rio-de-Janeiro; and after a tortuous course of 600 m. throws itself into the Atlantic at São-João-de-Parahiba, and in S lat. 21° 38′.—Also a district and town in the prov. of Rio-de-Janeiro. Pop. of district, 2,000.

PARAHIBUNA, a comarca of Brazil, in the prov. of Minas-Geraes.—Also a small town of the prov. and about 60 m. NE of the town of São-Paulo, and district of Jacarehi. Its inhabitants, about 2,000 in number, find their chief employment in the culture of tobacco, coffee, and millet, and in the rearing of pigs.—Also a river formed by the junction of the rivers Barros and Preto. It divides the prov. of Rio-de-Janeiro from that of Minas-Geraes, and falls into the Parahiba near the SW extremity of the prov. of Espiritu-Santo.—Also a small river of the prov. of São-Paulo, which joins the Parahiba on the l. bank, about 6 m. below Parahitinga.

PARAHIM, a deep but narrow river of Brazil, in the prov. of Piauhi. It has its source in the N side of the Serra-Gurguêa, and falls into Lake Pernagua.

PARAMARIBO, the capital of Dutch Guayana, situated on the l. bank of the Surinam river, 6 m. above its mouth, in N lat. 5° 49′. It is regularly built in the form of an oblong square; and its streets, which are perfectly straight, and lined with neat timber-built houses of from two to three stories in height, are bordered in the true Dutch taste with orange, shaddock, tamarind, and lemon trees. The town, besides the government-offices and courthouses, contains several churches of different denominations, and a large hospital. P. is the commercial mart of the colony, and possesses a fine roadstead for shipping in the river, which is above 1 m. in breadth opposite the town. Its exports are coffee, sugar, cocoa, cotton, and indigo; its chief imports consist of salted and dried fish, and articles of European manufacture. Its pop. is estimated at 20,000. It was greatly devastated by fire in 1820.

PARAMATTA. See Parramatta.

PARAME'-ET-ST.-JOLEUL, a commune and village of France, in the dep. of Ille-et-Vilaine, cant. and 2 m. E of St.-Malo. Pop. 3,392.

PARAMO, a village of Spain, in the prov. and 30 m. NE of Villafranca, on the l. bank of the Sil. Pop. 450.

PARAMYTHIA, a town of Albania, in the sanj. and 39 m. SSE of Delvino. Pop. 3,500. It is divided into an upper and a lower town, the former occupying the summit of a rock of considerable height, and being a place of considerable strength. The surrounding country is mountainous, and inhabited by a rude tribe, whose subjection to any authority beyond that of their own chiefs is only nominal. They speak the Greek language, but profess Mahommedanism.

PARANA, a great river of South America, which has its origin in the confluence of the Rio-Grande and the Paranahyba, on the common frontier of the Brazilian provinces of Minas-Geraes, Goyaz, and São-Paulo, under the parallel of 20° 25′ S. From this point it flows first SW by S, dividing the prov. of São-Paulo on the E from that of Matto-Grosso on the W; and in this part of its course is swelled by the tribute of the Rio-Tiete on the l., and the Rio-Pardo on the r. From the parallel of 22° 45′ S, at the junction of the Ivinheyma or Iguarey, which forms the N frontier of Paraguay, it flows SSW to Candelaria, in the Argentine prov. of Corrientes, where it turns W, and forms the S boundary of Paraguay to its junction with the Paraguay river, a little above the town of Corrientes. From this point the united stream of these two great rivers, under the name of the P., pursues a SSW course to about the parallel of 32° S, when it turns SE, and contributes with the Uruguay to form the great estuary known as the Rio-de-la-Plata. The free navigation of the latter great estuary, and its superior waters, embracing a coast of 2,000 m., forming the only means of communicating with the vast and fertile regions in the interior of South America, bounded by Brazil on the E and by the Andes on the W, was long and justly considered an object of the highest importance by the commercial states of Europe; and in 1846 it was deemed advisable by the English and French governments to force the passage of the P. and convoy a fleet of about 100 sail of merchant-vessels to bring down produce belonging to European merchants. But the emancipation of the upper provs. of the Argentine confederation from the thraldom of Buenos-Ayres and its dictator Rosas, was speedily followed by the formation of general federal arrangements which have accomplished all that European arms and diplomacy had hitherto failed to effect. After a ten years' siege, Monte-Video was liberated by the advance of the combined army of Brazil, Entre Rios, and Corrientes; and on the 29th May, 1851, a treaty of alliance was concluded between these states. "One of the articles of that treaty provided that the governments of Entre Rios and Corrientes should allow the free navigation of the P. to the contracting parties, and that Paraguay should be invited to join the alliance on the same terms of reciprocity and equality. The result was, that the government of Paraguay, which had taken no part in the military operations, now for the first time entered into regular commercial arrangements with her neighbours for the encouragement of trade, and that this line of river communication was opened from the 1st of October to an extent unknown since

the dissolution of the Spanish vice-royalty of Buenos-Ayres in 1810. An abortive attempt was made in that year from Buenos-Ayres to invade and subdue Paraguay. This attack was repulsed, and for nearly thirty years Paraguay remained under the absolute control of its dictator Francia, as much isolated in the heart of the South American continent as the empire of Japan in the Eastern ocean. Francia died in 1840, but all communication had been so long cut off from Paraguay that it was not easily restored. Lopez, the successor of Francia, dreaded the aggressive and arbitrary policy of Rosas, who had never recognised his independence, and Rosas intercepted and arrested the trade of the rivers with the interior. The immediate effect of the fall of that arrogant and oppressive dictator was the restoration of that freedom of intercourse which is indispensably needed to open and improve the country." On the 15th of July 1852, General Urquiza, as provincial dictator of the Argentine confederation, and Don Carlos Antonio Lopez, president of the republic of Paraguay, concluded a treaty of which the following are articles:

1. The river Parana is the boundary between the Argentine confederation and the republic of Paraguay, from the Brazilian possessions to 2 leagues higher up than the lower mouth of the island Atajo.

2. The island of Yaureta remains belonging to the territory of Paraguay; and that of Apipe, &c., to the Argentine. The other firm or inundable islands belong to the territory to which they are nearest.

3. It is stipulated as a special condition of this treaty, a frank communication between the towns of the Parana and San-Borja-del-Uruguay, for the Paraguayan and Brazilian posts, with the necessary escorts for their safety.

4. The river Paraguay, from bank to bank, belongs in perfect sovereignty to the republic of Paraguay, to its confluence with the Parana.

5. The navigation of the Bermejo is perfectly common to the two states.

6. The landward coast from the mouth of the Bermejo to the river Atajo, is neutral territory for the distance of one league, so that the high contracting parties shall not form military cantonments, nor police guards, not even for the purpose of observing the barbarians that inhabit the banks.

7. The confederation concedes to the republic the free navigation of its flag through the Parana and its affluents, extending to it all those immunities and advantages that civilized governments, united by special treaties of commerce, grant to each other; it will not detain, or prevent, or impose duties on the passage of any mercantile expedition that may have occasion to pass through the fluvial or terrestrial territory of the confederation to ports of Paraguay, or from the latter to any other foreign ports, without subjecting them to fiscal charges, duties, searches, undoing of packages, &c., &c., which, at the same time that they incommode commerce, annihilate it, by alarming it, and deterring it from frequenting the most productive routes.

8. In the same terms as the preceding article, the republic concedes to the Argentine flag the free navigation of the Paraguay and its affluents, and a free passage through its terrestrial territory.

9. It is distinctly understood that both states are entitled to dictate the regulations that they may consider expedient, to avoid contraband during the transit, to provide for their security, &c., with a complete reserve of the lawful use of their perfect sovereignty in their fluvial territory, that is not limited by public law or express treaties.

10. The confederation shall give a free transit through the Parana to other foreign flags, as soon as it has made the arrangements demanded for the same.

11. The government of the republic of Paraguay, in accordance with that of the Argentine confederation, will co-operate with the means afforded it by the topographical situation of the republic, to facilitate the navigation of the river Bermejo, removing the obstacles that may have formed in its channel, doing certain works that may render its navigation practicable, and establishing positions that may serve as touching points for vessels, in the sites and places that may be agreed upon and pointed out by both governments.

12. The government of the republic of Paraguay, when the case arrives of its being invited so to do by that of the Argentine confederation, shall sanction and garrison with previous accord a port in the river Pilcomayo, as high up as it may be navigable, so that from it a land route, the shortest possible, may be afforded to commerce through the Paraguayan territory, to the frontier of Bolivia.

On the 28th of August 1852, the Buenos-Ayrean government published a decree opening the rivers Plate, Parana, and Uruguay to all foreign flags exceeding 120 tons burden; but declaring that "all vessels coming from foreign ports, and going to the established ports of the republic on the Parana or Uruguay, or to those of Paraguay, shall only enter by the channel of Martin-Garcia; and in case of their being found in the channel of Las-Palmas or Arroyos which leads to it, shall incur for this act alone the penalty of confiscation of both vessel and cargo; that every vessel which passes by Martin-Garcia, in ascending the river, shall anchor at the port of the island, and shall be immediately visited by an individual of the preventive service." The island here named is a small low island with scarcely any vegetation, but important from its commanding the only entrance to the rivers Uruguay and P. for vessels of large burden. It lies about 2 m. from the coast of the Banda-Oriental, and 25 m. from that of Buenos-Ayres. About 10 m. above Martin-Garcia the junction of the two noble rivers takes place. The broad channel of the P., here called P. Guaza, averages about a ½ m. in width, and is separated on the r. bank from other channels by numerous islands covered with rank grass and low trees, and uninhabited. There is little variety on the banks of the river at its mouth. On the l. bank, low swampy land, covered with grass and low trees, meets the view; on the r., the islands just noticed, which separate the Guaza from the other channels. At Obligado, the river narrows, the land on the Enter-Riano side coming to a kind of point; and two or three wooded heights present themselves on the Buenos-Ayres side. It was at this point that Rosas planted his batteries, and stretched chains across the river, when the English and French fleet determined to force the ascent.

Navigation.] Captain Hotham, who has furnished the latest details respecting the navigation of the P., says that the Martin-Garcia channel presents a long wide expanse of shoal-water not unlike the Nore. "The channel you have to find has from 14 ft. to 16 ft. of water, and is difficult to light upon from want of buoying, but if buoyed would be easy enough; but vessels drawing more than 14 ft. water are in general excluded from entering the P. or the Uruguay. This difficult passage passed, there is no impediment whatever to the navigation of the P. for 150 m. The channel is very deep, and easy to find. Ships can sail up in clear nights, and if they get ashore it is their own fault: 150 m. brings them to the city of Rosario, the most important spot on the P. It is the most important, because it is the most western, and therefore nearest the markets of Western South America. The anchorage is excellent; ships can lie close to the shore, and discharge and load with ease; and, as I mentioned before that ships drawing 14 feet water can get there at all seasons of the year, there can be no doubt that a direct trade with Europe can be established for a large class of brigs or corvettes, and with advantage, from Rosario. Ascending the river higher, we find the P., like all rivers flowing from the tropics, has a high and low season. Six months in the year—from December to June—the river may be considered high, and six months low. Where the river is wide, 3 ft. may be the rise; where narrow, 8 ft.: taking the whole, perhaps an average of 4 ft. will be near the mark. Of course, larger ships can ascend in the high season than in the low; but one point is clear to me, that, taking into consideration the uncertainty of sea-voyages from countries so distant as Europe, and, when the vessel has arrived up these rivers, the uncertainty of getting immediate return freight, no direct trade can be established between these countries and Europe unless carried on in vessels which can ascend and descend the rivers at all times in the year; because, if any accident occurs to a ship which cannot descend in the low season, it involves a detention of six months up the country, which is a risk which no merchant will run when he can avoid it by getting his goods up in small vessels certain of being able to ascend and descend at all seasons. Therefore my narrative will consider the river at the low season only. Leaving Rosario, 90 m. brings us to the towns of Santa-Fe and Bajada; but there are three or four shallows in the way, which prevent vessels drawing more than 10 ft. of water arriving here at all seasons of the year. Leaving Bajada, 160 m. further up, we arrive at a very bad shallow, called 'The Pass of San Juan.' Here vessels of more than 7½ ft. water are stopped in the dry season. At 180 m. further up we come to Corrientes, the most rising place after Rosario, on the P. The trade of three great rivers, the P., Paraguay, and Vermejo, meets here. 200 m. further up, or 150 as the crow flies—for here the river winds very much—brings us to the city of Ascension in Paraguay. Further than that I have not been, and the rivers at present are not opened beyond to other than Paraguayan vessels; but the river is said to be navigable 800 m. above Ascension, but to what class of vessels, and if at all seasons of the year, I have no personal

knowledge, and it is very difficult to arrive at the truth through other persons' reports. The distance of Ascension from the Martin-Garcia channel is 800 m. as the river winds, or 700 m. following the general course of the stream, but not the particular bends. The pass of San-Juan is the pass which stops the whole of the upper rivers. Vessels drawing more than 7½ ft. water cannot pass that in the dry season; but over that barrier they can get to Ascension, and certainly a great distance beyond at all seasons of the year. Even if large ships could always ascend, they would not find it answer, because they would always be beaten in competition by the river-craft. The average of these vessels is from 36 tons to 50 tons. I come therefore, generally, to the conclusion that, as far as sailing-vessels are concerned, the opening of the P. will benefit us very little, but that the trade, with the exception perhaps of Rosario, will continue to be transshipped at Buenos-Ayres or Montevideo, and sent up in river-craft as before. I have never ascended the river Uruguay," continues Captain Hotham, "and cannot, therefore, speak from personal observation; but from what I have heard, I think I can give a general good idea of the capabilities of this river. The entrance is through the Martin-Garcia channel; therefore the river, as a general rule, is closed to all vessels drawing more than 14 ft. water. In the navigation, the same difficulties of shoal-water are encountered. The navigation extends to 31° 23′ S, where a ridge of rocks across the river impedes it. The whole navigable distance is about 250 m. I cannot say where vessels of 12 ft., 10 ft., and 8 ft. draught are successively stopped, but the river in general has the same characteristics as the P., and gives vessels of small draught a very considerable advantage over vessels built for sea-voyages. I now turn to the remaining consideration, whether river steamers under our flag or the flag of any other nation can compete successfully, and in any degree supersede the river-craft at present employed. And here again we have to consider the character of these rivers. The former part of this memorandum referred chiefly to the depth of water, but I now enter upon the principal impediments to sailing vessels—namely, the strength of the stream and prevailing winds. The current down these rivers varies, according to the season of the year, from about 2 to 4 m. an hour. Hence sailing-vessels cannot ascend, unless they have not only favourable winds, but winds of such strength as to impel them above 2 or 4 m. an hour. The P. appears to form a natural channel for the winds—for they almost always blow either directly up or directly down. Meteorological observation at Buenos Ayres in 1822 gives about two days N wind to one day S the whole year round, or, to ships ascending the river, two days' foul wind to one fair. The passage from Buenos Ayres to Ascension, a distance of upwards of 800 m., is therefore very tedious. The average time is 70 days, or about 13 m. a-day. It takes longer to get to Ascension from Buenos Ayres than to England. Now see what has been done by steam. An American merchant-steamer, a slow boat, drawing 8 ft. water, reached Ascension in 12 days, and returned to Buenos Ayres in 8 days. But vessels built on the plan of the Mississippi boats, drawing 5 ft. water, could in my opinion reach Ascension in 8 days and return in 5. Wood for fuel in the upper part of the river is abundant, and of excellent quality. It could be floated down in rafts to form depots where required, and sawmills erected, worked by the force of the current, to cut it to convenient lengths. To conclude: the rivers are of such a character that, as a general rule, it will not answer for sea-going ships to ascend them, but they are eminently adapted to steam. But this business will in all probability get into the hands of the Americans, partly because they have much more experience in steam river-navigation than we have, and partly because they have always a supply of boats unequal to the competition on their own rivers, which they will be glad to employ out here. It is immaterial to us what nation gets the transit trade as long as they will carry our merchandise cheaply and safely into the interior. A saving of time to us is a saving of money. But sea-going ships from Europe will still have to unload and transfer their cargoes to steamers or river-craft, and the port where this important change should take place is Montevideo. I annex a statement of the vast interior navigation of these countries:—

RIO DE LA PLATA

From Montevideo to Martin-Garcia channel, 100 m.; open to vessels drawing 16 to 18 ft., ...	100 m.

RIO PARANA.

From Martin-Garcia channel to Corrientes, 540 m.; open to vessels drawing from 14 to 7½ ft.; becoming generally shallower as you ascend, ...	540
From Corrientes to Candelaria, 150 m.; open to vessels drawing from 7½ ft. to — ft., uncertain; rapids at Candelaria, ...	150

RIO PARAGUAY.

From Corrientes to Ascencion, 200 m.; open to vessels drawing 7½ ft. water, ...	200
From Ascencion to Cuyaba and Matto-Grosso, in Brazil, 800 m.; believed to be open to vessels drawing from 7½ ft. to 2½ ft. water, according to the season of the year, &c., ...	800

RIO VERMEJO.

From junction with Paraguay to latitude 23° S, 500 m.; no personal knowledge; from 7½ ft. of water to 2½ ft., according to the season of the year, &c., . . .	500

RIO URUGUAY.

From Martin-Garcia channel to 31° 23′ S lat., 250 m.; open to vessels drawing 14 ft. to probably vessels drawing 5 or 6 ft., ...	250
General total, ...	2,540"

The following extract from a leading article in the *Comercio del Plata* affords abundant evidence of the feeling and views of the people of the South American states on the general question of the opening of the navigation of their great rivers. "The Parana is a great river. A merchant-vessel entering any of its mouths which disembogue in the river Plate may steer a course from S to N of 1,800 m., traversing various latitudes, through countries diverse in climate and productions. Nature has destined it to be the channel of life and motion for the vast regions that skirt its banks. Corn, wine, wool, and the cattle which are produced in such abundance on the shores of its southern tributaries, will go, accompanied by the manufactures of Europe, to be exchanged for the sugar, the yerba, the cotton, and the woods of Paraguay, the gold and the diamonds of Cuyava and Matto-Grosso; and these countries, so long locked up in the centre of America, will at length find themselves in communication with the rest of the world. The realization of this future will commence as soon as the governments which rule upon its banks, inspired with a pacific and tolerant policy, allow man the right to labour and secure to him the fruits of his industry; as soon as the increase of population, the augmentation of industry, the advanced civilization and strength of the people begin to check the power of the tyrant who has speculated upon their poverty and their misfortunes to establish a barbarous and egotistical dominion; or rather, as soon as this tyrant has ceased to exist. At the present day the Parana bounds a great part of Buenos-Ayres, the richest and most populous prov.; and all one side of the prov. of Santa-Fe, where its produce and that of the northern provs. of the confederation may find an advantageous market; skirts in its whole extent the prov. of Entre-Rios, and wends its way northward through that of Corrientes. Those two provs., whose extensive plains are covered with sheep and cattle, furnish a considerable contingent to the exports of the Argentine republic, and would rise to a twofold importance if freed from the harassing trammels with which the government of Buenos-Ayres clogs their commerce, to the depression of their industry and the promotion of discord among their people. The free navigation of this river, facilitating the exchange of produce, and diminishing the costs of transport, will increase the amount of exports, and direct a stream of riches into these provs., affording a stimulus to their industry, and establishing a progressive increase in their pop., their exertions, and their wealth, with immense benefit to the producers, the carriers, the foreign and native merchants, and the states at large. Territorial property will be augmented in value; the points of traffic and markets will increase in number; and a tendency towards the cultivation of the arts and peaceful occupations will banish that spirit of war and of discord, without object or motive, which exercises so unfortunate an influence on the most energetic portion of these populations." The article from which the foregoing extracts are made, is a reply to assertions made by a Captain Page, who was sent out by the French government on a secret mission to Buenos-Ayres, that the navigation of the P. was chimerical, and if attempted would only tend to anarchise the states of the interior. This Captain Page, during his residence in Buenos-Ayres, became strongly imbued with the principles of General Rosas, and from him and those who surrounded him de-

rived all his information as to the traffic, produce, or constitution of the states bordering the River Plate and its tributaries. Hence the bias in his opinions. The writer in the *Comercio*, in reference to them, makes the following forcible observations: "So soon as the navigation of the P. shall be open to a free foreign export and import trade, so soon as stranger flags shall float upon those waters, they must necessarily be subject to the regulations established by the authorities on its banks, and be guided by them. No one has ever imagined that the permission to navigate a river puts an end to the exercise of the legitimate territorial authority: anarchy cannot be brought about by the mere fact of the existence of a free navigation. But this navigation will give great importance to the province of Santa Fé, which will become an entrepôt and market for the produce of the interior, now wasted on account of the difficulties of transport; it will give new life to the commerce and industry, and will increase the power of the other provinces of the confederation, and augment more especially the trade and wealth of Entre-Rios and Corrientes."

PARANAGUA, a district and town of Brazil, in the prov. of São-Paulo, and comarca of Curitiba or Paranagua, on the S side of a bay of the same name, and 201 m. SSW of São-Paulo. It is chiefly built of stone; and contains several churches, a town-house, an hospital, a custom-house formerly a Jesuit's college, and a school. Its port is excellent, and affords easy access to vessels of 400 tons burden. Its trade, which is considerable, consists chiefly in timber, rice, grain, flour, coffee, and cattle.—The bay of P. presents an irregular outline, 24 m. in depth, and about 15 m. in breadth, and is studded with numerous islands.—Also a small river of the prov. of Santa-Catharina, which flows into the channel opposite the island of São-Francisco.

PARANAHIBA, a town of Brazil, in the prov. and district and 24 m. WNW of São-Paulo, on the river Tiete, in S lat. 23° 31′. It has a church and an hospital.—Also a town in the Brazilian prov. of Piauhy, on the r. bank of the E arm of the river of the same name, 320 m. NNE of Oeiras. Its inhabitants, about 7,000 in number, find their chief employment in the cultivation of sugar and cotton and the rearing of cattle.—Also a river of the prov. of Matto-Grosso, an affluent of the Rio-Porrudos or São-Lourenco.—Also a river of the prov. of Goyaz, which descends from the E flank of the Serra-dos-Vertentes, and runs SW to its junction with the Rio-Grande under S lat. 19° 20′, after a course of 600 m., in which it receives the Corumba and the Annicuns on the r., and the Rio-das-Velhos on the l. —Also a river of Brazil, which rises under the parallel of 11° S, and the meridian of 47° W; runs NNE, separating the provs. of Piauhy and Maranhão; and flows into the Atlantic by several arms after a course of 800 m. Its principal affluents are the Urussuhy, the Gorungueia, the Piauhy, the Pety, and the Piracuraca, on the r.; and the Balcas on the l.

PARANA-MIRIM, a river of Brazil, which rises in the district of Bom-Jesus, in the prov. of Pernambuco, and flows into the Rio-Capibaribe.—Also a river of Brazil, which flows into the E side of the bay of Todos-os-Santos.

PARANAN, a river of Brazil, which rises on the W flank of a serra of the same name, within the prov. of Goyaz, and is enlarged in the upper part of its course by numerous tributaries from the Serra-dos-Couros, the Serra-Arares, and the Serra-dos-Viadeiros.—Its general course is NNE to its confluence with the Rio-da-Palma, with which it forms the Paranatonga. It receives in the lower part of its course the Corrente, Galheiro, Almas, and Arraias.

PARANAN (Serra), a mountain-ridge of Brazil, in the E part of the prov. of Goyaz. It gives rise to the Rio-Grande, an affluent of the Parana.—Also a ridge which divides the comarca of São-Francisco, in the prov. of Bahia, from the prov. of Goyaz. The Rio-Paranan descends from its W, and the Rio-Correntes, an affluent of the São-Francisco, from its E flank.

PARANAPANEMA, a river of Brazil, in the prov. of São-Paulo, which has its source on the N side of the Serra-Geral, and near a town of the same name; runs WNW; and unites with the Parana on the l. bank, in S lat. 22° 25′, and after a course of about 450 m.—Also a town in the same prov., comarca and 90 m. SW of Hytu, and 150 m. WSW of São-Paulo.

PARANAPETINGA, a river of Brazil, in the prov. of Matto-Grosso, an affluent of the Rio-Porrudos, or São-Lourenço.

PARANAPIAÇABA, a mountain of Brazil, in the prov. of São-Paulo, a ramification of the Cordilheira-Cubatão. It forms the line of separation between the districts of São-Paulo and Santos.

PARANAPITANGA, a town of Brazil, in the prov. of São-Paulo, and district of Itapeva.

PARANAPUCUHI, a village of Brazil, in the island of Fundão or Gato, in the prov. and at the entrance to the bay of Rio-de-Janeiro. It is inhabited by Tamoyos Indians.

PARANATINGA, a river of Brazil, in the prov. of Goyaz, generally believed to be formed by the junction of two streams, and running N a distance of about 20 m. to join the Maranhão in 12° lat.

PARANAUHA, or Pernagua, a lake of Brazil, in the prov. of Piauhy. It is about 4 m. in length and 2 m. in breadth, and is traversed by the Rio-Parahim. Its waters abound with fish. A village named Pernagua is situated on its W bank.

PARAPAMBA, a river of Brazil, in the prov. of Pernambuco, which, in junction with the Jaboatão, flows into the Atlantic at a village of the same name.

PARAPA-OYA, a river of Ceylon, in the SE part of the island. It traverses the districts of Ouvah and Mahagampattu, and throws itself into the gulf of Bengal, under the name of Yahli, after a course, first in a S and afterwards in an E direction, of 60 m.

PARAPITI, or Apere, a river of Bolivia, which descends from the mountains in the district of Charcas; runs first ESE, then NE; traverses the Laguna-Grande; issuing thence at the E extremity, it directs its course through the Pampas-de-Huanacos, and falls into Lake Ubahy. On its N bank, near its entrance into the Laguna-Grande, is a village of the same name.

PARATARI, a river of Brazil, in the prov. of Para, which joins the Amazon on the r. bank, 24 m. below the principal embouchure of the Rio-Puru.

PARATOUNKA, a river of Russia in Asia, in Kamtchatka, formed by the junction of several streams, which descend from the Vilouitchiskoï-Sopka. It runs ESE; and after a course of 60 m. throws itself into the bay of Avatcha. It is navigable for canoes. On its l. bank, a little above its mouth, is a village of the same name, enclosed with palisades.

PARATI, a port of Brazil, in the prov. and 50 m. W of Rio-Janeiro, at the embouchure of a small river of the same name, which flows into the bay of Angra-dos-Reys, on its W coast. It is a well-built town, with a pop. of about 10,000. It is a place of some trade in native manufactures, and conducts a considerable coasting traffic.

PARAUTA, a town of Spain, in the prov. and 40 m. WSW of Malaga. Pop. 1,400.

PARAY-LE-MONIAL, a canton, commune, and village of France, in the dep. of Saone-et-Loire, arrond. and 8 m. W of Charolles, intersected by the river Bourbince and the Canal-du-Centre.—The cant., comprising 11 coms., had a pop. of 8,422 in 1841; the com. 3,364.

PARBUTPORE, a town of Hindostan, in Bengal, 40 m. S of Buxar. Mulraj, the ex-dewan of Multan died here in August 1851, while on his way to the fortress of Allahabad, where he was to be detained a prisoner.

PARCAY, or Parce', a town of France, in the dep. of Sarthe, arrond. and 14 m. NW of La-Fleche, on the l. bank of the Sarthe. Pop. 2,226. It has factories for the weaving and dyeing of woollen stuffs, and the fabrication of siamoise goods.—Also a com. in the dep. of Ille-et-Vilaine, cant. and 6 m. S of Fougeres. Pop. 1,050.—Also a com. in the dep. of Maine-et-Loire, 18 m. SE of Raugé. Pop. 1,546.

PARCELLY, a mountain-ridge of European Turkey, in the sanjak of Sophia. It branches from the Despoto-dagh, and runs NE, between the Stanimaki-su and the Urundja rivers, to Mount-Jongu.

PARCHIM, or Parchen, a town of Mecklenburg-Schwerin, the cap. of the duchy of Schwerin, situated on the r. bank of the Elde, at an alt. of 53 yds. above sea-level, 21 m. SE of Schwerin. Pop. in 1845, 6,489. It is walled, and is divided into an upper and a lower town. It contains 2 churches, a Latin school, an hospital, and the offices of the supreme court of appeal for the two grand-duchies of Mecklenburg. Tanneries, breweries, distilleries, dye-works, tin and copper foundries, tobacco factories, and the fabrication of straw-hats and coarse flannels, afford employment to the inhabitants.

PARCHWITZ, a town of Prussian Silesia, in the reg. and 9 m. NE of Liegnitz, on the r. bank of the Katzbach. It is walled, and has two Lutheran and a Catholic church. Pop. in 1837, 1,188. On the 15th of August, 1760, the Prussians defeated the Austrians at this place.

PARCO, a village of Sicily, 6 m. SW of Palermo.

PARCOU, a town of France, in the dep. of Dordogne, cant. and 6 m. W of St. Aulaye, on the l. bank of the Dronne. Pop. 650.

PARCQ (Le), a canton, commune, and village of France, in the dep. of Pas-de-Calais, arrond. of St. Pol. The cant. had a pop. of 11,370 in 1841; the com. 804.

PARCZOW, a town of Poland, in the woivode and 48 m. SE of Siedlec, in a marshy district, on the river Pivonia. Pop. 2,826.

PARDAILHAN, a village of France, in the dep. of Herault, cant. and 6 m. from St. Pons-de-Thomieres. Pop. 1,190.

PARDAILLAN, a town of France, in the dep. of Lot-et-Garonne, cant. and 4 m. S of Duras. Pop. 800.

PAR-DE-RUBIAS, a village of Spain, in the prov. and 24 m. SE of Vigo. Pop. 200.

PARDILLA, a village of Spain, in the prov. and 45 m. NNE of Segovia, near the l. bank of a stream of the same name, an affluent of the Riaza. Pop. 190.

PARDINES, a village of France, in the dep. of Puy-de-Dome, cant. and 3 m. WNW of Issoire. Pop. 340.

PARDO, a river of Brazil, formed by the confluence of the Sanguexuga and the Vermelho. It flows SE, between the provs. of Matto-Grosso and Goyaz, and joins the Parana on the r. bank, in S lat. 21° 55′, after a course of 240 m. It has a rapid current.

PARDO (El), a chateau and hamlet of Spain, in the prov. and 9 m. NNW of Madrid, on the l. bank of the Manzanares. The chateau is a royal residence of considerable extent and magnificence.

PARDOUX (Saint), a village of France, in the dep. of the Allier, cant. and 2 m. W of Marcillat, and 13 m. S of Moutluçon, on the r. bank of the Buron. Pop. 900. It has mineral wells and baths.—Also a commune in the dep. of the Deux-Sevres, cant. and 3 m. NNE of Mazieres, and 6 m. SW of Parthenay, on a height. Pop. 1,450. It has a small hospital.

PARDOUX, Pardoux-la-Riviere, or Perdoux (Saint), a canton, commune, and town of France, in the dep. of Dordogne, and arrond. of Nontron. The cant. comprises 7 com. Pop. in 1831, 10,047; in 1841, 10,533. The town is 5 m. SE of Nontron, and 24 m. N of Perigueux, on the r. bank of the Dronne. Pop. 1,557. It has a paper-mill, several tanneries, a forge, and a manufactory of locks.

PARDOUX-LES-CARDS, or Pardoux-les-Quarts (Saint), a commune of France, in the dep. of the Creuse, cant. and 4 m. SW of Chenerailles, on the r. bank of the Rozeille. Pop. 1,274. Coal is found in the locality.

PARDOUX-DE-FEIX (Saint), a village of France, in the dep. of the Dordogne, cant. and a little to the N of Brantome, and 15 m. NNW of Perigueux. Pop. 1,200.

PARDOUX-EN-RANÇON (Saint), a village of France, in the dep. of the Haute-Vienne, cant. and 5 m. SW of Bessines, and 13 m. SE of Bellac, near the r. bank of the Couze. Pop. 1,100.

PARDUBITZ, or Pardubice, a town of Austria, in Bohemia, in the circle and 7 m. N of Chrudim, and 14 m. S of Königgratz, on the l. bank of the Elbe, at the confluence of the Chrudimka. Pop. 3,546. It is the capital of a considerable seignory; and has a castle and an hospital, iron and copper works, and a paper-mill.

PAREDES, a town of New Castile, in the prov. and 30 m. NW of Toledo, partido and 3 m. NW of Escalona. Pop. 350.—Also a town in the prov. and 51 m. NE of Guadalajara and partido of Atienza, in a deep valley. Pop. 217.—Also a town of Galicia, in the prov. of Oviedo and partido of Luarca, in a valley on the Rio Lesba. Pop. 1,490. It has a parish-church and a custom-house.—Also a town of Portugal, in the prov. of Beira, comarca and 24 m. N of Francoso, and 12 m. SW of S. João-da-Pesqueira.

PAREDES-DE-NAVA, a town of Spain, in Leon, in the prov. and 18 m. NW of Palencia and partido of Frechilla, in a plain, at the foot of a chain of mountains, and near the Rio-Villarumbroso. Pop. 4,662. It is ill-built and ill-paved, and contains 4 parish churches, several convents, and an hospital. It has extensive manufactories of woollen fabrics, and several tanneries. Cattle are extensively reared in the vicinity.

PAREDON-GRANDE, an island of the Antilles, in the old Bahama channel, to the N of Cuba, in N lat. 22° 25′, and W long. 78° 8′. It is 11 m. in length, and about 3 m. in breadth. On its N side is good anchorage.

PAREJA, a town of Spain, in New Castile, in the prov. and 30 m. E of Guadalajara, partido and 5 m. NE of Sacedon, in a mountainous tract, near the l. bank of the Tagus. Pop. 868. It has a parish church, a custom-house, and a public granary.

PAREN, a river of Russia in Asia, in the district of Okhotsk, which descends from the SE side of the Stanovoï mountains, and which, after a course in a generally SE direction of 120 m., throws itself into the bay of Penjinskaia. Its principal affluent is the Tylka, which it receives on the l.

PARENTIS, a village of France, in the dep. of

Landes, 45 m. NE of Mont-Marsan, near the E extremity of the etang of Biscarosse. Pop. 1,450. Iron is wrought in the vicinity.

PARENZO, a town of Illyria, in the gov. and 45 m. S of Trieste, on a peninsula, which, projecting into the Adriatic, forms with some small adjacent islands, a secure harbour. Its pop. is about 4,000. A lighthouse erected on one of the protecting islets stands in N lat. 45° 13′ 37″.

PARETO, a village of the Sardinian states, in the prov. and 12 m. S of Acqui. Pop. of district 2,000.

PAREY, a village of Prussian Silesia, in the reg. and 24 m. NE of Magdeburg, on the r. bank of an arm of the Elbe, near the canal of Plau, which joins the Havel. Pop. 1,000.

PARGA, a port on the coast of Albania, in the sanj. of Delvino, opposite the S point of the island of Corfu, in N lat. 39° 16′, and E long. 20° 24′, 35 m. WNW of Arta, and 13 m. E of Paxo. The town, built in the decline of the Roman empire, on a rock washed on three sides by the sea, and backed by a precipitous cliff, having on the summit an almost impregnable citadel, stands near the mouth of the Fanar river, the *Acheron* of the ancients. It is surrounded with walls, and has a double harbour, formed by a small island defended by a battery. The streets are narrow, steep, and dirty; and the place has no buildings of any importance; but the prospect from the citadel is magnificent. The district which belongs to the town is divided from the Albanian frontier by lofty mountains. It is well watered, and fertile in oil, tobacco, fruits, and wine. This place is hardly mentioned in history until 1401, when it entered into an alliance with Venice, which it maintained until the subversion of the latter power in 1797. While independent of Ali Pacha, the tyrant of Albania, this place afforded an asylum to refugees from his violence, and it became an object of importance to him to obtain possession of it. In 1798, he found means to reduce Bucintro, Prevesa, and the other fortified places on the adjacent coast; but P. alone bade defiance to his arms. In 1814, Ali marched against it with a military force: the Pargiots withstood the attack, but applied to the British authorities in Corfu, and received a garrison from them. To this arrangement, however, the British government did not give effect. The apprehension of continued strife with the Albanians led to a negociation for its surrender, on Ali paying a pecuniary indemnity to such of the inhabitants as should refuse to remain after a change of government. This compensation amounted to about £200,000; but hardly any of the Pargiots chose to submit to the tyrant of Albania. The evacuation took place in 1819, most of the inhabitants removing to Cephalonia and Cerigo. The former inhabitants were mostly Albanian Greeks, and about 4,000 in number; the present inhabitants are chiefly Turks.

PARGOIRE (Saint), a village of France, in the dep. of Herault, cant. and 10 m. SSW of Gignac. Pop. 1,380.

PARHAM, a parish in Sussex, 5 m. NE of Arundel. Area 1,264 acres. Pop. in 1831, 46; in 1851, 55.—Also a parish in Suffolk, 14 m. NE of Ipswich. Area 2,212 acres. Pop. in 1831, 502; in 1851, 532.—Also a small town and harbour on the N side of the island of Antigua, 5 m. W of St. John's.

PARIA, a province of Bolivia, bounded on the N by Sicasica; on the NE by Cochabamba; on the E and SE by Chayanta and Porco; and on the W by Carangas. It takes its name from a lake along the NE border of which it extends, but which is more commonly called the lake of Chucuito. It is of a cold temperature, and produces little grain, but cattle and sheep are numerously reared on its pastures. It contains salt and silver mines, saline lakes, and hot springs.—The town of P. is 210 m. NW of La Plata, and 25 m. NE of Oruro, in S lat. 18° 50′.

PARIA (Gulf of), a large gulf of the Caribbean sea, on the NE coast of Venezuela, lying between the prov. of Cumana on the W, and the island of Trinidad on the E. From each of these two territories a point juts out on the N, with two islands intervening, which leave four openings, called the Mouths of the Dragon, by which the gulf communicates with the Caribbean sea. The largest opening being 2 leagues broad, is that on the W, between Point Paria of Venezuela and the island of Chacachacares. Between the latter island and that of Navios is a second mouth, smaller than the first, called the Vessels. The third entrance lies between the isle of Navios on the W, and that of Monas on the E. It is called the Mouth of Huevos, or the Egg's Mouth. It is much more convenient to enter from, than to go out by. The fourth channel lies between that island and Point Chaguaramas, the NW extremity of the island of Trinidad. It is called the Boca-de-Los-Monos, or Monkey's Mouth. It is narrow and difficult, at the same time that the land of Trinidad, by excluding the winds, preserves a calm in it which is rarely interrupted by momentary gusts. The gulf is 25 leagues from E to W, and 15 leagues from N to S: there is anchorage in all that extent, but the depth varies from 8 to 30 fath., and upon the coast of Paria the soundings are much less. It has a muddy bottom, except near the W coast, where there are shoals and banks of sand. On the S and SE, it receives a considerable volume of water by the Gurapiche, the Manamo, and other mouths of the Orinoco, which enter it with a velocity that incommodes vessels entering the gulf on the SE, between Cape Soldado, the SW extremity of Trinidad, and Point Folets in Venezuela. The water thus poured into the gulf, must find its way into the Caribbean sea by the Mouths of the Dragon, which it is therefore impossible to enter unless when favoured by the wind, and it is at least as difficult to enter the gulf on the S when the wind is from the SE. There are several ports and roads along the coast of Paria, on the peninsular projection of Venezuela, as the NW side of the gulf is termed, which greatly facilitate the communication with Trinidad. The tide is not only perceptible, but even formidable in the gulf of Paria, where it discovers a violence not to be conceived by those who are not well acquainted with the great ebbings and flowings of the sea.

PARIA (Lake of). See Chucuito.

PARIA (Point), a headland of Venezuela, which runs into the sea for many leagues, opposite the island of Trinidad, in N lat. 9° 12′, and W long. 62° 1′.

PARIGNE, a village of France, in the dep. of Ille-et-Vilaine, cant. and 6 m. N of Fougeres. Pop. 1,400.

PARIGNE L'EVEQUE, a town of France, in the dep. of Sarthe, 9 m. SE of Mans. Pop. 2,900.

PARIGNY, a commune of France, in the dep. of the Manche, cant. and 1½ m. NE of St. Hilaire-du-Harcourt, and 8 m. SW of Mortain. Pop. 1,365.—Also a commune in the dep. of the Loire, and cant. of Perreux. Pop. 1,365.

PARIGNY-LES-VAUX, a village of France, in the dep. of the Nievre, cant. and 3 m. E of Pougues, and 8 m. N of Nevers. Pop. 888. In the environs are the castle of Bizy, and extensive iron-works.

PARILLA. See Santa.

PARIMA (Sierra), a mountain-system of Guayana, stretching between the parallels of 4° and 7° N, in a NW direction, from the Sierra Pacaraina to the banks of the Orinoco; and forming the water-shed between the Cayuni of Guayana, and the Caura, a great tributary of the Orinoco, on the E; and the upper course of the Orinoco, and its affluent the Ventuari, on the W.

PARIMBALA, a headland of the island of Timor, one of the Sunda islands, Asiatic archipelago, in S lat. 8° 35′ 10″, and E long. 125° 7′ 10″.

PARIN. See Barin.

PARINA (Point), a headland of Peru, of which it forms the most westerly point, in the intendency of Truxillo and district of Piura, 30 m. NNW of Cape Payta, in S lat. 4° 42′ 30″, and W long. 86° 5′ 55″.

PARINACOCHAS, a province of Peru, in the S part of the intendency of Guamanga, in the midst of the Andes, and is intersected by the Pausa and several other streams of water. The climate is cold, but large numbers of sheep and cattle are pastured

on the mountains. It contains mines of gold and silver, and has manufactories of gold and silver. Pop. 16,011, of whom 8,475 are Indians, and 6,451 Creoles. Its capital is Pausa.—Also a lake in the prov. of the same name, to the N of Pausa. It is 24 m. in length from NW to SE, and about 3 m. in breadth, and is traversed by the Pausa.

PARIS, the capital of France, built on a plain on both sides of the river Seine, here flowing in a direction from SE to NW, at the distance of 70 m. from the sea, and 210 m. direct distance SSE of London; in N lat. 48° 50′ 13″, E long. 2° 20′ 15″, at an alt. of 193 ft. above sea-level. Its road-distance from Brussels is 189 m.; from London, 254 m.; from Geneva, 315 m.; from Marseilles, 504 m.; from Vienna, 678 m.; from Madrid, 775 m.; from Rome, 925 m.; from St. Petersburg, 1,405 m.; and from Constantinople, 1,574 m.—Its original name, as mentioned by Cæsar, was *Lutetia*, a word, the etymology of which is unknown, though it is supposed by some to have been derived from *lutum*, 'mud,' as descriptive of the wet and marshy nature of the ground,—the '*palus perpetua*' of Cæsar,—on which the town stands. Of its present name a more satisfactory account can be given. The *Parisii*, who anciently inhabited the district in which Lutetia was situated, would in process of time naturally impart their name to the capital of the prov. in which they dwelt. At what time, however, this modern appellation was first applied to it, cannot be exactly determined. It could not have been earlier than towards the end of the 5th cent.; for Julian, who resided here for some time, speaks of it in 458 as his 'dear Lutetia.'—The country on all sides of the city is level, and presents little diversity of physical appearance. On the N and NE it rises into low hills. Instead of being adorned, like the neighbourhood of most other large towns, with villas, gardens, and pleasure-grounds, the country surrounding the metropolis of France exhibits, almost to the very gates of the city, the features of a rural and even sequestered district. The roads display few symptoms that a populous city is at hand; and, when compared with those in the vicinity of the British capital, are enlivened with uncommonly few travellers. On entering P., we seem to pass at once from the silence and solitude of the country to the noise and bustle of a crowded metropolis. The approach to P. on one side, however, is incomparably beautiful. From the bridge of Neuilly, on the road to St. Germains, a spacious avenue of stately trees, skirted on either side by elegant houses and gardens, extends for 1½ m., in a straight line, to the very gates of the city. By this entrance, some of the most splendid public edifices of the French metropolis present themselves in succession to the admiring traveller; while in front, the view is beautifully terminated by the triumphal arch named L'Arc d'Etoile. The Seine at Paris is not above half the width of the Thames at London. Its breadth at the Pont-d'Austerlitz is 544 ft.; at the Pont-de-Jena, 446 ft. Its mean velocity is 20 inches in a second of time. During the summer-months its channel becomes comparatively dry, and it is enlivened by nothing that merits the denomination of shipping. Though its banks are termed quays, and though a few small boats, chiefly for the purpose of internal navigation, are frequently seen to diversify its surface, yet Havre-de-Grace, at the mouth of the Seine, may be regarded as the harbour of P., and the communication between that place and the capital takes place chiefly by land-carriage,—the river being seldom used except to transport wood, charcoal, coal, and other bulky articles. Yet the Seine is far from being deficient in beauty and ornament. Its banks or quays are built of stone, and extend 5 m. along the river on each side. They form one of the most pleasant walks about P.; and on one side, along the S bank, there extends for more than a mile a row of edifices of an elegant and massy description. Its numerous and spacious bridges are highly deserving of notice. The Pont-Neuf, the largest and most ancient in Paris, contains 12 arches, and is 1,020 ft. in length, and 90 ft. in breadth. The Pont-Royal or Pont-National, and the Pont-Louis XVI. or Pont-de-la-Concorde, each consisting of 5 arches, were built respectively by Louis XIV. and Louis XVI. In the time of Buonaparte, several bridges, of which the Pont-de-Jena or des-Invalides, and the Pont-d'Austerlitz, are the most important, were erected. The arches of all these bridges are characterized by only a slight degree of elevation, as the quays or stone embankments on which they are built are considerably raised above the level of the river. The total number of bridges over the Seine between the barriers is 27, 7 of which are suspension-bridges.

Form and extent of the city.] P. is nearly of a circular form. It stretches along the Seine about 4½ m.; its breadth, at right angles with the river, here flowing from SE to NW, is about 4 m. It was surrounded in 1785, to prevent the illicit introduction of all exciseable articles, by a wall 17 m. in circumf.; but as this wall encloses towards the W the Champs-Elysées and a considerable space of ground unoccupied with buildings, its real extent may be comprised in a circuit of not more than 14 m. London with its suburbs is extended over a much larger surface, but the French capital is more compactly built, contains much higher houses, and is more densely inhabited. It consists of three principal divisions,—the *Cité*, which lies in the centre,—the *Ville* on the N,—and the *Université* on the S. The *Cité*, which is built on one of the two islands—L'Isle St. Louis and L'Isle Notre-Dame—formed by the Seine, comprises the site of the ancient *Lutetia*, the original capital, and contains the greater number of important edifices. There are numerous subordinate divisions, designed to facilitate the administration of justice. The Fauxbourgs, which lie between the Boulevards and the new wall, still retain their individual names; but as in every sense they form no inconsiderable part of the French cap., they are included in the foregoing description. The general statistics of its buildings were thus summed up in 1846. With a pop. of 912,035, P. covered a superficies of 3,439 sq. hectares. There were 42,000 houses, 1,922 public thoroughfares, 57 barriers, 46 chemins-de-ronde, 37 quays, 20 boulevards, 37 avenues, 133 squares, 37 bridges, 105 'courts' or 'cities,' cloisters, &c., 9 palaces, 23 remarkable edifices, 6 public gardens, 4 principal arches, 5 columns, 1 obelisk, 35 libraries, 15 museums, 28 fountains, 38 churches, 25 convents, 26 hospitals, 4 equestrian statues, 24 theatres, and 39 barracks. There are now upwards of 45,800 houses and 13,000 shops in P.

Streets.] In P., as in London, the oldest and worst-built parts of the city are to the eastward, viz., the insulated spot called the Cité, the suburb of St. Antoine, and the quarter of the Marais. From the Cité, the streets were in the course of ages extended northward towards the Temple, and southward towards the Pantheon, but without acquiring width or elegance, until the labours of the builder were extended westward, to the Tuileries on the N, and the suburb of St. Germain on the S. The streets of the Cité can be compared only to Warwick-lane or East-Cheap. Of the streets adjoining it, whether to the N or S, the great defect consists in their being narrow, and in the houses having, as in the old part of Edinburgh, an inconvenient degree of height. Several of them, such as the streets of the Temple, St. Martin, St. Denis, and Montmartre, are long, but

have not half the width of Bishopsgate-street. The suburb of St. Germain contains the Rue-de-l'Universite, the Rue-des-Augustins, the Rue-de-Bourbon, and a number of other streets, all straight and well-paved, but not wider than the streets of London adjacent to Soho-square, which, like them, were built towards the close of the 17th cent. The Rue-St.-Honore, stretching from the central part of P. to the W, bears, with the exception of width, some resemblance to the Strand and Piccadilly. In the quarter of the Tuileries a few new streets, the Rue-de-Rivoli, Rue Castiglione, Rue-de-la-Paix, are exempt from this defect, but they are of inconsiderable length. Many of the best streets run parallel to the river. The total number of streets in 1850 was 1,688; of avenues and alleys, 32. The most recently founded streets are in the N and NW suburbs; and considerable additions have been made to the quays at the E end of the city.—The old coarse pavement of the city, which seemed contrived for the very purpose of breaking horses' legs, is gradually, though very slowly, being replaced by an improved species approaching in form to the admirable pavement of London. Good materials, however, are wanting, for not a morsel of trap or granite is to be found within 100 m. of P. A compact and hard sandstone, procured from the outskirts of what is geologically called 'the Paris basin,' is used for the pavement of the streets and squares. The trottoirs are now formed generally of asphalte and gravel, and judging from their condition, it seems to answer the purpose admirably. From official returns lately published, on the paving and maintenance of the pavements of P., it appears that the paved surface of the streets of that capital is 3,321,000 sq. yds., of which the state maintains 1,083,000, and the corporation of P. 2,238,000 yds. The charge of keeping up this pavement is fixed at £53,000. To this must be added the cost of keeping up the public roads laid with gravel, bitumen, or small flints, such as the roads, side-walks, and alleys of the promenade of the Champs-Elysées, the Quai-Montebello, the exterior and interior Boulevards, and a great number of other places. A sq. yard of pavement costs 3½d. per annum for keeping up. The most considerable operation—and which, from its expense, only occurs at distant periods—is taking up and replacing the old pavement, which costs 1s. 10d. per sq. yard, not including, of course, the cost of the new stone. The budget of the corporation of P. allots £10,000 per annum for this purpose, a very insufficient sum, as the complete repaving takes place every 25 or 30 years in the quarters situated in the centre of P., such as the neighbourhood of the Palais-Royal, the Boulevards, the Bourse, and the Place-Vendôme. In the suburbs and more distant quarters, however, a complete repaving is required only every 40 years. "There is a great improvement in the lighting of the city since 1839, though the principal streets are still far behind those of London in this respect. The old lamps suspended with ropes over the middle of the street are now fast disappearing. The new houses are generally of 5 stories, with iron balconies at each window; a few are of polished stone, but nineteen-twentieths have their fronts covered with plaster, and by way of ornament a heavy cornice at the top, with a slighter one at each story, and neat plaster mouldings round the windows. It is the universal use of plaster fronts, even in the meanest buildings, which gives P. an aspect so much more gay and cheerful than London. No canopy of smoke broods over P., obscuring its streets and blackening its buildings. A plaster front, after receiving its coat of paint, will last some nine years, without needing another application of the brush. The old form of building, which seems so strange to an Englishman, is still invariably adopted. A tenement, or 'land,' as we say in Scotland, has a little open court in the middle, 20 or 30 ft. broad, with a '*grande porte*' to the street, large enough to admit a carriage, and shut at nightfall by an iron, wooden, or bronze gate. Into this parallelogram two, three, or four common stairs open, and there are often two doors at each landing-place. Hence you have sometimes 20 families lodged in one tenement. This mode of living *en masse*, though it dates from the palmy days of the old monarchy, is essentially democratic in principle. In the same stair you may find a baron or vicompte on the first flat, a general or colonel in the second, a bourgeois in the third, and a tailor or carpenter in the fourth. A *portier* or janitor sits in a small booth behind the '*grande porte*,' and keeps an eye on every one who enters the tenement or leaves it, stops loiterers and beggars, and receives messages or letters from those who are from home. There are absolutely no self-contained houses arranged in streets in P. The rich bankers, and men of large patrimonies, live in mansions completely isolated, each forming a sort of *rus in urbe*, separated from the street by a high wall, and surrounded with a garden or shrubbery of an acre or half-an-acre. The number of these, however, is extremely limited, and, as might be expected, they are found chiefly in the suburbs. Yet the system of living in flats built round parallelograms is not universal in the French towns. In Marseilles, all the new streets, and there are many, consist of self-contained houses, with front doors like ours. Rents are extremely high in P. I was shown a parallelogram in the Rue-St.-Honore, 6 stories high, including the ground flat, with a front probably 90 ft. in length. It lodged 18 families, and with 4 or 5 little shops in the side fronting the street, yielded £2,400 per ann. of rent. It was for sale at an upset price of £40,000. The rent of one of the best flats is about £200 per ann. Think of such a sum paid for a flat in a common stair! The situation was good, but had no peculiar advantages." [*Mr. C. Maclaren in* 1847.]

Boulevards and squares.] The Boulevards occupy the space appropriated to the defence of the city in former ages, when its circumf. did not exceed 7 m. This space—happily unencumbered with buildings—has been converted into a spacious and magnificent street about 2 m. in length, and running along the N part of the city. In the middle is a wide unpaved road, which until recently had a long row of lofty trees on each side; and between each row of trees and the parallel row of houses were spacious gravelled walks for foot-passengers. Their waving line adds greatly to the beauty of the Boulevards; and the uncommon width of from 200 to 300 ft. is productive of no vacuity or dulness,—so brisk is the movement of carriages and passengers, so lively the scene presented in the shops, hotels, and coffee-houses on either side. On the S side of the city, the Boulevards extend a still greater length, but are not yet lined with houses.—In squares, P. differs greatly from London,—the aspect of the buildings which surround them being lofty and grand, while the extent of the space forming the square is often insignificant. At present, the finest square is the Place-Vendôme, an octagonal space surrounded by elegant stone buildings, but much smaller than the principal squares in London, being little more than 500 ft. in length, and 400 ft. in breadth. The Place-Royale, a square in the E of P., built in the reign of Henry IV., is of nearly similar dimensions, while the Place-des-Victoires, a central and busy spot, is still more restricted. The Place-de-Grève, the scene of so many revolutionary executions, is a small square in the centre of P., in front of the Hotel-de-Ville.

The Place-Dauphine on the S, and the Place-du-Châtelet on the N of the river, are, like many other openings, very convenient for carriages or passengers, but have no title to the name of squares. A very different character is due to the Place-du-Carrousel, a spacious oblong between the Tuileries and the Louvre, extending a ¼ m. in length, and having the long picture-gallery on its S side. This is used for the occasional exercise of the troops. Every open space at the junction of streets, of more than usual size, is termed a *place*.—The Champ-de-Mars is an oblong park on the SW of Paris, extending from the Military school to the river, and bordered on each side by several rows of trees.—It is 3,280 ft. in length, by 1,640 ft. in breadth; and is flanked by ditches faced with stone.—The Palais-Royal, situated in the centre of P., has long ceased to be a royal residence; but it contains within itself a little world, and is deemed one of the principal curiosities of the French capital. It is not only a bazaar on a large scale, but a centre of amusement, and the general rendezvous of the foreigners who visit P. The nocturnal loungers, and the votaries of dissipation, scattered in London over so wide a space, are in P. collected on this central spot, which, besides the palace, contains a garden 700 by 300 ft. in length, surrounded by arcades and a broad gallery filled with shops.

Public edifices.] In palaces and public structures of the first rank, P. is greatly superior to London. The church of St. Geneviève, or the Pantheon, is a magnificent modern building with a fine cupola. The church of Notre-Dame is a noble Gothic edifice, 390 ft. in length; those of St. Roch and St. Eustache are also very fine buildings. The church of St. Paul-et-St. Louis is a beautiful edifice in the Italian style. The splendid Madeleine was designed under the empire, and founded under Louis-Philippe.—The Tuileries, the present imperial residence, was begun in the 16th cent., and finished, after various interruptions, in the 17th. It extends from N to S above 1,000 ft., and exhibits several orders of architecture. —A little to the E of the Tuileries, on the same side of the Seine, stands the Louvre, of which the chief part is of the age of Louis XIV. Its E front is 525 ft. in length, and 85 ft. in height. The length of each side is 408 ft.—The Palace of the national assembly, originally the Palais-Bourbon, and now the Chamber-of-Deputies, has a façade of 12 Corinthian columns resting on a flight of 29 steps, and supporting a triangular pediment.—The hotels of the ministers are in general splendid residences.—The finest of the municipal buildings is the Hotel-de-Ville. The Louvre is used as a depot for objects of taste and art. It contains above 1,000 paintings, 500 statues and busts, and 20,000 drawings.—The Palace of the Luxemburg is distinguished by the symmetry of its proportions. It is more regular than the Tuileries, but less animated; more chaste and elegant, but less striking. One of its halls forms the chamber of Peers; another contains a national gallery of paintings; but the most striking object in its interior is the grand staircase, which is adorned with a number of statues of French generals and legislators. The adjoining gardens are spacious and beautiful.—Since the elevation of the present emperor to the throne of France, much has been done and is doing to embellish P. Without speaking of the works on the Bois-de-Boulogne, the construction of the central markets, the prolongation of the Rue-de-Rivoli, the enlargement and embellishment of the vicinity of the Louvre, the creation of the Rue-de-Strasburg, and the Rue-des-Ecoles, are among those gigantic operations which can only be conceived and realized at a great epoch and by a great city. All the streets leading to the markets, the Louvre, and to the great arteries newly opened, have had to be enlarged, levelled, and embellished, while new sewers have been constructed on a vaster and better system. In several places the Seine has been narrowed, to afford a wider space to public thoroughfares, its bridges have been lowered, and their issues disengaged; every day sees the disappearance of inequalities of soil which offended the eye, retarded the circulation, and rendered it more painful and more dangerous; and in a short time the double line of quays which runs for 2 leagues on each side of the river, will be complete and rectified through all its extent. The termination of the Louvre has been the dream of all the governments of France which have succeeded each other since the commencement of the cent. The first empire undertook the work with vigour; the restoration added little; the monarchy of July confined itself to projects which failed; and the provisional government to a decree which remained a dead letter. The completion of this grand edifice, in all the magnificence of its first conception, is also meditated by the present emperor. The Louvre terminated will continue to be at once the palace of the nation, and the great temple of the arts to Frenchmen.

Public monuments.] The most striking of the public monuments of P. is the column of the Place-Vendome, erected by Buonaparte to commemorate his successes in Germany in 1805. It is a great brazen pillar, the materials of which were obtained by melting the cannon of the vanquished. The diam. of the shaft is 12 ft.; its height 135 ft.; its form, an imitation of Trajan's pillar at Rome. It is surrounded with bas-reliefs, disposed in small groups following each other in a spiral direction round the pillar, from the base to the entablature. A spiral band separates each range of bas-reliefs; on the summit is an acroterium, upon which is placed a statue of Napoleon 11 ft. high. The total cost of this monument was 1,500,000 fr.—The column of July, erected on the Place-de-la-Bastille, is 154 ft. in height, and 12 ft. in diam. It is composed of metallic cylinders, and is inscribed with the names of 504 citizens killed during the Three days of 1830. Next to this, but of inferior rank, comes the triumphal arch in the Place-du-Carrousel, near the Tuileries, erected in 1806. Its height is 45 ft., but it lost much of its attraction after the Prussians removed the bas-reliefs representing the victories obtained over them, and the Austrians carried off from its summit the well-known Venetian horses and car of victory.—The Arc-de-Triomphe-de-l'Etoile, outside of the barrier of Neuilly, is a noble erection. The Porte or gate of St. Denis, a large triumphal arch erected by Louis XIV., is admired for the harmony of its proportion and the finish of its execution; the Porte St. Martin, constructed also in that reign, is less rich in decoration, but nowise inferior in workmanship. A fine bronze statue of Henry IV. was erected in 1818 on the Pont-Neuf. Of the public fountains of P.—no fewer than 80 in number—several are much admired. Among others the Fontaine-des-Innocens, the Fontaine-Desaix in the Place-Dauphine, the Fontaine-de-Bondi on the Boulevard of that name, &c.

Hospitals.] The hospitals of P. are numerous: and, since the beginning of the present cent., have been particularly well managed. The largest by far is the Hotel-Dieu; after it come the hospitals de-la-Charite, St. Antoine, Beaujon, des Enfans-Malades, and others, to the number in all of 14. They are in several cases badly situated and ill-planned; but the interior management is always good, and the attendance assiduous and kind. There were placed in the Foundling-hospital of Paris

Between 1640 and 1664	. .	9,002 children.

Distinct from these are the hospices, or establishments where the aged, the infirm, the lunatics, are received and supported, on paying a small sum. The Salpetrière corresponds to our Bedlam; the Bicetre, to Bridewell. The name of *hospice* is given also to hospitals for the incurables of both sexes, and to asylums for orphans. The hospitals in P. have not, as in England, each its separate board of management; but are all under a general board appointed by and dependent on government. The funds for their support arise less from private donation than from town-dues and the public treasury, and a tax of 8 per cent. on the receipts of all places of public amusement.—There are in Paris several establishments, called *maisons-de-santé*, forming a medium between an hospital and a private house, separate rooms and medical attendance being given, on moderate terms, to a limited number of patients.—The prisons of P. also are much amended in their management since the beginning of the present cent.

Before the first revolution, the churchyards in P. were not numerous; but since the promulgation of a law which prohibited the burying of the dead in churches, and even within the precincts of the city, two great necropoli have been formed, one for the S, the other for the N division of the city. The latter is beautifully situated on the ascent to Montmartre.—The catacombs are subterraneous quarries, excavated in the course of ages for the building of P., and converted in the latter part of the 18th cent. into a great burying repository. They stretch along the S part of Paris, and occupy an area of about 200 acres, and contain the remains of at least 3,000,000 of human beings. They are no longer used for purposes of interment. A subterranean map of P., begun in 1844, has been completed in 45 sheets. It exhibits quarter by quarter all the labyrinthine sinuosities of the ancient quarries and catacombs over which P. is built, with the corresponding edifices, squares, and streets above ground.

Literary institutions, &c.] The literary institutions and scientific collections in P. are numerous, and formed upon the most liberal principles. Its libraries—some of them the largest in Europe—are accessible at all times, and equally to the rich and to the poor. The Royal library or Bibliothéque nationale has above 860,000 printed books, besides as many tracts collected into vols., and 72,000 manuscripts; the library of Monsieur possesses 150,000 vols., and 5,000 manuscripts; the library of St. Geneviéve, 110,000 vols., and 2,000 manuscripts; the Magazine library, 92,000 vols., and 3,000 manuscripts; the library of the city of Paris, 60,000 vols. All these are daily open to the public. There are also in P. a number of private libraries to which access may be easily obtained. The principal of these are—the private libraries of the Tuileries, of Fontainbleau, St. Cloud, Trianon, and Rambouillet; the library of the Legislative body; of the Council-of-state; of the Institute; of the Invalids; of the Court-of-cassation, formerly the library of the advocates; and of the Polytechnic school. Among the printing-offices, the Imprimiere Royale claims the first place, on account of its extent and admirable arrangement. The gallery of the Louvre, the museum of natural history in the Jardin-des-Plantes, and the Jardin-des-Plantes itself, are not to be equalled in any city of Europe. The new Exchange in P. is the full size of the Parthenon at Athens; and, like that famous temple, has the form of an oblong quadrangle, surrounded with pillars nearly of the same dimensions, but more numerous. After having passed the steps which ascend to the peristyle, and traversed a vast porch, we enter the great hall, the rendezvous of the merchants. The hall is an immense apartment, and a cover of glass crowns it. A double portico on the ground floor and the first story goes quite round. The ornaments are in the best taste, and the *tout ensemble* is at once elegant and grand.

Places of amusement.] In 1851, the number of theatres in the 86 deps. of France was 361; and of this number 36 were in the small dep. of the Seine. Under Louis XIII. there was only one theatre in the capital; under Louis XIV. they increased to 5; there were 6 under Louis XV., and under his ill-fated successor 10 theatres were in full play. In 1791, all monopolies having been abolished, 51 theatres sprang up all at once; but by the year 1807, they had decreased to 34. At that period privileges were re-established, and in the following year only 9 were in existence. P. had 10 theatres from 1810 to 1814; 11 from 1814 to 1819; 14 from 1819 to 1830; 16 in 1831, 21 in 1832, 23 in 1846, 25 in 1849, and 23 in 1851. These 23 theatres contain about 34,000 places, and the average number of spectators every night is calculated at 20,000 Besides theatres there are 145 places of amusement open in the cap. and its vicinity, principally during the summer season,—public balls, such as Malfille's, café concerts, Guinguettes, &c. These establishments are frequented by, it is estimated, 24,000 persons per diem, thus carrying the number of pleasure-seekers in P. to 44,000 daily. The receipts of the metropolitan theatres have undergone many variations. From 1807 to 1811 their average was nearly 5,000,000 fr.; from 1822 to 1826 nearly 7,000,000 f.; from 1837 to 1841 they averaged more than 9,000,000 f.; from 1842 to 1846 more than 10,000,000 f.; in 1847 they rose to 11,000,000 f.; in 1848 they were 6,747,408 f.; in 1849, 7,775,570 f.; in 1850, 9,959,785 f.; in 1851, 10,460,000 f. Of the *personnel* employed in the P. theatres, it appears that, commencing at the lower end of the scale, there are upwards of 400 boxkeepers, male and female; and 750 employés, clerks, &c., in the administrations, whose aggregate salaries amount to 740,000 francs. The dressmakers, carpenters, sceneshifters, &c., are more than 600 strong, and their aggregate salaries amount to 500,000 f. The number of musicians in the various orchestras is 630, and their aggregate income is 600,850 f. Of performers, according to M. Rondot, there are 1,152 men, and 891 women. Of these 793 are artistes, and the remainder choristers and figurantes. The emoluments of this numerous *personnel* average per annum 3,534,990 f. At the time the statement was drawn up (1851) the highest salaries were 4,500 f., and the lowest 25 f. per month. Formerly, in 1713 for instance, the first singer at the grand opera only received 1,500 f. per ann.; in 1783, Madame St. Huberti's salary was 4,000 f. a-year; and the celebrated danseuse, Mddle. Guimard, only received 4,330 f. How different at present, when at the same theatre artistes scarcely of first-rate excellence receive as much as 80,000 f. a-year—nearly double the remuneration of the president of the high court-of-cassation!

Population.] In the 13th century, P. contained 120,000 souls; in 1474, 150,000; under Henry II., 210,000; in 1590, 200,000; under Louis XIV., 492,600; in 1719, 509,640; from 1752 to 1762, 576,630; in 1776, according to Buffon, 658,000; in 1778, according to Mohan, 670,000; in 1784, ac-

cording to Neckel, 660,000; at the end of the reign of Louis XVI., 610,620; in 1798, according to census, 640,504; in 1802, 672,000; 1806, 547,756; 1808, 580,609; 1809, 794,595; 1817, 743,966; 1827, 890,434; 1831, the commencement of the quinquennial census, 774,328; 1836, 909,126; 1841, 912,033 (exclusive of soldiers, absentees, and children at nurse); 1846, 1,053,897; and the dep. of the Seine, 1,364,467. The pop. of the dep. was thus divided in 1846: 1st arrondissement, 111,245; 2d, 117,768; 3d, 64,675; 4th, 48,233; 5th, 96,628; 6th, 104,484; 7th, 72,893; 8th, 112,170; 9th, 52,604; 10th, 106,878; 11th, 66,119; 12th, 100,203; 13th (St. Denis), 187,513; and 14th (Sceaux), 123,057. The pop. of France in 1700 was 19,669,000 souls; in 1831, 32,560,934; and in 1846, 35,400,486.—Some curious calculations have been made in France, with respect to the average duration of human life, &c., in P. during the 18th cent. It appears that the average of marriage was for men about 29¾ years; for women, about 24¾ years; and that the average age of parents at the birth of a son was for women about 28¼ years; for men, about 33¼ years. It follows that there were nearly three generations in P. during the last cent. It is a remarkable fact that this estimate coincides with that of the Greeks in their chronological tables. —M. Falret prepared from the official records of the police a memoir on the suicides in Paris from 1794 to 1823. In these 30 years the whole number of attempted suicides discovered by the police was 6,782, of which 4,720 were effected. This amounts to 223 per annum on an average, but the number has been increasing; in the ten years ending 1803, it was 107 per annum; and in the ten years ending 1823 it was 334. In the ten years ending 1823, the whole number was 3,340; and of these it is surprising to find that 181 were under fifteen years of age; and 479 between fifteen and twenty! But the age at which suicide is most common is between 35 and 45, the number for that period being 2,370, or two-thirds of the whole.—The following are the results of an inquiry instituted into the condition of the working classes of P., so far as regards the state of education amongst them, and the way in which they are lodged: The information obtained relative to instruction only applies to 169,431 men, and 86,616 women, but it is thought that even if it had reached the whole of the working-classes of both sexes, the proportions would not have been materially altered. In 1847, 147,311 men could read and write, being about 87 per cent. This general proportion is not invariable in each of the 13 groups of trades; the differences, however, are not very great, ranging between 83 and 97 per cent., excepting those employed in the trade of skins and leather, amongst whom the proportional amount is 73 per cent. Printers, engravers, and stationers stand in the first rank in the table, as might be expected; the proportion of those who read and write is 97 per cent. In the persons employed on the precious metals it is 96 per cent.; in Parisian articles, 95 per cent.; in food, 92; in building, 91; and in furniture, 90. In those employed on articles of clothing, the proportion is only 88 per cent. In the persons connected with building, the proportions vary from 95 per cent. for joiners, to 78 for carpenters, and 60 for masons. All the men employed in making the bannisters for stairs can read and write. Out of the 86,616 women, 68,219 had received elementary instruction, being a proportion of 79 per cent. If the table of the subdivision of the numbers in the different groups be examined, the following singularities will be found: The proportional number of those connected with the skin and leather trade is the highest, say 97 per cent.; for the men, on the contrary, it is the lowest, or 73. For the females employed in the printing, engraving, and stationery trades the proportion is 93 per cent.; for the men, 97. In Paris articles the men stand for 95 per cent., and the women for only 83. The most unfavourable proportion as regards women is to be found in the turnery and basket trades, where it is only 72 per cent.; for the men it is 73. The following are the results obtained from the inquiry into the question of lodgings. 122,922 men, and 68,691 women are in their own furniture; 4,200 of the former, and 12,141 of the latter reside with their relations; 5,661 and 2,214 with their employers, and 34,311 and 4,158 in furnished lodgings. For the men who possess their own furniture the proportion is 74 per cent., and for the women 79; for those of the former, who live in furnished lodgings 21, and for the latter only 5. What is singular is that the number of men, whose lodgings have been stated, is lower by 2,337 than that of those on whose education particulars have been procured, while the difference for the women is more by 598. As compared with London one circumstance would lead us to suppose the pop. of P. miserably poor. In Paris, burials are allotted to privileged undertakers, who pay a tax for the privilege—and the rites of inhumation being considered expensive, (although the charge for the lowest class is only about 41 francs or £1 13s., every thing included,) a vast proportion of those who die are buried by certificates of indigence! In an average statement of the burials from 1821 to 1823, it appears that of persons who died in their own houses scarcely one-fourth were buried at the expense of their families.

Municipal government.] P. is divided into 12 arrondissements, over each of which presides a mayor; each arrondissement is divided into 4 quarters; in each quarter is a commissary of police, and in each arrondissement a justice-of-peace. The municipal council of P. is the council-general of the dep. of the Seine, at the head of which is the préfet of the dep. A préfet of police, whose jurisdiction extends over the whole dep., has the charge of the public safety, and has under him a municipal guard, and a corps of sapeurs-pompeurs or firemen.—As the city of P. is divided into 12 sections or arrondissements, so, for the purpose of affording effectual relief to the poor at their houses, an office or board of charity, denominated *bureau de bienfaisance*, is established in each arrondissement, which is regularly organized, and to which are attached an indefinite number of visitors (*visiteurs*) and charitable ladies (*dames de charité*) residing in the arrondissement, for the purpose of visiting the sick and indigent at their houses and ascertaining their wants and condition. The relief to the poor is administered chiefly in kind, but sometimes also in money. They are provided with medicine and medical assistance when requisite. Some are furnished with materials to work up, and are paid for their labour. Temporary relief is sometimes afforded by means of small loans of money. In their litigious concerns, the poor have the advice of counsel gratis, and to that effect a jurisconsult is attached to each board of charity. In short, there is in P. a most minute, and extensive, well-digested, and excellently organized system of benevolent inspection into the wants and condition of the poor. The administration of public assistance, in a statistical account of the indigent pop. of P. for 1850, stated that the number of poor families in that year was 28,724, numbering 63,133 persons. In 1829, the number was 62,705; in 1832, 68,986; 1835, 62,539; 1841, 66,487; 1844, 66,148; 1847, 73,905. The average number of indigent, as compared with the total pop., would be in 1829, 1 in 13.0; in 1832, 1 in 11.1; in 1835, 1 in 15.3; in 1841, 1 in 13.3; in 1844, 1 in 13.7; in 1847, 1 in 13.9;

and in 1850, 1 in 16.3. All P. forms one jurisdiction, both in a municipal and in a political sense. Its constitution in this respect is thus explained by M. Horace Say. While each of the other departments into which the kingdom is divided has one préfet, the dep. of the Seine and of the town of P. has two; the Préfet-de-la-Seine and the Préfet-de-Police. The préfet, everywhere, is what we may call the universal representative of the king, or his ministers; but in the case of P. there is this peculiarity, that each minister may act, and often does act, in his own department without the intervention of either préfet; "or, at least," says M. Say, "the personal responsibility of these officers is concealed, in most cases, by the absence of all initiative action on their part. But," he proceeds, "if the two préfets of the dep. of the Seine have less of prefectoral action than those of the other deps., their functions acquire a high importance from the municipal duties which devolve upon them. They are the real mayors of P., and it is solely with them that the municipal council is called upon to debate the interests of the commune. There is yet another distinction to be made, the municipal duties themselves not being all included in the division which is made of them between the two préfets. The latter are not charged with the keeping of the registers of the civil state of the dep., nor with the celebration of marriages, any more than with the details respecting the national guard, elections, and what concerns the administration of charities, and the local committees of elementary instruction; for all these current matters the town of P. is divided into 12 sections, improperly called *arrondissements*, each of which has a mayor and two assistants. These mayors and assistants were nominated under Louis Philippe's regime by the king, out of a list of 12 candidates formed by election. They have no correspondence with each other, and are without influence in the direction of the affairs of the commune, the management of which is thus placed in the hands of the direct agents of the government, who do not stand upon any elective basis." This organization, which, M. Say remarks, is in general little known, was established in 1834; but some parts of the system remain insufficiently settled or developed. Each préfet is also mayor of P.; and in the latter capacity each has to discuss, in so far as his particular dep. is concerned, the budgets and accounts of the department and of the town, before the general and municipal councils of Paris. "Previously to 1830," says M. Say, "these two councils were confounded together into one; since that date, and in conformity with the definitive arrangement made by the law of the 20th of April, 1834, the municipal council is composed of 36 members, taken from among the members of the general council, and of which three are elected by each of the 12 communal arrondissements, with renewal of a third part of the three every three years; so that each councillor is, in fact, elected for 9 years. The departments are all composed, in fact, of arrondissements, which are subdivided into cantons, and these into communes, while the dep. of the Seine is composed of two arronds. and a commune, which latter also differs from other communes. The town of P. makes no part of any arrond., or of any canton, and is itself, on the contrary, divided into 12 districts, presided over by justices-of-peace. The general council, then, is composed of 36 members, nominated at P., and of 8 other members, 4 of whom are elected by the department of Sceaux, and 4 by that of St. Denis, making in all 44 members. The general council of the dep. of the Seine meets once a-year, like those of all the other deps.; only a little later than the others; its session usually taking place in Nov., and lasting only a fortnight. The conservative spirit of the central government, or its interest of conservatism, as our author phrases it, has introduced many precautions into the law which regulates the proceedings of these general councils. The municipal council of P. meets every year in the month of May, and continues assembled for 6 weeks, during which it is employed in examining and voting the budget for the year following; and it also meets once a-week for current business throughout the rest of the year, with the exception of a vacation of two months; but it has no right of initiating anything.

Municipal revenue.] The gross revenue of P. from all sources amounted in 1847, to 46,000,000 frs., or £1,840,000, exclusive of £300,000 belonging to the hospitals. The produce of the *octroi* was £1,250,000; the remainder arose chiefly from the rents of the *abattoirs*, or slaughter-houses, the *halle-aux-vins*, markets, canal of Ourcq, &c., and of course was principally obtained from capital previously expended. But one-tenth of the produce of the octroi was paid over to the government, and the sinking fund for the extinction of the debt absorbed as much more. The capital of the city debt was stated as 31,500,000 fr., or £1,260,000; the interest, assuming the average rate to be 5 per cent., formed an annual burden of £62,000. The expense of collecting the revenue, including the administration of the octroi, amounted to £120,000. These various charges made a deduction of £420,000, or thereabout, leaving a net revenue of £1,420,000. The expenses attending the organisation of the national guard in legions, were £40,000 per annum. Another sum of £40,000 was expended in the support of 227 primary or infant schools, which afforded education to 25,490 boys and 16,416 girls. A monthly fee of 1s. 6d. was paid by the scholars, but those whose parents pleaded poverty paid nothing; and in the period from 1837 to 1841 these gratis scholars were 88 per cent. of the whole number. The municipal schools of P., therefore, are maintained chiefly for the instruction of the poor. A sum of £344,000 was expended in the support of charitable institutions, and might perhaps be considered as the poors'-rate of P. The department of public works absorbed £100,900. This included £46,000 for paving the streets, but the government adds £20,000 for certain streets which are considered as part of the *routes royales*, or great roads: the sum expended on paving, therefore, was £66,000. The entire length of the streets of P. was estimated at 420,000 metres or 270 m. The police cost £430,000 in 1847, and the principal items were:

Cleaning and water for the streets,	£44,000
Lighting,	66,400
The corps of *sapeurs pompiers* (firemen), 850 strong,	24,200
Municipal guard, 2,733 infantry and 620 cavalry,	160,000
The Municipal police, corresponding to what is called City police in London and Edinburgh, consisted of 24 'Peace officers,' 183 'Inspectors,' and 329 'Sergents-de-Ville,'	35,900
The Commissariat of police,	22,000
Other items not specified,	77,500
	430,000

The whole number of persons employed and paid by the city, as municipal guards, firemen, policemen, paviers, scavengers, inspectors, &c., was about 8,500 in 1847. Besides the usual heads of expenditure, there was a large disbursement under the head of *extraordinaries*, which in 1846 amounted to £356,000, and probably comprehended the erection or repair of churches, quays, markets, and other public buildings. The municipal commission upon the budget of the city of P. for 1850 reported that at the breaking out of the revolution of February the city possessed a sum of 17,000,000 f. in account-current at the treasury, intended to meet the purchase of houses neces-

sary for the enlargement of the *halles* and various other contemplated improvements. The city had been besides authorised to contract a loan of 25,000,000 f., which, united to successive credits which it was proposed to add to it, constituted a provision of 80,000,000 f. of works which were to have been executed in ten years. All these plans were overturned by the revolution. The ordinary expenses of 1850 were estimated at 41,000,000 f.; the ordinary receipts at 43,500,000 f., of which sum the *octroi*, it was estimated, would furnish 33,000,000 f. In order to obtain this amount, however, it would be necessary to continue the receipt of the second provisional decime, and to add to the present tariff of the octroi dues.

Manufactures.] Since the beginning of the present century, the manufactures of P. have rapidly increased, and it is now the principal manufacturing city in the kingdom. The value of exports for 1829 was 42,493,341 francs. Among the principal articles manufactured are—

Salts, acids, and oxides, to the amount of	3,500,000 fr.
Refined sugar,	28,300,000
Cotton goods,	18,200,000
Silks and cashmeres,	12,500,000
In horology,	19,765,000
In typography,	8,800,000
Bronzes,	5,250,000

&c. &c. All sorts of articles of luxury and fashion are made with the greatest elegance and taste. Numerous diligences run to all quarters of the kingdom, and a ready communication between all parts of the city is kept up by fiacres, cabriolets, &c. &c.—The following are a few facts lately pointed out by M. Blanqui in a lecture on political economy at the *Conservatoire des Artes et Métiers*, where he is professor of that science:—Parisian industry produces annually from 14 to 1,500,000,000 of francs' worth of goods of various species. There are 325 principal branches of industry, 64,000 patented masters, 342,530 workpeople, of whom 204,000 are men, 112,000 women, and 26,530 children. The 1st arrondissement, in which the carriage-trade is chiefly carried on, produces to the value of 102 millions; the 2d, 177 millions; the 3d employs 32,000 workmen, producing 127 millions; the 4th employs 21,000 workmen, producing 72 millions; the 5th, 51,000, producing 169 millions; the 6th, 68,000, producing 235 millions. The last arrond. is especially Parisian. In it the artisan is truly a magician,—a Proteus,—he excels in every branch. This arrond. produces annually 235 millions' worth of goods out of nothing, but it contributes its genius to the work. It is here that Paris goods are manufactured,—fancy turnery, buttons, brushes, canes, umbrellas, jewellery, plated work, lace, and a hundred thousand marvels of ingenuity known and sought after in every part of the world. The 7th numbers 41,000 workmen, and produces 153 millions. It is very nearly related in character to the 6th. The 8th employs 50,000 workmen, and produces 132 millions: this is the quarter for cabinet-making, paper-hanging, carpentry, and brewing. The 9th numbers 15,000 workmen, producing 55 millions. The 10th numbers 20,000 workmen, producing 68 millions. The 11th numbers 19,000 workmen, producing 63 millions. Lastly, the 12th, which is the great quarter for tanners, rag merchants, and brewers, numbers 70,000 workmen, producing 100 millions. Proceeding then to the study of special branches of industry, the professor noticed that of bronze work, unrivalled in the world, and producing 20 millions; hat making, 16 millions; glovemaking, 14 millions. The wages vary among this immense pop. of workpeople from 20 centimes (2d.) a-day to from 35 f. to 40 f. (from 28s. to 32s.) The average wage is 3 f. 80 c. (3s. 2d.) a-day for a man, and for a woman 1 f. 65 c. (1s. 4½d.)—The report upon the manufactures of P. in 1847 says:—Taking the statement of each of these 64,816 employers, the total amount of the industry of P. in 1847 was 1,463,628,350 francs. This sum includes the value of the material employed, as the statements refer to sales. The comparative amount of each of the 13 groups is as follows:

	Amount.	Workmen.
Clothing,	240,947,293 fr.	90,064
Food,	226,863,080	10,428
Building,	145,412,679	41,603
Furniture,	137,145,246	36,184
Work in precious metals,	134,830,276	16,319
Fancy articles (articles de Paris),	128,658,777	35,679
Thread and fabrics,	105,818,474	36,685
Works in metals,	103,631,601	24,894
Chemical production and pottery,	74,546,606	9,737
Carriages, saddlery, &c.,	52,357,176	13,754
Printing, paper, &c.,	51,171,873	16,705
Hides and skins,	41,762,965	4,573
Carving, baskets, &c.,	20,482,304	5,405
Total in 1847,	1,463,628,350	342,530

There is a number of large public establishments at P., employing workmen, the statistics of which could not properly have a place with the statistics of private industry. These establishments are the national manufacture of the gobelins—carpets and hangings—the manufacture of tobacco, the national printing-office, the mint, the stamp-office, the bakery of the army, the bakery of the hospitals, the bakery of the prisons, spinning establishments for the poor, prison workshops, the funeral establishments, and the theatres.—The *Debats*, commenting on the manufacturing industry of P. in 1852, says: "Parisian manufacture has been exceedingly active during the whole of the last year. Its general production, both for home consumption and for foreign countries, has certainly exceeded that of 1851, and yet that year was a most excellent one for the articles which P. sends abroad. The exports of P. in 1851 had been 219,500,000 f., whilst, in 1852, they have been 221,500,000 f. The difference, it is seen, is not very great; but it is worthy of remark, that the last year offers an augmentation over 1850 of nearly 24,000,000 f., and over 1849 of 50,000,000 f. We do not speak of 1848, when all the manufactures of P. had to suffer so much from the political tempest, and when the exports fell to 157,000,000 f., notwithstanding the artificial movement which it was endeavoured to impart to them by the system of drawbacks. But since then the exports of P. have gone on increasing, and represent at present about the seventh part of all that we export, and about the fourth part of our special exports in manufactured produce. The reason is, that P. is in fact for our country the centre of all the fabrications of taste and of art. It not only sends to foreign countries what its able workmen prepare, but likewise a crowd of products in wood, leather, and metal sent in a rough state from the departments, and finished in Paris. The work done in P. consequently is not only that of the metropolis, but of many towns in the provinces. It is right to add that the amount of the exports of P., such as they are shown by the customs returns, comprehends many articles furnished by Lyons, Sedan, Mulhausen, and St. Etienne. P. in 1852 had to supply large orders sent from the United States and S. America. In addition to our silks and printed stuffs, which have everywhere an incontestable success, our articles of dress, our furniture, jewellery real and false, our clocks and watches, gloves, saddlery, and glass have found ready markets at Valparaiso, Lima, La-Plata, Rio-Janeiro, and Pernambuco. Large quantities have also been sent to the countries of the Baltic, to Russia, and to the countries of the Danube, where the taste for French articles is increasing

more and more, and where it would become a regular branch of trade, giving us a large profit, if through unpardonable carelessness we did not allow the merchants of London and Trieste to carry there our own goods, which naturally they charge with their profits on the goods. But, however that may be, Parisian exports occupy a considerable place in the commerce of the world—a place worthy of the rank which they obtained at the exhibition of London; and it is to be remarked that they have increased in a proportion which exceeds the general progress of our foreign commerce. During the last 15 years—that is, since 1837—the general movement of our exports has not increased more than half, whereas the special exports of P. rose from 94,000,000 f., representing a weight of 11,852,000 kilogrammes, to 221,000,000 f., representing a weight of about 33,000,000 of kilogrammes, and has thus more than doubled the value and tripled the quantity of goods which they furnish to foreign countries."

Supply of water.] P. is divided into two distinct zones for the distribution of water. All the lower portion, that is to say four-fifths of P., might be supplied by the water of the Canal-de-l'Ourcq, arriving naturally from its own weight, without the aid of machines and the expense of fuel. This is the first zone. The other portion, less important as to extent, cannot receive the water except by artificial means, on the l. bank. It comprises the Montagne Ste. Genevieve and the neighbouring quarters, which are supplied by the waters of Arcueil, the well of Grenelle, and the forcing pump of Notre-Dame. On the r. bank, the second zone forms the line running parallel to the octroi wall; these are the richest and best built quarters of the capital, yet they are the worst supplied with water from the Seine. The forcing pump at Chaillot gives a very insufficient supply. Wanting the means of action, either on account of the small number of its pipes or of their small size, the city of P. cannot utilize the mass of water which it has a right to draw from the Canal-de-l'Ourcq. In consequence of the inconveniences which every day arise from this state of things, in the simultaneous service of the fountains at the corners of streets, the watering, and the public fountains, the city has decided on utilizing all the water it can draw from the Canal-de-l'Ourcq. After providing for the service of the fountains at the corners of the streets, the watering, and the monumental fountains, the city now derives from the sale of its water a revenue of nearly 1,200,000 francs. This revenue is every day increasing, and will be still further increased by the ameliorations we have just spoken of. The receipts for the sale of water in

1830, were	575,641 fr.
1840, ...	845,571
1848, ...	1,065,683
1851, ...	1,187,368

The city of P. possesses very peculiar advantages for such an undertaking. In London the quantity of water consumed daily is 168,826 cubic metres for 191,066 houses. In P. we may reckon 40,000 houses, or little more than one-fifth of those in London. The expense of pumping by steam-engines this quantity of water from the level of the Thames at London to an elevation equal to the Canal-de-l'Ourcq above the Seine, would cost £69,000 per year, the whole of which would be saved by a supply from the Canal-de-l'Ourcq. The length of the pipes required for P. will not exceed a fourth part that of London, and their dimensions will be less, on account of the descent of the water affording a greater velocity. M. Girard estimates the quantity of water supplied by the Canal-de-l'Ourcq at 260,820 cubic metres per day. Supposing this calculation to be exact, it will be necessary, first, to deduct all the water necessary for the supply of the present public fountains and markets; and secondly, what is consumed by the locks on the canals St. Martin and St. Denis, which may be calculated at 1,054 cubic metres for the passage of a barge, or of 105,400 cubic metres for the passage of 50 barges on the two canals. The quantity of water consumed daily in each house in London in 1810, before the establishment of the new water companies, did not exceed 50 gallons, but since that period the consumption has reached 200 gallons per house per day. This includes manufactories, baths, water-closets, &c. If a similar increase in the consumption should take place in P., the quantity required would be 140,000 cubic metres per day for the use of 909,126 inhabitants. London pays annually for water the sum of £284,188, averaging about 32s. per house for 6 persons; consequently, if P. were called upon to pay £60,000 per year, it would average about 8s. for every family of 6 persons for an equal supply.

Fortifications.] P. within the barriers is of an oval form, and comprises a space of 5 m. in length, by 4 m. in breadth, but much of the surface is occupied by public and private gardens. The fortifications consist of two lines or systems,—1st, the *enceinte*, a continued wall or rampart, 35 ft. high, surrounded by a ditch counter-scarped with masonry, and capable of being filled by the Seine to the depth of 8 ft., with 50 gates, each forming a small citadel; and 2dly, a series of 17 detached forts at a distance beyond the *enceinte*, and connected with each other by military roads. The circumf. of the continued wall is 33,165 metres, equal to 36,000 yds., or 20½ English m. But as the salient and re-entering angles of the bastions make an addition of 5,500 metres, the line of development will measure 24 m. The breadth of the open space betwixt the wall and the barriers of course varies, but averages about a mile. The inner defence of Paris, therefore, consists of a wall 24 m. long. The outer defence of the city is to consist, we have said, of a series of 17 detached forts, placed in commanding situations, not less than 1½ m., nor more than 4½ m. from the wall. They are to embrace a circumf. of 20 leagues, or 50 m.! Their average distance from the centre of P. will be 8 m ; from the barriers, 5 m.; from the wall, 3¼ m. The armament of the *enceinte* employs 20,000 heavy guns; that of the fortresses, 700. The magazines of the fortresses are adapted to contain 5,000,000 lbs. of gunpowder, with other ammunition. A military servitude has been established over all the ground within 250 metres (273 yds.) of the wall; that is, no buildings will be allowed to be erected in that space. The expense of the works was originally thus estimated:

	Francs.
For the wall and price of ground, .	69,691,000
For the detached forts, . . .	58,596,000
Indemnity for the military servitude,	4,000,000
	132,287,000

In round numbers the expense is estimated at 140,000,000 f., or £5,600,000. If the city were defended by detached forts only, even though divided by smaller intervals, it would be very insecure. After the enemy had reduced one or two of them, Paris would be completely open to him. Nay, with such a prize in view, he would not wait for the reduction of the forts, but push his columns through the intervals at the expense of a great sacrifice of life. The continued wall would also by itself form an imperfect defence, and requires the cordon of forts to render it complete. The forts have various advantages. First, they prevent the enemy from establishing the works necessary for a regular siege in the space between the cordon and the wall, at least till he has reduced two or three of them. Next, they form an outer line of defence, and throw the enemy to a distance which renders bombardment impossible; for bombs fired from any point beyond this outer circle could not reach the skirts of P. This, as the report states, is an object of vast importance; for many men will cheerfully expose their own persons on the ramparts or in the field, who would tremble at the thought of bombs falling on their wives and daughters in the streets, or setting fire to their houses. Thirdly, the cordon of forts would compel the enemy to spread his force over a line of 50 m., intersected by woods and rivers, and expose him to be beaten by a much smaller army acting from the centre, and choosing its point of attack at pleasure. Fourthly, the great tract of ground on the W side of P., comprised in the bend of the Seine, between St. Denis and Sevres, and included within the cordon of forts, would shelter and feed herds of cattle, and supply fresh meat, the only want for which it would otherwise be difficult to provide. P., with the addition of a garrison and 200,000 inhabitants from the neighbouring villages, could be provisioned for 60 days. There are always laid up in P. grain and flour for 35 or 45 days, besides an immense quantity of animal and vegetable food, and six months' store of wine. The pop. of P. is roughly calculated at 1,000,000, that of the banlieu at 200,000, the garrison would be 100,000, and 80,000 additional sacks of flour would support the whole for two months. The troops might be encamped between the lines; the national guard would defend the *enceinte*. The sphere of action of a simple fortified post is the range of its artillery; of a fortress, the distance to which its garrison can act with safety; of a grand fortified position, the whole range of country on which an entire army can operate. There are in France 123 fortified places,—23 of the first class, 46 of the second, and 54 of the third. But the two principal points of national defence are P., which now has 20 fortresses, and Lyons, which has 16. The national guard amounted to 800,000; and the *arriere ban*, or general pop., are liable to be called out to take charge of the capital and the fortresses, leaving the regular army disposable for the field.

Canals and railroads.] All the canals on the N of P. are branches of the Canal-de-l'Ourcq, made for supplying the city with water from the Ourcq beyond Mareuil, about 24 m. from P. —The Seine communicates with the Loire by the canals of Briare and of Orleans; with the Saone by the Canal-de-Bourgogne; and with the Somme and the Scheldt by the Canal-de-St.-Quentin.—Ten railroads have stations in P., viz., the St. Germains, Rouen, Versailles, Rennes, Orleans, Corbeil, Sceaux, the Northern line, Strasburg, and Lyons.

History.] A Gotho-Celtic tribe, called *Parisi*, founded P. on an island of the Seine. They burned it on the approach of the Romans; but the conquerors rebuilt it, and called it *Lutetia*. It was a place of small importance, however, until Julian established his winter-quarters here in 360. In the 5th cent. it was conquered by the Franks; and it became the cap. of their kingdom in 508. Clovis embraced the Christian faith, and lived in the palace of the *Thermæ*, of which ruins are found to this day in the street Laharpe. Clotilda, his wife, completed the church Ste. Geneviève, which he had begun. About 550 Childebert commenced the building of Notre-Dame; 100 years after St. Landry founded the Hotel-Dieu. Towards the end of the 8th cent. Charlemagne instituted the schools from which at a later period sprung

the university. In 845 the Normans besieged the city; and they burnt it about 857. After Hugh Capet, count of Paris, the first king of the third race, ascended the throne in 987, P. remained the residence of the kings, until Louis XIV., whom the Fronde had driven from the cap. in 1649, made Versailles the royal residence. Hugh Capet resided in the present palace of justice. Under Louis the Fat, not more than about 12 francs of taxes were collected monthly at the N gate, in the neighbourhood of the present street St. Martin. In 1163 Bishop Maurice-de-Sully erected the cathedral of Notre-Dame, as it is still to be seen. In the same cent. the Templars built their palace on the square where at present is the Market-du-Temple. In 1190, Philip Augustus, who had caused P. to be paved, ordered a third enlargement, and divided the city into eight quarters. Until that period it had but 3 gates; now it received 15. After the abolition of the order of the Templars in 1312, Philip the Fair, in 1314, caused the grand-master Molay and several knights to be burned in the Place-Dauphine. Under Philip of Valois, P. contained 150,000 inhabitants. The *black death*, so called, which ravaged Europe about the middle of the 14th cent., destroyed half of the inhabitants of P. About this time the Hotel-de-Ville, on the Place-de-Grève, was begun. In 1367 the fourth enlargement of P. took place under Charles V., and P. was divided into 16 quarters; 20 years later the Bastile was begun. Until that time P. had two bridges,—one towards the N, called Le-Pont-au-Change, the other towards the S, called Le-Petit-Pont; in 1378, the third, Le-Pont-St.-Michael, opposite the present street Laharpe, was built. The fourth bridge, Pont Notre-Dame, was built soon after. In 1418 P. was visited by famine and pestilence, and 100,000 people perished in three months. In 1420 the cap. of France was taken by the English. Charles VII. drove them out in 1436. In 1465, some attempts, though very imperfect, were made to light the streets at night. Under Louis XI. P. contained 300,000 inhabitants. In 1563 the Jesuits established themselves here. Henry IV. besieged P.; the city surrendered in 1594, and Henry made a triumphal entry. Henry IV. completed in 1604 the Pont-Neuf, begun by Henry III. in 1578. In 1614 the equestrian statue of Henry IV.—the first monument of this kind in France—was erected. In 1615 the Palace-Luxembourg was begun; in 1629 the Palais-Royal in its old form; and in 1635 the Jardin-des-Plantes. Louis XIV. enlarged the city, and did much for the embellishment of it. In 1664, the Tuileries, begun by Catharine of Medici, were completed; in 1665 Perrault built the colonnade of the Louvre; and almost at the same time the Hotel-des-Invalides, the observatory, the gate St. Denis. Under Louis XV. the Ecole Militaire was erected, and the church Ste. Genevieve completed. In 1763 the city erected the statue of Louis XV. on the place of his name, and a number of magnificent buildings. The Revolution interrupted the embellishment of P., which Napoleon, zealous as he was to make the French nation the ruling power of Europe, and P. the capital of the world, pursued with ardour. The history of P. is to a considerable degree the history of France, so much has this city during the last centuries concentrated in itself all the vital action of France. This has had several good and many evil consequences; true liberty, the life-blood which should animate all parts of the body politic, cannot be domesticated in France until the departments and provincial towns have resumed their proper importance. The preponderance of P. over all France, not only in a political sense, but in literature, arts, customs, &c., is immense, and was most strikingly manifested during the revolution of the last cent. On the 31st of March 1814, the taking of P. concluded the campaign of the Allies against Napoleon. The taking of P. cost the Allies 9,000 men; the French lost 4,000, besides prisoners, and 109 cannons. When, after a series of blunders on the part of the Bourbons, Napoleon returned to P. in 1815, and lost the battle of Waterloo, Davoust received the command of about 60,000 men for the defence of P.; but a capitulation was concluded at St. Cloud. The subsequent history of P. is sketched in the historical section of article FRANCE.

PARIS, a flourishing village of Upper Canada, in the S part of the township of Dumfries, and partly in Brantford, 22 m. W of Dundas and 6 m. from Brantford, at the junction of Smith's creek with Grand river. Pop. 1,000. It is finely situated, and consists of an upper and lower town. Gypsum abounds in the environs.

PARIS, a township of Oxford co., in the state of Maine, U. S., 39 m. W by S of Augusta. The surface is hilly, but the soil is generally fertile. It is watered by Little Androscoggin river. Pop. in 1840, 2,454.—Also a township of Oneida co., in the state of New York, 8 m. S of Utica, and 96 m. WNW of Albany. It has an elevated and undulating surface, and is drained by Sadaquada creek. The soil consists of sand and calcareous loam. Pop. 2,844. The village contains about 150 inhabitants.—Also a village of Fauquier co., in the state of Virginia, 129 m. N by W of Richmond. Pop. about 125.—Also a village of Henry co., in the state of Tennessee, 98 m. W of Nashville, on the S side of a branch of Little Sandy river. Pop. 250.—Also a village of Bourbon co., in the state of Kentucky, 36 m. E of Frankfort, on the S fork of Licking river. Pop. 1,197.—Also a village of Stark township and co., in the state of Ohio, 135 m. NE of Columbus. Pop. 300.—Also a township of Stark co., in the same state. It has a hilly surface, and is drained by Sandy creek. The soil is generally fertile. Pop. 2,474.—Also a township of Portage co., in the same state. Pop. 936.—Also a township of Union co., in the same state. Pop. 789.—Also a village of Jennings co., in the state of Indiana, 77 m. SSE of Indianapolis, near the S fork of Muscatatack creek. Pop. 150.—Also a village of Edgar co., in the state of Illinois, 114 m. E of Springfield, on the borders of a rich prairie. Pop. 350.—Also a village of Monroe co., in the state of Missouri, 71 m. N of Jefferson city, on the S side of Middle fork of Salt river. Pop. 400.

PARIS-EN-ARDENNES. See BASTOGNE.

PARIS-EL-LA-RUE-HAUTE, a commune of Belgium, in the prov. of E. Flanders and dep. of Meldert. Pop. 495.

PARISBURG, a village of Giles co., in the state of Virginia, U. S., on the S side of New river, a branch of Great Kanawha river. See GILES.

PARISH, a township of Oswego co., in the state of New York, U. S., 22 m. E of Oswego, and 147 m. WNW of Albany. It has an undulating surface, and is drained by Salmon creek and its tributaries. Pop. 1,543. It has a village, containing about 150 inhabitants.

PARISHVILLE, a township of St. Lawrence co., in the state of New York, U. S., 15 m. E of Canton, and 221 m. NW by W of Albany. It is hilly in the S, and is watered by St. Regis, Racket, Grass, and Oswegatchie rivers. The soil consists of sandy loam Pop. in 1840, 2,250. The village is on Regis river, and contains 300 inhabitants.

PARISIAN, an island in the SE part of Lake Superior, in N lat. 46° 30′, W long. 85°. It makes part of the North-West Territory, U. S.

PARISIS, formerly a district of France, in the central part of the ancient prov. of the Ile-de-France, and now comprised in the dep. of the Seine-et-Oise and Seine. Its chief place was Louvres.

PARISOT, a village of France, in the dep. of the Tarn, cant. and 4 m. SSE of L'Isle, and 11 m. SSW of Gaillac. Pop. 800.—Also a town in the dep. of the Tarn-et-Garonne, cant. and 10 m. NE of St. Antonin, at the foot of a mountain, near the Seye, an affluent of the Aveyron. Pop. 1,500.

PARITA, a town of New Grenada, in the dep. of the Istmo, on a gulf of the same name, at the mouth of a small river, 110 m. SW of Panama. The gulf of P. forms an indentation on the W side of the gulf of Panama, extending from Point-Chaume on the N, to Point-Mala on the S. It receives the Choque and Salado, and several minor rivers.

PARITCHI, a town of Russia in Europe, in the gov. of Minsk, district and 24 m. SSE of Bobronisk, on the r. bank of the Berezina.

PARITSCH, or PIRICSKE, a pass of Transylvania, in the Szeklers country, and see of Csik, in the mountains to the N of Gyergyo-St.-Miklos.

PARIZA, a town of Spain, in Old Castile, in the prov. of Burgos, partido and 26 m. E of Miranda-de-Ebro, on the r. bank of the Somoaguda, an affluent of the Ebro. Pop. 135.

PARIZE-EN-VIRY (SAINT), a village of France, in the dep. of the Nièvre, cant. and 4 m. NNE of Dorne, and 21 m. S of Nevers. Pop. 1,200.

PARIZE-LE-CHATEL (SAINT), a town of France, in the dep. of the Nièvre, cant. and 6 m. NNE of St. Pierre-le-Moutier, on an extensive plateau, which rises above a valley watered by the l

branch of the Colatre. Pop. 1,202. It has several mineral springs, and a tile-work. In the vicinity is a mine of iron.

PARKANG, or Baracan, a town of Hungary, in the circle beyond the Danube, comitat and 1 m. NNW of Gran, on the l. bank of the Danube, a little above the confluence of the Gran. Pop. 1,370. The Turks here sustained a defeat by the Imperialists and Poles in 1683.

PARKE, a county in the W part of the state of Indiana, U. S., comprising an area of 450 sq. m., bounded on the W by Wabash river, and drained by Big and Little Racoon and Sugar creeks. Pop. in 1840, 13,499; in 1850, 15,049. Its cap. is Rockville. —Also a township of St. Joseph's co., in the state of Michigan. Pop. in 1840, 331.

PARKER, a mountain of New South Wales, in the district of Darling Downs, at the head of Ann's creek, an affluent of Condamine river.—Also a river of Australia Felix, in the Portland bay district, which flows into the sea 4 m. NE of Cape Otway.

PARKERSBURG, a village of Wood co., in the state of Virginia, U. S., 335 m. NW by W of Richmond, on the N side of Little Kanawha river, at its junction with the Ohio.

PARKGATE, a township in Neston p., in Cheshire, 11½ m. NW of Chester, on the river Dee.

PARKHAM, a parish of Devonshire, 7 m. SW of Bideford, on the S bank of the Yeo. Area 5,808 acres. Pop. in 1831, 923; in 1851, 951.

PARK-HILL, a village and missionary station of the Cherokee nation, Indian territory, U. S., a little to the N of Arkansas river.

PARKIA, a town and port of the Archipelago, in the Cyclades, on the W coast and capital of the island of Paro, 12 m. W of Naxia, and 111 m. SE of Athens. Pop. 800. It has a castle, a handsome church, and several chapels. The ancient *Paros*, on the site of which Parkia stands, was one of the largest, richest, and finest in the Archipelago. Fragments of its cornices and columns, to be seen here and there built into modern edifices, are all the traces now existing of its former magnificence.

PARKMAN, a township of Piscataquis co., in the state of Maine, U. S., 71 m. N by E of Augusta. It is drained by a head-branch of Piscataquis river, and has a fertile soil. Pop. in 1840, 1,205.—Also a township of Geauga co., in the state of Ohio, 162 m. NE of Columbus, on the head-waters of Grand river, and drained by a branch of Cuyahoga river. Pop. 1,181.

PARKSTEIN, a town of Bavaria, in the circle of the Ober-Pfalz, 5 m. WSW of Neustadt-an-der-Waldnab, and 30 m. SE of Bayreuth, on a mountain. Pop. 670.

PARKU, a village of Beluchistan, in the prov. of Jhalawan, 12 m. NW of Nal, in a fertile locality. It was nearly reduced to ruins by Mehrab, khan of Kelat.

PARKUNDY, a town of Hindostan, in the prov. of Malva, and district of Mundessur, near the l. bank of the Chumbul, 75 m. NNW of Ujein.

PARKUR, a district and town of Hindostan, in the SE part of Sinde. It forms a peninsulated tract, about 40 m. in length from NW to SE, and 12 m. in average breadth, extending into the Runn of Cutch, and connected on the N with the Thurr or Indian desert. It consists of a sandy plain, intersected in the E by a range of porphyritic hills, rising to the height of 1,000 ft., and covered with jungle. The soil possesses little fertility; and water, though plentiful at the depth of 40 cubits, is in most parts brackish. The district contains upwards of 30 villages, but in 1820 half of these were uninhabited. The chief town is Parinuggur or Nuggur. A large revenue was formerly obtained by the local government from the numerous pilgrims who resorted to this locality, to perform their devotions at the shrines of Goreecha and Mandow Ray, noted deities of the Shrawacks and Banyans. The inhabitants are chiefly Soda Rajputs, and are governed by an independent rajah.

PARKUTA, a town and fortress of Little Tibet, on the Indus, 25 m. SE of Iscardo. It is noted for its saddlery, and possesses a considerable trade.

PARLA, a town of Spain, in New Castile, in the prov. and 14 m. S of Madrid, and partido of Getafe, in a fertile plain. Pop. 1,036. It has a parish-church, several convents, a custom-house, and a public granary.

PARLAN, a village of France, in the dep. of Cantal, cant. and 7 m. WSW of St. Mamet, and 17 m. SW of Aurillac, near the Veyre. Pop. 1,000.

PARLEY (West), a parish of Dorset, 5½ m. ESE of Wimborne-Minster. Area 3,407 acres. Pop. 286.

PARLO. See Palos.

PARMA, a duchy in the N of Italy, between the parallels of 44° 20′ and 45° 7′ N, and the meridians of 9° 15′ and 10° 34′ E; bounded on the E by Modena; on the S and W by Tuscany; and on the N by the Po, which divides it from Milan. Including the districts of Placentia and Guastalla, it contains 2,280 sq. m. Its pop., according to the census taken by order of the French government in 1806, was 377,000, or 165 to the sq. m.; in 1833 it was 465,673; in 1846, 496,803; and in 1851, 497,343. It presents little diversity of surface, being almost an uniform plain, excepting the S parts which are traversed by several branches of the Apennines. The appearance of the country is extremely delightful, the whole being divided into enclosures, which are surrounded with rows of mulberries, poplars, and oaks, from whose branches the vines hang in beautiful festoons. It is watered by numerous rivers, which have their source in the Apennines, and which, proceeding in a N direction, discharge themselves into the Po. The principal of these are the Taro and its affluent the Stirone, the Tidone, the Nura, Larda, Ongina, Enza, Parma, and Trebbia.—The soil is a rich sandy or gravelly loam, which produces abundantly wheat, maize, vines, and olives, and likewise hemp, saffron, and all sorts of fruits. The pastures are extensive and rich, and support a great number of cattle, which are reared on account of the dairy. The Parmesan cheese has been long held in great estimation, and is exported to almost every country in Europe. The metayer system of cultivating the ground is chiefly pursued, and the farms are very small. In the S districts there are some mines of copper, iron, vitriol, and salt, and also some mineral springs.—The trade of the duchy is small, and consists chiefly in the exportation of cattle, hogs, and the raw produce of the soil.—The executive power is vested solely in the prince, whose authority is not controlled by any separate order in the state. The revenues of the duchy amount to £170,000. The military force on the full establishment is 8,597 men. It is subdivided into the districts of P., Borgo-San-Donnino, Placentia, Val-di-Taro, and Lunigiana-de-Parma.

Parma, a city of Italy, the cap. of the duchy of the same name, situated in N lat. 44° 48′, and E long. 10° 26′, in a beautiful and fertile country, on the banks of the river Parma, which runs through the town, dividing it into two unequal parts united by bridges. Pop. in 1844, 40,927. It is surrounded by a ditch and walls flanked with bastions; on the S side of the town is the citadel, a regular pentagon, formerly reckoned one of the strongest fortresses in Italy, but now falling to decay. The streets of the town are broad, regular, and clean, and meet in the centre, forming a handsome square, which is surrounded with arcades. The houses are of an in-

different appearance, being in general low; many of them are painted on the outside. The public buildings are not remarkable for their architecture; but the paintings with which many of them are enriched attract the attention of tourists. It is here, in particular, that we are to look for the master-pieces of Correggio, Parmeggiano, and Lanfranco, the two last of whom were natives of P. The ducal palace is an extensive but unfinished range of buildings, without regularity and without ornament. It is occupied by several public establishments, amongst which are the academy of fine arts, the museum of sculpture and painting, and the public library. The library consists of 80,000 vols. In the gallery of the academy is the celebrated fresco picture of the Virgin and Child, accounted Correggio's master-piece. The same gallery contains many other fine paintings, and several ancient statues found in the ruins of Velleia. The theatre, which also forms a part of the palace, is a building of Vignola, on the plan of the Olympic theatre at Vicenza. It is said to be the largest in Europe, being capable of containing 9,000 spectators: but, on account of the great expense of fitting it up, it is never used, and has therefore been suffered to fall to decay. There are 5 collegiate and 30 parish churches in P. The cathedral is Saxon, but lined in the inside with Roman architecture; it is celebrated for its cupola, painted by Correggio. The university was founded in 1412, by Nicolas d'Este. Its buildings, which are large and handsome, contain an anatomical theatre, an observatory, a chemical laboratory, and a museum of natural history; there is also a botanical garden attached to it: the number of students seldom exceeds 400. A college for the sons of nobility, founded in 1600 by Ranuzio Farneze, is fitted for the accommodation of 500 students, but is seldom attended by more than 50. The royal printing press of P., established in 1765, has produced several elegant editions of the classics. P. is the see of a bishop, suffragan of Genoa, and likewise the seat of the ducal administration. Its trade consists chiefly in silk; there are also some small manufactories of hats and fustian. Near the town is the Palazzo Giardino, a ducal palace surrounded with fine gardens. This spot was, in 1734, the scene of a bloody engagement between the French and Sardinians on the one side, and the Imperialists on the other, in which the latter were defeated.—P. was founded by the ancient Etruscans. It became a Roman colony in the 568th year of the city. It is said to have suffered severely during the triumvirate, from the cruelties of Antony. It was several times taken and retaken by the Goths and Romans, the Lombards and Greek exarchs. On the destruction of the kingdom of Lombardy, it was given by Charlemagne to the Holy see. It afterwards came successively under the dominion of the house of Este, the Scaligers, Visconti, Sforzas, and the Popes; and in the 16th cent. it was given by Paul III. to his son Luigi Farnese. It remained in the Farnese family till the extinction of the male branch in the beginning of the last cent., when it passed to Spain, by the marriage of Elizabeth Farnese to Philip V. Their son, Don Carlos, in 1731, took possession of the duchy; but, on his obtaining the crown of Naples, P. was ceded to the Emperor. On his death, it was again claimed by Spain, and by the treaty of Aix-la-Chapelle, in 1748, it was arranged that Don Philip, second son of Elizabeth Farnese and Philip V., should be put in possession of the duchies of P. and Placentia. In 1801, the Duke of P. obtained the crown of Tuscany, with the title of king of Etruria; but, on his death, P. and Placentia were occupied by the French troops, and united to France, forming the dep. of the Taro. On the overthrow of Bonaparte, they were given by the treaty of Paris, in 1814, to the ex-empress Maria Louisa, reverting, on her death, to Austria and Sardinia; but, by later arrangements, it was settled that these provinces should eventually fall to the duke of Lucca. See articles Lucca, and Modena.

PARMA, a river of the duchy of Parma, which has its source in the N side of the Apennines, a little to the SW of Cormiglio; runs through the capital; and throws itself into the Po, on the r. bank, above Guastalla, and after a course in a generally NNE direction of 75 m.

PARMA, a township of Monroe co., in the state of New York, U. S., 10 m. NW of Rochester, and 231 m. W by N of Albany. It has a generally level surface, bounded on the N by Lake Ontario, and drained by Salmon and Little Salmon creeks. The soil consists of sand and gravelly loam. Pop. in 1840, 2,652.—Also a township of Cuyahoga co., in the state of Ohio, 6 m. S of Cleveland. It has a level surface, is drained by a branch of Cuyahoga river, and has a fine loamy soil. Pop. 963.—Also a township of Jackson co., in the state of Michigan. Pop. 525.

PARMAKA, a town of Turkey in Europe, in Rumelia, in the sanj. and 44 m. SSW of Monastir, on the Levkaritza, and to the S of Mount Barcetesios.

PARNA, a village of Sind, 40 m. NE of Omercote.

PARNAC, a commune of France, in the dep. of the Indre, cant. and 2 m. NE of St. Benoit-du-Sault, and 23 m. SE of the Blanc. Pop. 1,510.

PARNAHIBA. See Paranahiba.

PARNASSUS. See Liakuri.

PARNDON (Great), a parish of Essex, 5 m. NNW of Epping. Area 2,211 acres. Pop. in 1831, 296; in 1851, 488.

PARNDON (Little), a parish of Essex, 1½ m. NE of Great Parndon p. Area 534 acres. Pop. in 1831, 90; in 1851, 62.

PARNE, a town of France, in the dep. of the Mayenne, cant. and 6 m. S of Argentre, and 7 m. SE of Laval, near the r. bank of the Ouette. Pop. 1,020.

PARNELLAH, or Parnalaya, a pergunnah and town of Hindostan, in the prov. of Bejapur and 32 m. W of Merritch.

PARO. See Beni.

PARO, a small island, near the SW coast of Guatemala, in the gulf of Salinas. Pearls are fished near its coasts.

PARO, or Paros, an island of the archipelago, in the Central Cyclades, to the W of the island of Naxia, from which it is separated by a channel 5 m. in breadth. Its highest summit, mount St. Elias, is in N lat. 47° 2′ 46″, and E long. 25° 11′ 30″. It is 14 m. in length from NE to SW, and 11 m. in breadth; and is nearly oval in form. Pop. 2,000. Its coasts form several excellent harbours, viz.: Naussa, on the N, one of the finest in the archipelago, Parkia on the W, and St. Maria, Marmora, and Trio on the E. This island though mountainous is generally fertile, and in some parts well-cultivated. Its principal productions are olives and cotton; but corn, wine, fruit, and legumes are also extensively cultivated. Sheep, goats, and pigs are reared in great numbers on its upland pastures. Its marble quarries, noted for the whiteness and durability of their stone, and celebrated in the annals of ancient art, have since the decay of the eastern empire, fallen into neglect. This island still contains some antiquities; in one of its quarries about 5 m. from Parkia, is a bas-relief cut in a rock. Here also, the Arundel marbles, called the Chronicles of Paros, were discovered in 1627.

PARO, Parogong, or Rinjipo, a district, town,

and fortress of Butan. The district extends from the frontiers of Bengal to those of Tibet, and comprises also the tract of low land near the Luckidwar mountains, on the l. bank of the Pa-chu, 15 m. SW of Tassisudon. It is the residence of the governor of the district, and is noted for the manufacture of images and of arms. The valley of P., which is of considerable extent, runs in a NW direction and is intersected by a river.

PAROLA, a town of Hindostan, in the prov. of Candeish, 75 m. ESE of Nândurbar. It is large and flourishing, and was formerly strongly fortified.

PARONA, a village of Sardinia, in the div. and 14 m. SSE of Novara and prov. of Lomellina, mand. and 3 m. NNE of Mortara.

PAROPAMISUS. See HINDU-KUSH.

PAROS. See PARO.

PAROUSIA, a river of Russia in Europe, in the gov. of Novgorod and district of Staraïa-Rous, which has its source on the confines of the gov. of Pskov, a little to the SE of Prouskoé; runs in a generally N direction; and throws itself into the Polest, on the r. bank at Staraïa-Rous, and after a course of 78 m.

PARPAN, a village of Switzerland, in the cant. of the Grisons, 6 m. S of Coire. Pop. 115. In the adjacent mountain of Rothenhorn are mines of gold, silver, and copper.

PARR, a township of Lancashire, in the p. of Prescott, 3 m. WSW of Newton in Makerfield. Area 1,360 acres. Pop. in 1841, 3,310; in 1851,

PARRA (LA), a town of Spain, in Estremadura, in the prov. and 33 m. SSE of Badajoz, partido and 12 m NW of Zafra, at the foot of a mountain. Pop. 1,885. It has a convent, and possesses manufactories of woollen and linen fabrics, and several tanneries. It contains some Roman antiquities.—Also a town in the prov. and partido and 18 m. S of Cuenca, at the foot of the Sierra-de-Cuenca, in a cold but salubrious situation. Pop. 790. It has an hospital.

PARRAMATTA, a river of New South Wales, in the co. of Cumberland, which has its source in the W part of the district of the same name; flows through the town of Parramatta, and discharges itself into the W extremity of Port Jackson, after a course in a generally E direction of 15 m. It receives Duck river on the r., and, although rather shallow, is navigable as far as Parramatta, between which and Sydney, a distance of 18 m., steam-boat communication has been regularly established.—Also a hundred, district, and town in the same co. The hundred comprises 6 parishes, and contains 7,887 inhabitants.—The district comprises the hundreds of Parramatta and Dundas, and the p. of Concord, and contains an area of 151,105 acres. Pop. 9,400.—The town, which is the second in New South Wales, and the seat of the county executive, is partly in the parish of the Field of Mars, and partly in that of St. John, on the river of the same name, and 15 m. by land distance from Sydney. Pop. 4,454. It is situated in a valley, enclosed on the S by a chain of hills, and is about a mile in length. The streets are regularly laid out, but only a small portion of the houses are built of brick. The greater number are constructed of wood and earth. The principal buildings are the government and court houses. It has also two Episcopalian and two Scotch churches, a Roman Catholic, an Independent, and two Wesleyan chapels, a Protestant and a Catholic orphans school, an observatory, several hospitals, a gaol, barracks, and at the distance of half a mile, a factory or female penitentiary. Several coaches and steam-boats run daily between this town and Sydney.

PARRAS, a town of Mexico, in the state and 240 m. SSE of Chihuahua, and a little to the E of a lake of the same name. Pop. 7,000. The vine is cultivated with success in the environs. The lake of P. is 32 m. in length from N to S, and 12 m. in breadth, and abounds with fish.

PARRAS-DE-CASTELLOTE (LAS), a town of Spain, in Aragon, in the prov. of Teruel and partido of Castellote-y-su-Barrio-Montijo, 66 m. SE of Zaragoza, and 17 m. SSW of Alcaniz, near the r. bank of the Guadalupe. Pop. 425. It has manufactories of linen.

PARRET, a river of Somerset, which rises to the E of Crewkerne; flows NNW, past Bridgewater; and flows into Bridgewater bay, in the Bristol channel, after a course of 36 m. Its principal affluents are the Isle and the Tone on the l., and the Yeo on the r.

PARRILLA (LA), a town of Spain, in New Castile, in the prov. and 24 m. S of Cuenca, near the r. bank of the Xucar. Pop. 2,160. It has manufactories of coarse woollen fabrics.

PARRILLAS, a town of Spain, in New Castile, in the prov. and 69 m. W of Toledo, and 9 m. NNE of Oropesa, near the Sierra-de-Gredos and the r. bank of the Guayerbas. Pop. 455.

PARRY, a river of New South Wales, in the district of Liverpool plains.—Also a mountain in the same district, on the confines of the co. of Bligh.—Also an inlet of Western Australia, on the S part of the co. of Stirling. It is named by the natives Hordabup.

PARRY (CAPE), a headland of British North America, on the E side of Franklin bay, on the Polar sea, in N lat. 70° 18′, and W long. 123° 0′.—Also a headland of the W coast of Greenland, in the Arctic Highlands, near the NE extremity of Baffin's bay, in N lat. 77° 6′, and W long. 71° 23′.—Also a headland of the E coast of Greenland, in N lat. 72° 27′, and W long. 21° 45′.—Also a sound and island of Upper Canada, on the E side of Georgian bay, Lake Huron.

PARRY (ISLANDS), a group of islands in the N. Pacific, in the Bonin or Arzobispo archipelago, in N lat. 27° 44′, and E long. 142° 0′.

PARSAC, a village of France, in the dep. of the Creuse, cant. and 4 m. NE of Jarnage, and 11 m. SSW of Boussac, on the E bank of a pond formed by the Veraux. Pop. 1,400.

PARSBERG, a market-town of Bavaria, in the circle of the Upper Pfalz, and to the SW of Hohenfels. Pop. 594. It has a castle, and contains several breweries.

PARSBOROUGH, a town of Nova-Scotia, in King's county, on the N coast of the basin of Minas, and 60 m. NW of Halifax.

PARSDORF, a village of Bavaria, in the circle of Upper Bavaria, and 12 m. E of Munich. Pop. 132.

PARSIPPANY, a village of Hanover township, Morris co., in the state of New Jersey, U. S., 60 m. N of Trenton, on a river of the same name. Pop. in 1840, about 100.

PARSIS, a tribe scattered over our Indian possessions, and forming the most numerous and wealthy class of merchants in Bombay, Surat, and Barouch. They are the descendants of a body of Persians, who about the year 651 fled from the invasion of the Caliph Omar, and, carrying with them the doctrines of Zoroaster, first appeared in India, in the island of Diu or Dew, off the S coast of the peninsula of Guzerat, in 766. From Diu, they migrated to Damaun on the E coast of the gulf of Cambay; and from this point they sent colonies to Surat at the embouchure of the Tapti, and to Barouch at that of the Nerbudda. In the city of Bombay their numbers are estimated at 120,000; in other parts of the British dominions in Western India they are estimated to be 130,000. They are chiefly engaged in trade and handicrafts, never as soldiers or sailors. After above 1,000 years' residence in India, they still preserve the colour, blood, and religion of their ancestors the countrymen of Cyrus or Darius.

PARSONAUTH, or PARSWANATHA, a place of pilgrimage of Hindostan, in the presidency of Bengal, prov. of Bahar, and district of Ramghur, in a mountainous locality, 136 m. SW of Boglipur. It is

held in great reverence by the Janis, the founder of which sect died at the age of 100 years on Mount Sameya or Samet in this locality.

PARSON-DROVE, a chapelry in Leverington p., in Cambridgeshire, 4½ m. W of Wisbeach. Area 4,460 acres. Pop. in 1831, 755; in 1851, 946.

PARSONFIELD, a township of York co., in the state of Maine, U. S., 86 m. WSW of Augusta. It has a hilly surface; and is watered by Ossipee river, the outlet of a large pond in the E part of the township. Pop. in 1840, 2,442.

PARSON'S CREEK, a township of Linn co., in the state of Missouri, U. S. Pop. in 1840, 501.

PARSONSTOWN, a parish of co. Louth, 4 m. ESE of Dunleer. Area 524 acres. Pop. in 1841, 237.

PARSONSTOWN. See Birr.

PARSONNIER, a commune of Belgium, in the prov. of Namur, and dep. of Cul-des-Sarts. Pop. 176.

PARSOW, a village of Poland, in the woiwodie and obwodie of Radom.

PARTALOBA, a town of Spain, in Andalusia, in the prov. and 42 m. NE of Almeria, partido and 18 m. E of Purchena, at the foot of the Sierra-de-Aguaderas, and near the l. bank of the Almanzo. Pop. 820.

PARTANNA, a market-town of Sicily, in the prov. and 33 m. SE of Trapani, district and 21 m. E of Mazzara. Pop. 3,000.

PARTE (La), a town of Spain, in Old Castile, in the prov. and 23 m. NE of Burgos, partido and 7 m. N of Bribiesca, near the r. bank of the Oca. Pop. 122.

PARTEEN, a village in the p. of St. Patrick's, co. Clare, 2½ m. N by E of Limerick, on the r. bank of the Shannon.

PARTENICO, a district and town of Sicily, in the prov. and 18 m. WSW of Palermo. Pop. 8,000. It has manufactories of silk and woollen fabrics, and carries on a considerable trade in wine and oil.

PARTENKIRCHEN, a market-town of Bavaria, in the circle of Upper Bavaria, near the r. bank of the Loisach, and 54 m. SSW of Munich. Pop. 1,055. It has a Latin school, and possesses numerous wells and a gypsum quarry.

PARTHA, a river of Saxony, in the circle of Leipzig, which has its source in the bail. of Colditz; runs first NW, then SW; and joins the Pleisse, on the r. bank, at Leipsig, and after a course of 30 m. It bathes the towns of Naunhof and Taucha.

PARTHENAY, a town of France, in the dep. of the Deux-Sevres, 27 m. NNE of Niort, and 31 m. W of Poitiers, on the slope and summit of a hill, on the r. bank of the Thoue. Pop. 3,900. It has a town-hall, a communal college, a theatre, and an hospital, and possesses manufactories of woollen fabrics and several tanneries. Grain and cattle form its chief articles of trade. This town was formerly capital of the small district of Gâtine, in Upper Poictou, and sustained several sieges against the English.

PARTICK, a village of Lanarkshire, in the p. of Govan, on the Kelvin, a little above its junction with the Clyde.

PARTICLES, a parish in co. Limerick, containing the v. of Glenosheen. Area 8,497 acres. Pop. in 1841, 2,431.

PARTINGTON, a township in Bowden p., in Cheshire, 8 m. N by W of Nether Knutsford. Area 803 acres. Pop. in 1831, 466; in 1851, 485.

PARTNEY, an island of Spencer's gulf, in Sir Joseph Bank's group, to the W of Reevesby island, co. of Flinders, South Australia.

PARTNEY, a parish of Lincolnshire, 2 m. N by E of Spilsby. Area 919 acres. Pop. in 1851, 489.

PARTOW, a parish in the N division of Kirkcudbrightshire, at the head of Urr-water. Area 28 sq. m. A large portion of its surface is covered with heath. Pop. in 1831, 827; in 1851, 731.—Also a township in Moresby p., in Cumberland, 2 m. N of Whitehaven. Pop. in 1831, 559; in 1851, 778.

PARTREE, or Partry, a village in the p. of Ballyovey, co. Mayo, 5 m. NW of Ballinrobe.

PARTRIDGE, an island of the bay of Fundy, on the N coast of New Brunswick, and near the entrance to St. John's harbour, in the bay of Fundy. It has a lighthouse in N lat. 45° 19′ 40″, W long. 66° 1′ 30″. —Also a headland of Newfoundland, on the NE coast, a little to the E of White bay, in N lat. 50° 15′, W long. 56°.

PARTSCHENDORF, or Bartossowice, a village of Moravia, in the circle of Prerau, 8 m. ESE of Fulnek, and 17 m. NE of Weisskirchen, near the r. bank of the Oder. Pop. 1,670.

PARU, a mountain of Brazil, in the prov. of Para, in Brazilian Guayana, which runs parallel to and at a short distance from the l. bank of the Amazon, between Onteiro and a river of the same name. The river has its source in the Serra-de-Velha; runs S past Desterro and Almeiram; and joins the Amazon between the embouchures of the rivers Urubuquara and Jari, and after a course of 300 m. Many of the affluents of this river are auriferous, and its banks are noted for their tobacco and sarsaparilla. It was formerly named Genipapo.

PARUL, a small island of the Asiatic archipelago, in the Sulu group, between Borneo and the Philippine islands, in N lat. 6° 1′, and E long. 121° 43′.

PARURO, a province and town of Peru, in the intendency of Cuzco. The prov. occupies the central part of the intendency, and is to a great extent covered with mountains. Pop. 20,236, of whom about 15,000 are Indians. It produces considerable quantities of grain, and pastures large herds of cattle. The town is 15 m. SSW of Cuzco and 24 m. NE of Tambobamba, at some distance from the r. bank of the Apurimac.

PARVICH, Parvichio, or Bocca-de-Segno, a small island of the Adriatic, in the gulf of Quartero, on the coast of Dalmatia, and circle of Zara, between the island of Veglia on the NW and that of Arbe on the S, and 7 m. SW of Segna, from which it is separated by the canal of Morlacca, here about 5 m. in breadth. Pop. 1,000. It is about 4 m. in length, and has a harbour named Dubaz.

PARWANATHA. See Parsonauth.

PARWICK, a parish of Derbyshire, 6 m. N of Ashbourne. Area 3,247 acres. Pop. in 1851, 493.

PARYSSCHESTRAETE, a commune of Belgium, in the prov. of East Flanders, and dep. of Astene. Pop. 258.

PARYSSTRAET, a commune of Belgium, in the prov. of Brabant, and dep. of Binckom. Pop. 102.

PARYZOW, a town of Poland, in the woiwodie and 33 m. WSW of Siedlec, obwodie and 32 m. W Lukow. Pop. 375.

PARZENCZEW, a town of Poland, in the woiwodie of Mazow, obwodie and 9 m. S of Lenezy, and 87 m. WSW of Warsaw. Pop. 580, of whom about 200 are Jews.

PAS, a commune and town of France, in the dep. of the Pas-de-Calais, and arrond. of Arras, 17 m. SW of Arras, and 8 m. E of Doullens, on the Guilienne, an affluent of the Authie. Pop. 800. It has manufactories of oil and of cotton velvet, a spinning mill, and several tanneries.

PAS, a river of Spain, in the prov. of Santander, which has its source on the N side of the Cantabrian mountains; receives the Gurueba and Pisuenna on the r.; and throws itself into the Suanes, on the r. bank, a little above the entrance of that river into the Atlantic. It has a total course, in a generally

NNW direction, of about 36 m. Also a valley watered by the river of the same name. It is 15 m. in length, and contains 3 villages, the inhabitants of which, named Pasiegos, employ themselves extensively in smuggling and as carriers.

PASA. See Fesa.

PASACAB, a defile of Guatemala, in the state of that name, and dep. of Sacatepequez and Chimaltenago, intersected by the Pancacoya.

PASACAO, a village of the island of Luzon, Philippine islands, on the W coast of the Caramines peninsula, opposite the bay of San-Miguel.

PASADO, a headland of Ecuador, in the prov. of Pichincha, on the Pacific, in S lat. 0° 21′, W long. 80° 35′ 17″.

PASAGE, or Caburao, a small island of the Philippine archipelago, a little to the E of the island of Leyte, in N lat. 10° 20′, E long. 120° 48′.

PASAGES, a town and port of Spain, in the prov. of Giupuzcoa, partido and 4 m. E of San-Sebastian, 6 m. from the French frontier, on an extensive bay, at the foot of the Jaizquivel mountains. Pop. 895. It is divided by the harbour into two parts, communication between which is maintained by means only of ferries. It possesses two parish-churches, one of which, dedicated to St. John the Baptist, contains a fine statue of that saint, a convent, an hospital, a marine school, and several magazines. The port is the only one to the distance of Corunna capable of affording safe anchorage. The bay is enclosed by steep mountains; and its only opening to the sea consists of a gorge running between two walls of rock, and wide enough to admit but a single vessel. This port, formerly so celebrated in the annals of Spain, is now incapable, from accumulations of sand, of receiving vessels of the first class; and possesses but little trade. The entrance is defended by the castle of St. Isabella, and by other works and batteries, all now in a dilapidated condition. Fishing and boat-building form the chief branches of local industry. Freestone is quarried in the environs.

PASARON, a town of Spain, in Estremadura, in the prov. and 60 m. NE of Caceres, and partido of Jarandilla, at the foot of a mountain, and on a small river of the same name. Pop. 1,482. It has manufactories of tiles and bricks.

PAS-A-WASINE, a commune of Belgium, in the prov. of Hainault, and dep. of Bailloeul. Pop. 130.

PAS-BAYARD (Le), a hamlet of France, in the dep. of the Aisne, cant. and com. and 3 m. NE of Hirson, and 15 m. NE of Vervins, in a woody locality. It has several iron-works.

PASCA, a river of New Granada, in the dep. of Cundinamarca, which has its source on the W side of the E branch of the Andes, 30 m. N of Caguan; runs first N, then W; and, after a course of about 105 m., joins the Somma-Paz, on the r. bank, to form the Fusagasanga, an affluent of the Magdalena.

PASCAGOULA, a river of the state of Mississippi, U. S., formed by the junction of the Chickasawhay and Leaf rivers, and which, after a course of 200 m., falls into a sound of the same name. The sound extends along the shores of the states of Mississippi and Alabama, and is separated from the gulf of Mexico by a series of low narrow islands. It is about 55 m. in length, and has an average breadth of 8 m. On the E side of the river, at its entrance into the sound, is a village of the same name.

PASCHESCHINITZ, a village of Bohemia, in the circle and 21 m. W of Klattau, and 4 m. SW of Tauss, near the Czerchowberg, and not far from the source of the Radbuza. It has an alum manufactory.

PASCHLEBEN (Gross), a village of the duchy of Anhalt-Kothen, to the NW of Kothen. Pop. 440.

PASCHLEBEN (Klein), a village of the duchy of Anhalt-Kothen. Pop. 470.

PASCO, or Cerro-Pasco, a mining-town of Peru, in the prov. and 60 m. S by W of Huanaco, on the table-land of Bombon, at an elevation of upwards of 14,000 ft. above sea-level. The pop. varies with the season of the year and the state of the mines, from 4,000 to 15,000. Previously to 1825, it consisted of a few mud and reed huts covered with thatch. The arrival of the English agents of the Peruvian Mining company, in that year, introduced many comforts to which the inhabitants had previously been strangers, and gave an impulse to the place. From 1825 to 1836, the surrounding silver-mines yielded ore to the value of £3,500,000; but the mines were with difficulty kept clear of the water, which, impregnated with sulphur, was found to generate vitriol, and to corrode the iron work of the steam-engines. Coal is mined within 5 or 6 m. of this place. A recent traveller describes the town as containing several good houses, the property of mine-owners and shopkeepers, though presenting, in some of its best streets, the conical Indian hut in juxtaposition with its best edifices. Within many of these huts are the mouths of silver-mines, of which more than 1,000 are opened in and around the city; the mine-owner can often pass at once from his dining-room into his mine. The streets and foundations of the houses are thus everywhere honey-combed and ruinous; but the mines are comparatively shallow, rarely exceeding 100 ft. in depth, whilst many are only from 30 to 40 ft. Two great veins of silver traverse the site of the town. One of these lies nearly due N and S, and extends to an ascertained length of at least 2 m., with an average breadth of 130 yds. The other great vein crosses this, at an angle of 70°, in a WNW direction, and has been traced above a mile. From these principal arteries numerous veins diverge in every direction. Nearly the whole mining-work is performed by Indians; and the majority of the mine-owners are little superior to the Indians either in intellect or morality. With a few great exceptions, the mine-owners are rarely wealthy. The silver is all cast into large flat oblong bars, weighing 100 lbs. each, and in this shape is conveyed to the coast, and shipped for Europe at Callao.

PASCOE, an islet of North Australia, in the gulf of Carpentaria, about 10 m. from Point Tanant.

PASCUARO, or Patzquaro, a town of Mexico, in the state of Mechoacan, 33 m. WSW of Valladolid, on the W bank of a small lake of the same name, at an alt. of 2,406 yds. above sea-level. Pop. 6,000. In the vicinity are mines of copper.

PAS-DE-CALAIS, a department of Northern France, organized from the prov. of Artois and part of Basse-Picardie; lying between the parallels of 50° 2′ and 51° 0′ N, and between 1° 35′ and 3° 10′ of E long.; and bounded on the N and E by the dep. Du Nord; on the S by that of Somme; on the W by the English channel; and on the NW by the Straits-of-Dover, or, as the French term it, the Pas-de-Calais. It has a superficial area of 655,645 hectares. The pop. in 1836 was 655,215; in 1851, 692,994.—The surface exhibits a few chains of low hills, which give rise to the Aa, the Lys, and the Scarfe, all flowing into the Northern sea; the Liane, the Canche, and the Authie, flow into the straits of Dover. With the exception of the neighbourhood of Boulogne, the coasts are low, and are in some places only protected from the invasion of the sea by a ridge of sandy downs. There are some extensive marshes.—The soil is fertile, and well-cultivated. Of the total surface nearly 500,000 hect. are arable; 20,000 are in heaths and wastes. In addition to the ordinary cereals, oleaginous seeds, beans, potatoes, beet-root, and tobacco,

are extensively grown. Oxen, cows, sheep, and pigs, are reared in considerable numbers. There are rich coal-mines in this dep., and considerable indications of copper and iron. Manufacturing industry is active. Beer, malt-spirits, and beet-root sugar, are largely manufactured. Lace, linen stuffs, yarns, leather, gunpowder, soap, pottery-ware, and glass, are among the principal articles of manufacture. Calais and Boulogne are the principal seaports: see these articles.—The dep. is divided into the 6 arrondissements of Arras, Bethune, Boulogne, Montreuil, Saint-Omer, and Saint-Pol, which are subdivided into 43 cantons, and 903 communes. It forms the diocese of the bishop of Arras. In 1838-9 it sent 8 members to the chamber-of-deputies, who were chosen by 4,512 electors.

PASE', or PASAY, a port on the N coast of the island of Sumatra, 120 m. ESE of Acheen. It has considerable commerce, and the adjacent country is fertile in grain, and produces large timber.

PASEWALK, a walled town of Prussia, in the reg. and 25 m. W of Stettin, on the r. bank of the Ucker. It has large distilleries of brandy, and manufactories of woollens and hats. Pop. in 1846, 5,620.

PASIECZNA, a village of Galicia, in the circle and 3 m. NNW of Stanislawow, near the l. bank of the Bistrica.

PASIJAN, one of the smaller Philippine islands, between Leyte and Zebu, in N lat. 10° 36′.

PASIMONI, or PACEMONI, a river of Guayana, which skirts the N frontier of Portuguese Guayana, and flowing W, joins the Cassequiari, on the l. bank, under the parallel of 2° N. It appears to inosculate by a head-branch with the Cababuri flowing S to the Rio-Negro.

PASITANO, a town of Naples, in the prov. of Principato-Citra, 15 m. WSW of Salerno, and 6 m. W of Amalfi, on the gulf of Salerno. It has a small harbour, and some coasting-trade. Pop. 4,000.

PASKACK, a village of Washington township, Passaic co., in the state of New Jersey, U. S., 88 m. NNE of Trenton, on the W side of Hackensack river.

PASKAU, or BORZIKOW, a town of Moravia, in the circle of Prerau, 10 m. S of Mahrisch-Ostrau, and 30 m. ENE of Weisskirchen, near the l. bank of the Ostrawitza. Pop. 440. It has a castle.

PASLEY, a headland of South Australia, in Nuyts land, in S lat. 33° 57′, E long. 121° 6′.

PASMAN, an island of the Adriatic, on the Dalmatian coast, from which it is separated by the Zara canal, 6 m. SSE of Zara, in N lat. 43° 57′, E long. 15° 18′. It is about 10 m. in length from NW to SE, and less than a third of that extent in breadth. Its coasts are extremely irregular, and its surface mountainous. The soil is tolerably fertile, and produces wine and oil in considerable quantities. It contains 7 villages and 2 convents.

PASO (EL), an old presidio or military post of the Spaniards, on the r. bank of the Rio-del-Norte, in N lat. 32° 15′. In the recent treaty with Mexico, the commissioners agreed to fix the point where the S boundary of New Mexico strikes the Rio-Grande, at the parallel of 32° 22′, on the authority of Disturnell's map, executed in 1847. On examining the ground, however, it was ascertained that the true position of El P. was 32° 15′, instead of 32° 45′, as in the map referred to. The treaty says the line shall follow the Rio-Grande from its mouth until it strikes the S boundary of New Mexico. Now, on examining this map, the boundary referred to is plainly laid down; and the question arises, how is it to be found? Must its position be measured from any particular town, river, mountain, or other natural boundary, or must its lat. be ascertained and determined accordingly? Nearly every state in the Union has, for one or more of its boundaries, a line running E and W, or N and S, laid down and defined by their lat. or long.: no one would define them by their distance from any particular town or city. Without reference to the position of El P., Mr. Bartlett, the United States commissioner, agreed upon the boundary-line as it is on the map, at 32° 22′. But Mr. Gray, the United States surveyor, objected to Mr. Bartlett's line, on the ground that the parallels of lat. were wrong, and not the position of the town El P., and that the boundary must be but 8 m. from that place. When El P. is correctly placed on the map, at 32° 15′ N lat., and the S boundary of New Mexico 8 m. above it, the line, Mr. Gray argued, will be about 7 m. below the 32d parallel, while the treaty-map lays it down at 32° 22′. The United States commissioner insisted that if the map is adhered to according to treaty, his point is correct; but if the map is taken for one admeasurement, and the United States commissioner goes to the ground for another, and fixes the point in question 8 m. above the true position of El P., it would be a departure from the map and the treaty. But, in addition to the error of 30 m. in the position of El P., it was found on examination that the Rio-Grande was still more out of place, being laid down on the map more than 2° too far to the E. The result of this was, that by placing it in its true position, the S boundary of New Mexico would be contracted to less than 1°, instead of having an extent of 3°, which the treaty-map gives it. This double error placed the commissioners in a dilemma: but it was finally settled by fixing the initial point where the S boundary of New Mexico strikes the Rio-Grande at 32° 22′, and prolonging it W 3°, two of which were in a portion of the state of Sonora, gaining thereby a section of territory embracing about 6,000 sq. m.

PASQUA, a town of Senegambia, in the kingdom of Jereja, on a river of the same name, an affluent of the San Pedro, and 45 m. SSE of Vintang. It is enclosed by six rows of palisades, and contains about 300 inhabitants, chiefly Bagnons, the remainder Portuguese. The environs are fertile, and produce rice and melons in great abundance.

PASQUAL, or PASCUAL (SAN), a town of Spain, in the prov. and 19 m. N of Avila, and partido of Arivalo. Pop. 152.

PASQUAL-COBO, or PASCUALCOBO, a town of Spain, in the prov. and 30 m. NW of Avila, and partido of Piedrahita. Pop. 357.

PASQUOTANK, a river of the state of N. Carolina, U. S., which has its source in Dismal swamp, and runs SE into Albemarle sound. It is connected with Elizabeth river by a canal 23 m. in length, and which forms a communication between Hampton roads and Albemarle sound.—Also a co. in the NE part of the same state, comprising an area of 300 sq. m., bordered on the NE by a river of the same name. The surface is level and in some parts marshy, but it is generally fertile and well-cultivated. Pop. in 1840, 8,514; in 1850, 8,950. Its cap. is Elizabeth.

PASSADUMKEAG, a township of Penobscot co., in the state of Maine, U. S., 100 m. NE of Augusta, on the E side of Penobscot river, and drained by Passadumkeag and its tributary Coldstream rivers, affluents of the Penobscot. Its soil is generally fertile. Pop. 394.

PASSAGE, a small seaport town in the p. of Kill-St.-Nichols, co. Waterford, on the W shore of the estuary of the Suir, or upper part of Waterford harbour, 5½ m. E by S of Waterford, and 81¾ m. S by W of Dublin. The tideway in front of the town is about a ½ m. broad; any number of vessels may here ride in safety during storms, and a ferry has long

been established to Ballyhack. A pier projects into a sufficient depth of water to afford large vessels convenience for loading and discharging. Pop. in 1831, 658; in 1841, 624.—Also a village on the E shore of Kinsale harbour, adjacent to the town of Kinsale, co. Cork.

PASSAGE (East), a hamlet on the E shore of the E channel of Cork harbour, 3¼ m. E by N of Cove, co. Cork. A ferry here connects Great Island with the mainland of Barrymore and with Imokilly.

PASSAGE (West), a seaport town in the ps. of Marmullane and Monkstown, co. Cork, on the W shore of the estuary of the Lee, opposite Great Island, 1½ m. N of Monkstown, 3 m. NW of Cove, and 5½ m. ESE of Cork. The environs are romantic and beautiful. The town itself consists chiefly of two central irregularly built streets, about a mile in length. The quay is a substantial structure, and affords accommodation to the steam-vessels which ply on the river and down the estuary. Near the quay is a dock-yard; and at the S end of the town are large and convenient baths. Passage is the port of Cork for all very large vessels; it is, as its name imports, the grand thoroughfare or ferry-station between Cork and Cove; it is also an increasingly frequented place of at once commerce, ship-building, and sea-bathing; and, in all these capacities, it is the scene of much resort and of considerable bustle. "The disadvantages and difficulties of the navigation of the river between P. and Cork," says Mr. Windele, "are much in favour of the former. In the channel the greatest depth is 16 ft., but at the neap tides it falls 13 and sometimes 11½ ft. It cannot be generally used with a NE wind, and very frequently sailing vessels are detained at P. by the tides. To reach Cork from P. after the first hour of ebb would require a fast vessel; and after the tide has retired for a couple of hours, the transit becomes very doubtful. The upper part of the river is not, therefore, practicable at all for large vessels exceeding 150 tons burthen; while, on the contrary, at P. there is a great depth of water in front of the town, with a safe channel, which, added to the necessity of large vessels unloading there, are facilities from which P. derives considerable advantage." A proposal was made a number of years ago, to construct a railway from Cork to P. Pop. in 1831, 2,141; in 1841, 1,721.

PASSAGE, a small island of the Indian ocean, near the W coast of Sumatra, in N lat. 2° 27′, and E long. 97° 30′. It is low and sandy, but abounding in wood.—Also an island of the Molucca group, between the islands of Gilolo and Ceram, in S lat. 1° 32′ 35″, and E long. 128° 37′ 15″.—Also two islands in Bank's strait, to the E of Bass strait, between Clark's island on the E, and the SW extremity of Cape Barren island. They are of granitic structure, and abound with seals and penguins.—Also an island of the Antilles, in the group of the Leeward islands, in the chain of islets to the WNW of Anguilla, in N lat. 18° 19′ 30″, and W long. 63° 20′.

PASSAGE, or Karakita Islands, a group of islands, in the Celebes sea, between the NE extremity of Celebes and Sangir island.

PASSAGE (Le), a village of France, in the dep. of the Isère, cant. and 4 m. NE of Virieu, and 5 m. SE of La Tour-du-Pin. Pop. 800.

PASSAGE-CANAL, an inlet in Prince William's sound, on the W coast of N. America, in N lat. 60° 48′, explored by Vancouver.

PASSAGE-FORT, a small town and fort of Jamaica, in the co. of Middlesex, and parish of St. Catherine, at the mouth of the Cobre, 7 m. SE of Spanish town, on the road thence to Port Royal.

PASSAGE POINT, the E point of Elizabeth's bay, in the straits of Magalhaens, in S lat. 53° 15′.

PASSAGEM, a suburb of the town of Cabo-Frio, in Brazil, in the prov. of Rio-de-Janeiro, on the canal or Rio Itajuru.—Also a village of the prov. of Minas-Geraes, on the Ouro-Preto, and between the town of that name and Marianna.—Also a village in the same prov., in the district of Paracatú, on the l. bank of the São-Francisco, above the confluence of the Rio Abaite.—Also a village of the same prov., in the district of São-Romão, on the l. bank of the Paracatú.—Also a military station in the same prov., on the l. bank of the Jequitinhonha, on the road from Serro to Januaro, established at the beginning of the present century, for the protection of the gold and diamond mines.—Also a village of the prov. of Alagoas and district of Villanova-da-Assemblea.

PASSAGEM-DO-RIO-DA-PRATA, a town of the prov. of Minas-Geraes, in the district and 30 m. SE of Paracatú.

PASSAGEM-FRANCA, a town of Brazil, in the prov. of Maranhão, and comarca of Pastos-Bons.

PASSAGES (Los). See Pasages.

PASSAIC, a river of the United States, which rises in a large swamp in Morris co., in New Jersey, and flows NE and then S into Newark bay. It is navigable 10 m. for small vessels. At Paterson is the cataract or great falls, where the river, 40 yds. wide, moves in a slow gentle current until within a short distance of a deep cleft in a rock which crosses the channel, over which it falls 70 ft. perpendicular in one entire sheet.—Also a co. in the NE part of the state of New Jersey. Area 180 sq. m. Pop. in 1840, 16,734; in 1850, 22,577.

PASSAIL, a town of Styria, 12 m. N of Grätz, on the r. bank of the Raab. Pop. 480.

PASSAIS, a town of France, in the dep. of the Orne, near the small river Pisse, 6 m. SW of Domfront.

PASSAMAN, a state of Sumatra, on the W coast between Natal and Padang, formerly under the dominion of Menangcabu, but afterwards under Achin. Its cap., of the same name, 45 m. SE of Natal, was formerly a place of considerable trade; and besides a great export of pepper, received considerable quantities of fine gold from the mountains of the Ran country, lying about three days' journey inland.

PASSAMAQUODDY. See Sainte-Croix.

PASSAMAQUODDY BAY, a bay which belongs partly to the British prov. of New Brunswick, and partly to the state of Maine, in the American federacy. It is about 6 m. from N to S, and 12 m. from E to W, and contains a number of islands, amongst which are Campo-Bello, Deer, Moose, Dudley, and Frederick.

PASSANDAVA, a town of Madagascar, on the NW coast, in S lat. 13° 45′.

PASSARGE, a navigable river of E. Prussia, which, rising a little to the NE of Hohenstein, flows NNW, and falls into the Frische haff, near a village of the same name, after a course of about 86 m.

PASSARIANO, a town of Austrian Lombardy, in the prov. and 15 m. SW of Udino. Pop. 3,000.

PASSARO, or Passero, a small barren island in the Mediterranean, at the SE extremity of Sicily, 24 m. S of Syracuse, in N lat. 36° 41′. It has a fort and garrison, and is used as a place of exile, particularly for military offenders.

PASSARO, or Passero (Cape), a cape on the SE coast of Sicily, in N lat. 36° 40′, the *Pachynum promontorium* of the ancients. Off this cape Sir George Byng defeated a Spanish fleet in 1718, and captured 23 sail of large ships.

PASSAROS, an island of Brazil, in the Tacoari, near its junction with the Paraguay.

PASSAROWITZ, a town of Servia, near the

Morawa, 32 m. ESE of Belgrade. It is remarkable for the treaty concluded here in July 1718, between Charles VI. and the Porte.

PASSARUANG, a town and fort on the N coast of the island of Java, towards the E extremity of the island, the cap. of a principality, which in 1808 contained 108,812 inhabitants, on an area of 1,952 sq. m. The town is in S lat. 7° 40′, 32 m. SSE of Sarabaya. It is crossed by a wide river, which is navigable some leagues for coasting vessels. The surrounding country is fertile, and produces abundant crops of rice and maize.

PASSA-TEMPO, a parish of Brazil, in the prov. of Minas-Geraes, near the source of the Para, an affluent of the São-Francisco. Pop. 1,200.

PASSAU, a town of Bavaria, at the confluence of the Inn and Danube, 88 m. ENE of Munich, in N lat. 48° 34′, and E long. 13° 28′. It consists of three parts: P. proper, situated on the peninsula between the two rivers; the Innstadt on the S side of the Inn; and the Ilzstadt on the N side of the Danube, along the small river Ilz. The three parts are connected by two long wooden bridges, and contain together nearly 10,000 inhabitants. P. proper is well built, and contains several public edifices, such as the cathedral, the bishop's mansion, several public hospitals, and a gymnasium. The Ilzstadt consists of a row of meanly built houses inhabited chiefly by fishermen and labourers. The Innstadt is of somewhat superior character to the Ilzstadt. P. has large breweries and tobacco manufactories, shipbuilding docks, and some trade arising from its command of river-navigation. The town is strongly fortified, and is defended by two citadels and a line of small forts.—Here was concluded in 1552, between Maurice, elector of Saxony, and the Emperor Charles V., the famous peace, considered by the German Protestants the grand charter of their liberties. In 1652, the greater part of the town was burnt down; and in 1800, 1805, and 1809, it suffered greatly from contributions and the passage of troops. The bishopric of P. comprised a tract of country lying between Bavaria, Bohemia, and Upper Austria. Its superficial extent was 470 sq. m. It was secularized in 1803; and since 1815, the part lying to the W of the Inn has belonged to Bavaria, and the rest to Austria.

PASSAVANT, a town of France, in the dep. of the Maine-et-Loire, cant. and 8 m. SE of Vihiers, and 20 m. SW of Saumur, on the l. bank of the Layon. Pop. 400.—Also a village of France, in the dep. of the Haute-Saône, cant. and 13 m. NE of Jussey, and 27 m. NNW of Vesoul. Pop. 1,240. It has 2 steel-works.

PASSBERG, a town of Illyria, in the gov. and 44 m. SE of Trieste, and 8 m. ENE of Pisino, on an elevated plateau.

PASSCHENDAELE, a department, commune, and town of Belgium, in the prov. of W. Flanders, and arrond. of Ypres. Pop. of dep. 2,971. The town is 8 m. NE of Ypres, and 26 m. SSW of Bruges, on a height, near the source of the Mandelbeke, an affluent of the Lys.

PASSE, a commune of Belgium, in the prov. of E. Flanders and dep. of St. Nicolas. Pop. 272.

PASSE, a nomade tribe of Indians, in Brazil, who inhabit the banks of the Rio-Negro and of its affluents, and frequent the towns in the vicinity of these rivers See also Muritiba.

PASSEENOE, or Passance, a village of Beluchistan, on a bay of the Indian ocean, enclosed on the S by a cape of the same name.

PASSENDORF, a village of Prussia, in the prov. of Saxony, regency and 9 m. NNW of Merseburg, circle and 1½ m. SW of Halle. Pop. 270. It has a manufactory of gloves, and a considerable trade in mercery.—Also a village in the prov. of Silesia, regency and 57 m. SW of Breslau, circle and 14 m. WNW of Glatz, in the midst of lofty mountains. Pop. 362.

PASSENHAM, a parish of Northamptonshire, 8½ m. SE of Towcester, on the Ouse. Area 2,230 acres. Pop. in 1831, 820; in 1851, 969.

PASSENHEIM, or Passim, a town of Prussia, in the prov. of W. Prussia, regency and 78 m. SSE of Königsberg, circle and 11 m. NW of Ortelsburg, on the r. bank of a considerable lake. Pop. 1,230. It has 2 suburbs.

PASSER, a river of the Tyrol, in the circle of Botzen, which descends from a ramification of the Stuben-Ferner, and joins the Etsch or Adige about 20 m. NNW of Botzen.

PASSERAU, a group of islands in the Querimbé archipelago, channel of Mozambique, in S lat. 11° 30′, and E long. 40° 20′.

PASSERIANO. See Passariano.

PASSERO. See Passaro.

PASS-IF-YOU-CAN, a hamlet in the p. of Rathconnel, co. Westmeath, 3 m. NE of Mullingar.

PASSIGNANO, a village of the Papal states, in the delegation and 12 m. NW of Perugia, on the NE shore of the lake of that name. Pop. 600. The streets are narrow and tortuous, and its situation insalubrious.

PASSIM. See Passenheim.

PASSIN, a village of France, in the dep. of the Ain, cant. and 2 m. N of Champagne, and 13 m. N of Belley. Pop. 456.—Also a village in the dep. of the Isère, cant. and 3 m. WNW of Morestel, and 10 m. N of La-Tour-du-Pin. Pop. 850.

PASSION, a rock of the North Pacific, off the coast of Mexico, in N lat. 16° 45′, W long. 109° 5′.

PASSIR, a town and district on the E coast of Borneo, in S lat. 1° 57′, E long. 116° 10′. The town is situated about 50 m. from the mouth of a river of the same name, near the bottom of a large bay. The river near the town is very rapid. The tide rises in it 9 ft., and ascends above the town. Over the bar at its mouth there is 2 fath. water, with a muddy bottom. The town in 1808 consisted of 300 houses, built of wood, and most of them inhabited by Bugi merchants. The house or palace of the sultan was on the S side, a short distance from the river; while the rest of the town stood on the N side. About 1772 the East India company attempted to settle a factory here for the sale of opium, piece-goods, &c., and for the purchase of the many valuable articles brought hither by the Bugi traders from Celebes, the Sulu archipelago, and other islands; but the scheme was frustrated by a commotion amongst the natives, at which the English took alarm, and quitted the country, much against the wishes, it is reported, of the principal inhabitants. The adjacent country is flat and unhealthy; but produces rice, benzoin, musk, aloes, pepper, cassia, and nutmegs, also various kinds of fruit, excellent mastic and other gums, particularly dragon's blood, honey, gold dust, and camphor. The language of the place is the Malay, mixed with Bugi.

PASSIRAC, a village of France, in the dep. of the Charente, cant. and 1½ m. NW of Brossac, and 11 m. SSE of Barbezieux, on a mountain. Pop. 580.

PASSO, a river of Mexico, which has its source in the state of Oaxaca, about 48 m. N of Tehuantepec; runs N; forms a portion of the boundary line between the states of La-Vera-Cruz and Tabasco; and after a course of 90 m. throws itself into the Huasacualco, on the l. bank, 30 m. above the entrance of that river into the gulf of Mexico.

PASSO, or PASA-DEL-CABALLO, or Corpus-Cristi, a channel of Texas, forming the entrance to Matagorda bay, between Pto.-Cavallo and the SE corner of Victoria co. It contains Pelican island.

PASSO-DO-CAMARAGIBA, a village of Brazil, in the prov. of Alagoas, on the Camaragiba.

PASSO-DO-CONTRATO, a village of Brazil, in the prov. of São-Pedro-do-Rio-Grande.

PASSO-DOS-CORDEIRAS, a village of Brazil, in the prov. of São-Pedro-do-Rio-Grande.

PASSO-DO-COUTO, a village of Brazil, in the prov. of São-Pedro-do-Rio-Grande.

PASSO-DO-LUMIAR, or Paço-do-Lumiar, a small but ancient town of Brazil, in the island of Maranhão, 9 m. E of São-Luiz, on a small stream named São-João. It has a church, and an elementary school. The houses are constructed of wood, and thatched with straw. Tobacco, rice, and mandioc are cultivated in the environs, and with fishing form the chief objects of local industry.

PASSO-DEL-NORTE. See Paso-del-Norte.

PASSWANG, a mountain of Switzerland, in the cant. of Soleure, and bail. of Ballstall, in the Jura, 15 m. S of Bâle. It has an alt. of 3,730 ft. above sea-level, and is crossed by the road from Beinweiler to Guldenthal.

PASSY, a town of France, in the dep. of the Seine, cant. and 3 m. S of Neuilly, and 8 m. SW of St. Denis, to the W and closely adjacent to Paris, of which it now forms a suburb. Pop. 5,625. It rises amphitheatrally on a height, on the r. bank of the Seine, and near one of the entrances to the Bois-de-Boulogne. The principal street is handsome, and of considerable length. Among the numerous mansions in its vicinity is the ancient castle of La Muette, the frequent residence of Louis XV. and the ancient seignory. It has also two large bathing establishments, a manufactory of pottery, a sugar-refinery, a manufactory of shot, and a spinning mill. The trade, which is considerable, consists chiefly in wine, brandy, and oil.

PASTAN, a village of Afghanistan, 15 m. E of Herat.

PASTAZA, or Pastaca, a river of Ecuador, which has its source in the Andes, at the foot of Cotopaxi, in the prov. of Chimborazo; flows first SSE, under the name of São-Felipe; then directs its course SE and ultimately S to the Maranon, which it joins on the l. bank, 45 m. NW of La Laguna, and after a total course of 405 m. Its principal affluents are, on the r, the Pinches, Huassaga, and Sugachi, and on the l. the Barbonaca.

PASTENA, a town of Naples, in the prov. of the Terra-di-Lavoro, district and 21 m. N of Gaïta, cant. and 5 m. N of Pico. Pop. 1,625. It has a collegiate and several other churches.

PASTO, a province and town of New Granada, in the S part of the dep. of the Cauca. Pop. of prov. 27,325. The town is 102 m. SSW of Popayan, and 150 m. NE of Quito, in the midst of the Andes, in a fine plain which forms a portion of an extensive plateau, and a little to the E of a volcano of the same name, in N lat. 1° 13′ 5″, W long. 76° 41′, at an alt. of 2,857 yds. above sea-level. Pop. 7,000. It is noted for its cabinet work.

PASTOUR (Saint), a village of France, in the dep. of the Lot-et-Garonne, cant. and 5 m. NE of Mondar, and 8 m. NW of Villeneuve-d'Agen. Pop. 1,400.

PASTON, a parish of Norfolk, 3¾ m. NE of North Walsham, near the coast. Area 1,445 acres. Pop. in 1831, 286; in 1851, 303.—Also a parish in Northamptonshire, 2½ m. N of Peterborough. Area 3,150 acres. Pop. in 1831, 836; in 1851, 1,058.—Also a township in the p. of Kirk-Newton, Northumberland, 9½ m. NW by W of Wooler. Area 2,336 acres. Pop. in 1831, 207; in 1851, 208.

PASTOS-BONS, a small town of Brazil, in the prov. of Maranhão, in a comarca of the same name, 262 m. SSW of St. Luiz, between the Parnahiba and Itapicuru. The pop. consists chiefly of Indians. Hunting, fishing, the culture of cotton, and rearing of cattle, form the chief branches of local industry.

PASTRANA, a judicial partido and town of Spain, in New Castile, and prov. of Guadalajara. The partido comprises 30 pueblos. The town is 17 m. SE of Guadalajara, pleasantly situated in a valley, on the Arles. Pop. 3,021. It is of considerable antiquity; and contains a collegiate church, numerous chapels, 2 convents, and 2 hospitals. It has a paper and several oil mills, several manufactories of silk, and extensive dye-works.

PASTROVICH, a village of Dalmatia, in the circle and 11 m. SSE of Cattaro, and 2 m. ENE of Budua, on the gulf of that name. Pop. 2,400.

PASVIG, or Patsjoki, a river of Russia in Europe, in Finland, which issues from Lake Enara; flows E; traverses the W part of Lake Kiolme; and throws itself by a wide embouchure into the Arctic ocean, near the entrance into the gulf of Varanger, and after a total course in a generally NNE direction of about 90 m.

PASZTO, or Pastucha, a town of Hungary, in the comitat of Heves, 19 m. N of Hatvan, on the l. bank of the Zagyva, at the W extremity of the Matra mountains.

PATA, a town of Hungary, in the comitat of Heves. 7 m. WNW of Gyöngyos, and 29 m. WSW of Erlau, at the foot of the Matra mountains. Pop. 2,580.

PATA, an island of the Sulu archipelago, between the island of Borneo and the Philippines, and a little to the S of the island of Sulu, in N lat. 5° 45′, and E long. 121° 10′. It is from 9 to 12 m. in length, and 6 m. in breadth, and is inhabited. It affords large quantities of saltpetre.—Also a town on the N coast of the island of Luzon, 150 m. N of Manilla.

PATACHOS, a tribe of Indians who inhabit the banks of the Jussiape or Contas and of the Grugungi, in the prov. of Bahia, in Brazil.

PATADA, or Pattada, a village of Sardinia, in the dio. of Capo-Sassari, prov. and 7 m. ESE of Ozieri, in a deep valley. Pop. 3,019.

PATAFUFIO, a village of Brazil, in the prov. of Minas-Geraes, and comarca of Rio-das-Velhas.

PATAGONIA, an extensive region of South America, bounded on the E by the Atlantic; on the S by the straits of Magellan, by which it is separated from the islands of Tierra-del-Fuego; and on the W by the Pacific. The boundary line by which this tract is divided from the Argentine provs. and Chili commences, on the side of La Plata, on the coast of the Atlantic, under the parallel of 37° S, and is carried across the continent, as far as the Chilian Andes under the same parallel, an extent of 660 m. from E to W. The western boundary runs along the E flank of the Chilian Andes to 41° S lat., when it strikes the Pacific to the S of Araucania. On the western side, the coast extends about 770 m., to the W entrance of the straits of Magalhaens, in S lat. 52°; on the Atlantic coast it has an extent of upwards of 1,050 m.; its utmost central length, from 37° S lat. to the southernmost point of the straits in S lat. 54°, is 1,175 m. The region embraced within these limits is little known, and at present of very little importance. The name *Patagonia* was bestowed on the S part, by Fernando Magalhaens, or Magellan, the first discoverer of its E coast, and of the straits called by his name. This appellation, derived from a tribe of savages denominated Patagons by him, was afterwards extended to the whole tract lying to the S of the Spanish settlements. That part of it which stretches along the shore of the Southern Atlantic, from Tuyu to Cape Virgin Mary, is denomi-

nated *Costa Desierta* by the Spaniards; and from the vast saline plains which skirt its eastern shore, it is also called *Comarca Desierta*, or 'the Desert of Comarca,' in Spanish maps. The sea-board only of this country is known, having been successively explored by Magalhaens, Diego-Ramirez, Sarmiento, Drake, Cavendish, Hawkins, Narborough, Anson, Byron, Carteret, Wallis, Cook, Cordova, King, and Beechey. During the 17th cent., in search of a safer passage to the great South sea than the long and hazardous navigation through the straits, the Dutch examined all these coasts: hence the successive attempts of Oliver Van-Noort, Schouten, Le-Maire, De-Weert, Hermite, and others.

Gulfs and bays.] The principal gulfs, bays, and capes on the Atlantic side are the gulf of St. George, extending from S lat. 45° to S lat. 47°; the gulf of San-Antonio, extending from 41° to 43° S lat.; the bay of Nuevi, and Great bay, to the S of Port St. Julian; the entrance of Ballaco; Port Desire; Port San-Julian; and the bay of Nodales.—The capes are those of Corrientes, Blanco, Tres-Puntas, Curiosa, Barrera, Possession, and Virgin Mary, at the E entrance of the straits of Magalhaens. Port Famine and Cape Forward form the S extremity of the South American continent, at the middle of the straits. To the NW of the straits, the W coast presents capes Victory, Isabella, San-Lucia, and the gulf of the Holy Trinity, Cape Corso, the peninsula of the Three-Mountains, with the isthmus of Orfin, the gulf of Pinas, Point St. Andrew, the archipelago of Chonos, and the gulf of Chiloe.

Geological formation and mountains.] The vast chain of the Andes, which pervades this region from N to S, having on the E a large extent of flat saline country interspersed with innumerable small streams ending in small lakes, appears to form here a continuous cordillera, the summits of which near the middle of the strait are generally about 3,000 ft. high, although some attain the height of 4,000 ft. The line of perpetual snow in the strait is about 3,500 ft. above the level of the sea; between Chiloe and the strait, the height is above 3,000 ft., with a few summits rising to the height of 5,000 and 6,000 ft. There are several active volcanoes, as those of Osorno, in S lat. 41°; Huanauca-Corcobado, in S lat. 43°; Quechucabi-Iluytaca, in S lat. 44° 20′; Minchimavida and St. Clement, in S lat. 46°; and Volcan-des-Gigantes, in S lat. 52°. A chain of mountains, called Casuhati or Gazuati, stretches SE from the Chilian Andes to the district of Tuyu, forming the NW boundary of P., but it is of small elevation, seldom exceeding 1,500 ft. Immediately to the S of the Rio-Negro is another small chain of mountains passing E from the Andes, called Caquicalel, and seemingly chalky, appearing at a distance like snow. The Patagonian tertiary formation has been traced by fossils for 1,100 m., but, according to Mr. Darwin, has a far greater extent. At Santa-Cruz it stretches across the whole continent, its thickness on the coast being 800 ft., and considerably more in the interior. Including the newer Pampean deposit, some doubtful strata in Eastern Tierra-del-Fuego, and the boulder-formation, Mr. Darwin says: "We have a line of more than 27° of lat., equal to that from the straits of Gibraltar to the S of Iceland, continuously composed of tertiary formations. Throughout this great space the land has been upraised, without the strata having been in a single instance, as far as my means of observation went, unequally tilted or dislocated by a fault." Its most remarkable portion is a great mass of basaltic lava, which has poured like a deluge down from the cordillera to a distance of about 100 geog. m. At the lower end it is 130 ft. thick, increasing 35 m. inland to 322 ft. It consists of several beds, which seem to have flowed over the very gently sloping bed of the ancient ocean. On various parts both of the E and W coasts, Mr. Darwin observed metamorphic rocks like those of Europe. Thus, for 1,200 m., from Tres-Montes to Copiapo, and he believes for a much greater distance, the shore of the Pacific consists, with few exceptions, of gneiss, mica-schist, and altered clay-slate, with granite, greenstone, and sienite.

Rivers.] The chief rivers of this tract fall into the Atlantic, having their sources on the E flank of the Andes, and generally running in a SE direction. The first of these, to the SE of the pampas of Buenos-Ayres, is the Tleuque, which, rising in the Andes of Cuyo, in S lat. 29°, after a comparative course of 700 m., falls into the bay of Anegada, in 38° S lat. The next stream is the Desaguadero or Rio-Colorado, called Moya-Lec-Leubu by the Indians, and the largest river of P. It takes its rise from a multitude of small streams which issue from the eastern cordillera under the 30th parallel, and after passing through the Laguna-de-Guanachuache and the Laguna-Grande, and sending off a branch at a large marsh called the Reedy swamp, to the river Tleuque, falls into the Atlantic, in S lat. 39° 50′. Its comparative course is upwards of 1,000 m., and it is a deep and rapid stream. The third river, called the Rio-Negro or the Cusu-Leubu, is formed by a variety of brooks which have their sources on the eastern declivity of the Andes, between the 35th and 36th parallels of S lat. It runs first S, then W, and finally S, and falls into the Atlantic, in 41° S lat., after a winding course of more than 700 m. It is joined in the early part of its course by the Sanguel or Moya-Lec-Leubu, a large stream coming from the N. Beyond the Rio-Negro is the Rio-Camarones, a large stream running SE from the Andes into the gulf of St. George, in S lat. 44°. It is supposed that the source of this stream is not far distant from the gulf of Chiloe, and that a communication might be opened between it and another stream which falls into the above gulf at Estero-del-Aysen, by means of a short canal. Farther to the S is the river of Desire, falling into the port of the same name. In S lat. 48° 51′ is the deep bay of San-Julian, which is supposed to run so far into the interior as to be connected by means of lakes with the river of Campana, which falls into the Pacific; but the governor of Buenos-Ayres having in 1746 sent persons to examine this imaginary or pretended communication between the Atlantic and Pacific, it was found that no such communication existed. On the W coast, the rivers of P., though numerous, all run short courses from the western declivities of the Andes, and merit no particular description.—There are a considerable number of large lakes in the interior, besides smaller ones of little consequence. Among the principal discoveries made by King, are two spacious lakes, which extend to a considerable distance inland from the W shore of the continent. One, named Otway-water, is a large inland sea of salt water about 50 m. in length: this communicates by a narrow channel with another, named Skyring-water, about 34 m. long, and 20 m. wide. Another opening extends to the NW from Skyring-water, which Captain King had not time to explore. The tracks of horses were noticed in many places on the shores of these lakes; and the bones of guanacoes were scattered over them.

Soil, &c.] So little is known of the interior of P., that no idea can be formed of the nature of the soil, or whether it be comparatively barren or fertile. At the mouth of the Rio-Negro, the land has been found fertile on both sides of the stream, the banks of which are often woody, though the rest of the country is represented to be a sandy waste. Around Port-Desire

there is nothing but sand; while in the vicinity of San-Julian there is much gravel, on a hard stiff soil. Though a few valleys here and there along the coast are tolerably fertile and warm, yet navigators universally concur in representing the soil of the Patagonian coasts as barren, and hardly producing any grain, and the climate excessively cold. The country abounds with wild animals, as deer, guanacoes, hares, and ostriches, while multitudes of water-fowl frequent the rocky shores. Prodigious numbers of seals, from 14 to 18 ft. long, and thicker in the body than a bull, are to be found in the vicinity of Port-Desire.

Inhabitants.] The region we have now described is thinly peopled, and that only by savages as barbarous as the country is desolate. According to Falconer, a well-known Jesuit missionary, the various tribes which roam over the mountains and wastes of P. are all Puelches or Patagonians. The term *Puelches* is an appellative, signifying 'Eastern men,' indicating their relative situation to the Moluches or Araucanians. They are tall in stature, fond of the chase, and often change their habitations, so that they may be called the Tartars of S. America. There is such a similarity of character between the natives of P. and their kindred tribes in Chili and Araucania, that the description of the latter might serve for that of the former, with this exception, that, roaming over a more barren and inhospitable country, and having less communication or rather none at all with Europeans, they are more barbarous, cruel, and savage. The tribes of the Moluches, like their Araucanian neighbours, have hereditary chiefs, called *elmens* or *yas*; and they sometimes choose an *apo*, or commander-in-chief. They appear to venerate the sun and moon, whom they call *antu* and *quien*; but the only ceremony known amongst them that looks like a religious one is when they kill an ox, and sprinkle some of the blood upon the ground, with these words, 'Give me and my people to eat.' Around Port-Desire and San-Julian, the pop. is scanty and poor. The Indians of the pampas bordering on Buenos Ayres do not exceed 5,000 or 6,000, including 1,000 warriors. The Tuelcoes are still more numerous, and are much dreaded by the Pampas Indians, but often join with them in their attacks on the Spanish settlements. Much has been said of the gigantic stature of the Tehuels or Patagonians of the straits, and, after making every reasonable allowance for the exaggerations of navigators who have represented them as from 8 and 9, to 11 and 12 ft. high, it does appear that many, if not the most of them, are considerably above the ordinary stature of human beings. Falconer measured a cacique of the Tehuels, and found him to be 7¼ ft in height. Their stature, measured with great accuracy by the Spanish officers of Cordova's expedition, in 1785 and 1786, was found to be at the utmost 7 ft. 1¼ inches, and the common height from 6½ to 7 ft. It is to be remembered, however—as the translator of Cordova's narrative has remarked—that the *vara*, or yard of Burgos, the standard of Spain, contains 33·06132 inches, or 2 ft. 9 ins. and 1-16th English; the tallest Patagonian, therefore, did not exceed 6 ft. 6¼ ins., English. Those of the common size were from 5 ft. 11 ins. and 2-3ds, to 6 ft. 5 ins. and 1 7th English. "But even this height," says Cordova, "is not so striking as their corpulence, or rather bulkiness,—some of them measuring 4 ft. 4 ins. round the breast. But their feet and hands are not in due proportion to their other parts. They all give evident signs of strength of body; they are full of flesh, but cannot properly be called fat. The size and tension of their muscles evince their strength; and their figure, on the whole, is not disagreeable, although the head is large, even in proportion to the body; their face is broad and flattish, their eyes are lively, and their teeth extremely white, but too long. Their complexion, like that of other Americans, is *cetrino* (pale yellow), or rather verging on a copper-colour. They wear thin black straight hair, tied on the top of the head with a piece of thong or ribbon brought round their forehead, having the head entirely uncovered. We observed some with beards, but which were neither thick nor long. Their dress adds much to the effect of their size, being composed of a kind of cloak made of the skins of lamas or zorillos, arranged with some skill, with stripes of different colours in the inside. They wear it fastened round the waist, so that it covers them below the calf of the leg, that part commonly hanging down which is intended for covering the shoulders; when cold or other cause induces them to put it over them, they hold the upper part of it with the hand, and so cover themselves entirely with this cloak. Some also, besides this skin-cloak or mantle, wear *ponchones*, and breeches or drawers, of the same shape and sort with those worn by the creoles of Chili and Buenos Ayres. There were, however, few Patagonians who enjoyed all these conveniences: the far greater number were almost naked, having only their skin-cloak, with a sort of leather purse hanging by a thong fixed round the waist, and fastened between the legs, with one or two thongs, to that passing round the waist." The Italian Pagifeta, in the romance which he published as a history of Magalhaen's expedition, is the first who gave to the Patagonians a stature of more than 4 yds. Maximilian Transilvanus —who in his work only translated Pagifeta's book—repeats the same absurd story, and even embellishes it with some improbabilities of his own invention. As these two were the only works on P. which for some time had general circulation in the world, they fell into the hands of authors of more simplicity than discernment, such as Gonzalo Fernandez Oviedo, who translated the above and many other fables into his *General and Natural History of the Indies*, enlarging much on the Patagonians, and confiding in the information he received from Arizega, who, wantonly abusing his credulity, told him that even a tall man could not reach with his hand to the waist of a Patagonian; that these people devoured a couple of pounds of raw flesh at a mouthful; that they drank off 6 or 7 arrobas (18 or 20 gallons) of water at a draught; and other equally ridiculous tales. Gomara not only copied Pagifeta, but added many other absurdities which he had industriously collected from other quarters. The latest account, from personal observation, furnished us of the Patagonians, is that recently published by a Mr. Bourne, mate of an American vessel, who spent an accidental captivity amongst them in 1849-50. "In person," he says, "the Patagonians are large: at first sight, they appear absolutely gigantic. They are taller than any other race I have seen, though it is impossible to give any accurate description. The only standard of measurement I had was my own height, which is about 5 ft. 10 ins. I could stand very easily under the arms of many of them; and all the men were at least a head taller than myself. Their average height, I should think, is nearly 6½ ft.; and there were specimens that could be little less than 7 ft. high. They have broad shoulders, full and well-developed chests, frames muscular and finely proportioned; the whole figure and air making an impression like that which the first view of the sons of Anak is said to have made on the children of Israel. They exhibit enormous strength whenever they are sufficiently aroused to shake off their constitutional laziness, and exert it. They have large heads, high cheek-bones like the North-American Indians, whom they also resemble in their complexion, though it is a shade or two darker. Their foreheads are broad, but low, the hair covering them nearly to the eyes. The eyes are full, generally black, or of a dark brown, and brilliant though expressive of but little intelligence. Thick, coarse, and stiff hair protects the head, its abundance making any artificial covering superfluous. Their teeth are really beautiful, sound and white—about the only attractive and enviable feature of their persons. They have deep heavy voices, and speak in guttural tones—the worst guttural I ever heard—with a muttering indistinct articulation, much as if their mouths were filled with hot pudding. Their countenances are generally stupid; but on closer inspection there is a gleam of low cunning that flashes through this dull mask, and is increasingly discernible on acquaintance with them. When excited, or engaged in any earnest business that calls their faculties into full exercise, their features light up with unexpected intelligence and animation. They are almost as imitative as monkeys, and are all great liars: falsehood is universal and inveterate with men, women, and children. To these traits should be added a thorough-paced treachery, and, what might seem rather inconsistent with their other qualities, a large share of vanity, and an immoderate love of praise. They are excessively filthy in their personal habits. They never wash themselves; hands and faces are usually covered with a thick deposit of dirt. The men sometimes paint or bedaub their faces with a kind of red earth. Charcoal is also used as a cosmetic. A broad line of red, alternating with a stripe of black, in various fantastic figures, is a favourite style of decoration. The women make themselves, if possible, still more hideous than the men, by the application of a pigment made of clay, blood, and grease. Some of them would be very comely, if only cleanly, and content to leave nature less strenuously adorned." They are good riders, and have many horses, most of which have been stolen from the settlements near the N border of their territory. The highest accomplishment of a young Patagonian is to be an expert horse-thief. Their habitations are small and moveable, consisting merely of a framework of stakes, covered with skins of the guanaco. This creature is a quadruped allied to the Peruvian llama; its flesh is their chief article of food, and its skin is used for clothing and various other purposes. The only weapons of the natives are their long knives, and the *bolas* or 'balls,' a curious implement with which they capture their game. It consists of two round stones, or leaden balls when these can be procured, weighing each about a pound, and connected by a strap or thong of leather 10 or 12 ft. long. When engaged in the chase, his horse at the highest speed, the rider holds one ball in his hand, and whirls the other rapidly above his head. When it has acquired a sufficient momentum, it is hurled with unerring aim at the object of pursuit, and either strikes the victim dead, or coils inextricably about him and roots him to the spot.

PATAI, a town of Hungary, in the com. of Pest, 9 m. S of Solt, near the l. bank of the Danube.

PATAK (NAGY), a town of Hungary, in the com. and 10 m. SW of Zemplin, on the r. bank of the Bodrog.

PATAMUNDI, a town of Hindostan, in the prov. of Orissa, 52 m. ENE of Ketek, on the r. bank of the Berurah, an affluent of the Mahanadi.

PATAN, a town of Hindostan, in the prov. of Ajmir, on the S side of the Chumbul, 22 m. SE of Bundi.—Also a town of Cashmere, 25 m. NW of

Serinagur, in N lat. 34° 7′.—Also a town of Nepal, the ancient cap. of the country, 3 m. SSE of Katmandu, the modern cap. It is chiefly remarkable for its temples, which are fantastic and singular structures. The durbar is a huge massive building of great extent, occupying one side of a square, and absolutely covered with black wood carving.

PATANA. See SERINGAPATAM.

PATANAGO, a town of Burmah, in the prov. of Mranma, on the l. bank of the Irawaddi, 80 m. NNW of Prome, in a well cultivated district. A little to the N of this town are rich asphaltum springs.

PATANI, a town of S. Africa, in the Betshuana territory, 36 m. WSW of Lithaku.

PATANS. See AFGHANISTAN.

PATANY, a state and town in the NE part of the peninsula of Malacca. The state is bounded on the N by Lower Siam and the gulf of Siam; on the E by the gulf of Siam; on the S by the state of Tringano; and on the W by the state of Quedah. It is watered by the Patani, the Tsena, the Sirku, and the Siha. The inhabitants are a mixed race of Malays and Siamese.—Its cap., of the same name, is situated on the Patani, 6 m. from its mouth, in N lat. 6° 56′. It was formerly a place of considerable trade, exporting gold-dust, canes, gums, and a variety of other articles, and an English factory existed here from 1610 to 1623.

PATANY (CAPE), a remarkable headland on the E coast of the Malay peninsula, in N lat. 7° 8′, E long. 101° 50′, defining the limit of the gulf of Siam on the SW.

PATAPSCO, a river of Maryland, U. S., which rises in Baltimore co., and flows SE, passing Baltimore, into Chesapeake bay, which it enters by a broad estuary after a course of 74 m.

PATARA, or PATERA, a ruined city of Asiatic Turkey, in the sanjak and 30 m. SE of Meis, on the coast of Caramania, a little to the SE of the embouchure of the Etshen-chai or *Xanthus*, and 12 m. S of the ruins of *Xanthus*. It still presents numerous remains of its ancient splendour, and the circuit of its walls may yet be traced; but the only inhabited dwellings within its area are the huts of a few shepherds whose cattle feed in the adjacent plain.

PATATAN, or POLATAN, a town on the NW coast of Borneo, on the river Patatan, which discharges itself to the S of Pulo-Gaya, and has a shallow bar. The town stands 3 or 4 m. up the river, and contains about 100 houses. Above the town are numerous pepper-gardens belonging to the Chinese; further down the coast is Papal river, the banks of which abound with cocoa-nut trees.

PATAY, a town of France, in the dep. of Loiret, 13 m. NNW of Orleans. Pop. 1,200. It has manufactories of woollen blankets. In its vicinity, in 1429, Joan of Arc defeated the English forces.

PATAZ, a jurisdiction of Peru, in the intendancy and 120 m. E of Truxillo. It is situated on the slope and summit of the Andes, and has in consequence different climates favourable for fruits and grain; but the chief employment of the inhabitants is working the mines of gold with which it abounds. Caxamarquilla and Huamachucho, its chief towns, are of little note except for the gold-washings in their neighbourhood.

PATCHAM, a parish of Sussex, 3 m. N by W of Brighton. Area 4,398 acres. Pop. in 1851, 490.

PATCHETTE, a town of Hindostan, in the prov. of Bahar, district of Ramghur, 9 m. ENE of Rogonatpur.

PATCHING, a parish of Sussex, 5 m. E by S of Arundel. Area 1,748 acres. Pop. in 1851, 271.

PATCHOW, or PATCHUSAN ISLANDS, a group of islands on the coast of China, the E extremity of which is formed by Typinsan, a large island having on its N side an extensive reef on which the Providence was wrecked in 1797, in E long. 125° 11′, N lat. 25° 6′. These islands, which are fertile in rice, potatoes, and fruits, are tributary to the Great Lieu-Kieu. After the loss of the Providence, her commander and crew were treated with great hospitality by the inhabitants of Typinsan, who supplied the schooner with water and refreshments to carry them to Macao. The southernmost island is in E long. 123° 52′, N lat. 24° 6′.

PATCHU, a town of Bhotan, which rises on the frontier towards Thibet, and flows SE to the Chintchu.

PATCHWARY, a town of Bengal, in the district of Rajeshy, on the high road leading from Murshedabad to Dara, celebrated for a fine kind of rice which is grown in its vicinity.

PATCUNA, or PATKUM, a town of Bengal, cap. of a small district of the same name, in the prov. of Bahar, situated among hills on the N or l. bank of the Corcorry, 50 m. SSE of Ramghur.

PATE (LE), a fort of France, in the dep. of the Gironde, situated on an insulated spot in the river Gironde or Garonne, 1 m. SSW of Blaye.

PATEETA, a town and fortress of Hindostan, in the district of Benares, 8 m. S of Chunar. It was taken by the British in 1781.

PATELEY-BRIDGE, a market town of the W. R. of Yorkshire, on the river Nidd, on the edge of Niddersdale forest, 14 m. NW of Harrowgate, and 22 m. N by W of Ripon. Extensive lead-mines are wrought in the vicinity. It is one of the polling-places for the W. riding of the co.

PATER. See PEMBROKE-DOCK.

PATER (SAINT), a village of France, in the dep. of Sarthe, 12 m. NW of Mamers, near the l. bank of the Sarthe. Pop. 780.

PATERA. See PATARA.

PATERNA, a town of Spain, in Andalusia, in the prov. and 23 m. NW of Almeria and partido of Canjayar, at the foot of a branch of the Sierra Nevada, and on a small river of the same name, which is here crossed by an ancient bridge. Pop. 1,627. It has manufactories of linen, and carries on a considerable trade in silk and in pigs.—Also a town in the prov. and 5 m. WNW of Valencia, and partido of Moncada, on the l. bank of the Guadalavier. Pop. 1,585.

PATERNA-DEL-CAMPO, a town of Spain, in Andalusia, in the prov. and 39 m. NE of Huelva, and partido of La Palma, in a fertile plain. Pop. 1,678. It has a parish church, a convent, a custom-house, and a public granary.

PATERNA-DE-LA-RIBERA, a town of Spain, in Andalusia, in the prov. and 24 m. E of Cadiz, and partido of Medina-Sidonia, in a fertile plain, at the foot of the Sierra-de-Xeres. Pop. 2,436. It has a parish church, a convent, a custom-house, and a public granary. The rearing of cattle and fishing form the chief branches of local industry.

PATERNE (SAINT), a town of France, in the dep. of Indre-et-Loire, cant. and 5 m. W of Neuvy-le-Roi, and 19 m. NNW of Tours. Pop. 2,150. It has extensive manufactories of woollen and linen fabrics.

PATERNO, a town of Naples, in the prov. of Abruzzo-Ultra, district and 3 m. NE of Avizzano, cant. and 4 m. W of Celano, near Lake Fucino. 217.—Also a town in the prov. of Calabria-Citra, district and 6 m. S of Cosenza, cant. and 1 m. SE of Dipignano, on a hill. Pop. 2,020. It contains 5 churches and a convent.—Also a canton and market town in the prov. of the Principato-Ultra, district and 9 m. WNW of San-Angelo-de-Lombardi, and

14 m. ENE of Avellino. Pop. 2,400. It contains 6 churches.—Also a canton and town of Sicily, in the prov. and district and 11 m. NW of Catania, at the SW base of Etna. Pop. 10,800. It has a considerable trade in timber, oil, wine, flax, and hemp. In its vicinity are a ferruginous spring and a salt mine. This town, the *Hybla* of the ancients, was formerly noted for its honey.

PATERNOSTERS (Great), a group of islets and rocks of the Asiatic archipelago, in the Sunda sea, to the N of the island of Sumbawa, and to the SW of Celebes. The group most westerly of the islands is in S lat. 7° 15′, E long. 117°. The entire group covers an area about 150 m. in length from E to W, and 60 m. in breadth.

PATERNOSTERS (Little). See Balabalayan.

PATERSON, a district and town of New South Wales, in the E part of the co. of Durham. The district comprises a superficial area of 273,243 acres, and contained in 1846, 3,733 inhabitants.—The town is situated in the p. of Houghton, on a river of the same name, 130 m. from Sydney. Pop. 141. The river P., originally named Yimming, has its source in the W part of the co., and throws itself into Hunter's river, at the town of Hinton, after a course, in a generally S direction, of about 60 m.

PATERSON, a village of Passaic co., in the state of New Jersey, U. S., on Passaic river, near the Great falls, 13 m. N of Newark, and 17 m. N of New York. Pop. in 1840, 7,596.

PATERSON (Cape), a headland of S. Australia, in S lat. 38° 38′, E long. 145° 36′.

PATERSON'S PLAINS, a level tract of the co. of Durham, New South Wales, intersected by the river of the same name.

PATGONG, a town of Hindostan, in the presidency and prov. of Bengal, district and 51 m. NNW of Rungpur, on the r. bank of the Dorlah.

PATH-HEAD, a town in the p. of Dysart, in Fifeshire, ¾ m. W of Dysart. Pop. in 1831, 2,090; in 1851, 3,977.—Also a village in the p. of Crichton and shire of Edinburgh, 5 m. S of Dalkeith. Pop. 750.

PATHRI, a district and town of Hindostan, in the prov. and 120 m. NW of Beeder, and near the Doudna.

PATIA, a river of New Granada, which has its source in the Cordillera-de-Sindagua, a branch of the Andes, 33 m. WNW of Popayan; runs first SSW; then WNW; and, after a course of about 210 m., throws itself by several embouchures into the Pacific. It receives the Guaytara and Telembi, and several smaller streams.—Also a river of Brazil, in the prov. of Para, and district of Castro-d'Avelães, an affluent of the Amazon.

PATI-DO-ALFERES, a parish and town of Brazil, in the prov. of Rio-de-Janeiro, 9 m. S of the r. bank of the Rio-Parahiba, and watered by several of the affluents of that river. Pop. 2,000. Sugar, millet, coffee, and mandioc, are extensively cultivated in the environs.

PATIENCE, or Terpenica (Bay), an indentation of the E coast of the island of Saghalien, opening to the S, and extending from Cape Soimonov on the W, to Cape Patience on the E, a distance of about 90 m. Cape Patience is in N lat. 48° 52′, E long. 144° 30′.

PATIENTIA, a strait of the Molucca archipelago, between the island of Gilolo on the NE, and that of Batchian on the SW. It is about 48 m. in length from NW to SE, and at its narrowest point has a breadth of 6 m.

PATIGNIES, a department and commune of Belgium, in the prov. of Namur, and arrond. of Dinant. Pop. of dep. 261; of com. 255.

PATINO. See Patmos.

PATIPE. See Pardo.

PATITIBA, a river of Brazil, in the prov. of Rio-de-Janeiro, and district of Parati, an affluent of the bay of Angra-dos-Reis.

PATIVILCA, or Patavirca, a town of Peru, in the intendancy and 105 m. NNW of Lima, prov. and 51 m. NNW of Chancay, on the l. bank of the Barranca, at its entrance into the Pacific. It now consists of only about 60 houses, but contains magnificent remains of a palace and fortress of the Incas.

PATJE, a province of the island of Java, to the N of the prov. of Panaraga, and to the E of that of Madion, and bathed on the E by the Kadiri.

PATMOS, or Patino, a small island of the Grecian archipelago, near the coast of Asia Minor, 11 m. NW of Lero, and 20 m. S of the W extremity of Samos. It is about 10 m. long, 5 m. broad, and 25 m. in circumf. It has a deeply indented coast-line, with steep and precipitous shores, and on its E side presents a good harbour called La Scala. On the ridge of a mountain overlooking this port stands the cap. of the island, a town of 500 inhabitants, in N lat. 37° 17′, E long. 26° 35′. Almost all the inhabitants of the island, says M. Michaud, dwell in the town. "They are poor, but they live in peace; the air is salutary, and the plague, which so often desolates the other islands, has never extended its ravages to P. P. has more than one celebrated college, and may be called the university of the archipelago. The course of education comprises classic Greek, Italian, rhetoric, and logic; pupils come thither even from the Morea. This rocky island holds out little temptation to the Osmanlis, who never show themselves in it, and are contented with a moderate tribute. Never was there seen in P. the shadow of a minaret; never was there heard the voice of a muezzin: the bell which sounds every hour from the summit of its mountain, announces at once that religion flourishes and that slavery is unknown. Whilst all the other islands are agitated by the question of independence, P. has needed no exertion to become free; liberty has sprung up here like a plant or flower of its own mountain."

PATMUR, a town of Hindostan, in the presidency of Madras, in the Carnatic, district and 36 m. SE of Madura, in the island of Vavg-aru.

PATNA, a village of Ayrshire, in the p. of Straiton, on the l. bank of the Doon, 7 m. E of Maybole. Pop. 300.

PATNA, a celebrated city of Hindostan, the cap. of the prov. of Bahar, and supposed to be the *Palibothra* of the Greeks. It is situated on the S bank of the Ganges, which is here during the rainy season 5 m. broad, and deep enough to float a ship-of-war, in N lat. 25° 37′, E long. 85° 15′, 300 m. NW of Calcutta. The city within the walls is about 1½ m. in length, by ¾ m. in breadth, and is enclosed by a brick wall having small round bastions; but, including its suburbs, it extends 8 m. along the banks of the river, and 4 m. inland. It contains some mosques and temples, but few of the houses are of brick, or exceed one or two stories in height. It also possesses a small citadel; but neither this, nor the fortifications of the town, could resist a regular attack, although in 1574 it resisted the arms of Akbar for a considerable time. Its fortifications are in fact in a state of decay. In the neighbouring villages a quantity of white cotton cloths are made, which are carried to the city and stamped for chintzes; and the neighbouring country produces the finest opium, and great quantities of wheat, sugar, indigo, and saltpetre. The opium and saltpetre are monopolized by government, but a considerable trade is carried on in all the other articles. The houses of the Europeans

are in a suburb called Bankipur, 1½ m. to the W of it. In this suburb there is also an immense granary built with brick, and having a cupola roof. This edifice was erected during the government of Hastings, for the purpose of holding grain for the use of the city in seasons of scarcity. The building is surrounded by a spiral staircase, up which it was intended the grain should be carried, while it may be drawn off by a small door at the bottom; but it has never been filled, and is now used as a magazine and arsenal. It was the governor's intention to have built one of these granaries in the vicinity of each of the large cities of Hindostan. At the distance of 11 m. W stand the large military cantonments of Dinapore. The pop. of P. has been estimated at 300,000. —The growth of the white poppy, for the purpose of producing opium, is a monopoly now rented from the East India company by the Opium company of P. About 6,500,000 lbs. of poppy juice are annually manufactured at P., yielding a revenue of £3,500,000. Good poppy juice in its inspissated state is of a hard and brittlish white; the bad is light in weight, black in colour, soft, friable, and greasy, and mixed with impurities. The concrete substance is mixed up with water into a paste, and this paste is formed into balls, which are left to dry in baked earthenware cups, and then stocked for some time on open-worked shelves. The opium thus prepared is in due season packed in timber cases lined with hides, and sent down the river to Calcutta, where it is shipped on board the fine swift vessels styled 'opium clippers.'

PATNEY, a parish of Wiltshire, 4½ m. ESE of Devizes. Area 833 acres. Pop. in 1851, 184.

PATOKA, a river which has its source in Orange co., in the state of Indiana, U. S., and flows W to the Wabash river, opposite Mount Carmel, in the state of Illinois.—Also a township of Gibson co., in the state of Indiana, 138 m. SW of Indianapolis. Pop. in 1840, 2,343.

PATONES, a village of Spain, in New Castile, in the prov. and 36 m. NNE of Madrid, partido and 4 m. NE of Torrelaguna, in a mountainous defile. Pop. 295. It is inhabited by descendants of refugees from some of the valleys and mountains of Old Castile, who, at the period of the Moorish invasion, fled hither and formed a state, remarkable not less for the smallness of its limits than for its duration: its kings having retained the hereditary sovereignty till the 18th cent., when the last of their number, a simple villager, relinquished his dignity, and annexed the state to the corregidorat of Uzeda. The Patones have always maintained their ancient customs and usages. They cultivate their territory, and rear goats and bees.

PATONGA, a creek of New South Wales, in the co. of Cumberland, an affluent of Hawkesbury river.

PATOS, a town and parish of Brazil, in the prov. and 240 m. W of Parahiba, in a valley enclosed by the lofty serras of Cairiris-Novos, Espinharas, and Borborima, and crossed by the road from the prov. of Ceara to that of Pernambuco. Pop. 2,000. Cotton is cultivated in the locality.—Also an extensive lake in the prov. of São-Pedro-do-Rio-Grande, extending between 30° and 32° S lat., and between 51° and 52° 20′ W long. It is 180 m. in length from NE to SW, and has a breadth at its widest part of 60 m. It is connected by the Jacuy on the NW with Lake Viamao, with Lake Mirim on the SW by the canal or rio of São-Goncalo, and with the Atlantic, from which it is separated in its entire length by only a narrow tract of land, by the Rio-Grande-do-Sul, 6 m. in length. On its W bank it receives the Rio-Camacuan and several smaller streams. This lake is navigable for vessels of large size. Its banks are generally low, and towards the S its waters become saline.—Also a river of the prov. of Goyaz, which runs N, and joins the Maranhão.

PATOS, a tribe of Carijos Indians, who live in the Brazilian prov. of Sao-Pedro-do-Rio-Grande, on the banks of the lake of the same name.

PATRADJIK, a village of Turkey, 60 m. SSW of Larissa, on the Kilada river. Pop. 1,500. Cotton is extensively grown in the neighbourhood of this town.

PATRAS, or Baliabadra, a seaport of Greece, on the NNW coast of the Morea, on the E side of a gulf of the same name, about 5 m. SW of the entrance of the gulf of Lepanto, in N lat. 38° 14′, E long. 21° 46′. It is situated on the side of a hill rising from the shore, and surmounted by its citadel, whence in clear weather the view extends as far as the islands of Zante and Cephalonia. The interior comprises one broad and well-built street, from which numerous narrow lanes and alleys branch off. A few of the houses are built of brick; and every considerable house is surrounded with a garden. Most of the ancient monuments of this town have disappeared in the lapse of ages, and the war of independence. It is favourably situated for commerce, being a central point for the coast of Livadia, the Ionian isles, and the N part of the Morea; and has a pretty extensive trade. The port is a little to the N of the town, or farther up the gulf; for the roadstead fronting the town is exposed to heavy seas during the winter months. The trade of P. is chiefly with Great Britain, Marseilles, Trieste, Corfu, and Zante, in currants, oil, wine, honey, wax, silk, wool, and skins.—P. occupies the site of the ancient *Aroë*. In 1770, while held by the Russians and Mainottes, it was surprised and burnt by the Turks. During the war of independence it formed the chief seat of the Turkish arms, and resisted all attempts of the Greeks to reduce it; but in 1828 it surrendered to a French force.—The gulf of P., entering between Cape Papa and Bakari-point, is about 7 m. in breadth, and 21 m. in length from E to W; and lies between the gulf of Lepanto on the E and the Ionian sea on the W.

PATRI, a town of Hindostan, in the province of Gujerat, the capital of a district of the same name. It is a large and populous place, defended by three walls, the inner one of which is surrounded by a wet ditch.

PATRIA (Lago), a lake of Naples, 15 m. NW of the city of Naples, and less than 1 m. distant from the coast. It is about 1 m. in diam. Near its S bank are the ruins of *Literna*, which was destroyed by the Vandals in 455.

PATRICE (Saint), a village of France, in the dep. of Indre-et-Loire, cant. and 4 m. SW of Langeais, near the Loire. Pop. 1,020.

PATRICE-DU-DESERT (Saint), a village of France, in the dep. of Orne, cant. and 7 m. WSW of Carouges, on the Cossée, an affluent of the Mayenne. Pop. 850.

PATRICK, a county of the United States, in the S part of Virginia. Area 541 sq. m. Its cap. is Taylorsville. Pop. in 1840, 8,032; in 1850, 9,620.

PATRICK (Cape Saint), a headland on the E coast of Van Diemen's Land, in S lat. 41° 42′.

PATRICK'S WELL (Saint), a village of co. Limerick, in the ps. of Kilkeedy, Killonohan, and Mungrett, 3 m. NE of Adare. Pop. in 1841, 541.

PATRICK'S-BOURNE, or Patrixbourne, a parish of Kent, 3 m. SE of Canterbury. Area 1,637 acres. Pop. in 1831, 280; in 1851, 264.

PATRICKTOWN, a township of Lincoln co., in the state of Maine, U. S., 15 m. E of Augusta. Pop. 550.

PATRIMONIO-DE-SAN-PIETRO, an ancient prov. of the Papal states, bounded by Orvietan on

PATRAS.

A Fullarton & Co. London & Edinburgh.

the N; Ombria and Sabine on the E; the Campagna-di-Roma on the SE; the Tyrrhenian sea on the SW; and by Tuscany on the NW. It is now comprised in the S part of the delegation of Viterbo, in the delegation of Civita-Vecchia, and in the NW part of the comarca of Rome. Viterbo was its capital.

PATRINGTON, a parish and market-town in the E. R. of Yorkshire, 16 m. ESE of Kingston-upon-Hull. Area of p. 4,494 acres. Pop. in 1831, 1,298; in 1851, 1,827. The church is a beautiful Gothic structure with a lofty spire. The town, which is a place of considerable antiquity, is situated near the Humber, where a creek forms a kind of haven for small craft which convey corn to Hull and London, and import lime and coal from the west riding.

PATRO, a canton of Corsica, in the E part of the arrond. of Calvi. Its capital is Olmi.

PATROCINIO, an island of the North Pacific, in N lat. 28° 9′, E long. 175° 48′.

PATROCINIO, a parish and town of Brazil, in the prov. of Minas-Geraes, 60 m. N of Araxo. Pop. 1,500. The culture of a few common articles of provision, and the rearing of cattle, form the chief objects of local industry.

PATROCINIO-DO-MURIAHE′, a parish and town of Brazil, in the prov. of Minas-Geraes, and district of Presidio-do-São-João-Baptista.

PATRULHA (Santo-Antonio-da), a small town of Brazil, in the prov. of São-Pedro-do-Rio-Grande, 48 m. ENE of Porto-Alegre, on the road which crosses the prov. of Santa-Catharina to that of São-Paulo. Pop. at the last census 3,103, of whom 1,706 were whites.

PATSCH. See Paks.

PATSCHKAU, a town of Prussia, in the prov. of Silesia, regency and 46 m. WSW of Oppeln, circle and 15 m. W of Neisse, on the r. bank of a river of the same name. Pop. 2,240. It is enclosed by walls and ditches, and has 2 suburbs. It contains 3 Catholic churches, a Lutheran chapel, and an hospital; and has some woollen manufactures.

PATSJOKI. See Pasvig.

PATTA, a town and port of Zanguebar, in the kingdom and 90 m. NE of Melinda, on an island, at the mouth of a small river, in S lat. 2° 2′, and E long. 40° 39′. It was held by the Portuguese from 1503 to 1692, and during their occupation was the seat of a considerable trade in Indian goods, ivory, &c. Since their expulsion by the Arabs, it has been seldom visited by Europeans.

PATTAIG, a mountain-torrent of Inverness-shire, which flows by a N and then W course of 8½ m. into Loch Laggan.

PATTEE, a village of Sinde, on the l. bank of the Indus, 10 m. NE of Tattah, and 40 m. SSW of Hydrabad.

PATTEN, a village of the Punjab, on the l. bank of the Indus, about 10 m. above the confluence of the Cabul river.

PATTENSEN, a town of the kingdom and gov. of Hanover, in the principality of Kalenberg, 9 m. S of Hanover. Pop. 1,530. It has manufactories of silk fabrics.—Also a village of the principality and 12 m. NW of Lüneberg. Pop. 450.

PATTERDALE, a chapelry, with Hartsop and the hamlet of Deepdale, in the p. of Lowther, in Cumberland, lying around the head of Ulleswater. Area 8,314 acres. Pop. in 1831, 400; in 1851, 686.

PATTERGOTTA, or Patarghat, a village of Hindostan, in the presidency of Bengal, prov. of Bahar, district and 24 m. ENE of Boglipur, on the r. bank of the Ganges, the navigation of which is here rendered dangerous by the masses of rock which appear to have become detached from the masses by which its channel is here enclosed. Its banks contain several excavations, and on the summit of a projecting rock is a small Hindu temple.

PATTERSON, a township of Putnam co., in the state of New York, U. S., 92 m. S of Albany. It has a hilly surface, and is drained by Croton river. The soil in the valleys is extremely fertile. Pop. in 1840, 1,349. It has a village situated on Croton river, with about 150 inhabitants.

PATTERSON'S PLAINS, a level tract of Van Diemen's Land, in the co. of Cornwall.

PATTESHULL, or Patshull, a parish in Staffordshire, 7½ m. W by N of Wolverhampton. Area 1,850 acres. Pop. in 1831, 132; in 1851, 112.

PATTI, a district, canton, and town of Sicily, in the prov. of Messina. The district comprises 6 cants. The town is 42 m. W of Messina, on a plateau, near a river which flows into a gulf of the same name, on the N coast of the island. Pop. 5,000. It is enclosed by old walls now much dilapidated, and has a fine cathedral and a castle. The streets are regularly built and terminate in a square. The manufacture of earthenware and fishing form the chief branches of local industry.—The gulf of P. forms a considerable embrasure, extending from Cape Calava on the WSW, to the promontory of Milazzo on the ENE, a distance of about 20 m. It receives numerous streams which descend from the Neptunian mountains. On its SW side, on Point Tyndaris, is Port Madonna.

PATTI, a town of Java, in the prov. and 24 m. ESE of Japara, and 42 m. ENE of Samarang, in the Dutch territory.

PATTIALAH, a flourishing town of Hindostan, capital of a small Sikh principality, in the prov. and 129 m. NNW of Delhi, and div. of Sirhind, on an affluent of the Gagor. It is enclosed by a strong mud wall and ditch, and in its centre is a massive square citadel, in which is the residence of the raja. It contains the tombs of several Sikh saints. This town is said to have been founded about the year 1,465, by Rai Ram Deo, who rented the prov. of the Punjab, during the reign of the Afghan emperor, Belol Lody. It was for a long time the residence of the collectors of the district, many of whom expended large sums of money in building temples and mosques, and constructing reservoirs and gardens for which it was much celebrated.

PATTINGHAM, a parish, partly in Salop, and partly in the co. of Stafford, 6 m. W of Wolverhampton. Area 4,042 acres. Pop. in 1831, 921; in 1851, 1,033.

PATTISHALL, or Pateshull, a parish in the co. of Northampton, 4¼ m. NNW of Towcester, intersected by the London and Birmingham railway. Area 2,460 acres. Pop. in 1831, 742; in 1851, 775.

PATTISWICK, a parish in Essex, 2½ m. NW by W of Great-Coggeshall. Area 1,297 acres. Pop. in 1831, 341; in 1851, 354.

PATTON (Cape), a headland of Australia Felix, to the SW of Port Phillip, in S lat. 38° 47′, and E long. 143° 39′. It is called by the French, Cape Marengo, and forms with Cape Otway, Talleyrand bay.

PATTONSBURG, a village of Bottetourt co, in the state of Virginia, U. S., 166 m. W of Richmond, on the N side of James river, opposite Buchanan, with which it is connected by a bridge. Pop. in 1840, 360.

PATTU (Serra do), a mountain-range in Brazil, in the prov. of Rio-Grande-do-Norte, in the district and to the S of Porto-Alegre. It contains a considerable population, and has a chapel.

PATTUDA, a town of Upper Guinea, on the Gold coast, in the kingdom of Bouroumy, 55 m. NW of Guia, and 120 m. NE of Kumassie.

PATUN, a new and flourishing town of Hindos-

tan, in the prov. of Ajmir, 53 m. SE of Kola, on the l. bank of the Chumbul. It is enclosed by a substantial wall, about 9 ft. in thickness, and from 12 to 15 ft. in height, defended by several round bastions mounted with light guns. The streets intersect each other at right angles, and are wide and regularly built. An abundant supply of water is obtained from a lake to the W of the town. This town contains a fine temple of Vishnu.—Also a town in the prov. of Nepal, 3 m. SSE of Katmandu. It is well-built, and contains a fine temple.

PA-TUNG, a district and town of China, in the prov. of Hu-pih, and div. of E-chang-fu, 240 m. WNW of Wu-chang-fu, on the r. bank of the Yang-tze-keang, in N lat. 31° 2′, E long. 110° 17′.

PATURAGES, a department, commune, and town of Belgium, in the prov. of Hainault, and arrond. of Mons. Pop. of dep. 6,292. The town is 3 m. S of Jemmappes, and 5 m. SW of Mons, in a valley, on an affluent of the Haine. It has manufactories of steam-engines. Coal is wrought in the environs.

PATUXENT, a river of the state of Maryland, U. S., which rises in the N part of Montgomery and Anne-Arundel cos.; flows first SE, then S; runs for a distance of 50 m. nearly parallel to, and after a course of 108 m. throws itself by a large estuary into Chesapeake bay, on the W side, and 21 m. N of the embouchure of the Potomac. It is navigable to Nottingham for vessels of 250 tons burthen.

PATY, or Pathy (Alto), a town of Hungary, in the comitat of Eisenburg, 15 m. ENE of Steinamanger, near the l. bank of the Raab.

PATZAU, or Paczow, a town of Bohemia, 49 m. SSE of Prague. Pop. 2,600.

PATZIZIA, a town of Guatimala, in the dep. of Chimaltenango. Pop. 6,000.

PAU, a town of France, the cap. of the dep. of Basses-Pyrenees, situated on the r. bank of the Gave-de-Pau, 15 m. NE of Aleron, in N lat. 43° 17′, W long. 0° 12′. It stands on an eminence rising above a delightful valley through which the Gave flows in a picturesque manner. The Pyrenees, among which the Pic-du-Midi-de-P. and the Pic-du-Midi-de-Bigorre are leading summits, rising behind, form a romantic boundary to the prospect. The town is well-built. Of its public places, the best are the square called the Place-Royale, and the promenade called the Cours-Bayard, extending about a mile along an elevated bank overlooking the Gave. P. possesses a public library, an academy of arts and sciences, and a university academy. The old castle, the residence in former ages of the princes of Béarn, and the birth-place of Henry IV., is magnificently placed, and was repaired under Louis-Philippe; and its *parc* still forms a fine public walk. The manufactures of P. consist chiefly of linen, table-linen, and towels; it has also some trade in hams, which are cured here, and shipped at Bayonne; and the environs produce abundance of fruit, and a good red wine. Pop. in 1846, 13,143. P. was the birth-place of Gaston-de-Foix, and of Bernadotte, the late king of Sweden.

PAU. See Paou.

PAU (Gave de), a river of France, formed by the union of the Gaves-de-Barreges and de-Gavarnie, near Luz-en-Barreges, in the dep. of Hautes-Pyrenees. The united stream first flows N, then W, and then NW to its junction with the Adour, 3 m. W of Peyrehorade.

PAU (Santa), a village of Spain, in the prov. and 10 m. NW of Girona, on the l. bank of the Cer, an affluent of the Fluvia.

PAUCAROLLA, a province of Peru, bounded on the NE by the lake of Titicaca; on the E by the lake and the prov. of Chucuito; and on the S by the provs. of Arica and Pacajes. It is watered by several streams flowing into Lake Titicaca. Peruvian bark, papas, and barley are cultivated; but the chief occupation of the inhabitants consists in breeding cattle, sheep, pigs, and lamas. Vicunas, deer, partridges, and lake-fowl, are caught or killed by the natives; and the lake also supplies the inhabitants with fish. Its chief town is Puno. Its former cap., which gave name to the prov., situated on the shore of Lake Titicaca, is inhabited by a few Spanish families.

PAUCARTAMBO, a province of Peru, bounded on the W and NW by the provs. of Calca and Lares; on the NE and E by the frontier of the Indians; and on the S by Quispicanchi. It is formed by a large valley, terminating in the mountains of the Andes, and traversed by a river of the same name, which rises in the cordillera of Vilcanota, and flows N, NW, and then WSW to the Apurimac. It produces wheat, barley, maize, seeds, and fruits of various sorts, in the lower grounds.—The cap. is situated on the E bank of the river of its name, 33 m. ENE of Cuzco.

PAUGHTUR, a town of Hindostan, in the prov. of Bejapur, 100 m. SW of Hydrabad.

PAUGHUR, a pergunnah and town of Hindostan, in the prov. and 132 m. NNE of Mysore.

PAUILLAC, a commune and town of France, in the dep. of the Gironde, 12 m. SE of Lesparre, and 28 m. NNW of Bordeaux, on the l. bank of the Gironde. Pop. 1,830. It has a good port, and conducts an entrepot trade in the wines of Bordeaux.

PAUKPUTTAN, Pakapatana, or Adjodin, a town of the Punjab, 100 m. SSW of Lahore, to the N of the Sutlej.

PAUKTE, a village of Burmah, in the prov. and 6 m. below Ava, on the Irawady, opposite the pagoda of Kaong-Mhudaw.

PAUL (Saint), a village of France, in the dep. of the Lower Alps, 11 m. NNE of Barcelonnette, near the r. bank of the Ubaye. Pop. 1,795.—Also a village of France, in the dep. of the Gironde, cant. and 4 m. ENE of Blaye, and 23 m. N of Bordeaux. Pop. 1,000.—Also a village in the dep. of the Oise, cant. and 5 m. N of Auneuil, and 4 m. W of Beauvais. Pop. 1,198. It has a manufactory of earthenware.—Also a town in the dep. of the Upper Vienne, cant. and 6 m. NE of Pierre-Buffiere, and 11 m. SE of Limoges, on the Rozelle, an affluent of the Briance. Pop. 1,400.

PAUL (Saint), a department, commune, and village of Belgium, in the prov. of E. Flanders, and arrond. of Termonde. Pop. of dep. 1,804; of vil. 363.—Also a commune in the prov. of Brabant, and dep. of Gammerage. Pop. 437.—Also a com. in the prov. of Brabant and dep. of Walhain-Saint-Paul-Sart-lez-Walhain. Pop. 247.

PAUL (Saint), a town of Illyria, in the gov. and 50 m. NNE of Laybach, circle and 32 m. E of Klagenfurt, on the brow of a hill, near the r. bank of the Lavant. Pop. 500. It has a gymnasium.

PAUL (Saint), a captainry-general or Portuguese government, comprising Congo, Angola, and Benguela, in Lower Guinea, and of which St.-Paul-de-Loando is the capital.—Also a headland of Upper Guinea, on the Slave coast, in the kingdom of Kerapaz, and district of Augua, 15 m. E of the embouchure of the Volta, in N lat. 5° 45′, and E long. 0° 55′.—Also a small town of the island of Bourbon, on the NW coast, and to the W of a lagune into which the Bernica and several other streams throw themselves. The houses are well built, and several of the streets are lined with trees. It has no port, but the roadstead is excellent. The trade consists chiefly in coffee and cotton. This was the first establishment of the French in Bourbon.—Also an island of the Indian ocean, to the N of Amsterdam,

in S lat. 38° 42′, E long. 77° 48′. It is difficult of access, and is exposed to violent tempests. It is merely the crater of an extinct volcano, extending 10 m. in length, and from 4 to 5 m. in breadth. The crater now forms a circular lagune enclosed by steep and rocky walls from 300 to 700 ft. in height, covered with a stunted vegetation of scrub, coarse grass, and ferns, and forming a safe and commodious harbour for small craft. There is at present a small colony of Nossibe blacks upon it, under the superintendence of a Frenchman who conducts an active fishing establishment here, and carries the produce of his fisheries to Bourbon or Port-Louis.—Also an island in the E part of Behring's sea, near the coast of Russian America, in the group of the Pribylov islands, in N lat. 57° 15′, W long. 170° 10′.—Also a bay of Newfoundland, on the W coast, in N lat. 49° 50′, W long. 57° 40′.—Also a small island at the entrance of the gulf of St. Lawrence, 12 m. NE of Cape North,—the N extremity of Cape Breton. It has a lighthouse. — Also a small bay of Lower Canada, on the N coast of the estuary of the St. Lawrence, 60 m. NE of Quebec, opposite the Ileaux-Coudres. Its banks are lofty, and highly picturesque.

PAUL (Saint), a parish in Cornwall, 2½ m. S of Penzance. Area 3,433 acres. Pop. in 1851, 5,408.

PAUL (Saint), or Paghill, a parish in the E. R. of Yorkshire, 5 m. ESE of Kingston-upon-Hull, on the W bank of the Humber, including the townships of P. and Thorn-Gumbald. During the late war, a dockyard existed here in which ships of 74 guns were sometimes built. Area 8,914 acres. Pop. 884.

PAUL'S BAY (Saint), a bay of Malta, on the N coast, 8 m. W of Valetta. Its entrance extends between Point Kaura and the NE extremity of the little island of Salamonia a distance of nearly 1½ m., and is defended by several forts. It affords good anchorage during the summer months. This bay is identified by many with the scene of the shipwreck of St. Paul. At a little distance to the W is the castle of Selamonia.

PAUL'S ROCKS (Saint), a cluster of rocks in N lat. 0° 58′, W long. 29° 15′, 350 m. from Fernando-Noronha. The highest point of the cluster is only 50 ft. above sea-level; and the entire circumference only ¾ m.

PAULA, a fort of Russia, in the gov. of Caucasus, 20 m. W of Ekaterinograd.

PAUL-DU-BOIS (Saint), a commune of France, in the dep. of the Maine-et-Loire, cant. and 5 m. S of Vihiers, and 26 m. WSW of Saumur, on a plateau. Pop. 995.

PAUL-CAP-DE-JOUX (Saint), a canton, commune, and town of France, in the dep. of the Tarn, and arrond. of Lavaur. The town is 9 m. E of Lavaur, on the l. bank of the Agout. Pop. 900. This was formerly a considerable town, and still exhibits the remains of its ancient fortifications.

PAUL-DE-COMMEQUIERS (Saint), a commune of France, in the dep. of the Vendee, cant. and 2 m. W of Palluau, and 23 m. NNE of the Sables-d'Olonne. Pop. 500. It has extensive tanneries.

PAUL-LES-DAX (Saint), a commune of France, in the dep. of the Landes, cant. and 1 m. N of Dax, on a height. Pop. 1,020. It contains mines of iron.

PAUL-LES-DURANCE (Saint), a commune of France, in the dep. of the Bouches-du-Rhone, cant. and 7 m. ENE of Peyrolles, and 18 m. NE of Aix, on the l. bank of the Durance. Pop. 1,000.

PAUL-DE-FENOUILLET (Saint), a canton, commune, and town of France, in the dep. of the Eastern Pyrenees, and arrond. of Perpignan. The town is 24 m. WNW of Perpignan, on the l. bank of the Gly. Pop. 1,928. It has a considerable trade in Spanish wool.

PAUL-DE-JARAT (Saint), a commune of France, in the dep. of the Ariège, cant. and 5 m. SE of Foix, on the Belmont. Pop. 1,353. In the environs are several unwrought silver-mines.

PAUL-EN-JAREST (Saint), a commune and town of France, in the dep. of the Loire, cant. and 4 m. S by W of Rieve-de-Gier, and 11 m. NE of St. Etienne, near the l. bank of the Bourley, an affluent of the Gier. Pop. 4,356. It has numerous silk-mills and manufactories of crape.

PAUL-DE-LOANDA (Saint). See Loanda.

PAUL-DE-LOUBRESSAC (Saint), a commune of France, in the dep. of the Lot, cant. and 5 m. NE of Castelnau-de-Mont-Ratier, and 11 m. S of Cahors, near the l. bank of the Lutte. Pop. 1,100.

PAUL-LA-ROCHE (Saint), a commune of France, in the dep. of the Dordogne, cant. and 4 m. SW of Grand-Jumillac, and 18 m. ESE of Nontron. Pop. 1,686.

PAUL-TROIS-CHATEAUX (Saint), a commune and town of France, in the dep. of the Drome, cant. and 5 m. SE of Pierrelatte, and 16 m. S of Montelimart, at the foot of a hill, on the Roubinne. Pop. 2,183. It contains an ancient Benedictine convent, and has some manufactories of silk fabrics. Its trade consists chiefly in grain, almonds, nuts, wine, oil, and silk.

PAUL-DU-VAR (Saint), a commune and town of France, in the dep. of the Var, cant. and 2 m. N of Vence, and 11 m. ENE of Grasse. Pop. 1,120. It has some old ramparts. The locality affords good wine.

PAUL-DE-VARAX (Saint), a commune of France, in the dep. of the Ain, cant. and 8 m. NNW of Chalamont, and 22 m. NE of Trevoux, in a marshy territory. Pop. 550.

PAUL-DU-VERNAY, a commune of France, in the dep. of the Calvados, cant. and 4 m. E of Balleroy, and 7 m. SSW of Bayeux. Pop. 1,050.

PAULAR (Santa-Maria-del), a convent of Spain, in the prov. of Segovia, 9 m. SE of San-Ildefonso, or La-Granja, and 39 m. NNW of Madrid, at the extremity of the valley of Lozoya, and amidst the most elevated mountains of the Serra-de-Guadarrama. It is of fine architecture, and contains numerous pictures. It was founded by Don Juan I. in 1390, and finished by Henry III. and Don Juan II.

PAULDING, a county in the NW part of the state of Georgia, U. S., comprising an area of 600 sq. m., drained by the head-branches of Tallapoosa river, and by tributaries of the Etowah. Pop. in 1840, 2,556; in 1850, 7,045. Its cap. is Van Vert.—Also a co. in the NW part of the state of Ohio, comprising an area of 932 sq. m. It has a level surface, and is drained by Maumee and Auglaize rivers. The soil is very fertile. Pop. in 1840, 1,034; in 1850, 1,766. Its cap. is Charloe.—Also a village of Jasper co., in the state of Mississippi, 109 m. ESE of Jackson, on the head-waters of Leaf river.

PAULE, a commune of France, in the dep. of the Cotes-du-Nord, cant. and 4 m. SSW of Mael-Carhaix, and 28 m. SW of Guingamp. It has a lead-mine.

PAULE (Sainte), a commune of France, in the dep. of the Rhone, cant. and 3 m. NNW of Bois-d'Yvingt, and 8 m. WSW of Villefranche, on the brow of a hill. Pop. 304. It has some coal-mines.

PAULERSPURY, a parish and village of Northamptonshire, 3 m. SE of Towcester. Area 2,961 acres. Pop. in 1831, 1,092; in 1851, 1,162. The v. was the birthplace, in 1761, of Dr. Carey, the celebrated Indian missionary.

PAULES (Las), a village of Spain, in the prov. and 52 m. NE of Huesca. Pop. 300.

PAULHAC, a village of France, in the dep. of Cantal, 9 m. W of Saint-Flour, near the source of the Jorol. Pop. 1,800.

PAULHAGUET, a town of France, in the dep. of Haute-Loire, 9 m. SE of Brioude. Pop. 1,330.

PAULHAN, a village of France, in the dep. of Herault, 14 m. SE of Lodeve. Pop. 1,200.

PAULI, or PAULIGHUR, a celebrated fortress and town of Hindostan, in the prov. of Aurungabad, 40 m. SE of Bombay. The fort, which is said to have been built in the 17th cent. by the celebrated Mahratta chief Sevaji, but is probably of a much older date, is erected on the top of an insulated mountain about 1,500 ft. high, and is inaccessible except on the N side, which is well defended. There are several reservoirs of water in it; and the store-rooms and other places are dug out of the solid rock. This fortress was taken in 1818 by the British troops, after a siege of only three days.

PAULIEN (SAINT), a town of France, in the dep. of Haute-Loire, 6 m. NNW of Le Puy. Pop. 2,600.

PAULILATINO, a village of the Sardinian states, in the prov. of Busachi, 16 m. NE of Oristano. Pop. 1,900. There is here a royal stud of horses.

PAULIN, a village of France, in the dep. of Tarn, 15 m. E of Alby. Pop. 2,900.

PAULINSKILL, a river of New Jersey, U. S., which runs into the Delaware, in N lat. 40° 54′, E long. 75° 9′.

PAULINZELLA, a village of Schwarzburg-Rudolstadt, 12 m. W of Rudolstadt, on the Rinne.

PAULIPIRI, a village of Sardinia, 3 m. N of Cagliari. Pop. 1,200.

PAULITZA, a village of the Morea, 12 m. S of Fanari, built on the site of the ancient *Phigaleia*. The extensive circuit of the ancient city, defended by a number of circular towers situated on rocky eminences and tremendous precipices, may still be traced.

PAULO (SAO), a maritime province of Brazil, between the parallels of 20° and 26° S lat., and bounded on the N by the provs. of Goyaz and Minas-Geraes, from the former of which it is separated by the Rio-Grande or Para; on the E by the provs. of Minas-Geraes and Rio-de-Janeiro, and by the Atlantic; on the S by the prov. of Santa-Catherina, Rio-Grande-de-São-Pedro, and the Argentine prov. of Missiones, from the latter two of which it is separated by the Curitiba river or Rio-Yguazo; and on the W by the Rio-Parana, which separates it from Paraguay and the prov. of Matto-Grosso.—The Sierra-do-Mar runs along the E side of this prov., its distance from the sea increasing as it proceeds southwards, and the only large stream on its E side being the Iguape. The Sierra-de-Ibotacatu runs in a NW direction from the Sierra-do-Mar, between the upper courses of the great central rivers of the prov., the Rio-Tiete or Anhemby on the N, and the Rio-Paranapanema on the S. The Cordillera-de-Maracayu enters the prov. on the W, and runs across the S part towards the Sierra-do-Mar, between the rivers Piquiri, and Jaguary. All the larger rivers of the prov. flow W towards the Parana.—This prov. is one of the richest and most fertile of the empire, largely exporting rice, coffee, sugar, tobacco, cotton, hides, tallow, timber, and smoked provisions, and conducting an active traffic with the surrounding provinces. Its principal cities are São-Paulo, Santos, and Curitiba; and its chief towns Itu, Jundiahi, Taubaté, and Franca. Its pop. in 1814 was 199,364; in 1829, 306,581, of whom 90,712 were slaves; it is now estimated at 360,000. It sends 9 deputies to the legislative chamber, and 4 senators to the senate. Its legislative provincial assembly consists of 36 members.

PAULO (SAO), the capital of the above prov., is situated in the vast plain of Piratininga, at the confluence of the Tamandataby and the Hynhangabahu, near the l. bank of the Tieté, in S lat. 23° 33′, 270 m. WSW of Rio-de-Janeiro, and 36 m. NNW of Santos. The town stands on an eminence of about 2 m. in extent, surrounded on three sides by low meadow-land, and washed at the base by rivulets, which almost insulate it in rainy weather, but connected with the high land by a narrow ridge. The streets are in general remarkably clean and well-paved, although narrow and irregular. There are several squares, 2 convents, 3 monasteries, and 8 churches, the greater part of which are built of earth: the walls being erected by means of a frame-work made of wood, into which earth is put, which the workmen beat, occasionally moistening it with water until it acquires solidity. The houses in the principal streets are two or three stories high. They are constructed with balconies, and are stuccoed in various colours. Though built of earth, they are durable; Mawe says that he saw some that had lasted 200 years. The shopkeepers here are a numerous class, who, as in most of the larger towns of Brazil, deal in almost everything. In the outskirts of the city live a number of Creolian Indians, who make earthenware for culinary purposes, large water jars, and a variety of other utensils ornamented with some taste. The greater proportion of the inhabitants consists of farmers and husbandmen. The situation of the town was chosen more on account of the gold which abounded in the neighbourhood, than the salubrity of the air and climate. The surrounding country, however, has for more than a century been exhausted of the precious metal, and the inhabitants have been compelled at length to betake themselves to the cultivation of their fertile soil. The pop. in 1810 was returned at 22,032; it now exceeds 30,000. There is a fine botanical garden about 1 m. from the city.

PAULO-DE-LOANDA (SAO). See LOANDA.

PAULO (MORRO-DE-SAO), a hummock on the coast of Brazil, in S lat. 13° 21′ 40″, W long. 38° 54′ 48″, on which a lighthouse has recently been placed to guide ships making for Bahia. It is 10 leagues SW of Cape San-Antonio.

PAULOGRAD, a town of Russia, in the gov. and 36 m. E of Yekaterinoslav, on the Voltshey.

PAULOVO-SELO, a town of Russia, in the gov. of Nijni-Novgorod, on the Oka, 12 m. S of Gubatof. Pop. 8,000. It is distinguished for its hardware manufactures.

PAULOVSK, a town of Russia, in the gov. and 16 m. SSE of St. Petersburg, near the sources of the Slavianka, an affluent of the Neva. It is regularly built, and is the seat of an imperial palace with fine gardens.—Also a town in the gov. of Voronetz, on the l. bank of the Don, 76 m. SSE of Voronetz. Pop. 2,000. The chief employment of its female pop. consists in knitting worsted stockings and gloves. It was laid waste by inundation in 1728, and by fire in 1744, and again in 1793.

PAULOVSKAIA, a town of Russia in the gov. of Kherson, 36 m. ENE of Olviopol.—Also a fort in the prov. of Caucasus, on the r. bank of the Kura, 15 m. SE of Georgievsk.

PAULSTON, a village of co. Kilkenny, 3½ m. NNW of Goresbridge. Pop. in 1841, 265.

PAULTON, a parish of Somersetshire, 9½ m. SW of Bath. Area 1,056 acres. Pop. in 1851, 2,104.

PAUNGUL, a town and fortress of Hindostan, in the prov. of Hyderabad, in N lat. 16° 10′.

PAUNNAC, a village of France, in the dep. of Dordogne, cant. and 3 m. SE of St. Alvère. Pop. 1,100.

PAUNTLEY, a parish of Gloucestershire, 3 m. NNE of Newent. Area 1,967 acres. Pop. 256

PAURAUTE, a river of Venezuela, which rises in the mountains of Carora, and empties itself into the E side of the lake of Maracaibo.

PAUSA, a town of Saxony, in the Voigtland, 8 m. WNW of Plauen. Pop. 1,600.—Also a town of Peru, 90 m. NW of Arequipa, in the prov. of Parinacochas.

PAUSEBACH, a small river of Prussian Silesia, which rises near Silberberg, and falls into the Neisse.

PAUSILIPPO, or Posilippo, a mountain of Naples, to the SW of the city of Naples, advancing into the sea opposite the island of Nisida. The grotto of P. is a tunnel cut through the tufa rock, 2,316 ft. in length, 22 ft. broad, and 87 ft. high. Over its entrance is the tomb of Virgil, situated in a vineyard amid tufa rocks, and hung round with ivy and other creeping plants.

PAUSRAM, or Pauzdram, a town of Moravia, on the Schwarza, 4 m. of Brunn. Pop. 900.

PAUSSAC, a village of France, in the dep. of Dordogne, cant. and 6 m. NE of Montagner. Pop. 1,020.

PAUTE, a river of New Grenada, in the prov. of Cuenca, which rises in the mountains of Tarqui, and receiving the accession of other streams, becomes a large navigable river assuming the name of Santiago, and enters the Amazon, on the l. bank, near Borja.

PAVANT, a commune of France, in the dep. of the Aisne, cant. and 2 m. S of Charly, and 9 m. SW of Chateau-Thierry, near the l. bank of the Marne. Pop. 1,600.

PAVDINSKI, Pavdinskaia-Gora, or Pavdinskoi-Kamen, the loftiest summit of the chain of the Ural mountains, in Russia, on the confines of Europe and Asia, in the gov. of Perm, and 78 m. WNW of Verkhontorie. It has an alt. of 6,365 ft. above the level of the Caspian, and gives rise to the Kosva and Lialia rivers.

PAVENHAM, a parish of Bedfordshire, 5½ m. NW of Bedford. Area 1,340 acres. Pop. 556.

PAVESAN, or Pavese. See Pavia.

PAVESIN, a commune of France, in the dep. of the Loire, cant. and 6 m. SE of Rive-de-Gier, and 15 m. ENE of St. Etienne, on the N side of the Cote-des-Perouses. Pop. 1,020. It has a nail manufactory.

PAVIA, a town of Portugal, in the prov. of Alemtejo, comarca and 24 m. N of Evora, and 9 m. S of Avis, on an eminence on the l. bank of the Tera, which is here crossed by a handsome bridge. Pop. 885. It has an hospital and an alms-house. The environs afford excellent lime.

PAVIA, a delegation or province of Austrian Italy, in the gov. of Milan; bounded on the N by the prov. of Milan; on the E by that of Lodi-et-Crema; on the SE by the duchy of Parma, from which it is separated by the Po, which also separates it on the S from the Sardinian prov. of Alessandria; and on the W by the Sardinian division of Novara, from which it is separated by the Ticino. Its superficial extent is 320 sq. m.; its pop. about 150,000. Its surface is for the most part level, and of such fertility that it is regarded as the garden of the Milanese. It is watered by the Po, the Ticino, and the Olona; and traversed by the Naviglio-Grande, and the canals of Bereguardo and Pavia. Rice and vines form the principal objects of culture; but silk is also raised in large quantities, and the pastures feed a fine breed of cattle. The cheese of this district also forms an important branch of export. The trade of the prov. is carried on by the Po and the Ticino, as well as by a canal which forms a communication between the r. bank of the Olona and the l. bank of the Ticino, or cities of Milan and P. It is subdivided into the 8 districts of Abbiategrasso, Belgiojoso, Bereguardo, Binasco, Corte-Olona, Landriano, Pavia, and Rosata.

Pavia, the cap. of the above deleg., situated on a pleasant eminence on the bank of the Ticino, 4 m. above the spot where that river discharges itself into the Po, and 19 m. SSW of Milan, in N lat. 45° 10′ 47″, E long. 9° 9′ 48″. Its length from E to W is upwards of 1 m., and its breadth is nearly the same. Its pop. in 1837 was 23,531; in 1846, 28,169. Its streets are broad and straight, especially the Corso-di-Strada-Nuova, which extends from the bridge to the centre of the city; and many of the buildings are good, but the town in general has little of that splendour which might be expected in the ancient cap. of Lombardy, and 'the City of a hundred towers.' It contains several squares, the chief of which, situated in the centre of the town, is surrounded with piazzas. Some ancient towers of extraordinary height, the remains of Gothic ages, are still to be seen; and numerous palaces of great extent but half ruinous and dismantled. P. is surrounded with fortifications, forming an irregular polygon. One of the most remarkable structures in the town is the bridge of 7 arches, and 300 ft. in length, built in the 14th cent., and connecting it with the suburb of Borgo-Ticino, on the opposite side of the Ticino. Of the public buildings, the most remarkable are the churches. The church and convent of the Carthusians are grand and striking edifices. The court of the convent is said to be one of the finest in Europe. The ancient church of the Augustinians, in which the ashes of St. Augustine are said to be preserved, contains the tomb of the well known Boethius. The cathedral of P., a Gothic building in decay, has been rebuilt, but in bad taste. The university of P. is said to be the most ancient in Europe, having been founded by Charlemagne in 791. This seminary suffered in the wars of the French revolution, but received in 1802 a considerable grant, and in 1842 was attended by 1,484 students. The professors, 38 in number, have salaries of from £120 to £240. A library of 60,000 vols. is attached to the university. The city also contains a gymnasium, a high-school, and several hospitals. It is a bishop's see, and the seat of a superior court. Though the trade of P. is insignificant, its situation is favourable for commerce, the Ticino being sufficiently broad and deep for the conveyance of large barks from the Po, and affording an outlet for the corn, rice, hemp, wine, and other products of the country. Some trade in silk is carried on with Turin, Genoa, and Lyons. Wine is sent to Milan and Lodi, and rice to various parts of Italy. The excellent cheese made in the district is likewise exported in considerable quantities. Of manufacturing industry, the only branch is silk-weaving.—P., the ancient *Ticinium* or *Papia*, was founded by the Gauls, and fell subsequently under the dominion of the Romans. In the middle of the 5th cent., the Romans were driven out by the Goths. The latter in their turn yielded to the Lombards, who, towards the end of the 6th cent., made P. the cap. of their kingdom. It underwent various changes until the 12th cent., when it recovered its liberty, and erected itself into a republic. It was afterwards annexed to the territories of the duke of Milan. In 1525, Francis I. king of France, was made prisoner by the imperialists, in a battle fought near P. In 1527, to avenge this affront, the French under Count Lautrec sacked the town. In 1706 it was besieged by the imperialists, and the inhabitants compelled the French garrison to surrender. After this, P. remained in the hands of Austria till 1796, when it was taken by the French, by whom it was kept until 1814, when it fell again under the Austrian dominion.

PAVIE, or PAYRE, a commune and town of France, in the dep. of the Gers, cant. and 3 m. S of Auch, on the l. bank of the Gers. Pop. 850.

PAVILLY, a canton, commune, and town of France, in the dep. of the Lower Seine and arrond. of Rouen. The town is 11 m. ESE of Yvetot, and 12 m. NW of Rouen, on the Austreberte, at the confluence of the Saffembec. Pop. 3,008. It has an alms-house, and contains manufactories of soft-soap, and of linen, a paper and several cotton-mills.

PAVOLOTCH, a town of Russia in Europe, in the gov. and 63 m. SW of Kiev, district and 15 m. NW of Skwira.

PAVONATA, two small islands in the Dardanelles, at the entrance of the Black sea.

PAVONE, a village of Sardinia, in the dio. of Turin, prov. and 3 m. S of Ivrea.

PAVUNA, a river of Brazil, in the prov. of Rio-de-Janeiro, which has its source in the Serras-do-Bangu and Jarixino; flows for some distance between the parishes of Miriti and Iraja, and joins the Miriti.

PAWANGHUR, or PAVANAGHAR, a town of Hindostan, in the prov. of Bejapur, 30 m. W of Merritch.

PAWELS-POLDER (SAINT), a village of Holland, in the prov. of Zealand, 3 m. NW of Hulst. Pop. 1,250.

PAWEN, an island in the bay of Tomini, on the E coast of the island of Celebes, in S lat. 0° 18′, and E long. 122° 5′. It is 9 or 12 m. in length.

PAWLET, a river of the state of Vermont, U. S., which has its source in the N part of Bennington co., passes through a township of the same name, into the state of New York, and enters Wood creek, a little above its entrance into Lake Champlain.—Also a township of Rutland co., in the same state, 87 m. SSW of Montpellier, watered by the river of the same name, and by Indian stream. It has a hilly surface, but a generally fertile soil. Pop. in 1840, 1,748.

PAWLETT, a parish of Somerset, 3¾ m. N of Bridgewater. Area 3,566 acres. Pop. in 1841, 595; in 1851, 536.

PAWLINGS, a township of Duchess co., in the state of New York, U. S., 20 m. E of Poughkeepsie, and 89 m. S of Albany. It is intersected by an extensive valley, and is drained by Croton river. Pop. in 1840, 1,571.

PAW-PAW, a flourishing village of Van Buren co., in the state of Michigan, U. S., 159 m. W of Detroit, on a river of the same name.

PAWREY, or PAUREY, a town of Upper Guinea, in Dahomey, on the coast road between the Salt and Whydah lakes.

PAWTUCKET, a river which has its source in Worcester co., in the state of Massachusetts, U. S.; enters the state of Rhode island on the NE; and joins Providence river, a little below the town of that name. It bears in the upper part of its course the name of Blackstone.—Also a village, partly in N. Providence township, in the state of Rhode island, and partly in Pawtucket township, in the state of Massachusetts, 4 m. N of Providence, on both sides of the river of the same name, which is here navigable. Pop. in 1840, 6,000.—Also a township of Bristol co., in the state of Massachusetts, 4 m. N of Providence, on the E side of the river of the same name, and comprising a portion of the village of Pawtucket.

PAWUL, a town of Hindostan, in the presidency of Bombay and prov. of Aurungabad, 33 m. NNE of Poona.

PAXAROS, or PAJAROS, two small rocky islets of the S. Pacific, near the coast of Chili, on which they are dependent, in the district of Coquimbo and 42 m. NW of La Serena, in S lat. 29° 35′, and W long. 71° 35′.

PAXAROS (FARALLON), or GUYS REEF, one of the most northerly of the Marianne islands, in the N. Pacific, in N lat. 20° 29′ 45″, and E long. 145° 30′.

PAXFORD, a district in Blockley p., county of Worcester, 3½ m. NW by N of Moreton-in-the-Marsh.

PAXIMADA, a small island of the Archipelago, to the N of Candia, and 3 m. E of the island of Standia, in N lat. 35° 26′ 4″, and E long. 25° 18′.

PAXIMADI, a small island of the archipelago, in the Central Cyclades, near the SW extremity of the island of Milos, in N lat. 36° 37′ 40″, and E long. 24° 18′ 50″.

PAXIMADIA, or KABRA, two islets of the Mediterranean, near the S coast of the island of Candia, at the entrance of the gulf of Messara. The highest summit of the larger island is in N lat. 34° 59′ 40″, and E long. 24° 34′ 35″.

PAXO, an island of the Mediterranean, one of the Ionian group, 9 m. S by E of Corfu, and 9 m. SW of the coast of Albania, having its N point in N lat. 39° 14′, and 20° 9′ E long. It is about 21 m. in circuit, and has an area of 26 sq. m. Its W and SW coast present a number of remarkable caverns penetrating the limestone rock. Its surface is hilly, and its soil dry and stony, producing little else than olives, almonds, and wine. Mules and goats are reared in considerable numbers; and fish are abundant on the coast. On its E side is Porto-Gaya, where small vessels may find good anchorage. Pop. 5,400.

PAXTON, a village of Berwickshire, in the p. of Hutton, 10 m. E of Dunse. Pop. in 1831, 270.

PAXTON, a township in Worcester co., Massachusetts, U. S., 50 m. W of Boston, on the height of land between the Connecticut and Merrimac rivers. Pop. 670.—Also a township in Ross co., in Ohio. Pop. 1,226.

PAXTON (GREAT), a parish in Huntingdonshire, 3¼ m. NE by N of St. Neot's, on the E bank of the Ouse. Area 1,120 acres. Pop. in 1831, 267; in 1851, 410.

PAXTON (LITTLE), a parish in Huntingdonshire, 1¾ m. N by E of St. Neot's, on the W bank of the Ouse. Area 2,040 acres. Pop. in 1831, 310; in 1851, 224.

PAXTON (LOWER), a township of Dauphin co., in Pennsylvania, U. S., 6 m. NE of Harrisburg, on Paxton's creek. Pop. 1,400.

PAXTON (UPPER), a township of Dauphin co., in Pennsylvania, U. S., 22 m. N of Harrisburg, skirted on the W by the Susquehanna. Pop. 1,814.

PAYA, an Indian village of New Grenada, in the prov. and 45 m. SW of Casanare, at the foot of the Lomas-del-Viento.

PAYAGUAS, a tribe of Indians, in New Grenada, inhabiting the l. bank of the Napo, and the borders of the Payagua river, to the S of the Parranah.

PAYAMINO, a river of Ecuador, which flows into the Napo, on the l. bank, 50 m. below Napotoa, after a SSE course of about 100 m.

PAYAS. See BAYAS.

PA-YEN-JUNG-KIH-TING, a district and town of China, in the prov. of Kan-su and div. of Sining-fu.

PAYERNE, or PETERLINGEN, a village of Switzerland, in the cant. of Vaud, on the r. bank of the Broye, 12 m. W of Friburg. It is an ancient place, and possesses a curious town-house.

PAYHEMBURY, or PEHEMBURY, a parish in the co. of Devon, 5¼ m. WNW of Honiton. Area 2,698 acres. Pop. in 1831, 542; in 1851, 544.

PAY-HO. See PEI-HO.

PAYLAD, a town of Hindostan, in Gujerat, on the Goma, 85 m. SW of Ahmedabad.

PAYLINGTON. See PAILTON.

PAYN-DUAYN, or MUNKHOM, a town of Burmah, in the district of Semsuk, in N lat. 26° 34′, E long. 96° 53′.

PAYNESVILLE, a village of Sumter co., in Alabama, U. S., 78 m. SW of Tuscaloosa.—Also a village of Onondaga co., in New York, 51 m. W by N of Albany.—Also a village of Pike co., in Missouri.

PAYN-GANGA, a river of Hindostan, which rises in the district of Nerwallah, in Berar, and joins the Vurda, on the r. bank, after an ESE course of 220 m.

PAYO-DE-PELLE, a town of Portugal, in the prov. of Estremadura, comarca and 9 m. S of Thomar, on the r. bank of the Tagus. Pop. 800.

PAYO-DE-VALENCIA-DE-FLORES, a village of Spain, in the prov. and 80 m. SW of Salamanca, on the Sierra-de-Gata. Pop. 350.

PAYRA, a village of France, in the dep. of Aude, cant. and 4 m. SE of Salles, near the r. bank of the Lers-Mort. Pop. 400.

PAYRAC, a village of France, in the dep. of Lot, 27 m. N of Cahors. Pop. 1,786.

PAYRE, a village of France, in the dep. of Vienne, cant. and 3 m. NNE of Couche. Pop. 1,020.

PAYSAC, a village of France, in the dep. of Ardeche, cant. and 4 m. SW of Joyeuse, near the r. bank of the Salendre. Pop. 1,000.

PAYS-DE-VAUD. See VAUD.

PAYSON, a village of Adams co., in Illinois, U. S., 22 m. W of Springfield.

PAYTA, or PAITA, a town and port of Peru, in the intendancy and 276 m. NW of Truxillo, prov. and 39 m. WNW of Piura, on the SE side of a fine bay of the Pacific, in N lat. 5° 6′ 4″, W long. 82° 12′ 28″. Pop. 5,000. It is situated in an arid plain of great extent, and consists of an assemblage of houses lightly constructed of bamboos, with high roofs covered with leaves. Rain is unknown in the locality, and the heat is intense. Water is conveyed from a distance of nearly 12 m. The port is excellent, and possesses an active trade in wine, salt, &c., with Panama, Guayaquil, and Callao. This town was destroyed by Admiral Anson in 1741, and again in 1810 by Lord Cochrane.

PAYTHORNE, a township in Gisburn p., W. R. of Yorkshire, 8 m. S of Settle, on the W bank of the Ribble. Area 2,627 acres. Pop. in 1851, 206.

PAZ (LA), a town and district of Bolivia, lying between the district of Chuluman on the N, and Ayoayo on the S, at the upper sources of the Beni, and in the vicinity of the western cordillera of the Andes, the spurs of which intersect it on the S and W. The adjacent cordillera, which is only 12 leagues distant, is very high, and some of its summits are covered with perpetual snow, which subjects the district to a severe climate; but the city enjoys a salubrious air, and considerable warmth. The pop. of the district around the city are mostly confined to the valley, as the higher grounds are covered with forests, which afford shelter to bears, jaguars, and pumas. Gold is occasionally found in the river, an affluent of the Beni, when it is increased by the melting of the snow which forces large masses of rock from the mountain of Illimani.—The city, in N lat. 17° 30′, W long. 68° 25′, 120 m. ESE of Arequipa, at an alt. of 1,906 toises = 4,063 yds. above sea-level, was founded in 1548, and called La Paz, or Peace, in memory of the public tranquillity being settled by the defeat of Gonzalo Pizarro and his adherents. Besides the cathedral, it has 4 churches, 5 convents, and 3 nunneries. It has, according to Helms, suffered considerably by the revolt of the Indians, but it is still rich, and, according to the same authority, has 20,000 inhabitants. One great article of trade in this place is *matté* or Paraguay tea.

PAZ (LA), a town of Lower California, on the S side of a fine bay of the same name, on the W coast of the gulf of California, and about 20 m. from the mouth of the bay, in N lat. 23° 45′. Pearl-fishing and silver-mining constitute the chief employment of the inhabitants. The vicinity is a good grazing country, but very dry.

PAZ (LA), a town of Entre-Rios, on the l. bank of the Parana, 40 leagues above the city of Parana.

PAZANNE (SAINTE), a town of France, in the dep. of Loire-Inferieure, cant. and 6 m. SSW of Pellerin. Pop. 1,900.

PAZZANO, a town of Naples, in Calabria-Ultra Ima, 19 m. NNE of Girace. Pop. 1,000.

PCHOVJA, a river of Russia, in the gov. of Novgorod, which rises near Khilino; runs NW; and flows into the Volkhov, on the r. bank, near Tchemitzy, after a course of 60 m.

PE, a district and town of China, in the prov. of Sze-chuen, div. and 15 m. N of Ching-tu-fu, in N lat. 30° 47′, E long. 103° 56′.

PE′ (SAINT), a town of France, in the dep. of Hautes-Pyrenees, on the Gave-du-Pau, 8 m. NNW of Argeles, in the midst of a rude mountainous district. Pop. 2,700. Lead and copper are wrought in the environs.—Also a town in the dep. of Basses-Pyrenees, on the r. bank of the Nivelle, 12 m. SW of Bayonne. Pop. 2,100.

PEA, a river of Alabama, U. S., one of the principal affluents of the Choctawhatchie.

PEABODY, a river of New Hampshire, U. S., which joins the Androscoggin.

PEACE RIVER, otherwise called UNJIGAH, a river which, according to Mackenzie, who ascended it to its source in his journey across the American continent to the Pacific ocean, has its rise in the Rocky mountains, in N lat. 54° 24′, W long. 121°, only a few miles, or, according to recent report, only 25 yds. from that of the North branch of the Columbia river, which, taking an opposite direction, empties itself into the Pacific ocean. After a winding course through a vast extent of country, during which it is increased by the accession of many large rivers, the Peace river flows through the Lake-of-the-Hills, after which it is called Slave-river, and forms the main feeder of Slave-lake, on issuing from which it receives the denomination of Mackenzie's river, which it preserves until it empties itself into the Frozen ocean, in 70° N lat., and about 135° W long. Its stream is from 200 to 800 yds. wide. It is generally navigable, except within the Rocky mountains, where its course is much interrupted by rapids and cascades. Where it falls into Slave-lake it is upwards of 1 m. broad; the country between this and the Lake-of-the-Hills is so flat that it is frequently overflowed.

PEACHAM, a township of Caledonia co., Vermont, U. S., 36 m. E by N of Montpellier. Pop. 1,443.

PEACH-BOTTOM, a township of York co., Pennsylvania, U. S., 26 m. SE of York, on the Susquehanna. Pop. 1,074.

PEACH ISLAND, an island of Upper Canada, in Lake St. Clair, containing about 150 acres, and used chiefly as a fishing-station.

PEAGE-DE-ROUSSILLON (LE), a village of France, in the dep. of Isere, cant. and 1 m. W of Roussillon. Pop. 1,400.

PEAK (THE). See DERBYSHIRE.

PEAKE-FOREST, a liberty in High Peak hund., co. of Derby, 2½ m. NW of Tideswell. The limestone quarries here are extensive. Area 1,360 acres. Pop. in 1831, 573; in 1851, 596. See DERBYSHIRE.

PEAKIRK, a parish in Northamptonshire, 3¼ m

SE of Market-Deeping, on a branch of the Welland. Area 630 acres. Pop. in 1831, 191; in 1851, 223.

PEAOU-SHWUY, a district and town of China, in the prov. of Keang-su, and div. of Keang-ning-fu or Nan-king.

PEAOU-YANG, a district and town of China, in the prov. of Keang-su, and div. of Chin-keang-fu.

PEARCE POINT, a low and sandy point on the E shore of Spencer's gulf, on the S coast of Australia, in S lat. 34° 28½′, E long. 137° 20′ 45″.

PEARL, a river of Mississippi, U. S., which rises under N lat. 33° and pursues a SW course for 60 m., and thence E 150 m., until it falls into Lake-Borgne, a little to the E of Lake Pontchartrain. It is navigable 150 m. At its entrance it has 7 ft., but deepens at the distance of 2 m. from the lake; the navigation, however, is obstructed by logs and drift wood. It flows through a fertile territory, and in the S part of its course, from N lat. 31°, it separates the state of Mississippi from Louisiana.

PEARL ISLAND, an island in the gulf of Mexico, towards the mouth of the Mississippi, a few leagues from Dauphin island. It is 6 m. in length, and 4 m. in breadth.—Also a small island in the W. Indies, in N lat. 14° 53′, W long. 79° 13′.

PEARL KEYS, a group of islets or rocks off the Mosquito shore, in N lat. 12° 26′.

PEARL ROCKS, a cluster of low and dangerous rocks in the N. Pacific, near the S extremity of Calvert's island, in N lat. 51° 54′.

PEARSON'S ISLES, a cluster of small isles off the S coast of Australia, included by Flinders under the Investigator's group. The largest is remarkable for two high and sharp-pointed peaks.

PEASE, a township of Belmont co., in the state of Ohio, U. S., on Wheeling creek. Pop. 2,471.

PEASEMORE, or PEYSMER, a parish in Berks, 3¾ m. SW by S of East Ilsley. Area 2,048 acres. Pop. in 1831, 298; in 1851, 369.

PEASENHALL, a parish in Suffolk, 4¼ m. NW by N of Saxmundham. Area 1,995 acres. Pop. in 1831, 773; in 1851, 820.

PEASMARSH, a parish in Sussex, 3 m. NW of Rye. Area 3,718 acres. Pop. in 1851, 898.

PEATLAW, a hill in the co. of Selkirk, 2 m. NW of the town of Selkirk, rising 1,964 ft. above the level of the sea.

PEATLING-MAGNA, a parish in Leicestershire, 6½ m. NE by N of Lutterworth, on a branch of the Soar. Area 1,900 acres. Pop. in 1851, 301.

PEATLING-PARVA, a parish in Leicestershire, 4½ m. NE by N of Lutterworth. Area 870 acres. Pop. in 1831, 174; in 1851, 215.

PEAUGRES, or PAUGRE, a commune of France, in the dep. of the Ardèche, cant. and 4 m. SW of Serrières, and 18 m. NNW of Tournon. Pop. 1,020.

PEAULE, a commune and town of France, in the dep. of Morbihan, cant. and 8 m. SE of Guestembert, and 21 m. ESE of Vannes. Pop. 2,250.

PEAUX, a village of France, in the dep. of the Loire-Inferieure, cant. and 4 m. SE of Machecoul, and 23 m. SW of Nantes. Pop. 1,130.

PEBALK. See AA.

PEBBLE, or BORBON, an island of the Falkland archipelago, South Atlantic, a little to the N of Falkland island, in S lat. 51° 20′, W long. 59° 40′. It is about 24 m. in length from E to W, and from 6 to 9 m. in breadth.

PEBMARSH, or PELMARSH, a parish in Essex, 3 m. NE by E of Halstead, near the source of the Colne. Area 2,023 acres. Pop. in 1851, 683.

PEBRAC, a commune of France, in the dep. of Haute-Loire, cant. and 5 m. S of Langeac, and 21 m. SSE of Brioude, at the foot of a mountain, on the r. bank of the Dège. Pop. 850.

PEBWORTH, a parish in Gloucestershire, 5 m. N by W of Chipping-Campden. It includes the hamlet of Broad-Marston. Area 3,050 acres. Pop. in 1831, 578; in 1851, 737.

PECCAIS, a fort of France, in the dep. of the Gard, in the cant. and 6 m. SE of Aigues-Mortes, 21 m. SSW of Nimes, and 5 m. from the shore of the Mediterranean, on the Silvereal canal. It is of irregular structure, with several bastions, and surrounded by a deep ditch; and was originally designed for the defence of the adjacent salines.

PECCIOLI, a town of Tuscany, in the prov. and 21 m. SE of Pisa, vicariat and 8 m. ESE of Lari. Pop. 2,000.

PECETTO-TORMISE, a village of Sardinia, in the dio. and prov. and 5 m. ESE of Turin, mand. and 3 m. W of Chieri. Pop. 2,100.

PE-CHE-LI, or CHIH-LE, a province of China, stretching between the parallels of 41° 25′ and 35°; and bounded on the N by Mandshuria, from which it is separated by the Great wall; on the E by Mandshuria, the gulf of Pe-che-li, and the prov. of Shan-tung; on the S by Shan-tung and Ho-nan; and on the W by Ho-nan and Shan-se. It has an area of 58,949 sq. m., with a pop. of 27,990,871. Its W side is flat in surface; and towards the W it rises in elevation towards the Shan-se frontier. The Pe-ho or Pei-ho, a river taking its rise beyond the Great wall, and flowing S and SSE to the gulf of P., is the most important river of the prov., as Peking, the cap. of the empire, is situated near it. The Great canal intersects the E part of the prov., and joins the Pei-ho in N lat. 39° 11′. The Yung-ting-ho also joins the Pei-ho. Though intersected by numerous large rivers, this prov. does not appear to possess even the average fertility of the rest of the empire. Large districts are impregnated with saline substances, and the soil is in many places scanty. The grain chiefly grown is a species of millet; a little rice is also produced, but the grain raised falls far short of the internal consumption of the vast pop. of this province. See article PEKING.

PECHINA, a town of Spain, in Andalusia, in the prov. and partido and 3 m. NNE of Almeria, in a fertile plain watered by the Anderaso, and near a mountain of the same name. Pop. 1,628. It has a parish church, a school, a custom-house, and thermal baths, and possesses some manufactories of common cloth. In the environs are a rich mine of antimony and quarries of gypsum.

PECHLARN, or PECHLARN (GROSS), a town of Austria, in the prov. of Lower Austria, and upper circle of the Wienerwald, 8 m. ENE of Ips, and 22 m. W of St. Polten, on the r. bank of the Danube, a little below the confluence of the Erlaf. Pop. 700. It has a castle in the environs, and some mineral springs.

PECHLARN (KLEIN), a town of Austria, in the prov. of Lower Austria, and upper circle of the Manhartsberg, on the l. bank of the Danube, a little to the NNE of Pechlarn, and 25 m. SW of Krems.

PECHLEITE, a mountain of the duchy of Saxe-Meiningen, and principality of Hildburghausen, near the source of the Werra, in the chain of the Thuringerwald, of which it is one of the principal summits.

PECHOR, a town of Hindostan, in the Scindia's Dominions, 25 m. SSE of Gualior, to the E of the road thence to Jaunsy.

PECHTCHANOE, a town of Russia in Europe, in the gov. of Poltava, district and 15 m. NW of Zolotonocha, at the confluence of the Kovra and Soupoï.

PECINGUABA, a bay of Brazil, towards the N of the prov. of São-Paulo, between Cape Cairucu and the bay of Ubatuba.

PECKAU, or PEGGAU, a market-town of Austria, in Styria, in the circle and 13 m. NNW of Grätz, at the foot of the Schöckelberg, on the l. bank of the Muhr. Pop. 310. It has a mine of argentiferous lead.

PECKELSHEIM, or PEKELSEN, a town of Prussia, in the prov. of Westphalia, regency and 51 m. SSE of Minden, circle and 8 m. N of Warburg, in a mountainous locality. Pop. 1,600. It is enclosed by walls, now much dilapidated, and has 4 gates.

PECKFORTON, a township in Bunbury parish, Cheshire, 3¾ m. SSW of Tarporley. Area 1,729 acres. Pop. in 1831, 331; in 1851, 286.

PECKHAM, a village in Camberwell p., Surrey, 2½ m. SSE of St. Paul's, and 1½ m. W of the Croydon canal and railway.

PECKHAM (EAST or GREAT), a parish in Kent, 5¾ m. NE by E of Tunbridge. Area 3,358 acres. Pop. in 1831, 2,018; in 1851, 2,254.

PECKHAM (WEST or LITTLE), a parish in Kent, 5 m. NE of Tunbridge. Area 1,583 acres. Pop. in 1831, 536; in 1851, 545.

PECKLETON-WITH-TOOLEY, a parish in Leicestershire, 5¼ m. NE by N of Hinckley. Area 2,020 acres. Pop. in 1831, 294; in 1851, 39[illegible].

PECORA, a headland of the island of Sardinia, on the W coast, in the div. of Cabo-Cagliari, prov. and 12 m. NW of Iglesias, in N lat. 39° 37′, E long. 8° 25′. In its vicinity is the government fishery of Cala-Pecora, the most productive in the island.

PECORARA, a town of the duchy of Parma, 18 m. SW of Piacenza, and 8 m. N of Bobbio, near the r. bank of the Tidoncello, at the confluence of the Tidone-Merlingo.

PECOS, a half-civilized tribe of Indians, in the state of New Mexico, who claim a very ancient origin. They inhabit the banks of a river of the same name, which takes its rise within 15 m. of Santa-Fe, and pursues a course of several hundred miles to the Rio-Grande. About half-way between Santa-Fe and the town of San-Miguel upon this river, is the chief village of the tribe. They have no records, but are governed by oral traditions. They observe the Catholic faith, but they say they are waiting the return of their great king, and from time immemorial they have preserved the same fire that was burning upon his departure. They describe this personage as their great king and saviour, and they take by turns the watching of the fire, which is preserved in a deep well or cellar. In latter years great sickness prevailed amongst them, and the village went to decay; in consequence, about the year 1839, they moved to the W side of the Rio-Grande, to a small village called Jemas, about 50 m. from Santa-Fe, and carried with them the everlasting fire.

PECQ, a department and commune of Belgium, in the prov. of Hainault, and arrond. of Tournai. Pop. of dep. 1,522. The village is 7 m. NNW of Tournay, on the l. bank of the Scheldt. It has extensive coal-mines.

PECQ (LE), a commune of France, in the dep. of the Seine-et-Oise, cant. and a little to the E of St. Germain-en-Laye, 7 m. N of Versailles, and on the railway from Paris to St. Germain. Pop. 1,250.—The village is situated on the slope of a mountain, near the l. bank of the Seine, which is here crossed by a wooden bridge, and is well built. It has manufactories of soap, ceruse, potato-starch, glue, and leather; and possesses a small port. Its trade consists chiefly in wood and wine. Le Pecq is noted as the place at which the united armies effected the passage of the Seine, on the 1st July 1815.

PECQUENCOURT, a commune of France, in the dep. of the Nord, cant. and 4 m. SW of Marchiennes, and 6 m. E of Douay, near the r. bank of the Scarpe. Pop. 1,300. In the environs is a Benedictine abbey, of which the abbot in 1750 was Cardinal York, a son of James II. of England.

PECROT-CHAUSSEE-AND-MALHAISE, a commune of Belgium, in the prov. of Brabant, and dep. of Bossat-Gottechain. Pop. 440.

PECS. See FUNFKIRCHEN.

PECSKA. See PETSCHWAR.

PECZYNISZYNE, a town of Galicia, in the circle and 9 m. SW of Kolomea, and 14 m. NW of Pystin, on the l. bank of the Soprowka.

PEDARA, a town of Sicily, in the prov. and district and 9 m. N of Catania, on the S slope of Etna. Pop. 2,068.

PEDASO, a town of the Papal states, in the delegation and 9 m. SE of Fermo, on the r. bank of the embouchure of the Azone, in the Adriatic. Pop. 1,000.

PEDAVOLI, a town of Naples, in the prov. of Calabria-Citra, district and 11 m. SE of Palmi, cant. and 3 m. ESE of Sinopoli-Superiore. Pop. 1,060.

PEDDA-BALABARAM, or PEDDA BALIPUR, a town and fortress of Hindostan, in the prov. of Mysore, 85 m. NE of Seringapatam. The fort, although built of mud, is very strong, as shot buries itself in the rampart without bringing down any part of the parapet. It commands the town, which consists of about 200 houses, and is also fortified by a wall and hedge. It carries on a considerable traffic.

PEDDAPORE, a town of Hindostan, in the Northern Circars, district and 28 m. ENE of Rajamundry. A battle was fought, in 1758, in the vicinity of this place, between the French and British forces, in which the former were defeated.

PE'-DE-CASTEX (SAINT), a village of France, in the dep. of Gironde, cant. and 2 m. W of Pujols. Pop. 1,000.

PEDEE (GREAT), a river of the United States, which rises in N. Carolina, where it is called Yadkin; runs SSE into S. Carolina; and uniting with the Waccama flows into Winyaw bay, which communicates with the Atlantic 12 m. below Georgetown. It is navigable for boats of 60 or 70 tons, about 200 m.—The Little P. also rises in N. Carolina, and unites with the Great P. 32 m. above its mouth.

PEDENA, or BIBEN, a town of Austrian Illyria, 15 m. SW of Trieste. Pop. 1,500.

PEDERNALES, a small river of the island of Hayti, which rises in the mountains of Baruco; runs W; and enters the Atlantic between Cape Colorado and the bay of Puer.

PEDERNEIRA, a small seaport of Portugal, in the prov. of Estremadura, at the mouth of the river Alcoa, 18 m. NE of Peniche. It has a good harbour, on the N side of which is a fort of São-Miguel.

PEDERNOSO (EL), a town of Spain, in the prov. of Cuenca, 15 m. W of San Clemente. Pop. 1,400.

PEDERSTRUP, a village of Denmark, in the island of Laaland, 12 m. NW of Marieboe.

PEDESTAL POINT, the SW extremity of Angra Pequena bay, on the S coast of Africa, in N lat. 26° 38′, and E long. 15° 7′. A mining company have recently commenced operations at this point, and are sinking a shaft of considerable size. Some specimens of ore already procured are worth £45 a ton, but the supply as yet appears to be small, and difficult to separate from the quartz in which the veins of copper occur. It is expected that gold, platina, and precious stones will be met with. The geological structure of this coast is primitive quartz and granite rock, with abundance of mica and iron. The limestone and coal deposits do not occur. Abundance of inferior pebbles are found upon many of the islands, mostly opals, and some similar to the Ceylon moonstone.

PEDIR, a town on the N coast of the island of Sumatra, in N lat. 5° 22′, E long. 91° 22′. It is the centre of a considerable traffic in betel-nut, pepper, gold-dust, canes, rattans, bees' wax, camphor, and benzoin or frankincense. The soil of the vicinity is fertile and well watered with rivulets; but in the low land next the sea are bogs and marshes which

produce only reeds, rattans, and bamboo canes. Horses of a small breed, buffaloes, goats, oxen, hog-deer, and poultry are reared; and tigers, elephants, rhinoceroses, monkeys, wild hogs, spotted deer, and bears, abound in the mountains and forests.

PEDOR (San), a town of Spain, in the prov. and 36 m. NNW of Barcelona. Pop. 2,450. It has manufactories of cottons and distilleries of brandy.

PEDRA, a village of Brazil, in the prov. of Rio-de-Janeiro, on the r. bank of the Parahiba, below the confluence of the Bosarahi. It contains about 100 families.

PEDRA-DOS-ANGICOS, a village of Brazil, in the prov. of Minas-Geraes, on the r. bank of the Rio-São-Francisco, consisting of a church and about 20 houses.

PEDRA-DE-BAIXA, or Pedra-de-Maria-da-Cruz, a small town of Brazil, in the prov. of Minas-Geraes, on the r. bank of the São-Francisco, 135 m. N of Barra-das-Velhas, on an eminence. It has a church.

PEDRA-BONITA, a mountain of Brazil, in the prov. of Pernambuco, to the NE of Flores.

PEDRA-BRANCA, a town of Brazil, in the prov. of Bahia, 15 m. WSW of Genipapo. It has a church and a school.—Also a little rocky island on the E entrance of the straits of Singapore.

PEDRA-DE-GALLE, a small island off the coast of Africa, in N lat. 22° 11′ 37″, W long. 16° 48′ 26″.

PEDRAJAS-DE-SAN-ESTEBAN, a town of Spain, in the prov. and 24 m. SE of Valladolid, and partido of Olmedo, in a plain, near the r. bank of the Eresma. Pop. 893. Madder is grown in the environs, and with corn and timber forms the chief article of local trade.

PEDRALBA, a town of Spain, in the prov. and 23 m. NW of Valencia, and partido of Villar-de-Benaduf or del-Arzobispo, on the l. bank of the Guadalaviar. Pop. 1,534. It has manufactories of baskets and distilleries of brandy.

PEDRA-LISA, a mountain of Brazil, in the prov. of Rio-de-Janeiro, between Campos and Cantagallo.

PEDRAS, a town of Brazil, in the prov. of Matto-Grosso, on the Porrudos or Rio-de-São-Lourenco, 78 m. NE of Cuiaba.—Also a village of the prov. of Bahia, 9 m. SW of Itapuan, on a river of the same name.—Also an island of the same prov., in the bay of Camamú. It is about 3 m. in circumf., rises to a considerable height, and contains several families.—Also a small river of the prov. of Matto-Grosso, an affluent of the Guapore, which it joins on the l. bank, in S lat. 12° 53′.—Also a river of the prov. of Alagoas, which rises to the N of the Serra-de-Marambaia, passes Porto-Calvo, and 18 m. below Porto-das-Pedras enters the Atlantic.—Also a river of the prov. of Rio-de-Janeiro, in the district of Rezende, which, after a short course, flows into the Parahiba, on the r. bank.—Also a river of the prov. of Minas-Geraes, which has its source in the Serra-do-Grão-Mogor, passes Santa-Quiteria, and joins the Ilucambira.—Also a lake of the prov. of Rio-de-Janeiro, between the Rio-Muriare and the l. bank of the Parahiba. It discharges itself into the last-named river opposite Campos.

PEDRAS, or Pungo-Andoñjo, a fort of Lower Guinea, in Angola, in the territory of Dongo, near the r. bank of the Coanza, opposite the confluence of the Gango, and 300 m. E of St. Paul-de-Loango.

PEDRAS (Porto das), a port of Brazil, in the prov. of Pernambuco, 120 m. SSW of Recife, in S lat. 9° 13′ 32″, and W long. 35° 47′ 50″.

PEDRAS (Punta das), a headland of Brazil, at the SE extremity of the coast of the prov. of Ceara, in S lat. 4° 44′, and W long. 36° 21′.

PEDRAS-D'AMOLAR (Serra-das), a mountain of Brazil, in the prov. of Matto-Grosso, which runs along the r. bank of the Rio-Paraguai, a distance of about 9 m., between 15° and 18° S lat. It takes its name from the mill-stone which abounds in it.

PEDRAS-DE-FOGO, a town of Brazil, in the prov. and 16 m. SW of Parahiba.

PEDRAZA, a town of Venezuela, in the dep. of the Apure, prov. and 50 m. W of Varinhas. Pop. 3,100. Cacao, tobacco, and maize are cultivated in the environs.

PEDRAZA, or Pedraza-de-Cuidad-Rodrigo, a town of Spain, in the prov. and 42 m. SW of Salamanca, partido and 15 m. NNE of Ciudad-Rodrigo, near the confluence of the Yettes and Morasverdes. Pop. 23.

PEDRAZA-DE-CAMPOS, a town of Spain, in the prov. and 14 m. W of Palencia, near the r. bank of the Salon. Pop. 730. It has manufactories of coarse woollen fabrics.

PEDRAZA-DE-LA-SIERRA, a town of Spain, in the prov. and 15 m. ENE of Segovia, partido and 12 m. S of Sepulveda, in the chain of the Samosierra. Pop. 1,018. It has a parish church, a castle of great strength, in which the two sons of Francis I. were detained, a convent, a custom-house, and a public granary. It has extensive manufactories of coarse woollen fabrics.

PEDREGUER, a village of Spain, in Valencia, in the prov. of Alicante and partido of Denia, 36 m. ESE of S. Felipe, in a fine umbrageous valley, on the Alberca. Pop. 2,635. It contains an ancient palace, a parish church, a custom-house, and a public granary, and carries on a considerable trade in oil and legumes.

PEDRERA (La), a town of Spain, in Andalusia, in the prov. and 51 m. ESE of Sevilla and partido of Estepa, in a fertile locality. Pop. 1,097. This town consists of only a single long street.

PEDREZUELA, a town of Spain, in New Castile, in the prov. and 24 m. NNE of Madrid and partido of Colenenar Viejo, near the l. bank of the Jarama. Pop. 425.

PEDRICKTOWN, a village of Upper Penns creek township, Salem co., in the state of New Jersey, U. S., 55 m. S of Trenton, on Oldman's creek. Pop. in 1840, about 150.

PEDRO (San), a fort of Spain, in Andalusia, in the prov. and 32 m. E of Almeria, and 15 m. NE of Cape Gata, at the foot of the Serra-de-Aljamilla, on the Mediterranean, in N lat. 36° 53′.

PEDRO (San), a river of Upper Guinea, on the Ivory coast, which flows into the gulf of Guinea, ESE of Great Bereby or Kadahbu.

PEDRO (San), a bay of Mexico, on the coast of New California, in N lat. 33° 45′, and W long. 117° 47′.—Also a river which has its source in the state of Gautemala, near Teopisca, runs N into the Mexican state of Tabasco, and throws itself into the gulf of Mexico, in N lat. 18° 40′, and W long. 92° 25′.

PEDRO (San), a town of New Grenada, in the dep. of Cundinamarca and prov. of Antioquia, at an alt. of 2,500 yds. above sea-level. Pop. 2,847.

PEDRO (San), a town of Peru, in the intendancy and 46 m. NNW of Truxillo, prov. and 48 m. SSE of Sana, a little to the S of the entrance of the Picasmayo into the Pacific. It contains about 160 families, chiefly Indians.—Also a village in Lima, to the E of the town of that name.—Also a village of Bolivia, in the district of Moxos, on the Mamore.—Also an island between the island of Chiloe and the main, in S lat. 43° 21′, and W long. 73° 49′. It rises to an alt. of 3,200 ft.; and is wooded to its very summit.

PEDRO (Sao), a parish and village of Brazil, in the prov. of Rio-de-Janeiro, 4 m. from Cabo-Frio.

Pop. 400.—Also a village of the prov. of Sergipe, in the district of Propria, on the r. bank of the São-Francisco. It is inhabited by semi-civilized Indians. —Also a village of the prov. of Para, on the r. bank of the Amazon, 24 m. above Castro-d'Avelães.—Also a parish of Brazilian Guiana, on the l. bank of the Rio-Negro.—Also a missionary station on the r. bank of the Marmore, 40 m. below the confluence of the Jacuna. It is said to have formerly had a pop. of 3,000 persons.—Also a river of the prov. of Rio-de-Janeiro, which descends from the Cordelheira dos Aimorés; runs from the N to the SE; receives on the r. the Rio-de-Frade, and on the l. that of the Homen-Deitado; and flows into the r. bank of the Macahi.—Also a small river of the same prov., in the district of Iguaçu, which descends from the Serra-do-Tingua; runs SW; and joins the Rio Guandu, below the confluence of the Rio-de-Santa-Anna.

PEDRO-DO-ACU-DA-TORRE (Sao), a parish of Brazil, in the prov. of Bahia.

PEDRO-D'ALCANTARA, a town of Brazil, in the prov. of Goyaz, on the r. bank of the Tocantins, 80 m. in a direct line SE of the confluence of the Araguaya, and 350 m. NNE of Villa-Boa or Goyaz. —Also a town of the prov. of Minas-Geraes, 20 m. SW of Araxa.—Also a new missionary settlement of the prov. of Bahia.—Also a colony of the prov. of Santa Catharina, founded in 1829.

PEDRO-DE-ARLANZA (San), a town of Spain, in Old Castile, in the prov. and 20 m. S of Burgos, near the r. bank of the Arlanza. Pop. 103.

PEDRO-DEL-ATARCE (San), a town of Spain, in the prov. and 33 m. W of Valladolid and partido of Mota-del-Marques, in a fine plain, on the l. bank of the Rioseco, which is here crossed by a bridge. Pop. 948. It has a parish church and a custom-house, and possesses some linen manufactures.

PEDRO-DE-BATOPILAS (San). See Batopilas.

PEDRO-DE-BERCIANOS (San), a village of Spain, in the prov. and 18 m. SSW of Leon. Pop. 235.

PEDRO-BERNARDO, a town of Spain, in the prov. and 30 m. SSW of Avila and partido of Arenas-de-San-Pedro, near the r. bank of the Tietar. Pop. 2,120. It has a parish church, a school, a custom-house and a public granary, and possesses manufactories of cloth, linen, and wooden-ware, a fulling mill and a dye-work.

PEDRO-DE-BIAPINA (Sao), a town of Brazil, in the prov. of Ceara and district of Viçosa.

PEDRO-DE-CANSOLES (San), a town of Spain, in the prov. and partido and 66 m. NNW of Palencia, near the r. bank of the Carrion. Pop. 106.

PEDRO-DE-CANTAGALLO (Sao). See Cantagallo.

PEDRO-DE-CARDENA (San), a Benedictine convent in Spain, in the prov. and 5 m. E of Burgos, in a pleasant valley. It was founded by Rodrigo-de-Vibar, surnamed the Cid, and contains the tomb of that warrior.

PEDRO-DE-LAS-DUENAS (San), a town of Spain, in the prov. and 30 m. SE of Leon, in a hollow, near the l. bank of the Cea. Pop. 140.

PEDRO-DE-LA-HOS (San), a town of Spain, in the prov. and 19 m. NE of Burgos, partido and 2 m. W of Bribiesca, at the foot of lofty mountains. Pop. 55.

PEDRO-MANRIQUE (San), a town of Spain, in the prov. and 20 m. NE of Soria and partido of Agreda, in a mountainous locality, near the river Linares. Pop. 627. It is very ancient, and has the remains of walls and of a fortress, 4 parish churches, 2 chapels, an hospital, several convents, a custom-house, and a public granary. It has manufactories of coarse woollen fabrics.

PEDRO-MARTYR (San), a village of Gautemala, in the state of that name, near the Michatoyat, which here forms a fine cascade.

PEDRO-MATAPAS (San). See Matapas.

PEDRO-MUNOZ, a town of Spain, in the prov. and 69 m. NE of Cuidad-Real and partido of Alcazar-de-San-Juan, in an extensive plain, at some distance from the r. bank of the Zancara, which in winter is liable to disastrous inundations. Pop. 1,958. It has a parish church, several convents, a custom-house, and a public granary; and possesses manufactories of woollen fabrics and tanneries.

PEDRO-DE-MACEDA-DE-LIMIA (San), a town of Spain, in Galicia, in the prov. and 11 m. E of Orense. Pop. 800.

PEDRO-DE-LA-NAVE (San), a town of Spain, in the prov. and 9 m. NW of Zamora, on the l. bank of the Esla. Pop. 240.

PEDRO-NOLASCO (Sao), a village of Brazil, in the prov. of Para, in Brazilian Guiana, 10 m. above São-Raimundo, near the source of the Urubu, an affluent of the Amazon.

PEDRO-DE-OLLEROS (San), a village of Spain, in the prov. and 6 m. NE of Villafranca, on the summit of a hill, to the l. of the Ancares. Pop. 307. It has manufactories of linen and of coarse woollen fabrics. Slate is quarried in the environs, and to the W are the ruins of a fort.

PEDRO-PALMINCHES (San), a town of Spain, in the prov. and 24 m. NNW of Cuenca, and 5 m. NNW of Canaveras, on a height, on the l. bank of the Guadiela, which is here crossed by a bridge. Pop. 470. It has manufactories of baskets.

PEDRO-D'EL-REI (Sao), or Pocone, a town of Brazil, in the prov. of Mato-Grosso, comarca and 66 m. S of Cuiaba, in an extensive plain, and 3 m. from a lake which becomes dry in summer. The inhabitants employ themselves chiefly in mining and agriculture. The soil is auriferous, but is scantily supplied with water.

PEDRO-DO-RIO-GRANDE (Sao). See Rio-Grande-de-Sao-Pedro.

PEDRO-DEL-ROMERAL (San), a town of Spain, in the prov. and 30 m. S of Santander, partido and 17 m. NW of Villacarriedo, in the midst of the Cantabrian chain. Pop. 2,596. It has a parish church and several convents.

PEDRO-SACATEPEQUEZ (San), a town of Guatemala, in the dep. of Sacatepequez and Chimaltenango, and district of S. Juan. Pop. 3,700.

PEDRO-ET-SAO-PAULO (Sao), a parish of Brazil, in the prov. of Rio-de-Janeiro, on the banks of the small river Lages. See also Parahiba-do-Sul.

PEDRO-SHOALS, or Banc-de-la-Vivora, a sand-bank of the Caribbean sea, a little to the S of Jamaica, the central part of which is in N lat. 17°, and W long. 78° 30′. This bank is 150 m. in length from E to W, and 45 m. in breadth. The cayo of Pedro on the N, of Sola on the E, and some others, rise above the surface of the water.

PEDRO-SOLOMA (San), a town of Guatemala, in the dep. of Totonicapan and Gueguetenango. Pop. 750.

PEDRO-DO-SUL (San), a town of Portugal, in the prov. of Beira, comarca and 14 m. NW of Viseu, on the r. bank of the Vouga, in a fertile locality. Pop. 1,000. It is said to have been founded in 1040, by the Moors.

PEDRO-DE-TORELLO (San), a town of Spain, in Catalonia, in the prov. and 42 m. N of Barcelona, near the l. bank of the Ter.

PEDRO-DE-ZAMUDIA (San), a town of Spain, in the prov. and 38 m. NNW of Zamora. Pop. 226.

PEDRO-ZULA (San), a town of Honduras, 90 m. N of Comayagua.

PEDROCHES, a town of Spain, in Andalusia, in the prov. and 30 m. NE of Cordova and partido of Pozoblanco, on a hill in the midst of a wide valley, formed by the sierras Morena and Almodavar. Pop. 1,444. It is the capital of 7 small villages, and contains 2 convents and an hospital; and possesses manufactories of woollen fabrics and of soap, a tannery, and several spinning-mills.

PEDROGAO GRANDE, a town of Portugal, in the prov. of Estremadura, comarca and 36 m. NE of Thomar, on a mountain plateau, to the r. of the Zezere, which here makes nearly a complete circuit, and is crossed by a bridge remarkable for its height. Pop. 1,857. It has a convent, an hospital, and a Latin-school. The town is of Roman foundation. The locality is remarkable for its salubrity and the longevity of its inhabitants.

PEDROGAO-PEQUINO, a town of Portugal, in the prov. of Alemtejo, in the comarca and 57 m. NNW of Crato, near the l. bank of the Zezere.

PEDROLA, a town of Spain, in the prov. and 23 m. NW of Zaragoza, partido of Almunia, in a plain, near the Aragon canal. Pop. 1,627. It has a ducal palace now much dilapidated, a parish church, a convent, a custom-house, and a public granary.

PEDRONERAS-DEL-CAMPO, a town of Spain, in the prov. and 50 m. SSW of Cuenca. Pop. 3,112. It has a parish-church, a custom-house, and a public granary. It has manufactories of linen, and a considerable trade in wine and saffron.

PEDROSA, a village of Spain, in the prov. and 40 m. NE of Leon, on the r. bank of an affluent of the Esla. Pop. 236.

PEDROSA-DE-DUERO, a village of Spain, in the prov. and 40 m. E of Valladolid. Pop. 500.

PEDROSA-DEL-PRINCIPE, a village of Spain, in the prov. and 24 m. WSW of Burgos, on the l. bank of the Odra. Pop. 500. It has a fulling-mill and dye-works.

PEDROSA-DEL-REY, a village of Spain, in the prov. and 27 m. WSW of Valladolid. Pop. 615.

PEDROSO, a town of Spain, in the prov. and 20 m. SW of Logrono, in the partido and 10 m. SE of Magara, on the r. of the Nagerilla. Pop. 1,097.

PEDROSO (El), a town of Spain, in the prov. and 30 m. NNE of Sevilla, on the r. bank of the Gazona. Pop. 1,569. In the vicinity are important iron mines.

PEEBLES, a parish nearly in the centre of Peebles-shire, 18,210 acres in area. The Tweed, running prevailingly eastward, moves majestically across the centre of the parish, over a distance geographically of 4½, and along its channel of 6 m. It is here 500 ft. above sea-level; and though it has performed only one-third of its course to the sea, it has fallen 1,000 ft., or two-thirds of the aggregate height between its source and its embouchure. The Lyne, Meldon-burn, Manor-water, Eddlestone-water, and three other considerable streamlets intersect the p. The hills are in no instances very high; and, in the aggregate, much lower than those of most other parishes in the co. Upwards of 3,000 acres are in tillage. The pastoral grounds produce a fine herbage, and sustain, besides black cattle, about 8,000 blackfaced and Cheviot sheep. Pop. in 1801, 2,088; in 1831, 2,750; in 1851, 2,673.

The ancient royal burgh of Peebles, the capital of Tweeddale, is situated 6 m. WNW of Innerleithen, 22 m. S of Edinburgh, and 54 m. NNE of Dumfries, on the N bank of the Tweed, and on both banks, but chiefly the E one, of the Eddlestone. It is divided into an old and a new town. All those parts located in the peninsula and along the l. bank of the Eddlestone, and a few houses on the south side of the Tweed, constitute the new town. The old town is of small extent, and consists almost entirely of a single street. Two bridges, one a stone erection of a single arch, and the other a timber bridge for foot passengers, connect the old town and the new. Tweed-bridge, a structure of unknown antiquity, has 5 main arches in the ordinary channel of the river, and 3 smaller ones at the ends to admit the transit of a flood. A little below the town a light, handsome iron-bridge, constructed in 1818 for foot-passengers, spans the Tweed, at a point where it is 108 ft. wide. As the metropolis of an extensive, though thinly peopled, district, it has a considerable depot trade; nor is it destitute of even a decent amount of manufacture. In a suite of waulk-mills on Eddlestone-water waulking and dyeing are an established employment, and the fabricating of plaiding, flannel, and coarse woollen cloth, in all parts of the process from carding onward, is somewhat briskly conducted. Stocking-making employs a few workmen; and the tanning and the working of leather are carried on in Northgate. The manufacture of fine cotton fabrics was introduced from Glasgow at the beginning of the century; but it has greatly declined. The fabrics woven are chiefly cambric handkerchiefs with borders. P., at the passing of the reform act, was disfranchised as a burgh, and thrown into the county; before that date, it united with Selkirk, Linlithgow, and Lanark, in returning a member to parliament. The streets and shops are lighted. The pop. within the royalty, in 1841, was 1,908; in 1851, it was 1,982. P. gives the title of Viscount to the Earl of Wemyss and March.

PEEBLES-SHIRE, or Tweeddale, a county in the south of Scotland, situated between 55° 24′ and 55° 50′ N lat., bounded on the N and NE by Edinburghshire; on the E and SE by Selkirkshire; on the S by Dumfries-shire; and on the SW and W by Lanarkshire. Its form is irregularly triangular. The extreme length, from N to S, is about 30 m.; the extreme breadth, from E to W, is about 22 m. Area, according to Armstrong, 251,320 English acres; according to Findlater, 229,778 acres; and, according to Chalmers, the author of 'Caledonia,' whose data appear to be the most correct, 216,320 acres, or 338 sq. m. The surface lies aggregately higher than that of any other co. in the S of Scotland, and is a congeries of hilly clusters and mountain-ranges, directing their spurs and their terminations to every point of the compass. The lowest ground is in the vale of the Tweed, immediately within the boundary with Selkirkshire, and lies between 400 and 500 ft. above sea-level. The Tweed's entire course, in the segment of a circle, from the extreme SW corner, round by the very centre, on to the E angle of the co., over a distance along the channel of about 41 m., forms a great artery into which, with the exception of the few rills on some parts of the boundaries, all the water-courses pour their liquid accumulations; but this long sweep of central basin is, over a great proportion of its length, a series of mere gorges. On the S the surface is so densely mountainous as utterly to forbid all interior traffic, and barely to allow one wild outlet to Dumfries-shire; on the E it permits communication with the exterior world only by passes near the Tweed; on the north it is penetrable only through three gorges among the hills, and along an equal number of elongated furrows, the narrow glens of southward streams. The mountain watershed for 12 m., partly along the W but chiefly along the SE boundary are the summits of the Hartfell group, the highest Scottish ground S of the Forth and the Clyde, and the nucleus of the great mountain-ranges which extend from sea to sea, and constitutes the southern Highlands of Scotland. Along the SE, or the boundary with Selkirkshire, a lofty

series of heights maintains NE to the Tweed, an elevation but slightly diminished from that of the more alpine district. Among other summits, it sends up Blackhouse-hill to the alt. of 2,360 ft. above sea-level, Scawed-law to the alt. of 2,120, and the wide-spreading obese mountain of Minchmuir to the alt. of 2,285. Even along the NE boundary, the rim of the complicated county basin is so high as to have the summits of Windlestraw and Dundroich respectively 2,295 and 2,100 ft. above sea-level. Along the N the surface subsides, for a considerable way, into little more than hilly swell, and nowhere possesses a loftier summit than Cairn-hill, whose altitude is 1,800 ft. Along the W the highest ground, even where the boundary is a water-shed, lies somewhat in the interior, and, among other heights, has those of Pykestane, Broughton, and Cadon, with elevations above sea-level of respectively 2,100, 1,483, and 2,200 ft.,—and in the valleys, or rather on the streams at the base of these heights, the surface has an elevation of at least 800 ft.

Rivers.] The Tweed is so dominantly *the* river of the co. as to have popularly imposed upon it, since at least the 12th cent. the name of Tweeddale. The only streams which do not pay their tributes to the Tweed, are the Clydesdale, half of the Medwin on the W, and the head-waters of the North Esk and the South Esk on the N, two streams which traverse Edinburghshire, unite at Dalkeith, and enter the frith of Forth at Musselburgh. The other or interior streams, from their having at most only half the length of the co. to traverse, are necessarily all of inconsiderable bulk; and are chiefly on the r. bank of the Tweed, Fruid-water, Talla-water, Glensax-burn, and Quair-water, and, on the l. bank of the Tweed, Biggar, Lyne, Eddlestone, and Leithen waters, with Holms-water, a tributary of the Biggar, and West-water, and Tarth, or East Medwin, water, tributaries of the Lyne. Megget-water, on the S, finds its way to the Tweed, not in the indigenous manner of the other streams, but as a tributary of the Yarrow, and by it of the Ettrick, through Selkirkshire. The only lakes of the co.—additional to St. Mary's-loch, which touches its SE margin for about a mile, and conveys the Megget to the Yarrow—are Water, or Eddlestone-loch in Eddlestone, Gameshope-loch in an uninhabited glen in Tweedsmuir, and a small lake in Linton. The chief medicinal springs are those of Heaven-aqua well in Linton, and the celebrated spa of Innerleithen,—resembling respectively the medicinal wells of Tunbridge and of Harrowgate.

Climate, &c.] Tweeddale, like all hilly countries, is variable in its climate. Owing to its midland situation, it is exposed to rain equally from both seas; it has less aggregate fall of moisture than the sea-board on either the E or the W; it has been known to have, at its centre or at Peebles, only 24·936 inches of rain, when the town of Dumfries had 36·9; and yet, owing to flying clouds and partial falls, it has fewer days free from rain or snow than even the W coast. The medium height of the barom. at Peebles, is in summer 29·2, and in winter 29; the range of the therm. between 81° and 14° below zero.

Geology and soils.] P. is comparatively rich in minerals. Coal abounds in its NE extremity, forms the W termination of the coal-field which extends about 15 m., by a breadth of 7 or 8 m., on both sides of the North Esk to the sea at Musselburgh, and supplies with fuel the whole co., excepting parts which more conveniently obtain it from Lothian. Carboniferous limestone exists plentifully in the coal-district. An endless variety of clays lies over a considerable part of the carboniferous formation, including a very thick bed of fire-clay, like that of Stourbridge, and a small seam of fullers' earth. Alum-slate likewise abounds; and ochres, both red and yellow, with veins of manganese, occur. White freestone, in the same region as all these minerals, is plentiful; and red freestone, of a firmer texture than the white, furnishing good blocks for building, and containing seams whence excellent pavement-flag is obtained, forms a hilly ridge, bisecting the district lengthwise. Greywacke and greywacke slate are the prevailing rocks throughout the great body of the co. The blue clay-slate of Stobo, which occurs in two seams, has long been in esteem. Galena is found in the glen of one of the tributaries of the Quair: and gold was formerly found in the p. of Megget.—The soil of by far the greater part of P. never was, and probably never will be, turned up by the plough; that of the arable grounds comprehends a very extensive variety. Moss, from 4 or 5, to 10 or even 20 ft. deep, is found in almost every hollow and patch of level in the higher parts of the co. A mixture of sand and clay, in various proportions, very generally covers the skirts of most part of the hills, at the highest elevation to which cultivation is extended. A mixture of clay and sand, generally deep and fertile, with often a great proportion of gravelly debris, generally covers the lower and gentle gradients of the declivities, immediately above the troughs or little plains of the streams. A soil prevailingly light and sandy is spread out athwart the haughs.

Agriculture.] The co., as to its configuration and entire physical character, is essentially pastoral. The number of sheep upon its pastures was, in 1814, 112,800; at present only about 110,000; but it is likely to augment to its former amount. Nearly the whole annual produce in live stock is sent to the S of England. Over nearly one-half of the co., constituting the SE district, the Cheviot breed constitutes unmixedly almost the whole stock; over the rest of the area it yields to the predominance of the black-faced breed, or is crossed with the Leicester sheep. The number of black cattle is about 5,000. The Tees-water and the Ayrshire breeds are distributed very nearly in the same way as the two breeds of sheep,—the Tees-water corresponding in territory with the Cheviot, and the Ayrshire with the black-faced. Much attention is given in some districts, particularly in the N, to the dairy.—The smaller farms, chiefly arable, consist of from 40 to 100 acres, and in one or two instances rise to 200. Few of the sheep-farms comprehend less than 600 or 700 acres, and most comprehend from 1,000 to 4,000; but they are in general let out according to their capacity, or appreciated power of supporting so many head of black cattle and scores of sheep.

Manufactures.] Viewed in connection with the extent and resources of the co., and especially with the purity and great aggregate power of its waterfalls, the amount of existing machinery for factorial produce is small. Excepting the exportation of the surplus produce of the sheep, dairy, and arable farms, the whole commerce consists in the importation and retail of the small amount of goods required for local consumpt.—About one-fifth of the compact area of the co., lying on the r. side of the Tweed, is ill-provided with roads, having only footpaths or mere hoof-formed tracts. Other districts, considering that the country is so tumultuously hilly, are well-provided. The road from Edinburgh to Dumfries, by way of Biggar, passes through the NW wing; the better road from Edinburgh to Dumfries, by way of Moffat, traverses the extreme length of the co., down the Dead-burn and the Lyne, and up the higher Tweed. The road between Glasgow and Kelso traverses the extreme breadth of the co. down the Tarth and the Lyne and the lower Tweed. The road from Edinburgh respectively to Peebles and to Innerleithen passes along the dales of the Eddlestone and the Leithen. A line of railway, connecting the co. town with the Edinburgh and Hawick branch of the North British railway, is now in process of execution.

General statistics, &c.] The only town is Peebles, till recently a royal burgh; and the only villages are Innerleithen, Linton, and Carlops. The co. returns a member to parliament. Constituency in 1841, 803; in 1848, 568. Real property, as assessed in 1815, £64,182; in 1842, £74,810. Pop. in 1801, 8,717; in 1811, 9,935; in 1821, 10,046; in 1831, 10,578; in 1841, 10,499; in 1851, 10,738.

History.] The portion of the ancient British *Gadeni* who inhabited the districts on the upper Tweed, are believed to have intermixed less with foreign races, and to have sent down their British blood to their modern successors on the soil in a stream of greater homogeneousness than their brethren either of their own tribe or of any of the tribes S or E of the Grampians. The co. accordingly abounds with the monuments of the Britons; and its topo-

graphical nomenclature is replete with denominations from their significant language. During the 9th cent., the Britons of Tweeddale, in common with those of Strathclyde, felt severe pressures from the Scoto-Irish on the W, and the Saxons on the E, and numerously emigrated to Wales. The districts on the upper Tweed were not formed into a shire or sheriffdom till near the close of the 13th cent. David I. and Malcolm IV. respectively call the co. Tueddal and Tuededale, and seem to have had no notion of designating it as 'a shire.' But owing to the existence of two royal castles, the one at Peebles, and the other at Traquair, there were, in the reigns immediately succeeding Malcolm IV., two sheriffdoms, named, not from Tweeddale, but from the seats of the royal castles. Before the epoch of Edward I.'s ordonance settling the government of Scotland, in 1305, the sheriffdom of P. had ingulfed that of Traquair, and extended over all Tweeddale. —Tweeddale gives the title of Marquis to the noble family of Hay, created Baron Hay of Yester in 1488, Earl of Tweeddale in 1646, and Marquis of Tweeddale, Earl of Gifford, and Viscount of Walden, in 1694.

PEEKS KILL, a village of Westchester co., in the state of New York, U. S., 46 m. N of New York, on the E side of the Hudson. Pop. 2,000.

PEEL, a port on the W coast of the isle of Man, 10 m. NW of Douglas. Pop. 2,200, chiefly fishers. There are the remains of a fine old castle here. See article Isle of Man.

PEEL, a county of Western Australia, bounded on the N by the co. of Minto; on the S by that of Hay; and on the W by the co. of Wicklow. Its boundaries on the E are still undefined. In its NE corner is Lake Kondeniny, a large sheet of good water. Towards the W confines are Peel plains.—Also an extensive inlet in the co. of Murray, separated from the ocean by a long narrow tract of land, at the extremity of which is the town of Peel, and terminating in the N in a narrow channel. It is 23 m. in length from N to S, and swells at the upper half into a breadth of about 6 m. It receives Hervey, Murray, Currie, and Serpentine rivers. The town of P. is about 40 m. SSW of Perth.—Also a harbour in the same co., in Warboro sound, about 20 m. NNE of Peel inlet.—Also an island of New South Wales, in Moreton bay, in the co. of Stanley, 6 m. SW of Amity point.—Also a parish in the co. of Roxburgh, to the W of Eskdale.

PEEL, an extensive marsh of Belgium, in the W part of the prov. of N. Brabant, and NE part of that of Limburg, on the l. bank of the Meuse, comprising an area extending from Grave, on the NNW to Venlo on the SSE, of about 30 m. in length, and varying from 3 m. to 9 m. in breadth.

PEEL, an island of the N. Pacific, in the group of the Arzobispo or Bonin islands, of which it is the largest.

PEEL, a town of Upper Canada, in the Wellington district. Pop. about 1,000.

PEEL, a river of British North America, which has its sources in the W side of the Rocky mountains, in about N lat. 65°, and which joins the Mackenzie river, on the l. bank, about 100 m. above the entrance of that river into the Arctic ocean. Its intermediate course is still undefined.

PEEL, or Nammoy, a river of New South Wales, supposed to be a head-stream of the Darling, which rises in about S lat. 31° 40′, W long. 151° 10′, and flows first N, and then NW, to about the parallel of 29° 40′, when it spreads its waters into an extensive marsh. Its course beyond this point is not known. Its principal affluents are the Conadilly and Turrabeile on the l.; and the Cockburn and the Gwychir on the r.

PEEL-PLAINS, an extensive tract in New South Wales, in the district of Darling-Downs, to the NNE of the Condamine river, at an alt. of 1,800 ft. above sea-level.

PEEL-RANGE, or Cocoparu, a chain of mountains in New South Wales, in the district of Lachlan, and to the S of the river of that name. It runs from N to S, between 33° 30′ and 34° 7′ S lat., and in about 146° 15′ E long., and between Mount Flinders on the N, to Mounts Caley and Brogden in the S.

PEENE, a river which has its source in the grand-duchy of Mecklenburg-Schwerin, duchy of Mecklenburg-Güstrow, and bail. of Malchin; traverses Lakes Malchin and Kummerow; forms for some distance the boundary-line of the Prussian prov. of Pomerania; enters that prov.; separates the regs. of Stettin and Stralsund; joins the W arm of the Oder, about 3 m. NW of its exit from the Little Haff, and to which it thence gives its name; traverses Acher water; and discharges itself into the Baltic, to the E of Der Bodden bay. Its principal affluents are the Trebel and Tollen. Malchin, Demmin, Anclam, and Wolgast, are the chief towns on its banks.

PEENEMUNDE, a village of Prussia, in the prov. of Pomerania, reg. and 60 m. NW of Stettin, in the island and 18 m. NNW of Usedom, and circle of Usedom-Wollin, on the r. bank of the Peene, about 2 m. above its entrance into the Baltic. Pop. 291. It has a tolerable harbour, and is defended by a fort.

PEEN-KWAN, a district and town of China, in the prov. of Shan-se, and div. of Ning-woo-fu.

PEE-PEE, a township of Pike co., in the state of Ohio. U. S. Pop. in 1840, 919.

PEER, a department, commune, and town of Belgium, in the prov. of Limburg, and arrond. of Hasselt. Pop. of dep. 1,522. The town is 15 m. NNE of Hasselt, in the midst of extensive wastes, on the Dommel. Pop. 750.

PEER, Pe'r, or Ptyiru, a march or district of Transylvania, in the W part of the comitat of Middle Szolnok.

PEEREBOOM, a commune of Belgium, in the prov. of W. Flanders, and dep. of Cortemarcq. Pop. 125.—Also a commune in the prov. of E. Flanders, and dep. of Moerbeke. Pop. 160.

PEERSTON-JAGLIN, a township in Featherstone p., in Yorkshire, 2¾ m. SW of Pontefract. Area 984 acres. Pop. in 1851, 269.

PEGALAJAR, a town of Spain, in Andalusia, in the prov. and 14 m. SE of Jaen, and partido of Mancha-Real, on the slope of a hill near the r. bank of the Rio-de-Jaen. Pop. 2,516. It has a parish-church, a school, and a public granary, and possesses numerous oil-mills.

PEGAU, a town of Saxony, capital of a district, in the circle and 15 m. S of Leipzig, on the l. bank of the White Elster. Pop. 3,360. It has manufactories of linen and shoes.

PEGGAU. See Peckau.

PEGNITZ, a river of Bavaria, which has its source in the circle of Upper Franconia, about 8 m. SSW of Bayreuth, and near that of the Red Main; passes a town of the same name; enters the circle of Middle Franconia, in which it waters Velden, Lauf, and Nuremberg; and, after a course from S to W of about 33 m., joins the Rednitz, on the r. bank, at Furth, whence the united streams take the name of Regnitz. This river gave its name in 1808 to a circle now comprised in those of Upper and Middle Franconia.—Also a town in the circle of Upper Franconia, 14 m. S of Bayreuth, and 30 m. NE of Nuremberg, on the river of the same name, near its source. Pop. 792. It is enclosed by walls, and has a suburb and 2 churches. In its vicinity is an iron-mine. The presidial of P. contains 20,000 inhabitants.

PEGNON-DE-VELEZ. See Penon-de-Velez.

PEGO, a judicial partido and town of Spain, in Valencia, in the prov. of Alicante. The partido comprises 20 pueblos. The town is 26 m. ESE of San-Felipe de-Jativa, in a plain. It is well-built, with broad streets, and has a parish-church, a cus-

tom-house, a convent, an hospital, a public granary and a fine fountain. It possesses several oil and corn-mills.

PEGSWORTH, a township in Borhall p., in Northumberland, 1½ m. ENE of Morpeth. Area 1,267 acres. Pop. 215.

PEGU, or Begu, an ancient kingdom of Asia, recently forming the S portion of the Birman empire, but annexed in June 1853 to the SE frontier of the British dominions. The N frontier-line has been fixed so as to comprise within the British frontier the cities of Miaday, or Miede, on the Irawaddi or Irawady river, in N lat. 19° 26′, and Tunghu or Tongo, on the Setang river, in 19° S lat. On the E it is separated by the Salwin or Saluaen river from the British prov. of Tenasserim; on the S it has the gulf of Martaban and the Indian ocean; and on the W, the bay of Bengal and the British prov. of Aracan. Its breadth towards the N frontier is about 180 m., but gradually decreases towards the S. Its length from N to S is about 230 m. It is generally a flat country, but is intersected by several ranges of hills, which attain a considerable elevation on the Aracan frontier. The S part of the country presents a singular interlacement of streams, forming the delta of the great rivers Irawaddi and Saluaen. The soil is fertile, especially in rice; but the country has long been comparatively depopulated, and vast tracts are covered with teak-forests or jungle. Iron, tin, and lead, are known to exist within the country. The natives are a lively, active race, of low stature. They are Bhuddists, and appear to be descended from a common stock with the Siamese. The physical features, and the political history of this region up to its incorporation with Birmah, are sketched in the article Birman Empire.

Pegu, the capital of the above state, is situated on a river of the same name, an affluent of the Irawaddi, 75 m. N of Rangoon, in N lat. 17° 40′, E long. 96° 12′. The river empties itself into the Rangoon river by a wide mouth, but soon narrows to 200 yds., and near the city to as many feet. Before its capture, in 1757, by the Birmese monarch Alompra, it was a fortified city of a quadrangular form, each side measuring 1½ m. in extent, surrounded by a rampart 35 ft. thick, composed of bricks cemented with mud, and a ditch 60 yds. in breadth. At present it consists of only two streets, one running parallel to the river, and the other leading to a great pagoda built on the summit of an apparently artificial mound, composed of successive terraces, like the religious structures of the ancient Mexicans. The surrounding country exhibits a uniform level expanse.

Recent history.] The annexation of P. to our Indian empire, the most recent transaction of importance in our Indian annals, originated in two merchant-captains having become involved in litigation at Rangoon, and having their vessels detained by the Birmese authorities. Redress was, in the first instance, demanded from the governor of Rangoon, who met the application with a contemptuous refusal to listen to it. The court of Ava having approved of the behaviour of its officer, a large British force was despatched to the mouths of the Irawaddi; Rangoon and Martaban were captured, but without appearing to produce any impression on the Birmese. A force of 10,000 men, ascending the Irawaddi, then took possession of Prome. Meanwhile the Birmese monarch was dethroned by his brother, and an envoy was sent from Ava to sue for peace. The Birman envoy, confessing their inability to resist the power of the British government, announced his willingness to sign a treaty in accordance with the proclamation of the governor-general, by which the prov. of P. was annexed to the British dominions in the East, objecting only to the frontier being placed at Miaday. The governor-general in council consented to withdraw the frontier from Miaday, and place it, in strict conformity to the most literal wording of the proclamation, immediately to the N of Prome and Tunghu, cities which have been described at all times as within the northern limits of P. in the official records of transactions between the states; But when this concession was offered, the Birman envoy, wholly receding from his previous declarations, refused to assent to any treaty by which a cession of territory should be made. Thereupon negociations were at once broken off; the frontier of the British territories was finally fixed to the NW of Miaday and Tunghu, and the envoy was directed to quit the camp. Further proceedings were rendered unnecessary by the court of Ava expressing its desire for the cessation of war. The king announced that "orders had been issued to the governors of districts not to allow the Birmese troops to attack the territories of Miaday and Tunghu, in which the British government had placed its garrisons." Furthermore the king set at liberty the British subjects who had been carried prisoners to Ava; and expressed his wish that "the merchants and people of both countries should be allowed, in accordance with former friendship, to pass up and down the river for the purpose of trading." Accepting these pacific declarations and acts of the king as substantial proof of his acquiescence in the proposed conditions of peace, although a formal treaty had not been concluded, the governor-general in council issued a notification permitting the raising of the river blockade, consenting to the renewal of former intercourse with Ava, and proclaiming the restoration of peace. "The army of Ava," says the notification, "will no longer be maintained on a war establishment. At the same time a force will be permanently retained in P. amply adequate for its defence and fully prepared for the event of war." P. is to Birmah very much what the delta of the Ganges is to Bengal: the holders of it command the whole maritime amenities of the country. It seems likely, therefore, that the annexation of P. will only prove the precursor to fresh collisions and the final annexation of the entire Birmese empire. In the meantime it is contended by some that the annexation of P. has not strengthened our SE frontier; that in addition to administrative difficulties with the prov. itself, the frontier line of the annexed territory is far from tenable From the Aracan mountains to the Irawaddi at Prome, a distance of about 30 m., the country is covered with dense jungle, affording admirable cover for the predatory incursions of a native enemy. From Prome to Tungu, a distance of about 100 m., the country is hilly and jungly; just such a tract as would perplex the minds of our British officers and embarrass the movements of our troops, while the Birmese would find it favourable to their more desultory operations. "Of the country beyond Tunghu to the eastward," says a high official authority, "I have seen no particular description; but that it should present any insurmountable obstacle to a Burman force I conceive to be improbable from what I know of the routes by which the Bundoolah's army advanced in 1824 to Ramroo, and returned at the most inclement season to the Irrawaddy. Supposing, therefore, our troops to be cantoned upon the contemplated frontier, one division at Tangoo and the other at Prome, with such intermediate posts as the nature of the country might admit of, are we warranted in supposing that such a distribution of our force would prove so imposing as to deter the Burmese from attempting to pass the boundary line to plunder our villages to the southward? Deprived as the monarch and his court would be of their revenues, and cut off, in common with their subjects, from many articles, not only of luxury, but of ordinary consumption, privation would combine with the hope of plunder to dispose the rulers to determine upon a system of marauding warfare, which, under such circumstances, the people of the upper provinces would furnish the means of carrying on. * * That predatory bands of Burmese could, in a country covered with jungle, pass between the Aracan mountains and the Irrawaddy, or between Prome and Tangoo, and probably past the latter place by a detour to the east, without their movement being detected before they reached the villages or other object of their attack, seems to me almost certain. That it would be very seldom possible effectually to intercept their retreat appears to me absolutely certain." On the other hand, it is clear that the present opportunity for securing the free navigation of the Irawaddi and opening up a commercial intercourse with Western China ought not to be lost sight of. It is well known that a considerable demand for some articles of British manufacture, especially woollens, exists in the lofty table-lands which skirt the N frontier of Birmah. "Hitherto, however, the Russians have monopolized the trade; and perhaps there cannot be a better proof of the natural capabilities of the market than the fact that it can be supplied at a profit from a centre so remote as the Muscovite entrepot of Kiakhta, and by traders who have to cross the deserts of Mongolia. Formerly, indeed, British cloths were sent to that place to be exchanged for the teas supplied by the Chinese; but Russia soon established manufactures of her own, in order to render her merchants independent of our wares; and now, with a trifling exception, the latter do not enter either Thibet or Western China. That exception, however, trifling though it be, has a material bearing on the question before us. The town of Bhanmo—situated on the river Irawaddy at about the 24th degree of latitude, and distant a few stages only [40 m.] from the Chinese frontier—is the entrepot from which a small quantity of British woollens yearly find their way into the celestial empire. [See article Bhanmo.] Here, then, is a market ready-made to our hands; and a traffic which can remunerate the Burmese retailers must be capable of being made still more profitable to the merchants who supply the goods in the first instance. Moreover, if Russia can ply a brisk overland trade with China on the confines of Siberia, with hundreds of miles of desert between her market and her consumers—and that so advantageously that she has found it politic to establish new staples of industry in order to meet the demand—we can scarcely be wrong in attaching considerable value to the possession of an entrepot not forty miles distant from the country to be supplied, and within eight or ten days' journey from the bay of

Bengal by the country-boats." [*Times.*] The distance from Rangoon at the mouth of the river, to Ava the capital of the Birman empire, is about 500 m., and the ascent of the river only occupies 10 days, even during the rainy season, when the descending current is most powerful, while the descent is often accomplished in four days. About 6 m. to the NE of Ava is Miaday, one of the two entrepots of trade between Birmah and China; and Bhanmo, the other entrepot, is about 120 m higher up the river.

PEGWELL, a hamlet of Kent, at the head of a fine bay about 1 m. W of Ramsgate.

PE-HING, a town of China, of the third rank, in the prov. of Shan-tung, 48 m. NE of Si-nan.

PE-HO, a town of China, of the third rank, in the prov. of Shen-si, on the r. bank of the Han-kiang.

PEI, a district and town of China, in the prov. of Keang-su, and div. of Seu-chu-fu, in N lat. 34° 49′, E long. 117° 14′.

PEI-CHU, a district and town of China, in the prov. of Seu-chu-fu, in N lat. 34° 30′, and E long. 118° 20′.

PEIGAMBER, a town of Persia, in the prov. of Irak-Ajemi, 90 m. WSW of Casbin.

PEIGNES (Les), several islets in the Grecian archipelago, situated near the SE coast of the island of Milo, in N lat. 36° 38′.

PEIH, a district and town of China, in the prov. of Shan-tung, and div. of E-chu-fu, in N lat. 35° 18′, and E long. 118° 5′.

PEI-HO, or Pe-Ho, a considerable river of China, in the prov. of Pe-che-li. It rises on the borders of Tartary, and in its course southwards passes within a few miles of the capital, maintaining its communication with the Great canal and with the Yellow sea, into which the P. discharges itself in N lat. 38° 33′. Most of the country through which it flows is almost entirely a dead flat, so that there is scarcely any sensible rise as far as Pekin, and the tide is felt for 400 m. up; but the river is unfit for the ascent of large vessels.

PEIH-SHAN, a district and town of China, in the prov. of Sze-chuen, and div. of Chun-king-fu, in N lat. 29° 45′, E long. 106° 18′.

PEIH-TSEE-HEEN, a district and town of China, in the prov. of Kwei-chu, and div. of Ta-ting-fu, 102 m. WNW of Kwei-yang-fu, in N lat. 27° 12′, and E long. 105° 13′.

PEIH-YANG, a district and town of China, in the prov. of Ho-nan, and div. of Nan-yang-fu, in N lat. 32° 48′ 40″, and E long. 113° 22′ 30″.

PEIL, a river of Prussian Silesia, which rises 6 m. S of Reichenbach, and falls into the Weistritz, on the r. bank, above Schweidnitz, after a NW course of 26 m.

PEILAU, a village of Prussian Silesia, in the reg. of Breslau, 4 m. SE of Reichenbach, on the Peil. Pop. 1,700. Part of these are a colony of Moravian brethren, employed as usual in the manufacture of cotton and woollen goods.

PEILENSTEIN, a village of Styria, 18 m. SE of Cilly, near the l. bank of an affluent of the Sotla. Pop. 300.

PEILHAC, a town of France, in the dep. of Morbihan, 26 m. E of Vannes. Pop. 1,750.

PEILSTEIN, a town of the archd. of Austria, 9 m. N of Limbach.

PEINA, a town of Hanover, in the principality and 18 m. NE of Hildesheim, on the r. bank of the river Fuse. It is surrounded with walls, and is defended by a castle. Pop. 3,000, chiefly Lutherans, who are employed partly in spinning yarn and weaving coarse linens, and partly in the manufacture of tobacco. Large cattle fairs are held here.

PEINGHEE, or Pying-ghy, a town of the Birman empire, situated on the Irawaddi river, in N lat. 18° 31′, 25 m. SSW of Prome. In the vicinity much teak timber is procured, which is conveyed to Rangoon, and thence exported to the British territories. This teak is not reckoned so close-grained as that which grows on the coast of Malabar, but it can be sold much cheaper at Calcutta and Madras. Ships of 400 tons burden have been built at this town, although at the distance of 200 m. from the sea.

PEIPIN, a village of France, in the dep. of Bouches-du-Rhone, cant. and 3 m. NNW of Roquevaire. Pop. 920.

PEIPUS (Lake), or Tschudskoe Osero, a large lake of European Russia, lying between the governments of Petersburg, Livonia, Esthonia, and Pskov. It is about 80 m. in length, and 35 m. broad; and communicates by a strait with the lake of Pskov, and with the gulf of Finland, by the river Narva. In its S part it presents several small islands. The rivers Embach and Kosa flow into it on the SW; the Tsherma on the E; and the Jaetsha on the SE. It abounds in fish, with which the markets of Petersburg are supplied. Its shores are low and marshy, and without any visible rocky formation. In some places it is 10 fath. deep; but in general it is much shallower.

PEIRAH. See Perak.

PEIRATTE (La), a village of France, in the dep. of Deux-Sevres, 6 m. SW of Thenezay. Pop. 1,000.

PEIRE (Saint). See Sampeyre.

PEISAT, or Paysac, a town of France, in the dep. of Dordogne, cant. and 3 m. E of La-Nouaille, near the r. bank of the Haute-Vezere. Pop. 400.

PEISENBERG, a mountain of Bavaria, near the Tegernsee. Alt. 5,676 ft. above sea-level.

PEISERN, or Pyzdry, a town of Poland, 34 m. NNW of Kalisch, on the r. bank of the Wartha. Pop. 2,000.

PEISEY, a village of the Sardinian states, in the Tarentaise, 12 m. NE of Moutiers. Pop. 1,200.

PEISKRETSHAM, a village of Prussian Silesia, in the reg. and 36 m. SE of Oppeln. Pop. 1,900.

PEISO, a lake of Hungary, in the palatinate of Presburg, the capital of which was formerly called from it, Peissburg. Part of it is now dried up, the rest forms extensive marshes planted with alders. It is distinct from the lake of Neusiedel, which lies on the other side of the Danube.

PEISSANT, a department and commune of Belgium, in the prov. of Hainault and arrond. of Charleroi. Pop. 719.

PEITAPUR, a town of Hindostan, in the prov. of Gujerat, district and 21 m. NNE of Ahmedabad, near the r. bank of the Sabermutty.

PEITELSSTEIN, or Potestango, a village and castle of the Tyrol, in the circle of the Pusterthal, 3 m. NW of Cortina, and 14 m. SSE of Prunecken.

PEITI. See Baidi.

PEITZ, or Peiz, a town of Prussia, in the prov. of Brandenburg, regency and 36 m. S of Frankfort, circle and 9 m. N of Kottbus, on the r. bank of the Matx, an affluent of the Spree, in a marshy locality. Pop. 2,100. It has a blast furnace, manufactories of cloth and linen, and several spinning-mills.

PEIXA-DE-COURO, a river of Brazil, in the prov. of Mato-Grosso.

PEIXE, a lake of Brazil, in the prov. of São-Pedro-do-Rio-Grande and district of Mostardas, between the lake dos-Patos and the Atlantic, with which it is connected by a short channel. It derives its name from the fish with which it abounds.—Also a river of the prov. of Mato-Grosso, which has its source in the Cordilheira-Parecis; runs N; and throws itself into the Tapajaz, on the r. bank.—Also a river of the same prov., formed by the junction of the Raizame and Tacoaral, and which flows into the Araguaia, near the confluence of the Rio-das-Mortes.

—Also a river which has its source in the Serra-de-Luiz-Gomes, in the prov. of Parahiba; passes Villanova-de-Souza; enters the prov. of Rio-Grande-do-Norte, and joins the Piranhas on the l. bank.—Also a river of the prov. of Goyaz, which has its source in the mountains, near Meia-Ponte; runs from SE to N; and throws itself into the l. bank of the Tesouras, near Santa-Ritta.—Also a river of the same prov., which waters the comarca of Santa Cruz, and joins the Corumba, on the r. bank, below the confluence of the São-Bartholomeo.—Also a river of the same comarca, which runs NW, and joins the Rio-das-Almas.—Also a river of the prov. of Minas Geraes, in the comarca of Ouro-Preto, an affluent of the Guallacho.—Also a river of the same prov., in the comarca of Campanha, which, with the Angai and Capivari, flows into the Rio-Verde.—Also a river of the same prov., a tributary of the Sapucahi.—Also a river of the same prov., in the comarca of Serro, which flows into the Rio-Antonio, an affluent of the Rio-Doce.

PEIXO-BRAZO (Serra do), a mountain-chain of Brazil, in the prov. of Minas Geraes and comarca of Rio-de-Jequitinhonha, to the S of Januaria.

PEIZA-DA-REGOA, a village of Portugal, in the prov. of Beira, comarca and 7 m. NNW of Lamego, on the r. bank of the Douro. Pop. 1,625. It has a fine quay, and extensive cellars for the reception of the wines of the environs.

PEJO, a village of the Tyrol, in the circle and 32 m. WNW of Trent, and 25 m. S of Glarus, near the source of the Noce, in the Val-di-Sol. It has a mineral spring.

PEKATONICA, a river which has its source in Iowa co., in the state of Wisconsin; runs S and E; and joins Rock river, in Illinois, 6 m. below the N boundary of the state. Its principal affluent is Sugar creek.—Also a village of Winnebago co., in the state of Illinois, 220 m. N of Springfield, at the junction of Pekatonica and Rock rivers.

PEKALONGAN. See Paccalungan.

PEKCHA, a river of Russia, in the gov. of Vladimir, which has its source in the district and 15 m. W of Youriev-Polskoi; flows thence into that of Pokrov; and throws itself into the Kliazma, on the l. bank, 21 m. E of Pokrov, and after a course in a generally S direction of 60 m.

PE-KEANG, or Tchhing-Keang, a river of China, in the prov. of Kwang-tung, which has its source in the N part of the prov., on the S side of the Nan-ling mountains; runs first W; passes the towns of Nan-heung and Chao-cheu; then flows S and under the walls of Canton joins the Ta-keung, on the l. bank, to form the Tchu-keang or Tigris. It has a total course of about 240 m.

PEKEL-AA, a village of Holland, in the prov. and 22 m. SE of Groningen, and 4 m. SW of Winschoten, in a marshy locality, near a small river of the same name.

PEKEL-AA (Nieuwe), a village of Holland, in the prov. and 21 m. SE of Groningen, and 8 m. SW of Winschoten, on the l. bank of the Pekel-Aa. Pop. 2,900.

PEKEL-AA (Oude), a village of Holland, in the prov. and 22 m. SE of Groningen, and 5 m. SW of Winschoten, on the r. bank of the Pekel-Aa. Pop. 3,000.

PE-KHENG, a name given by the Aborigines to Southern Camboja, in Annam.

PEKIN, a village of Tazewell co., in the state of Illinois, U. S., 62 m. N of Springfield, on the E side of Illinois river. Pop. in 1840, 900.

PEKING, Pekin, or Peh-king, [*i. e.* 'the Northern capital,'] the modern capital, since 1471, of the empire of China, in N lat. 39° 54′ 13″, and E long. 116° 28′ 54″, 60 m. from the Great wall, and 100 m. from the sea; on a sandy plain, between the river Pei-ho and its affluent the Hoen-ho. By Marco Polo, and other early travellers in the 13th and 14th cents., it is mentioned under the name of Cambalu and as a city, which the Tartar monarchs had recently built adjacent to the Chinese city of Tay-du. The distinction between the Chinese and Tartar cities is still maintained. The latter forms the main body of P., being surrounded by the principal wall which encloses an area of 14 sq. m. It is called the *Nuy-ching*, or *Nei-tching*, or 'Inner city,' and contains the six supreme tribunals of the empire, the public granaries, the palace of the Russian embassy, and the 'forbidden enclosure,' or palace of the emperor. The palace-division forms the innermost of the three divisions. The northern part of P. also includes a college for the cultivation of the Chinese and Manchu languages, and one for the study of Tibetian, a Mahommedan mosque, a Russian and a Roman Catholic church, and numerous Buddhist temples, of which that called the White pagoda is the most remarkable. The Chinese city which lies to the S of the Tartar division, and is distinguished as the *Wai-tching* or 'Outer city,' has a wall of its own, which, however, is in many parts falling into ruin, but which encloses an area of about 9 sq. m. The suburbs are also very large. P., like most other Chinese cities, is laid out with mathematical precision. A street 4 m. long, and 120 ft. broad, reaches from one gate to the other of the Chinese section, and is crossed by another of similar length and breadth. At the point where these streets meet are lofty ornamental arches. The other streets leading from these two main lines of thoroughfare are narrow; many of them can only be considered as lanes. They are all unpaved, and covered with sand and dust, but are kept clean, and frequently watered. Each family has a large earthen jar into which all filth is thrown, and carefully preserved for manure: this practice greatly assists in maintaining the external cleanliness of Chinese cities. The principal streets consist almost entirely of rows of shops, which are painted, gilded, and adorned with much magnificence: sky-blue, and green mixed with gold, are the prevailing colours upon the walls. The goods are not only displayed within the shops, but are also exposed in front of the houses. Wooden pillars, whose tops are much higher than the roofs of the houses, bearing inscriptions in gilded characters, which state the nature of the goods to be sold, and assure the buyer of not being cheated, are placed before the shops; and the better to attract notice, these posts are generally hung with various coloured flags, streamers, and ribbons, exhibiting the appearance of a line of shipping, dressed in all the different colours used in Europe. Lanterns of horn, muslin, silk, or paper, and every variety of form, are also arranged before the doors. The regular form of the streets, the flat red-tiled roofs, and the various ensigns with which they are decorated, give P. very much the appearance of a large encampment. The streets are peculiarly crowded, in consequence of the number of trades that are carried on in the open air; the moveable workshops of tinkers and barbers, cobblers and blacksmiths, the tents and booths where tea, fruit, rice, and other eatables, are exposed to sale, the wares and merchandise arrayed before the doors, the troops of dromedaries laden with coals from Tartary, the wheelbarrows and hand-carts stuffed with vegetables, leave in the broadest street only a very narrow space unoccupied. Room is scarcely allowed for the frequent processions of men in office, with their numerous retinues and strange insignia, or for those pompous trains which pass through on occa-

sions of funeral and marriage; and over and above all the uproar and the confused voices of the multitude buying and selling their various commodities, rise the cries of jugglers, conjurors, fortune-tellers, mountebanks, quack-doctors, comedians, and musicians. Women are frequently seen among the crowd, either walking, or riding on horses, which they bestride like men; but they are all Tartar females whose manners alone admit of such exposure; Chinese ladies are more rigidly confined to the house in P., than in any other part of the empire. Hired carriages and sedan chairs are in common use. See article CHINA.

P. notwithstanding the number and splendour of its shops has few manufactures, and is not distinguished by any of peculiar excellence, unless perhaps that of printing books. The duties levied on imports at the gates of P. exceed the whole amount of duties raised in the western provs.; but the exports are only cut glass, felt, pictures, books, and a few trifling articles. The maritime emporium of P. is Teen-tsin near the mouth of the Pei-ho, in N lat. 39° 10′. The circulating medium in P. chiefly consists of paper notes issued by private banking-establishments.

P., according to Chinese ideas, is strongly fortified. It is surrounded with walls about 30 ft. high, and 20 ft. thick at their base; but their breadth on the top, within the parapets, does not exceed 12 ft., so that they have a considerable slope, especially on the inside, and rise by stages like pyramids. It is also surrounded with a ditch, and defended by square towers placed at the interval of 70 yds., or a bowshot. Each tower projects about 40 ft. from the line of the wall, and has a small guard-house on its summit. The body of the wall is composed of earth dug up from the ditch; but it is faced on each side with a mixture of brick and stone. Lord Macartney's embassy saw no cannon mounted on the walls or towers; but in an elevated fortification which surrounds the gates, rising to the height of several stories, there were representations of cannon, which at a distance somewhat resemble the sham ports in a ship of war.—Of the ornamental buildings of P., the most conspicuous are those commonly called triumphal arches, placed at the intersection of the streets, but which appear really to be monuments erected to the memory of distinguished men, particularly those who have attained to any extraordinary measure of longevity. They usually consist of a large central gateway, with a smaller one on each side, covered with narrow roofs; and, like the houses, are splendidly gilded, varnished, and painted.—The imperial palace is an enclosure within the city, formed by what is called the Yellow wall, from the colour of a small roof of varnished tiles which rises above the red brick of which the wall itself is built. The enclosing wall is 30 ft. high, and 12 ft. thick. The space contained within it, about 1 m. in length, and ¾ m. in breadth, is artificially formed into an imitation of rude and romantic nature. A number of lakes have been excavated, the earth dug up from which has been formed into eminences, while the lakes are studded with small islands adorned with trees and fanciful structures. The edifices destined for the accommodation of the emperor are placed on hills of different height; the loftiest summits being crowned with pavilions, kiosks, and other buildings, destined for pleasure and refreshment. The grand entrance to the palace is by the S gate, the central avenue of which is reserved exclusively for the emperor's use. Behind the gardens of this palace is a building said to contain a library of immense extent. The imperial palace of Yuen-ming, situated without the city, presents the same scene on a more extended scale. The grounds here are at least 10 m. in diameter, and comprise an extent of about 60,000 acres. All the great features of Nature,—lakes, mountains, forests, rocks, and rivers,—are here grouped in a bold and irregular manner. This palace contains 30 distinct places of residence for the emperor, each, with all the necessary appendages, forming a village of no inconsiderable magnitude. The buildings, however, are more remarkable for number than magnificence. The very dwelling of the emperor, and the grand hall-of-audience, when divested of their colours and gilding, are little superior to the barns of a substantial English farmer. The apartments are as deficient in proportion, as their construction is void of every rule and principle. The length of the audience-hall is 110 ft., breadth 42 ft., and height 20 ft.; the ceiling is painted with circles, squares, and polygons, whimsically disposed, and loaded with a great variety of colours. The Tae-ho-mun, or 'Hall of great harmony,' attached to the palace in the Tartar division of the city, is an apartment of about 130 ft. in length, and nearly square.

Population.] According to the best official information which Macartney could procure, P. contains a pop. of 3,000,000. This is a denser pop. than its magnitude suggests, especially when we consider that no house consists of above one story, and that much of the space within the walls is occupied by gardens and enclosures; but the lower ranks in China crowd into a very narrow space, several generations often living under one roof. At the same time it is highly probable that the above number, like some others reported by the mandarins to the ambassador, is very considerably exaggerated.—Klaproth estimates it at 1,300,000. Gutzlaff is of opinion that if the suburbs are included, the pop. may amount to 2,000,000, in which is comprised a stationary garrison of about 100,000 Manchus and their families. This pop. is mainly dependent on the supplies sent annually from the fertile low lands on both sides of the Yang-tse as far as the Yellow river on the N, and the bay of Hang-chow on the S, either by the Grand canal, or by sea from the port of Shang-hai, and up the Pei-ho. The city is chiefly supplied with water by the river Yuh, which rises in the Yuh-tseuen mountains to the NW of P., and, entering the Tartar city, divides into branches, after which it passes through the Chinese city, and then falls into the Pei-ho. The highest class of inhabitants is composed of the officers of the Manchu or Tartar troops, next to them rank the wealthy merchants.

P., under the name of Khan-Valig, was in 1314 made an archbishopric by Pope Clement V. The first bishop, John-de-Montecorvino, who was sent into Asia in 1288, spent six years in erecting a church in P., and baptized above 6,000 persons. In 1600, Christianity was reintroduced into P. by Matthew Ricci. In 1810 there were 11 Catholic missionaries in P., but the bishop of the diocese resided at Macao. The Russian government for more than a century and a quarter has had at P. a religious and scientific mission, not, as the translator of Timkowski's narrative says, "merely tolerated or connived at, but openly existing under the sanction of a formal treaty." Timkowski, referring to this treaty, thus commences the account of his journey: "On the 14th of June 1728, a treaty of peace was concluded between Count Vladislawitsch, Russian ambassador extraordinary, and the ministers of China. The 5th article is in the following terms: 'The Russians shall henceforth occupy at P. the kouan or court which they now inhabit. According to the desire of the Russian ambassador, a church shall be built, with the assistance of the Chinese government. The priest who now resides there, and the three others

who are expected, shall live in the kouan abovementioned. These three priests shall be attached to the same church, and receive the same provisions as the present priest. The Russians shall be permitted to worship their God according to the rites of their religion. Four young students, and two of a more advanced age, acquainted with the Russian and Latin languages, shall also be received into this house, the ambassador wishing to leave them at P. to learn the language of the country. They shall be maintained at the expense of the emperor, and shall be at liberty to return to their own country as soon as they have finished their studies.' According to this treaty, the Russian mission, composed of 6 ecclesiastical and 4 lay members, fixed its abode at P. The first do duty alternately in the convent of Candlemas and the church of the Assumption, situated in the same quarter of the city, and originally inhabited by the Russians, whom the Chinese government caused to be removed hither in 1685, after the destruction of Albazin, a Russian fortress, which had been built on the banks of the Amur. The lay members are young men, who are obliged to study the Mantchoo and Chinese languages, and to acquire an accurate knowledge of China. They all reside in the kouan, a vast building, part of which, known by the name of the court of the embassy, is kept in repair by the Chinese government, and the other, containing the convent, by Russia. The regular abode of the mission at P. is fixed at ten years, at the expiration of which time it is relieved by another; but the correspondence of the Russian ministry of foreign affairs, in the name of the directing senate, with the tribunal at P., is subject to so many delays, that the abode of the missionaries is protracted to a longer period."

PEKINI, a town of Turkey in Europe, in Albania, in the sanj. and 48 m. NNE of Valona, and 21 m. WSW of El-Bassan, on the l. bank of the Skombi or Stirnatza, 10 m. above the entrance of that river into the Adriatic.

PELAGIAN ISLANDS, a group in the Mediterranean, between the E coast of Tunis and Malta, three in number, Lampion, Lampedusa, and Linosa.

PELAGNISI, or Pelerissa, an island of the Grecian archipelago, in the group stretching ENE of the channel of Trikeri, in N lat. 39° 21′, and E long. 24° 5′. It is 5 m. in length from N to S, and about 3 m. in breadth, and was the frequent resort of corsairs. It is the *Solimnia* of the ancients.

PELAGO, or San Clemente-Pelago, a town of Tuscany, in the prov. and 11 m. E of Florence, vicariat and 4 m. ESE of Pontassieve, near the r. bank of the Vicano, an affluent of the Arno.

PELAGOSA, or Pellagosa, a small desert island of the Adriatic, 42 m. SW of the island of Lagosta, and 32 m. from the coast of the Capitanata, in the kingdom of Naples, in N lat. 42° 21′ 30″, and E long. 16° 15′ 50″. It is surrounded by dangerous rocks, of which the principal is in N lat. 42° 21′, and E long. 16° 19′. It affords fine marble.

PELAHUSTAN, a town of Spain, in New Castile, in the prov. and 42 m. NW of Toledo, partido and 9 m. W of Escalona, at the foot of a mountain. Pop. 976. In its vicinity is a deep cavern.

PELANDJ, Pelagny, or Simov, a river of the island of Mindanao, in the group of the Philippines. It is formed by the junction of two streams, the more northerly of which issues from Lake Britain; runs W; and after a course of about 90 m. throws itself by several arms—on the more northerly of which is Mindanao—into Illana bay.

PELAYO (San), a village of Spain, in Leon, in the prov. and 18 m. SE of Salamanca, partido and 6 m. SW of Alba-de-Tormes, in a mountainous locality, and near a stream, the exhalations of which in summer render it extremely unhealthy. Pop. 120.

PELAYOS, a town of Spain, in Old Castile, in the prov. and partido and 11 m. ENE of Segovia, and 8 m. W of Pedraza. Pop. 192.

PELDON, a parish in Essex, 5½ m. S by W of Colchester. Area 2,186 acres. Pop. in 1851, 502.

PELE (Point), or South Foreland, a headland of Upper Canada, in the township of Mersea, Essex co., Western District, at the extremity of a long narrow tongue of land running out into Lake Erie.—Also an island of Lake Erie, to the SW of Pele-Point.

PELEE (Isle), a rocky islet of the English channel, off the N coast of the French dep. of La Manche, at the entrance of the E passage of the roadstead of that name, and at the distance of 1,598 yds. from the coast. It is almost entirely covered by Fort Royal.

PELEE (Mount), a mountain in the NW part of the island of Martinique, 8 m. NNE of St. Pierre. It has an alt. of 4,438 ft. above sea-level, and forms the loftiest summit in the island. It is of volcanic structure, and on the 5th of August 1851, suddenly burst forth in a violent eruption.

PELEGRINO (San), a village of Austrian Lombardy, in the gov. of Milan, and del. of Bergamo, near Zogno. It has several thermal springs.

PELELAP, an island of the North Pacific, in the group of the M'Askill islands, Caroline archipelago, in N lat. 6° 12′ 40″, and E long. 160° 47′ 55″.

PELELEW, or Pililew, an island of the North Pacific, in the group of the Pelew islands, to the SSW of the island of Babelthouap. It has a village, enclosed with mud walls, upon it.

PELERISSA. See Pelagnisi.

PELESTRINA, a town of Austrian Lombardy, in the prov. and 12 m. S of Venice, district and 5 m. N of Chioggia, towards the centre of an island of the same name, in N lat. 45° 15′ 40″, and E long. 12° 18′ 4″.—The island consists of a narrow tract of land, 8 m. in length from N to S, and about a mile in breadth, stretching between the lagunes and the Adriatic. Pop. 7,026.

PELEW ISLANDS, or Palaos, a cluster of islands in the Pacific ocean, situated between the parallels of 8° and 9° N, and between 130° and 136° E long. They are about eighteen in number. The names of some of the principal are Oroolong, Emungs, Emillegue, Artingal, Corooraa, and Pelelew. The group was probably first noticed by the Spaniards of the Philippines, and by them named the Palaos islands, from the tall palm-trees which grow in great abundance upon them. The Spaniards gave the same appellation to all the numerous islands of the archipelago, now known by the name of the New Carolines. These islands are long but narrow in outline; of a moderate height, and well covered with wood. They are circled on the W and N sides by a reef of coral. The inhabitants are a tribe of Malays, who rear cattle, goats, hogs, and poultry, and cultivate yams, bananas, sugar, and cocoa-nuts.

PELHAM, a parish of Van Diemen's Land, in the co. of Monmouth, bounded on the E by the river Jordan.

PELHAM, a town of Upper Canada, in the Niagara district, bounded on the S by Chippewa or Welland river. Pop. in 1842, 1,522.

PELHAM, a township of Hampshire co., in the state of Massachusetts, U. S., 81 m. W of Boston. It has a hilly surface, and is watered by Swift and Fort rivers. The soil possesses little fertility. Pop. in 1840, 956.—Also a township of Hillsborough co., in the state of New Hampshire, 37 m. S by E of Concord. It is watered by Beaver river, and is extremely fertile. Pop. 1,003.—Also a township of Westchester co., in the state of New York, 10 m.

S of White Plains. It comprises several islands in East river, and has a generally level surface. The soil, consisting of clay and sandy loam, is generally well-cultivated. Pop. 789.

PELHAM-BRENT, a parish in Hertfordshire, 5 m. E by N of Buntingford. Area 1,601 acres. Pop. in 1831, 271; in 1851, 298.

PELHAM-FURNEAUX, a parish in Hertfordshire, 12 m. NE by N of Hertford. Area 2,535 acres. Pop. in 1831, 619; in 1851, 688.

PELHAM-STOCKING, a parish in Hertfordshire, 6 m. N by W of Bishop-Stortford. Area 628 acres. Pop. in 1831, 158; in 1851, 138.

PELICAN (Islands), a group of islands nearly 2 m. in length, off the NE coast of Australia, in Princess Charlotte bay, in N lat. 13° 54′, and E long. 143° 46′. The principal island is only a ¼ m. in length, low and sandy, and covered with coarse grass. This group forms one portion of the Great Barrier Reefs.

PELICAN (Lake), a small sheet of water in British North America, in the district of English river, between the Beaver and Saskatchewan rivers.

PELICAN (New), a port of Newfoundland, in the peninsula of Avalon, on the E side of Trinity bay, and 24 m. WSW of Old Pelican. It has a safe and spacious entrance, and affords good shelter from all winds.

PELICAN (Old), a port of Newfoundland, in the peninsula of Avalon, on the NE side of Trinity bay, and about 30 m. in a direct line NE of St. John.

PELICAN PONDS, a series of pools of water in E. Australia, in the district of the Liverpool Plains, between the Nammoy or Peel and Gwydir rivers, in S lat. 29° 43′, and E long. 149° 15′.

PE-LING, or Northern Mountains, a chain of mountains in the N part of China proper, which it intersects from N to E, between the basins of the Hoang-ho and Yang-tse-Keang rivers. It extends from the Koko-nor territory on the W, in which it detaches itself from the E ridge of the central plateau of Asia, to the shore of the Eastern sea in the prov. of Keang-su. Its principal summit is the Tai-pe-chan on the W. Towards the centre of the chain is the Tai-hua-chan, noted under the name of the Western Go.

PE-LING, an island of the Asiatic archipelago, near the E coast of the island of Celebes, in S lat. 1° 50′. It is about 60 m. in length from E to W, and 15 m. in average breadth. It is indented near the centre by two deep bays, and is surrounded by numerous islets.

PELING-TAO, a small island of the Yellow sea, near the W coast of the Corea, in the prov. of Hwang-hai, in N lat. 38° 25′.

PELISANNE, or Pellisanne, a commune and town of France, in the dep. of the Bouches-du-Rhône, arrond. and 18 m. WNW of Aix, and cant. of Salon, on the r. bank of the Touloubre, an affluent of the Rhone. Pop. in 1846, 3,651. It is well-built, and has numerous silk-mills, a pottery, and some bleacheries.

PELLA, a village of Russia in Europe, in the gov. and 18 m. SE of St. Petersburg, district and 15 m. SSW of Shlusselburg, on the l. bank of the Neva, at the confluence of the Tosna.

PELLA, a town of Hottentotia, in Little Namaqua Land, near the S bank of Orange river, 160 m. above its entrance into the Atlantic, and to the E of the Kaabus or Carlisle mountains.

PELLA. See Jenizza.

PELLARE, a village of Naples, in the prov. of Principato-Citra, 1 m. N of Il-Vallo. Pop. 600.

PELLEGRINO (Monte), a mountain of Sicily, 2 m. N of Palermo, rising to an alt. of 315 toises, or 671 yds. above sea-level.

PELLEGRUE, a town of France, dep. of Gironde, 12 m. NNE of La Reole. Pop. in 1841, 1,857; of cant. 5,276.

PELLENBERGH, a village of Belgium, in S. Brabant, 3 m. E of Louvain. The French were defeated here on the 22d March 1793.

PELLERIN (Le), a town of France, dep. of Loire-Inferieure, on the S bank of the Loire, 17 m. E by S of Paimbœuf, and 11 m. W of Nantes. Pop. in 1841, 1,729; of cant. 12,495.

PELLEW'S GROUP (Sir Edward), a cluster of islands on the N coast of Australia, and W shore of the gulf of Carpentaria, in S lat. 15° 30′. They occupy a space of 34 m. from E to W, and 22 m. from N to S. The five principal islands are from 7 to 17 m. in length. They are formed of a hard close grained sand-stone, with an admixture of quartz. The larger islands are covered with trees and bushes, and in some low places with grass. The names of the principal islands are Vanderlin's island, North-West, South-West, and Centre islands.

PELLEW (Cape), the N extremity of an island of Sir Edward Pellew's group, in the gulf of Carpentaria, called North island, in S lat. 16° 30½′.

PELLEW (Point), a cape on the W coast of N. America, in Prince William's sound, in N lat. 60° 51′.

PELLICE, a small river of Piedmont, which has its source in a small lake on the N side of Monte-Viso, and falls into the Clusone, near Gazzigliana. It flows through a valley called from one of its towns the Val-di-Lucerna or Val-Pellice, chiefly inhabited by a Protestant community.

PELLO, a mountain in Swedish Lapland, on the r. bank of the Tornea, in N lat. 66° 48′, E long. 23° 58′. It was for some time the station of Maupertius in 1736, and of Ivanberg in 1803, when measuring a degree of the meridian.

PELLWORM, or Pelvorm, a small island of Denmark, on the W coast of the duchy of Sleswick, in N lat. 54° 32′. Area 5,300 *demat*, or nearly 15 sq. m. Pop. 2,000. Its principal harbour is Ostersiel, on the E coast. It is the remnant of the large island of Nordstrand, which was overwhelmed by the sea in 1634. It gives name to a small district containing this island and 11 adjacent islets, with about 4,000 inhabitants.

PELLY (Cape), a high bluff cape in the Arctic regions, in N lat. 67° 28′, W long. 87° 40′. The tides are very irregular here: one tide flowing 8 or 10 ft., and the next not half so much.

PELOCHE, a town of Spain, in the prov. and 60 m. E of Badajoz, near the l. bank of the Guadiana. Pop. 1,386. It has manufactories of coarse woollens.

PELOPONNESUS. See Morea.

PELOSO (Cape), a cape on the S coast of the island of Zante, in N lat. 37° 50′.

PELOTAS, a town of Brazil, in the prov. of São-Pedro-do-Rio-Grande, 24 m. NW of Rio-Grande, and 135 m. SW of Porto-Alegre. Pop. 2,419.—Also a river which descends from the Cordilheira-do-Mar; separates the prov. of São-Pedro-do-Rio-Grande and of São-Paulo; and joins the Uruguai-Mirim in the Campos-da-Vaccaria, and after a total course of about 75 m.—Also a river of the prov. of São-Pedro-do-Rio-Grande, which runs E through the district of the same name, and joins the Rio-de-São-Gonçalo, at the entrance of that river into Lake Patos.

PELSALL, a chapelry in Wolverhampton p., co. of Stafford, 3 m. N by E of Walsall. Area 1,194 acres. Pop. in 1831, 721; in 1851, 1,132.

PELSOCZ, or Plessowec, a town of Hungary, in the com. of Sohl, 9 m. S of Altmuhl.

PELT (Ober), a village of Dutch Limburg, 5 m.

NNW of Peer, on the l. bank of the Dommel. Pop. 1,260.

PELTEW, a river of Galicia, which rises near Lemberg, and flows into the Bug, on the l. bank, at Busk, after an E course of 32 m.

PELTON, a township in Chester-le-Street p., co.-palatine of Durham, 7 m. N by W of Durham, in the line of the Stanhope and Tyne railway. Area 1,109 acres. Pop. in 1831, 550; in 1851, 1,207.

PELTRE, a village of France, in the dep. of Moselle, 4 m. SE of Metz.

PELUSSIN, a town of France, in the dep. of Loire, 6 m. SW of Condrien. Pop. 560. It has some manufactories of silk. Chestnuts are largely cultivated in the neighbourhood.

PELVOUX-DE-VALLOUISE, a mountain in the SE of France, in the dep. of Hautes-Alpes, NW of Vallouise, elevated 13,500 ft. above the level of the sea.

PELYMSKOE, a village of Asiatic Russia, in the gov. and 240 m. NW of Tobolsk, on the Tarda river.

PELYNT, or Plint, a parish in Cornwall, 4 m. WNW of Looe. Area 4,683 acres. Pop. 799.

PEMAQUID BAY, a bay on the coast of Maine, U. S., containing several small islands, in N lat. 43° 45′.

PEMAQUID POINT, a cape on the coast of Maine, U. S., in N lat. 43° 37′.

PEMBA, an island in the Indian sea, near the E coast of Africa, intersected by the parallel of 5° 20′ S, about 18 m. from the main at its N end. It is 30 m. in length from N to S, and 10 m. in breadth, low, well-wooded, and fertile, being in fact the granary of the neighbouring coast. It was captured from the Mombassians by the imam of Muscat.—Also a province in the interior of Congo, very imperfectly known, but generally described as fertile. Its cap., of the same name, is 75 m. S of San Salvador.

PEMBERTON, a chapelry and township in Wigan p., co.-palatine of Lancaster, 2 m. W of Wigan. Area 2,868 acres. Pop. in 1851, 5,252.

PEMBERTON, a village in Burlington co., in the state of New Jersey, U. S., 22 m. S of Trenton. Pop. 750.

PEMBRIDGE, a parish and market-town in Herefordshire, 4 m. N by W of Weobly, on the river Arrow. Area 7,077 acres. Pop. in 1851, 1,319.

PEMBROKE, a county of Van Diemen's Land, bounded on the N by the co. of Glamorgan, from which it is separated by Little Swan Port river; on the E by the Pacific; and on the W by Storm bay and the co. of Monmouth. It comprises in the S Forestier's and Tasman's peninsulas; and presents in its maritime outline numerous indentations, of which the principal are Prosser's, Marion, and Monge or Pirate's bays, on the E; Port Arthur on the S; and Norfolk and Frederick-Henry in the W. The principal river is the Prosser, which flows into the bay of the same name. Towards the E coast is a group of mountains, named Three Thumbs, which have an alt. of 2,800 ft. above sea-level. Buckland, Tenby, and Sorcle are its chief towns.

PEMBROKE, a township of Washington co., in the state of Maine, U. S., 180 m. ENE of Augusta. It is watered by an affluent of Cobscook bay, and is generally fertile. Pop. in 1840, 1,050.—Also a township of Merrimac co., in the state of New Hampshire, 5 m. SE of Concord. It has a hilly surface; and is bounded on the SE by the Suncook river and on the W by the Merrimac. The soil is generally fertile. Pop. 1,336. The village extends for 3 m. along the banks of the Merrimac.—Also a township of Plymouth co., in the state of Massachusetts, 26 m. SE of Boston, watered by North river and its branches. Pop. 1,258.—Also a township of Genesee co., in the state of New York, 262 m. W of Albany It has a generally level surface, and is drained by Tonawanda creek and its tributaries. The soil consists of clay and gravelly loam. Pop. 1,970.

PEMBROKE, a borough and market-town in the co. of Pembroke, 10 m. S by E of Haverford-West. The borough comprises the ps. of St. Mary and St. Michael, with part of the p. of Moncton. Area 1,079 acres. Pop. in 1801, 2,515; in 1831, 6,511; in 1851, 10,107. The increase of pop. is due to the establishment of the government dockyard at this place. P. is pleasantly situated on Milford haven, upon the margin of a creek navigable by vessels of 200 tons burden. The town consists principally of one long street, stretching from E to W of the elevation on which it stands. It is encompassed by a wall of considerable height on the N side, flanked with numerous bastions. The castle, one of the most splendid remnants of military architecture in Britain, stands upon a rock at the W end of the town. The dockyard occupies an area of nearly 80 acres, at Pater or Paterchurch, about 2 m. to the NW. It is chiefly used as a building yard; and contains 12 building slips, and a dock with 23 ft. of water. On the heights above it, is a defensible barrack for 400 men. P., in conjunction with Tenby, Milford, and Wiston, returns one member to parliament. The number of electors registered for the borough in 1837 was 745; in 1848, 920.

PEMBROKE (Cape), a headland of Southampton island, British North America, in the N part of Hudson's bay, in N lat. 62° 51′, W long. 86° 59′.—Also the easternmost point of the Falkland islands.

PEMBROKESHIRE, a county of South Wales, bounded on the NE by Cardiganshire; on the E by Carmarthenshire; on the S by the Bristol channel; and on the W and NW by St. George's channel. Its form is irregular. It is estimated to extend about 30 m. in length from N to S, by nearly the same in extreme breadth; and to contain 335,600 acres of land, of which about 140,000 acres are arable, 160,000 in pasture, and the remainder waste.

Aspect, soil, and produce.] The surface of this co. is in general hilly, but the landscape is not so varied by mountains as in other parts of the principality. The most elevated tract is confined to its NE portion. The climate is considered temperate, and the air salubrious, frost seldom continuing for any considerable time, and the snow dissolving very rapidly after a fall. From its situation, however, being almost surrounded by the ocean, this co. is supposed to be peculiarly affected by rain. The soil varies considerably in quality, but is in general tolerably fertile, and includes a great proportion of rich meadow and arable land. Limestone is raised along the W border; coal is found in the south. Lead ore of excellent quality has been raised at Llanvyrnach, on the borders of Carmarthenshire. Wheat is grown in the W district, chiefly in the limestone country, and barley, rye, oats, turnips, &c., in every quarter. In the upland districts, herds of young black cattle are grazed in summer, and subsequently turned out upon a richer pasture, whence they are sold to the dealers. They are jet black in colour, long-horned, and much admired. Butter and cheese are extensively made for the English market.

Rivers, coasts, &c.] The principal rivers are the Teivy or Tivy, the East Cleddy, and the West Cleddy. The less considerable streams are the Gwain, Biran, Nevern, Dead river, and Rudford. The coast is in general hilly, with steep or perpendicular cliffs. Tracing it from its NE point, at the mouth of the Teivy, the first remarkable place is Aberkikor bay, having in its centre the small fishing town of Penyrallt. Next succeeds Newport bay,

near which are the town of Newport and the fishing village of Eglwys Dinas. Fishguard or Abergwain bay, forming a much better harbour than either of the above, next presents itself: near its centre is the town of Abergwain or Fishguard. From hence the coast, running SW, winds round Strumble head to that of St. David's. The large bay of St. Bride's succeeds; and beyond some islands on its S side is the entrance to the celebrated Milford haven. The various creeks here abound with oysters and other fish. The last place on the coast to be noticed is Tenby, at the S extremity of a small bay.

Trade, manufactures, &c.] P. is neither noted for its trade nor its manufactures, though it has great commercial advantages in its numerous harbours and wide extent of coast. Its chief exports are oxen, hogs, butter, cheese, corn, and other agricultural produce, with salt, stone, coal, culm, and limestone. The fisheries on the coast are the principal source of employment to a large portion of the inhabitants.

General statistics, franchise, &c.] The county is divided into 7 hundreds, namely, Castle-Martin, Dewisland, Dungleddy, Kemess, Kilgerran, Narberth, and Roose, and contains 145 parishes. Its towns, besides Haverford-West, a county of itself, are the city of St. David's, the boroughs of Pembroke and Haverford-West, and the contributory boroughs of Fishguard or Abergwain, Narberth, Wiston, Tenby, and Milford.—The pop. of this county in 1801 was 56,280; in 1831, 80,900; in 1841, 88,044; in 1851, 94,140.—This co. returns one member to parliament, who is polled for at Pembroke, Haverford-West, Abergwain, Newport, Narberth, and Tenby, the principal place of election being Haverford-West. The number of electors registered for 1837 was 3,710; for 1848, 3,479. Haverford-West and Pembroke, with their respective contributories already named, also return one member each.—The co. is included in the SW circuit. The spring and autumn sessions and the assizes are held at Haverford-West, where also the county jail and house of correction is situated.—P. is in the prov. of Canterbury and dio. of St. David's.

PEMBURTY, a town of Hindostan, in the prov. and 24 m. NE of Hyderabad.

PEMBURY, a parish in Kent, 3½ m. SE of Tunbridge. Area 3,481 acres. Pop. in 1851, 1,114.

PEMES, a town of France, in the dep. of the Upper Saone, 12 m. S of Gray, and 40 m. SW of Vesoul, on a fine hill, on the r. bank of the Oignon. Pop. 1,500. It contains the ruins of a fine castle, and has several forges and blast-furnaces.

PEMIGEWASSET, a river of the state of New Hampshire, U. S., which has its source in Franconia township, flows into Franklin township, and joins the Winnipiseogee, whence the united streams take the name of Merrimac.

PEMNAGUR, a town of Hindostan, in the presidency of Bengal and prov. of Bahar, 69 m. NNE of Patna. It formerly possessed a strong fortress.

PEMPELFORT, a village of Prussia, in the prov. of the Rhine, regency and a little to the NE of Dusseldorf. Pop. 1,500.

PEN. See Peno.

PENA, a town of Spain, in the prov. of Navarra, 33 m. SE of Pamplona, and 5 m. SSE of Sanguesa, on a steep rock. Pop. 68. It has a fortress.

PENA (Point), a headland of Brazil, in the prov. of Ceara, 30 m. SE of the embouchure of the Ceara.

PENACERRADA, a village of Spain, in the prov. of Alava, partido and 9 m. NW of La Guardia, and 18 m. SSW of Vitoria, at the foot of the chain of mountains which separates this prov. from that of Logrono. Pop. 368. The parish church is considered one of the finest in the prov., and contains numerous paintings and sculptures. In the environs are mines of iron, quarries of white marble and of stone, and a mineral spring. This town, which is situated on the frontier of Castile, was the theatre of several engagements. Traces of forts and of its ancient walls are still to be seen.

PENACOVA, a town of Portugal, in the prov. of Beira, comarca and 10 m. ENE of Coimbra, near the r. bank of the Mondego. Pop. 2,436.

PENA-DE-FRANCIA (La), a Dominican convent in Spain, in the prov. and 45 m. S of Salamanca, and partido of Ciudad-Rodrigo, and 6 m. ENE of Monsagro, on a lofty summit of the Sierra-de-Gredos, of which the lower part forms a portion of the valley of the Batuecas, and from the S part of which issues the Francia, an affluent of the Alabon.

PENAFIEL, a judicial partido and town of Spain, in Leon, in the prov. of Valladolid. The partido comprises 36 pueblos. The town is 30 m. E of Valladolid, in a plain, between the l. bank of the Duero and the r. of the Duranton, and at a short distance from the confluence of these rivers. Pop. 3,161. It contains 5 parish churches, 3 convents, 2 hospitals, and a public granary; and has manufactories of common cloth, earthenware, and madder, 3 tanneries, a fulling and several spinning-mills, and 2 dye-works. On an adjacent hill is a strong fortress.

PENAFIEL, or Penafiel-de-Souza, a comarca and town of Portugal, in the prov. of Minho. Pop. of comarca, 60,000. The town is 32 m. SE of Braga, and 9 m. SW of Amarante, in a fine valley on the slope of a mountain, to the r. of the Tamega. Pop. 2,288. It consists of one spacious and handsome street, crossed by several of an inferior description; and contains a town-house and a parish church, both handsome structures. It has also an alms-house, with a fine church, a Franciscan convent, an hospital, and a school. This town was founded in 850, by D. Fayon-de-Suarez, a descendant of the Goths.

PEÑAFLOR, a town of Spain, in the prov. and partido and 9 m. NE of Zaragoza, on the l. bank of the Gallego. Pop. 662. About a mile to the S is the famous convent of Aula Dei. On the opposite side of the river is a large paper-mill.—Also a town in Andalusia, in the prov. and 39 m. NE of Sevilla, and partido of Lora-del-Rio, in a hilly district, on the r. of the Guadalquivir. Pop. 2,094. It is the capital of a marquisate, and contains some antiquities. In the vicinity, in the middle of the Guadalquivir, is a rock, on the summit of which is a saline spring.—Also a town of Leon, in the prov. and 12 m. W of Valladolid, and partido of Motadel-Marques, on a height near the l. bank of the Hornija. Pop. 500. It has 2 parish-churches and a fine chapel, and contains the ruins of an ancient prison.

PENAGARCIA, a town of Portugal, in the prov. of Beira, comarca and 33 m. E of Castello-Branco, and 8 m. NNW of Salvaterra-do-Estremo, near the Eljas, which here forms the boundary of Spain. It is enclosed by walls, and is defended by a fortress.

PENAGUILA-Y-ARES, a town of Spain, in Valencia, in the prov. and 24 m. N of Alicante, and partido of Concentania, on a mountain. Pop. 1,280. It is one of the four towns of the royal domain, and from the ruins which are scattered on the surrounding mountain, appears formerly to have been a place of considerable strength. It now contains only a few narrow, steep streets, wretchedly built, and an hospital.

PENALARA, a mountain of Spain, in the Sierra-de-Guadarrama, on the confines of the provs. of Segovia and Madrid, 9 m. SE of the former of these towns, and 39 m. NNW of the latter. It has an alt. of 2,589 yds. above sea-level, and forms the highest

summit of the sierra. Near its peak is a lake of the same name.

PENALBA, a town of Spain, in Aragon, in the prov. and 45 m. SSE of Zaragoza, partido and 16 m. WSW of Fraga, between two valleys. Pop. 700. It is supplied with water by a perennial spring. Glass forms its chief article of manufacture. A sanguinary engagement between the troops of the Archduke and of Philip V. took place here in 1710, in which the latter were defeated.

PENALBA-DE-CASTRO, a town of Spain, in Old Castile, in the prov. and 39 m. SSE of Burgos, partido and 20 m. NE of Aranda-de-Duero, near the r. bank of the Arandilla. Pop. 150. In the vicinity, to the S, is the mountain on which the ancient *Clunia*, the capital of the Arevaci, was situated.

PENALEN, a town of Spain, in New Castile, in the prov. and 60 m. E of Guadalajara, and partido of Molina-de-Aragon, in a valley, near the l. bank of the Tagus. Pop. 277.

PENALLY, a parish in Pembrokeshire, 1½ m. SW of Tenby, on the coast. Area 2,832 acres. Pop. in 1831, 333; in 1851, 394.

PENALSORDO, a town of Spain, in Estremadura, in the prov. and 75 m. ESE of Badajoz, and partido of Puebla-de-Alcocer, on an eminence near the l. bank of the Zuja, between two lofty mountains. Pop. 1,637. It contains a palace, belonging to the dukes of Bejar, and has manufactories of woollen fabrics.

PENALT, a parish in Monmouthshire, 1¾ m. SSE of Monmouth, pleasantly situated on the Wye. Area 2,284 acres. Pop. in 1831, 549; in 1851, 467.

PENALVA-D'ALVA, a town of Portugal, in the prov. of Beira, comarca and 29 m. SW of Viseu, and 8 m. NW of Arganil, in a deep valley on the r. bank of the Alva. Pop. 1,989. It contains two parish-churches and a Latin school, and has several manufactories of common cloth.

PENALVER, a town of Spain, in New Castile, in the prov. and 21 m. ESE of Guadalajara, and partido of Sacedon. Pop. 868. It has a parish-church, a custom-house, and a public granary; and possesses several manufactories of common cloth and oil-mills.

PENAMACOR, a town of Portugal, in the prov. of Beira, in the comarca and 36 m. NE of Castello-Branco, and 14 m. S of Sabugal, on a lofty rock, the foot of which is bathed by the Eljas, a frontier river of Spain. Pop. 2,279. It is strongly fortified, and contains 3 parish-churches.

PENANG, Pulu-Pinang, or Prince of Wales's Island, an island and a British settlement off the W coast of the Malay peninsula, between 5° 14′ and 5° 29′ N lat., with its NE point under W long. 100° 25′. It is about 16 m. in length from N to S, and has an average breadth of 8 m. A strait, which opposite Fort Cornwallis is only 2 m. wide, separates it from Province Wellesley on the main. Its area is about 155 sq. m. It consists of a central mountain-range, with plains extending along its E and W sides. The mountains are of granite, traversed by veins of quartz; the plains are formed entirely of alluvial matter, and appear to have been gained from the sea. Tin-ore is found at the base of the mountains. The W side is swampy and nearly uninhabited; but the E side is well-cultivated over a breadth of from 2 to 4 m. By far the greater part of the island is rocky, sterile, and covered with a forest of tall trees; but the surface is exquisitely diversified with plains, valleys, rivers, bays, and summits of apparently Alpine elevation, shooting up as they do from the immediate vicinity of the sea to upwards of 2,500 ft. P. is considered one of the loveliest spots in the Eastern world.—The mean annual temp. in the valleys is 80° 03′; the average monthly range of the therm., 11°; the greatest daily range, 13°. The annual quantity of rain, 55·5 inches. On Western hill, alt. 2,500 ft., the mean temp. is 71°; average range of therm., 10°; annual quantity of rain, 116·6. Rain is frequent throughout the year, but the regular wet season is of short continuance. "The mountainous cone which commands the island," says Dr. Yvan, "is divided into climatic zones with as much regularity as the scale of a thermometer. At the foot of this volcanic elevation you find the warm temperature of the oceanic regions; at its summit the tonic freshness of Laguna or Solassy,—a bracing climate that invigorates without the painful contractions occasioned by our sharp winter cold. This paradise came into possession of the English by having been given by the King of Kheddah as a wedding-dower to his daughter, who married an Englishman. The happy husband, with the consent of his royal consort, named it Prince of Wales's Island, and presented it to his country; and since then it has under the English government become a place of resurrection for the bold conquerors of India. It is here that these proud traders who have invaded the world in rendering it tributary to their productions, go to recover health that has been worn out in commercial struggles,—combats a hundred times more honourable than the victories obtained by the limping heroes of the Invalides. The operation of the climate is almost infallible. The organisation, debilitated by the humid heat of Calcutta, Madras, or Bombay, recovers here, as well as at Cape Town or Teneriffe, the energy that has been lost for years." The soil is of various qualities, but generally good, though thin and scanty, often not exceeding a few inches in depth. It is generally a light dark mould mixed with gravelly clay. The forests produce ship-building-timber, while the scented camellia, the lotus, the red jasmine, and the rose, adorn the plains. The principal productions are pepper, nutmegs, betel-nuts, cocoa-nuts, coffee, sugar, rice, ginger, yams, mangosteens, betel-leaf, three varieties of pine-apples, guavas, oranges, citrons, and pomegranates. Rice and Indian corn are the only kinds of grain cultivated. Rice yields a return of from 60 to 75 fold. About 12,000 acres were under cultivation in 1821. Pepper is the staple article of produce, and its cultivation is almost exclusively in the hands of the Chinese. Crawford says, an acre planted with pepper yields in P. 2,040 lbs., while in Malabar it only yields 344 lbs., and in Bencoolen 310 lbs. The nutmeg may be reckoned next. Each tree is calculated to yield 1,000 nuts annually, which sell for 5 Spanish dollars, the mace is worth about the same sum. The clove is also cultivated with great success. The *Urceola elastica*, or American caoutchouc, is found in great plenty here. The orange, the plantain, and the pine-apple are cultivated with peculiar success.—The trade of P. is chiefly that of transit. Almost all the country-ships bound to the eastward, particularly those for China, touch here. P. is well supplied with fish, and is the only settlement in the straits where cattle can be readily and cheaply obtained. The harbour, formed by the N side of the island, and the mainland on the Quedah shore, is capacious, and affords good anchorage in water at all times smooth. It has been suggested that a government dock-yard should be placed here, as it lies directly in the track of ships passing on the Molucca side of the straits.—The pop. of this island and its dependencies, including Wellesley prov. on the mainland, up to the 31st of December, 1822, was 51,207 souls, of whom 24,520 were Malays and Buguese, 8,900 Chinese, 6,915 Chulias, 1,670 Bengalese, 1,172 native Christians, and 400 Europeans and their descendants. In 1844 the pop. of the

island itself was 40,000, of whom 16,000 were Malays, 9,000 Chinese, 8,000 Chulias from the Coromandel coast, and 800 of European descent.—George Town, the cap., at the NE extremity of the island, has a pop. of about 10,000.—The settlement of P. was formed by the East India company in 1786. In 1800, a tract of 23 m. of uninhabited land on the opposite coast, now forming Province Wellesley, was added to the settlement. In 1830 it was made a residency under the Bengal government; but in 1851, it became with Singapore and Malacca a separate presidency. See articles MALACCA and SINGAPORE.

PENANJONG BAYS, indentations of the S coast of Java, to the W of Nusa-Kambanjan island.

PENANTIPODES. See ANTIPODES.

PENAPARDA, a village of Spain, in Leon, in the prov. and 81 m. SW of Salamanca, partido and 24 m. SSW of Ciudad-Rodrigo, on the Sierra-de-Gata, at the foot of a mountain by which it is commanded on the NE. Pop. 363.

PENARANDA-DE-BRACAMONTE, a judicial partido and town of Spain, in Leon, in the prov. of Salamanca. The partido comprises 36 pueblos. The town is 28 m. ESE of Salamanca, and 18 m. E of Alba-de-Tormes, in a fine plain. Pop. 4,140. It has a parish-church, an hospital, a ducal palace, a public fountain, and several convents; and possesses manufactories of tape, cordage, leather, hats, and friezes or coarse woollen fabrics.

PENARANDA-DE-DUERO, a town of Spain, in Old Castile, in the prov. and 48 m. SSE of Burgos, partido and 12 m. ENE of Aranda-de-Duero, at the foot of a rock, on the summit of which is a fortress, and near the r. bank of the Arandella. Pop. 1,187. It is enclosed by walls, flanked with towers, and has a collegiate church, a convent, an hospital, and a palace belonging to the dukes of Meranda. It has manufactories of coarse woollens.

PENARTH, a parish in Glamorganshire, 3 m. S by W of Cardiff, on the coast. Area 2,507 acres. Pop. in 1831, 68; in 1851, 105.—Also a parish in Glamorganshire, 8½ m. SW by W of Swansea. Area 2,292 acres. Pop. in 1831, 357; in 1851, 348. The once magnificent castle of P. is now encompassed by sand-hills, and the sea has approached within 200 yds. of its walls.

PENAS (CAPE), a headland on the coast of Spain, in N lat. 43° 42′ 20″, and E long. of Cadiz 22° 0′ 28″. It bears a lighthouse, with a light elevated 370 Castillian ft. above sea-level, and seen in clear weather at a distance of 20 m.

PENAS (GULF OF), an arm of the sea, on the W coast of Patagonia, stretching between the peninsula of Tres-Montes on the N, and the island of Campana on the S. Its S entrance is in S lat. 47° 30′, and W long. 74° 33′.

PENAS-ROIAS, a village of Portugal, in the prov. of Tras-os-Montes, 20 m. WSW of Meranda. Pop. 220.

PENAS-DE-SAN-PEDRO, a town of Spain, in the prov. and 15 m. SW of Chinchilla, at the foot of a scarped hill on which stands a strong fort. Pop. 9,000. It has manufactories of soap, linen, and chocolate.

PENAUSENDE, a village of Spain, in the prov. and 14 m. SSW of Zamora. Pop. 1,020.

PENBOYR, a parish in Carmarthenshire, 4 m. SE of Newcastle-in-Emlyn. Area 6,876 acres. Pop. in 1831, 1,444; in 1851, 1,271.

PENBRE, or PEMBREY, a parish in Carmarthenshire, 4 m. SE by S of Kidwelly. Area 16,735 acres. Pop. in 1831, 2,645; in 1851, 3,310. A considerable tract of this parish is covered with sand-hills, and other parts are frequently overflowed by the tide.

PENBRYN, or LLANFIHANGEL-PEN-Y-BRYN, a parish in Cardiganshire, 9 m. NE by E of Cardigan. Area 8,347 acres. Pop. in 1831, 1,773; in 1851, 1,659.

PENBUALT, a hamlet in Llangammarch p., co. of Brecon, 8 m. NE of Bualt. Area 5,423 acres. Pop. in 1831, 614; in 1851, 542.

PENCADER, a hamlet in Llangammarch parish, Carmarthenshire, 11½ m. N of Carmarthen.

PENCARREG, a parish in Carmarthenshire, 4 m. SW by W of Lampeter, on the S bank of the Teifi. Area 10,392 acres. Pop. in 1831, 1,178; in 1851, 1,123.

PENCAITLAND, a parish of Haddingtonshire, 6 m. WSW of Haddington. Area 3,800 Scotch acres. Pop. in 1831, 1,166; in 1851, 1,175.

PENCHES, a village of Spain, in the prov. and 30 m. NE of Burgos. Pop. 120.

PENCLAWD, a village and chapelry in the p. of Llanrhidian, Glamorganshire. Here are coal and copper works.

PENCO, a village of Chili, on the bay of La Concepcion, in S lat. 36° 45′. It occupies the site of a town which was destroyed by an earthquake in 1751.

PENCOMBE, a parish in Herefordshire, 4 m. W by S of Bromyard, including the townships of Grendon-Warren and Marstone-Stannet. Area 4,590 acres. Pop. in 1831, 521; in 1851, 397.

PENCONDAH, a town and fortress of Hindostan, in the Balaghaut, 150 m. WSW of Cuddapah.

PENCOYD, a hamlet in the p. of Coychurch, Glamorganshire. Area 2,045 acres. Pop. in 1851, 490.—Also a parish in Herefordshire, 5½ m. WNW of Ross. Area 879 acres. Pop. in 1851, 239.

PENDENEN, or PENDERYN (LOWER and UPPER), a parish in the co. of Brecon, 7 m. W by N of Merthyr-Tydvil. Area 12,765 acres. Pop. 1,777.

PENDEULWYN, or PEN-DOYLON, a parish in the co. of Glamorgan, 4 m. ENE of Cowbridge, on the banks of the Ely. Area 3,504 m. Pop. 363.

PENDKOW, a village of Poland, in the obwodie and 26 m. SW of Rawa, on the l. bank of the Wolborka.

PENDLEBURY, a township in Eccles p., co.-palatine of Lancaster, 4½ m. NW by W of Manchester, on an eminence to the W of the Irwell. Area 930 acres. Pop. in 1831, 1,556; in 1851, 2,750. There are extensive printfields in this township.

PENDLETON, a township in Whalley p., co.-palatine of Lancaster, 2¼ m. SSE of Clitheroe. Area 2,800 acres. Pop. in 1831, 1,205.—Also a chapelry and extensive suburban village to Salford, in Eccles parish, co.-palatine of Lancaster, 2½ m. WNW of Manchester, at the junction of the Liverpool and Bolton roads. Area 1,720 acres. Pop. in 1801, 3,611; in 1821, 5,948; in 1841, 11,032; in 1851, 14,224. The cotton, silk, and flax manufactures are extensively carried on here, and there are several coal mines. From a report of a committee of the Manchester Statistical society, issued in 1839, it appears that of the children of a suitable age to go to school, little more than one-half—or about 13 per cent. of the entire pop.—was at that period attending school at any one time.

PENDLETON, a county toward the N part of the state of Virginia, U. S., comprising an area of 999 sq. m. It consists of an elevated table-land lying between two branches of the Alleghany mountains, and is intersected in a NE direction by the S branch of the Potomac. The soil is generally sterile. Pop. in 1840, 6,940; in 1850, 5,795. Its cap. is Franklin.—Also a co. in the N part of the state of Kentucky, containing a superficies of 450 sq. m., drained by Licking river and its branches. Pop. in 1840, 4,455; in 1850, 6,772. Its cap. is Falmouth.—Also a township of Niagara co., in the state of New York, 7 m. SW of Lockport, bounded on the S by Tonawanda

creek. It has an undulating surface, and the soil, consisting of calcareous loam, is generally fertile. Pop. in 1840, 1,098. The village is on Erie canal, and contains about 30 dwellings.—Also a village of Anderston district, in the state of S. Carolina, 136 m. WNW of Columbia, on a branch of Savannah river. Pop. 633.—Also a village of Madison co., in the state of Indiana, 31 m. NE of Indianapolis, on Fall creek. Pop. 200.—Also a township of St. Francis co., in the state of Missouri. Pop. in 1840, 387.

PENDOCK, a parish in Worcestershire, 5 m. SSW of Upton-upon-Severn. Area 1,163 acres. Pop. 302.

PENDOMER, a parish in Somersetshire, 4 m. SW by S of Yeovil. Area 1,090 acres. Pop. 78.

PENDYN, or Pendine, a parish in Carmarthenshire, 5 m. WSW of Langharne. Area 1,578 acres. Pop. in 1831, 183; in 1851, 181.

PENEGOS, or Pen-Egwest, a parish in Montgomeryshire, 1½ m. E by N of Machynlleth, on the river Dulas, including the townships of Isycoed and Uchycoed. Area 8,085 acres. Pop. in 1851, 928.

PENFIELD, a township of Monroe co., in the state of New York, U. S., 8 m. E of Rochester. It has an undulating surface, drained by Irondiquoit river. The soil consists chiefly of sand and gravelly loam. Pop. in 1840, 2,842. The village is on Irondiquoit creek, and contains about 700 inhabitants.—Also a township of Lorain co., in the state of Ohio, 14 m. S of Elyria, drained by the main branch of Black river. Pop. 405.—Also a township of Calhoun co., in the state of Michigan. Pop. 377.

PENEDO, a district and town of Brazil, in the prov. of Alagoas, 195 m. SW of Recife, on the l. bank of the São-Francisco, 30 m. above the entrance of that river into the Atlantic. The town lies partly on the river and partly on a rising ground; and is large, well-built, and populous. It contains several churches, a Franciscan convent, a court-house, and two schools. The river has here a breadth of about ¾ of a mile, and has a tide rise of 3 ft. The surrounding district produces cotton, rice, millet, and mandioc; and contains about 14,000 inhabitants, chiefly Indians.

PENEDONO, a village of Portugal, in the prov. vince of Beira, comarca and 17 m. N of Trancoso. Pop. 154.

PENEIRA, or Pinheira, a headland of Brazil, in the prov. of Santa-Catharina, which, with Point Naufragados, at the S extremity of the island of Santa-Catharina, from which it is distant 2½ m. S, forms the S entrance to the strait or gullet between that island and the main.

PENEKA, or Punukka, a fort of Bhotan, 20 m. NE of Tassisudon, at the confluence of two rivers which form the Maa-chu. It is the residence of the chiefs of the country during the cold season, and is the capital of a considerable territory.

PENELLA, a town of Portugal, in the prov. of Beira, comarca and 21 m. SE of Coimbra, and 12 m. N of Chão-de-Conce, on the l. bank of the Deuca. Pop. 3,457.—Also a town in the comarca and 18 m. N of Trancoso, and 1½ m. SE of Sernancelhe, on a hill. Pop. 2,730. It has an old fortress, 2 churches, an hospital, and an alms-house.

PENERF, a hamlet of France, in the dep. of Morbihan, cant. of Muzillac, and com. of Damgan, on a stream of the same name. Pop. 250. It has a fishing port, and has a considerable trade.

PENESTIN, a commune of France, in the dep. of Morbihan, cant. and 9 m. W of La-Roche-Bernard, and 20 m. SE of Vannes, on the l. bank of the Vilaine, near the entrance of that river into the Atlantic. Pop. 1,392.

PENETANGUISHENE, a village of Upper Canada, in the township of Tiny, in Simcoe district, on a bay of the same name, an arm of Gloucester bay. Pop. 120.

PENFORD, or Pendeford, a township in Tettenhall p., Staffordshire, 4½ m. NNW of Wolverhampton, in the line of the North-Western railway.

PENGE, a hamlet belonging to Battersea p., Surrey, 4 m. NNE of Croydon. Area 840 acres. Pop. in 1831, 229; in 1851, 1,169. The great increase of pop. has arisen from the establishment of the Surrey school-of-industry, containing, in 1851, 464 persons, and of the queen-dowager's and watermen's almshouses, and likewise from the extension of building.

PENGUIN (Island), a small island in Bass strait, in the group of Hunter's islands, to the E of Barren island, and about 10 m. NE of Ma-an-dai Point, the NW extremity of Van Diemen's land.

PENHA, a parish and town of Brazil, in the prov. of Minas-Geraes, 63 m. SW of Minas-Novas, on the Itagua. Pop. 1,000. It has a handsome square, surrounded with houses, and containing a church. Rice, millet, and other commodities, are cultivated in the environs for the market of Diamantina.—Also a village on the E bank of the island of Itaparica, in the prov. and opposite the town of Bahia. It has a handsome church, and 2 schools.—Also a village in the prov. of Minas-Geraes, 3 m. NW of Cahete.—Also a parish in the same prov., in the comarca of Paracatu, near the sources of the Rio-Urucaia. It has a church. Agriculture forms the chief object of local industry.—Also a mountain in the prov. and on the S side of the bay of Espirito-Santo.

PENHA (Grande), a group of Rocky islets, in the Atlantic, on the coast of the Sahara, to the SE of Cape Bojador, in N lat. 25° 7′ 6″, and W long. 14° 50′ 53″.

PENHA-DE-FRANÇA, a village of Brazil, in the prov. of Parahiba, and district of the same name.

PENHA-DE-FRANÇA-DE-TACOARA′ or Taquara′, a parish of Brazil, in the prov. of Parahiba, and district of Alhandra, near lake Camusi. Its church is one of the oldest in the prov. It has a considerable trade in mandioc.

PENHA-VERDE, a town of Portugal, in the prov. of Beira, comarca and 14 m. NNW of Linhares, and 9 m. W of Trancoso.

PENHOW, a parish in the co. of Monmouth, 5½ m. E of Caerleon. Area 1,784 acres. Pop. in 1831, 235: in 1851, 279.

PENHURST, a parish in Sussex, 3½ m. W by N of Battle. Area 1,462 acres. Pop. in 1851, 120.

PENICHE, a fortified town of Portugal, in the prov. of Estremadura, comarca and 48 m. SW of Leiria, and 17 m. W of Obidos, on the Atlantic, on the S side of a peninsula of the same name. Pop. 2,518. Its position, naturally a strong one, renders it a fortress of the first class, and the harbour although small affords safe anchorage. The parish church, a convent, an hospital, and a public school, are the only buildings it contains worthy of note. The peninsula of P. is believed to have formerly been insulated, and to have formed a place of refuge to several Lusatians who thus sought to escape from the Roman yoke. The town was taken by the English under Drake in 1589.

PENICUIK, a parish on the S verge of Edinburghshire. Area 20,000 Scottish acres, of which about 7,000 are arable. Pop. in 1831, 2,255; in 1851, 3,003.—The v. and vicinity of P., 10 m. S of Edinburgh, on the l. bank of the North Esk, is the seat of numerous paper-mills. An extensive depot for prisoners of war existed here during the late war.

PENIG, a town of Saxony, 12 m. NW of Shemnitz, on the r. bank of the Mulde. Pop. 3,600. It

has manufactories of cotton goods, and of pottery, and iron forges.

PENINSULA, a village of Boston township, Summit co., in the state of Ohio, U. S., 136 m. NE of Columbus, on the Ohio canal, at the Cuyahoga aqueduct.

PENISCOLA, a fortified town of Spain, in the prov. and 36 m. NE of Castellon-de-la-Plana, in N lat. 40° 22′, and W long. 0° 30′, on a rocky peninsula advancing into the sea, and rising to an alt. of 240 ft. above sea-level. Its streets are narrow, and lined with ill-built houses; but its position is a strong one; and it possesses two good harbours, from which an active fishing-trade is conducted. Pop. 2,200. It was held by the French troops from 1811 to 1814.

PENJINA, a river of Asiatic Russia, which rises on the SE flanks of the Stanovoi mountains, and flowing S, falls into the N extremity of Penjinskaia bay, after a course of 160 m. The town of Penjinskoi is situated near its embouchure.—The bay with that of Olioutorskaia, encloses the peninsula of Kamtchatka; and stretches about 140 m. from NNE to SSW.

PENKEM, a village of Prussia, in the reg. and 19 m. SW of Stettin. Pop. 1,434.

PENKETH, a township in Prescot p., co.-palatine of Lancaster, 3½ m. W by S of Warrington. Area 1,048 acres. Pop. in 1831, 548; in 1851, 679.

PENKHULL, a township in Stoke-upon-Trent p., co. of Stafford, 1 m. SSE of Newcastle-under-Lyne. Pop. in 1831, 5,876; in 1851, 9,207.

PENKRIDGE, a parish and market-town in Staffordshire, 6 m. S by E of Stafford, intersected by the North-Western railway, which has a station here, and by the Worcester and Stafford canal. The parish comprises the chapelries of Coppenhall, Dunston, and Stretton, and the townships of Lovedale with Drayton, Whiston with Bickford, Mitton, Otherton, Pileton, Water-Eaton, Rodbarston. Area 19,605 acres. Pop. in 1831, 2,991; in 1851, 3,316. The town is pleasantly situated on the banks of the Penk, in the midst of an agricultural district. It contains some respectable houses, and is a place of considerable antiquity. The petty-sessions for the hundred are held here. It is also one of the polling-places for the S division of the county.

PENLEY, a chapelry in the p. of Ellesmere, co. of Flint, 4 m. N by E of Ellesmere. Area 2,036 acres. Pop. in 1831, 517; in 1851, 406.

PENLIMMON, or PLINLIMMON, one of the loftiest mountains in Wales, a summit of the Berwynd chain, in Cardiganshire. Alt. above sea-level, 2,463 ft.

PENLLECH, a parish in Carnarvonshire, 10½ m. W by S of Pwllheli. Area 2,187 acres. Pop. in 1831, 268; in 1851, 279.

PENLLINE NEAR COWBRIDGE, a parish in Glamorganshire, 2 m. W by N of Cowbridge. Area 1,784 acres. Pop. in 1831, 349; in 1851, 338.

PENMACHNO, a parish in Carnarvonshire, 6½ m. S of Llanrwst. Area 1,128 acres. Pop. in 1831, 984; in 1851, 1,251.

PENMAEN, a parish in Glamorganshire, 6½ m. S by W of Castellelwchwr. Area 1,538 acres. Pop. in 1831, 137; in 1851, 114.

PENMAEN-MAWR, a mountain near Abercönway, in Carnarvonshire, forming the NE termination of the Carnarvonshire chain. Alt. 1,540 ft. above sea-level. At its base runs the new line of road leading to Holyhead.

PENMAIN, a hamlet in Mynyddy's-Lwyn p., Monmouthshire, 12 m. NW of Newport. Area 4,250 acres. Pop. in 1831, 2,175; in 1851, 2,379.

PENMARCH, a village of France, in the dep. of Finistere, cant. and 7 m. SW of Pont-l'Abbe. Pop. 1,727. It has a good harbour and an active fishing-trade.

PENMARK, a parish in Glamorganshire, 5½ m. SE of Cowbridge. Area 3,395 acres. Pop. in 1831, 536; in 1851, 495.

PENMON, a parish in Anglesey, 3½ m. NE by N of Beaumaris. Area 7,180 acres. Pop. in 1851, 226.

PENMOREA, or PENMORFA, a parish in Carnarvonshire, 2 m. W by N of Tremadoc. Area 10,157 acres. Pop. in 1831, 982; in 1851, 1,109.

PENMYNYDD, a parish in Anglesey, 5 m. W of Beaumaris. Area 3,153 acres. Pop. in 1851, 566.

PENN, a parish in Bucks, 3 m. NW of Beaconsfield. Area 4,270 acres. Pop. in 1831, 1,103; in 1851, 1,254.—Also a parish in Stafford, 2 m. SW by S of Wolverhampton, comprising the township of Lower P. and the liberty of Upper P. Area 3,986 acres. Pop. in 1831, 863; in 1851, 1,160.

PENN, a township of Lycoming co., in the state of Pennsylvania, U. S. Pop. in 1840, 354.—Also a township of Perry co., in the same state. Pop. 839.—Also a township of Philadelphia co., in the state contiguous to Philadelphia, on the NW, and bounded on the W by Schuylkill river, and drained in the NW by Falls Run. It has a level surface, and the soil, consisting of clay and loam, is fertile and well-cultivated. It is the seat of Girard college, erected for the gratuitous education of orphan boys. Pop. 3,342.—Also a township of Cass co., in the state of Michigan. Pop. 415.

PENNA (PUNTA DELLA), a headland of Naples, on the coast of the Adriatic, in N lat. 42° 10′.

PENNA-DE-RILLI, a town of the Papal states, in the deleg. and 20 m. WNW of Urbino.

PENNAGRA, a fortress of Hindostan, in the presidency of Madras, 38 m. NNW of Salem. It was taken by the English in 1791, after a vigorous resistance.

PENNAL, or PENALT (LOWER and UPPER), a parish in Merionethshire, 3 m. W by S of Machynlleth. Area 7,461 acres. Pop. in 1831, 776; in 1851, 606.

PENNANT, a parish in Montgomeryshire, 10 m. SE of Bala. Area 5,000 acres. Pop. in 1851, 749.

PENNA-PIEDIMONTE, a town of Naples, in Abruzzo-Citra, 15 m. S of Chieti. Pop. 1,000.

PENNAR, or PENN-AIR, a river of Hindostan, which rises in Mysore, near Hidjigul, under the parallel of 13° 25′, and, running N, enters the Balaghaut, under the parallel of 14° 50′; turns E, and then SE; and, after traversing the Carnatic, flows into the gulf of Bengal, 15 m. NE of Nellore. It has a course of nearly 300 m.; but is shallow, and only navigable by boats. Its principal affluents on the r. are the Chittravutty, the Pawpugni, and the Chergair; on the l. the Khoondair and the Suggleair.

PENNARD (EAST), or MINSTER, a parish in Somersetshire, 4 m. SSW of Shepton-Mallet. Area 2,829 acres. Pop. in 1831, 726; in 1851, 675.

PENNARD (WEST), a parish in Somersetshire, 3½ m. W by S of Glastonbury. Area 3,063 acres. Pop. in 1831, 920; in 1851, 874.

PENNA-SAN-ANDREO, a town of Naples, in Abruzzo-Ultra 1ma, 15 m. NW of Civita-di-Penne. Pop. 1,000.

PENNATORE, a port of Hindostan, on the Travancore coast, in N lat. 8° 25′. The chief export is pepper.

PENNAUTIER, a town of France, in the dep. of Aude, cant. and 3 m. W of Carcassonne, on the l. bank of the Fresquel. Pop. 1,214. There is a fine chateau here.

PENNE, a canton, commune, and village of France, in the dep. of Lot-et-Garonne, 6 m. E of Villeneuve-sur-Lot, near the l. bank of the Lot. Pop. of cant. in 1846, 10,055; of com. 4,555; of v. 555.—Also a

town in the dep. of Tarn, 18 m. NW of Gaillac, on the l. bank of the Aveyron. Pop. in 1846, 2,201.

PENNE, or Civita-di-Penne, a town of Naples, in Abruzzo-Ultra 1ma, 8 m. SW of San Angelo. Pop. of district 8,860. It has tanneries and straw-hat manufactories.

PENNES (Les), a town of France, in the dep. of Bouches-du-Rhone, 12 m. SW of Aix. It is supplied with water by means of a fine aqueduct.

PENNINGHAM, a parish in the NE extremity of Wigtonshire. Area about 52 sq. m. It forms a belt of irregular breadth between the rivers Cree and Bladenoch, which respectively trace the whole of its E and W boundaries. Its chief features of interest are its town of Newton-Stewart and the Cree: see these articles. The moss of Cree, in the SE extremity, has an extent of nearly 2,000 acres; it seems first to have been submarine, next a forest, and next a moss. Pop. in 1831, 3,461; in 1851, 4,155.

PENNINGTON, a parish in the co.-palatine of Lancaster, 2 m. WSW of Ulverstone. Area 2,767 acres. Pop. in 1831, 355; in 1851, 481.

PENNINGTON, or Pannington, a township in Leigh p., co.-palatine of Lancaster, 12 m. W of Manchester. Area 1,437 acres. Pop. in 1831, 3,165; in 1851, 4,573. The cotton manufacture affords employment to many of the inhabitants.

PENNINGTON, a village of Hopewell township, Mercer co., in the state of New Jersey, U. S., 8 m. N of Trenton. Pop. in 1840, 200.—Also a township of Licking co., in the state of Ohio. Pop. 1,244.—Also a township of Union co., in the state of Arkansas. Pop. 914.

PENNISTON, a parish and market-town in the W. R. of Yorkshire, 6½ m. WSW of Barnsley, intersected by the Manchester and Sheffield railway. The parish comprises the chapelry of Denby, and the townships of Gunthwaite, Hunshelf, Ingbirchworth, Langsett, Oxspring, and Thurlestone. Area 21,580 acres. Pop. in 1831, 5,201; in 1851, 6.302. The town, situated on the S bank of the river Don, consists of several streets intersecting each other at right angles. Cotton and woollen manufactures are extensively carried on in this p.

PENNSBURG, a township of Chester co., in the state of Pennsylvania, U. S., 23 m. SW of Philadelphia. It has a sloping surface, bordered on the E by Brandywine creek, and intersected by Pocopsen creek and its tributaries. The soil is chiefly calcareous loam. Pop. in 1840, 933.

PENN'S NECK (Lower), a township of Salem co., in the state of New Jersey, U. S., 5 m. NW of Salem, bounded on the W and SW by Delaware river, and on the SE by Salem river. The surface is level, and the soil clay and sandy loam. Pop. 1,219.

PENN'S NECK (Upper), a township of Salem co., in the state of New Jersey, U. S. The surface is level, and the soil sandy loam. Pop. 1,854.

PENNSVILLE, a village of Wrightstown township, Bucks co., in the state of Pennsylvania, U. S., 25 m. N of Philadelphia. Pop. in 1840, about 48.—Also a village of Penn township, Morgan co., in the state of Ohio, 77 m. E by S of Columbus. Pop. 100.

PENNSYLVANIA, one of the most important states of the N. American confederation, originally a part of that extensive region which was granted to the celebrated William Penn,—from whom it derives its name,—lying between the parallels of 39° 43′ and 42° 17′ N; and between 74° 44′ and 80° 34′ W long. Its NW corner is washed by Lake Erie; the state of New York forms its N boundary; the river Delaware, separating it from New York and New Jersey, bounds it on the E; a small portion of Delaware, with Maryland and Virginia, bounds it on the S; and a long narrow strip of Virginia, with Ohio, forms its W boundary. Its shape is almost a perfect parallelogram, three of its sides being marked by parallels of lat. and a meridian. It is 270 m. long, and 160 m. broad; and contains 44,000 sq. m., or 28,160,000 acres.

Physical features.] The surface of this state is mountainous, few level tracts of any extent being found within its boundaries. The Appalachian chain here spreads to its widest limits, and covers with its various ranges more than one-half of the state. The greatest width of this chain is 200 m. It consists of parallel ridges, often lying little distant from each other, but, in some instances, with valleys 20 or 30 m. broad between them. The range nearest the coast, called the South mountain, is a continuation of the Blue ridge of Virginia. It is, however, hardly a distinct ridge, but only an irregular series of rocky broken eminences, sometimes disappearing altogether, and at others spreading out several miles in breadth. These eminences lie 150 or 200 m. from the sea, and their height does not exceed 1,200 ft. above the surrounding country. Beyond these are the Kittatinny or Blue mountains, which extend from Maryland to New Jersey across the Susquehanna and Delaware. Further westward are the ridges bearing the names of the Sideling hills, the Ragged mountains, Great Warrior mountain, East Will's mountain, till we come to the Alleghany ridge, the highest range, from which this whole chain has received the name of the Alleghany mountains. The highest summits of this ridge are between 3,000 and 4,000 ft. above the level of the sea. W of the Alleghany are the Laurel and the Chestnut ridges, in general covered with thick forests. The Laurel mountains are overgrown on their E flank with the tree from which they are named. The wide valleys between the great ridges are filled with a multitude of hills confusedly scattered up and down. The tops of the ridges sometimes exhibit long ranges of tableland 2 or 3 m. broad; some are steep on one side, and extend with a long slope on the other. These mountains are traversed by the great stream of the Susquehanna, and the head-waters of the Ohio.—The valleys of the Susquehanna and its branches are remarkably irregular. These streams traverse the whole width of the Appalachian chain of mountains, sometimes flowing in wide valleys between parallel ranges for 50 or 60 m. in a nearly direct course; at other times breaking through the mountain-ridges. The valleys between the different ranges of the great chain, extending throughout the whole state, are often 20 or 30 m. in width, with a hilly or broken surface.—The Delaware washes the E limit of the state, and is navigable for ships from the sea to Philadelphia. It receives at Easton the Lehigh, which flows 75 m. in a SE course, nearly half of it being navigable. Nearer the sea, and 6 m. below Philadelphia, it receives the Schuylkill, which also flows SE 130 m., and is navigable for boats 90 m. The Susquehanna rises from two sources. The E branch has its origin in Otsego lake, in the state of New York. The W branch rises in the most elevated region of P., in the W part of the Appalachian mountains. It passes through the great Alleghany ridge, and the others which lie E of it; unites with the E branch at Northumberland; and flows SE into Chesapeake bay. The Susquehanna is the longest river of the eastern and central states. It is 1¼ m. wide at its mouth, but is much obstructed by falls and rapids, which sometimes occur in a continual series for 50 m. together. It abounds with fish; vast quantities of salmon and shad are yearly taken in its waters. The Juniata, a branch from the W, which traverses the mountainous country, rises in the Alleghany mountains, and enters the Susquehanna 11

m. above Harrisburg. It is 180 m. long, and part of it is navigable for boats. The Tioga, a feeder of the E branch, rises N of the mountains, near the boundary of New York. It is navigable for boats 50 m. The Alleghany rises W of the mountains, in the N part of P., and flows N into New York, where it curves to the SW, and re-enters P.; it then flows S, till, after a course of 400 m., it joins the Monongahela below Pittsburg. This last river has its source among the Laurel mountains in Virginia, and running N, enters P., and joins the Alleghany at Pittsburg. It is 300 m. in length. Both these rivers have boat-navigation for a great part of their course, and their united waters form the great stream of the Ohio, which after a short course passes out of this state. The Youghiogeny, a tributary of the Monongahela, rises E of the Laurel mountains, through which it passes, and runs into the Monongahela, 15 m. above Pittsburg. The Ohiopyle falls are upon this river.—About 40 m. of the NW border of the state lie upon Lake Erie. This extent of coast contains the harbour of Presqu' Isle or Erie, which affords a good haven for small vessels.

Climate.] P. may be regarded as comprising three separate divisions, viz., the E slope of the mountains, the mountainous region, and the W slope. In the country E of the mountains, the climate does not differ greatly from that part of New Jersey in the same parallel. Its greater distance from the sea, and somewhat higher level, render the cold of winter in a slight degree more sensible, but the climate may be characterized in general terms as mild and temperate. The mountainous country lies exposed to the chilling NW winds, and the winter in this part is severe with deep snows. To the W of the mountains the climate becomes milder; here the E winds of the Atlantic coast are unknown, and the country is not exposed to the sudden changes which they occasion. The heat of summer is not so great as upon the coast, and the autumn is long, serene, and temperate. On the whole this state is one of the healthiest of the American continent.

Geology and minerals.] P. is characterised by the inexhaustible abundance rather than by the variety of its useful minerals. Iron ore of several species, lime, marl, sandstone, clays, slates, salt, and coal, occur in profusion; but the pretended deposits of silver and tin, lead, zinc, and copper, assigned to various localities, have no existence. By far the greater portion of the rocks belong to the secondary formations of the lower series; only the SE section furnishing some members of the transition and primary groups. The rocks of the Blue ridge, comprising various slates, sandstones, and conglomerates, are referred to the former; E of this extends a newer group of red shales, sandstones, and variegated conglomerates, the prolongation of the belt ranging across New Jersey. Another portion of this region is occupied by primary rocks of the stratified class, consisting chiefly of micaceous gneiss, mica, talcose, chlorite slates, and limestones. Valuable deposits of magnetic iron ore here as elsewhere characterise the primary strata; and traces of zinc and copper occur in the red sandstone formation. The city of Philadelphia is indebted to the limestone beds of this tract for the beautiful marbles which adorn her streets. The rock-formation of the great valley W of the Blue ridge consists of alternating belts of limestone and slate, occupying a low place in the geological series, and perhaps belonging to the transition group. The limestone is often argillaceous and slaty, generally blue, sometimes fossiliferous, and occasionally assuming the aspect of a marble, either pure white or of a gently variegated hue, with a fine even fracture, susceptible of a beautiful polish. Some bands yield an excellent hydraulic cement, the usual place of which is near the contact with the slates; hematitic iron ore, which is easily reduced, and yields a large proportion of metal of superior quality, is also plentifully associated with these limestones. Some of the slate strata afford quarries of good roofing and writing slates. The vast tract W of the Blue mountains is divided by the Alleghany ridge into two strongly marked regions, of widely different aspect and geological structure. That on the E, comprising the various chains of the Kittatinny group, consists of numerous alternating strata of limestones, slates, shales, and sandstones, which have been broken up and thrown into great disorder, generally tossed into highly inclined positions, and often so much tilted up as to become perpendicular. The valleys of this region are valleys of elevation. W of that range, on the other hand, the rock strata preserve a nearly undisturbed horizontal position; but they have been cut through, and partially washed away by the action of water, so that only isolated patches of what once formed a continuous platform now remain, capping the summits of the loftier table lands, and separated by wide and deep valleys of denudation. The former of these regions contains vast deposits of anthracite, and some patches of bituminous coal; the latter is richly stored with bituminous coals and salt, and both contain inexhaustible quantities of iron ore. Geologists have generally referred the coal-measures of the Kittatinny region to the transition formation, but the state geologist assigns to all the coal-measures of the state the same position in the series. The anthracite or non-bituminous coal is distributed in enormous quantities in three great fields, in a tract lying E of the Susquehanna, between the Blue mountain and the North branch, and extending E, to the Lehigh on the S, and nearly to the head of the Lackawannock on the N. The following table exhibits the total amount of anthracite coal raised in this state from 1820 to 1851:—

1820	365	1836	682,428
1821	1,073	1837	881,476
1822	2,240	1838	739,293
1823	5,823	1839	819,327
1824	9,541	1840	865,414
1825	34,893	1841	958,899
1826	48,047	1842	1,108,001

1835	560,758	1851	4,383,899

"The coal and iron area of P. alone is upwards of 10,000 sq. m., being about five times as great as the aggregate coal and iron area of Great Britain and Ireland. Its two great coal-fields are divided from each other by the Alleghany ridges, the bituminous field extending along the W, and anthracite along the E slope of the mountains. It was not until anthracite coal was demonstrated to be available for smelting purposes that the coal-trade of the state received that impetus which has resulted in its extraordinary development since the year 1820. Previously to that year the eastern coal-field,—that most accessible to the great markets of the country,—lay almost useless, whilst from its position, and the then want of the means of easy and cheap transportation across the mountains, the development of the western or bituminous field depended almost exclusively upon the growth of a demand in the valleys of the Ohio and the Mississippi. That demand rapidly increased, and so did the produce of bituminous coal. But largely as the supply from the western coal-field has increased, its increase is not to be compared to that of the produce of the great anthracite bed since the discovery was made that anthracite coal was available for all the purposes to which its bituminous rival could be applied. The value of this great mineral resource to the state is illustrated by the cost at which public works have been constructed, having an especial reference to the development of the coal-trade. The Lehigh works, in the shape of canals and railways, have cost upwards of 7,000,000 dollars, or about £1,400,000. The Schuylkill coal-region is permeated by works, which have cost, in the aggregate, nearly 20,000,000 drs., or upwards of £4,000,000. Immense sums have also been expended on the Philadelphia and Reading railway, built mainly with a view to the transport of coal from the mines to tide water. In addition to this, a new port, that of Richmond, in the immediate vicinity of Philadelphia, has been called into existence, within the last 15 years, by the unexampled development of the coal trade. Bituminous coal beds are also extensively worked in Maryland, and in the valley of the James river, near Richmond, Virginia."—The SW part of this geological region contains bituminous coal of good quality; the coal-seams of Broad-Top mountain and of Will's mountain are about 6 ft. in thickness. Salt springs also occur in this section. Iron-ore is abundant through the whole tract between the Blue mountain and the Alleghany range; and is generally found in the limestones, but it occurs also in some of the slates. Some of the deposits are of enormous thickness. The ores are hematites and hydrates. The portion of the state W of the Alleghany escarpment, forms the NW angle of the vast bituminous coal formation which occupies a large part of the Mississippi valley. As the rocks have a general dip towards the W, the coal-fields of the E part occupy only the more elevated spots, and occur in detached basins. Further W, the coal is found in almost every county, in vast fields, often presenting numerous seams lying one above another in the cliffs of the ravines and river-valleys. Rich deposits of nodular argillaceous iron-ore are extensively distributed throughout this region, associated with beds of limestone and seams of coal offering every facility for its conversion into metal. Salt is also extensively diffused in brine-springs, and is advantageously manufactured at various localities; the sandstones and shales from which the brine is drawn, are of more recent date than those of the New York springs belonging to the carboniferous series. Petroleum or Seneca oil, and carburetted hydrogen, appear in many places; sulphur and alum, saltpetre, and copperas earths occur.—To the E of the mountains, the soil is excellent. In this quarter the land is level, and enriched from the washing of the

hills and uplands. In the interior the soil is rocky and barren, with fertile spots in the valleys and along the borders of the streams. Some of these valleys contain very rich land, the soil being generally a black mould two or three feet deep; but among the mountains, it is not well-adapted to cultivation. W of the mountains, the country improves, and around the head-streams of the Ohio, it is generally fertile.

Agriculture.] E of the mountains, and especially in the neighbourhood of Philadelphia, the country is under excellent cultivation, and great attention is paid to agricultural pursuits. In 1847, 14,150,000 bushels of wheat, 18,835,000 of oats, 20,200,000 of Indian corn, 12,000,000 of rye, and 150,000 of barley were raised; besides 1,720,000 tons of hay, 600,000 lbs. of tobacco, and 2,000,000 lbs. maple sugar. The farms in this state are generally large, and skilfully managed. Nearly 2,000,000 sheep are pastured in the state. Wheat and maize are the most important products, and flour of the best quality is sent to the Philadelphia and Baltimore markets. This region also produces abundance of excellent fruit. The water-melons, which are raised here, are of excellent quality, and produced in such abundance as to be often sold in the cities for a cent a-piece. Peaches, pears, and apples are also raised in great quantities and in high perfection. In the interior and W parts, wheat, maize, buckwheat, rye, oats, barley, hemp, and flax, are much cultivated.

Commerce.] Philadelphia enjoys nearly all the foreign commerce of the state, which chiefly consists in the export of the productions above mentioned. The coasting-trade also of this port is considerable. A great internal trade is carried on between Philadelphia and the West, across the mountains. The most common routes are to Pittsburg and Wheeling. There is also a port at Presqu' Isle, on Lake Erie, which has some trade. The total imports of the state in 1850, amounted to 12,066,000 drs.; the exports to 4,501,000 drs.

Manufactures.] P. is the first state in the Union for manufactures. Those of Philadelphia chiefly consist of cotton, iron, and glass. At Pittsburg and in the neighbourhood, are large glass manufactories, which furnish cut-glass ware and window glass, white, clear, and excellent, both in texture and polish. The cotton manufacture is also extensive, and occupies several large establishments here and in the neighbouring towns of Alleghany and Birmingham. The manufactures of iron employ several founderies and rolling-mills. The manufacture of steam-engines and sugar-mills, and of small steam-machinery to drive them, has become an important branch of business. There are many iron-works in various parts of the state. At York is a foundry for church-bells, and manufactures of cutlery and surgical instruments. Carpeting is also made at the same place. At Manyaunk, on the Schuylkill, are large cotton and woollen manufactories. At Chambersburg, are extensive manufactories of edge-tools, axes, carpenters' tools, hatchets, and chisels. At Bush-Hill, near Philadelphia, is a manufacture of floor-cloths from hemp and flax, and of table-cloths from cotton. At Bethany, in Wayne co., is a glass manufactory, which produces 450,000 ft. of window glass annually. In the W part of the state, are large manufactures of salt from springs. The principal salt-works are on the Conemaugh, a stream running into the Alleghany. The water is obtained by boring 400 or 500 ft. below the surface. Copper tubes are inserted in the perforation, in which the salt water rises to a level with the river, accompanied by sulphuretted hydrogen gas. Fresh water is seldom found below 100 ft. Veins of coal and slate are penetrated at various depths, and narrow beds of limestone, lying deep, are passed through. In the process of manufacturing, salt water is pumped by horse-power into large troughs, where the earthy particles not held in solution subside. It is then passed into a shallow boiling pan of cast-iron, and after boiling is drawn off into vats, where the oxide of iron, which is abundant, and the earthy salts, subside, together with a portion of muriate of soda. The clean brine is passed off into a boiler, in which the salt is precipitated, and then removed to drain. The fisheries of P. are of little value; the capital invested only amounts to 170,000 drs. The products of the forest are only exceeded in value by those of Maine and New York. Lumber is the largest item, the fur-bearing animals being almost extinct in this state. Some considerable quantities of pearl and pot ashes, with a little turpentine, tar, and miscellaneous articles, also appear in the returns. The banking capital of P. amounted, in 1846, to 14,871,837 drs. Railroads and canals intersect this state in every direction.

Finances.] Early in the annals of internal improvement, P. embarked largely in extending and facilitating her communications by constructing some of the most magnificent works in the country, and contracted an immense debt, chiefly held against her by foreign bondholders. In 1838 the state-debt amounted to 24,140,003 drs.; in 1848, it had reached 40,578,949 drs. The pressure of the times and other collateral circumstances compelled the state to suspend paying interest on these liabilities; the credit of the state was totally annihilated, and the whole commonwealth condemned to disgrace. A just outcry was on this account raised, and all further intercourse in matters of this description was entirely discontinued. But the state has resumed an honourable course, and one satisfactory to all interested. After making trial of various unfortunate devices, the state manfully undertook the task of regenerating its credit by levying a tax of 3 mils on each dollar of assessed valuation of property in the state; and since the year 1846, all accruing interests have been punctually paid. However just the denunciations may have been in times past, and however degrading the position of this state, P. has now redeemed herself, and stands on the books of the capitalist solvent; and there is little doubt, had the arch-clamourist, the witty and rev. Sidney Smith, lived to see the return of confidence this state now enjoys, he would have had pleasure in recalling his not unmerited anathemas. The report by the auditor-general of P. states the revenue and expenditure of the state on the 30th November, 1850, as follows:—

Total revenue, ...			4,438,131 d. 51 c.
Balance in treasury, Dec. 1, 1849, . .	926,207 d. 24 c.		
Unavailable deposit in the Bank of the United States,	280,000	00	
			1,206,207 24
Total, . . .			5,644,338 75
Total expenditure, . . .			4,569,053 d. 94 c.
Balance in the treasury, Nov. 30, 1850, available, .	754,252 d. 81 c.		
Depreciated funds in the treasury unavailable, .	41,032	00	
Deposit in Bank of the United States unavailable, .	280,000	00	
			1,075,284 81
Total, . .			5,644,333 d. 75 c.

The balance in the treasury on the 30th of November 1850, and the amount paid commissioners of the sinking fund, make an aggregate of 1,073,116 d. 84 c.; exceeding the balance in the treasury on the 30th of November 1849, by 146,909 d. 60 c. Unavailable funds in treasury, November 30, 1850, 321,032 d. The actual revenue of the state for the year was 187,941 d. 60 c. more than the actual or ordinary expenditure.—The payment of interest on the state

debt exceeded 2,000,000 d. This debt was, on 1st Dec. 1850, as follows:

Six per cent. stocks,		2,312,022 d.	51 c.
Five per cent. stocks,		37,350,892	27
Four and a half per cent stocks,		200,000	00
Total funded debt,		39,062,914 d.	78 c.
The unfunded debt was as follows:			
Relief notes in circulation,	652,164 d. 00 c.		
Interest, certificates outstanding,	162,135 90		
Interest, certificates unclaimed,	4,448 38		
Interest on unclaimed and outstanding certificates to be added to them when funded,	10,504 57		
Domestic creditors,	83,317 d. 79 c.		
Total unfunded debt,		912,570	64
Total public debt, Dec. 1, 1850,		40,775,485 d.	42 c.
Deduct, held by commissioners of the sinking fund, 459,122 d. 98 c., which makes the actual public debt,		40,316,362	44
Regular annual interest on loans, nearly		2,005,000	00
Add guaranteed interest on internal improvement companies,		32,500	00
Total interest for the year, nearly		2,037,500 d.	00 c.
The productive property owned by the state, was on 1st Dec. 1850:			
Stock in incorporated companies,		1,907,948	52
Pennsylvania railroads and canals,		29,204,787	33
Total productive property,		32,112,735 d.	85 c.

Divisions and population.] P. is divided into 64 cos. Its cap. is Harrisburg, situated on the E bank of the Susquehanna, in N lat. 40° 2′ 36″, W long. 76° 20′ 33″. The pop. at several periods was as follows:

Years.	Whites.	Slaves.	Free Blacks.	Total coloured.	Total.
1790	424,099	3,737	6,537	10,274	434,373
1800	586,095	1,706	14,564	16,270	602,365
1810	786,804	795	22,492	23,287	810,091
1820	1,017,094	211	32,153	32,364	1,049,458
1830	1,309,900	67	38,266	38,333	1,348,233
1840	1,676,115	64	47,854	47,913	1,724,033
1850	2,258,480		53,201		2,314,807

Education.] In the higher branches of education, P. enjoys institutions of celebrity. The principal colleges are the university of P. at Philadelphia; Dickinson college at Carlisle; Jefferson college at Canonsburg; Washington college, Alleghany college, and those of Pennsylvania, La Fayette, and Marshall. There are also several medical schools and theological seminaries. There were in this state, in 1840, 290 academies and grammar-schools, with 15,970 students, and 4,968 common schools, at which 179,989 children received their education. The number of white persons over the age of 20 years, unable to read and write, was 33,940, but of this amount more than 26,000 were from Ireland alone. The whole number of school districts reported, exclusive of the city and co. of Philadelphia, for the year ending June 1850, was 1,445. The whole number of schools was 8,844. The average number of months that schools were taught was 5·1. Number of male teachers, 7,236; number of female teachers, 4,005. Average wages per month of male teachers, 17d. 20 c.; of female teachers, 10 d. 15 c. Number of male scholars, 242,621; number of female scholars, 198,181; number learning German, 11,041. The average number of scholars in each school was 40; and the cost of teaching each scholar per month, 1 d. 44 c. The amount of tax levied in the accepting districts was 795,401 d. 48 c.; received from the state appropriation, 159,367 d. 44 c. The cost of instruction was 609,377 d. 45 c.; fuel and contingencies, 63,329 d. 14 c.; of school-houses, repairs, &c., 253,741 d. 06 c. The number of taxables by the triennial return in 1850 was 499,395. Since, and including 1844, the annual appropriation by the state for the support of schools has been 200,000 d.—Church statistics exhibited the following results in returns of 1847. The Methodists are the most numerous denomination of Christians, having 629 travelling, 57 superannuated, and 989 local preachers, and about 80,000 or 90,000 communicants. Presbyterians are next in point of numbers. The 'old school' have 417 churches, 307 ministers, and 45,213 church members. The Baptists have 302 churches, 208 ministers, and 27,873 members; the Congregationalists have 16 churches, 90 ministers, and 5,506 members; and the Protestant Episcopalians have 127 ministers, and an extensive connection. The Universalists have 48 churches, and 29 preachers. Roman Catholics, Presbyterians, and Baptists (of denominations other than those above named), Jews, and especially the Society of Friends, are numerous.

Constitution.] The constitution of P. provides for an executive, legislature, judiciary, &c. The governor is elected by the people, and may hold office six years out of nine. He must be 30 years of age, and have resided in the state for 7 years. The legislative power is vested in a general assembly, consisting of a senate and house-of-representatives. The senate consists of 33 members, elected for 3 years, one-third being elected annually. The house-of-representatives has 100 members, elected annually. There are the usual restrictions as to age, citizenship, and residence. Judicial officers were until 1850 appointed by the governor, with the consent of the senate: they are hereafter to be elected by the people. The judges of the supreme court hold their seats for 15 years, and the president and judges of the several courts of common pleas for 10 years. The secretary of the commonwealth is appointed by the governor, and holds office during his pleasure. The treasurer is elected by the general assembly in joint ballot. The right of suffrage is granted to every white freeman of the age of 21 years, who has resided in the state one year, and in the district where he deposits his vote ten days next previous to the election. It is an indispensable qualification that the voter must have paid a state or county tax. The legislature meets at Harrisburg on the first Tuesday in January annually.

Canals.] The state works, begun in 1825, comprise a series of railroads and canals, extending across the country from tide-water to the Ohio, and branching-off in different directions to almost every section of the state. The Grand Trunk canal and railroad extends from Philadelphia to Pittsburg, a distance by this route of 400 m. The first division of the work is a railroad from Philadelphia to Columbia, on the Susquehanna, 81 m.; here the canal begins, and is continued up the Susquehanna and the Juniata to Holidaysburg, 172 m., part of which distance is occupied by pools. The rise and fall in this section is 748 ft., and the summit at Holidaysburg is 684 ft. above Columbia. The canal is 40 ft. wide at top, and 4 ft. deep. The Alleghany ridge is then surmounted by the Alleghany Portage railroad, 37 m. in length, with a total rise and fall of 2,570 ft. This railroad comprises 10 inclined planes, about 4 m. in length, passed by stationary steam-engines. The summit-level is 2,325 ft. above the sea. At Johnstown the western section of the canal begins, and is continued down the Conemaugh or Kiskiminetas, and the Alleghany to Pittsburg, 104 m., with a total lockage of 471 ft. The Delaware branch of the Pennsylvania canal extends from Easton to Bristol, on the r. bank of the river, 60 m., with a descent of 170 ft. The Susquehanna division extends up the Susquehanna and the North branch, from the mouth of the Juniata to Holidaysburg, 127 m. The West branch division runs from Northumberland up the W branch of the Susquehanna to Farrandsville, 75 m. The North branch division runs to Wilkesbarre, 73 m. The French Creek division extends up the river of that name, from Franklin at its mouth, to Meadville and the Conneat lake, 46 m. The Beaver branch, from the Ohio to Newcastle on the Shenango, is 30 m. long.—The total number of miles of railroad in operation within the state on 1st January 1853 was 1,211, while 914 m. additional were in progress.

History.] In 1638, a company of Swedes purchased a tract of land from the Indians on the W side of the Delaware river, and there made the first settlement of the state. The Dutch obtained possession of the territory; but in 1664, when the English captured New Netherlands, they obtained possession of this colony

also, and for several years it was held subject to the governors of New York. In 1681, William Penn, the celebrated Quaker, obtained the grant of a charter for the territory from Charles II., and proceeded to settle the country. In 1768, the boundary known as Mason and Dixon's line was run between P. and Virginia. William Penn died in 1718, and his heirs continued to hold his interests until the revolutionary war, when they sold their claims to the commonwealth for the sum of 580,000 dollars. In 1775, an addition, by purchase of the Indians, was made in the NW. The first constitution of the state was adopted in 1776; the second in 1790; the present in 1838; and amendments were passed upon it in 1850. Delaware was originally a part of Penn's patent, and for a long period formed a component part of P. During the 7 years' war with France, and the revolutionary war, this state took an active position. It was several times occupied by the royal forces, and for some months Philadelphia was made their head-quarters.

PENN-YAN, a village of Milo township, Yates co., in the state of New York, U. S., 192 m. W of Albany, on the outlet of Crooked lake. Pop. 1,800.

PENO (Lake), a lake of Russia, in the gov. of Tver, 20 m. SW of Ostushkof. It is 15 m. in length from N to S, and about 2½ m. in breadth. On the N it receives a small stream from Lake Sterj; and on the W the river Knd; and on the SE it discharges its waters by the infant Volga.

PENOBSCOT, a river of the state of Maine, U. S., formed by the confluence of two streams, the larger and western of which rises in the highlands, in the W part of the state, on the confines of Canada, and near the sources of the Chaudiere; flows E; and passes through Chesumcook, Pemadumcook, and other lakes, before uniting with the Sebovis or E branch, which issues from a series of small lakes near the head-waters of Aroostook river, and flows S to its junction with the W branch, which takes place 54 m. above Bangor. The P. then directs its course SE to the confluence of the Mattawamkeag river; then SSW until it receives the Piscatiquis, and afterwards flows S by W till its entrance into the bay of the same name. It has a total course of about 275 m.; and is navigable to Bangor a distance of 50 m, and at which there is a tide-rise of upwards of 20 ft. Above Bangor the river is studded with islands, all of which, to the extent of several miles above the Mattawamkeag river, belong to the Penobscot tribe of Indians, and the principal of which, named Oldtown, forms the residence of the tribe. Several of these islands are of large size, and very fertile. A considerable annuity is secured to this tribe of Indians by the government. The principal towns on the river are Castine, Bucksport, and Orrington, on the E side, and on the W are Thomaston, Camden, Belfast, Prospect, Frankfort, Hamden, Bangor, and Orono.—P. bay forms a fine embrasure, 20 m. in depth from Owl's-head to Belfast bay; and 30 m. in breadth at the entrance, from Owl's-head to Burnt Coat island. It contains numerous islands, of which the principal are Deer, Fox, and Long islands, and the Isle of Hant; and along its shores are Castine, Belfast, Buckport, Bangor, and many other fine harbours.—Also an extensive co. in the N part of the state of Maine, drained in its upper parts by the head-branches of Aroostook and the W branch of Penobscot rivers, and containing numerous lakes, and intersected in its lower parts by the Penobscot, and its tributaries the Mattawamkeag, Sebec, and Kanduskeag rivers. It has an undulating surface, but the soil is generally fertile. Pop. in 1840, 45,705; in 1850, 63,094. Its cap. is Bangor.—Also a township of Hancock co., in the same state, 8 m. N by E of Castine, on the E side of the bay of the same name. In its NE part is a large pond. Pop. 1,474.

PENOL (El), a town of New Granada, in the dep. of Cundinamarca and prov. of Antioquia, 54 m. SE of Santa Fe-de-Antioquia, and 87 m. NNW of Mariquita, on an affluent of the Magdalena, at an alt. of 2,059 yds. above sea level. Pop. 822.

PENOMPING, or Calompe, a town of Siam, in Camboja, on the r. bank of the Mekon, 50 m. SSE of Camboja and 110 m. NW of Saigon.

PENON-DE-ALHUCEMAS. See Alhucemas.

PENON-DE-VELEZ, a fortified Spanish presidio, in Marocco, in the prov. of Fez, a little to the NE of Velez-de-la-Gomera, 75 m. SE of Ceuta, and at a nearly equal distance W of Melilla, on a lofty rock, surrounded by the Mediterranean, in N lat. 35° 11′ 45″, and W long. 4° 13′ 55″. It possesses two churches, a chapel, an hospital, and bomb-proof powder and provision stores. Water is supplied by means of a large cistern. The Penon is merely a fortress built on a rock surrounded on all sides by the sea, with a port for the reception of vessels of small dimensions. It is situated facing the Campo-del-Moro, whence it is separated by a strait about 100 varas = 450 yds. across, called the Fredo. At one extremity of this strait is a small fort provided with a few cannons, and standing on a piece of land called the Islete, connected with the principal rock on which the fortress is built by a kind of natural bridge little indebted to art for its construction. The town, containing a crowded pop., is built in the form of an amphitheatre, and consists of only two streets. This town was built in 1508, by D. Pedro-de-Navarra. In 1520 it was taken by the Moors, but was recovered in 1664 by the Spaniards, and has ever since been in their possession. See Ceuta.

PENPONT, a parish in Upper Nithsdale, Dumfries-shire, measuring 14 m. in extreme length from NW to SE, and 32¼ sq. m., or 16,418 Scottish acres in area. Two-thirds or more of the whole area are arranged lengthwise into four generally steep ridges, and three deep and narrow glens each watered by a plentiful stream. In the bosom of the river Skarr's left mountain-flank, rises almost perpendicularly from the glen, the naked stupendous crag of Glenquhargen, a mountain mass of nearly bare stone, amidst highlands where all else is green or russet, one of the greatest curiosities in the S of Scotland. About 1¾ m. SE of it appears the summit of Cairnkinna, crowning a gradual ascent, possessing an alt. of 2,086 ft. above sea-level, and commanding a view of large parts of Nithsdale and Annandale, considerable portions of Ayrshire, Kirkcudbrightshire, and Clydesdale, and some blue and hazy summits in Cumberland and Westmoreland. The village of P. stands on the Skarr, 2 m. W of Thornhill. It is a straggling, rural, pleasant place; and consists of three clusters, Penpont Proper, Townhead of Penpont, and Brierbush. Its pop. is between 400 and 500. Pop. of the p. in 1831, 1,232; in 1851, 1,411.

PENPU, or Fombu, a town of the Lieu-kieu archipelago, in the Great Lieu-kieu island and prov. of Chan-pe, on the S bank of a peninsula, which projects from the W side of the island and 36 m. N of Zieuly.

PENRHOS, a parish in Carnarvonshire, 3½ m. SW by W of Pwllheli. Area 555 acres. Pop. in 1831 and in 1851, 112.

PENRHOS-LLIGWY, a parish in Anglesey, 3 m. NE of Llanerch-y-Midd. Area 2,894 acres. Pop. in 1831, 557; in 1851, 553.

PENRHYDD, or Penrith, a parish in Pembrokeshire, 7 m. SE of Cardigan. It includes the chapelry of Castellan. Area 899 acres. Pop. in 1851, 421.

PENRHYN, a township and sea-port in Llandegai p., Carnarvonshire, adjacent to Bangor, and 8½ m. NE of Carnarvon. Port P., at the influx of the river Ogwen into the Menai straits, is considered the harbour of Bangor. It has a commodious quay, at which vessels of 300 tons can easily load and unload. The castle of P. is a magnificent structure, entirely composed of Mona marble, and occupying the site

of the palace of Roderic Molwynog, prince of Wales in 720. A great slate quarry exists at Dolawin, in this township, about 6 m. from Bangor, at the entrance of the romantic valley named Nant-Frangon. The solid masses of slate taken from this quarry are from 80 to 100 ft. in height. Pieces are shaped on the spot into grave-stones, chimney-pieces, roofing slates, cisterns, rails, &c.: about 2,000 persons are here constantly employed, and the quantity of slate taken daily from the quarry amounts to 200 tons. They are conveyed on a railway to Port- P., whence they are shipped to all parts of Great Britain, and even to the United States of America.

PENRHYN ISLANDS, a group of islands in the S. Pacific, in S lat. 9° 2′, and W long. 157° 35′. They are densely covered with wood, consisting chiefly of cocoa-palms and pandanus, and appear very populous. The inhabitants are robust and well-made. Their only clothing consists of a cincture made of cocoa-palm leaves. Fishing forms their chief employment.

PENRHYS, or Penrice, a parish in Swansea, Glamorganshire, 10 m. W by S of Swansea. Area 2,248 acres. Pop. in 1831, 362; in 1851, 398. Some of the ruins of castle P. are still to be seen, and on part of its site stands the modern P.-castle, an elegant structure.

PENRITH, a parish and market-town in Cumberland, comprising the townships of Burrogate, Dockray, Middlegate with Sandgate, Netherend-Bridge with Carleton, and Plympton-Head; and intersected by the Carlisle and Lancaster railroad, by which it is 17½ m. distant from Carlisle, and 51½ m. from Lancaster. Area 7,664 acres. Pop. in 1831, 6,059; in 1851, 7,387. The pop. of the town and p. are in general employed in agriculture, and in the manufacture of checks, ginghams, fancy waistcoat-pieces, and hats. The vicinity is rich in lead ore, blue slate, flags, and freestone. The town is pleasantly situated in a fertile valley, a little to the N of the river Eamont, within the district called Inglewood forest, and commanding a noble view of the mountains which environ the lake-district. It consists principally of one long, but irregular street, well-paved and lighted with gas, and lined with good houses. The houses are chiefly built of red freestone and roofed with a fine slate. Considerable and handsome additions to the town have been made of late years. The parish-church, nearly in the centre of the town, is a handsome structure; and a very elegant chapel in connection with the Establishment has recently been opened. The pop. of the town itself as distinct from the p. was 6,668 in 1851. The ancient castle and likewise the more modern hall of the family of Brougham and Vaux are on the S bank of the Eamont in this vicinity, and within a brief distance of each other.—P. is a place of considerable antiquity. It was twice burned in the reigns of Edward III. and Richard II., when a strong fortress—some considerable remains of which still exist—was erected to prevent further incursions of the Scots. It also suffered dreadfully by the plague at two different periods.

PENROSE, a parish in Monmouthshire, 6 m. W by S of Monmouth. Area 2,695 acres. Pop. in 1831, 398; in 1851, 353.

PENRYN, a borough and chapelry in St. Gluvias p., Cornwall, 50 m. SW and nearly adjoining to Falmouth, at the NW extremity of Falmouth creek or inner harbour. Area 325 acres. Pop. in 1831, 3,521; in 1851, 3,959. The town, which stands on the declivity of a hill rising from a creek running into Falmouth harbour, chiefly consists of one broad street, and two or three of a narrower description. The town-hall and the market-house occupy a prominent place in the principal street. The imports are chiefly those requisite for home consumption, and for the mines in the immediate vicinity. The export is almost exclusively granite, which is quarried a few miles from the town. There is no manufacture of any importance; but several good breweries and grist and paper mills. The pilchard and Newfoundland fisheries have been of service in the employment of many of the inhabitants. The income of the borough for 1840, was £678; in 1849-50, £514. In conjunction with Falmouth, the borough returns 2 members to parliament.

PENSACOLA, a sea-port of the state of Florida, U. S., on a bay of the same name, 10 m. from the gulf, in N lat. 30° 24′, and W long. 87° 10′, 1,050 m. distant from Washington. Its streets are broad and regularly laid out, but covered with deep sand, and its houses are mostly of wood. Pop. in 1850, about 2,800. It has a wharf extending 600 ft. into the bay, and forms an important port-of-entry in Florida; but the harbour is shallow, and a sand bank crossing the mouth of the bay has only 22 ft. water upon it at high tide. An important navy-yard belonging to the Union has been formed upon Tartar-point, which stretches out into the bay; and a light-house with a revolving light, stands on the W shore of the bay, within the entrance, in N lat. 30° 20′, and W long. 87° 11′. The fortifications of P. were repaired and strengthened by the English while they held the place in 1814, and have since been much strengthened; but the best defences of the town consist in the marshes which surround it.—Also a little island in the lake of Nicaragua, almost within cannon-shot of the old castle of Granada, "one of the out-lyers of the labyrinth of small islands which internal fires long ago thrust up from the depths of the lake around the base of Momobacho." It contains numerous Aztec monuments.

PENSAX, a chapelry in Lindridge p., Worcestershire, 6 m. SW of Bewdley. Area 1,190 acres. Pop. in 1831, 571; in 1851, 537.

PENSCELLWOOD, a parish in Somersetshire, 3½ m. NE by E of Wincanton. Area 1,101 acres. Pop. in 1831, 361; in 1851, 431.

PENSFORD (St. Thomas), a parish and market-town in Somersetshire, 27 m. NNE of Somerton, on a branch of the Avon. Pop. in 1851, 316.

PENSHAW, Pensher, or Painshaw, a chapelry and township in Houghton-le-Spring p., co.-palatine of Durham, 5¾ m. WSW of Sunderland, in the line of the Durham Junction railway. Area 1,066 acres. Pop. in 1831, 2,539; in 1851, 2,120. Lime and excellent freestone are wrought here.—On Pensherhill a monument has been erected to the memory of the late Earl of Durham. The structure approximates to that of a Grecian temple, eighteen equidistant columns, 30 ft. in height, and 6½ ft. in diameter, supporting at each end a magnificent pediment, with a deep entablature on each side. The height to the upper point of the pediment is about 70 ft. It forms a prominent object from the railway between Darlington and Newcastle.

PENSHURST, a parish and town in Kent, 4½ m. WSW of Tonbridge, on the banks of the Medway. The SE railway passes 2 m. N of the town, which gives the title of baron to Smythe, Viscount Strangford. Area 4,526 acres. Pop. in 1851, 1,628.

PENSTHORPE, a parish in Norfolk, 2 m. E by S of Fakenham, on the river Wensum. Area 753 acres. Pop. in 1831, 30; in 1851, 11.

PENSTON, a village in the p. of Gladsmuir, Haddingtonshire, 3 m. E of Tranent. It occupies the centre of one of the most extensively-worked coal districts in the county, and is inhabited chiefly by colliers.

PENSTROWED, a parish in Montgomeryshire, 3 m. W of Newtown, on the SW bank of the Severn. Area 1,220 acres. Pop. in 1831, 123; in 1851, 110.

PENTA-DAKTYLON, a mountain-range of Greece, in the Morea, which runs in a SSE direction along the confines of the nomarchies of Lacedemonia and Laconia, and terminates in the latter, in Cape Matapan, forming the S extremity of the Hellenic chain. Its highest summit, Mount Hagios Ilias or Mount St. Elias, has an alt. of 7,829 ft. above sea-level, and is conspicuous for its abrupt sharpness. It is the *Taygetum* of the ancients. The summits of this ridge are not unfrequently clothed in snow. A cultivated tract occupies its middle region.

PENTAIA, a town of Cyprus, near a bay of the same name, on the NW coast of the island, 25 m. WNW of Nicosia.

PENTECOST, an island off the NE coast of Australia, in the group of the Cumberland islands, in S lat. 20° 23′, and E long. 148° 59′.

PENTECOST, or WHITSUNTIDE, an island of the S. Pacific, in the group of the New Hebrides, in S lat. 15° 45′, and E long. 168° 17′. It is 23 m. in length from N to S, and 8 m. broad. It has a mountainous surface, but is well-cultivated. It was discovered in 1768 by Bougainville, on the day from which it takes its name.

PENTEDATTILO, a town of Naples, in the prov. of Calabria-Ultra, 14 m. SE of Reggio, cant. and 3 m. NW of Melito, on a rock. Pop. 820. The environs afford large quantities of silk.

PENTELI, or MENDELI, a mountain of Greece, in the nomarchy of Attica, 16 m. NNE of Athens. It is the *Pentelicus* of the ancients. Alt. 3,637 ft. About 4 m. to the S is a village of the same name.

PENTELLARIA. See PANTELLARIA.

PENTEMSIA, a small island of Greece, in the gulf and to the NE of the island of Egina.

PENTEREAZ, or PENTHALAZ, a village of Switzerland, in the cant. of Vaud, 6 m. SE of Orbe, and 13 m. N of Lausanne. Pop. 294.

PENTERRY, a parish in Monmouthshire, 3½ m N by W of Chepstow. Area 479 acres. Pop. in 1831, 55; in 1851, 34.

PENTHIEVRE, a fort of France, in the dep. of Morbihan, cant. and 4 m. N of Quiberon, and 20 m. SE of Lorient, at the narrowest point of the isthmus by which the peninsula of Quiberon is connected with the main-land.

PENTHIR-BAY, a bay of France, in the dep. of Finistere, cant. and 6 m. W of Crozon, and 18 m. WNW of Chateaulin, on the Atlantic, between a headland of the same name on the W, and the bay of Dinant on the E. It is about 1 m. in width at the entrance, and possesses little depth.

PENTIMA, a town of Naples, in the prov. of Abruzzo-Ultra and 6 m. NW of Sulmona. Pop. 1,600. The ruins of the ancient *Corfinium*, in the vicinity, form the chief materials of which this town is built.

PENTLAND FRITH, the strait or sound betwixt continental Scotland and the Orkney islands, connecting the Atlantic and the German oceans. Its length is about 17 m.; its breadth, from 6 to 8 m. At the middle, it expands, on the N side, into Scalpa-flow. On the coast of Caithness it terminates, on the E, at Duncansby-head, and, on the W, at Dunnet-head; on the N, or Orkney side, it is terminated, on the E, by a headland of S. Ronaldsay, and, on the W, by a headland of Hoy. The distance, or breadth of sea, between the eastern terminations, is 6 m.; that between the western terminations, is 7 m. Nearly in the centre of the E end of the frith, but 2¼ m. E of a straight line between Duncansby-head and South Ronaldshay, lie the Pentland Skerries; and 12 m. NW of Duncansby-head, and 1½ m. from the nearest point of the Caithness coast, lies the island of Stroma. About 3½ m. NNE of this island, 2 m. W of the nearest point of S. Ronaldshay, and looking right up the centre of Scalpa-flow, lies the island of Swona; and 2 m. WSW of Stroma, and not far from the Caithness coast, are some very dangerous rocks, called the Merry Men of Mey, which cause a dreadful agitation of the sea. At the E end of the frith, outward from Duncansby-head, is another very rough and dangerous piece of sea, occasioned also by rocks alternately submerged and visible, called 'the Boars of Duncansby.' The Pentland frith is the most dangerous of the Scottish seas; yet must be traversed by all vessels passing from the E of Scotland to the Atlantic, or from the W to the German ocean, which cannot navigate the limited capacities of the Caledonian canal. The tide varies in rate from 3 to 9 m. an hour, according to the height of its rise, and the consequent mass of waters. At full spring, it rises 8 ft.; and on extraordinary occasions 14 ft.; at neap it rises from 3½ to 6 ft. The flood comes northward along the W coast of Scotland, runs eastward through the frith, and then courses away S along the E coast. But, in consequence of sudden contractions and expansions of the channel, and of the intervention or obstruction of headlands, islands, rocks, and shoals, counter-currents are produced in the frith as rapid as the tide itself; and these, in their collisions with one another, or with the tide, or with sunken rocks, produce powerful eddies and stupendous spoutings which, when lashed and infuriated by gales, are menacing to even the largest vessels. The stream along the coasts flows in a direction opposite to that of the central or main current.

PENTLAND HILLS, a beautiful range of heights, partly in Peebles-shire, and chiefly in Mid-Lothian. The range is geographically a slender continuation to the NE of the congeries of mountains and hills which comes off from the Southern Highlands, and occupies most of the area of Peeblesshire; and extends about 12 m. to a point about 4 m. SW of Edinburgh. The summits at the NE end, or in Collinton and Lasswade, rise, in several instances, about 1,600 ft. above sea-level; and several which form a group about the middle, have an alt. of upwards of 1,700 ft.; East-cairn-hill, the highest, rising 1,802 ft. above the level of the sea at Leith. From some of the copious springs of pure water which they in numerous places send up, Edinburgh is supplied by pipes. The P. have geognostically no affinity to the Tweeddale heights, but, in most cases, consist entirely of porphyry,—chiefly of the claystone and felspar varieties. Malachite or green carbonate of copper, and one or two other rare minerals, occur on this range.

PENTLAND SKERRIES, two islets and some contiguous rocks, a little seaward of the middle of the E entrance of the Pentland frith. The smaller islet lies 1¼ m. S by W of the larger, and is uninhabited. The larger islet lies 4½ m. ENE of Duncansby-head, and 3½ m. S by E of the Loather rock, on the nearest part of the Orkney coast. In 1794 a lighthouse was built on the larger Skerry. It stands in N lat. 58° 41′, and W long. 2° 55′; and consists of two towers, with a higher and a lower light.

PENTLOW, a parish in Essex, 3½ m. E by N of Clare, on the river Stour. Area 1,847 acres. Pop. in 1831, 340; in 1851, 380.

PENTNEY, a parish in Norfolk, 7 m. NW by W of Swaffham. Area 2,330 acres. Pop. in 1851, 624.

PENTON-MEWSEY, a parish in Southampton-shire, 2¾ m. NW by W of Andover. Area 1,044 acres. Pop. in 1831, 254; in 1851, 210.

PENTONVILLE, a populous district in St. James, Clerkenwell p., Middlesex, 1¾ m. N by W of St. Paul's. Area 134 acres. Pop. in 1841, 9,522; in 1851, 11,904. The Government model prison, or penitentiary, is situated in this neighbourhood. See article LONDON, also CLERKENWELL.

PENTRAETH, a parish in Anglesey, 5 m. WNW of Beaumaris. Area 4,013 acres. Pop. in 1831, 938; in 1851, 963.

PENTRICH, a parish in Derbyshire, 2 m. S by W of Alfreton, in the line of the Birmingham and Derby railway, comprising the township of P. and the chapelry of Ripley. Area 3,889 acres. Pop. in 1831, 2,521; in 1851, 3,557.

PENTRIDGE, a parish in Dorsetshire, 3½ m. NW by N of Cranborne. Area 1,764 acres. Pop. in 1831, 241; in 1851, 256.

PENTROBIN, a township in Hawarden p., co. of

Flint, 4¾ m. WSW of Hawarden, on the W bank of the river Alen. Area 1,586 acres. Pop. in 1831, 931; in 1851, 940.

PENTYRCH, a parish in Glamorganshire, 7 m. NW of Cardiff, in the line of the Taff-Vale railway, and the Merthyr-Tydvil canal. Area 3,975 acres. Pop. in 1831, 926; in 1851, 1,599.

PENVENAN, a commune of France, in the dep. of the Cotes-du-Nord, cant. and 4 m. NW of Treguier, and 10 m. NE of Launion. Pop. in 1846, 2,913.

PENWORTHAM, a parish in the co.-palatine of Lancaster, 1½ m. SW of Preston, on the S bank of the Ribble, and in the line of the North-Union railway, which here crosses the Ribble on a fine viaduct, including the townships of Farrington, Howick, Hutton, and Penwortham, and the chapelry of Longton. Area 2,277 acres. Pop. in 1831, 4,679; in 1851, 1,487.

PEN-Y-BONT, a hamlet in Llanbadarn-Fawr p., Radnorshire, 7 m. WNW of New Radnor, on the river Aran.

PEN-Y-CLAWDD, a parish in Monmouthshire, 2½ m. E by N of Ragland. Area 614 acres. Pop. 42.

PENZA, a government, district, and town of Russia in Europe. The gov. lies between 52° 48′ and 55° N lat., and 42° 26′ and 48° 40′ E long.; and is bounded on the N by the gov. of Nijnii-Novgorod; on the NE and E by that of Simbirsk; on the S by the gov. of Saratov; and on the W by that of Tambov. It is 180 m. in length from E to W, and 165 m. in extreme breadth, and comprises an area of 33,394 sq. versts, or 14,568 sq. m. Pop. in 1841, 1,018,100; in 1846, 1,087,200. This gov. is intersected in the SW by the ridge of hills which separates the basin of the Caspian sea and that of Azof, but the surface is generally flat. The principal rivers are the Sura, Insara, Isa, Moksha, Vad, and Vicha, affluents of the Volga; and the Khoper and Vorona, which belong to the basin of the Don. The climate is mild, and the soil fertile. It is one of the most fertile grain provs. of the empire, producing rye, spelt, barley, oats, millet, and buck-wheat, also large quantities of hemp. Its extensive pasturage supports large numbers of cattle. The rivers, especially the Sura, abound with fish. Near Troïtzk are highly productive mines of iron, and in several parts are quarries of millstone. The forests are extensive, and afford excellent timber, particularly oak. Linen and woollen fabrics, cloth, leather, soap, vitriol, and glass, form articles of extensive manufacture in this gov. It possesses also numerous distilleries of spirits from malt, several iron founderies, and manufactories of beet-root sugar, and carries on an active trade. The government of Penza is administered by a civil governor, dependent on the military government of Novgorod. It is divided into 10 districts; and contained, in 1831, 13 towns and 17 public schools.—The town is 360 m. ESE of Moscow, and 750 m. SE of St. Petersburg, partly at the foot and partly on the NE side of a height, near the l. bank of the Sura, at the confluence of the little river Penza. Pop. 11,000. The majority of the houses are of wood, and generally ill-built; but from the number of its churches, and several large mansions which have been built in it by the noble families connected with this district, it presents a generally handsome effect. Besides the cathedral, which is a large and well-built edifice founded in 1717, it has 11 churches, a gymnasium, and several schools. The principal street, and the great square, are elevated 60 ft. above the level of the Penza. The lower part of the town, on the opposite bank of the Penza, is generally inundated in spring. The manufacture of leather and of soap forms the chief employment. The shops are well-stocked with the productions of foreign markets. This town was founded in 1666 by the czar Alexis-Mikhaïlovitch.

PENZANCE, a sea-port and chapelry in Madron p., Cornwall, 73 m. SW by W of Launceston, and 9 m. ENE of the Lands-end, on the NW side of Mounts-bay. Pop. in 1801, 3,382; in 1831, 6,563; in 1851, 9,214. The town is of considerable size and importance, consisting chiefly of four streets of neat houses, with a market-place at the point of their intersection. A new guild-hall and market-house were erected in 1838. The pier, exclusive of recently projected improvements, is about 800 ft. in length; with a depth of water at spring-tides of 17 ft. The projected improvements consist of a floating dock or inner basin, with gates, to contain 350 sail of vessels, exclusive of the accommodation in the outer basin for 100 sail more; for the further protection of shipping, an extensive breakwater in the bay has been projected. The number of vessels and boats above 15 tons registered at this port, in 1837, was 83; tonnage, 4,469; in 1850, 98 = 9,198 tons. The total amount of tonnage which entered the port and its outports in 1837 was 49,943, of which 5,179 tons were with foreign imports: mining speculations had previously increased the importation of foreign timber to a great extent. In 1850, there arrived inwards and coastwise 580 vessels = 34,641 tons; 10 = 1,028 tons fron the colonies; and 18 = 1,684 tons from foreign ports. Portleven, Newlym, and Mousehole, are outports of P. The gross receipt of customs in 1839 was £23,735; in 1849, £12,413. The exports are chiefly tin, copper ore, china clay, leather, wool, and fish,—chiefly pilchards. There are no manufactures in the district, which is agricultural and mining. The Royal Geological society of Cornwall, instituted in 1814 for the cultivation and diffusion of a knowledge of mineralogy and geology, has a hall here, and a valuable museum of mineralogical and geological specimens. A public library, containing about 4,500 vols., was instituted in 1817. There are other three considerable libraries and two news-rooms. The income of the borough in 1840 was £2.680; in 1849-50, £3,574. P. is situated in a district no less noted for its fertility than for the beauty of its scenery, and the salubrity and peculiar mildness of its temp.: hence it is much resorted to by invalids both as a watering-place for visitors and as a permanent residence. According to Sir James Clark, the mean annual temp. of P. is only 3° below that of Rome; while that of London is 10°; and the mean temp. of winter in Rome is only 5° higher than that of P. About one-third more rain falls at P. than at Rome.

PENZING, a village of Austria, in the circle and 3 m. W of Vienna, on the l. bank of the Wienfluss. Pop. 3,135. It contains numerous villas, belonging to the inhabitants of the metropolis, and has extensive manufactories of silk and cotton fabrics, and of vinegar.

PENZLIN, a frontier-town of the duchy of Mecklenburg-Schwerin, in the duchy of Mecklenburg-Gustrow, 12 m. N of Neu Strelitz, and 45 m. ESE of Gustrow, between two small lakes. Pop. 2,200. It is enclosed by walls, and has a castle. It has manufactories of coarse woollen fabrics, and of pottery, nails, and leather; and several breweries and distilleries of brandy.

PEO-HAM-CHIN, a group of islets in the Yellow sea, near the Chinese coast, in N lat. 38° 20′, E long. 121° 10′.

PEONA, a village of Sardinia, in the prov. of Nice, mand. and 3 m. NE of Guillaumes, on the Tueli. Pop. 550. It has several oil-mills, and a mine of lead.

PEOPLETON, a parish in Worcestershire, 3 m.

N by W of Pershore, and about the same distance from the Birmingham and Gloucester railway. Area 1,474 acres. Pop. in 1831, 276; in 1851, 266.

PEORIA, a county in the W part of the state of Illinois, U. S., comprising a gently undulating surface of 648 sq. m., bounded on the E by Illinois river, and drained by Spoon river, and by Copperas, Kickapu, and Senatchwine creeks. The soil is extremely fertile. Pop. in 1840, 6,153; in 1850, 17,550.—Its chief town, which bears the same name, is 70 m. N of Springfield, beautifully situated on the W bank of Illinois river, at its exit from Peoria lake, and 200 m. from the mouth of the river. Pop. in 1840, 1,467.—Lake P. is an expansion of the Illinois, about 20 m. in length, and extends in a NE direction from the village of the same name. It is divided by the Narrows into two parts, and has little current. Its waters are clear, and abound with fish.

PEOVER (Little), a township in Great Budworth p., co.-palatine of Chester, 2¾ m. S by W of Nether Knutsford. Area 278 acres. Pop. 121.

PEOVER (Nether), a chapelry and township in Great Budworth p., co.-palatine of Chester, 5 m. E of Norwich. Area 914 acres. Pop. in 1851, 232.

PEOVER (Superior), a chapelry and township in Rosthern p., co.-palatine of Chester, 3½ m. SSE of Nether Knutsford. Area 2,929 acres. Pop. 543.

PEPECHAPISSINAGAN, a river of Lower Canada, which has its source in Lake Itaoumanion; runs SE; and flows into the N bank of the estuary of the St. Lawrence, 180 m. NE of Quebec, and after a total course of 120 m.

PEPER-HARROW, a parish in Surrey, 3 m. W of Godalming, on the N bank of the Wey. Area 1,454 acres. Pop. in 1831, 144; in 1851, 129.

PEPERSTRAET, a commune of Belgium, in the prov. of E. Flanders, and dep. of Eecloo. Pop. 205.

PEPERSTRAETE, a commune of Belgium, in the prov. of E. Flanders, dep. of Herzele. Pop. 192.

PEPIN (Lake), an enlargement formed by the Mississippi, between the Missouri and the North-West Territories, U. S., about 160 m. below St. Peter's, and immediately above the confluence of the Chippeway. It is 21 m. in length, and in some places 3 m. in breadth from bluff to bluff. The rapid current of the river here settles into an almost stagnant pool.

PEPINGHEN, a department and commune of Belgium, in the prov of Brabant, and arrond. of Brussels. Pop. of dep. 1,821. The com. is 11 m. SW of Brussels, near the r. bank of the Meulenbek, an affluent of the Senne. Pop. 186.

PEPIN-GUAÇU, or Caudalozo, a river of Brazil, in the prov. of São-Paulo, which has its source in the mountains to the S of the Rio-Iguaçu or Curitiba; runs S; and joins the Uruguay, on the r. bank, 70 m. W of the confluence of the Pelotas.

PE-PI-SHAN, Pi-pi-shan, or Pe-yo, a chain of mountains in the N part of the peninsula of the Corea, which runs in a WSW direction, between the provs. of Pin-gan and Hwang-hai.

PEPIRI-MIRIM, Pepini-Guaçu, Pequiri, or Repiri, a small river of Brazil, in the prov. of São-Paulo, to the N of the Comarca-das-Missões. It has its source in the mountains to the S of the Curitiba; runs SW; forms to a small extent a frontier-line of Brazil; and joins the Uruguay, on the confines of the Banda-Oriental.

PEPPER-BAY, an indentation of the W coast of the island of Java, in N lat. 7° 30′, E long. 105° 40′. It is about 15 m. in breadth at its entrance, and nearly equal in depth. It contains two islands, named Sapoelo and Tjintal.

PEPPER-CREEK, a small river of New South Wales, which forms a portion of the boundary-line between the cos. of Bathurst and Georgiana, and joins Campbell river, on the confines of the co. of Westmoreland.

PEPPERELL, a township of Middlesex co., in the state of Massachusetts, U. S., 38 m. NW of Boston, bordered on the E by Nashua river, and intersected by Nisitissit river. Its surface is hilly, but the soil is generally fertile. Pop. in 1841, 1,571.

PEPPERSTOWN, or Peppardstown, a parish in co. Tipperary, 1 m. NE of Fethard. Area 4,779 acres. Pop. in 1831, 1,156; in 1851, 1,215.

PEPRENDAL, a commune of Belgium, in the prov. of E. Flanders, and dep. of Paricke. Pop. 133.

PEPY'S ISLANDS. See Falkland Islands.

PEQUANNOCK, a township of Morris co., in the state of New Jersey, U. S., 10 m. N of Morriston. It has a hilly surface, and is bounded on the NE by a creek of the same name, and on the E by Pompton river, and intersected by Rockaway river. The soil consists chiefly of loam and clay. It contains iron-ore in large quantities, and the sulphate of iron. Pop. in 1840, 5,190. P. creek has its source in Sussex co., in the Walkill and Wawayanda mountains; flows SE; and, after a rapid course of 27 m., enters Passaic river. It receives the name of Pompton on reaching the village of that name.—Also a small river of the state of Connecticut, an affluent of Bridgeport harbour.

PEQUAWKETT, or Pegwacket, a river of the state of New Hampshire, U. S., an affluent of Saco river.

PEQUEST CREEK, a large and rapid stream of the state of New Jersey, U. S., formed by the confluence of two branches, in Independence co., and which, after a course of 30 m., enters Delaware river, at Belvedere.

PEQUIGNY. See Picquigny.

PEQUIRI, a village of Brazil, in the prov. of Matto-Grosso, on the r. bank of the Rio-Correntes.

PERA, a town of Turkey in Europe, to the NE of Constantinople, of which it is considered a suburb, being separated from it only by the narrow arm of the Bosphorus which constitutes the port of the city. It stands on a hill commanding the channel, to the N of the suburb of Galata, and to the E of that of Cassim-Pasha. It is about 3 m. in length, but is narrow, ill-paved, and irregularly built. It contains a Greek and four Catholic churches, a monastery of dervishes of the Mevlevis order, and a college; and was until recently the residence of the European ambassador. The pop. of this suburb are a mixed race of people, speaking a singular patois of Greek, Turkish, French, and Italian. The environs are remarkable for their beauty. See article Constantinople.—Also a town of Rumelia, in the sanj. and 90 m. ESE of Sophia, and 1½ m. NW of Philippopoli, of which it may be considered a suburb.

PERA (Cape), a headland of the island of Majorca, on the E coast, in the prov. and 45 m. ENE of Palma, in N lat. 39° 42′ 12″, E long. 3° 33′ 25″.—To the SE is a village of the same name.

PERA (Pulo), a solitary rocky islet in the strait of Malacca, about midway between the W coast of the peninsula of Malacca and the NE extremity of the island of Sumatra, in N lat. 5° 50′, E long. 90° 12′. It is visible at a distance of several miles. A little to the N of this islet is the best route toward the strait during the SW monsoon.

PERABAD, or Pedro-Abad, a town of Spain, in Andalusia, in the prov. and 18 m. ENE of Cordova, partido and 6 m. N of Bujalance, in a fertile plain, near the l. bank of the Guadalquivir. Pop. 2,122. It has an hospital. Silk is cultivated in the environs, and a considerable trade is carried on in wine, oil, and fruit.

PERACHORA, a village of Greece, 9 m. NNE of Corinth, on the peninsula which extends between the bay of Corinth and the gulf of Lepanto.

PERA-HEAD, a cape of NE. Australia, on the E side of the gulf of Carpentaria, in S lat. 12° 58′ 30″, E long. 141° 39′ 45″. It consists of low reddish cliffs.

PERAK, a state of Malacca, which extends 75 m. along the W coast of the peninsula, to the S of Keddah or Quedah, and N of Salangore. It is separated from the former state by the Krian river, which debouches in N lat. 3° 59′; and from Salangore by the Bernam; and, with the state of Tringano, occupies the widest portion of the peninsula. The principal river by which it is watered is the Perak, which, after a course, in a WSW direction, of about 90 m., falls into the straits of Malacca. A chain of primitive mountains separates it from Tringano. In the S part of this territory are some fine alluvial plains, containing productive tin-mines, which are reputed to yield 3,000 piculs annually. This state was tributary to Siam until 1822. It is now governed by its own hereditary sultan. It contains 105 *mokims* or cantons. Its pop. is roughly estimated at 35,000 Malays, and a few Chinese and Chulia or Arab settlers from Malabar, exclusive of the aboriginal tribes. Its cap., which bears the same name, is 165 m. NNW of Malacca, near the river Perak, which will admit vessels drawing 12 ft. A factory was established here by the Dutch, who had once a fort on the fine harbour formed between the Dinding islands and the main.

PERAL (El), a town of Spain, in New Castile, in the prov. and 54 m. SSE of Cuenca, and 9 m. NNE of Tarazona, on the r. bank of an affluent of the Xucar, in a fertile locality. Pop. 609. It has a soap manufactory.

PERAL-DE-ARLANZA, a town of Spain, in Old Castile, in the prov. and 33 m. SW of Burgos, and partido of Lerma, on the l. bank of the Arlanza, which is here crossed by two bridges. Pop. 340.

PERALEDA-DE-LA-MATA, a town of Spain, in Estremadura, in the prov. of Caceres, partido and 5 m. SE of Navalmoral, near the r. bank of the Tagus. Pop. 2,800. It has a parish-church, a custom-house, and a public granary; and possesses oil and flour-mills, and manufactories of coarse woollen fabrics.

PERALEJA, a town of Spain, in New Castile, in the prov. and 21 m. NW of Cuenca, partido and 8 m. ENE of Huete, at the foot of a mountain. Pop. 888. It has manufactories of linen fabrics, and an oil-mill, and carries on a considerable trade in sheep and mules.

PERALEJOS-DE-ABAJO, a town of Spain, in Leon, in the prov. and 30 m. WSW of Salamanca, and partido of Lumbrales, in a fertile locality. Pop. 664. It has manufactories of coarse woollen fabrics and of common earthenware.

PERALEJOS-DE-LAS-TRUCHAS, a town of Spain, in New Castile, in the prov. and 66 m. E of Guadalajara, and partido of Pastrana, in a mountainous locality at some distance from the r. bank of the Tagus. Pop. 1,284.

PERALEJOS-DE-SOLIS, a town of Spain, in Leon, in the prov. and 24 m. SSW of Salamanca, and partido of Sequeros-del-Condado, in a mountainous district. Pop. 52.

PERALES, a town of Spain, in New Castile, in the prov. and 18 m. NW of Cuenca, and partido of Priego. Pop. 23.—Also a town in the prov. and partido and 18 m. NW of Palencia, on the r. bank of the Carrion. Pop. 110. The environs are unhealthy.

PERALES-DEL-RIO, a town of Spain, in New Castile, in the prov. and 8 m. SE of Madrid, and partido of Getafe, on the r. bank of the Manzanares, in a sandy locality. Pop. 81.

PERALES-DE-MILLA, a town of Spain, in New Castile, in the prov. and 24 m. WSW of Madrid, and partido of Navalcarnero, in a plain, near the r. bank of the Perales, an affluent of the Alberche. Pop. 150.

PERALES-DE-TAJUNA, a town of Spain, in New Castile, in the prov. and 24 m. SE of Madrid, and partido of Chinchon, in a fine valley, near the r. bank of the Tajuna. Pop. 1,290. It has a parish church, an hospital, a custom-house, and a public granary, and has manufactories of linen fabrics.

PERALOECHE, a town of Spain, in New Castile, in the prov. and 45 m. NE of Guadalajara, and partido of Sacedon. Pop. 434.

PERALTA, a town of Spain, in the prov. of Navarre, partido and 12 m. SE of Olete, and 35 m. S of Pamplona, on the r. bank of the Arga, which is here crossed by a fine bridge, and at the foot of a mountain, the summit of which is covered with Moorish fortifications. Pop. 2,348. It has a parish church, an hospital, several convents, and a custom-house; and possesses distilleries of brandy, and several oil-mills. The locality is noted for its wine.

PERALTA-DE-ALCOFEA, a town of Spain, in Aragon, in the prov. of Huesca and partido of Sarinena. Pop. 633. It has a parish church, a custom-house, and a public granary.

PERALTA-DE-LA-SAL, a town of Spain, in Aragon, in the prov. and 48 m. SE of Huesca, and partido of Tamarite. It has a parish church, a convent, and an hospital. It possesses manufactories of soap and of brandy. In the environs are quarries of lime and gypsum.

PERAMEA, a town of Spain, in Catalonia, in the prov. and 66 m. NE of Lerida, partido of Sort, in a mountainous locality. Pop. 389. It is enclosed by walls.

PERAMOLA, a town of Spain, in Catalonia, in the prov. and 51 m. NE of Lerida, partido of Solsona, in a level tract. Pop. 740. It has manufactories of brandy and of linen.

PERAMPUR, a town of Hindostan, in the Carnatic, district and 9 m. NW of Madura.

PERARNA, a town of Spain, in Aragon, in the prov. and 36 m. E of Huesca, partido and 9 m. NW of Benabarre, on the r. bank of the Essera. Pop. 567.

PERASTO, a town of Dalmatia, 6 m. NNW of Cattaro, on the gulf of that name, at the foot of a mountain, the summit of which is crowned with a fortress. Pop. 2,500. It has a small fishing and trading port.

PERASUNGUM, a village of Hindostan, in the prov. and 35 m. SW of Aurungabad, at the confluence of the Pira with the Godavery. It contains numerous temples.

PERAWA, a town of Hindostan, in the prov. of Malwa, and district of Mundessor, 75 m. N of Ujein. It is enclosed by a wall, now much dilapidated, and contains an old fort. The streets are irregular, and the houses generally ill-built.

PERAY (Saint), a canton, commune, and town of France, in the dep. of the Ardèche, and arrond. of Tournon. The cant. comprises 10 com. Pop. in 1831, 9,625; in 1841, 10,168. The town is 9 m. S of Tournon, and 21 m. NE of Privas, on the Merdoril, an affluent of the Rhone. Pop. in 1841, 2,485; in 1846, 2,720. The locality is noted for its vineyards, which produce a highly-esteemed white wine, approaching champagne in quality. Lime and lithographic stone occur in the vicinity.

PERBAIS, a commune of Belgium, in the prov. of Brabant, and dep. of Wathain-Saint-Paulsart-lez-Wathain. Pop. 228.

PERCE'E, a village of Lower Canada, on the E coast of the district and co. of Gaspé, on the S side of Mal-bay. The surrounding scenery is very beautiful. In the vicinity is Mount P., alt. 1,235 ft. above sea-level.

PERCE'E ROCK, a small island of the gulf of the St. Lawrence, 21 m. S of Gaspé point. It consists of a perpendicular rock of red sandstone and limestone, rising to a height of 288 ft. above sea-level, and intersected by two natural arches, through which the sea has free passage. Boats can pass through these natural tunnels at high water.

PERCELADA, a town of Portugal, in the prov. of Beira, and comarca of Viseu. It contains about 196 houses.

PERCH, a river of the state of New York, U. S., which has its source in Orleans township, Jefferson co., and flows SW into Black River bay.

PERCHAI, a town of Russia in Europe, in the gov. and district and 42 m. WNW of Minsk.

PERCHE, an ancient territorial division of France, in the prov. of Maine, now comprised in the departments of the Eure-et-Loire, Orne, and Eure. It was divided into the Great and Little Perche, or Perche-Gouet and Thimerais. Its cap. was Mortagne.

PERCHE (Col-de-la), a pass of the Pyrenees, in France, in the dep. of the Eastern Pyrenees, a little to the SW of Mont-Louis.

PERCIVAL, a river of Prince Edward's island, flowing into the head of Egmont bay. The tide ascends it about 5 m. between low and marshy banks.

PERCQ, a department and commune of Belgium, in the prov. of Brabant, and arrond. of Brussels. Pop. of dep. 1,050; of com. 779.

PERCS (Vamos), a town of Hungary, in the circle beyond the Theiss, in a woody plain, 14 m. E of Debreczin, and 22 m. ESE of Böszörminy.

PERCY, a canton, commune, and town of France, in the dep. of the Manche, and dep. of St. Lo. The cant. comprises 12 com. Pop. in 1831, 10,635; in 1841, 11,010. The town is 16 m. SW of St. Lo, and about the same distance SE of Coutances, on the Gièse, an affluent of the Sienne. Pop. in 1841, 3,215; in 1846, 3,215.

PERCY, a parish of New South Wales, in the co. of St. Vincent, extending along the E side of Shoalhaven river.

PERCY, a township of Upper Canada, in the Newcastle district, bounded on the N by the river Trent. Pop. in 1842, 920.

PERCY ISLANDS, a group of islands in the Northumberland archipelago, off the NE coast of Australia. The largest is from 12 to 14 m. in circumf., and rises to the height of about 1,000 ft. Its SW end is in S lat. 21° 40′, E long. 150° 13′ [*King*]. A species of pine and a few cabbage palms are the principal trees. These islands were first visited by Flinders in 1802. They appear to be frequented by the natives in pursuit of turtles.

PERDIDO, a river which has its source in the state of Alabama, U. S., in the co. of Baldwin; runs S, forming to some extent the boundary-line of the territory of Florida; and after a course of 75 m. throws itself by a wide mouth into the gulf of Mexico, 21 m. SE of Pensacola.

PERDIFUMO, a town of Naples, in the prov. of the Principato-Citra, district and 15 m. WNW of Il-Vallo, cant. and 5 m. W of Castel-dell'-Abate. Pop. 700. Its locality affords good wine and oil.

PERDIGON (El), a village of Spain, in Leon, in the prov. and partido and 8 m. S of Zamora, and at about an equal distance SW of Moraleja. Pop. 987. It has a palace, a parish church, a convent, a custom-house, and a public granary.

PERDU (Mont), one of the highest summits of the Pyrenees, near the centre of the chain, in Spain, in the prov. and 45 m. NNE of Huesca, near the S confines of the French dep. of the Pyrenees, and near a small lake of the same name. It has an alt. of 11,264 ft. above sea-level. From its glaciers descends the torrent of Gavarnie, which, leaping boldly down a precipice of 1,200 ft., forms a magnificent cascade, one of the sources of the Gave-du-Pau.

PERE (Saint), a commune of France, in the dep. of the Ille-et-Vilaine, cant. and 2 m. NNE of Chateauneuf, and 7 m. SE of St. Malo. Pop. 1,886.—Also a commune in the dep. of the Yonne, and cant. of Vezelay, 9 m. WSW of Avallon, on the l. bank of the Cure. Pop. 1,476.

PERE'BRODE', a town of Russia in Europe, in the gov. of Minsk, district and 30 m. WNW of Disna.

PEREBUC (Saint), a village of France, in the dep. of Morbihan, cant. and 5 m. NE of Allaire, and 82 m. E of Vannes, on the Oust. Pop. 500.

PERED, a village of Hungary, in the circle beyond the Danube, comitat and 37 m. E of Pressburg, and 14 m. SSE of Szered, near the r. bank of the Vaag. Pastel is extensively grown in the environs.

PERE-EN-RETZ (Saint), a canton, commune, and town of France, in the dep. of the Loire-Inferieure, and arrond. of Paimbœuf. The cant. comprises 4 com. Pop. in 1831, 8,328; in 1841, 8,863. The town is 6 m. S of Paimbœuf, and 25 m. W of Nantes. Pop. in 1846, 2,862.

PEREGRINE (Point), a headland of British North America, on the E side of Fox channel, to the E of Cape Willoughby, in N lat. 66° 30′, W long. 77° 0′. It was discovered by Fox in 1631.

PEREGRINO, a small island of the S. Pacific, in S lat. 10° 15′, W long. 151° 50′, in the group of the Society islands. It was discovered by Quiros in 1606; and is described by Torres and Torquemada as lying within a coral reef, and extremely fertile.

PEREHINSK, a village of Galicia, in the circle and 33 m. SSE of Stry, and 6 m. SSE of Rozmatow, on the l. bank of the Lomnica. It has an iron-mine.

PEREIASLAV, or Pereiaslavl, a town of Russia in Europe, cap. of a district, in the gov. and 162 m. WNW of Poltova, and 60 m. SE of Kiev, at the confluence of the Troubej and Alta, in a low tract of land near the l. bank of the Dnieper. Pop. 7,000. It still retains some of the earthen fortifications erected by the Swedish prisoners in 1709, and contains numerous churches. The trade, which is considerable, consists chiefly in horses, cattle, corn, brandy of local manufacture, and rosin. This town is of great antiquity, and was for a long period governed by its own sovereigns. From 1061 to 1239, it suffered greatly from wars and pestilence, and at the latter period was taken and destroyed by the troops of Balu-Khan. After being rebuilt, it fell under Polish dominion, and so continued until the 17th cent., when it was finally restored to Russia.

PEREIRA, a town of Portugal, in the comarca and 6 m. W of Coimbra, and 3 m. ESE of Tentugal, on the l. bank of the Mondego. Pop. 1,800. Maize and melons are cultivated in the environs.

PEREIRA-JUZAO, a town of Portugal, in the prov. of Beira, comarca and 12 m. SE of Feira, and 8 m. NE of Bemposta, at the foot of mountains. Pop. 2,600.

PEREK, a town of Persia, in the prov. of Farsistan, district and 15 m. N of Darap or Darabgherd. It has a castle.

PEREKOP, or Or-Kapi, a town and fortress of Russia in Europe, in the gov. of Taurida, 84 m. NNW of Simferopol, and 72 m. SE of Kherson, on the isthmus of the same name, and a little to the SE

of its narrowest point. It stands in a plain, on the road leading from the Crimea into the interior of the empire, 2 m. from the shore of the gulf of Sibache or Sivach, and about 4 m. from that of the gulf of P. The fortress lies to the E of the town, near the great road, and consists of irregular fortifications, all substantially built of stone, and enclosing an interior fort of considerable height. It contains also within its walls a castle, barracks, a mosque, and a Greek church. Near the gate leading to P., and partly only within the fortifications, are several houses occupied by persons connected with the salt-works and stores. Two miles S is a suburb named Armianskoie-bazar, consisting of several streets, and containing numerous shops. The situation of the town is extremely unhealthy, and the resident pop., consisting of Russians, Tartars, Greeks, Armenians, and Jews, does not exceed 1,000. In summer it is frequented by large numbers of Nogai-Tartars, who come hither to attend its fairs. The trade consists chiefly in salt, of which 20,000 cart-loads are annually sent into Southern Russia. *Taphros* or *Taphrae*, signifying 'ditch,' the ancient name of this town, was derived from the ancient ditch by which the isthmus was originally crossed. The Tartar name, *Or-Kapi*, signifies 'the gate of the fortification,' from the gate by which entrance is here obtained into the Crimea. *Perekop*, the Russian appellation, denotes 'the entrance' or 'gate of the isthmus.' The town was first taken from the Turks by the Russians in 1736. It was again ceded to Russia in 1775, and ultimately with the Crimea in 1783.

PEREKOP (Gulf of), an indentation formed by the Black sea, on the W coast of the Russian gov. of Taurida. The breadth of its entrance, extending from Tendra-point on the N, to the W extremity of the Crimea, is 50 m.; and the depth of its embrasure about 75 m. At its W extremity it is separated by an isthmus of the same name from the Sibache-More or Putrid sea, an inlet of the sea of Azof. The isthmus of P. connects the Crimea with the mainland. It is 27 m. in length from NW to SE, and swells from a breadth of 5 or 6 m. at the extremities, to 18 m. in the centre. It is but slightly elevated, and contains several salt lakes, which, in the months of May, June, and July, form extensive deposits of salt. A line of defence was here established by the Turks, which extended from the Black sea to the Sivach, a distance of 12 m., consisting of a strong rampart, and a ditch 12 fath. wide, and 25 ft. deep.

PEREKOPSKAIA, a town of Russia in Europe, in the gov. of the Don Cossacks, and district of Oust-Medvieditza, and 27 m. E of Rospopinskaia, near the r. bank of the Don.

PERELADA, a town of Spain, in Catalonia, in the prov. and 27 m. NE of Gerona, partido and 11 m. WNW of Figuieres, on a mountain, at the foot of which is the junction of the Orlina with the Little Llobregat. Pop. 1,682. It has 2 convents, and an hospital.

PERELLO, a town of Spain, in Catalonia, in the prov. and 30 m. SW of Tarragona, partido and 20 m. NE of Tortosa, at the foot of the Lazamos mountains, and on the great coast road.

PERE-MUL-PAR, an island of the Laccadive archipelago, to the E of Cardanum island, in N lat. 11° 9′, E long. 72° 30′.

PEREMYSCHL, a district and town of Russia in Europe, in the gov. of Kaluga. The district is very fertile, and contains extensive forests. It has manufactories of sail-cloth, two iron-works, and several distilleries. The town is 24 m. S of Kaluga, on the l. bank of the Oka. Pop. 2,300. It contains 6 churches, and has a large sail-cloth manufactory, which gives employment to 600 workmen, and produces annually 4,000 pieces of cloth. This town was founded in 1152, by the grand-duke George Vladimir II., and has still some remains of its ancient earthen walls.

PERENA, a town of Spain, in Leon, in the prov. and 42 m. WNW of Salamanca, partido and 27 m. W of Ledesma, at some distance from the l. bank of the Duero, from which it is separated by steep hills. Pop. 1,128. It has a parish-church, several convents, a custom-house, and a public granary, and possesses manufactories of linen and of brandy. In the environs are mines of sulphur and antimony, and a fine cascade; and within a short distance are the ruins of a Roman town.

PERENE, a river of Peru, which has its source in the intendancy of Tarma, a little to the N of the town of that name; runs E into the Pampas-del-Sacramento or Pajonal; and, after a course of about 180 m., throws itself into the Apurimac, on the l. bank, 80 m. SW of the confluence of the Paro.

PERE-PYE, or Pir-Pae, a village of Afghanistan, on the r. bank of the Cabul river, 25 m. WNW of its confluence with the Indus, and 20 m. NE of Peshawur.

PERESLAVL-RIAZANSKOI. See Riazan.

PERESLAV-ZALIATZKOI, or Pereslavl-Zaleski, a town of Russia in Europe, cap. of a district, in the gov. and 75 m. WNW of Vladimir, and 96 m. NNE of Moscow, pleasantly situated on the E bank of Lake Plestchieivo, at the junction of the Troubej. Pop. 2,000. It possesses a cathedral, a fine edifice in stone, containing the tombs of three princes of Pereslav, and numerous other churches and convents. It has manufactories of linen, and carries on an active trade with the capital. This town was founded in 1152, by the grand-duke Jouri-Vladimirovitch-Dolgorouki. It was enclosed by ramparts, and was for a long time the cap. of a principality, governed first by its own princes, and afterwards by the sovereigns of Moscow. It was several times pillaged by the Tartars. Previous to the reorganization of the government by Catherine II., this town was the cap. of a prov., and the residence of a bishop.

PERESZLEG (Hoszu), a town of Hungary, in the com. of Eisenburg, on a woody plateau, 22 m. SE of Steinamanger. Pop. 1,280.

PERETA, a village of Tuscany, in the prov. of Sienna, podesteria and 2 m. S of Scansano. Pop. 400.

PEREUIL, a village of France, in the dep. of Charente, cant. and 3 m. W of Blunzac, near the r. bank of the Ars. Pop. 800.

PEREVOLOTSHNA, a town and fort of Russia in Europe, in the gov. of Poltova, district and 24 m. SSW of Kobyliaki, on the l. bank of the Dnieper, at the confluence of the Vorskla. It has 2 churches. This town was several times taken by the Tartars and Poles. A Cossack colony established themselves in it in 1654, and some time after the Russians erected the fort, in which a garrison is still constantly maintained.—Also a town in the same gov., district and 15 m. E of Prilouki.

PEREVOLOTZKAIA-KREPOST, a fortress of Russia in Europe, in the gov. and district and 48 m. W of Orenburg, near the sources of the Samara. It forms a square, and is defended by chevaux-de-frise, with a ditch outside, and some batteries. It contains a church, and about 100 houses. The garrison consists of a company and a half of dragoons, and 50 Cossacks. The surrounding country is desert, but affords excellent pasturage.

PEREVOZ, a town of Russia in Europe, in the gov. and 57 m. SE of Nijnii-Novgorod, district and 27 m. SW of Kniaginen, in a fertile locality, on the r. bank of the Piana. It contains about 100 houses, inhabited chiefly by agriculturists.

PEREZ, or Cayos-de-Diego, a reef of rocks near the S bank of the island of Cuba, in N lat. 21° 58′, W long. 81° 43′ 2″.

PERFORATED ISLAND, an island in the S part of the Mergui archipelago, NNE of the Seyer islands, in N lat. 8° 48′, E long. 97° 47′.

PERG, or BERG, a market-town of Austria, in the circle of the Muhl, 8 m. ENE of Enns, and 11 m. WNW of Grein, on the Naarn. It has a manufactory of common pottery, and in the environs is a quarry of fine freestone.

PERGAIN (LE), a village of France, in the dep. of the Gers, cant. and 10 m. N of Lectoure. Pop. 750.

PERGAMINO, a town of La Plata, in the prov. and 150 m. WNW of Buenos-Ayres, and 70 m. S of Rosario, on a small affluent of the Arrecifes.

PERGAMUS. See BERGHAMEH.

PERGINE, or PERGEN, a market-town of Austria, in the Tyrol, in the circle and 5 m. ESE of Trent, and 4 m. NW of Levico, on the brow of a hill. Pop. 3,060. It has a castle and a Franciscan convent, and possesses manufactories of woollen fabrics, and several silk spinning-mills. In the environs are an iron-mine and a quarry of millstone. Wine is extensively cultivated in the surrounding district.

PERGINE, or SAN ANGELO-DI-PERGINE, a village of Tuscany, in the prov. and 39 m. ESE of Florence, vicariat and 11 m. N of Monte-S. Savino.

PERGOGA, a town of New South Wales, in the co. of St. Vincent, on the N bank of the Moruga, 5 m. above its entrance into the sea.

PERGOLA, a town of the Papal states, in the legation of Urbino and Pesaro, 15 m. SE of Urbino, on the Cesaro. Pop. 3,200. It has manufactories of cloth and other woollen fabrics, and several tanneries.

PERGUIÇA, a river of Brazil, in the prov. of Maranhão, which, after a short course, in a generally N direction, falls into a bay of the Atlantic, of the same name. The E point of this bay lies in S lat. 2° 41′ 27″.

PERGUSA, a small lake of Sicily, in the prov. of Caltanicetta, district and 15 m. N of Piazza, and a little to the E of Castrogiovanni.

PERI, or BUDERICH, a village of Sweden, in the cant. of Berne, bail. and 11 m. ENE of Courtelari, on the Pissot. Pop. 630.

PERIACULLUM, a town of Hindostan, in the presidency of Madras, and prov. of the Carnatic, 33 m. SW of Dindigul.

PERIAPATAM, a town of Hindostan, in the prov. of Mysore and subah of Patna, 42 m. W of Seringapatam. In 1790, when the British army were approaching this place, through the Kurg country, Tippu Sultan gave orders for the fort and town to be destroyed, and the country laid waste. In 1799 a battle was fought in the vicinity, between the British forces commanded by General Stuart, and the army of Tippu, in which the latter was totally defeated, and compelled to leave the road to Seringapatam open. The surrounding country is beautiful, and abounds with sandal-wood.

PERIBOACA, a river of Lower Canada, which connects Lake Mopamène with St. John's lake, in N lat. 48° 32′.

PERICO ISLES, three small islands in the gulf of Panama, lying close to the shore, in N lat. 8° 55′, and defending the road of Panama, so as to form a good port for smaller vessels.

PERIERS, a town of France, in the dep. of La Manche, 9 m. N of Coutances, near the Horerola, an affluent of the Save. Pop. 2,800.

PERIGNAC, a village of France, in the dep. of Charente, cant. and 2 m. ESE of Blanzac. Pop. 1,100.—Also a v. in the dep. of Charente-Inferieure, cant. and 4 m. NE of Pons.

PERIGNY, a village of France, in the dep. of Deux Sevres, cant. and 4 m. NW of Brioux. Pop. 1,250.—Also a v. in the dep. of Allier, cant. and 4 m. W of La Palisse. Pop. 660.

PERIGORD, an ancient province in the SW of France, now forming the dep. of the Dordogne, and a small part of that of Lot-et-Garonne. Its cap. was Perigueux.

PERIGUEUX, a town of France, the cap. of the dep. of the Dordogne, situated in a valley on the r. bank of the Isle, in N lat. 45° 11′ 8″, 70 m. NE of Bordeaux. Pop. in 1846, 10,933. The town is ill built, and offers very narrow tortuous streets, lined by tall gloomy houses, but the walks in the vicinity are pleasant. The cathedral is the only public building worth notice, and it is chiefly remarkable for a square tower of great height, surmounted by a pyramidal spire. The town has manufactories of paper, leather, and cutlery, and some trade in wines, *liqueurs*, corn, and chestnuts. It is the see of a bishop, and has a library of 16,000 vols., a botanical garden, a cabinet of natural history, and an agricultural society.

PERIJA, or SANTA ANNA, a river of Venezuela, which rising on the E flank of the Sierra, runs E, and discharges itself into Lake Maracaybo, by several mouths, 30 m. below a town of the same name, which is situated near its r. bank, 75 m. SW of Maracaybo.

PERILLA-DE-CASTRO, a town of Spain, in the prov. and 17 m. NNW of Zamora, near the r. bank of the Esla. Pop. 550.

PERIM, an island in the straits of Babel-Mandeb, nearly 4 m. from the coast of Yemen. It is about 4½ m. long, by 2 m. broad, and rises to 230 ft. above sea-level. On its SW side is a good harbour, 800 yds. broad, with an entrance a ½ m. wide. The adoption of this as a coaling-station has been suggested. The distance from Ceylon to P. is nearly the same as the distance from P. to Cosseir and back. A reef runs almost the whole length of its N coast, but the side nearest to Arabia has deep water to the base of the rock, and, besides being clear from reefs, has the small harbour we have noticed. The greatest objection to P. as a station for shipping and steamers is the want of water.

PERINALDO, a town of the Sardinian states, in Piedmont, in the prov. and 23 m. ENE of Nice. Pop. 1,500. It was the birthplace of Cassini, the celebrated astronomer.

PERINGARY, a town of Hindostan, in the Carnatic, in the district of Madura, on the r. bank of the Vaigam.

PERIVALE, a parish of Middlesex, intersected by the Paddington canal, 3 m. S by E of Harrow-on-the-Hill. Area 626 acres. Pop. in 1831 and 1851, 32.

PERIVOLI, a town of Turkey in Europe, in the sanj. and 60 m. SSE of Monastir.

PERJAN, a town of Bokhara, 36 m. ESE of Anderab.

PERKINS, a township of Erie co., in the state of Ohio, U. S., 15 m. NW of Norwalk. Pop. 839.

PERKINSVILLE, a village of Windsor co., Vir ginia, U. S., 71 m. S of Montpellier.

PERKIOMEN, a river of Pennsylvania, U. S., which runs into the Schuylkill, about 6 m. above Norristown, after a S course of 30 m.

PERLAK, a town of Hungary, 12 m. ENE of Warasdin, near the l. bank of the Drave. Pop. 2,500.

PERLAS (ISLAS DE), a group of small islands in the gulf of Panama, in N lat. 8° 27′, and W long. 78° 49′. They are so called from the pearl fishery which was at one period conducted upon them.

PERLE (LA), a small island situated near the N coast of the island of Martinique, in N lat. 14° 51′.

PERLEBERG, a town of Prussia, in the gov. and 62 m. NW of Potsdam, on the Stepnitz. Pop. 3,200.

PERLEPE, a town of Turkey, in the sanj. and 20 m. NE of Monastir, in a fine and richly cultivated country. It contains from 500 to 600 houses, chiefly inhabited by Albanians.

PERLETTO, a town of Piedmont, in the prov. of

Alba, on the declivity of a hill, 2 m. NE of Cortemiglia. Pop. 1,200.

PERLICAN (New), a harbour on the E coast of Newfoundland, 8 leagues WSW of Old Perlican, and 5 leagues from Random-head. It has a wide and safe entrance. Ships may ride in it landlocked from all winds, in from 5 to 10 fath. water.

PERM, a very extensive government, situated chiefly in European, but partly in Asiatic Russia, between the parallels of 61° 50′, and 55° 30′; and bounded on the N by the govs. of Wologda and Tobolsk; on the E by Tobolsk; on the S by Orenburg; and on the W by Viatka. It has a reputed area of 293,851 sq. versts, or 128,978 sq. m.; but its pop. was only 1,143,902 in 1825; and 1,637,700 in 1846. It is intersected from N to S, for above 450 m., by the great Ural chain of mountains, here from 7 to 70 m. broad; and is in general a hilly country, covered with vast and impenetrable forests. The rivers on the W side of the Ural chain flow into the Kama, which joins the Wolga; those on the E side fall, for the most part, into the Obi, which discharges itself into the Frozen ocean. There are about 600 lakes scattered over the prov., but most of them lie to the E of the Ural chain. The forests contain various animals, such as the sable and martin, which are hunted for their furs; also bears and other beasts of prey. The gov. is divided into 12 districts or circles, of which those situated in the SE are fertile and tolerably cultivated; producing rye, barley, oats, flax, and potatoes; the rest of the country is much fitter for pasture than tillage. Though the climate is warm in summer, the cold wind from the mountains often puts to hazard the hopes of the husbandman, and renders it necessary, thin as the pop. is, to make an annual import of corn. The exports in return are tallow, cattle, furs, tar, and the produce of the mines. The only manufactures are of cloth, leather, soap, candles, and other articles requisite for domestic consumption. The inhabitants are a mixed race, partly Russian, partly of Finnish and Tartar descent. The occupation of by far the greater part is pastoral, but about 100,000 find employment at the mines. Iron, copper, platinum, gold, silver, salt, marble, agates, and loadstone are mined within this gov. See articles Russia and Ural Mountains. The ancestors of the Permians, or inhabitants of the country between the White sea and the Ural mountains, are described by Scandinavian writers as a wealthy and powerful nation, an epithet which probably means that they carried on a traffic in the furs of their country, with the Persians and other Asiatics, who gave them precious metals in return. After falling, in the middle ages, under the sway of the republic of Novgorod, they were progressively incorporated into the Russian empire.

Perm, the cap. of the above government, is situated at the conflux of the Jagashika, in N lat. 58° 1′, and E long. 56° 26′, at an alt. of 370 ft. above sea-level, on the river Kama, which here flows with a swift current and deep stream. It has some neat public buildings, such as the two churches, the offices of government, a public school, and an hospital; but good stone buildings are only seen here and there; and the houses in general consist of wooden structures of a single story ranged round a quadrangular court. The streets however are kept clean, and have narrow wooden footways. The general control of the Uralian mines is vested in a board located here. It has smelting works, and carries on a pretty active traffic with the provinces both to E and W, in the metals wrought in the surrounding country. The pop. is estimated at 10,000.

PERMACOIL, a town and fortress of Hindostan, in the Carnatic. The fort is situated on a rock from 200 to 300 ft. high, and from 400 to 500 yds. in breadth. It was taken by the British in 1760, but was afterwards made over to the nabob of Arcot. In 1782 it was again captured by Hyder Aly, but at the conclusion of the war, it was dismantled, and the fortifications blown up.

PERMEIRA ROCKS, a group of rocks in the Indian sea, within 6 or 7 m. of the coast of Canara, 20 m. N of Mangalore, in N lat. 13° 11′.

PERNAGUA. See Paranahiba.

PERNAIBAO. See Paranahiba.

PERNALLA, a town of Hindostan, in the prov. of Bejapore, in N lat. 20° 35′.

PERNAMBUCO, a province of Brazil, bounded on the N by the provs. Piauhy, Ceara, and Parahiba; on the E by the Atlantic; on the S by the provs. of Alagoas and Bahia; and on the W by Goyaz. It is chiefly a mountainous territory of very irregular outline and varying breadth. Its coast-line is low and sandy, and does not exceed 120 m. in extent. The chief streams which discharge themselves into the sea here are the Tapacora, the Ipojuco, and the Unna. It is in this portion of the prov., immediately along its coast, that the sugar-plantations are exclusively located. To the W of the country intersected by these streams lies a highly mountainous territory, of which the Sierra-Cayriris may be regarded as the nucleus or central point. The Sierra-de-Piauhy, or Sierra-dos-Irmaos, runs along the whole extensive frontier with the prov. of that name; while the Rio-de-São-Francisco, here sweeping round from NE to SE, approaches the base of these chains, and contracts the breadth of the prov. of which it forms the frontier with Bahia, to a breadth of 50 m. under the parallel of 10° S. The S part of the prov. expands into a greater breadth between the Sierra-de-Javatinga separating it from Goyaz on the W, and the Rio-São-Francisco, still forming its E boundary. The Rio-Carynhenha, an affluent of the São-Francisco, forms the S limit of the prov. All the streams to the N of this river, with the exception of the coast rivers already named, are affluents of the São-Francisco. The most important are the Rio-Formosa, Rio-Corrientes, Rio-Grande, Rio-Verde, Rio-de-Caza-Nova, Rio-Pajchu, Rio-San-Antonio, and Rio-Moxeto. The area of the prov. has been estimated at 7,200 sq. Spanish leagues. On the basis of a census taken in 1842, its free pop. was estimated in 1846 at 600,000, exclusive of foreigners. The number of slaves is by some calculated to exceed by two-thirds the free pop. Cotton and hides are the principal articles brought from the interior.—The manufactures of the prov. are almost entirely confined to the production of a few articles of the most ordinary domestic consumption, such as leather dresses, coarse cotton cloth, and knives. A little fine lace is made in some places on the coast. The rearing of the silk-worm has recently been attempted with success.—The climate is hot and moist in the interior. The chief exports are cotton, sugar, and rum; hides, cocoa-nuts, dye-woods, ipecacuanha, and a few other drugs, are also occasionally exported. [See following art.] The prov. is administratively divided into 10 comarcas; and sends 13 deputies to the legislative assembly, and 6 senators to the upper chamber. The original captaincy of P. reached to the river San-Francisco on the S. The French first established themselves on this coast in 1535. They were succeeded by the Dutch, who in 1654 were driven out by the Portuguese.

Pernambuco, or Sao-Antonio-do-Recife, the capital of the above province, and the third city in Brazil, is situated in S lat. 8° 6′, W long. 35° 1′, on the coast of a broad bay, stretching with a moderate but regular curvature between Point Olinda and

Cape Saint Augustine. Seen from the sea, it appears to occupy a flat and but slightly elevated site; for no part of the coast within many leagues of P. rises to any height, except that whereon Olinda, about 3 m. N of the city of P. stands. It consists of three divisions, Recife or São-Pedro-de-Gonsalves, São-Antonio, and Boa-Vista; and comprises within its whole extent 17 churches and chapels, an English chapel, 2 monasteries, 3 asylums for girls, 6 hospitals, a theatre, a government-house, a custom-house, a prison, marine and military arsenals, and three barracks.—The division of Recife is nearest the sea. It stands on a long narrow neck of land, a perfectly barren bank of sand, which stretches southward from the foot of the hill on which the town of Olinda is built; and expanding, forms the site on which the quarter of Recife is built. In front of this bank, at a distance varying from ¼ m. to ½ m., runs a reef of rocks, over which at full tide the waves roll; but being checked by this barrier, they strike the quays and buildings of the town with diminished strength. At low water this natural parapet is left dry. A branch of the Biberibe, navigable for boats as far as Olinda, forms the principal channel of communication with that place. A second ridge of sand, on which stands the division of the town called São-Antonio, is connected with Boa-Vista, situated on the continent, by a narrow wooden bridge. The greater part of the extent of sand between Olinda and the town which remains uncovered is open to the sea, and the surf is here very violent. The tide enters between the bridges, and encircles the middle compartment. On the land-side there is a considerable expanse of water, having the appearance of a lake, which becomes narrower towards Olinda, and reaches to the very streets of this section of the city, thus facilitating the communication between the two divisions. The first division of the town is composed of brick houses, of three, four, and even six stories in height. Most of the streets are narrow; and some of the older houses in the inferior streets are only one story in height. In general, the buildings in this quarter of the town have an antiquated appearance, exhibiting the old Dutch style of house-architecture. The principal street of the Recife is the Rua-da-Cruz, which at its N extremity towards the Arsenal-da-Marinha is wide and imposing in its aspect. To the northward is the residence of the port-admiral, with the government timber-yards attached to it. The cotton-market and warehouses are also in this part of the town. A single bridge across the Biberibe connects this quarter with that of São-Antonio.—São-Antonio, or the middle town, is composed chiefly of large houses and broad streets, and forms the finest part of P. considered as a city. The ground-floors in this division are appropriated to shops, warehouses, and stables. The shops are without windows; the only light they have is admitted from the door. In this division is the palace, in which the affairs of the provincial government are carried on, in former times the Jesuits' convent, a large building of gloomy appearance with walls of enormous thickness; also the military arsenal, the town-hall and prison, the barracks, the Franciscan, Carmelite, and Penha convents, several churches, the interiors of which are very handsomely ornamented, and the British chapel.—The division of Boa-Vista is very extensive, and is chiefly occupied by residences and country-seats. Much attention is paid to the gardens attached to the houses near and in this suburb. The principal street, formerly a piece of ground overflowed at high water, is broad and handsome; but the other streets are unpaved. A long embankment connects the sand-bank and town of São-Antonio with the mainland to the S and W of Boa-Vista. The Rio-Capibaribe discharges its waters into the harbour or channel between São-Antonio and Boa-Vista. It is of small size, and is navigable only for canoes to a distance of about 10 m. from the city.—The three divisions of the town in 1845 comprised a free pop. of 74,310, Whites, Mulattoes, coloured free people, and slaves of several shades, with about 160 French, and the like number of English and 300 Germans. Mr. Gardner says that while the inhabitants of P. resemble very much those of Rio, there is a great difference in the appearance of the country-people, who here, as elsewhere, are easily distinguished from the citizens. "Those seen in the streets of Rio-de-Janeiro are a tall handsome race of men, mostly from the mining districts, or the more southerly province of San-Paulo; their dress consists of a linen jacket and trousers, generally of a blue colour, brown leather boots, which are firmly tied round the leg a little above the knee, and a very high-crowned broad-brimmed white straw hat. Those, on the contrary, who frequent the city of Pernambuco are a more swarthy and more diminutive race, but still far superior in appearance to the puny citizens. There are two classes of them, the Matuto and the Sertanejo. The Matutos inhabit the low flat country, which extends from the coast up to the high land of the interior,—called the *sertao*, or desert; while the latter district gives name to, and is inhabited by, the Sertanejos."—The institutions for public instruction within the city are a lyceum, 2 Latin and 7 primary schools.

Harbour.] The harbour belonging to Recife, called the Mosqueiro, situated on the outward bank, is formed by the reef of rocks which runs parallel with the town at a small distance from the shore. The Lameirao or lower harbour, for vessels of 400 tons and upwards, called the Poco, is very dangerous, being open to the heavy roll of the sea. The port has two entrances, one of which is deeper than the other. The tide does not rise more than 5½ ft., but the port is of easy access. The principal defence of the town consists in the forts Do-Buraco and Do-Brum, both of which are built of stone, and are situated upon the sands opposite to the two entrances. There is likewise the small fort of Bom-Jesus, near to the arch and church of the same name; and upon the SE point of the sand-bank of São-Antonio stands the large stone fort of Cinco-Pontas, so called from its pentagonal form.

Commerce.] P. is a thriving commercial place, and its commerce is rapidly extending. Its export of cotton, sugar, and hides, from 1828 to 1845, was as follows:

Years.	Cotton. Bags.	Sugar. Weight	Hides. Number.
1828	70,785	1,460,628 arrobas.	52,444
1829	54,820	1,463,332	46,573
1830	61,151	1,705,614	65,489
1831	53,157	1,799,986	76,584
1832	31,520	1,518,300	66,656
1833	58,564	1,301,612	84,743
1834	42,799	854,088	86,350
1835	52,142	1,388,888	91,492
1836	62,832	1,828,392	90,701
1837	43,847	1,456,420	93,771
1838	60,648	1,750,380	105,851
1839	39,173	1,878,675	111,052
1840	35,849	2,191,093	132,993
1841	26,990	2,261,699	136,494
1842	21,357	1,906,936	125,296
1843	35,906	2,017,522	104,428
1844	41,385	2,146,688	124,074
1845	26,562	2,565,824	163,935

The subjoined table exhibits the chief exports of P., and the ports and countries with which it traded, from Nov. 1, 1849, to Oct. 31, 1850:

	Vessels.	Cotton. Bags.	Sugars. Bags.	Tons.	Hides. No.	Rum. Pipes.
Great Britain & Ireland,	38	22,716	30,899	2,820	...	...
Channel for orders,	23	...	76,751	5,575	2,865	60
France,	28	5,700	66,347	4,700	12,917	...
Amsterdam,	3	...	1,850	130	9,800	...
Antwerp,	1	...	5,700	500	...	...
Bremen,	1	...	3,950	280	...	...
Hamburg,	1	...	3,300	230	...	...
Copenhagen,	2	...	6,550	460	...	...
Sweden,	15	100	32,628	2,600	19,428	2
Portugal,	29	550	30,291	4,260	2,354	40
Barcelona,	14	9,884	...	...	483	...
Gibraltar for orders,	11	...	25,370	2,040	...	...

Africa,	7	...	...	15	2	950
Valparaiso,	2	...	6,233	460	...	...
Sydney,	1	...	...	10	...	...
Total,	251	39,045	475,849	38,660	74,026	1,221
North Brazil,	21	...	5	440	...	...
South Brazil,	77	831	21,890	5,060	370	1,215
Total,	349	39,876	497,744	44,160	74,396	2,436

In addition to the above, there were exported 2,074 cases, 508 boxes, and 63,693 barrels of sugar, and 2,436 pipes of rum. The latter article was chiefly exported to Africa and the southern provs. of Brazil. Camauba wax, obtained from the leaves of the palmetto, and bees'-wax, have recently become articles of export.—Of imports, the principal are the woven cotton cloth called 'domestics,' chiefly from the United States, the printed cottons of Manchester and Glasgow, salted cod-fish from Newfoundland and Nova Scotia, tea from the United States, butter from Ireland and France, earthenware and glass from England, flour from Trieste, and iron from England. The provisional government of the prov. has within the last few years effected great improvements on the roads in the interior. Proposals for a railway in the prov. of P. have been brought forward. The plan of the route extends from the city of P. to a point on the river São-Francisco above the great falls of Paulo-Affonço, an entire length of 300 m. This distance is to be divided into three sections, for the first of which, 75 m. in length, and terminating at the village of Agua-Preta, a concession has been granted. The district to be thus opened up is one of great fertility, and contains upwards of 400 sugar-factories, while it also supplies nearly all the useful and ornamental timber for P. and the adjoining provinces. The second section is to terminate at a point where a great part of the cotton that goes down to the coast is received; while the third, by effecting a junction with the São-Francisco, will furnish an outlet for the produce of the shores of 2,000 m. of navigable water, and extend the communication to the prov. of the mines. The exclusive privilege for the first section, which it is supposed will cost about £1,000,000, is for 90 years. In addition to the guarantee of a minimum return of 5 per cent. upon the outlay, the imperial government have also conceded an exemption from duty upon all the machinery, carriages, &c., of the company, as well as upon the coal required to be imported for 10 years after the opening of the line. They are also to have the right of mining along the entire route and on either side within a distance of 20 m., and all their servants are to be free from liability to serve in the army or in the national guard.—In 1595, the town of Recife was piratically captured and sacked by the English navigator. James Lancaster. The first struggle for independence took place here in 1814.

Climate.] As P. is exposed to the influence of the trade-winds all the year round, it enjoys a comparatively cold climate, and is considered more healthy than either Rio or Bahia. The following meteorological observations were made during 1842, in the city of P., by the late Dr. Loudon:

	Max. temp.	Min. temp.	Fall of rain.
January,	86°	72°	6·09 in.
February,	86	73	2·01
March,	87	72.	8·23
April,	84	73	25·24
May,	83	71	16·21
June,	82	70	25·26
July,	82	67	16·11
August,	81	69	3·15
September,	85	70	1·04
October,	87	70	1·13
November,	87	73	0·29
December,	88	74	1·31
Mean,	84	71	109·27

The wind blew from S to E 208 days; and from N to E 156 days; and rain fell on 124 days. The rainy season generally commences about the middle or end of April, and continues till the middle of August.

PERNAMBUCO, a sandy plain in the Brazilian prov. of São-Pedro-do-Rio-Grande, between Torres and Estreito plains, and the parallels of 30° and 31° S lat.

PERNAMBUQUINHO, a village of Brazil, in the prov. of Ceara, and district of Villa-da-Imperatur, on the coast, about 18 m. E of the embouchure of the Mandahu.

PERNAU, a river of Russia in Europe, which has its source in the gov. of Esthonia, and district of Weissenstein, a little to the NE of the town of that name; runs SW into the gov. of Livonia; and, after a course of 75 m., throws itself into the gulf of Livonia, at the town of the same name. Its waters abound with fish.

PERNAU, Pernov, or Pernalin, a town of Russia in Europe, cap. of the gov. of Livonia, 108 m. NNE of Riga, and 81 m. S of Revel, on the gulf of Livonia, at the mouth of the river of the same name. Pop. 9,500. It is fortified, and is defended by a strong citadel, and has two suburbs, an Esthonian, a Russian, several German churches, and several schools. It has manufactories of iron-ware, and numerous grain stores, and carries on an active trade in grain, flax, hemp, linseed, hemp-seed, and leather. Owing to a bar of sand at the entrance, vessels drawing more than 7 ft. of water are unable to enter the port, and anchor in the roadstead. This town, from the lowness of its site, is exposed when the wind blows up the river to frequent inundations. P. was taken from Roland by the Russians in 1575, and retained by them till 1582. It afterwards fell into the hands of the Swedes, and was by them ceded in 1710 to Peter the Great. The ancient town, which was demolished in 1599, was the seat of a bishopric.

PERNELLE (La), a village of France, in the dep. of the Manche, cant. and 2 m. NNE of Quettehou, and 12 m. NE of Valognes. Pop. 604. A species of reddish clay is found in the environs.

PERNES, a canton, commune, and town of France, in the dep. of Vaucluse, and arrond. of Carpentras.—The cant. comprises 6 coms. Pop. in 1831, 7,818; in 1841, 8,852; in 1846, 9,143.—The town is 3 m. S of Vaucluse, and 14 m. ENE of Avignon, on the l. bank of the Nesque. Pop. in 1841, 4,997. It has a silk and a madder-mill, a distillery of brandy, and a manufacture of balances. The environs produce wine, almonds, olives, madder, and saffron.—Also a com. and town in the dep. of the Pas-de-Calais, cant. and 7 m. E of Heuchin, on a hill near the l. bank of the Clemance, an affluent of the Lys. Pop. 810. It has manufactories of beet-root sugar. In the environs are several coal-mines, and quarries of coloured slate.

PERNIAVOR, a town of Turkey in Europe, in Bosnia, in the sanj. and 51 m. N of Trawnik, on the Vihacsko.

PERNINGER, a town of Bohemia, in the circle and district of Elnbogen. Pop. 650. It has mines of tin and silver.

PERNO, a town of Russia in Europe, in the grand-duchy of Finland, and gov. of Kymmenegard, and district of Kymmene, 6 m. W of Lovisa, and 45 m. ENE of Helsingfors, on the gulf of Finland.

PERNOV. See PERNAU.

PERNSTEIN, a castle of Moravia, in the circle and 23 m. NW of Brunn, and 1 m. SW of Newieditz, on the summit of a mountain. It is entirely built of marble, and is the largest and finest in the margraviat.

PERNUMIA, a village of Austria, in Lombardy, in the prov. and 11 m. S of Padua, district and 3 m. SE of Battaglia. Pop. 2,020.

PERO, a canton and commune of Corsica, in the arrond. of Bastia. The cant. comprises 5 coms. Pop. in 1831, 2,623; in 1846, 3,086.—The village is 22 m. S of Bastia, and 55 m. NE of Ajaccio. Pop. 500.

PERO (CAPO DI), a headland of the island of Elba, in the Mediterranean, 7 m. NE of Porto-Ferrajo, in N lat. 42° 51′, E long. 10° 27′. It forms the most easterly point of the island.

PEROBAS, a village of Brazil, in the prov. of Espirito-Santo, 6 m. from Vianna, on a small stream named Santo-Antonio.

PERO-CAO, a mountain of Brazil, in the prov. of Espirito-Santo, on the l. bank of the Rio-Guarapari.

PEROLS, a lagune of France, in the dep. of the Herault, cant. and 5 m. SE of Montpellier, between the lagunes of Mauguio on the NE, and that of Maguelonne on the SW, and separated from the Mediterranean by only a low narrow tongue of land. It is 5 m. in length, and about 2 m. in breadth, and is intersected in its entire length by the canal des Etangs.

PEROLS, or PERAULT, a commune of France, in the dep. of the Herault, cant. and 6 m. S of Montpellier, between the lagune of the same name and that of Mauguio. Pop. 796. It affords good wine, and has several mineral springs.

PERON, a headland of W. Australia, in the N part of the co. of Murray, to the N of Warnboro sound, in S lat. 32° 14′, and E long. 115° 38′.—Also a mountain in the co. of Melbourne, in Gardener's range, about 12 m. N of Mount Leseur.—Also a peninsula of W. Australia, in Endracht Land, in Shark bay, between Hamelin harbour on the ENE, and Freycinet harbour on the WSW, and connected by Taillefer isthmus with the mainland. It is 66 m. in length, and 18 m. in breadth at its widest part. Near its NW extremity is a small fresh water lake.

PERONNE, an arrondissement, canton, commune, and town of France, in the dep. of the Somme.—The arrond. comprises an area of 116,970 hectolitres, and contains 8 cants. Pop. in 1831, 106,475; in 1841, 110,982; and in 1846, 113,424.—The cant. comprises 22 com. Pop. in 1831, 15,888; in 1846, 17,149.—The town is 32 m. E of Amiens, and 24 m. SW of Cambray, on a rising ground, on the r. bank of the Somme, at the confluence of the Doingt, and enclosed on all sides by a marsh, the exhalations of which render the locality extremely unhealthy. Pop. in 1789, 3,046; in 1821, 3,707; in 1831, 3,802; and in 1846, 4,294. It consists of a high and low town, and is generally well-built. It is surrounded by ramparts of brick and ditches, and were it not commanded by the adjacent heights of Flamicourt and Quinconce would be one of the strongest places in France. It has two suburbs, and an ancient castle, in which Charles-the-Simple died after a long confinement, and in which Louis IX. was held prisoner by the duke of Burgundy. It has also two churches, one of them a fine old Gothic edifice in which several of the early kings of France were interred, a communal college, a convent, a town-house, a theatre, and an hospital. It possesses manufactories of woollen and linen fabrics, and sugar from beet-root, of several tanneries, flour and oil-mills, and distilleries of brandy, and carries on an active trade in grain, flour, wool, wine, and brandy. This town is of great antiquity, and belonged to different princes until it was united by Louis 16th to the crown of France. It has sustained several sieges, and in 1814 and 1815 was occupied by the allied armies. The famous act between Henry 3d and the duke of Guise was signed within its walls in 1576. Previous to the first revolution, this town was the capital of the district of Santarre, in Picardy.

PERONNE, a department and commune of Belgium, in the prov. of Hainault and arrond. of Tournai, watered by the Schelde and the canal of Pommeroeul-a-Antoing. Pop. 944.

PERONNES, a department and commune of Belgium, in the prov. of Hainault and arrond. of Mons, watered by the Princesse. Pop. 344. It has manufactories of beet-root sugar.

PERONVILLE, a village of France, in the dep. of the Eure-et-Loir, cant. and 8 m. SW of Orgeres, and 13 m. E of Chateaudun, on the Connie. Pop. 460. It has a quarry of fine bluish stone.

PEROSA, a town of Sardinia, in the div. and 30 m. WSW of Turin, cap. of a mandemento, prov. and 9 m. NW of Pignerol, on the l. bank of the Clusone, in a valley of the same name. Pop. 2,400.

PEROS-BANHOS, a group of islets, 22 in number, in the Chagos archipelago, Indian ocean, in S lat. 5° 23′, and E long. 71° 50′. They encircle a basin to which there are two openings. This group of islands is dependent on the isle of France.

PEROTE, or PINAHUIZAPAN, a town of Mexico, in the state and 78 m. WNW of Vera Cruz, a little to the NW of the mountain of Nauhcampatepetl or Coffre-de-Perote, near the E limit of the table-land, and at an alt. of 2,769 ft. above sea-level. The houses are tolerably well-built, but from the want of windows to the street, present a gloomy aspect. In their construction a large portal is generally made to lead to the *patio-corral*, or yard, round which are the rooms. In its vicinity, to the N, is the large and strong fort San Carlos, 'the Tower' of Mexico, being the place in which are confined "the unlucky chiefs whom revolutions and conter-revolutions have turned upon their backs." From P. to Puebla, a distance of 80 m., the road passes over a broad generally uncultivated, and comparatively uninhabited plain, without a single tree or spontaneous shrub, and rarely a drop of running water. Yet the plain of P. is said to have been in the time of the Aztecs covered with a forest of heavy growth.

PEROTE (COFFRE-DE), a celebrated mountain on the table-land of Mexico, in the state of Vera Cruz, so called from the singular figure of a rock on its summit, a square seat-shaped eminence, resembling a chest. It is composed of basaltic porphyry, and is evidently an extinct volcano. Humboldt estimates its alt. at 4,089 metres = 13,514 ft.

PEROUGE, a town of France, in the dep. of the Ain, cant. and 1 m. W of Mexinneux, and 21 m. E of Trevoux, on the slope of a hill. Pop. 800.

PEROUSE (LA), a bay of the Kurile islands, on the E coast of the island of Simiesir or Marikan.—Also a strait which runs between the islands of Sagalin and Geso, and connects the seas of Japan and Okotsk. At its narrowest point, between Capes Crillon and Soga, it has a breadth of 24 m.

PERPENDICULAR (POINT), a headland of New South Wales, in the co. of St. Vincent, at the E extremity of the peninsula by which Jervis bay is en-

closed on the N, in S lat. 35° 10′, and E long. 150° 53′.

PERPEZAT, a commune of France, in the dep. of the Puy-de-Dôme and cant. of Rochefort, 21 m. SW of Clermont-Ferrand. Pop. 1,139.

PERPIGNAN, a town of France, in the dep. of the Pyrenees-Orientales, situated partly on a gentle declivity, partly in a plain, on the r. bank of the Tet, over which are two stone bridges at this point, and 6 m. above its embouchure in the Mediterranean, in N lat. 42° 42′. Pop. of cant. in 1789, 14,456; in 1846, 22,706; of town in 1846, 18,264. P. is accounted one of the keys of the kingdom, being on the only highroad to Spain by the SE frontier of France. The citadel, situated on an eminence which commands the town, is very strong, and its fortifications have been always kept in good order. The town, with the exception of one or two streets, is ill built and gloomy, containing no buildings worth notice but the cathedral. It has fine promenades, particularly along the great earthen mound that surrounds the town, and commands a picturesque view on every side, over a country entirely level, to Mount Canigou, one of the highest summits of the Pyrenean chain on the W; the mountains of Cabrieres on the E; and the Catalonian mountains on the S. The manufactures of P. are woollen and silk goods, lace, soap, liqueurs, and essences. It has also some trade in corn, wool, oil, iron, and wine produced in the environs; but is chiefly supported by its garrison and by the transit trade to Spain. The temp. is so mild that the orange flourishes in the vicinity of P., and considerable olive-plantations extend from near the town to the port of Canigou. P. is the see of a bishop, and the seat of a communal college, a school of design, and the different branches of departmental administration. It has a public library of 13,000 vols. In 1793, the Spaniards were defeated near this town by the French.—The arrond. of P. comprises 137,029 hectares, and 6 cants. Pop. in 1846, 86,864.

PERPIGNAN (Cape), a cape on the NW coast of Minorca, in N lat. 40° 6′.

PERQUILABEN, a river of Chili, which runs W, and after joining the Castillo, enters the Longomilla.

PERQUIMANS, a river of N. Carolina, U. S., which runs into Albemarle sound, in N lat. 36° 5′.—Also a co. in the NE part of the state. Area 175 sq. m. Pop. in 1850, 7,228. Its cap. is Hertford.

PERRANARWOTHAL, a parish in Cornwall, 3¼ m. N by W of Penryn. Area 1,796 acres. Pop. in 1831, 1,504; in 1851, 1,634.

PERRANUTHNOE, a parish in Cornwall, 2½ m. SE of Marazion, containing the township of Gold-Sithney. Area 1,182 acres. Pop. in 1851, 1,229.

PERRANZABULOE, or St. Pieran-in-the-Sands, a parish in Cornwall, 6 m. NW of Truro. Area 11,340 acres. Pop. in 1831, 2,743; in 1851, 3,114. The ancient church of this p. was, according to tradition, overwhelmed with sand, about five or six centuries ago: a small portion of the walls was visible above the sand, and the interior of this interesting edifice was restored to light in 1835. There are extensive copper and tin mines in the p. At Perranporth is a fine sandy beach, frequented as a bathing-place.

PERRECY-LA-FORGES, a town of France, in the dep. of Saone-et-Loire, cant. and 6 m. SE of Toulon-sur-Arroux. Pop. 1,740.

PERRERO, a village of Sardinia, in the prov. and 12 m. WNW of Pignerol.

PERREUX, a town of France, dep. of the Loire, on the r. bank of the Rhodon, 3 m. E of Roanne. Pop. 2,800.—Also a village in the dep. of Yonne, 4 m. SE of Charny.

PERRIERE (La), a village of Savoy, in the Tarentaise, on the l. bank of the Doron, 3 m. W of Boyel.

PERRINTON, a township of Monroe co., in the state of New York, U. S. Pop. 2,513.

PERROS-GUIREC, a town of France, in the dep. of Cotes-du-Nord, 5 m. N of Lannion. Pop. 2,550 in 1846. It has a small harbour.

PERROT ISLE, an island in the river St. Lawrence, to the SW of Montreal, between the embouchure of the Ottawa and the Lake of the Two Mountains. It is 7 m. in length, and 3 m. in breadth. About one-half of the surface is settled and extremely well-cultivated. It has a pop. of about 1,000.

PERROTT, or Parret (North), a parish in Somersetshire, 2 m. E of Crewkerne. Area 1,248 acres. Pop. in 1831, 454; in 1851, 399.

PERROTT (South), a parish and village in the co. of Dorset, 3½ m. N by W of Beaminster. Area 1,451 acres. Pop. in 1831, 381; in 1851, 374. The small village of South P. appears to have been a Roman station of some importance.

PERRY, a central county of the state of Pennsylvania, U. S., containing an area of 540 sq. m. It has a mountainous surface, and is drained by Juniata river and Sherman's creeks. The soil is generally fertile. Pop. in 1840, 17,096; in 1850, 20,109. Its cap. is Bloomfield.—Also a central co. of the state of Alabama, comprising an area of 936 sq. m., drained by Catawba river and its branches, and by branches of Black Warrior river. Pop. in 1840, 3,089; in 1850, 3,092. Its cap. is Marion.—Also a co. in the SE part of the state of Mississippi, comprising a surface, to some extent rugged, of 1,044 sq. m., drained by Leaf river and its branches, and by Black creek and its branches, tributaries of Pascagoula river. The soil possesses little fertility, and is to a great extent covered with pine. Pop. in 1840, 1,889; in 1850, 2,438. Its cap. is Augusta.—Also a co. in the W part of the state of Tennessee, containing an area of 575 sq. m., drained by Tennessee and Buffalo rivers. Pop. in 1840, 7,419; in 1850, 5,949. Its cap. is Perrysburg.—Also a co. in the SE part of the state of Kentucky, comprising a surface, generally hilly, of 760 sq. m., drained by the N and Middle Forks of Kentucky river and their branches, and bordered on the N by Laurel mountain. It is fertile in the valleys. Pop. in 1840, 3,089; in 1850, 3,092. Its cap. is Hazard.—Also a co. in the SE part of the state of Ohio, containing an area of 400 sq. m. It has a hilly surface, watered by affluents of Hockhocking and Muskingum rivers, and is generally fertile. Pop. in 1840, 19,344; in 1850, 20,474. Its cap. is Somerset.—Also a co. in the S part of the state of Indiana, containing a superficies of 400 sq. m., bordered on the SE, S, and SW by the Ohio, and drained by Anderson's, Deer, Bear, and Oil creeks. The surface is hilly, but the soil generally fertile. Pop. in 1840, 4,655; in 1850, 7,251. Its cap. is Rome.—Also a co. in the SW part of the state of Illinois, containing an area of 432 sq. m. It consists chiefly of prairie, and is drained by Big, Beaucoup, and Little Muddy creeks and St. Mary's river. Pop. in 1840, 3,222; in 1850, 5,278. Its cap. is Pinkneyville.—Also a co. in the SE part of the state of Missouri, containing a superficies of 400 sq. m., bordered on the NE by the Mississippi, and drained by several fine mill-streams. It contains some fine alluvial soil. Pop. in 1840, 5,760; in 1850, 7,220. Its cap. is Perrysville.—Also a township of Washington co., in the state of Maine, 5 m. NW of Eastfort, and 191 m. ENE of Augusta, on the W side of St. Croix river, and bordered on the E by Passamaquoddy bay, and on the S by Cobscook bay. Pop. in 1840, 1,008. It contains a village inhabited by Passamaquoddy

Indians.—Also a township of Wyoming co., in the state of New York, 243 m. W of Albany. It has an undulating surface, and is watered by the outlet of Silver lake. The soil consists of sand and clay loam. Pop. 3,082.—Also a township of Union co., in the state of Pennsylvania, pop. 1,254; of Armstrong co., watered by Alleghany river, and its affluent Clarion river, pop. 1,122; of Jefferson co., watered by Little Sandy Lick and Mahoning creeks, pop. 1,076; and of Fayette co., in the same state, pop. 1,350.—Also a township of Lake co., in the state of Ohio, 182 m. NE of Columbus, on the S shore of Lake Erie, pop. 1,339; of Allan co., in the same state, pop. 561; of Brown co., containing the villages of Cedarsville and Fayetteville, pop. 1,869; of Carroll co., pop. 1,344; of Coshocton co., containing the villages of Claysville and Guilford, pop. 1,339; of Columbiana co., pop. 1,530; of Pike co., pop. 558; of Franklin co, on the E side of Scioto river, pop. 1,037; of Fairfield co., pop. 1,172; of Gallia co., watered by Racoon and Symme's creeks, pop. 972; of Lawrence co., pop. 663; of Wayne co., pop. 2,079; of Licking co., pop. 994; of Shelby co, pop. 861; of Logan co., watered by Rush creek, pop. 1,044; of Stark co., pop. 2,209; of Montgomery co., pop. 1,881; of Monroe co., pop. 982; of Muskingum co., pop. 1,061; of Pickaway co., pop. 1,277; of Putnam co., pop. 266; of Richland co., pop. 1,853; of Tuscarawas co., pop. 1,381; of Wood co., pop. 550.—Also several townships of Indiana: viz., of Marion co., pop. 1,510; of Miami co., pop. 593; of Tippecanoe co., pop. 807; of Wayne co., pop. 1,744; of Noble co., pop. 464; of Allen co., pop. 293; of Clay co., pop. 483.—Also a township of Johnson co., in the state of Arkansas. Pop. 510.—Also a village of Pike co., in the state of Illinois, 66 m. W of Springfield. Pop. 1,339.—Also a village of Houston co., in the state of Georgia, 59 m. SW of Milledgeville, on the N bank of Indian creek. Pop. about 200.—Also a village of Perry co., in the state of Kentucky, 151 SE by E of Frankfort, on the E side of Kentucky river.

PERRY-BARR, a hamlet in the p. of Handsworth, Stafford, in the line of the North-Western railway, on which there is here a station 94 m. distant from Liverpool and Manchester. A handsome church was erected here in 1833.

PERRYOPOLIS, a village of Washington township, Fayette co., in the state of Pennsylvania, U. S., 192 m. W by S of Harrisburg, on the Youghiogeny river. Pop. in 1840, about 400.

PERRY'S BRIDGE, a village of La Fayette p., in the state of Louisiana, U. S., 218 m. W of New Orleans, on the W side of Vermilion river.

PERRYSBURG, a township of Cattaraugus co., in the state of New York, U. S., 306 m. W by S of Albany. It has a hilly surface, bounded on the N by Cattaraugus creek, and drained by several of its affluents. The soil consists of gravel and clay loam. Pop. in 1840, 1,660.—Also a village of Wood co., in the state of Ohio, 123 m. NNW of Columbus, on Maumee river. Pop. 1,065.

PERRY'S MILLS, a village of Champlain township, Clinton co., in the state of New York, U. S., 193 m. N of Albany, on Chazy river, 1 m. S of the Canada line. Pop. in 1840, about 100.

PERRYSVILLE, a village of South Kingston township, Washington co., in the state of Rhode Island, U. S., 41 m. S of Providence.—Also a village of Fenner township, Madison co., in the state of New York, 115 m. W by N of Albany. Pop. in 1840, 250.—Also a village of Bethlehem township, Huntingdon co., in the state of New Jersey, 10 m. N of Flemington, at the foot of Musconetcong mountain.—Also a village of Ross township, Alleghany co., in the state of Pennsylvania, 8 m. N of Pittsburg. Pop. 60.—Also a village of Perry co., in the state of Tennessee, 95 m. WSW of Nashville, on the W side of Tennessee river.—Also a village of Boyle co., in the state of Kentucky. Pop. 500.—Also a village of Green township, Richland co., in the state of Ohio, 78 m. NNE of Columbus, on the Black fork of Mohiccan creek.—Also a village of Vermilion co., in the state of Indiana, 81 m. W of Indianapolis, on the W side of Wabash river. Pop. 420.—Also a village of Perry co., in the state of Missouri, 214 m. ESE of Jefferson city, on Saline creek, 10 m. W of the Mississippi. Pop. 100.—Also a village of Perry co., in the state of Arkansas, 55 m. WNW of Little Rock, on the N side of La Fêve river, a branch of the Arkansas.

PERRYTON, a village of Perry township, Licking co., in the state of Ohio, U. S., 61 m. NE of Columbus. Pop. in 1840, about 75.

PERSAC, a town of Irak, in Persia, 25 m. SSE of Sultanieh.

PERSAGOW, a village of Dalmatia, on the gulf and 3 m. NW of Cattaro.

PERSAH, a town of Hindostan, in the prov. of N. Bahar, district of Tirhut, 120 m. NNW of Patna. It formerly possessed a strong fort, which commanded one of the roads leading into Nepal.

PERSAIM. See Bassein.

PERSANTE, or Psante, a river of Prussian Pomerania, which issues from Lake Paguset, near Neu Persanzig; passes Belgard; and falls into the Baltic, a little below Colberg, after a prevailingly NW course of 90 m., forming at its mouth a harbour capable of admitting ships of 200 tons.

PERSAUMA, or Persamma, a town of Hindostan, in the prov. of Bahar, and district of Tirhut, 99 m. ENE of Patna.

PERSEPOLIS, an ancient city of Persia, the majestic remains of which exist 34 m. NE of Shiraz, in the district of Puna, on the road to Ispahan, and have been described by nearly every European traveller, from Figueroa in 1619, and Pietro-de-la-Valle in 1621, downwards. The reader who wishes for full satisfaction with respect to them may consult Chardin, Le Bruyn, Ousely, Porter, Rich, and De Bode. Their site is in the vale of Merdasht, the 'Hollow Persia' of Strabo, watered by the Araxes, the Medus, and the Cyrus, about half a farsang from the v. of Kenore. The royal palace, consisting of a number of superb buildings, forming both a palace of ample magnitude and a citadel or bulwark for the capital, appears to have occupied a commanding site. It consists of an artificial platform, 1,426 ft. long, by 802 ft. broad on the S, and 926 ft. on the N side, chiselled out of a mountain forming the plain of Merdasht on the W, and having a higher part of the same mountain connected with its E side, the other three sides presenting perpendicular precipices from the subjacent plain. On the mountain to the E, called by Diodorus 'the royal mount,' and which still preserves the name *Shah-koh*, are the tombs of the kings excavated in the rock. The approach to the summit of this mountain is by an ascent of steps on the W face, forming a double flight. The steps are broad and shallow, 10, and sometimes 14, being cut out of one block of black marble. Niebuhr declares this staircase to be the most splendid, sublime, and durable, ever reared by human hands, many of the stones being 27 ft. long, and many on the wall 55 ft. long by from 4 to 6 ft. high. On reaching the platform, the first objects that meet the eye are two colossal bulls of noble form and attitude, sculptured on the lofty sides of an enormous portal; other symbolical representations in granite basso-relievo are found in different places. At another gateway similar to the one before-mentioned, the sculptor has represented two monstrous figures, of the human and bestial forms united, with the addition of wings projecting from the shoulders, extending high over the back, and covering the breast. Each has the body, legs, and ears of a bull, and the face of a man. The expression of the human face is severe, and a long carefully-curled beard adds to the majesty of the general form. On a near approach to the hall of columns, the eye is rivetted by the grandeur and beautiful decorations of the double staircase which leads up to them; beyond it, and rising from the landing-place, is another double staircase, but smaller. The windings of these staircases are covered with sculptures of human figures, and a duplicate representation of a combat between a bull and a lion. The pillars are ranged in four divisions,—three colonnades, and a quadrangle of central columns. The form of the columns of the three colonnades is the same in all, and perfectly beautiful. The height of each pillar in the colonnades is 60 ft.; the circumf. of the shaft, 16 ft.; its length, 44 ft. from the tor to the capital. Each shaft is fluted in 52 divisions. Of 72 columns of which this splendid temple was originally composed, 13 are still standing erect; in 1621, 25 were standing.

PERSHORE, a market-town of Worcestershire, 10 m. SE of Worcester, and 35 m. SSW of Birmingham; $2\frac{3}{4}$ m. W of the Birmingham and Gloucester railway. Pop. in 1831, 2,536; in 1851, 2,717. The town is pleasantly situated on the river Avon, which is here spanned by a stone-bridge. It consists principally of one long street, and contains some well-built houses. The manufacture of stockings employs a considerable number of hands.

PERSIA,

An extensive country of Central Asia, the political boundaries and divisions of which have greatly varied at different periods. The Persia of modern times, in the widest application of the term, forms an extensive and lofty upland sloping on the S to the Persian gulf and Indian ocean; on the W to the basin of the Tigris and Euphrates; on the N to the basin of the Lower Araxes, the Caspian sea, and basin of the Oxus; and on the E to that of the Indus. The region thus traced, comprising an area of from 1,000,000 to 1,200,000 sq. m., is quite distinct in its physical features from all the countries in its vicinity; and, though comprehending several distinct basins on its vast surface, yet the points in which these resemble one another are so many and so peculiar that the whole may be regarded as one continued physical region. This great upland extends upwards of 20° from the W of the Zagros, to the Afghanistan mountains, or nearly 1,200 m.; and has 10° of medial breadth; thus containing a surface of about 800,000 sq. m. Had the political state of this extensive region allowed us to describe and treat of it as one whole, the task of description would have been easier, its political and natural boundaries harmonizing together. Or had we been permitted to avail ourselves of Kinneir's plan, who describes it according to the boundaries it possessed in the bright days of the Sassanian dynasty, when the Persian empire reached from the Indus to the Euphrates, and from the Persian gulf to Mount Caucasus, the Caspian, and the Oxus, though the field of description would have been much larger, it would have also been still more distinct. But we must bow to the necessity of the case, and describe P., not as it was, in the days of its glory, but as it now is,—a mere '*magni nominis umbra*,' broken down into two insignificant monarchies, one of which exists but in name, while the other is silently and rapidly disappearing, as snow before the vernal sun, under the combined influence of intestine feuds, and pressure from without. The whole of Western P. is now politically dissociated from Eastern P., forming the independent states of BELUCHISTAN and AFGHANISTAN. See these articles. The present article is confined to Western P., constituting the modern kingdom of Persia.

Name.] The name *Persia* is not that by which the natives have at any time designated the extensive region to which that appellation has been given both by the ancients and the moderns. The ancient and native designation of Persia, collectively taken, is *Iran*; the name *Persia* only belonged, in early ages, to a prov. of that region, and one which had no political consequence till the time of Cyrus. The extensive plateau above traced was peopled by many tribes of perhaps different races, amongst whom the Persians, properly so called, formed only one race; but these having in process of time obtained political ascendency over the rest, the name was naturally transferred by the Greek historians to the whole region: just as, in after times, the Roman historians designated the same region by the name *Parthia*, the Parthians being the ruling tribe at the time, and afterwards by the name *Persia*, when the Persians again obtained the ascendency. But the appellation *Persia* having become stamped by the sanction of classical and even of sacred authority, it has continued to be the name of the whole region ever since. The name does not occur in Scripture till the return of the Jews from the Babylonish captivity. It is the general opinion, that under the name *Elam*, P. is designated in the earlier sacred writings; but this seems to be a mistake. The name Elam was certainly never applied to any region beyond the southern and mountainous part of Media, to the N of Susiana, and sometimes to Susiana itself. On the Persepolitan monuments P. is denominated *Airan*, in the Pehlevi language, or the old Persian as it was spoken and written in the time of the Sassanian dynasty. The same denomination is engraved in the same character on the Sassanian coins. On one of these, Artaxerxes, the founder of that dynasty, is denominated '*Artachetre*—in modern Persian, *Ardeshir*—the victorious, king of the kings of Airan and Anairan.' The Greek orthography of these Pehlevi terms is *Arianun* and *Anarianun*, or *Arians* and *Anarians*. In the Pehlevi, *air* or *eir* signifies 'faith;' *Airan* or *Eiran*, therefore, signifies 'the land of believers;' and *Anairan* or *Aneiran*, 'the land of the unbelievers. These denominations, therefore, are expressive not of a political but of a religious union or disunion; and the system in relation to which the terms were used was undoubtedly that of the Magi, of which Zoroaster was the reputed founder. The Scythians, beyond the Oxus, never received, but on the contrary resolutely and steadily opposed the tenets of Zoroaster, and their country was on this account denominated *Aneiran*, or 'the land of unbelievers' or 'infidels;' just as at this very day the Mahommedans designate the regions where their own faith is professed by the appellation of *Islam*, and where it is not by that of *Kafiristan*, or 'the land of *Kafirs*.' The terms *Aria*, *Ariane*, *Ariana*, are exclusively given by Eratosthenes and Pliny to the whole of Eastern Persia. It is not, however, true, as Malte Brun affirms, that Ptolemy applies that name exclusively to Eastern Persia: he applies it only to the lower region of the Etymandrus river. Mela uses the name *Ariane* in the same extensive sense as Eratosthenes and Pliny. The Armenian geographer, Moses of Chorene, who flourished in the 5th cent., and lived almost on the very spot where Magiism was professed, includes the whole Persian empire under the name of *Ariana*. Bochart, in his usual way of referring all Oriental words to Hebrew roots, having found that Herodotus and Pausanius affirm that the Medes were originally called *Arii*, and their country *Aria*, and that a nation dwelling in the neighbourhood of the Cadusians was denominated *Ariana* by Apollodorus, assigns the Hebrew noun *har*, 'a mountain,' as the origin of the appellation; and maintains that Media was called *Haru* because it was a mountainous region; while, dropping the aspirate, the Medes were called *Arii* or 'mountaineers.' The reader will perhaps be of opinion with us, after what has been said, that by the term *Eiran* was originally meant the whole region where Magiism was the professed creed and popular belief. It seems inaccurate to include, as Jones and Malcolm have done, Assyria and Babylon under this designation, for the Magian tenets were never professed by the sovereigns of these countries: Zabiism, or 'the worship of the host of heaven,' being always the professed religion of these states. It must not be inferred, however, that because *Eiran* was then the original designation of P. at large, a unity of political government, as well as of religious faith, existed here. The one might exist without the other, as it did in Hindostan previous to the introduction of Mahommedanism, and as it still does in Europe, which, though denominated *Christendom*, or 'the region of Christianity,' consists of many political and mutually independent states.

I. WESTERN PERSIA.] Western P., or the modern kingdom of Persia—to which the present article is confined—stretches between the parallels of 25° and 40° N, and from 44° to 62° 30′ E long.; and is bounded by Armenia, now in possession of Russia, by the Caspian sea from the mouth of the Astara, on the W, round to the mouth of the Attruck on the E, and nominally beyond it as far N as the gulf of Balkan, and by Turan, on the N; by the Eimak territory, Herat, Sistan, and Beluchistan, on the E; by the Persian gulf on the S; and by Asiatic Turkey on the W. Its greatest extent, from the vicinity of Mount Ararat on the NW, to that of Herat on the SE, is nearly 1,000 m.; but from the pass of Mount-Zagros, near Holware, to the same point, and nearly the same lat., is only 900 m. The medial breadth of the country is about 600 m.; so that the whole area of Western P. is little more than half that comprised within the physical boundaries already traced. —The superficial area of Western P. is thus variously estimated in sq. m.:

By Arrowsmith's map,	623,637
Reichaud's map,	496,564
Hassel,	475,236
Olivier and Stein,	473,000
Graeberg,	472,140
Bertuch, in the *Weimar Journal* of 1816,	332,460
Balbi,	477,300

From all the above estimates, the khanate of Erivan, and the district of Nakshivan, which composed Persian Armenia or the prov. of Aran, must be excluded, being now annexed by conquest and treaty to the Russian empire.—It is divided into the pro-

vinces of Azerdbijan, Kurdistan, Luristan, Khuzistan, Farsistan, Laristan, Kirman, Khorasan comprising the Kohistan or Great Salt desert, Irak-Ajemi, Ghilan, Mazanderan, and Astrabad; on all of which, separate articles will be found in the present work.

II. Eastern Persia.] This division of P. formerly comprehended, not only what is denominated Eastern P., but also all the tract from the crest of the Afghanistan and Beluchistan mountains to the Indus, the prov. of Sind, the whole of the Punjab, and the provs. of Multan and Cashmere. It also included the prov. of Balkh beyond the Hindu-kush, Tokharistan, and Khilan, whilst westward it reached as far as Turshiz and Meshid. All this extensive domain was comprised in the dominions of Achmet Shah-Abdalli. But the country E of the Indus was seized by Runjit Sing, the Sikh chief of Lahore; all beyond the Paropamisus and the Hindu-kush, by the Usbeks of Khullum and Kunduz; and when Meshid and Western Khorasan were recovered by the Persians, the Amirs of Sind retained their independence. The Afghan monarchy itself is now dismembered, and all that remains to the successors of Achmet Abdalli is the kingdom of Herat; Afghanistan being divided amongst the sons of Futteh Khan, and Beluchistan having fallen to the Khan of Kelat and other chiefs. The whole tract, thus divided, has the Persian gulf and Indian ocean on the S; the Indus and its delta on the E; the lofty range of the Hindu-kush and the khanate of Balkh on the N; Persian Khorasan on the NW; and the desert of Kirman on the W. On the shores of the Persian gulf its W limit is Cape Jask on the frontier of Luristan. Balbi divides the area thus traced into the kingdom of Herat, of 66,000 sq. m.; Beluchistan, 146,000 sq. m.; and Afghanistan, 229,000 sq. m.; total 441,000 sq. m. But in this last division he includes Multan, Leia, and Bahawulpur; and in the territory of Herat, that of Balkh, now in the hands of the Usbecs, seems to be included. Where territories are changing their political masters every few years, it is next to impossible to determine their political limits. We do not assign more than 400,000 sq. m. to Eastern P. as now described; its greatest length being from 60° E long. on the N, to the Indus in 72° E long.; and from 58° E long. to 67° E long. on the S, and its mean breadth being 10°, or from 26° to 36° N lat.

Physical features.] The general characteristic of P. is that of a great plateau, or upland, studded with innumerable mountains, with their corresponding valleys, and immense desert plains. In fact—to use the language of Chardin—P. is a country of mountains, but they seem not to have any general direction, or to form a continued chain: they extend without order in all directions, and groups, which seem to form the commencement of chains, are suddenly interrupted by smooth, extensive, and very elevated plains. The great Persian plateau joins on the W and NW those of Kurdistan and Armenia, and passes into that of Central Asia on the NE. On the SW it looks down on the valley of the Tigris; and towards the E, on that of the Indus, whilst its S and N declivities are the Persian gulf, the Indian ocean, and the Caspian sea. Strabo has divided this country into three regions,—a distinction founded on an accurate observation of the leading differences of climate and produce: the southern division or declivity being hot, dry, and barren,—the midland, cold and dry,—and the northern, moist, warm, and fertile. This middle region, or great body of Persia, is from 2,500 to 4,500 ft. in elevation above the sea. It appears that the general level of the plateau of Kashan is higher than that to the N of it; and that the level of Kum may be estimated as that of the Great Salt desert, or 2,000 ft.; it is probable, however, that the Zurrah or Hamun, the great inland lake of Sistan, is the lowest level of the whole plateau. The level, out of which the upland rises, called the *Dushtistan* or 'level country,' stretches alongst the coast of the Persian gulf, and the Tigris on the S, and under various appellations, along the shore of the Caspian to the northern foot of the Elburz. The aspect of the plateau itself, strewn with mountains, hills, valleys, and plains, would, it might be supposed, have a pleasing and diversified appearance, especially in such latitudes as those between 30° and 37° N; but this is by no means the case: the interior mountains are everywhere bare, arid, and forbidding, in most parts presenting nothing to view but huge masses of grey rock, successively piled on each other, or starting in abrupt ridges from the plain at their feet. Though in some places they have a little soil, yet they are unenlivened by wood or shrubs. For about two months in the year a scanty verdure tinges their brown sides with an emerald hue, but it is soon scorched up by the heat and drought of summer, and the original bistre colour is resumed,—not a single tuft remaining of what vegetated and withered so rapidly. The plains are equally unattractive, consisting chiefly of gravel washed down from the mountain-slopes, or the accumulation of some former revolution of nature deposited in deep and extensive beds, or of a hard clay, which being destitute of water, is as barren and desert as the rest. With the exception of Mazanderan and the provs. on the Caspian, P. may generally be described "as an arid country, without one great river, and with few perennial streams." [*Malcolm.*] The rivers are few; and even rivulets are by no means common. In the best districts, the small proportion of cultivated land resembles a Libyan oasis, just serving to render all around it the more dreary. The only trees to be seen are in the gardens of villages, or on the banks of streams, where they are planted for the purpose of affording the little timber used in building. They chiefly consist of fruit-trees, the noble chinar or oriental plane, the tall poplar, and the cypress. But the contrast which these gardens, spotting the grey and dusty plain with their dark green appearance, produce, is more melancholy than pleasing. There are, however, some exceptions to be found to the general picture,—some favoured spots to relieve the eye, as in the provs. of Ghilan and Mazanderan, the districts of Astrabad and Gurgang, all on the Caspian sea; and part of Azerdbijan, for Persian Armenia is now a Russian prov. These Caspian provs. are as beautiful as wood, water, and mountains in their most varied form, can make them. The plain of Nishapore, on the S slope of the Elburz, and that of Hamadan at the foot of the Elwund, and the extensive valley of Kirmanshaw in the Zagrian range, are also exceptions. The Eastern tales which delighted our early youth by their scenes of wonder, voluptuousness, and inexhaustible riches, all portrayed in the florid, hyperbolical style peculiar to Asiatics, have contributed their influence to throw over this region of the globe a magical and fascinating illusion, which must continue still to envelope it, until dispelled by the cold and accurate realities of science.

Mountains.] The mountains which enclose the great *oropedion*, or upland Persian plain, on the W, are elongations of the Taurian range, which runs through Kurdistan and Armenia, and of the Moschian range, which separates Armenia from Georgia. The latter, after forming the southern boundary of the basin of the Kur, crosses the Araxes, and enters Azerdbijan under the name of the Kara-Dagh. The Talish range is the commencement of the high lime-

stone belt, which surrounds the Caspian on the S like a bow. From the plain of Mogan, on the S side of the Kur, the direction of this chain is SE for about 4° of long. to a point somewhat E of Teheran. From this point it inclines E, and then NE, till about 62° E long., where it is interrupted by low grounds; further to the W it becomes identified with the Paropamisan mountains. As far E as the Sufid-rud or Kizil-Ozan, this chain is known as the mountains of Talish; to the E of that river, the general name is the Elburz, from the old Persic term, *El-bordj*, 'the mountain.' This name, however, is applied not only to the whole range, but also to the Caucasus itself; while on the other hand, the Elburz is also denominated the Kohé Caucasân. This extensive chain is connected with the mountain ranges which intersect Azerdbijan on the N, and stretch NNW towards the Arghirtagh or Mount Ararat. The mountain Savalan, at the NE extremity of the Sahund mountains, 80 m. E of Tauris, is the highest of the cluster, and is covered with perpetual snow. Major Willock ascertained, in 1825, its elevation to be 8,000 ft. above its base; its absolute elevation, therefore, must be more than 13,000 ft. Respecting the elevation of the Elburz, Mr. Fraser does not think that, with the exception of Demavend, its summits exceed 7,000 ft. About 50 m. to the SE of Teheran are the celebrated Caspian straits, through which Alexander pursued the unfortunate Darius. There are however, two passes, which have obtained the appellation of the *Caspiæ Pylæ*, or 'Caspian Straits,' and which, from their vicinity to each other, have been frequently confounded. The Caspian straits, strictly speaking, are those which lead from Media, direct to the Caspian sea, across the Elburz mountains; whereas the other pass, through which Darius fled, runs E along the southern slope of the Elburz, instead of crossing it. The great Kurdistan range enters P. between the lakes of Van on the W, and Urumiyah on the E, where it forms the line of boundary. Their name to the W of Urumiyah was anciently the *Caspii montes*. Running SSE, they join the great central chain to the S of Lake Urumiyah, called *Choatras* by Ptolemy, evidently the Persic *Kho-Ader*, or 'Mountain of fire.' At its SE extremity, the Kho-Ader branches into the Koflan-Koh, running NE, and into the Zagros running S and SE, and skirting the valley of the Lower Tigris, the Shat-al-Arab, and the alluvial regions of the Karun, the Jerahi, and the Tab, till it joins the lofty range which separates the upland of Persia Proper from the Gurmsir, or hot region. It forms, in fact, the great western and southern buttress of the Persian plateau the whole way, under various names, till it meets the southern projection of the Beluchistan mountains. From Bushire to Shiraz, not less than five ranges of mountains, each successively higher than the other, must be crossed before the wearied traveller begins to descend towards the plain of Shiraz. Three principal ranges in the centre of the Kurdistan chain, the Tahite, the Daru, and the Kurtak, are of great elevation. The range is generally limestone, and contains, like others of a similar structure, numerous caves and grottoes. The whole range, from where it enters P., to where it meets Cape Urbu, the S point of the Beluchistan range, is at least 2,000 m. in length. The Pirazun, the highest pass between Bushire and Shiraz, is estimated at 7,000 ft. by Lieut. Alexander; but its elevation is certainly more, as the plain of Arjun, at the foot of the pass, is 6,750 ft. above the sea by Fraser's table. The Elwend, or *Orontes* of the ancients, is rather a group than a chain of mountains, and appears completely detached from its NW neighbours, the mountains of Ardelan. It is generally covered with snow, its summits being 4½ hours' ascent above Hamadan, which is itself in a very elevated situation. The province of Kirman is traversed from E to W by different ranges of mountains. A very lofty range, covered with snow in some parts, separates the desert of Kirman from that of Sistan. Another range separating Kirman on the S, from Sistan on the N, seems to be the *Montes Becii* of Ptolemy. A third range forms the S limit of the district of Nurmanshir. It is very lofty, and is at all times covered with snow.

Deserts.] If the deserts, and the varied ranges and groups of mountains which either bound or crown the great Persian plateau, be excluded from the estimate, P. contains but a small portion of arable land. The great extent of deserts is a distinctive feature of Persian geography, which in this respect greatly resembles Arabia. There are five great deserts in P., using the term in its widest signification, exclusive of smaller ones: 1st, that called Karakum, or 'Black sand,' to the NE of Khorasan; 2d, the Great Salt desert, extending from the vicinity of Kashan and Kum on the W, to the frontiers of Kandahar on the E; 3d, the desert of Kirman, which may be regarded as an extension southwards of the Great Salt desert; 4th, that of Beluchistan in Eastern Persia, including that of Sistan, and extending from the foot of the Beluchistan and Afghanistan mountains, to the W and S, where it meets the desert of Kirman and the Great Salt desert, comprehending a surface of 140,000 sq. m.; and 5th, the desert of Kiab on the E of the Tigris, which stretches from that river to the Luristan mountains. It is impossible even to approximate nearly to the superficial extent of these collectively considered; but of this we are certain, that they compose nearly the whole of central Persia. In addition to these, the sandy waste of Bunpur, in the SW of Mekran, 155 m. long, by 80 m. broad, may be here mentioned, though belonging to Eastern Persia. These deserts cut off all communication between the eastern and western parts of P.; and hence travellers are compelled to take the circuitous route from Ispahan to Teheran, and from thence along the subalpine ridges that project southward from the Elburz to the desert, in order to arrive at Khorasan and Afghanistan. They form a portion of that remarkable chain of sandy and saline plateaus which extend from the Great Gobi, or 'Naked desert,' on the NW of China, across the whole of Asia, communicating, with little intermission, through Beluchistan, Mekran, and Nedjid, with the great sea of sand in Arabia.

Lakes.] As a natural consequence of the great extent of saline deserts, P., like Africa, abounds in salt lakes. Of these, the lake of Urumiyah in Azerdbijan, the *Spauta* of Strabo, the *Martianus Palus* of Ptolemy, and the *Capoton* of Moses of Chorene, is the largest, measuring, according to Major Rawlinson, above a degree of lat. in length, and above a third of that distance in extreme breadth. See URUMIYAH. The lake of Bakhtegan is the receptacle of all the rivers of Hollow Persia, or those that water the vales of Morgab, Merdasht and Karbal. It is 60 m. in length from NW to SE.—The lake of Shiraz, 6 m. E of that city, is a much smaller expanse than the Bakhtegan lake, being only 12 farsangs in circumf. The hollow plain, containing the basin of the Bakhtegan lake, is a saline desert bounded on both sides by ranges of lofty mountains. The lake of Zurrah belongs to Afghanistan, or Eastern Persia; and the Pfahl lake lies beyond the Attruk, in the Damin-e-Koh.—At Shiramin, a village near Lake Urumiyah, there are certain ponds, whose indolent waters, by a slow and regular process, stagnate, concrete, and petrify, and produce the beautiful transparent stone commonly called Tabriz marble, which is so remarkable in most of the burial places in Persia, and which forms a

chief ornament in all the buildings of note throughout the country.

Rivers.] From its physical configuration, Persia has but few rivers, and these generally inconsiderable. The most northern stream is the Araxes, which can scarcely now be called a Persian river, as but a very small portion of Persian territory touches its r. bank.—The Kizil-Ozan is, throughout, a Persian stream, and one of the largest in that region. It is the *Gozan* of Scripture, and the *Amardus* of Ptolemy. It originates in the mountains of Ardelan, its upper valley being bounded on the W by the range of the Kaplan-Dagh or Koflan Koh. Its whole course, including sinuosities, is 400 m. See article KIZIL-OZAN.—The Hud may be called a Persian river, being the ancient *Gyndes*, which separated Susiana from Assyria. It is a large stream, fully 300 yds. broad at its confluence with the Tigris, about midway between Koote-al-Hamara and Korna. It is a frontier stream, forming the W boundary of the prov. of Khuzistan.—The Kerah, or Hawiza, is another large stream in the SW of P. We take it to be the same with the river of Nehavend and Hamadan, which, instead of being made to describe a very tortuous course to the Karasu, should describe a meridional course to Khorremabad, 120 m. NW of Shush. It is a larger stream at the ruins of Shush or Susa than where it enters the Shat-al-Arab; much of its waters being drawn off by canals for the purpose of irrigation.—The Karun is perhaps the largest stream, in respect of volume of water, of any in all Persia. It is composed of two main branches, the Abzal and the Karun, which unite at Bundikeel, not far below Shushter. The combined stream is larger than the Tigris or the Euphrates, taken separately; and after a SW course of 100 m. below the junction, it disunites at Sabla, and enters the sea by six mouths. A little above Sabla, the Karun receives the Jerahi, a large stream running a winding course of 150 m. from the Luristan mountains. See KARUN.—The Tab, the *Oroates* or *Arosis*, is the river which anciently separated Persia from Susiana. It rises at the foot of the mountains that bound the plain of Shiraz to the W, and after a comparative course of 180 m., enters the Persian gulf.—The Araxes, the Cyrus, and Medus, of Strabo, are famous in classic story, as watering the vale of Persepolis. The first of these is now called the Bundemir; the second the Kurab; and the third the Sowan or Sewund.—The Attruck is the most NE river of P. It is a large body of water, which, after running a N and then a W course of more than 250 m., through territory which can hardly be regarded as politically belonging to P., enters the Caspian about 50 m. to the N of Astrabad.—There are no other rivers of consequence in Western P. Those of Mazanderan all run short courses from the Elburz to the Caspian; but, though extremely numerous, none of them are navigable. But poorly supplied as it is with rivers, Northern P. exhibits a wonderful contrast to Southern P. in respect of their physical features; Pottinger tells us, that such is the aridity of Southern P., that, in his whole route from Sonmeauny, at the NE extremity of the Indian ocean, to Shiraz, a journey of 1,500 m., 1,300 of which were in as direct a line as the paths would admit, from E to W, the vicinity of Shiraz was the first place where he had seen a running stream deep enough to take a horse above the knees.

Climate.] On such an extensive surface the climate must be exceedingly varied. What the younger Cyrus said to Xenophon is still applicable to modern P.: "My father's empire is so large that people perish with cold at the one extremity, while they are suffocated with heat at the other." This region may be said to present three climates: that of the low tracts bordering on the Caspian sea; that of the great plateau itself; and that of the shores of the lower Tigris and the Persian gulf. The Caspian sea being 332 ft. lower than the ocean, its shores in summer experience stronger and more lasting heats than do the West India islands. Excessive humidity is the leading feature of its climate. Both weather and temperature here are highly capricious. In the depth of winter the natives are often forced to throw off their warm clothing; at other times, in the middle of summer, they are compelled to have recourse to their sheepskin cloaks and furs. The climate of the plateau or upland is essentially different. Surrounded with mountains, on many of which snow lies perpetually, this region, from Ispahan to Candahar, experiences very hot summers and excessively cold winters. In summer, the atmosphere is excessively heated by the reflection of the solar rays from the burning sand and naked rocks. The heats of Teheran are insupportable in summer, and the whole court and most of the inhabitants abandon the place during this season for cooler retreats. In the plain of Hamadan, on the contrary, the heat is moderate, never rising above 80° in the shade, in the hottest period of the year. But this plain is elevated and well-watered and wooded. In other elevated situations, as Sutanuah, Gutuppeh, and Akhend, the temp of summer is moderate, not rising above 75° in the shade during the hottest time of the day. Farsistan, particularly the vale of Shiraz, has been represented as free from excessive and rigorous colds; but this is not strictly true, for, during the winter months, rain and hail, frost and snow, visit the plain of Persepolis; Le Bruyne, when engaged in exploring the ruins of Persepolis, was unable for some time to prosecute his researches, and compelled to seek shelter. Scarcely a day in winter passes without some person being frozen dead in the vicinity of the towns. This catastrophe is more frequent in consequence of the practice, universally followed and rigidly enforced, of shutting the gates of all cities and towns a little after sunset, and reopening them only at sunrise. Rainbows are seldom seen in Central P., because the air is too dry and pure. The serenity and purity of their cloudless atmosphere is, indeed, the greatest blessing the natives of this region enjoy; the sky being so clear at night, travellers can journey all night, and thus avoid the excessive heat of the solar rays so insupportable during the day. The third climate is that of the Gurmsir, or low region, which skirts the Persian gulf and the lower basin of the Tigris. Here the samiel often kills the unwary and imprudent traveller. At Bushire, the heat is excessive, the therm. ranging from 87° at sunrise, to 98° in the shade at noon; and generally standing at 90° during the night. The whole S coast of P. is burnt up and barren, presenting nothing to view but brown sand, grey rocks, and hardened clay.—Earthquakes are frequent in P. One of the most disastrous on record occurred in April, 1853. The city of Shiraz appears to have been near the centre of this convulsion, and experienced a series of shocks throughout five days, which reduced it to a heap of ruins, and destroyed, it is calculated, 12,000 lives, in and around the place.

Soil and productions.] From what has been stated respecting the aspects of Persia, its numerous naked mountains, extensive deserts, and scarcity of water, it may be easily inferred that the proportion of good soil in Persia is exceedingly small; and even of what arable land exists one-twentieth part is not cultivated. In ancient days, the prov. of Susiana was a rich fertile prov., but it is now scarcely distinguishable from the neighbouring deserts. Farsistan was once well-wooded; but though much has been said of the fertility and beauty of the plain of Shiraz, later travellers, as Fraser and others, declare it to be comparatively barren and unproductive. The vale of Merdasht, which contained the once celebrated city of Persepolis, and was famed for its agricultural produce, being watered by the Araxes, Cyrus, and Medus, and which supported a pop. of 1,500 villages, besides Persepolis, is now a dreary waste. The plains in the vicinity of Comaishah have been much praised for their exuberant fertility and beauty by Chardin, who traversed them nine times; and yet, in Fraser's opinion, they are sterile and barren. The district of Ispahan is well-watered by the Zenderud, and numerous canals, drawn from the river for the purpose of irrigation. The plain of Hamadan, 15 m. long, by 9 m. broad, is abundantly fertile; and that of Kirmanshaw is the most fertile in P. The plain of Khoi, in Azerdbijan, is noted for its deep and exuberant soil, which is so stiff as to require in some places ten pair of buffaloes to drag the ploughshare through it; but the district of Khalkhal is the granary of this prov., the soil being a dark loam, and standing in no need of artificial irrigation. A number of fertile valleys exist in the S slopes and subordinate ranges of the Elburz. In Kirman, the only fertile

district is that of Nurmanshir, and the district of Darabghurd, SE of the Bakhtegan lake. The Kurdish districts, in the S part of Persian Khorasan, are abundantly fertile; but Khorasan is so subjected to the inroads of the Turkman tribes, that its once numerous pop., flourishing cities, and extensive commerce, have disappeared. The land-tax was formerly a tenth of the gross produce, but lands held in fief, or for payment of military service, were exempt; it is now one-fifth of the gross produce, in addition to the *saaduraut*, or irregular taxes instituted to supply the exigency of the state, by which each proprietor is obliged to furnish a share proportioned to his estate. This is one of the heaviest burdens levied on the cultivator.—If P. be deficient in grain, it abounds with herbs and flowers of every kind and hue. Gardens are numerous and extensive, and few countries surpass P. in the variety and flavour of its fruits, amongst which are the fig, the pomegranate, the almond, the date, the peach, and the apricot. Khorasan is famous for its melons, of which there are 20 species. The quinces of Ispahan are the finest in the East; and the vines of Shiraz, Yesd, and Ispahan, have each their peculiar excellence. Of raisins there are 14 kinds, of which the violet, red, and black, are most esteemed. The Persian dates are exceedingly rich, their syrup being sweeter and more pleasant than virgin honey. Pomegranates attain great perfection, some of them weighing a full pound. The country also produces hemp, tobacco, opium, sesamum, rhubarb, manna, saffron, cotton, turpentine, mastic, and various aromatic gums. Ghilan and Mazanderan, or the narrow stripe between the Elburz and the Caspian, are by far the most fertile and productive districts in all P. From September to the end of April, the whole country in this quarter is one continued garden, and is covered with forests of oranges and lemons, and single and double jessamines. The cultivation of mulberry-trees, and the rearing of silk-worms, is the chief employment of the Ghilanis; for silk is but sparingly produced in Mazanderan. The annual produce of silk which passes through the custom-houses of Ghilan, as Fraser was informed, is about 60,000 *maunds shakee*, or 900,000 lbs., exclusive of what is used in home-consumption, which does not pay duty.

Animal kingdom] The horses of P. have been always celebrated as the finest in the East. The Nisæan pastures and the Nisæan horses have been renowned from a very distant antiquity. They are, however, although they may excel the Arabian horses in shape and handsomeness, inferior to them in fleetness; and for this reason Nadir-Shah preferred the Arab breed to the Persian. The horses of the Chab country are remarkable for their strength, though they have not so much blood as those of the desert. Those of Shuster are large, powerful, and admirably fitted for riding-horses, but are not found to answer as race-horses. The Turcoman breed of horses has been introduced into P.; they attain a great size, and are capable of enduring extraordinary fatigue, having been known to perform a journey of 900 m. in 11 successive days. The late Vakeel Kerim-Khan, mounted on one of these, once performed a journey of 332 m. in 58 hours. Camels are common in Interior and Southern P. They are of three kinds, but the Bactrian camel is most used for travelling. Mules are much used, and particular care is taken of the breed. An excellent breed of the ass has been introduced from Arabia. The *gurkhur*, *gur-kher*, or wild ass, is an object of the chase, and his flesh is esteemed a delicacy. The forests of the Elburz in Ghilan and Mazanderan abound, as might be expected, in wild animals, as wolves, tigers, jackals, foxes, boars, and the Caspian cat. Lions, leopards, and jackals, also abound in Mazanderan. Oxen and cows are kept chiefly for agricultural purposes, and for the supply of the dairy. The cows of Mazanderan and Ghilan are small in size, and resemble the lesser breeds of that animal in India. Those of Interior P. are of a better size; they have less of the hump, and approach nearer the English breed of black cattle. The sheep are of the Dhumba or fat-tailed kind. These, with goats, constitute the wealth of the Eels or wandering tribes. In consequence of the great abundance of pasture-land, and the numerous pastoral tribes that roam the country, wool is largely produced all over the country. The best wool is that of Kirman, the mountains of which, hot and arid in summer, and intensely cold in winter, sustain numerous flocks of sheep and goats, from whose wool and hair the shawls, nummuds, and other woollen fabrics of the country are made. The wool of the sheep is very fine, and the goats produce a down, which grows in winter at the roots of the hair, like that of the Tibet or shawl goats and nearly as fine. The latter material is spun into various fabrics, which almost vie with the shawls of Cashmere in warmth and softness, if not in fineness and beauty of manufacture. This down, called *khulk* in the language of the country, is obtained not only in Kirman, but more or less over all Khorasan, the mountains of which are favourable to the animals which produce it. But the Khorasan khulk is not so fine as that of Kirman, being full of coarse hair, and very foul. It does not fetch in Khorasan more than 5d. per lb., whereas that of Kirman is much finer, cleaner, and even cheaper in Kirman. Animals of the deer and antelope kind abound in P., and hares are numerous in the uncultivated parts of the country. Quails and partridges are common, and immense numbers of pigeons are reared by the natives for their dung, which is used as a manure for melons. The pigeon-houses in the vicinity of Ispahan were in Chardin's time above 3,000 in number, and very large, each being six times the size of European ones. Eagles, vultures, and falcons, abound in the mountainous parts of the country. The latter are much used in hunting. The *lubara*, a noble species of bustard, is found on the bare plains.—As the rivers in P. are few, fish cannot be numerous; but salt-water fish are abundant both in the Caspian sea and the Persian gulf. The people inhabiting the coast of Mekran and Kirman live much on this aliment, and hence were called *Ichthyophagi* or 'fish-eaters' by the ancients. All the rivers of Mazanderan abound in fish, especially sturgeon, vast quantities of which are cured on the coasts of these provs., and carried to Astracan.

Mineralogy.] Persia, though mountainous, produces few minerals or metals. Salt is the mineral which most abounds, the ground in most parts being more or less impregnated with it. None of the precious metals are found in P. Copper is produced in the mountains of Mazanderan and Kirman, and from those in the vicinity of Casbin, but not in sufficient quantity for the internal consumption. Lead occurs in the mountains of Fars and Kirman. Sulphur is an abundant mineral production, especially near the Demavend. Iron-stone abounds in Azerdbijan, the whole tract between Tabriz and the Araxes being covered with mountains of a reddish brown hue, indicating the presence of that mineral. At Sheherderabad on the Gurangu, a branch of the Kizil-Ozan, to the SW of Mianah, copper has been discovered. Lieut. Alexander, who passed this way in 1824, in his journey to Ardebil, says, that here are perhaps the richest veins of copper in the world. Silver and lead are also found in considerable quantities. Of all the mineral productions of P., turquoises have been the most celebrated. This gem is produced in the mountain of Firoz-Koh in the Elburz, and in a hill 40 m. WNW of Nishapur. The former mine is probably exhausted, as nothing of it has been heard since the time of Chardin, 160 years since; Fraser says the mines in the district of Nishapur are at present the only place where such gems are found. The hills in which they occur are a mass of porphyritic rock, intermingled with beds of clay and conglomerates of the same substance, all strongly tinged with iron, and in many places pervaded with micaceous iron-ore. The *kalaite* or turquoise is disseminated through this in veins, nodules, and irregular masses. The mines are six in number and the property of the Crown, and are farmed to the highest bidder. The rent in 1822 was 2,000 Khorasan tomauns, or £2,700. Marble, freestone, and slate, abound near Hamadan. The first is of four colours,—white or statuary, black, red and black, and white and black. We have already noticed the production called Tabriz marble. Mummy, a noted Persian production, is found in Kirman, near the village of Kesuiyeh. This substance is a black liquid petrolium, called *moum* by the Persians, which signifies 'an unguent.' It is also called *tutty*. It oozes from a rock in a cavern. Once a-year only, it is alleged, is the door of the cavern opened, and the moum which had distilled during the year—a quantity in size equal to a pomegranate—taken out, sealed up, and deposited in the royal treasury. It is esteemed a catholicon by the Persians. It is also found in Khorasan. Near Dalaki, on the road from Bushir to Shiraz, are two fountains of black naphtha or bitumen.

Commerce.] Manufactures and commerce in such a country as P. cannot prove a very prolific subject, inasmuch as the almost total want of internal water communication, combined as this is with that of the great central desert, and the difficulty of land-carriage over the great mountainous ranges that surround the lofty plateau, is an insuperable impediment to inland commerce. It is true, P. possesses a line of sea-coast, and a few harbours; but her own pop. neither navigates the sea which unites her southern shore, nor the Caspian which approaches her capital. The shipping of both is in the hands of foreigners [*Burnes*]. The institutions of the Magian system were also unfavourable to maritime commerce, as it was the design of Zoroaster to confine his countrymen solely to agriculture. Whatever maritime commerce was enjoyed by the ancient Persian empire was conducted by the Phœnicians

and Greeks, whilst the internal was managed by caravans as at present. In the days of Khosru-Nushirvan, when that prince's dominion comprehended most of the tract watered by the Euphrates and Tigris, and likewise the shores of the Persian gulf and the Red sea, the maritime commerce of P. was large and extensive. Having overcome their wonted aversion to commerce and navigation, the Persians established a flourishing and lucrative trade with India and China: all the principal ports of India were visited by Persian merchants, and in most of the Christian churches established in the peninsula, divine service was performed by Nestorian priests ordained by a Persian metropolitan. By sea and land the monopoly of silk and Indian produce was completely in Persian hands, even the Romans were wholly dependent on them for the supply of these articles. The great commercial intercourse which once existed with India by means of the Persian gulf, and the command of the navigation of the Euphrates and Tigris, is illustrated by the fact that the timber used in the construction of the Tauk-Kesra, or dome of Chosroes, at Ctesiphon, was Indian teak. We also learn from Cedrenus that when Heraclius pillaged Dastaghird, the imperial residence of Khosru-Parviz, the grandson of Nushivan, he found in it aloes, aloes-wood, mataxa-silk, thread, pepper, sugar, ginger, muslins without number, silk-robes, woven and embroidered carpets, and bullion: manufactured articles of the same kind were also found in the sack of Ctesiphon by the Arabian general Saad. One of the chambers of Khosru's palace was stored with camphire, an odoriferous gum, peculiar to the oriental regions, but especially to Borneo and Sumatra. On the subversion of the Persian monarchy and religion, the Arabs monopolized the commerce of Persia and India, and the shores of the Persian gulf were enriched by the Indian trade, especially the town of Siraf and the city of Bassora. In the 10th cent. Siraf, according to Ebn Hawkel, was a large and wealthy city, extending 4 m. in length, but unwalled. It possessed opulent merchants who expended 30,000 dinars in the erection of their houses; and he declares that he himself saw at Siraf merchants who were worth 4,000,000 dinars, and that there were others who were still richer. The people of Kazerum, in his time, carried on an inland commerce, and were patient and persevering in the acquisition of wealth, and the merchants of Fars, wherever they went, were rich and powerful. But it must be remembered, that a great proportion of the people were still Magians, who have always been an active and industrious race, like their successors at Yesd and Bombay, and that the baleful influence of the Mahommedan system was not then so fully felt as now. The frequent internal convulsions which subsequently agitated P., and the frequent inroads of Turks and Tartars, contributed to ruin both her internal and foreign commerce. Under the sway of Shah Abbas, the greatest prince of the Suffavean dynasty, much encouragement was held out to manufactures and commerce, and a colony of Armenians was transported from Julfa, on the Araxes, to Ispahan, to conduct the foreign trade; but the ruin of that dynasty, and the frequent revolutions that succeeded, reduced the Persian commerce to a low ebb. For some years past, however, the commercial exchanges between P. and Europe have become of increasing importance. In 1837, it was calculated that the average annual value of the trade carried on by the northern provs. of P. with Europe amounted to £800,000 in imports, and to £480,000 in exports; while the traffic by way of Armenia—composed probably chiefly of Russian products—amounted to £196,000 in imports, and £87,000 in exports.

Of the native productions of P., silk is the most important. It is produced in every province, but Ghilan and Mazanderan are those in which it chiefly flourishes, and which alone export it in any quantity. About 270,000 lbs. are annually purchased by the Russians, and carried to Astrakhan; an equal quantity is sent to Bagdad and its vicinity; 180,000 lbs. are exported to Constantinople, Aleppo, and Anatolia; the remainder is sent to Yesd, Cashan, Ispahan, and those other Persian cities where silk is manufactured. Russian Ghilan, Sherwan, and some of the districts connected with the Caucasus, are favourable to the production of silk; so that were the demand to increase, the supply would do so likewise. Its price varies according to its quality; at the time Fraser was in Ghilan (1822) the price was from £3 12s. to £4 8s. per maund of 14 lbs. English. The best silk goods are manufactured at Yesd. The chief articles are *alujahs* or shirts, and *kassubs* or trowsers, *deries* or outer vests, and *hueahuns* or men's shirts, taffetas, similar to ours, but stouter, and black silk handkerchiefs, about 1½ yd. square, coarse, and tweeled like Barcelonas, which serve for female head-dresses. Some of these are dyed in crimson, and sell at 6s. each. Silk-velvets, of very great beauty, are manufactured at Mesched, Ispahan, Cashan, and Tabriz. Satins are also produced, but those of China are preferred, as being finer.—Cotton is another article of raw produce, of which a great quantity is raised in Mazanderan, where the price, in 1822, did not exceed 2½d. per lb., and where its quality is fully equal to that of the best Bengal cotton. The cotton-goods chiefly manufactured in P. are chintzes or printed cottons, *calamcars* or printed patterns of wreathed and consecutive flowers, sparsely thrown upon a red, white, blue, or fawn-coloured ground; *peeralueahuns*, or king's shirts, resembling English long-cloth, which lately entirely superseded them; *rudduks* or upper vests, a fabric resembling nankeen; and Ispahan stripes, blue, purple, or grey, and a coarse white cloth called *kherboz*, made for home-wear in every village, and of which an immense quantity is annually carried-off by the Russians.—Wool being a native and abundant production, and many of the inhabitants being of pastoral habits, a great variety of articles are made of it. The best carpets are made at Kirman, Yesd, Herat, Burujird, and those of the Turkomans of Khorasan, Ispahan, and Azerdbijan. The shawls of Kirman are held in great estimation, and are only inferior to those of Cashmere. *Nummuds*, or fine felt-carpets, are sometimes of great beauty, but they are dear, and apt to get moth-eaten. The city of Hamadan has been long famous for its manufactures of leather, as saddlery, shoes, &c. Shiraz was once celebrated for its gold and silver embroideries, but these are now excelled by those of Cashan and Ispahan; its damasked steel knives and daggers are still esteemed, and a good deal of coarse glass-ware is made; but all its manufactures have declined since the death of Kerim Khan, its benefactor and sovereign. The wine of Shiraz, so much boasted of, is made in no great quantity, and in so careless a manner, that not more than one large bottle can be got out of four or five, fit for use. There is no such thing as a cask in all Persia.—There are no other manufactures of consequence in P. The whole amount of exports and imports between Russia and P., by way of the Caspian sea, was estimated by one or two respectable merchants at Balfrush, at 400,000 tomauns, or £214,000. The whole shipping employed in the Caspian commerce does not exceed 12 vessels of from 50 to 100 tons.

There is a growing demand for European manufactures, since the Persians have become better ac-

quainted with these commodities. The chief articles of European import are silk, cotton, and woollen manufactures, and sugar. The value of silk-stuffs disposed of every year at Teheran and Ispahan, is estimated at £60,000. The sorts most in request are chiefly gros de Naples, laventines, satins, velvets, stuffs, figured and worked with gold and silver patterns, China crapes, and white and coloured gauzes. The light stuffs form the habitual costume of the women, and in the interior of the harems. Shawls, embroidered in silk, imported in 1833 and 1834, fetched seven tomans per piece, or about £3 16s., although the weight of the embroidery caused them to rend easily. Silks, of good quality, sent direct, might probably replace with advantage the inferior kinds purchased by the Armenians at low rates at the Leipsic and other German fairs.—Cotton goods, which, by their moderation in price, are within the means of a more extensive range of consumers, are now much more generally in use than silks. The large pantaloons worn by the Persians instead of the robe, are generally made of printed cottons, of small flower patterns. Cotton prints, for the P. market, should be of very good colours, and of a brilliant finish, so as to compare to more advantage with the *kalencors* of native manufacture. The whole of the printed cottons now used in P. are supplied from England direct, or from Germany. After cotton prints the most current articles are cotton-net, used instead of silk crape and gauze, for the middle classes, and calico, percal, and the grey cloth of the sort known as 'domestics,' which are used for men's body linen and pantaloons.—Woollens have been long admired all over the East, and the imports of these are great and increasing, as also of chintzes and printed cottons. The outer garment of most of the wealthier classes in P. is usually made of broad cloth. Up to 1837, English, German, and Belgian woollens were almost the only goods of the kind to be found in the Persian market. The common qualities were chiefly from Germany. But Fraser remarks that the French and German manufacturers have been much more successful in hitting the Persian taste than the English, because they took care to have better information on that subject; every Persian bazaar having a full and glaring display of their rich chintzes, whilst the English patterns, of a more sober kind, lay neglected and unasked for. The Persians are supplied with brocades and embroidery by the French merchants of Lyons. Indigo, cochineal, spices, sugar, and sugar-candy, are all articles of importation; the cochineal is supplied from Russia; spices and indigo from India, by way of Bushire; sugar—which is an article of large consumption in P.—is principally supplied from England; black lamb and sheep's skins are imported from Bokhara; coffee from Arabia; tin and tuttenague, from India; copper, iron, and steel, porcelain and glass, from Russia; cutlery and steel goods, from England. It is remarkable that although Persia possesses no mines of the precious metals, yet there is not only an abundant supply of specie in that region, but also a very great sum in specie is annually remitted to India in return for produce imported. Not less than £290,000 was exported to India in the year ending 31st May 1821, as cash-payment for Indian goods. A large proportion of the Indian products which enter Persia are re-exported to the West, for which specie is returned. It is stated that the Georgian merchants, who trade between Teflis and Taurus, bring annually to the latter city 300,000 ducats in gold; and the remittances made to the mission there are all in the same coin. Shiraz and Ispahan are situated on the great routes of communication between Bushire on the Persian gulf, and the other chief trading marts of Persia and Central Asia. Bussorah, on the Euphrates, 70 m. from the gulf, is the great emporium of Asiatic Turkey for India and other eastern produce. The principal Persian emporium for European goods is Tabriz, in the province of Azerdbijan; they are sent through the Turkish port of Trebizond, on the Black sea, which is the mart of an extensive transit trade with Persia, Armenia, and Georgia, and the most eligible channel for intercourse with all the neighbouring countries of Western Asia.

Government.] P. is an absolute monarchy in the strictest sense of that term. The monarch's will is law; and the power of the governors of provinces is held only by delegation from him. There is something like public law in P. founded on the Koran. The Sheikh-ul-Islam, or chief of the Mahommedan faith, is president of the high court of law. The present political state of the country is by no means encouraging. The empire is composed of heterogeneous and discordant materials. The native pop. comprises two distinct people, speaking different languages, dwelling in different parts of the country, and regarding each other with mutual aversion. The shah is a Turk of the Kujar tribe, and his sway is therefore ungrateful to the Persians of the south. The Turkish race of the north, on the other hand, are proud of the superiority which this circumstance gives them, and regard their southern neighbours with contempt. The only titles in P. are *khan* and *mirza*. The former is not hereditary; the latter, if following the name, means 'prince.'

Army.] The Persian army—if army it may be called—is but an untrained rabble, who more frequently plunder their own countrymen than their enemies, and under pretence of collecting contributions for the war, rob the villagers, as well as travellers, of their valuables. The only force which bears any resemblance to a regular army is that which was raised and disciplined in the European manner by Abbas Mirza, the prince royal. The Russian successes compelled him to do so. This force consisted of 9,400 cavalry, and 1,240 infantry, disciplined by English officers and artillerymen; and with 1,000 disciplined troops under the sirdar of Erivan, completed the whole regular army, in 1822. When Abbas Mirza took the field in 1822 against the Turks, he could barely muster 35,000 men, including a large portion of inferior troops, and 22 field-pieces, with 20 or 25 rounds for each piece, and about as many rounds of ball-cartridges for each gun of the regular infantry. In the campaign of 1826, against the Russians, matters were little better. The whole army under his orders did not amount to 45,000, including irregulars; and of the whole corps only 12,000 could be called disciplined. Exclusive of the trained troops of Abbas Mirza, the Gholams or king's guards, are the only permanently embodied force; but these amount only to 4,000 men, and have no regular organization. The chiefs of the numerous tribes scattered through P. are bound to furnish a certain number of cavalry, who form the most efficient troops under the royal command, but have greatly degenerated from their former character. There is a kind of militia registered in muster-rolls, but whatever be their numbers—which are variously computed—they have no claim to be called soldiers. When the king takes the field in person, his force is generally estimated at 100,000 men, which, with camp-followers, is doubled or even trebled. There is a cannon-foundry at Tabriz.

Revenue.] Sir John Malcolm estimates the whole fixed revenue of the state at something more than £3,000,000; but Mr. Fraser, from what information he could obtain, estimated the whole, fixed and irregular, at only one-half that sum. Sir John also

estimated the irregular taxes and extortions as equal to the fixed revenue: so that, according to him, the whole revenue, fixed and irregular, is more than £6,000,000, or four times the sum estimated by Fraser. The whole fixed land-revenue is estimated by the latter at 989,000 tomans at 11s. each, or £543,950; and the contingent revenue of presents, fines, &c., at 1,500,000 tomans, or £825,000; or £1,368,950 in all. No land-tax is derived from the provs. of Western Khorasan, Azerdbijan, and Mekran; nor from the gov. of Kirmanshah, nor the khanships of Burujird, Nehavend, Khusar, and Korremabad; and one-half of the landed revenue of Fars is spent in its administration. The ordinary revenues arise from the crown-lands, which have been greatly increased by confiscations; from the church-lands, of which Nadir-Shah resumed the property, paying very moderate stipends to the clergy; and from landed proprietors, who pay ten per cent. on their crops. The renter or holder of crown-lands pays the same; but the land-tax has been lately raised to 20 per cent. on the gross produce. Gardens in or close on villages pay also one-fifth on their produce. Melon-grounds, tobacco, cotton, and such like fields, pay a fifth assessed on a valuation of the produce. Cattle are also taxed, as horses, mares, asses, sheep, and goats, oxen, buffaloes, and bees per hive. Capitation and door-taxes are made to press severely on Armenians, Jews, and Ghubres. Shops and bazaars pay a duty proportioned to their size and employment, and varying from 2 to 20 reals annually. The tenant also pays according to the nature of his business and ascertained profits, from 10 to 50 tomans annually. All merchandise, whether by land or sea, pays an entrance-duty of 5 per cent. generally. There are numerous custom-houses besides, which levy a duty on that which was levied before, at the rate in some places of 1, in others of 2 and 2½ per cent.: every governor of a district, in fact, does all he can to squeeze money from the trader. It has been calculated that before an investment of goods can arrive at Ispahan from Trebizond not less than 10 Persian duties must be paid. The present state of the Persian finances is deplorable in the extreme. The cultivation of the soil is abandoned in a thousand places; the oppression of the sirdars, of the proprietors of the villages, and of all the public functionaries, great and small, has become so insupportable that the unfortunate peasants have in many instances abandoned their villages in a body, and fled to the mountains and the deserts.

Religion and literature.] The modern Persians are Mohammedans of the sect of Ali, or Shiahs. They hold that Abubeker, Omar, and Osman, obtained the khalifate in unrighteous opposition to Ali, who, as son-in-law of the prophet, had a just claim to be his successor. In the festival of Hoseyn the son of Ali, and next to him the chief saint of their sect, the streets of Shiraz, Ispahan, and Teheran, ring with imprecations against the Sunnites or followers of Omar. This festival seems to have been dexterously got up by the heads of the sect in order to perpetuate the schism, and keep up the hatred of their followers to the Turks and Usbeks, the political as well as religious rivals of the Shiah faith. The Persians have no visible imam, or living head of their faith, like the Sunnites, who hold the indispensable necessity of such a head, and recognise its existence in the person of the Turkish sultan, who obtained the dignity of khalif by the voluntary resignation of Mahomet, the last khalif of the Abasside line, in favour of Selim I., when he conquered Egypt in 1517. Mahommedanism is, however, on the decline in P., chiefly through the prevalence of Suffeeism, a system which, under various shades and shapes, has existed from very early ages in the East, but especially in P. Suffeeism, as far as it can be understood, appears to maintain, in opposition to the Magian doctrine of two eternal opposing principles, the existence of only one simple substance pure and perfect, consequently denying the entity of matter as opposed to spirit, and believing that whatever exists is of the same nature with God, has emanated from him, and must again be united to him or reabsorbed in him. The system of the Suffis is thus a species of Pantheism, agreeing with the tenets of Spinoza and the Cabbalists. The progress of this system has of late been very rapid in P. Fraser met with Suffis among the nobility, the merchants, and even the moollahs.—Babism, notwithstanding the recent execution of its chief and founder Bab, the *soi-disant* representative of Mahommed Mehdi, the 12th and last imam claiming direct succession from Mahomet, continues to increase, and its followers are said to number in P. alone 50,000. The village of Zendjan, which is their stronghold, though only containing a pop. of 8,000, including women and children, continues to hold out, while we write, against five regiments of well-disciplined troops, which have closely besieged it for three months. It is said that the inhabitants have put themselves in a position, as regards provisions and warlike stores, to hold out for at least two years, against even a much superior force. The founder of this new sect, Bab appeared for the first time before the public at Bagdad, where he declared himself simply the representative of Mahommed Mehdi, who disappeared suddenly in the 296th year of the Hegira. Many of the faithful believed that he was not dead, nor that he had been carried up to heaven, but that he was in some unknown place in the universe, from whence, at the proper time, God would allow him to return among the human species. Seduced by the force of his addresses, a great number of disciples appeared, and offered their homage to Bab, who soon drew upon himself the attention of the government. The pasha of Bagdad condemned Bab to death as a public disturber; but the agent of one of the European powers interceded in his favour with the pasha, who commuted the capital punishment into that of banishment. Bab then returned to P., his native country, where he undertook the task of converting his fellow-countrymen. The governor-general of Azerdbijan sent him to the fortress of Tchehrik, whence he was taken to be shot. It is remarkable that though Bab was not able to communicate with any person during the lapse of time which he passed in this fortress, his doctrines continued to be propagated. It is said that while he was detained as a convict, a young lady of surpassing beauty earnestly embraced his cause and opinions, and began to preach in his name. Possessing, in a striking degree, the gift of speech, and marvellously seconded by the charms which nature had concentrated in her person, she soon found herself surrounded by numerous neophytes, among whom might be distinguished members of the church, literary men, and persons who had been elevated to places of dignity.—Magiism, the ancient religion of Persia, is more a subject of antiquarian research and past history than of modern discussion. It is the opposite of the two systems at present professed in P., but has been so veiled in mythological mystery that it is impossible accurately to understand and delineate its leading principles. The leading principle, however, which pervades the whole system is the doctrine of the two principles of good and evil, which have always coexisted in the universe of spirit and matter—a bold attempt of Oriental philosophy to reconcile the existence of moral and physical evil with the attributes

of a wise and beneficent Governor of the world. The number of the Ghubres, Guebres, or Fire-worshippers, is at present very small. Their chief place of residence is at Yesd, where their numbers are estimated at 4,000 families, who inhabit a separate division of the city, and have an *atish kadih*, or 'fire temple,' on the summit of a mountain in its vicinity.

Christians, &c.] The Persian Christians consist of Armenians, Nestorians, Jacobites, and Romanists. The Armenians in Ispahan, formerly above 80,000, are now reduced to 12,500. A Roman Catholic mission has been long established at Ispahan, but it has made few converts. A colony of Nestorians inhabits the mountains that bound the lake of Urumiyah to the W, where it is supposed to have existed for more than 13 centuries. They are said to be the remains of the numerous Christian pop. that once inhabited the country in the times of the Greek emperors, but were forced by their enemies to take refuge in this wild and most inhospitable region. They are divided into four tribes or branches. The first is denominated the Tiaris, and is by far the most important tribe, consisting of 10,000 families; the Kojumis number 1,000 families; the Jilus 500; and the Tukabis 300. The whole community is ruled by a prelatical chief whose dignity is hereditaty in the family. They can bring into the field 14,000 capital matchlock-men. They bring honey, wax, rosin, wool, sheep, timber, cattle, a little grain, and lead from the mines in their hills, to the low districts around, but come no further than the skirts of their own country, where they meet with persons in the habit of trading with them, and never trust themselves within the walls of a city. There are 1,500 Christian families in the district of Salmast, W of the Urumiyah lake, of whom 800 are Nestorians, and the rest Armenians or Nestorians who have joined the Roman Catholic church. Attempts have been recently made to introduce Protestantism into P. by means of missionaries. The late Henry Martin was the first who proclaimed before the moollah of Shiraz the doctrine of faith in Christ, and made the gospel known in their own tongue to the natives.

Literature and Science.] It does not appear that P. ever had a native poet or historian till it became Mahommedan. It was during the latter part of the khalifate that the lamp of science began to be lighted up in the East, and shone with comparatively great splendour, for some centuries, under the reigns of the later khalifs and Seljukian sultans. The poems of Ferduzi, Saadi and Hafiz, have been read with delight in translations and extracts. But Persian literature has been long on the decline, though poetry is still passionately beloved by the modern Persians. Their chemistry is alchemy, and their astronomy astrology. What philosophy they have is that of Plato and Aristotle. Most of the moollahs are addicted to magic and judicial astrology.

Languages.] Four languages have been successively used in P.: the Zend, the Pehlevi, the ancient Parsi, and the modern Persian.—The Zend is now entirely obsolete,—all that is preserved of it being the Zendevesta, and the inscriptions at Istakar and some other places. Heeren and some others, affirm that Bactria was originally the province where the Zend was vernacular; others, as Du-Peron the translator of the Zendevesta himself, and Wahl, contend that Azerdbijan was the original seat of that language. But it appears from recent discoveries, that the Zendic language was at one time diffused over all the country E of the Euphrates, as inscriptions in that language have been found on Babylonish bricks, cylinders, &c. at the ruins of Shushan, Hamadan, and in the mountain of Besitun, besides what have been found at the ruins of Istakar. The characters of this language are what have been commonly denominated the arrow-headed and cuneiform, and were till very lately untranslateable by the learned.—The Pehlevi language has a different character from the Zend, and is of posterior origin. It is denominated so, as being the language of warriors and heroes, and seems to have prevailed in the greater Media and among the Parthians. But we are, in fact, as ignorant of the origin of the Pehlevi language as of that of the Zend. We only know that it was the national language at the accession of Ardeshir Babegan to the throne in A.D. 226. It fell into gradual disuse during the period of the Sassanian dynasty, and was banished to the mountains of Parthyne by these princes, who introduced the use of the Parsi, or dialect of Farsistan, their native prov. —The Parsi is softer than the Pehlevi—which in that respect excelled the Zend—from which latter it seems to be derived, and must long have had the ascendency in the Persian court. It is the only language which furnishes an explanation of nearly all those Persian names which were known to the Greeks and Romans. When the Great Nushirvan filled the Persian throne, the Parsi was the language of the court, thence called the Deri, and the Pehlevi was the language of the learned. Four other dialects of the ancient Parsi, now lost, were then spoken. But none of these were ever more than provincial idioms. When Persia was conquered by the Arabs in the 7th cent., the Parsi was proscribed and lost its high reputation, and when restored to its former rank under the Dilemite princes, it was then corrupted by a large intermixture of Arabic; yet great poets and able speakers formed it into a rich and harmonious language under the name of modern Persian. The ancient Parsi, used among the Guebres, will owe its immortality to the Shah Nameh of Feerdusi. At present, and for some time back, the modern Persian has given place in the north of Persia, and even in the court of Teheran, to the Turkish, which is spoken all the way from Abhar to the Hellespont. In Persia, however, the Arabic is still the language of science.—The Persian language, both ancient and modern, has a great resemblance to the German and Gothic languages. It bears an equally strong resemblance to the ancient Sclavonian, and also to the Sanscrit, which, in its turn, has a strong similarity to the Greek and Latin languages.—Besides the modern Persian, Arabic, and Turkish, two others, the Kurdish and Lurish, are spoken by the Kurds and Luris. The Kurdish is, like the Pehlevi, a mixture of Persian and Chaldee, and even Hindostani. The Lurish language is a rude dialect of the Pehlevi.

Population.] The statements of travellers respecting the amount of Persian pop. are little more than mere guess-work. It is clear, from the numerous remains of ruined cities, towns, villages, &c., every where to be found throughout P., that it was as well peopled as the nature of the soil and climate would permit during the periods of the Magian dynasties. Sir John Chardin's computation of 40,000,000, as the amount of Persian pop., cannot be applied to the territory which now remains. Sir John Malcolm, following the authority of Pinkerton, states 6,000,000 as the pop. of Western Persia: this is certainly too low an estimate. Malte Brun, on the authority of the manuscript journals of several French travellers, has given a table of the Persian pop.; but it includes Eastern Persia. We shall however give it, and subjoin a few remarks:

I. STATIONARY POPULATION.

Modern Persia, comprising a mixture of ancient Persians, Tartars, Arabs, and Georgians,	10,000,000
Guebres, or Parsis, in Kirman and Mekran,	100,000
Afghans of Cabul,	500,000
Ghelaky, or ancient inhabitants of Ghilan,	50,000

Armenians (in Armenia and Azerdbijan),	70,000
Jews, at Ispahan, Shiraz, Tabriz, Hamadan, Kashan, &c.,	35,000
Sabians, or disciples of John, in Khuzistan,	10,000
	10,765,000

II. NOMADIC OR WANDERING TRIBES.

a. TURKISH TRIBES, SPEAKING THAT LANGUAGE.

1. Afshars (chiefly in Azerdbijan),	88,000
2. Kajars (in Mazanderan),	40,000
3. Mukkadem (near Maragha),	5,000
4. Dombelu (in Armenia), near Khoy and Salmast.	12,000
5. Turkomans (in Azerdbijan, and near Hamadan and Kozerun),	12,000
6. Talish (in Mazanderan and Ghilan),	15,000
7. Karaghusli (near Hamadan),	12,000
8. Bejat (in Azerdbijan, Fars, and Khorasan),	20,000
9. Shahsevend (near Ardebil and Rhey),	14,000
10. Jisvanshir (in Shirvan),	7,000
11. Jalayrs (in Khorasan),	
12. Modanlu (in Fars),	10,000
13. Kodjavend (in Ghilan and Mazanderan),	4,500
	239,500

Besides 28 other Turkish tribes, less considerable in numbers.

b. ARABIAN TRIBES.

1. *Arab shepherds, introduced by Tamerlane.*

1. Bistanieh (near Bistain in Khorasan),	12,000
2. Thuni (in Khorasan),	15,000
3. Jindaki (in an oasis of the Great Salt desert). unknown.	
4. Agakhani (in the Gurmsir or hot district of Farsistan),	15,000
5. Ahwaz (in the plains of Khuzistan), number unknown.	
6. Athullai (in Kirman),	6,000
7. Three other nameless tribes, consisting of 9,000 each,	27,000

2. *Arab fishermen on the sea-coast*

1. The Beni Kiab (in Khuzistan), number unknown.	
2. Arab Hindian (in maritime Fars), do.	
3. Beni Huli, do. do.	
Total numbers conjectured,	10,000
Malte Brun supposes the whole of the Arabian tribes above-mentioned to amount to	100,000

c. TRIBES OF THE LOORISH LANGUAGE.

1. The Zend (near Ispahan, and in the north of Fars),	12,000
2. — Lakes in Farsistan,	20,000
3 — Khogilu do.	15,000
4. — Zengueneh (environs of Kirmanshah).	6,000
5. — Feili in Luristan (between Shuster and Kirmanshah),	40,000
6. — Bakhtiyari (between Shuster and Ispahan),	30,000
7. — Kerrus (environs of Khamse),	10,000
8. — Kara Zindjiri (near Kirmanshah)	7,000
Total of Luri tribes,	140,000

d. TRIBES OF THE KURDISH LANGUAGE.

1. *In Kurdistan.*

1. The Mekris, able to muster	3,000	horsemen.
2. — Bilbas, or Bilbossi, able to raise	15,000	do.
3. — Giafs,	5,000	families.
4. — Gurars (near Sennah, in Ardelan),		
5. — Baras,	1,000	do.
6. — Sunsur,	1,200	do.
7. — Leks,	1,000	do.
8. — Kotchanlus,	10,000	persons.
9. — Shaghoghis (in Azerdbijan, a peaceful tribe,	15,000	do.

2. *Out of Kurdistan.*

1. The Reshwend (near Tarun in Irak),	10,000
2. — Pazequi (between Rhey and Teheran),	3,000
3. — Zafferanlu (in Khorasan),	10,000
4. — Bujnurd do.,	8,000
5. — Modanlu (in Mazanderan),	4,000
6. — Erdelani (in Khuzistan), }	
7. — Embarlu (in Ghilan), }	10,000
Total number of Kurds, exclusive of Gurars, reckoning 5 to a family,	200,000
In Persian Kurdistan, 155,000	
Out of do. do., 45,000	
	200,000

Lastly, we have an enumeration of what Malte Brun calls the Patan tribes, but it is excessively meagre, embracing few of the Afghan and Beluchi tribes. According to this list, procured by the French officers sent by Buonaparte in 1807-8, the stationary pop. of all P. is 10,765,000, and that of the nomadic tribes 679,500: total, 11,444,500. But the list is exceedingly incomplete. It is allowed that 28 Turkish tribes are altogether omitted in it; the number of the Jalayr tribe is not given; the Shahsevend is not a distinct Turkish tribe; and one of the tribes enumerated in the table as Turkish is settled in Shirvan, out of the Persian dominion. The whole of these are estimated at 240,000 in the table; and 81,000 has been assigned by another compiler as the aggregate of the 28 Turkish tribes, whose numbers have not been introduced at all. This, however, is mere conjecture, and would, after all, make the numbers of all the Turkish tribes only 320,000,—a number evidently too small, as Malte Brun himself makes the number in Northern P. alone 420,000. In the list of the Luri tribes, the Mahmud Sunis are omitted, a tribe containing 12,000 families, according to Morier; and the Bakhtiyari are calculated by Morier at 30,000 families. As to the Kurdish tribes enumerated in the same table, the pop. seems much underrated. In addition to the Kurdish tribes in Kurdistan, the Nestorian Kurds, inhabiting the mountain-range to the W of the districts of Urumiyah and Selmast number about 12,000 families. Out of Kurdistan, the enumerated pop. seems greatly underrated, no more than 18,000 being stated as the whole amount of Kurds in Persian Khorasan. The numbers of the nomadic tribes of which we have any information might, with greater approximation to accuracy, be stated as follows:

Turcoman tribes in Northern Persia, 40 tribes,	420,000
Do. in the NE of Persia, 3 tribes, Gocklans, Yamuts, and Tuckehs, 65,000 families,	325,000
Jalayrs of Kelat Nadiri,	20,000
Kurdish tribes in Khorasan, 36,000 families,	180,000
Lurish tribes, 7 tribes,	110,000
Lurish tribe of Bakhtiyari, 30,000 families,	150,000
Mahmud Sunis, 12,000 families,	60,000
Tartar tribes of Timuri and Hazreh, 24,060 families,	120,000
Christian Kurds W of the districts of Urumiyah and Selmast, 12,000 families,	60,000
Arabian tribes of shepherds and fishermen, 12 tribes,	100,000
	1,545,000

To the Kurdish pop. given above must be added

	Pop.
Tribes in Kurdistan,	147,500
Shaghaghis, a Kurdish agricultural tribe in Azerdbijan,	15,000
Tribes in Irak and Mazanderan,	17,000
Luri tribe of Abdall Malikis, in Mazanderan, 4,000 families,	20,000
The Kurdish tribe of Ambarlins,	20,000
	219,500
Calculated nomadic pop. before given,	1,545,000
Total of ditto,	1,764,500

From this statement it is probable that the whole nomadic pop. of Western P., under the general name of Eels, including those tribes whose pop. is not so much as conjectured, may not be short of 2,000,000; and if so, the stationary pop. cannot possibly be numerous. The aggregate pop. of Western P. does not, in Fraser's opinion, amount to 5,000,000. If the nomadic tribes be included in this estimate, then the Taujiks, or stationary pop., will not exceed 3,000,000. To show the utter futility of pretending to give an estimate of the Persian pop., we shall subjoin a list of the best-known cities, with their conjectured pop.:

		Pop.
Ispahan, by Morier, in his first journey, in	1809	400,000
Do. do. second do.	1811	60,600
Do. Ousley and Kinneir,	1811	200,000
Do. Lieutenant Alexander,	1824	250,000
Tauris in Azerdbijan, by Sir Robert Ker Porter,	1818	100,000
Do. do. Lieutenant Alexander,	1824	80,000
Do. do. Morier,	1811	55,000
Kasvin in Irak, by Beauchamp,	1787	12,000
Do. do. General Gardanne,	1807	60,000
Shiraz, by Franklin and others,		40,000
Do. Sir Robert Ker Porter,	1818	30,000
Do. Morier,	1810	19,000
Do. Ousely,	1810	20,000
Teheran, by Olivier,	1797	15,000
Do. Kinneir,	1813	60,000
Do. Morier,	1814	90,000
Do. Ker Porter,	1818	70,000
Astrabad, by Morier,	1813	5,000

Astrabad, by Fraser,		1822	20,000
Hamadan, by Morier,		1811	50,000
Do.	Alexander,	1824	25,000

Sir John Malcolm, in stating the pop. in all P., from the Zagros to the Indus, and from the Persian gulf to the Oxus, at only 10,000,000, says that this calculation makes 100 to the sq. m. He undoubtedly meant 10 to the sq. m.

National character.] The Persians have been vaguely represented as the Frenchmen of Asia; Della Valle compares them to the Italians. One writer describes them as brave, polite, and sincere; another as cowardly, rude, and deceitful. But P. must not be considered in the same light as France, or Spain, or Italy, whose separate inhabitants have been long amalgamated into one common mass, and exhibit some semblance of unity of character. P. is peopled by many different tribes, Persians, Turks, Tartars, Arabs, and Kurds, all blended under one political designation, though presenting great modifications of character. The pop. consists of two classes,—that of the cities and towns, or the stationary inhabitants,—and the wandering tribes; and among these again are great differences of character. The inhabitants of Kazvin, Hamadan, Tabriz, Shiraz, and Yesd, are as remarkable for their courage as those of Ispahan, Kum, and Kashan are for cowardice: the former are chiefly the offspring of warlike tribes, whilst the ancestors of the latter have for many centuries passed their days in civil employments. The inhabitants of Southern P. differ widely from those of Northern P., both in complexion and character. The former are of a dark olive colour, exhibiting, notwithstanding a mixture of Arab blood, a considerable affinity to the Hindus. They are more polite and voluble, more given to gasconade, more refined in their manners, more showy in their dress, and more ceremonious than their neighbours of the northern parts, whose fair and florid complexion shows them to be of Medish and Scythian descent. Generally speaking, the Persians are a handsome race of men; few of them are diminutive or deformed. The Guebres of Surat and Bombay, the pure unmixed descendants of the ancient Persians, are a manly and beautiful race. The Persians are also robust and active; and the very Greeks, their constant foes, acknowledged that the Medes, however their inferiors in military discipline and gymnastic exercises, were of advantageous form and stature; and by no means deficient in courage. In the opinion of Mr. Fraser—who, travelling in a private capacity, had far more opportunities of seeing Persian character in its natural colours than in the capacity of an ambassador, or attended with a pompous retinue—the Persian character has been too much extolled by modern writers. He denies their claim to being the politest people in the East. He observes that if by that term be meant a courteous manner to superiors and equals, a ready flow of complimentary terms in conversation, and a minute attention to forms and ceremonies, the Persians are certainly in that sense accomplished; but if it be understood, as in this country, to imply an absence of selfishness, and a considerate feeling towards all men, they possess it but in small measure. He maintains that the greatest proportion of Asiatic gentlemen will be found equally polite with those of P.; those of Hindostan and the Arab emirs are as much so as they; and even the Turks, whom it has long been the fashion to represent as a nation of savages, have an austere civility. He ascribes the Persian character for politeness in a great degree to the nature and phraseology of their language, which is more replete with hyperbole and metaphor than any other oriental tongue. The style of politeness so humorously satirized by Addison, in the assumed character of the ambassador of Bantam, is precisely that of a modern Persian gentleman. The least he tells you when received by him is that his house and all it contains, nay, all the town and country, are yours to dispose of at your pleasure. Everything you accidentally notice, his *kalleuns*, his horse, equipage, clothes, are all a present for your acceptance; but no one considers this or anything of the sort one whit more sincere than 'your most obedient servant' at the foot of an English letter. The national characteristics, says Fraser, are falsehood and treachery in all their shapes, cunning and versatility, selfishness, avarice, and cowardliness. Xenophon, in his romance of the *Cyropaidea*, tells us that the Persian youth were carefully instructed in three things,—the love of truth, the practice of horsemanship, and to draw the bow with skill and force. For the two latter they were long eminent; but the first—if ever they possessed it—seems to have wholly departed from them as a nation.—The character of the Eels or wandering tribes is very different from that of the stationary pop. Of all these the Luris are the fiercest, most cruel, and most addicted to lawless rapine. These tribes, which form a very numerous and formidable part of the whole pop., in general, continue to enjoy a sort of patriarchal government, closely resembling that of the Scotch Highlanders which prevailed before the breaking up of the hereditary jurisdictions. They are all actually independent, paying no more obedience to the Persian sovereign than suits their convenience, or the interest of their immediate chieftain. Singularly indifferent to the faith of the Koran, and comparatively destitute of all religious principle, these men are nevertheless hospitable as well as brave, and their women, who enjoy all the liberties which European habits allow, are as chaste as they are beautiful. The Turkomans are a Tartar race, with small eyes, high cheek-bones, thin beards, and robust frames. They may now be regarded more as borderers than as forming a part of the actual pop. of P.

History.] For the earliest accounts of this extensive region we are indebted partly to sacred Scripture, and partly to the Greek historians. From the former we learn that Elam was a powerful monarchy in the days of Abraham, 1921 B. C. In the time of Shalmanazar, king of Assyria, Media appears to have been a prov. of his empire, for it was to this region as well as that to the N of the Kizil-Ozan that the Ten Tribes were transported by that victorious sovereign. Elam or Susiana also appears to have formed a dependent kingdom on the monarchs of Nineveh; but whether the empires of Nineveh and Babylon included ancient P., or Fars, and Kirman, and the other provinces of Western P., is doubtful. It is by no means improbable that a number of independent sovereigns existed in the region collectively denominated *Persia*, long anterior to the times of a Dejoces or a Cyrus; but of these no monumental records exist. The true history of P. commences with the reign of Dejoces, the Mede, 710 BC, according to Herodotus. He instituted a code of laws for his countrymen; fortified Ecbatana, and made it the cap. of his dominions, which he extended on every side; and invaded Assyria, then in the decline of its power; but the Assyrian monarch anticipated his design by meeting him in the great plain of Ragau, where he utterly routed his army and slew his opponent Dejoces. He was succeeded by his son Phraortes, who reigned twenty-two years. It seems somewhat extraordinary that, after the defeat and death of his father, and the destruction of Ecbatana, he should not only have been able to expel the Assyrian invaders, but also to conquer the whole tract W of Media, to the Halys in Asia Minor. His career, however, was cut short while invading Assyria, where, like his father, he perished with the greater part of his army. Cyaxares, his son, succeeded him. This active and intrepid prince commenced another war with the Assyrians, whose capital, Nineveh, he besieged and took and levelled with the dust, in conjunction with his ally, Nebuchadnezzar the Great, 601 BC. The kingdoms of P. and Susiana were the last conquests made by this prince.

Cyrus and the Persian dynasty.] Cyaxares was succeeded by Astyages, who reigned 35 years. Mandane, his daughter, married Cambyses, king of P., then a small and inconsiderable state. The fruit of this marriage was the great Cyrus, who, in conjunction with his uncle Cyaxares, son of Astyages, conquered the Lydians and Babylonians, captured Babylon by turning the current of the Euphrates, and slew Belshazzar. Cyaxares was suc-

ceeded by his nephew, and by this event the sovereignty of the East was transferred to the Persians, after the Median dynasty had enjoyed it for the space of 176 years, under a succession of five princes, from Dejoces to the death of Cyaxares The Persian dynasty, founded by Cyrus, lasted 207 years, from the commencement of the reign of Cyrus, under a succession of 13 kings, and ended with Darius Codomanus, in 330 BC. The reign of this dynasty is chiefly distinguished by its ineffectual attempts to reduce the little states of Greece. Alexander the Great united the ever discordant Greeks under his victorious banner, and prostrated the Persian power.

The Seleucidæ.] A struggle of twenty years' duration took place amongst the generals of Alexander; P. fell to the share of Seleucus and his successors. In 248 BC the warlike tribe of the Parthians revolted, and founded a new dynasty, which lasted 474 years, and which, from small beginnings, rose to be a formidable empire, gradually stripping the Macedonian kings of Syria of all their dominions to the E of the Euphrates. Had not the Roman power kept them at bay, the Parthian empire would have included all which the former Persian dynasty possessed to the W of the Euphrates, and even to the Hellespont. Nearly at the same time with the revolt of the Parthians, the Greeks also, under Theodotus, revolted from the Seleucidæ, and founded a new dynasty of Greek sovereigns in Bactria and Eastern P. But this Greek empire was of short duration, being overthrown by a horde of Scythians from the N of the Oxus.

Artaxares and the Sassanian dynasty.] In the 226th year of the Christian era, the Parthian dynasty was extinguished by the valour and ambition of a private Persian of mean birth, the son of a tanner, or shoemaker, who, assuming the double diadem and the title of Artaxares, or 'the Great Lion,' founded a new dynasty, which, under the appellation of the Sassanian, swayed the sceptre of the East for more than four centuries, and comprised a succession of 28 sovereigns, some of whom raised P. to a greater degree of prosperity and glory than it ever enjoyed before or since. Shapur, the second king of this dynasty, overran all Mesopotamia, Syria, and Armenia, defeated the Roman emperor Valerian in the vicinity of Edessa, and kept him in a state of captivity till his death.—Chosroes, surnamed 'Nushirvan the Magnanimous,' was the greatest prince of this dynasty. In his wars with the Romans he was eminently successful, and the force of his arms was felt on the shores of the Euxine and the Mediterranean, the Red sea, and the Persian gulf. Under this conqueror, the limit of Persian domination included the district of Fargana or Kokan, between the Aktau and the Ming-Bulak, the Beloor-Tag, and the straits of Kujund. To the W of the Caspian sea, the lofty Caucasus formed the N limit of his empire, whilst its gates, its passes, and its mountain-fortresses, were garrisoned by his troops. During the confusion which followed the usurpation of Phocas, the Eastern empire was in no condition to withstand a Persian invasion, and the armies of Chosroes successively reduced Dara, Amida, Merdin, and Edessa, overrun all Syria, took Jerusalem itself by assault, in which 90,000 Christians were slain, and in one sacrilegious day rifled the devout offerings of 300 successive years of pilgrimage. Egypt, which had been exempted from foreign invasion and domestic war for more than three centuries, was again subdued by this successor to the throne of Cyrus; Pelusium, the key of that impervious country, was surprised by the Persian cavalry; the innumerable channels of the Delta were crossed with impunity; and the long valley of the Nile, from Memphis to the frontiers of Nubia, explored by the forces of the great king. The conqueror, treading in the footsteps of Alexander, returned in triumph through the sands of the Libyan desert; his generals advanced with other armies from the Euphrates to the Thracian Bosphorus; and a Persian army, stationed at Chalcedon, insulted for ten years the majesty of Constantinople. Pontus and Cappadocia, the city of Ancyra, and the isle of Rhodes, successively fell into the hands of this prince; and from the long disputed banks of the Euphrates and the Tigris, the limits of Persian domination were suddenly and once more extended to the shores of the Hellespont and the banks of the Nile, under the reign of the grandson of the great Nushirvan. At last the dormant energies of Heraclius were roused by the intolerant insolence of the Magian monarch; the clergy seeing the fate of their religion involved in that of the empire, contributed the wealth of the sanctuary to save the falling state; and in the course of a six years' warfare, Heraclius recovered all the conquests which Chosroes had won, pursued the Persians to their own territories, and avenged on the banks of the Tigris and the Diyallah, and in the sack of Dustagherd, the favourite residence of Chosroes, the fates of Antioch and Jerusalem. The glory of the Sassanian dynasty ended with Chosroes. A more formidable enemy than even Heraclius had lately arisen on the side of Arabia. The flame of enthusiasm which the impostor Mahomet had there excited, now threatened alike the aged and worn-out empires of Constantinople and of P. The Moslem Arabs hovered on the skirts of the empire, and having received large reinforcements, passed the Euphrates. advanced to Kadesia on the edge of the Chaldean deserts, and attacked the Persians. After a decisive victory, the whole of Irak submitted to the conquerors; and Ctesiphon, the capital of the monarchy, was taken and pillaged. This event decided the fate of the Magian system, and the house of Sassan. The whole of the Persian empire, from the Euphrates to the Indus, and from the Persian gulf to the Iaxartes, was rapidly overrun, conquered, and reduced to the obedience of the khalif.

Persia under the khalifs.] After this disastrous revolution P. sunk into a mere province of the vast empire of the khalifs, under whose sway it remained in peaceful subjection for more than two centuries. The last Magian of name and power was Mardavij, who preserved his independence amidst the rocky fortresses of the Elburz, in the beginning of the 10th cent. Under the dominion of the khalifs, nothing of importance occurs in Persian history, but the occasional revolts of provincial governors. The boast of the energetic Almanzor, that he could easier rule the East and the West than manage a chess-board of two feet square, was not realized by his indolent successors of the 9th cent. The disorders of the Turkish guards, the rise, progress, and wars of the Karmatian sectaries, and the extensive power delegated to the governors of the distant provinces, accelerated the downfall of the power of the khalifs. The Taherian dynasty was supplanted by one of those adventurers so common in the East, Yacub-Ben-Liess, whose dynasty, denominated Saffarians, or 'Pewterers,' from the original trade of their founder, filled the throne of P. for three generations, until reduced by Ismael-al-Sammanu, who obtained Mawaralnahar and Eastern Persia from the khalifs. Western Persia now came into the possession of the Bowides, the successors of the Deylamites, who for more than a century ruled here, till their influence and dynasty were subverted by Togrol Bey, the victorious founder of the Seljukian dynasty, in AD 1055.

The Seljukian dynasty.] The Seljukian dynasty, under Togrol Bey and his successors, stripped the descendants of Mahmud-Ghaznevi of their dominions in Eastern Persia, and confined them to the narrow tract between the Afghanistan mountains and the Indus. Their empire extended beyond the Oxus, even to the banks of the Iaxartes; the cities of Bokhara, Samarcand, and Carizme owned their sway; and the name of Al-Malek was engraved on the coins of the distant kingdom of Khashgar in Eastern Turkistan. Not content with the conquest of Persia and Mawaralnahar, the Seljukian sultans extended their arms and their conquests into the Greek empire. Armenia and Iberia were overrun by their cavalry; and the natives, an unwarlike race, were compelled to own the superior sway of Alp-Arslan, the nephew and successor of the victorious Togrol, and even to abjure the faith of the cross. The total defeat of the Greek emperor, Romanus Diogenes, in the vicinity of Malazgherd, and on the plains of the Morad-Shai, sealed the fate of the Asiatic provs. of the Constantinopolitan empire, and the Seljukian Turks obtained a firm footing in the provinces W of the Euphrates. After the demise of Al-Malek, the third and greatest of the Seljukian sultans, the unity of the Turkish empire was dissolved. The vacant throne was disputed by his brother and his four sons, and the result was a treaty, which made a lasting separation in the Persian dynasty. The three younger branches were those of Kirman, Syria, and Rum. The first of these ruled an extensive though obscure dominion in Southern P.; the second expelled the Arabian princes of Aleppo and Damascus; while the third obtained a portion of the Roman provs. of Asia Minor, and made continual efforts to possess the whole. Of the Persian branch it is sufficient to say, that its power gradually declined, till Togrol III. the last prince, was slain by the sultan of Karasm, in 1193. During the decline of this dynasty, a number of petty princes, or governors, called attabegs, rose, who, taking advantage of the weakness and dissensions of their masters, established their authority over some of the finest provs. of the P. empire: but these were all swept away before the inundation of the Tartars under Jenghis-Khan.

The Assassins.] Among these petty dynasties, that of the Hassanis, commonly called *Assassins*, rose into great importance. Von Hammer's *History of the Assassins*, gives a brief but pertinent detail of the rise, progress, and extinction of those tremendous sectarians, whose influence paralyzed for so many years the noblest Asiatic potentates. They originated, it seems, in the S of Persia. Their founder was a zealot named Abdallah, whose professed object was to conceal the tenets of his disciples, till a prince of their own persuasion should be seated on some African or Asiatic throne. This was with some difficulty, after a lapse of years, accomplished; a pretended descendant of Mahomet, released from prison, was placed on the throne of Egypt; and the doctrines of Abdallah—which, in their impious and daring absurdity, bore no slight resemblance to those of the revolutionary atheists of France—became the established religion of Africa. Not content with this triumph, the sectarians dispersed their heresies over Asia, until at length, in the 11th cent., the famous Hassan-Ben-Sabah, a Persian of ignoble extraction, modified them so as to suit his own views and the spirit of the times, and spread them under the title of the 'Sect of the Hassanis' over the greater part of the East. Under his direction the Assassins—as they were called—obtained unprecedented supremacy throughout Asia; and from their strong Persian fastness at Al-Mawt, where Hassan—or 'the Old Man of the mountain,' as himself and his descendants were styled—resided, gave laws even to the khalifs at Bagdad. The Persian mollahs in vain demanded the extirpation of this heretical and murderous fraternity, for no prince durst attempt it, till Mango khan of Tartary, sent his brother, Hulaku, with an army into Iran, who, having dethroned the last khalif of Bagdad, marched against Rocnodden, the last prince of this detestable dynasty, dismantled all his hill-forts, and put to death upwards of 12,000 Hassanis. After these transactions, Hulaku fixed his court at Maragha in Azerdbijan, and devoted his few remaining years to the cultivation of the sciences. Under his protection philosophers and astronomers assembled from every part of his dominions,

and laboured in works of science under the direction of his favourite Nasroddin-il-Tusi. The summit of a mountain close to Maragha was levelled, and an observatory built upon it, the foundation of which is still shown to travellers as the spot where Nasroddin formed those astronomical tables so celebrated under the name Zidge-ul-Khani. The successors of Hulaku, denominated the Eelkhanuan dynasty, or the dynasty of the Eels, expired in 1335, in the person of Mohammed Khodabundah.

Tamerlane.] Timur, or Tamerlane, as he is more commonly named, after having by dint of successful perseverance conquered all Mawaralnahar and Eastern P., found it an easy matter to reduce the W provs. of that region, each of which had a distinct ruler. At the death of that fanatical savage, Timur Bek, his empire, like those which preceded it, perished with himself, being torn to pieces by the quarrels of his numerous sons and grandsons, who contended for a sceptre which none of them could wield.

Suffavian dynasty.] For a long series of years, a family resided at Ardebil in Azerdbijan, whose influence was considerable though none of them had yet filled any public station. This influence arose from their descent from Musah, the seventh imam, and their hereditary reputation for sanctity. Sheik Suffioddin, one of this family, a contemporary of the great Timur, by the supposed sanctity of his character attracted the regard of that fanatical hero, who condescended to visit him, and asked what favour he could confer upon him. "Release those prisoners you have brought from Rum (Anatolia)," was the noble answer. Timur complied with the generous request; and the grateful Turkish tribes—seven in number—ultimately succeeded in raising Ismail, a descendant of Suffioddin, to the throne of P. Ismail introduced not merely a new dynasty of sovereigns, but also a schism in the Mussulman faith. The ancestors of Ismail had always cherished a strong predilection for Ali, the son-in-law of the pretended prophet, and his nephew, in preference to Abubeker, Omar, and Osman, by whom he was excluded from the khalifate. The abettors of this schism were called *Shiahs* or 'sectarians'—an epithet which had always been the appellation of the votaries of Ali, even in the days of the Bagdad khalifate—and they gloried in the name. This produced a war with Sultan Selim, the political head of the Sunis, who advanced from Constantinople at the head of a powerful army to chastise the Shiahs. An action took place in 1514 on the plain of Khoi on the frontiers of Azerdbijan, in which Ismail suffered a complete defeat. On the death of Selim, however, Ismail crossed the Araxes, and conquered Georgia. The Suffavian dynasty thus founded and established by Ismail lasted for more than 200 years. Shah Abbas, who succeeded in 1585, spent the first 17 years of his long reign in repressing the power of the rival khans, and in restoring the internal tranquillity of his curtailed dominions. In 1602 he commenced offensive operations against the Turks by the capture of Nehavend, and alarmed at these victories, on the 24th of August, 1605, a battle, in which, for the first time, the Turks sustained a decisive defeat, took place. Following up his victories, the shah expelled the Turks from Shirvan, Azerdbijan, Armenia, Georgia, Kurdistan, and the territory of Bagdad, which fell under his power in 1623. Attracted by the prosperity of the Portuguese in the Persian gulf, with the assistance of the English East India company, he took Ormus from them. The first twenty years of the reign of Husseyn, the last of the race that swayed a sceptre, passed in that deep calm which often precedes a storm. The persecutions excited by the intolerant Shiah priests provoked the Suni tribes of Kurdistan and the Afghan tribes of Candahar to revolt; and the rebellion organized in different provs. spread gradually towards the centre, by the increasing incursions of the Bakhtiyari tribes, who devastated the country to the very environs of Ispahan, and by the growing successes of the Afghans of Candahar and Herat, who, in conjunction with the ever predatory Usbeks, ravaged the provs. of Khorasan and Kirman. Through the incapacity of the Persian generals, the Afghans successively advanced from conquest to conquest under the command of Mur Vaez, till in March, 1722, they appeared before Ispahan, which at last surrendered, and the sceptre passed away from the nerveless grasp of Husseyn into the hands of an obscure Afghan chief.

Afghan dynasty.] Mahmud, though now elevated beyond his utmost hopes to the possession of an empire of which his own country formed but a small province, found it an easier task to conquer than to reign. He stood amidst the wreck of an empire, threatened by the Turks on the NW, by the Russians on the N, and by the Usbek Tartars on the NE, whilst the interior was wasted by herds of plundering nomadic tribes. The Russians, who had already under the fostering hand of Peter commenced that career of political greatness which now threatens the independence of Asia, had taken Derbend and Baku; the Lesghians of Daghistan had conquered Shirvan; the Turks had invaded Armenia and Azerdbijan, and captured Erivan and Tauris; and Kazvun had revolted. Alarmed at the dangers which pressed him on every side, he determined to destroy at a blow as many of the Persian nobles as he could entrap within his power, and 300 of them who accepted his invitation to a feast were massacred with their male offspring. A general slaughter of the defenceless and peaceful citizens followed, and after a continued carnage of 15 days, Ispahan was left without inhabitants. Shortly after the perpetration of these crimes, Mahmud was seized with madness and died. His cousin, Ashraff, who succeeded him in 1725, was in all respects a much more able and politic prince.

Nadir Shah or Kuli.] Nadir Shah or Kuli, a Turk of the Afshar tribe, and born in the fort of Dereguz in 1687, was possessed of that bold and commanding character which distinguishes the princes who found an empire from those that inherit it. The steps by which he rose from the humble station of an Afshar shepherd to the musnud of empire, are but imperfectly known, and indistinctly traced by the pen of his biographer, Mirza Mahadi: all that we certainly know is that he early acquired a commanding influence over the nomadic tribes of Afshars and Jalayrs, and the Khorasanian Kurds. In the reign of the last princes of the Suffaviah dynasty, the N and W parts of P. had been overrun by the Turks as far as Hamadan and Ardebil, and the Wallees of Georgia, with the chief of the neighbouring provs., had submitted to the Ottoman Porte. Nadir Shah by a succession of victories, interrupted by only one defeat, drove the Turks from all the ancient northern possessions of the Suffaviah kings, in which were included the provs. and districts of Georgia, Shirvan, Shekki, Ganja, and Erivan; recovered the places on the shores of the Caspian, which had been treacherously seized by the czar Peter; and restored once more to her sway all the original dependencies on the side of the Caucasus. The ancient family of the Wallis of Georgia was raised to the dependent throne of that country; and Nadir, dividing it into two kingdoms, at once weakened the power of its princes, and rewarded the services of Heraclius, who had accompanied him to India, with one of the crowns. After the death of Nadir Shah, P. continued for many years to be torn by contending factions; and the kings of Georgia, harassed by continued attacks from the mountaineers, whom they were unable to control, made a simultaneous application to Russia for assistance, which was granted. This occurred about 1752, and may be considered the first step towards the separation of Georgia from P.: for Russia, from this time forward, pressed with persevering activity her intercourse with these Persian dependencies. After a struggle of many years, Kurrim, a Kurdish chief of the Zund tribe, overcame all his competitors for the throne of Western P. Luft-Ali-Khan, the youngest and the best of his brethren, fell in an unsuccessful contest with Aga Mohammed Khan, the founder of the present dynasty. By the death of that chivalrous prince in 1794, Aga Mohammed, the son of Sedar Mohammed Khan Khujur, a petty chief of Mazanderan, who had been expelled from his state by Nadir Shah, became sole ruler of Western P. In 1795 he assembled a considerable army at Teheran, and moving rapidly into Georgia, defeated Heraclius near Teflis, and entered that city before Godovitch, who commanded the Russian troops in the line of the Caucasus, could arrive to oppose him. Catharine II. immediately declared war against P.; and in the following year, Count Valerian Zuboff, with a large force, marched upon Derbend, took that fortress by assault, and received the submission of Badku, Kuba, and Shirvan. In the autumn he renewed his operations, wintered in Moghan, and had taken Einzelli, Lankeran, Ganja, and the island of Sari, when Paul ascended the throne of Russia, and recalled the army. Futteh Ali Khan had his way to the throne smoothed for him by the destruction of every one whom Aga Mohammed judged likely to dispute the succession with him, even that of his own half brother, Jaaffer Kouli. Futteh, however, had to suppress three successive rebellions before he could consider himself secure of regal power.

European relations.] The connexion of England with P. may be said to have commenced with the mission of Sir John Malcolm to Teheran in 1800; and the first fruits of the alliance were commercial and political treaties concluded by him in 1801. The latter engaged P. to attack the Afghans, who then threatened our possessions in India, and to exclude the French from the gulf of Persia. In 1805 the shah, finding himself unable to cope with Russia, addressed a letter to Napoleon, then in the zenith of his glory, requesting his assistance, and desiring to form an alliance with France. In 1806, Mirza Riza was sent by the Persian government on an embassy to Napoleon, whom he accompanied to Tilsit, and with whom he concluded a treaty, which was ratified by the emperor at Finkenstein, in May, 1807. In the same year Mahommed Nebi Khan was sent on a mission to the British government in India, to claim our assistance against Russia; but this mission was unsuccessful; and P., losing all hope of support from her old ally, had no alternative but to throw herself into the arms of France. Napoleon gladly seized the opportunity which was afforded him to establish a connexion with P., which he justly considered a necessary preparatory step to his projected invasion of India. General Gardanne was charged with a mission from the French emperor to the court of the shah; and the failure of the application which had been made to India for assistance, the readiness with which the French entered on the alliance, and the abundant promises which were made by the French ambassador, combined to secure to him a distinguished reception. The success which attended the mission of Gardanne forced the British government to take measures to counteract the views of France; and from the commencement of this competition between France and England for ascendency in the councils of P. may be dated its political connexion with Europe. The favourable reception of the mission of Sir Harford Jones, in 1808, and the consequent expulsion of the French agents from P., while she was still engaged in a war with Russia, put an end for the time to all competition for the friendship of the shah, and laid the foundation of an alliance between the crowns of Great Britain and P., which was confirmed by a preliminary treaty. In 1814, by the mediation of the British ambassador, a treaty of peace was concluded at Gulistan, in Karabagh, by which P. yielded to Russia all her acquisitions S of the Caucasus, and engaged to

maintain no navy in the Caspian, while Russia became bound to aid the heir to the Crown of P. against all competitors for the throne. An amended treaty concluded by Messrs. Morier and Ellis defines the nature of our relations with the Persian government. By it Great Britain is bound to pay P. an yearly subsidy of 200,000 tomans to maintain troops in the event of her being attacked by any power at war with England; and should P. be attacked by any power at peace with England, we engage to use our mediation towards an amicable adjustment; but, should it fail, to pay the before-specified subsidy for the support of troops. P., on her side, engages to obstruct any power seeking to pass through her territories for the purpose of invading India. In the recent war with Russia, as Persia was the attacking power, British mediation was precluded.

Recent war with Russia.] In this war the Persians were the ostensible aggressors, alleging that the Russians had infringed the treaty of Gulistan in 1813, by forcibly seizing the disputable territory lying alongst the N and NE shore of the Goksha lake, or lake of Erivan, and a district bordering on Karabagh between the Capan and Megri rivers. The fact is that the remote cause of this war lay in the indistinct nature of the boundary towards its centre drawn by the belligerents in their treaty of peace. The limits were not marked by any natural barrier, nor even any human construction, such as towns and fortresses; so that there existed a considerable tract between the two empires, the sovereignty of which was uncertain, and it served as a refuge for roving bands of Kurds and Turkomans, who often plundered both territories, and occasioned mutual demands for satisfaction. The war commenced in July 1826, and the Persians were at first successful, as the Russians were then unprepared for active operations, their army of 40,000 men being dispersed in detachments through Georgia. The Mahommedans throughout Daghistan, Shirvan, and Shekhi, rose in arms; the khan of Talish revolted, and cut off the Russian detachments dispersed throughout his country; the people of Ganja, in Elizabethpol, instigated by their mollah, murdered the Russian garrison of 300 men, and 500 more were cut to pieces on their march to Karakilissa. Gumri, on the W frontier, was taken by the sirdar of Erivan, who slaughtered all the male Armenians, and sent their heads to the Persian camp. Karakilissa was evacuated by the Russians on his approach. Abbas Mirza came up with a Russian detachment 1,200 strong, with 4 field-pieces, in the pass of Kunjerik, and took them prisoners. Encouraged by this success, he marched upon the city of Shusha, and invested the citadel held by 2,000 Russians unfurnished with provisions. While thus employed, he detached a force of 10,000 men, commanded by his eldest son and his uncle, with 6 field-pieces, towards Teflis. This force was encountered and defeated by nearly an equal number of Russians, commanded by Mududoff, at Shamkar, 5 farsangs from Teflis. This was decisive of the fate of the campaign, for the Russians immediately advanced to Ganja, and drove the Persians thence with great loss. On the 22d of Sept., Abbas Mirza encountered the Russian army under Paskewitch, strongly posted about 5 m. from Ganja, and, as might have been expected, was totally defeated with the loss of 2,000 men killed in the field, whilst the Russians did not lose one-fourth of that number. In the ensuing year the Russians, having collected a large army and a train of battering artillery, laid siege to Erivan, and finally took it, in spite of every endeavour of the Persians to harass the operations of the besieging army. The Russians also captured Nakshivan and Abbasabad, and defeated the Persians in another general engagement; and so great was the terror produced by their success, and the hatred of the inhabitants of Taurus to their governor, that they opened the gates of the city to a Russian detachment, whilst another took possession of Ardebil. The shah, now convinced by repeated disastrous defeats of his utter inability to contend with the disciplined armies of Russia, and terrified for the fate of his capital, made peace on such terms as the Russian general was pleased to dictate. These were: the cession of all he possessed beyond the Araxes, with the payment of £1,500,000 for the expenses of the war. The present shah owes his elevation to the throne to the intervention of foreigners. The old king had appointed his son Abbas Mirza his successor; but the death of that prince occurring before his own, he declared in favour of his grandson the reigning monarch, a son of Abbas Mirza. In so doing he set aside the claims of the numerous brothers of Abbas, the shah wishing that the power should descend in the line of his favourite son. On the decease of the king, Mohammed Mirza, the present shah, was at Tabriz. The British minister, Sir John Campbell, had orders from his government to aid the accession of this prince to the throne. He therefore advanced funds to pay the troops of Azerdbijan, who were ready to desert, and marched down with them to Teheran. One of his uncles had already seized the throne, but abdicated immediately upon hearing of the approach of the army. All opposition fell before the young shah. He entered Teheran triumphant, and his rebellious uncle aided in the ceremony of his inauguration. Sir Henry Bethune, who had led the army to Teheran, soon afterwards marched to Shiraz, routed the malcontents who had gathered there, and finally established the shah upon his throne.

PERSIAN GULF, or Sea of Oman, an arm of the Indian ocean, opening between Cape Musseldom or Mussendom, in N lat. 26° 23′, E long. 56° 35′, and the coast of Gombrun, and separating Persia from Arabia. It is about 8° in length from SE to NW, from the straits of Ormuz to the mouth of the Shat-el-Arab, and has an average breadth of about 100 m. With the exception of the Shat-el-Arab, or common estuary of the Euphrates and Tigris, and the Karun, no large rivers flow into it. The coast on the side of Persia is more elevated than that of Arabia; and the islands lie chiefly on the side of Persia. The principal island in the gulf in respect of size is Kishm, which stretches 54 m. in length, at a distance varying from 3 to 13 m. from the Persian shore, and is 20 m. broad at its broadest part. The next island in point of importance, and of greater political celebrity, is Hormuz, nearly opposite the embouchure of the Minau, on the Persian shore, which enters the sea in N lat. 27° 7′, E long. 56° 49′. NW winds prevail in the gulf all the year; in the months of November, December, and January, S winds blow. At the entrance of the gulf, the prevailing current from May to September is inwards; but it is outwards during the rest of the year. Within the gulf, the current generally sets down the middle. A trigonometrical survey of this gulf was executed by the officers of the Indian navy between the years 1821 and 1829.

PERSIAUX (Des), a commune of Belgium, in the prov. of Hainault and dep. of Fontaine l'Eveque. Pop. 197.

PERSON, a county in the N part of the state of N. Carolina, U. S., comprising an area of 440 sq. m., drained by branches of Dan river and by the upper streams of Neuse river. Pop. in 1850, 10,791.

PERSQUEN, a village of France, in the dep. of Morbihan, cant. and 2 m. S of Guemene, and 12 m. WSW of Pontivy. Pop. 1,000.

PERTAUBGHUR, or Pertabgurh, a town and hill-fort of Hindostan, in the prov. of Bijapur, at the entrance of a defile which leads across the Western Ghauts, 45 m. SSW of Puna, and 92 m. SE of Bombay.—Also a town of Malwah, 36 m. NNE of Banswarra, on the route to Nimueh, at an alt. of 1,700 ft. above sea-level. It is the residence of a petty rajah. The surrounding country is undulating and fertile, with extensive fields of poppies and wheat.

PERTENHALL, a parish of Bedfordshire, 11 m. NNE of Bedford. Area 1,805 acres. Pop. in 1841, 420; in 1851, 405.

PERTH, a cluster of four *quoad civilia* and two *quoad sacra* cognominal parishes, in the district of Perth Proper, or that which is surrounded by the districts of Strathmore, Gowrie, and Strathearn, in Perthshire. The East Kirk or landward p.—all the others lying within the town—may, in a general view, be regarded as including whatever does not fall to be noticed under the burgh. Its area is about 3,410 acres. Various hills of a ridgy character, but soft in outline, and of inconsiderable elevation, occur in the S and the W. The highest of these is Moncrieff hill; the others vary in height from about 300 ft. to a little upwards of 600 ft. The villages of the p. are Tulloch, Craigie, Pitheaveless, and Cherrybank. Pop. of the 4 parishes in 1831, 20,016; in 1851, 22,232.

Perth, a large and beautiful town, a royal burgh, and the capital of Perthshire, stands in 56° 23′ 40″ N lat., and 3° 6′ 20″ W long.; 15 m. SSW of Dunkeld, 22 m. WSW of Dundee, and 39 and 43½ m. NNW of Edinburgh, respectively by Burntisland and by Queensferry. Its site is an alluvial plain on the r. bank of the Tay, about 28 m. above the influx of that river to the sea. The town itself has a rich and sumptuous urban aspect, second in Scotland only to that of Edinburgh. The *inches*, or public grounds—which derive their name from having formerly been insulated by the river—are beautiful parks. The South inch is nearly a square of about 680 yds. each way. The North inch is more spacious and less umbrageously shaded than its rival; and has, at various modern dates, received considerable additions. It forms a broad and long band of about 1,400 yds. by 350 yds., extending NW from the vicinity of the bridge. A race-course, curved at the ends, straight along the sides, and measuring about 950 yds. from end to end, and 370 yds. from side to side, is laid out

upon it parallel to the river. The old part of P., or what existed previous to extensions which were commenced toward the end of last cent., forms the central division, and occupies less than one-half of the area of the present town. All the S wing of the town has been built since 1801. The N wing, though constructed much less upon the straight line principle than the south wing, possesses an arrangement which gives finer effect to its handsome edifices. The bridge across the Tay is a noble structure of 9 arches. Its length is 880 ft.; its breadth between the parapets is 22 ft. A suite of county-buildings was erected in 1819, from a design by Smirke, at a cost of £32,000. The principal building fronts the Tay, and has an elegant portico, whose pediment is supported by twelve massive fluted columns. A spacious entrance-hall opens from the portico; and a flight of steps leads thence to the gallery of the justiciary-hall. This gallery can accommodate about 1,000 persons; and the hall itself has the form of a large segment of a circle, and measures in the upper part 66 ft. by 43½. Behind the county-buildings, are the new city and county prisons, surrounded by a high wall. A general prison for Scotland, which will contain about 400 prisoners, or about a fifth of the average number in Scotland, has been erected on the S side of the South inch, about a ½ m. from the city. To this prison all criminals ordered to imprisonment for six months or upwards may be sentenced or removed. The building is adapted to the separate system of prison-discipline; and consists of four wings, each four stories in height, radiating from a centre. Each wing contains 184 cells, with 4 rooms for warders, and 8 punishment-cells placed in the sunk floor. Each cell is 13 ft. long, and from 6½ to 8½ ft. wide. They are built in two separate ranges, divided by a corridor 15 ft. wide, and 220 ft. long. This prison is placed under the management of the board of directors of prisons in Scotland, who have power to apportion the several counties and burghs the sums required for building and maintaining the prison. Below the county-buildings, and overlooking the river, stands the water-reservoir, constructed in 1830, at a cost of about £13,600. In the NW extremity of the town, is a spacious suite of barracks. The public seminaries, built in 1807, at a cost of about £6,000, are provided in the interior with ample accommodation. Jointly with an adjoining building these edifices contain apartments for seven schools. King James the VI.'s hospital, is a large, handsome, well-arranged structure of three stories, erected in 1750. The city and county infirmary is a graceful and capacious edifice, erected in 1836. The royal Lunatic asylum, situated on the W side of Kinnoul-hill, is one of the most perfect establishments of its class in the kingdom. At once the most ancient, the most imposing, and, in all respects, the chief public building of P., is the church of St. John's, an edifice of very various dates, and now divided into three parochial places of worship. The length of the entire building is 207 ft. The square tower is the principal remaining part of the original or early edifice. A very handsome episcopal church, which has received the designation of the cathedral of St. Ninian's, is now approaching completion.—The manufactures of P. were, at an early period, extensive, and are still various and important. Gloves were early and long a staple produce; they possessed much fame throughout the kingdom, and were produced for home use to the amount of between 2,000 and 3,000 pairs a-year; but they have almost entirely ceased to be made, and are now an article of import. The dressing of sheep and lamb skins was carried on, about the year 1795, to the extent of about 30,000 skins. The cotton-goods manufacture was introduced about 60 years ago; but soon received a serious check, and became comparatively limited in its operations. An umbrella gingham manufacture established about the year 1806, is now the staple, and is increasing. It sends its produce to London, Manchester, and other great British towns. Pullicates, checks and similar fabrics, and also imitation Indian shawls and scarfs, are woven for the manufacturers of Glasgow. There are three extensive iron foundries, several coach-building establishments, distilleries, breweries, ropeworks, tanneries, dyeworks, saw-mills, and corn-mills, and various minor operative establishments. Ship-building is an extensive and increasing employment.—P. was anciently a place of extensive commerce and vast wealth. Before 1286, and during many ages, its merchants conducted an extensive traffic with the Netherlands, and visited the Hanse towns in their own ships. The modern prosperity of P. commenced immediately after the rebellion of 1745. During the previous rebellion it had been made a place of arms to which the rebels retreated after the battle of Sheriffmuir; during 1745-6 it was the central point of rendezvous for the forces and friends of Prince Charles Edward; and afterwards it continued, for a considerable period, to be the place of resort for the whole disaffected party. The harbour of P., till within the last few years, was inaccessible by vessels of any considerable burden; but recent improvements have been made on its harbour, and recent deepenings effected in the channel of the river, which have given increasing impulse to its seaward trade. Vessels of 300 tons now reach the harbour, and can easily be brought up by tug-steamers. The customs' revenue, sometime after the commencement of the present century, was so small that it sometimes did not pay local expenses; and, in the years 1834–5–6, though beginning to feel the effect of the improvements, and to mount up before them, it was so low as respectively £3,702, £4,942, and £5,190. But in 1837 it was £6,270; in 1838, £8,760; in 1839, £11,893; in 1840, £25,767; and in 1849, £17,067. The shipping belonging to the port, in 1828, was not more than 4,000 tons; in 1837, 5,467 tons; in 1849, 6,487 tons. P. was made a free port in January 1840. The principal articles of import are Baltic and American timber, hides, bark, tar, madder, flax, linseed, cloverseed, cheese, foreign spirits, coals, salt, lime, and bones; and the principal articles of export are the produce of the manufactories, potatoes, corns, slates, Scottish timber, pit-props, rails, and oak-bark. Coals are imported to the amount of about 55,000 tons a-year; and potatoes exported to the amount of from 100,000 to 150,000 Scottish bolls. Steam-vessels ply daily between P. and Dundee, touching at the intermediate port of Newburgh in Fife. Railway lines maintain communication with Edinburgh, Glasgow, Dundee, and Aberdeen.—The average corporation revenue, for seven years ending Michaelmas 1832, was £6,560. The revenue in 1839–40, was £6,225; in 1849–50, £4,798. The pop. within the royal burgh was 6,658, in 1851; within the city district, it was 14,878, in 1801; 20,016, in 1831; and 22,232, in 1851.—P. returns one member to parliament. Constituency, in 1840, 895; in 1849, 1,134. The parl. boundaries are extensive; and comprised in 1851, a pop. of 14,681.—Previous to the accession of James II. P. possessed, in many respects, the character of the capital of Scotland, or seat of the national government. The kings were crowned at Scone, in the vicinity, had a stated residence in P., and often made that residence their home. Events having proved that neither P., Scone, Stirling, nor Dunfermline could protect royalty against the treasonable plots of the turbulent nobility of the period, Edinburgh, in connexion with its castle,

came to be formally declared the Scottish metropolis. Yet, in spite of its apparent loss of rank, P. did not cease to contest the honour of being the capital till 1482, in the reign of James III.—P. formerly gave the title of Earl to a branch of the family of Drummond; created Baron Drummond in 1488, and Earl of Perth in 1605. James, the 4th Earl, attached himself to the cause of James II. after the Revolution, and was created by him Duke of Perth; but was outlawed by the established government, and dying in 1716, his two sons were attainted. The earldom is represented by George Drummond, Duke de Melfort, in France.

PERTH, a county of Western Australia; bounded on the N by the co. of Twiss; on the E by that of York; on the S by the co. of Murray; and on the W by the ocean; and comprising an area about 50 m. in length, and 40 m. in average breadth. It is intersected from N to S by the Darling range, and throughout its E section by ramifications of that chain. The principal rivers by which it is watered are Swan river, and its affluents the Ellen, Howick, and Garra, and by the Canning. In its NE part, amid open forests, are numerous fresh water lakes, the banks of which afford good pasturage; and stretching along, at some distance from the coast, is a series of islands and reefs, enclosing Cockburn sound, Owen and Gage road. The chief towns are Perth, the capital, Guildford, Kelmscott, Clarence, and Freemantle. The cap. is situated on the NNE bank of Perth water or Melville water, an expansion of Swan river, about 9 m. from the entrance of that river into the ocean. It is pleasantly surrounded by gardens, abounding in the ordinary fruits of warm climates. Its port is Freemantle.—Also a parish and town of Van Diemen's Land, in Cornwall co. The p. is enclosed on the W, S, and SE, by sinuosities of the South Esk river. The town is finely situated on the r. bank of the river, a few miles above the confluence of Lake River, 10 m. SSE of Launceston, and 80 m. N of Hobart-Town.

PERTH, a town of Upper Canada, in Drummond co., and cap. of Bathurst district, situated on a fine sandy ridge on the Rideau or Tay river, about 7 m. above its confluence with the Rideau canal, and 50 m. NNE of Kingstown. Pop. 2,000. It is of considerable extent, and contains several churches and chapels, and a substantially built prison and court-house.

PERTH, a township of Fulton co., in the state of New York, U. S., 46 m. NW of Albany. It has an undulating surface, and is drained by Chucktenunda creek. The soil consists of clay loam.

PERTH-AMBOY, a port of New Jersey, U. S., at the head of Raritan bay, and 46 m. NE of Trenton. Its harbour is easy of access. Pop. in 1840, 1,303.

PERTHES, or Perthes-en-Perthois, a commune and town of France, in the dep. of the Upper Marne, cant. and 6 m. W of St. Dizier, and 14 m. NW of Vassy, on the l. bank of the Marne. Pop. 725.—Also a town in the dep. of the Seine-et-Marne, cant. and 7 m. SW of Melun. Pop. 1,000.

PERTHOIS, or Pertois, a district of France, in the ancient prov. of Champagne, now comprised in the deps. of the Marne and Upper Marne. Saint Vitry-le-Francois was its capital.

PERTHSHIRE, one of the largest and most important counties of Scotland. It is situated in the centre of the kingdom, and connects the northern Highlands with the southern Lowlands, and the Highlands of the W with the Lowlands on the E. A small section of it, consisting of the ps. of Culross and Tulliallan, and lying on the N side of the upper part of the frith of Forth, is dissevered from the main body by the intervention of the cos. of Clackmannan and Fife. The body of the co. is bounded on the NW by Inverness-shire; on the N by Inverness-shire and Aberdeenshire; on the E by Forfarshire; on the SW by Fifeshire and Kinross-shire; on the S by Clackmannanshire and Stirlingshire; on the SW by Stirlingshire and Dumbartonshire; and on the W by Argyleshire. Its form is not very far from being a circle, upon a radius of about 30 m. From a point in the SW, within about 3 m. of the head of Loch-Fyne, to a point at the base of Mount-Blair, between Glenshee and Glenisla, a distance of at least 117 m., all over the W and the N, and part of the E, the boundary-line consists, with inconsiderable exceptions, of vast central summit-ranges,—the watersheds of the most alpine and elongated mountain-chains of Scotland. The co. lies between 56° 4′ and 56° 57′ N lat., and 3° 4′ and 4° 50′ W long. Its extreme length from Invergowrie on the E, to the top of Benloi on the W, is 77 m.; its extreme breadth from the boundary of the east forest of Athole, at the source of the Tilt on the N, to the frith of Forth at Culross on the S, is 68 m. Its superficial extent is usually stated at 2,588 sq. m., or 1,656,320 acres, of which, it is estimated, 500,000 are cultivated, 550,000 uncultivated, and 606,320 unprofitable. The co. has a prevailingly SE declination or exposure. Excepting a nook on the SW of about 30 sq. m., which is drained by the Falloch toward Loch-Lomond, the whole country N of this line belongs to the basin of the Tay and its tributaries. As the Earn sweeps away to the E on a line parallel to the S watershed, and at but a brief distance from it, a mere ribbony belt of the basin declines toward the N, while incomparably the greater expanse of it follows in its dip the SE declination of the Tay. All the band of country which is sectioned off from the Tay's basin belongs to the basin of the Forth.

Climate.] Situated in the zone where the Highlands melt down into the Lowlands, at nearly equal distances from the German ocean and the Atlantic, this co. possesses a temp. between that respectively of the northern and the southern cos., and experiences all the varieties of climate which belong to both the E and the W coasts. According to observations continued during 5 consecutive years, W winds have been found to prevail during from 165 to 220 days in the year; fair weather from 189 to 250 days; rain from 95 to 141; and frost from 11 to 66. The mean height of the barom. has been found, during 3 consecutive years, to range between 29·59 and 29·71; and the mean height of the therm. between 41° and 42½°. The annual quantity of rain during 5 years of observation varied between 31·45 and 38·4 inches. These results were ascertained partly at Meigle, in the extreme E, and partly at Coldock in Monteith, on the SW.

Mountains.] The mountain-rampart which runs along the N frontier of this shire is a main part of that vast alpine range, the greatest in Scotland, which extends from Ben-Nevis on the W, to Mount-Battock on the E; and thence forks off, in diminished lines, to the German ocean at Stonehaven and the mouth of the Dee; and so stern and resistful is it, that only at three points over its great extent,—at the heads respectively of the Shee, the Bruar, and the Garry,—have military roads been drilled through its high and terrific passes. The rampart which towers aloft along the W is a chief part of the continuous range which, second in importance only to the former, extends from the moor of Rannoch away southward by the peaks of Arroquhar to the extremity of the peninsula of Cowal. The moor of Rannoch intervenes between the commencement of the one range and the transit of the other, and presents at the boundary on the NW a waste table-land or huge upland plain, lying about 1,000 ft. above sea-

level. From the two continuous ramparts along the boundaries, and from the inner edge of Rannoch moor, ridges run direct into the interior, going off at right angles with the boundaries. In a few instances, also, as in the marked and magnificent one of Schichallion, mountains tower solitarily up from the plains formed by the recesses of these ridges. All these heights, from the boundaries inwards, wear the general and unmeaning name of Grampians; and over the whole of their aggregately slow and undulating descent to the interior, they lie within the Highlands, and form, with their valleys and gorges and retreats, at once the strongest, the most varied, and in every respect the most distinctive and fascinating section of that vast and very diversified territory. Among their numerous and grand summits, Ben-Lawers lifts its peak 4,015 ft. above sea-level; Ben-More, 3,903; Schichallion, 3,564; Beniglo, 3,724; Benledi, 3,009; Ben-Venue, 3,000; and Ben-Chonzie in Strathearn, 2,922. Most of them exhibit bare and weather-worn summits; and in the region below the crowning one where the rock breaks the surface, they are generally covered with a moorish soil, so comparatively rich, however, as to be superior to that of most upland tracts in England. Their lower declivities, and in some cases even their middle zones, are extensively green with sward, or bosky and warmly tinted with a profusion of copses and plantation. About two-thirds of the whole co., from Loch-Ericht or the moor of Rannoch south-eastwards, is comprehended in the Grampian or Highland region; but as an approach is made to the low country, the mountains lose much of their sternness, the valleys expand, summits are less generally bare, and declivities more frequently glide off into hanging plains; and eventually the Highlands, disclosing themselves through a long series of magnificent portals, come out in dresses of opulence and beauty which well befit the scene and the occasion of their union with the Lowlands. Nearly at right angles with the opening valleys, and with the terminating headlands of the ranges which separate them, runs from SW to NE across the whole of the co. what concurrent geographical nomenclature describes as Strathmore; yet the notion of a great plain, lying along the base of the frontier rampart of the Highlands, applies better, or with less violence, to the whole extent of what is geographically termed Strathmore, than to the section of it which lies within this co. The most southerly of all the Highland valleys suddenly expands and flattens down at Gartmore, 18 m. above Stirling, into a level strath, a broad band of carse ground; and this strath,—the luxuriant, wheat-bearing vale of the Forth,—after quite leaving the overshadowing flank of any spur of the Grampians, sweeps along all the remaining part of the S boundary of the co., so far as it lies upon the Forth. Strathallan, or the rich broad vale of the Allan, goes off from this plain in a NE direction, at points opposite the parish of Stirling; and till it is closed up by the long low ridge from E to W, which separates the basin of the Forth from that of the Tay, it might very literally be understood as part of the largely defined Strathmore. Strathearn opens from among the Grampians on a line parallel with the vale of the Forth, and while the greatest of the openings which spread out in Lowland fulness after debouching from the Highlands,—while, also, extending due eastward all the way to the Tay, at a point very near the N extremity of the boundary with Fifeshire, — it contributes not its length, but its breadth, to the continuation of the alleged great plain along the base of the Highland frontier. Another low ridge, similar to that which flanks the S side of Strathearn, at first mountainous and rugged, but afterwards gentle and undulating, now divides the feeders of the Earn from those of the Almond, and once more interrupts the strict continuousness of Strathmore; but beyond this ridge, or from Methven NE to the boundary at Meigle, the undoubted Strathmore, a well-defined plain across the ribs and inlets of the Highlands, stretches along in cultivated luxuriance, and includes the low grounds of Methven, Perth Proper, Stormont, and Upper Gowrie. The Ochils have the whole of their watershed or summit-range in this co. The Sidlaws, till they pass the frontier into the conterminous co., are also wholly within P.; they section off the rich district of the carse of Gowrie from the broad plain of Strathmore; and they claim various detached and straggling hills, among the most noted of which is the celebrated Dunsinnan. The carse of Gowrie, between the Sidlaws and the frith of Tay, differs from every other part of the co., except part of Strathearn, and the band of carse-lands along the Forth, in being nearly a dead level, singularly opulent in its soil, highly fructiferous over every square foot of its surface, and athwart all its expanse an uninterrupted scene of luxuriant cultivation. Though such striking combinations of marine and mountain landscape are wanting as form the grand attraction of the Western Highlands, they are here abundantly, and somewhat in their own style, compensated by large lacustrine and sometimes isleted sheets of water, screened by heights which for alpine altitude and boldness of contour, and romance of dress, may challenge comparison with any in the W. Excepting only that of Loch-Lomond, nearly all the finest lake-scenery of Scotland occurs in P.

Streams.] The waters of P., both lakes and streams, are very numerous. The lakes of the first class as to size are Tay, Earn, and Rannoch, in Breadalbane; Ericht on the boundary with Inverness-shire; and Katrine in Monteith. The second class lakes are Lydoch on the boundary with Argyleshire; Garry between Rannoch and Athole; Tummel in Athole; Vennachoir, Monteith, and Lubnaig, in Monteith; and Voil in Balquidder. Of numerous lakes of third class size the most noticeable are Lyon and Dochart in Breadalbane; Tilt in Athole; Ard, Achray, and Chon, in Monteith; Doine in Balquidder; Turret in Strathearn; Freuchie in Glenqueich; and Ordie, Lows, Butterstone, Cluny, and Drummellie, in Stormont.—The Forth traces much of the S boundary, and drains all the territory lying S of Strathearn. Its only noticeable tributaries on the side of P. are the Goody, the Teith, the Allan, the Devon, and the South Devon.—The Tay, as it drains all the country between the S screen of Strathearn and the northern boundary of the country, draws its waters in numerous and converging streams toward a great central channel. The Earn, its tributary along Strathearn, brings to it the Lednock, the Ruchil, the Turret, the Powaffray, the Machony, the Shaggy, the Ruthven, the May, and the Farg. The lake whence the main stream of the Tay issues, and that main stream itself, receive the Fillan, the Dochart, the Lochy, the Lyon, the Tummel, the Bran, the Isla, the Ordie, the Shochie, and the Almond; and of these the Lyon brings to it the Glenmore,—the Tummel brings the Gouir, the Ericht, the Rannoch, the Garry,—and, through the last, the Edendon, the Endor, the Feachory, the Erachkie, the Bruar, the Tarff, and the Tilt,—the Bran brings the Freuchie,—and the Isla brings the Shee, the Ardle, the Erochd, and the Lunan.—Though the co. is strictly inland, it stretches sufficiently far along the navigable parts of the Tay and the Forth to enable the inhabitants of Perth, of the Carse of Cowrie, and of the Culross and Tulliallan district, to conduct a considerable seaward trade.

Geology and mineralogy.] The series of hill-chains along the SE margin of Strathmore forms a barrier in the interior, or on the Highland side, of which coal has never been found; but it has been wrought for ages at Culross, and it occurs in all the districts SE of the Ochils. Inexhaustible beds of limestone, uniformly of a grey colour, occur in Rannoch, Glenlyon, the S part of Breadalbane, and the W end of Loch-Earn. A beautiful limestone, of the density of marble, of a blue ground, and finely variegated with streaks of white, occurs at Callander and at Aberfoil. Marble of superior quality and much beauty, at once of a fine green, of a light grey, and of a pure white colour, is found likewise in Glentilt; and thence, as well as from the former places, has been exported to a great distance, as a material for fancy ornaments and architectural embellishments. Iron-stone exists in abundance in the coal-field of the district SE of the Ochils. Large beds of fire-clay occur on the estate of Blair-castle, and other places in the vicinity of Culross. Roofing slates, some of a purple colour, some of an azure blue, and some of a muddy brown complexion along the cutters, are extensively quarried in the Highlands. Breccia or pudding-stone,—consisting of a great variety of small and different-coloured stones, firmly cemented by a brown basis, and so compact as to form a very durable building material,—occurs in Strathearn and in Monteith, and appears to extend SW to Dumbartonshire. Sandstone, of very prime quality for building, has long and extensively been quarried, both for home use and for exportation. Copper occurs among the southern Ochils. Lead has been extensively mined at Tyndrum; and it occurs also at Benledi, near Callander, and at Glenlyon in Breadalbane. Shell marl abounds in Stormont. Boulders of the sulphate of barytes, each about the size of an egg, occur in the bed of the Shaggy in Strathearn.—The prevailing rocks in all the Highlands of P. are mica-slate, gneiss, clay-slate, chlorite-slate, some varieties of hornblende-slate, with occasional beds of quartz, and some patches of granite. Mica-slate alone forms the entire mass of some of the monarch mountains, such as Ben-Lawers and Ben-Voirlich. A narrow tract of clay-slate may be traced NE, along the lower edge of the Grampians. Greywacke, frequently running into sandstone, a coarse red conglomerate, and hornblende porphyry, composes most of those isolated hills, which in several localities aggregate in crowds at the foot of the Grampians, and impart to the landscape an aspect of tangledness and picturesque confusion. A red sandstone, generally regarded as the old red, seems to lie beneath very nearly the whole of the large defined Strathmore, occupying all the Lowlands between the Grampians on the one side, and the Ochils and the Sidlaws on the other, and extending from the Forth to the boundary with Meigle. The geognostic features of the Ochils and the Sidlaws are noticed in the articles on these hill-ranges. Trap-dykes are comparatively unextensive.

Soil and agriculture.] In the carse of Gowrie all the flat land —which constitutes immensely the larger portion of the district— is a deep rich clay; and about the town of Perth in Strathtay, below Dunkeld, and in various limited localities throughout the lowlands of the co., are pendicles of rich soil more or less thoroughly argillaceous. Much haugh land occurs on the Earn, wherever the river occasionally flows beyond its ordinary channel,—on the Powis,—on the Allan,—on the Goodie,—on the Devonbelow Dollar,—in various parts of Balquhidder and Callander, —at Killin,—and in such portions of Glendochart, Glenfillan, Glenlochy, and other districts, as are frequently overflowed by their streams. On the Isla, where it holds a westerly course, the haughs are uncommonly rich and extensive; on various parts of the long course of the Tay, especially for some miles before it receives the Isla, they are considerable; and at the mouth of the Ericht, and at the W end of Loch-Tummel, they are of very noticeable extent. Light free soil, easily pulverized, and consisting principally of sand or gravel, is the most frequent in P. This soil prevails in all the valleys N of Alyth, Blairgowrie, and Dunkeld, and W of Crieff, Callander, and Gartmore, except where, at the confluence of streams, or in parts subject to inundation, haughs have been formed, or on the sloping face of hills where the soil is spouty, or on the confines of moors where the soil is a mixture of peat earth. Mosses of various dimensions, of various depths, and of various degrees of firmness, corresponding to the time they have had for acquiring solidity, expand on almost every flat, and on not a few slopes of the higher hills. In the lowlands, they may be viewed as concentrating all their interest in the famous Flanders moss in the vale of the Forth, originally computed at 10,000 acres.

Exclusive of diminutive possessions called pendicles, farms which may be regarded as arable range as to extent in P. between the extremes of 30 and 500 acres; and farms under a regular system of husbandry average from 100 to 300 acres. Large tracts of grass or pasture-ground, on the skirts of moors and hills, are frequently annexed to arable farms. Leases in the lowlands, as in most other agricultural districts of Scotland, are generally for 19 years, though a few are for 36 years; and in the highlands they extend for the most part to 9, 19, and 21 years. During the last 80 years plantations have rapidly increased, both in number and in extent, and in a few instances have suddenly spread away athwart a territory in a sea of forest. While the *Pinus rubra* or Scotch fir is the most common pine of these woods, ash, elm, plane, beech, oak, laburnum, and various other kinds, are so intermixed with it, and with the larch, as to diversify the general aspect, exhibit endless tints and shadings of the prevailing green, and relieve the eye from the dull sameness which invariably tires or disgusts. The oak prevails in the valleys of the Grampians, where the climate is genial, and the soil light and dry; the ash grows spontaneously by the side of every stream or lake; the alder delights in swamps and spouty ground; and the birch climbs boldly to the brow of every hill. The late duke of Athole, whose accession occurred in 1774, planted the enormous amount of 15,473 English acres of wood, or somewhere about 27,000,000 of trees. A fraction more than one-half of all his plantations were larches; about 1,000 acres were oak; the rest were principally Scottish fir, spruce fir, and birch. Only about 1,000 acres of wood existed on the duke's lands when he commenced his magnificent forest operations.—The aggregate extent of meadows, pastures, moors, and wastes in the co. is necessarily very great. Besides the sheep-walks on the Sidlaw hills, 5 parishes among the Ochils, and 22 of the averagedly vast parishes along the lower declivities, and in the bosom of the Grampians, are to quite a characterizing extent occupied by sheep stock, and are estimated in round numbers to maintain 222,000 sheep. The ancient stock were the whitefaced, few in number compared to the present flocks. About the year 1770, the blackfaced breed were introduced from the S. Goats, once so numerous and so much in favour, were necessarily sacrificed to improvements in the prime departments of sheep husbandry and of planting. Hogs are more numerously reared in Athole, Strathardle, Glenshee, and Glenisla, than in all the other districts of the co. combined. Red-deer occur in vast numbers in the forest of Athole, and limitedly in that of Glenartney; fallow-deer occur only at Blair-Athole and at Taymouth; and the roebuck and doe are in many of the upland parts of the co.,—in almost all of them which are not divested of wood. Common poultry are at every door, from the hen-house of the lord of the manor down to the meanest cottage; and turkeys and geese are reared in great numbers. Bees are an object of attention and profit in the sheltered parts of the hilly country. Game of nearly every description abounds on the moors and the mountains, and among the forests.

Manufactures.] P. cannot be viewed as distinctively, or as in any other than a very limited sense, a manufacturing and commercial county. Though the linen manufacture has long been established, it has never attained either steadiness or eminence, and it exists rather in humble subordination to that of Forfarshire than as an independent trade. The cotton manufacture sprang up toward the close of last cent., and made promise of achieving wonders; but it has made fitful progress, and occasionally all but stood still; and now it wears as sickly and feeble an aspect as can well comport with the fact of its holding several factories, and some two or three thousands of looms in employment. The principal mills are at Doune on the Teith, Stanley on the Tay, and Cromwell-park on the Almond; and the chief seats of the weaving population—employed for the most part by the manufacturers of Glasgow—are Auchterarder, Crieff, Dunblane, and other places in the south-east quadrant of the county. Paper-mills were established chiefly toward the end of last cent., in six or seven places; but they have in some instances been abandoned, and in others only partially successful. Extensive bleachfields have long been maintained, and are prosperously conducted in Strathmore, and in several villages within 4 or 5 m. of Perth. Several flax spinning mills, one or two small fulling mills, seven or eight linseed oil mills, and a limited manufactory of shawls, blankets, and other woollen fabrics, exist in various localities, principally in Strathearn and Strathallan. The manufacture of leather, though not a large trade, is long established and comparatively steady.—The extensive pastures on the valleys and mountains of the Grampians send down for sale, in the spring and fall of every year, immense droves of black cattle; and they send also from their flocks, to the shambles of the southern counties, and particularly of the districts along the Forth and the Clyde, numbers of lambs in summer, and of sheep in autumn, which almost baffle calculation. Great quantities of grain are exported from the Carse of Gowrie, the vale of the Isla, Strathearn, Monteith, Strathallan, and the district of Tulliallan and Culross. Large supplies of the prime freestone of the Carse are shipped at the small ports of Kingoodie and Pow of Errol; and of freestone and coals from the ports of Culross and Kincardine. Other exports are principally slates, timber, potatoes, and leather.

The chief imports are coals, lime, salt, bone-dust, Baltic produce, clover-seed, linseed, cheese, hides, and bark. Excepting what belongs to the small harbours on the coast of the Carse of Gowrie, nearly the whole coastwise and seaward commerce of the county passes through the ports of Perth and Kincardine. This county enjoys its share in the advantages of the railroad system, by which it has been placed in close connection with the manufacturing and commercial districts both of the north and south of Scotland. Two direct lines of railroad from Edinburgh to Perth, the Edinburgh and Northern railway, and the Edinburgh and Perth railway. A third and more important line for this county is that of the Scottish Central railway, and its prolongation the Scottish Midland Junction. By the former line a direct communication is effected betwixt Perth and Stirling, and thence onwards to the Edinburgh and Glasgow railroad, at two different points in the vicinity of Castlecarry and of Polmont. At the former of these points it is placed in connection with the Caledonian railway, or within 105¾ m. railroad distance of Carlisle. The Scottish Midland line prolongs the Scottish Central line through Strathmore, to the Aberdeen line, by a route of 38 m.; while the Dundee and Perth line, 44 m. in length, supplies another route to the north, and connects Perth directly with the towns of Dundee, Forfar, and Arbroath. A projected railway extends westwards through P., from Perth to Crieff, the second town in pop. and importance in the county, by the valley of the Pow; and it is further proposed to connect this line with the Scottish Central railway, by a branch to Auchterarder.—From the line of the Scottish Central railway, it has been proposed to form a branch line through Doune, to Callander, which will render the Trosachs, Loch Katrine, and what may be called the classical district of Perthshire, of easiest access to tourists.

Towns, &c.] Perthshire contains only two royal burghs,—Perth, the county-town, and Culross, a small decayed town on the frith of Forth; but it possesses upwards of 70 towns and considerable villages, including several burghs-of-barony. A little after the commencement of the present cent., it had 76 parishes, 18 of which were in the Highlands, and 58 in the Lowlands. The Highland parishes were all then of great extent, each comprehending, on the average, nearly seven times as much area as a medium-sized Lowland parish. In 1834, there were in the co. 73 parochial schools, conducted by 75 teachers, and attended by a maximum of 5,213 scholars, and a minimum of 3,138; and 251 other schools, conducted by 259 teachers, and attended by a maximum of 13,649 scholars, and a minimum of 7,435.—P. sends one member to parliament. Constituency, in 1840, 4,382; in 1850, 4,639. —The valued rent of the county, in 1674, was £339,892 Scottish; the annual value of real property, as assessed in 1815, was £555,532; in 1843, £624,274. —The pop., in 1795, as estimated by Dr. Robertson in 1799, upon the best data he could laboriously procure, was 143,123, evidently an over-estimate; and it was computed to have increased from 1755 to that period, 19,781. Pop., according to government census, in 1801, 126,366; in 1821, 139,050; in 1831, 142,166; in 1841, 137,457; in 1851, 138,660. The population, in 1831, was distributed into 2,482 occupiers of land, employing labourers; 2,787 occupiers not employing labourers; 6,778 agricultural labourers; 5,204 labourers not agricultural; 4,942 manufacturing operatives; 9,965 persons employed in retail trades and handicrafts; 1,519 capitalists; 496 male servants; and 7,054 female servants. In the same year, the number of families was 31,749; and the number of inhabited houses 23,809. In 1841, the number of inhabited houses amounted to 29,172; uninhabited, 1,798. In 1851, the inhabited houses were 22,528; the uninhabited 852; but flats were not reckoned houses as in 1841.

PERTININGA, a village of Brazil, in the prov. of Rio-de-Janeiro and district of Netherôhi, near a lake of the same name, which discharges itself by a short outlet into the sea. The lake abounds with fish.

PERTOMINSKAIA-POUSTYN, a convent of Russia in Europe, in the gov. and 60 m. W of Archangel, on the gulf of Ounsk, an arm of the White sea.

PERTRE (Le), a commune of France, in the dep. of the Ille-et-Vilaine, cant. and 6 m. ESE of Argentre, at the foot of a mountain, and at the source of the Seiche. Pop. 1,965.

PERTUADES, or Madeleine, a river of France, in the dep. of the Var, which has its source in the cant. and to the E of Collobrieres; passes a little to the N of La-Verne-Chartreuse; enters the cant. of St. Tropez, and joins the Molle on the l. bank, a little below the castle of La Molle, and after a course of about 15 m.

PERTUIS, a canton, commune, and town of France, in the dep. of Vaucluse and arrond. of Avignon. The cant. comprises 14 coms. Pop. in 1831, 13,937; in 1846, 13,761. The town is on the Lese, near the r. bank of the Durance, 15 m. ESE of Apt, and 41 m. ESE of Avignon. Pop. in 1846, 4,487. It has a church and a communal college, and possesses manufactories of vermicelli, and earthenware, distilleries of brandy, a spinning-mill, several dye-works, brick and tile-kilns, and nursery gardens. Its trade, which is considerable, consists chiefly of wine, brandy, grain, olive-oil, and madder. This town was founded to promote the designs of Marius, and was at an early period an important grain-market.

PERTUIS-BRÉTON, a strait which separates the island of Re, from the W coast of France. It runs between the NE coast of the island, and the departments of La Vendee, and of the Lower Charente. It varies in breadth from 1½ to 9 m.

PERTUIS-D'ANTIOCHE, a strait which separates the island of Re from that of Oleron, near the W coast of France and dep. of the Lower Charente. It has a breadth of about 6 m.

PERTUS (Col-de), a pass of the Pyrenees, extending between the French dep. of the Eastern Pyrenees and Catalonia, in Spain, on the line of route from Port-Vendres to Junquiera. At its summit, on the r. of the Col, is the fort of Bellegarde.

PERTUSA, a town of Spain, in Catalonia, in the prov. and 18 m. SE of Huesca and partido of Sarinena, on the l. bank of the Allanabre, which is here crossed by a bridge. Pop. 850. It has a parish church, a custom-house, and a public granary.
